The SSSC is working with NHS Education for Scotland (NES) on a range of initiatives to support the education and development of health and social services staff. Examples include the development and promotion of the Promoting Excellence Framework for social services and health staff working with people who have dementia and the on-going work around the development of an education and training strategy for carers. Both projects have required some flexibility in terms of financial resources and staffing from SSSC and NES. The SSSC will also be a member of the new Working Group which will examine the strategic workforce developments relating to the integration agenda.

**Question 12**: If Ministers provide direction on the minimum categories of spend that must be included in the integrated budget, will that provide sufficient impetus and sufficient local discretion to achieve the objectives we have set out?

Yes ☐ No ☐

**PERHAPS**

We note the intentions for Ministers to provide guidance on the categories of spend for Health and Social Care Partnerships. Employees and employers have clearly defined responsibilities in relation to personal and workforce development. These expectations are defined in the Codes of Practice for social services workers and employers. We note the recognition of the importance of organisational and workforce development in achieving many of the policy’s aims and we welcome the inclusion of an outcome which focuses on the vital role of the workforce in delivering this agenda.

**Question 13**: Do you think that the proposals described here for the financial authority of the Jointly Accountable Officer will be sufficient to enable the shift in investment that is required to achieve the shift in the balance of care?

Yes ☐ No ☒

We have no comment to make on this question.

**Question 14**: Have we described an appropriate level of seniority for the Jointly Accountable Officer?

Yes ☒ No ☐

We would suggest that there is a need to clarify the role of the Chief Social Work Officer (CSWO) in relation to the Partnerships and Jointly Accountable Officer. The CSWO have various roles which are particularly relevant to the partnerships including their Quality Assurance role in relation to service delivery, which may have implications for workforce development.
Question 15: Should the Scottish Government direct how locality planning is taken forward or leave this to local determination?

Yes □ No □

We have already indicated our view about the need to ensure that Partnerships have the flexibility to make decisions which reflect local need. We would suggest that locality planning is – as far as possible – also left to local determination.

Question 16: It is proposed that a duty should be placed upon Health and Social Care Partnerships to consult local professionals, including GPs, on how best to put in place local arrangements for planning service provision, and then implement, review and maintain such arrangements. Is this duty strong enough?

Yes □ No □

We set out our views on the need to involve practitioners in the planning process in our response to question 17.

Question 17: What practical steps/changes would help to enable clinicians and social care professionals to get involved with and drive planning at local level?

We could point to examples such as the Changing Lives Practitioners’ Forums as one potential model for this work but our sense is that the Partnerships must seek to develop a collaborative culture of contribution, innovation and change that is driven from the ground up. Partnerships should seek innovative ways of fostering empowerment and enabling practitioners to get involved with service planning. It is important to ensure that practitioners, service users and carers are all given opportunities to shape the delivery of future services.

Question 18: Should locality planning be organised around clusters of GP practices? If not, how do you think this could be better organised?

Yes □ No □

We believe that these issues are matters for local decision makers within the Health and Social Partnerships to consider.

Question 19: How much responsibility and decision making should be devolved from Health and Social Care Partnerships to locality planning groups?

See our response to question 18.
Question 20: Should localities be organised around a given size of local population – e.g., of between 15,000 – 25,000 people, or some other range? If so, what size would you suggest?

Yes ☐ No ☐

See our response to question 18.

Do you have any further comments regarding the consultation proposals?

One final point we would make is that there are a range of workers in adult social care and health settings who bring different experiences, backgrounds and expertise to service delivery. Many workers are required to hold qualifications and/or register with a relevant regulatory body. As an organisation supported by Scottish Government, the SSSC aims to protect people who use services and their carers by promoting high standards of conduct and by taking action where the public are at risk. Research clearly demonstrates that skilled, confident and qualified workers offer the safest, best quality care, with the best outcomes for people who use services. These aims bring us back to our earlier points about the need to continue to recognise the unique contribution made by workers, to maintain a focus on workforce development and to provide opportunities for sharing knowledge and expertise.

We welcome the observation in the consultation paper about the importance of “robust, trustworthy information and evidence” as a means of planning service design, joint management of risk, benchmarking and accountability for delivery. One of the consequences of moving towards an integrated resource is that it could become increasingly difficult to differentiate between the social care and health workforce. We already see evidence of this as data from the National Health Service’s Information Services Division (ISD) highlights the recent movement of staff across social care and health services in the Highlands. Social services data plays a valuable role in supporting employers and stakeholders to undertake workforce planning. The data has various roles to play. The local and sub-sector workforce data that we have developed has informed the Change Fund partnerships, supports employers in their benchmarking/workforce planning processes and informs our work around promoting careers in the sector. There is a need to develop a better understanding of the relationship between data on the workforce, services and demand. We are working with colleagues across health, Scottish Government and other regulatory bodies to address this challenge.

Do you have any comments regarding the partial EQIA? (see Annex D)

No.

Do you have any comments regarding the partial BRIA? (see Annex E)

We agree with the recommendation that Partnerships make their own decisions about appropriate governance arrangements.
EAST LOTHIAN COUNCIL
East Lothian Council is pleased to support the response from our partners, NHS Lothian. Additionally, it would want to highlight the following.

1. Do you agree with the general principles of the Bill and its provisions
Yes, East Lothian Council agrees with the general principles of the Bill. In response to the Bill East Lothian has, like other authorities and NHS Boards, established a Shadow Health and Social Care Partnership Board.

East Lothian Council has concerns regarding the Governance implications of the ‘body corporate’ model as it is detailed in the Bill. This requires clarification and more detail as it will strongly influence which model of integration partners choose to follow. For example, the nature and level of accountability to both NHS Boards and Local Authorities should be made explicit. There should be clear legal and financial structures to enable alignment of budgets and rules if integration is to achieve the desired outcomes.

Further clarity on the division of statutory responsibilities between the Jointly Accountable Officer, the Chief Social Work Officer and other Statutory Officer posts (including Chief Finance Officer and Monitoring Officer) would be required.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The Bill will only achieve its objectives if local authorities and health services are each enabled and required to delegate statutory responsibilities, and resources either to each other, or to a new body. As an example, are Local Authorities and their partners should be enabled to choose the financial model most appropriate for the partnership. The outcomes for patients and service users will be as limited as has happened with previous integration initiatives if the model does not fit with the partnership requirements.

In addition, the approach taken will not in itself reduce demand for both health and social care services, or the expectations of the public. It will, if successful, improve access, quality and deliver efficiencies and deliver some savings in the medium term. There will be one off costs, as well as those arising from the process of change. If these are not recognised and supported by Government then the Bill cannot achieve its objectives.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
It is good to see that the Bill offers different options and models for integration and that local areas can make decisions about which model best suits their local needs, circumstance and history. It will be very important, however, that
this approach is supported by very clear required outcomes and quality standards.

The policy objectives indicate the potential that the integration of services can achieve. However, the achievement of these objectives will be dependent on the local plans.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
Shifting the balance of care from institutional to community care is a key driver for NHS and Local Authorities. Although Delayed Discharges are part of this agenda, the Bill seems to fall short of acknowledging the resources required to implement effective support in a community setting. As demand grows, integration should, if fully achieved, enable improvement to the experiences and outcomes for patients and service users through faster access and more streamlined less bureaucratic delivery. It will not significantly reduce the overall resource pressures currently experienced by both health services and local authorities, nor significantly add capacity to meet future demands.

The provision of the draft Bill relating to Housing Services should be significantly strengthened. The representation of Housing Services on the Board needs to be re-considered. The importance of adequate provision of aids and adaptations to people’s homes, in making sure they have the most appropriate community based care or do not become delayed at discharge or an unplanned admission to hospital, should be acknowledged.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
East Lothian Council anticipates that an integrated service should eliminate duplication in assessment, speed up decision making, clarify accountability for individual care, and should improve the delivery of person centred services to those who most need them.

The change from current models to the future models of service will incur some transitional costs, as referred to in ‘2’ above, and this should be fully recognised within the Financial Memorandum. Given the severe pressure on local authority community care resources, it should be emphasised that there can be no immediate capacity to meet the inevitable costs of a change of this significance as well as the Council continuing to achieve its Local Outcome Agreements.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?
East Lothian Council expects that it will become easier for people who need services to understand an integrated system, how to access it, and how to hold it to account.

Working together to improve outcomes for those receiving services has been a key policy driver for health and social care in East Lothian for many years.
There have been notable successes and achievements in services for people with mental illnesses, and learning disabilities.

Integration should improve the service users’ and carers’ ability to meet their individual outcomes. It has to be recognised that improvements in services, including those for older people, were not achieved to the extent that was hoped from earlier integration initiatives such as ‘Joint Futures’. If lessons are learned from those experiences (for example, as particularly referred to in ‘2’ above), and included in the provisions of the Bill, the beneficial effect on outcomes will fall short.

East Lothian Council
12 August 2013
Public Bodies (Joint Working) (Scotland) Bill

NHS Lothian

1. Do you agree with the general principles of the Bill and its provisions?
Yes. Lothian NHS Board and its four local authority partners supported the general principles in their joint response to the consultation. At the same time we appointed Joint Directors for each of our four local authority areas. Shadow Health & Social Care Partnership Boards are in place in West Lothian and in Edinburgh, and being established in Midlothian and East Lothian.

