I am writing with regards the poor Broadband speeds situation in Kingswells.

I have lived in Kingswells for 17 years and for around 10 of those years broadband has been available but at very poor speeds ranging from 512kbps to just under 2Mbps, when the broadband gets busy at peak times these speeds can drop even further.

I think it is a poor reflection on the telecom infrastructure that Kingswells part of Aberdeen City is so poorly served.

I read in the papers about 20Mbps and a new superfast broadband speeds of 100Mbps from some networks. I am afraid in Kingswells we have been well and truly left in the dark ages which is very sad for a major city in Scotland such as Aberdeen.

I have to use the internet at home for work sometimes and it is incredibly slow.

As you can see from the dates above the houses in Kingswells are relatively modern so why it has such an out dated telecom system beggars belief. Why was this allowed to happen?

The Scottish government I feel needs either to provide more money or put more pressure on the private telecom firms so that everyone in Scotland has a fair crack of the whip with regards speeds from broadband.

I pay the same fee for someone who gets decent broadband speeds but the money is not being distributed fairly. The telecom firms upgrade the existing decent broadband speeds to superfast yet we in Kingswells are left with super slow broadband. Why is this allowed to happen?
