We live in rural Aberdeenshire, near Turriff, AB53 4LL. We are not extremely remote being 50m from a public road, 5 miles from a high school and Tesco in Turriff, and two miles from a scheduled bus route.

We are do not get broadband via the telephone landline because we are too far from the telephone exchange (9km estimate). Virgin and BT have both tried their equipment but it does not work.

We have zero mobile phone reception at home so mobile phone broadband is not an option either, without specialist ariel which we have not tried.

We have not tried satellite broadband, but expect that the capital cost is too high to justify it for our needs.

We usually use dial-up internet if we want internet. This dial-up service is slow but functional. As sites use graphics and video more and more this is becoming less functional over time.