At the same time we are organising two workshops in September 2013 for NHS Board members (including local authority stakeholder members) and the joint directors to consider the subject of integration and the provisions of the Bill as it stands.

Whilst the initial focus has been adult services, we are also keen within Lothian to explore the opportunities for children’s services.

The Bill obviously compels change. Through Section 21, the Bill uses similar language to describe the effect of delegation as is used in the National Health Service (Scotland) Act 1978 to describe the legal responsibilities of NHS Boards for functions delegated to them by Scottish Ministers.

Taking Section 21 together with the (body corporate) “integration joint board” model (Section 1(4) (a)) and its associated provisions, we believe the Bill is potentially materially different from the pre-bill consultation document and elements of the accompanying Policy Memorandum. We have been working on the understanding that the body corporate model is a vehicle that is accountable to the parent bodies, whose chief officer is directly accountable to the chief executives of the parent bodies, and whose strategic plans must be consistent with and led by the strategic plans of the parent bodies. The Bill appears to suggest something quite different. When the body corporate model is taken, the body corporate becomes the Integration Authority (section 42), and leads the strategic planning process with the parent bodies becoming mere consultees. This issue requires urgent clarification as it will strongly influence which model of integration partners choose to follow.

We would welcome clarification on the following questions within the final version of the Bill:

- Section 21 appears to give the body that receives the functions all duties, rights, powers and liabilities associated with carrying out the delegated functions. Section 21 (4) appears to state that all legal processes should be brought by or against the delegate. It appears to be a transfer of functions from one public body to another. Given the corporate governance implications, is this the correct interpretation of the meaning and intention of the Bill?
If an NHS Board delegates functions to a local authority or a new integration joint board, is the NHS Board Chief Executive still the Accountable Officer for those delegated functions under the Public Finance and Accountability Act 2000?

If the Board and Council delegate functions to Integration Joint Boards, does Section 21 mean that the Board and Council will be relieved of all legal responsibilities/ liabilities etc for those functions?

Who shall be members of the Integration Joint Boards? If the members are to be existing NHS Board members and councillors, does this create an inherent conflict of duties and interests for them?

If the Integration Joint Boards appoint their own Chief Officers (rather than the NHS Board and local authority Chief Executives), how can the Chief Officers be directly accountable to the Chief Executives of NHS Boards and local authorities?

Are the Integration Joint Boards empowered to operate autonomously from the parent NHS Board and local authority, by virtue of sections 9-11, 21, 42(a), 43(a), 28, 30, and 33?

Are the proposed default powers of Scottish Ministers to introduce Integration Joint Boards appropriate, given the emphasis on localities within the planning provisions in the Bill (Sections 23, 25 & 32)? If the Board and local authority fail to produce an Integration Plan on time, would it not be more appropriate for the Scottish Ministers to take a more facilitative role?

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill has the potential to achieve its stated policy objectives, subject to the points below.

The first two policy objectives relate to the design and the delivery of care. Their achievement and the timing of delivery depend on many factors, including:

- The range of functions being delegated
- The extent of innovation
- The availability and capability of ICT
- How successfully change is managed, e.g. transferring staff to a new employer, introducing new ways of working, addressing any identified gaps in skills, experience and training & development.

The third policy objective relates to resources.

The Scottish Government has published “Explanatory Notes”, within which is a Financial Memorandum. The Scottish Parliament’s Finance Committee has issued a separate call for evidence on the Bill, and therefore this response shall not cover that ground.

We believe that integrated functions and resources should produce greater efficiencies. However it is important to note that efficiencies do not always lead to cash-releasing savings. If we were able to reduce the number of people delayed in our system this would release beds, which in itself is an
efficiency and is also an important aspect of quality of care for the patient. If we can free up beds we then have more capacity and this in turn would allow us to reduce the number of people boarding or even the need to cancel elective, scheduled operations due to a lack of available beds.

The process of implementing re-design often requires upfront investment, particularly alternatives to hospital admission. Resources across the public sector have been severely constrained in recent years and one initiative that would be important to see continue is that of the investment made through the Change Fund for Older People. This is particularly important given the projected demographic changes in Scotland and Lothian, and the growth in the prevalence in dementia, offer two primary challenges to resources:

1) The ability to continue to provide routine services, and
2) The inevitability that the overall costs of providing health & social care services to the over 75s will rise in real terms.

Integration gives an opportunity to mitigate the impact of some of the growth in demand for specialist forms of care at home, care in residential settings or care in hospital.

The rate of admission to hospital will have to be massively reduced just for hospital services to stand still, let alone release resources for alternative methods of service provision. If a material amount of resources is to be released from hospital care, this would require the closure of some acute hospital facilities. There is extremely limited evidence of this being done quickly or successfully in Scotland in recent years and this would require full partnership support, engagement and consultation.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
All three policy objectives are sensible, but they are a significant understatement of the scope of this Bill.

There is the potential to interpret the Bill as it stands to give significant powers to Scottish Ministers to re-structure the Scottish public sector, with the potential for the Scottish Ministers to have more direct control of public functions without further legislative debate or consultation.

The provisions of Part 1 of the Bill do not limit the scope of the delegation of functions to adult services, or those relating specifically to older people. Any function can be captured. Part 2 of the Bill (Shared Services) applies to services and organisations beyond the realm of health and social care.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
Our response to Question 1 sets out a number of key questions for clarification.

A body corporate is a distinct legal entity, separate from those who created it. The term body corporate is used in many other laws which confer
responsibilities and liabilities to the body corporate, e.g. Health & Safety Act, Data Protection Act, Corporate Homicide Act, various tax laws etc.

The delegation of functions does have significant governance implications, and the review of the Bill should give due regard to how this will actually affect NHS Boards, local authorities, and any new integration joint boards.

There must be clarity on which organisation and which officers are responsible and accountable (and liable in Court) for observing the law in the discharge of “functions”.

Section 33 is about the performance report. This section could be improved by stipulating to whom the performance report is to be provided.

Section 33 refers to an assessment of the performance in “carrying out the integration functions for the area of the local authority.” Section 14 states that the role of the “Integration Joint Monitoring Committees” is “monitoring the carrying out of the integration functions for the area of the local authority.”

Section 21 of the Bill explains the effect of delegation. If a body receiving a delegated function assumes all responsibilities and liabilities of that function, then logically the oversight of the carrying out of that function is primarily a matter for the receiving body’s existing governance arrangements.

**Example - A local authority delegates a function to the NHS Board**

| The associated local authority employees are consequently transferred to the NHS Board (Sections 15(1) & 19) |
| The NHS Board (as a result of Section 21) is the body accountable in law (criminal and civil) for matters arising from carrying out the function. |

In the above example, the NHS Board has the corporate governance responsibility to be assured that the function is conducted in line with the principles of internal control, the law, quality standards, safety standards etc. The NHS Board would discharge this responsibility through its primary governance committees, e.g. Staff Governance Committee, Healthcare Governance Committee, and Audit & Risk Committee. With regard to the transferred employees, the Board’s Staff Governance Committee would be responsible for getting assurance (on behalf of the NHS Board) that those employees are being managed in line with employment law and the NHS Scotland Staff Governance Standard.

When the body corporate integration model is not being used, Section 14 of the Bill applies. It defines the role of Integration Joint Monitoring Committees as follows:

“(a) the local authority and the Health Board must jointly establish a committee (an “integration joint monitoring committee”) for the purpose of monitoring the carrying out of the integration functions for the area of the local authority,”

Section 5 of the Bill does not state who will be responsible for the achievement of the national outcomes.
Taking these points together, the following questions should be considered:

- Are councillors (on the joint committees) being given governance duties (assurance) for functions that have been purposely delegated to the NHS Board?
- Is there a risk of duplication of governance oversight between the Integration Joint Monitoring Committees and existing governance arrangements in NHS Boards and local authorities?
- With regard to the National Outcomes, should there be a distinction between “monitoring the carrying out of the integration functions” and monitoring the delivery of national outcomes?

Part 1 of the Bill refers to the delegation of “functions”. Part 2 of the Bill refers to “services”. It would be helpful if the Bill could define these terms, as it is relevant to how integration is progressed.

We do not think that a global delegation of existing portfolios of services and budgets from one organisation to another will be effective. A more refined approach would be to focus only on the functions where their delegation is:

a) Pertinent to the achievement of the policy aims, and
b) The receiving body is actually able to make changes required to the functions in order to achieve the policy objectives.

This approach will require NHS Boards and local authorities to look through what is currently established, and focus on the fundamental nature of the functions being performed. From the perspective of an individual service user, several “functions” will operate so that he or she receives the service required. Some functions may be pertinent to all services.

