Hello, I took antidepressants and here I am reporting the side effect that haven't gone away after discontinuation of the medicine.

2017 Dec

from the 6th to 12th Paroxetine 12.5mg, Bromazepam 3mg
extremely sleepy during the day

13-15 Paroxetine 12.5mg, Bromazepam 1.5mg

16 unable to orgasm

18-19 Bromazepam 1.5mg

24 Paroxetine 12.5mg, Bromazepam 1.5mg

26 weak orgasm (until now, 22/01/2018)

29 escitalopram 5, Bromazepam 1.5mg

Paroxetine 12.5mg for 11 days in total

I think I'm suffering from PSSD (post SSRI sexual dysfunction) caused by SSRI (Selective Serotonin Reuptake Inhibitors).

Did your Dr warn you about the withdrawal effects?

No, absolutely not. I wish he had informed me.

Have pharmaceutical drugs harmed you?

Unfortunately yes.

Have you had to give up work?

No.