Examples of possible “functions” are:

- The booking of all appointments
- The handling of all complaints and compliments
- The provision of a clean and equipped hospital and other facilities (to accommodate which could host any clinical services a body may want to deliver there)
- Patient and client transport
- Care and support to individuals with learning disabilities
- Provision of all aspects of care and support to older people (excluding secondary/tertiary clinical care), including the process of managing admission into a hospital when this is required.
- Provision of secondary/tertiary clinical care to older people
- The process to get patients out of hospital once their clinical intervention is complete, to the place they are meant to be.

This approach appears to be consistent with the Integration Planning Principles set out in Section 4 in the Bill.
NHS Boards currently have Community Health Partnerships in place. In Lothian these continue to be run alongside the new shadow Health & Social Care Partnership Boards that have been jointly established to advance the integration agenda. It is likely that the Community Health Partnerships will have an increasingly irrelevant role through the passage of time. It would be helpful if the Bill allowed for local flexibility, to allow for earlier dissolution of the current Community Health Partnerships where this can be agreed locally. This can be assisted if the date of implementation in law or regulation is given as a final date, rather than a given date in which all Community Health Partnerships end at the same time.

5. **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

Although Integration Plans are to be developed and the financial issues require further work there is a clear theme arising. The change from our current models to the future models may incur some transitional costs and this is already recognised within the Financial Memorandum. Thereafter, we consider that there will be a range of synergies generated as currently separate services are managed collectively, and these synergies will support the creation of capacity to meet the further demands on our system from demographic and other changes.

6. **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

The Integration Plans could lead to re-design that should improve the experience of the patient or client, and consequently improve their outcomes. An example would be reducing the number of different people involved in delivery of the person’s care. Integration could lead to the removal of the demarcation of tasks that can develop between professions, people of different grades within the same profession, and people in different organisations.

From the perspective of the patient / client, it is arguably better if they see fewer members of staff, but those members of staff spend more time with them and do more for them. This should improve quality of care, experience and outcomes. We will need to build on where we are now, and to engage with communities of interest and place to achieve better outcome for people, to streamline access to services as they are required (which is often in a crisis situation) and for people and their carers to have a bigger role in working in partnership in the decision making about the care they will receive.

**NHS Lothian**
**13 August 2013**
Public Bodies (Joint Working) (Scotland) Bill

Glasgow City Council

- Do you agree with the general principles of the Bill and its provisions?
The council is supportive of the general principles underpinning the Bill. However, the provisions are in the main very prescriptive. For example, the integration plan, to be approved by Ministers, must outline the model to be adopted, functions that are to be delegated, and the method by which payments are to be made. The question does therefore arise as to whether or not a Partnership has any real control over its plan/approach to integration.

A key feature of the Bill is the demonstrable shift in power in the delivery of local services in local communities away from local government. This necessarily impacts on local accountability within a democratic environment. It is a cornerstone of local government that citizens are able to scrutinise and hold to account decision makers in relation to local public services. The provisions within the Bill that prescribe the role and authority of the Chief Officer and the Partnership Board, the reduced oversight of the parent bodies and the lack of accountable relationship to the community planning partnership undermines this cornerstone.

- To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The policy objectives around integration are principally about improving outcomes for service users/patients. Glasgow City Council’s response to the Scottish Government’s consultation pointed out some fundamental weaknesses in the proposal for integration in being able to deliver these objectives.

For instance, a key issue in the patient/service user overall experience is the disconnect between acute and primary care within the NHS in relation to the patient experience and their outcomes. This is in addition to the disconnect between Health and Local Authorities which the Bill provides for. The draft legislation fails to address the first disconnect. From this perspective it is difficult to see how addressing only one of the key disconnects identified as having a negative impact on the patient/service user experience is likely to achieve the policy objectives and indeed failure to address one of the disconnects may only serve to undermine the changes made under this legislation.

Most patients, when they hear the word ‘health’, as in ‘health and social care integration’, are probably likely to think ‘health’ first of all has something to do with their GP, then something to do with hospitals, and then assuming they have heard of it, the services provided for within a CHP. Because GPs and acute hospital services are not included in the Bill and it is only CHPs that are required to ‘integrate’ with social care, it is difficult to see how a patient lying in a hospital bed can see the service they receive as being ‘integrated from the point of view of recipients’ (s4 (1)(b)(i)).
Current national policy objectives focus on shifting the balance of care from institutional to community based care in order to meet the demographic challenges that Scotland faces in the future. In order for this to be achieved, at the very least, resource needs to shift from acute as well as residential and nursing care; the draft legislation fails to address this.

The Bill does require Partnerships to engage with health professionals, however, this in itself is not sufficient to ensure that GPs for instance will engage effectively given the independent status of that group of professionals.

We know from some of our previous experience of CHCPs in Glasgow that integration works best when GPs and other stakeholders are engaged effectively. Therefore, merely requiring in law that Health and Social Care Partnerships must work with GPs, carers, the voluntary and independent sector within a locality planning framework will not of itself deliver the policy objectives when there is no expectation set out on these stakeholder groups to participate and work collegiately for the greater good.

When one third of total spend on older people's services is on unplanned admissions to hospital, clearly, without effective GP engagement, attempts to keep people in the community as opposed to within a hospital setting will be hindered. It cannot be stressed enough that the inclusion of GPs within the legislation is vital if the overall objectives of the Bill are to be achieved.

- Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

This council is supportive of the policy objectives as stated around improved outcomes, care at home and the effective and efficient use of resources to meet the needs of an increasing number of people with complex needs.

- Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

The general thrust of ministerial powers within the Bill represents a significant shift of power from local to central government. Scottish Ministers have powers at every level of the operation of the Integration Joint Boards. The powers detailed grant Scottish Ministers authority over the structure, membership, functions, financial arrangements, monitoring and staffing arrangements.

Glasgow City Council raised the issue of a centralised, prescriptive approach during the consultation stage. Research has demonstrated that central prescription does not equate to effective partnership working. It is disappointing that this fundamental issue raised by consultees has not been addressed in the drafting of the Bill. The view remains that legislation has a place in relation to joint outcomes, however how these are achieved should be left to local determination.

The Bill would be strengthened by abandoning central prescription and minimising the potential for significant levels of secondary legislation. This
would enable local authorities and Health Boards to develop effective local partnership arrangements which are appropriate to local circumstances.

It is concerning that Scottish Ministers may refuse to approve (s 7(3)) an integration plan presented by a Health Board and a Local Authority following a likely considerable period of time jointly working to develop and reach agreement.

It is also concerning that Scottish Ministers may if they ‘think fit’ make provision as to the appointment of staff, numbers of staff, terms and conditions (s11 (2)) as this has the potential to contradict the strategic direction of travel developed either within the broader Partnership or the locality planning groups.

It is not reassuring that the Bill also proposes that Scottish Ministers would have the power to instigate the transfer of staff, property, rights, liabilities or obligations away from a local authority or Health Board (s12 (3)). This only serves to reinforce the perspective that the Bill is a concerted move away from local democratic accountability.

Practical and technical issues around e.g. VAT and confusing staffing arrangements have not been addressed in the drafting of the Bill. As it is laid out, the Bill creates concern around the impact on workforce planning especially given the potential for direction to be subsequently provided by way of secondary legislation in relation to staffing.

Finally, the Bill fails to make any connection with the recently passed Self Directed Support Act and as such it is difficult to see how these two very different pieces of legislation impacting on the delivery of services to the adult population will work alongside each other. The Bill would be strengthened by making this connection and also by giving an indication as to how self directed support will impact on the NHS functions of a Partnership within a local area.

- **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

  It is difficult to quantify efficiencies and benefits arising from the integration plans. This is not to say that closer joint work will not be beneficial, rather that we are integrating a system that we know is already stretched and which demographic projections, as well as the current economic climate, indicate will lead to continued pressure.

  The Financial memorandum suggests efficiencies of between £138-£157M within hospitals as a consequence of a positive impact of improved anticipatory care and reduction in delayed discharges. However, as indicated above, there is no expectation that this will be a cashable saving that would then be redirected within the Partnership Board into alternative community provision thereby enabling the achievement of the policy objectives.
The cashable efficiencies that will be realised from integration therefore are likely to be around the margins only, albeit effective joint work does have the potential to ensure we are utilising joint resources to best effect.

The cost implications of delivering an integrated service outlined in the Bill also do not appear to be realistic. We know from experience that integration costs money.

Glasgow City Council in its response to the consultation intimated that there is a risk that the legislation will lead to the fracture of social work services with some (adults) being ‘in’ and others (children and families; criminal justice) remaining ‘out’ certainly at the outset and in some areas potentially long term.

This necessarily increases risk to vulnerable children in complex family situations where the adults in the family may be in receipt of social work services in relation to addictions or mental health provided through the body corporate or delegated model, to all intents and purposes by a separate organisation. Clearly, there would be an expectation of effective multi agency working but such a fracture must only mean that the efforts required to achieve this is increased because of the creation of a separate delivery model. This cannot be the most efficient use of precious resource.

Furthermore, the Council across all of its Departments has been able to establish significant efficiencies in the delivery of aspects of shared ‘back office’ provision in recent years in relation to ICT; human resources; payroll and customer services; office accommodation; health and safety and so on. Scale has enabled this to be achieved.

Integration of the adult social work services with health in a separate entity is likely to see the fracture of such back office provision as the Partnership Board makes alternative arrangements and this necessarily reduces the scale of what remains within the council and therefore may impact negatively on the associated efficiency that has been achieved.

In other words the unit cost for continuing the provision of the remaining back office services in the parent organisation is only likely to increase.

Alongside this, in the event of integration of adult services only, alternative systems and infrastructures will require to be developed in order to ensure the council’s statutory duties in relation to what remains (children and families; criminal justice etc) are adequately resourced and managed.

The corollary of this of course is that all services are ‘in’ from the outset. Glasgow City Council has consistently raised concerns about the scale of operation that this would entail equating to an organisation with limited democratic accountabilities with a publicly funded budget of c£1.2b. This is not to say that such an eventuality cannot be considered, but there would be an expectation that significant safeguards and accountabilities beyond what is outlined in the draft legislation are put in place beforehand.

- What effect do you anticipate integration plans will have on outcomes for those receiving services?
The development of joint outcomes for health and social care does have scope to improve outcomes for those receiving services. This council is in agreement with the principle around ensuring that health and social care services should be seamless from the perspective of those receiving them.

Currently, we know that there is scope for improvement in this regard and it is the practical development of joint arrangements to improve the experience of the service user that we want to focus on.

We remain concerned that the imposition of structural reform from above will only create more upheaval in this realm, risking scattering this vital focus.

We know that genuine, practical, and practicable integration must be built from the ground up, and that imposed structures, lacking in local accountability, impede rather than hasten improved outcomes for our citizens.

Glasgow City Council
15 August 2013
Public Bodies (Joint Working) (Scotland) Bill

The Housing Coordinating Group

1 Introduction

1.1 The Housing Coordinating Group (HCG) welcomes this opportunity to contribute to the Committee’s stage 1 scrutiny of the Public Bodies (Joint Working) Scotland Bill.

1.2 The HCG consists of the Association of Local Authority Chief Housing Officers (ALACHO); the Chartered Institute of Housing in Scotland; the Scottish Federation of Housing Associations (SFHA); Glasgow and West of Scotland Forum of Housing Associations (GWSF); the Housing Support Enabling Unit (HSEU); and Care and Repair Scotland. Thus, this evidence comes from representative bodies of strategic housing authorities, social housing providers (councils, housing associations and co-operatives), the housing profession, and many third sector providers particularly Care and Repair services. To reflect our common views, in this response we use the collective term “the housing sector”.

1.3 Together we make a very significant contribution to national outcomes on health and well-being by:

- Co-ordinated strategic planning of the supply and quality of housing and related services across tenures and stages of life;
- Providing individuals with information and advice on housing options;
- Directly providing or facilitating, ‘fit for purpose’ housing for rent and for sale / part sale, that gives people choice and a suitable home environment;
- Providing local, personal, preventative services such as aids and adaptations, and care and repair or “handyperson” schemes;
- Building capacity in local communities.

This paper sets out a response to each of the committee’s questions.

1.4 In summary, the housing sector supports the principles of integration for improved outcomes set out in the Bill and understands the need for legislation to promote joint working to pursue these principles. The success of the new ‘integrated authorities’ will largely depend on effective joint strategic commissioning to which the housing sector can make a crucial contribution. The current arrangements for involving the housing sector have not produced a consistent nor adequate approach and the Bill, as it stands, could result in an ‘integrated authority’ deciding not to involve the housing sector as a partner. To ensure that

---

1 The Joint Improvement Team has provided support and assistance to the Housing Coordinating Group
housing issues, and the housing sector, form an integral part of contributing to the delivery of national outcomes, the HCG urges that the contribution of the housing sector be recognised within the legislation, urging the new ‘integrated authorities’ to involve their strategic housing partners.

2 Do you agree with the general principles of the Bill and its provisions?

2.1 The HCG agrees with the planning and delivery principles as set out in the Bill (sections 4 and 25). These are in line with those originally set out in the consultation document and have gained the support of housing professionals across the sector. In promoting integrated services, the principles include taking account of the personal experience of individuals in terms of their improved wellbeing. We believe this focus on personal outcomes to be important. However we have concerns that quality of services is not mentioned and we feel that the principles would be strengthened with heightened focus on involving people in decisions about their care and support.

2.2 The principles also emphasise the anticipation and prevention of need. Housing providers offer varying levels of care and or / support to vulnerable adults and older people, and have long been committed to working with colleagues in health and social care to enable people to continue living in the community rather than institutional settings. There are examples where this has happened already and the Bill could promote this approach more widely across the country. The housing sector has much to contribute to this agenda.

2.3 The policy memorandum (para 9) states, and we agree, that an aim of the legislation is to deal with the variations in quality across the country. The forthcoming review of National Care Standards provides a significant opportunity to explore the scope to align regulatory standards with the principles of the Bill and the associated national outcomes being currently being developed.

2.4 The Bill sets out a requirement on local authorities and health boards to set up new integrated authorities’ but leaves it to local areas to decide whether and how to involve the housing sector. The possibility that any ‘integrated authority’ could lack the involvement of the housing sector at a strategic level is of some concern. Whilst the need to maintain a focus on housing issues in order to achieve the outcomes of integration has been acknowledged this cannot be achieved without proper engagement with the housing sector in both planning and delivery.
3 To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

3.1 The success of the new partnerships will largely depend on effective joint strategic commissioning plans (JSCP). It has already been acknowledged that housing plays a part in effective planning and Housing Contribution Statements (HCS) were introduced in 2012/13 as a way of highlighting the potential housing contribution to existing JSCPs. This first round of HCSs has been reviewed by the Joint Improvement Team and various issues have been highlighted. Whilst we acknowledge the challenge that local partnerships faced in developing and agreeing HCSs within a short timescale we nevertheless think it important to take the opportunity to learn lessons from the exercise.

3.2 The review found that although HCSs were submitted with partnerships’ JSCPs, only a minority actually integrated issues around improving housing and housing related services into the body of the JSCP. There was a tendency for the HCS to appear as a “bolt on”. HCS could be the key mechanism for linking Local Housing Strategies with JSCPs, and will be vital for the housing sector to play a strategic role in meeting the national outcomes associated with integration of health and social care. The housing dimension of integrated planning needs to be dealt with within the JSCP rather than sitting on the margins. In other words, we believe the best place for housing to demonstrate its actual and potential contribution to improving outcomes for people within the health and social care system is through proper integration of housing issues within JSCPs.

3.3 To further the integration of housing issues in JSCPs there needs to be a shared understanding of data relating to housing, health and social care, and a shared commitment to producing meaningful information from such datasets for planning purposes. We note that a review of the guidance relating to Housing Need and Demand Assessment (HNDAS) is currently underway. This will consider explicitly improvements needed to aid our collective understanding of the housing needs of vulnerable groups such as older people and those with particular needs, and we propose that revised HNDAS be regarded as part of the toolkit required for JSCPs.

3.4 Together with ALACHO and SFHA, the JIT is currently surveying the sector to extend understanding of the housing sector’s experience of the first round of HCS. The review of HCSs submitted in March 2013 identified that these tended to consider housing with care and adaptations, but there was concern about a lack of focus on housing advice, lower level housing support services and other housing related services. The sector, working with the Scottish Government will use the

---

2 Housing Need and Demand Assessments are undertaken to assess local housing need and demand to inform the development of local housing strategies and development plans.
information obtained to provide feedback and advice to practitioners across the housing health and social care sectors on how the housing contribution to JSCPs might be improved.

3.5 Housing planning and housing services already play a fundamental role in providing ‘homes or a homely setting’ for those using health and social care services particularly as people face long term conditions.

3.6 The Bill sets out integration across all adult age groups rather than simply older adults and this seems appropriate given the experience of housing providers in deprived areas where the onset of long term conditions tends to happen at a lower age. We note, however, that much of the Bill continues to focus solely on the needs of older people and suggest this should be addressed if the principles set out in the Bill are to be pursued effectively.

4 Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

4.1 A central policy objective of the Bill is to provide ‘joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so’. The requirement that integration authorities share a budget and that they develop JSCPs mark a real step change from previous aspirations about joint working and are key strengths of the Bill. The housing sector, as stated already, has much to contribute to the overall policy objective but its role and contribution needs to be strengthened, as set out below.

4.2 The development of a set of national outcomes will be fundamental in pursuing this objective and we look forward to further opportunities to reflect on the way housing related issues are reflected in the national outcomes and indicators.

5 Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

5.1 Effective leadership at a local level will be crucial if the required change is to be implemented. The role of social landlords as a community anchor at a local level could be fundamental to helping to link leaders within public bodies with local people and leaders in the voluntary sector and in community based organisations. The Bill could be strengthened by requiring integration authorities to work with housing and the third sector as partners rather than simply adhering to principles to engage with ‘community and local professionals’. As a comparison, there is currently in place a requirement that Reshaping Care for Older People Change Fund plans are signed off by four signatories: the NHS Board, the local authority, the third sector and the private sector. We would urge that the housing sector more generally be acknowledged as a signatory for future integration plans in addition to the third sector.

5.2 There is a lack of clarity about the elements of funding which will go into integrated budgets and the extent to which local authority budgets
currently directed at housing related services, such as housing support for homeless people, will be expected to be part of this. If each integration authority is left to decide this there is a risk that the financial context within which housing related services operate will become increasingly complex, to the detriment of the individuals who currently benefit from such services, with an increased risk that the policy objectives set out in the Bill will not be achieved.

5.3 Social landlords and many of the individuals they serve are already dealing with financial uncertainty resulting from welfare reform. It will be important that the financial arrangements introduced under the Bill do not destabilise housing related services further.

6. **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

6.1 The main efficiencies and benefits potentially arising from integration plans are likely to be improved living conditions for our tenants and residents rather than benefits accruing directly to housing organisations themselves. There is increasing recognition of the preventative benefits of housing investment such as keeping people safe at home longer through the timely provision of appropriate housing adaptations, or the reduction of respiratory illness through efficient modern central heating systems. The housing sector argues for an “investment dividend” arising from an established link between housing investment and a consequential reduction in other more expensive forms of provision such as hospital treatment or long term stays in care homes. As stated above, housing has much to contribute to achieving the objectives of integration but its contribution would be put on a more secure footing through a continued commitment to the HCS and through Community Planning Partnership arrangements to ensure that housing issues and housing sector are properly tied in with JSCPs and the delivery of the national outcomes being developed – the first 3 of which are particularly pertinent to housing: Healthier Living; Independent Living and Positive Experiences and Outcomes.

6.2 There are efficiencies and benefits to be had for the housing sector to work with integrated authorities rather than separately with social care and health. Conversely, it is important that integrated authorities work with the housing sector otherwise the opportunity joint working presents will be lost in some areas. One way to ensure that this joint working occurs is to require the new partnerships engage formally with the strategic function of housing in local authorities and delivery of housing more generally. This is too important to leave to chance.

7 **What effects do you anticipate integration plans will have on outcomes for those receiving services?**

7.1 See our response at Para 6.1 above. Members of the HCG are enthusiastic about the principles set out in the Bill. If the principles are to be pursued effectively and reflected in national outcomes, the integration of public bodies serves merely as a means to an end and
must not be regarded as the end in itself. The development of a set of indicators will be important in helping to chart progress but there needs to be accountability at a local level for improvement otherwise there is a danger that the outcomes and indicators will become little more than a reporting exercise.

7.2 The policy memorandum, which suggests (paras 98 onwards) that the scope of Bill should extend to adults of all ages, creates an opportunity to offer more consistent approaches to people with similar conditions or situations irrespective of their age. This may particularly assist those living in areas of deprivation, especially those with long term conditions, who are likely to face poorer health outcomes.

7.3 The Bill requires an integration authority to consult with service users where it decides to change the arrangements for carrying out of integration functions. Consultation is required where an authority wants to make changes ‘significantly affecting provision of service in an area’. This could be interpreted to include large tendering exercises, in which case this new duty might provide a means of ensuring that there is a process of consultation with service users in relation to such exercises. This is to be welcomed in order to achieve better outcomes for those using services.

The Housing Coordinating Group
16 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Association of Directors of Social Work

Background

ADSW is pleased to submit written evidence on the above Bill to the committee and is happy to provide evidence orally when that is appropriate.

ADSW is supportive of the integration of social care and health in order to improve outcomes for the people who use our services. People who depend on our services should have seamless care, no matter who delivers, manages or pays for that care. Many local authorities and their health partners are already working in integrated ways or have some or all or their services integrated.

ADSW has been working with government to ensure the legislation is focused on achieving those outcomes. In 2011, we commissioned the Institute of Research in Social Services to carry out research on our behalf, to help establish the evidence base on the factors essential for health and social care integration to deliver the outcomes for people that matter most.

In 2013 ADSW has led collaboration with our partner organisations in England, Wales, Northern Ireland to produce a paper on best practice when seeking to integrate health and social services, based on extensive evidence. This work, though not yet finalised informs our position.

Summary of response

The Bill is more prescriptive than we anticipated and is very mechanistic about the steps expected to be taken by local authorities and NHS Boards to achieve integrated services. The Bill ascribes extensive powers to Ministers that had not previously featured in the consultation document. ADSW is firmly of the view that these cover areas that are a matter for local determination and reasons for this are covered later in this response.

ADSW welcomes the specific inclusion of the Chief Social Work Officer in paragraph 115 of the Policy Memorandum and in particular the “firm reassurance of the Scottish Government’s commitment to the role of the Chief Social Work Officer role.”

We welcome the Bill’s focus on outcomes and support the concept of a national outcomes framework – the development of which must be based on a parity of respect and a shared responsibility for its development. However, we are of the view that the requirement for partnerships to adopt one of two models reduces the ability of those with the best local knowledge to plan according to local need. Our reasons for this are covered within this response.
It is also notable that the principles of quality and safety in health and care services are not included in the key principles of the Bill. We have had sight of the Royal College of Nursing response and would agree with the position stated that the Bill itself is focused too heavily towards resolving difficulties in delivering seamless care, and too lightly towards ensuring robust assurances of care quality and safety.

The Bill has the potential to fragment high profile professional activities- for example those associated with public protection. The creation of different organisational arrangements across services may actually disintegrate services that are already successfully integrated. Adult services that focus on mental health, addiction and criminal justice, for example, are a crucial part of the whole system that works to create the best environment for children to grow up in. Scotland’s children need responsible adults to thrive. We need to ‘Get it Right’ across the whole system-achieving a sophistication in policy development that reflects this shared responsibility. The Bill provides Scotland with the opportunity to build upon the Francis Report by embedding effective, safe, dignified care at the heart of this legislative reform. This is covered further within the response.

The importance of ensuring the acute dimension of health is appropriately represented in new partnership arrangements cannot be underestimated. This is covered in more detail within the response.

These are crucial components to ensuring that people get the care and services they need and want. They should guide all aspects of the Bill and ADSW believe that the committee should consider amending the Bill to incorporate these principles.

ADSW would support an amendment at Stage 2 to address this matter. The Bill should also ensure that the duties of the Self-Directed Support (Scotland) Act are extended to relevant parts of the NHS through an amendment to this Bill, as the two positions are incompatible.

**Specific questions**

Your committee has asked us to focus our response around 6 questions. Our answers are detailed below.

1. **Do you agree with the general principles of the Bill and its provisions?**

   ADSW agrees with the general principles of the Bill and its provisions. However, we have concerns about the powers Ministers are granting to themselves to intervene in the management of services when they perceive that services are not delivering effectively. The Bill ascribes extensive powers to Ministers that had not previously featured in the consultation document- for example
   - powers to transfer local authority functions without recourse to primary legislation
Ministers may, by order, make other provisions (e.g. membership of integration joint boards).

ADSW is firmly of the view that these are a matter for local determination. Managerial arrangements for partnerships are a local, not government concern; integration plans are for local agreement not government approval. Best outcomes will be achieved through the application of local knowledge and skill and through engagement with communities.

ADSW’s 2013 study into the critical factors for successful integration based on best research and practice knowledge from the four UK nations shows that there is no one solution for successful integration and that good practice cannot be centrally mandated-

“the main factors that promoted integrated working were locally determined- local leadership, vision, strategy and commitment” (NHS Confed.; 2010)

Central level input is shown in the study to be most successful when focused on developing a coherent legislative and policy context – on rationalising multiple regulatory frameworks, financial reporting and performance regimes – and without which no momentum for change could be sustained. It is essential that governance arrangements at all levels, as well as operational practices, reflect best knowledge in order to achieve best outcomes.

There is evidence of significant progress across partnerships in delivery of quality integrated services. Partnerships have worked closely together, supported by the older people’s Change Fund, to develop enhanced, flexible and joined up services in the community to support proven reductions in delayed discharges and unplanned admissions. We appreciate that there need to be accountability on partnerships for achieving the intended outcomes within the Bill, but the inclusion of what is essentially a power for Ministers to remove functions from local government seems to anticipate failure from the outset.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

Much of the detail of the Bill is being left to regulation and guidance. We await these documents to in order to be able to comment meaningfully on the details proposed.

The most important issue that is still to be clarified is the proportion of the acute NHS hospital inpatient budgets that should be included in the partnership arrangements as a minimum. The scope and extent of the budget made available across adult community care, primary care and acute care will determine how creative the total system can be in responding to local priorities, and whether the objectives of the Bill can be met.
The Scottish Government clearly stated the case for change in its 2012 consultation paper. Health and social care integration was necessary to address the “two key disconnects” within the system:

The first disconnect is found within the NHS, between primary care (GPs, community nurses, allied health professionals etc.) and secondary care (hospitals). The second disconnect is between health and social care. (para 1.2)

Addressing these disconnects would allow the balance of care to shift from institutional care to services provided in the community, and resources to follow people’s needs (para 1.8). This would support more preventative strategies based on “assessment, treatment, rehabilitation and support in the community” (para 1.10) – a strategic change now made urgent by the ageing of the population and by increasing numbers of people with long term conditions or disabilities.

The most recent ISD “Integrated Resources Framework” information on the balance of care for older people (we do not yet have this for all adults) is shown below – hospitals and care homes account for nearly 60% of spend, and nearly 31% of all health and social care spend is on acute emergency admissions (£1.4 billion):

For the integration vision to be achieved, health and social care partnerships need to unlock the budgets currently funding inpatient admissions. They would do this by having control over a significant proportion of inpatient budgets – focussing on specialities with high rates of emergency admissions.
– which in the short term would be returned to hospitals to manage current bed capacity, but in the medium to longer term would be used to take beds out of the system to fund the expansion of preventative and community based health and social care services. This would be achieved by joint strategic commissioning which would specify the hospital and community based services needed over the forward planning period to deliver better outcomes for public expenditure on health and social care.

There are three potential problems with this delivery model, all with potential solutions:

- First, funding. If successful, the model will reduce future demand for inpatient care but is unlikely to eliminate the need for more funding to address increased demand due to demographic change. Change funding is also needed to cover double running costs enable the expansion of community health and social care that is necessary to provide less expensive alternatives to inpatient admission. Unless demographic and change funding continues, these shifts in the balance of care will be difficult to make on the scale required.

- Secondly, many hospital catchments cover several local authority areas. Transferring relevant parts of hospital budgets between different health and social partnerships carries risks of destabilising hospital management. ADSW believes that these risks can be managed but that further work is required on mitigation measures as a matter of some urgency.

- Thirdly, there are issues of power. Health Boards are reluctant to lose control over in-patient budgets, and local authorities have analogous concerns about loss of control over social care. Within the medical profession “acute specialties often have the loudest voice”. These are serious challenges that the national and local work underway on governance and cultural change needs to address.

While these three problems are all challenging, ADSW believes that they can be resolved, given political will and leadership. The acid test will be the quantum of acute budgets transferred to partnerships. ADSW believes that there is general agreement that all or most mental health and learning disability inpatient budgets, and those for non-obstetric GP beds, and any other continuing care or community hospital beds, should transfer to health and social care partnerships. In 2009-10, all of general psychiatry, psychiatry of old age, learning disability, and non-obstetric GP beds, accounted for adult

---

spend of around £621 million, or about 18% of total inpatient spend on adults (aged 15+ for this illustrative modelling).

At the time of writing there is less agreement about the budgets for other inpatient specialisms. However, if we are serious about the resource following the person, and establishing commissioning budgets genuinely capable of reducing emergency admissions and shifting the balance of care, then our focus needs to be on redesigning the emergency care pathway. This would mean transferring inpatient budgets for range of acute and other inpatient resources including: front door (accident and emergency), general medicine and receiving services, and those specialisms which are mainly emergency-driven: such as medicine of the elderly, rehabilitation medicine, and palliative medicine – all of which currently spend more than 70% of their annual budgets on unplanned admissions. Their combined spend on adults in 2009-10 was just under £1 billion. With the £621 million mentioned earlier, the combined budgets of £1.6 billion amount to 46% of the total inpatient spend but 64% of expenditure on emergency inpatient admissions. (In time, there is also a case for further extending the commissioning budgets to include other specialism such as respiratory medicine, renal medicine and cardiology, which also currently spend more than 70% of their annual budgets on unplanned admissions).

The Scottish Government is currently preparing guidance on this issue. We are extremely concerned that this may set the minimum inpatient budgets to be transferred to Partnerships at too low a level to deliver the step change required. Without control over a significant proportion of inpatient budgets, the new Health and Social Care Partnerships will not be able to commission the changes to the whole system of care that are necessary to achieve the vision for integration; by itself “joint strategic planning”, without responsible power over budgets, will prove to be insufficient.

This is now the most important policy issue concerning health and social care integration.

3. **Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths**

The Bill builds on the impact of the older people’s change fund and together they provide the impetus for productive change. Research evidence and practical experience across the UK suggests there are four critical factors for successful integration-

- A clearly articulated and widely shared vision of ‘why, how and for what benefits?’
- A medium to long term financial strategy that is realistic about costs
- Flexible organisational arrangements that support a common purpose
- Attention to matters of culture through leadership

The Bill and its underpinning principles have presented Scotland with an opportunity to consider our ambitions for the public now and in the future and reflect upon current practices and their fit for purpose. ADSW is determined
to make a real and positive contribution to delivering this change and focus attention on these four key factors.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

The proposals for the integration of adult social care and health, and those in the Children’s Bill for the integration of children’s health and social care, should not result in a disconnect between adult services on which children depend for their safety and wellbeing. Where children are at risk, it is primarily from the actions or inactions of their adult carers. Children, therefore, depend as much on adult services for their safety, as on services targeted directly at them as children. The integration agenda is an ideal opportunity for services to bridge the gap between adult and children’s services, both within and across agencies. Legislation should support this effective integration, and not create additional boundaries, either strategic or operational, which then have to be managed.

Although the Bill seeks to create seamless services, there is still the issue of self-directed support to be resolved. The Parliament rejected amendments to the Self-Directed Support Bill, which would have extended it to appropriate health services. We need to find a way of avoiding confusion amongst professionals and the public and ensure that these two very positive pieces of legislation benefit people as much as possible.

The Bill leaves many important details to regulation, on which we are unable to comment at this stage.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

There is the potential for efficiencies to be gleaned from joint budgets, joint planning and joint commissioning, but the Bill itself focuses very much on the mechanistic arrangements to join services. Progress against nationally agreed outcomes and joint performance management frameworks will show progress in due course. The real benefits however will be in streamlining processes, having a more joined up approach, joint ownership of issues and a shared change agenda.

The Financial Memorandum, published alongside the Bill, provides estimates of the savings that integration may deliver:

The Bill will enable Health Boards and local authorities to plan and deliver holistic integrated health and social care services and to improve efficiency in allocation and utilisation of their joint resources. In summary, it is estimated that the potential efficiencies for partnerships from the combined effect of Anticipatory Care Plans, reducing Delayed Discharge and reducing variation, to be between £138m and £157m. These potential efficiencies should be considered in the context of the scale of the projected increase in expenditure attributable to demographic change, noted in paragraph 17, and will need to be
reinvested within the partnerships in order to help meet demand. (FM para 34).

ADSW welcomes this acknowledgement that any savings require to be reinvested. The FM refers in paragraph 17 to demographic projections of the increasing numbers of older people in Scotland but does not give data on costs. That can be found on page 5 of the Final Business and Regulatory Impact Assessment (BRIA) published\(^2\) by the Scottish Government alongside the Bill:

The challenge for health and social care services is seen in projections for demographic change in terms both of the expected growth in the older population and in terms of rising costs for health and social care for all ages. Over the next 20 years health and social care costs in Scotland are expected to rise by a total of £2.5 billion, so that by 2031 total annual costs will exceed today’s by £2.5 billion, at today’s prices.

The figure of £2.5 billion is 16 to 18 times larger than the savings estimates of between £138m and £157m contained in the FM.

Even so, ADSW believes that the Financial Memorandum savings estimates are problematic. The anticipatory care savings of £12m per year are modest and are based on grossing up a small pilot project\(^3\) in Nairn (para 29). Anticipatory care planning\(^4\) is used to support people living with a long term condition to plan for an expected change in health or social status. It also incorporates health improvement and staying well. Completion of a common document called an anticipatory care plan is suggested for both long term conditions and in palliative care. The results of the Nairn pilot were encouraging, but grossing up potential savings to Scotland from a study of 96 patients receiving ACP in Nairn is bound to involve a wide margin of error.

**Delayed discharge**: Chart 1 at paragraph 25 of the FM shows a dramatic fall in the number of people in hospital whose discharge is delayed from over 3,000 in early 2002 to under 500 in April 2008, since when numbers have fluctuated. The FM acknowledges that “progress has been more difficult in recent years” but does not explain why. The Final BRIA identifies “Savings from reduced cost shunting e.g. reduced delayed discharges” as one of the benefits of integration (also mentioned at para 159 of the Policy Memorandum). Certainly for some individuals with high cost care needs there are difficulties in securing the joint NHS and council funding to support timely discharge from hospital; however, such “cost shunting” cases are not sufficiently numerous to explain the difficulty in making further progress to

\(^2\) Final Business and Regulatory Impact Assessment (May 2013), available at: [http://www.scotland.gov.uk/Publications/2013/05/3959](http://www.scotland.gov.uk/Publications/2013/05/3959)

reduce delayed discharges. Data from Edinburgh, for example, suggests other causes: an 5.4% increase in home care hours in 2012-13, compared to the previous year, still left delayed discharge numbers at much the same levels. As more people are discharged, their beds are filled with new admissions who in turn become delayed.

The FM states that delayed discharge can be reduced by “by reallocating expenditure from hospital to community based health and social care to facilitate timely departure from hospital and provide alternatives to admission to hospital”. If no-one waited for more than 14 days £22m per year could be saved, increasing to £41m if no-one waited for more than 72 hours (paragraph 27). These calculations are based on the cost differences between inpatient beds and a weighted average of residential and home-based care. However, unless longer term investment capable of reducing future admission to hospital is increased, these savings are unlikely to be realised. The goal must be to ensure that GPs can get direct access to services or resources to care for someone at home as easily as it is currently to admit someone to a hospital or care home. In turn this requires that all GPs know about the services and resources available in Partnerships, and know that using them will deliver better outcomes for their patients.

The £104m savings modelled in the FM from “reducing variation” in health spend per weighted population down to the average are even less convincing. The statement that “For healthcare, the variation cannot be explained by differences in need across partnership populations or in input costs and may be due to inefficiencies” (para 30) assumes that populations weighted by the “NRAC” resource allocation variables adequately reflect all spending needs – a bold claim for any resource allocation formula, however good. Moreover annual health board budget allocations still reflect the phased changes from the previous “Arbuthnot” allocation formula to the current National Resources Allocation Committee (NRAC) formulae. So variation in NRAC standardised spend per head could reflect imperfections in the measures of need, transitional allocations, or externalities such as council spend (acknowledged in para 30), levels of unpaid care, inputs by of the third sector, etc.

Finally, depending on how the Scottish Government deals with the issue of acute inpatient budgets, discussed earlier, health and social care integration, together with the wide range of prevention work-streams and more concerted action on health inequalities, could do much to reduce the financial impact of increasing numbers of older people and people of all ages with disabilities and long term conditions. However, these policies are most unlikely to reduce the fiscal impacts of demography to zero. If GDP growth rates returned to their 30-year pre-austerity average, then the full cost of additional services required by 2030 would be affordable, provided there was appropriate political leadership and sufficient societal support for increased spending on care. If the long boom is past, then tougher choices are inevitable. Either way, ADSW believes that a wider review of future options for the resourcing of health and care is required in Scotland, similar in scope (but not necessarily in outcome) to reviews undertaken in England by Derek Wanless, Andrew Dilnot and others.
It is acknowledged that the financial memorandum to the Public Bodies Bill is focussed on ‘adult’ care and health budgets and costs. The comments from ADSW therefore centre on resources associated with adults and older people. The association would however wish to underline that these budgets and costs do not exist in isolation and in particular there are very similar cost pressures with local authority Children’s Services. In social work services (and in education services) these demand led cost pressures are considerable and are driven by issues such as the 16,200 children who are looked after, the largest number for 30 years. ADSW would submit that any consideration of ‘adult’ budgets experiences in children’s services and the impact that this can have on the whole social care and health system and this is not referred to in the memorandum.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

As previously stated, ADSW welcomes the focus on outcomes and we will be keen to monitor effectiveness in terms of achievement of the national outcomes. However, we are of the view that a requirement for partnerships to adopt one of two models reduces their ability to make best, locally sensitive decisions. Partnerships should be responsible and accountable for the outcomes associated with integration. Either model has the potential to destabilise existing, effective arrangements across high profile services. They may increase risk to vulnerable groups/ be counter-productive to joint working. Best outcomes will not be possible unless services are provided in a coherent, rational manner.

A fundamental issue in improving outcomes is the long term sustainability of funding social care in the context of major reductions in local authority budgets and the need to protect best NHS practice. The role of the acute sector is central to the achievement of outcomes and we must ensure that it is appropriately represented in new partnership arrangements.

To develop sustainable change that delivers best outcomes for individuals, we need to commit to an appropriate scale and pace of change. Evidence shows that success depends upon effective change planning for a 5 year period (see Ham, C 2010) and requires the financial and wider resource cost of change and of changed practices to be recognised.

Without due recognition of the activities that are required to create an environment where integration can flourish, best individual outcomes will not be sustained. For example, investments are needed in new innovation before funds are released from traditional models of practice; there requires to be a concurrent focus on self directed approaches within an integrated environment; we need to establish clear responsibilities for market development to ensure the correct supply of appropriate adult care services within a plural market; develop joint financial governance frameworks and joint strategic commissioning plans as well as integrated budgets.

Culture is an essential factor – we must develop a persuasive vision for staff and the public through good leadership.
“Rhetoric must be mirrored by collaborative leadership practice in action, as without this the sustainability of change aimed at improved outcomes will be severely limited” (Bardsley et al; June 2013)

Essentially, we must base integrated work on outcomes defined by service users not targets. National outcomes need to be defined by the views of service users -

“defining outcomes that matter to service users and carers is important...(they)...may differ from policy and [practice imperatives but are a crucial aspect of understanding the effectiveness of joint or integrated services” (Cameron et al:2012)

Good, cost effective outcomes are those built around individuals using approaches that maintain local determination.

Association of Directors of Social Work
16 August 2013
Q1. Do you agree with the general principles of the Bill and its provisions?

In general, Alliance Boots supports the Scottish Government’s vision for integrating health and social care services. The structural changes within health and social care organisations contained within the Bill will help but they will not, by themselves, achieve a shared culture or integrated delivery of services from a patient perspective.

This Bill is mainly enabling legislation and there is a lack of detail about how the principles of integration will be applied in practice.

The Government also needs to place greater emphasis on promoting healthy lifestyles and preventative public health and screening services. Without this, it will merely store up problems that will be more expensive for health and social care services to deal with in the long term.

Community pharmacies sit at a nexus between health and social care. Many of our customers will be receiving support from both services. Pharmacies also have extensive contact with formal and informal carers, and many pharmacies make deliveries to patients, providing a regular point of contact with NHS services.

We expect community pharmacy representatives to be consulted at all stages in the design, development and implementation of local plans, allowing our awareness of patients’ needs across the spectrum of health and social care to be incorporated into the integration process.

Q2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

In our submission to the Scottish Government’s consultation on “The integration of adult health and social care” last year, we said that the proposed structural approach was complex, difficult for patients and outsiders to grasp and did not set out clear lines of accountability. The approach in the Bill does little to address this.

Health Boards and Local Authorities could end up working in a complex matrix of partnerships and delegated authority, potentially diluting the “joined up thinking” approach that the Government is seeking to achieve. Ministers need to explain how this will solve rather than create problems locally.

As mentioned above, there is a significant lack of detail on the face of the Government’s Bill, with much to be decided by Ministers or included in secondary legislation (as yet to be written). Therefore, it is difficult to predict with any certainty the extent to which the Bill will produce a more unified service, as experienced by patients and providers.
Q3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

We believe that the creation of “national health and wellbeing outcomes” could be a key strength, as long as these are clear, pragmatic and achievable in the medium to long term.

In England, the creation of overlapping NHS, Public Health and Social Care Outcomes Frameworks is giving greater recognition and clarity to the shared responsibilities that each sector has for improving patients’ wellbeing. We hope that the Scottish Government will also be able to create a similar set of shared outcomes for organisations to achieve.

Q4. Please provide details of any areas in which you feel that the Bill’s provisions could be strengthened.

We believe that there should be more explicit recognition of the need for clinical professionals (including pharmacists) to be represented on new bodies and fully involved in the planning of services, as was the case with Health and Social Care Partnerships. This should include representation from those working in a variety of sectors and locations across the pharmacy profession.

The Scottish Government has commissioned a review of NHS pharmaceutical care of patients in the community from Dr Hamish Wilson and Professor Nick Barber (known as the Wilson review). This is due to report to Ministers shortly. We would like the Committee to consider any implications for the planning of integrated health and social care services that might arise from the review, once it is made public.

On a wider note, the Bill specifies [Part 1, Section 1] that where there is one Health Board and one Local Authority in a co-terminous locality, then they have four approaches for developing an integration plan, ranging from a joint board to various permutations of delegated authority. The Bill should be clear about what approaches are available where a Health Board shares its boundaries with multiple local authorities.

Q5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As stated under Q2 (above), without seeing the detail of how such plans will be put together, what they will contain and how they will be delivered, it is difficult to quantify any potential benefits at this stage.

We re-iterate our concerns that having a multitude of approaches to arranging local service provision will increase costs for organisations operating nationally.

Pharmacies are located at the heart of the communities they serve and are able to reach those who are currently well, not just those who are ill. Pharmacies are already making a huge contribution to health and public health. They can do more with the right resource and support. We want to see
integration plans that recognise this and which combine national standards and outcome measures with local flexibility and innovation.

Pharmacies can support patients at all stages of health and care. Public health services make interventions that reduce current and future burdens on the NHS. Support for patients who are taking medicines for long-term conditions enables them to get the best outcomes, reducing demand on other parts of the health system. Variations in adherence to medicines can be a pointer to wider health or social care issues and early interventions can prevent unnecessary hospital admissions.

Pharmacists’ knowledge of medicines helps identify issues related to medicines taking, including adherence and side effects, which could have consequences for social care, such as falls. Pharmacies support patients and their carers to ensure medicines are taken safely and appropriately, avoiding waste and adverse incidents.

Q6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integration plans will not by themselves improve outcomes. Instead, they set the direction that each locality will pursue in establishing a shared health and social care service. These new organisations then need to demonstrate how they are supporting health and social care professionals to work together to deliver better care and outcomes for patients.

We support the development of shared anticipatory care plans for high-risk patients who are frequent users of health and care services. Given the place of medicines in the treatment of long-term conditions, we would expect all such plans to have a pharmacy element and for there to be formal involvement of community pharmacies in the development and use of such plans.

Public Bodies (Joint Working) (Scotland) Bill

Late Submission - NHS Highland

Following integration in the Highlands when NHS Highland became the lead agency for Adult Services a period of redesign over a five year period was initiated. This was in line with the Partnership Agreement signed between the Health Board and the Council and reflected the outcomes framework outlined therein.

The following are examples of improvements that have occurred over the first 18 months of the Lead Agency model. It must be remembered that a number of changes and initiatives are coming together in adults care commissioning, co-production, community development, anticipatory care but these examples illustrate the real benefits as a result of adopting this integrated model.

Care Homes – As part of the transfer of functions to the Lead Agency, care homes previously run by the Council are now the responsibility of NHS Highland. This has enabled a consistent approach to training of staff in moving and handling, infection control, tissue viability and falls prevention across community health and social care staff and those working in care homes. There are obvious benefits in relation to economies of scale but more importantly, all are working to the same policies and procedures providing a consistent approach. The joint training has also enabled better sharing of information and learning of roles and responsibilities across the sectors.

In addition to this care homes are seen as a central resource in communities where a flexible service can be delivered providing a range of respite, step-up-step-down and intermediate services in conjunction with other health and social care services delivered across all of the sectors. An impact of this was when an Independent care Home crisis was averted by local mobilisation of support, thus avoiding the emergency transfer of 8 vulnerable people on a Friday afternoon. Another example is of a lady admitted for a 2 week stay but was able to go home after 8 days due to the coordinated support.

Integrated teams – work is ongoing to develop a more holistic approach to health and social care in our communities accessed by one single point of access. Many teams are already co-located with sharing of information across community, Primary and Social care teams to speed up access and deployment of services. Teams are able to consider more flexible use of all of their resources and services on a daily basis. For example, in the past in order to access a respite place a client needed to be on a Social Worker’s case load. Now that all professional groups are more integrated and linked in, they have a greater awareness of who would benefit from a period of respite and can allocate accordingly. The development of this holistic approach involves a wider range of staff and affords greater working together opportunities. Another example is the delivery of a memory clinic delivered by a Community
Psychiatric Nurse in a Day Centre. Not only do the people attending get the benefit on the day but also at all other times as staff gain insight and understanding that allows them to better support people with failing memory.

NHS Highland
Public Bodies (Joint Working) (Scotland) Bill

Supplementary Submission – Scottish Health Council

The Scottish Health Council is part of Healthcare Improvement Scotland. We are providing this further evidence to clarify and expand on points raised during the oral evidence sessions on 24th September 2013 and 2nd October 2013.

Role of Scottish Health Council in supporting Public Partnership Forums
The Scottish Health Council was established in 2005 to ‘support, ensure and monitor’ patient focus and public involvement activities of NHS Boards. As such the Scottish Health Council has a role to support the development of Public Partnership Forums, with the prime responsibility for establishing them and maintaining their effectiveness resting with Community Health Partnerships. The Scottish Health Council support is provided primarily through our network of Local Offices, but we have also at times in the past engaged at national level with Public Partnership Forum representatives to get feedback and share good practice.

The Scottish Health Council has a functional approach, with dedicated teams providing:

- Community engagement and improvement support (local advice and support)
- Service change (quality assurance and advice)
- Participation Network (evidence and promoting good practice, national support)
- Performance and Planning (quality assurance/evidence/standards)
- Public Involvement Unit (providing support to Healthcare Improvement Scotland in relation to its Duty of User Focus and Equalities duties).

The Participation Standard
The Participation Standard was developed by the Scottish Health Council to enable NHS Boards to assess how well they were doing and how to improve in relation to patient focus and public involvement. We recently produced a National Overview Report that demonstrates that the majority of Boards have improved over recent years, as verified by local patients/community groups.

Standards for Public Involvement in Health and Social Care
The Scottish Health Council commissioned research to explore the future possibilities for public involvement in Scotland, in the context of integration between adult health and social care services gathering views from members of the public, and health and social care practitioners through discussion groups, telephone interviews, an online survey and a workshop. Subsequently a think piece was developed which outlines ideas about how people – as individuals and communities – could be involved in discussions and decisions about health and social care in Scotland in the future.

To explore the debate on both the expectations and options for the development of Public Partnership Forums the Scottish Health Council held
four regional events under the title of “Developing a shared vision for public involvement in integrated adult health and social care services”. This work reported that:

‘Most felt that a common standard could help with building a joint ethos, culture and language around public involvement across health and social care’.

The Scottish Health Council considers that there is an opportunity for the Bill to be clearer on the involvement of the public and that there should be a single standard for the integrated structures that build on existing good practice standards and principles. The Participation Standard is now demonstrating that it is driving improvement and should be used as the basis for a revised single standard, that brings together the National Standards for Community Engagement and other good practice guidance, and that includes indicators linked to the delivery of a national outcome.

A single standard for participation in health and social care should be developed. There should be a quality assurance system to ensure improvement can be demonstrated.

An Outcome for Public Involvement in Health and Social Care
On the question of a national outcome for public involvement, participant views were mixed although there was a sense that a national outcome would give public involvement a higher profile and status and give a clear signal to all about its importance. People also suggested that an outcome should be realistic, something that everyone could understand and couched in generic language rather than in jargon that is specific to either health or social care. The outcome should be about both the process and outcome of involvement.

The Scottish Health Council suggests that a national outcome should be developed to read along these lines:

People are encouraged and supported to work with health and social care providers to achieve services that meet local needs and improve health and wellbeing.

Structures for Public Involvement in Health and Social Care
The Scottish Health Council considers that through the Bill process guidance should be provided to health and social care partnerships with recommended mechanisms for public involvement in each health and social care partnership area, with local areas asked to comply with the guidance or explain their local variation.

Practice should build on existing networks and relationships with condition specific and equalities groups taking account of geography and culture.

Scottish Health Council
Health and Sport Committee

Public Bodies (Joint Working) (Scotland) Bill

Note of a meeting of members of the Health and Sport Committee NHS Highland staff and board members, held at the Mackenzie Centre, Inverness on Monday 23 September 2013

Members Present: Duncan McNeil MSP (Convener), Rhoda Grant MSP, Nanette Milne MSP

NHS Highland staff, board members and service users:

David Donaldson – Service User
Garry Coutts – Chair
Elaine Mead – Chief Executive
Jan Baird – Director of Adult Care
Fran Macleod – Manager – MacKenzie Centre
Frances Gair – District Manager – Inverness East
Allyson Harrison – Charge Nurse – RNI
Jane Williams – Senior Physiotherapist RNI
Thomas Ross – Lead Pharmacist – South & Mid Operational Unit
Gillian Swanson – Deputy Lead Pharmacist – South and Mid Operational Unit
Vivian MacKenzie – OT – York Day Hospital
Carol Jackman – Physiotherapist – York Day Hospital
Lisa Fox – Speech and Language Therapy – York Day Hospital
Fiona MacDonald MacKenzie Centre
Mary McCormick MacKenzie Centre

Summary of discussion

The meeting had been arranged in order to assist the Health and Sport Committee in its stage 1 scrutiny of the Public Bodies (Joint Working) (Scotland) Bill. As it appeared that Highland would be likely to be the only partnership that would be adopting the “lead agency model”, the Committee agreed to send a delegation to learn about the scheme of integration being developed in Highland and to meet staff involved in delivering integrated services.

- Gary Coutts, HNS Highland Chair explained that the board and the local authority (Highland Council) had rejected the body corporate model, on the basis that the board and council had coterminous boundaries that made it perhaps easier to adopt the lead agency model, particularly given the degree of integration that already existed.

- “Hundreds” of issues had emerged but council and NHS staff had worked through them all and agreed solutions. Final partnership agreement document runs to hundreds of pages.
• Approximately 1400-1500 Highland Council staff had transferred to NHS Highland and about 200-300 from NHS Highland to Highland Council. Budgets had been moved at the same time.

• The first year had been very much about understanding the business, but work was progressing apace on the development of the Highland Quality Approach, which was based on “getting it right first time”.

• It was noted that there had been an increase in delayed discharge from hospital; this was due to a dramatic reduction in care home capacity, which staff were making urgent efforts to address.

• Asked about why it appeared that no other partnerships appeared likely to adopt the lead agency model, it was stated that this model “is best for people, but involves giving up power and requires trust between the partners”.

• It was noted that the Public Bodies (Joint Working) (Scotland) Bill, if passed, would not have a significant impact on the integration agenda in Highland, as the development of integrated care and health services had been undertaken using existing powers. However, it was noted that there was nothing in the Bill that would be to the detriment of the existing work that had been carried out, and no steps would require to be undone as a result of the provisions contained in the bill.

• Workforce issues. It was noted that the intention was to develop a single workforce, but it would take time to ensure that the correct management structures were in place in order to be able to devolve services fully to staff teams. It was reported that there had been while there had been issues to resolve with regard to harmonisation, salaries and conditions of service, these had not so far proved insurmountable. Equal pay issues were not being seen as a major risk.

• Co-location of staff had been very successful and had helped staff from different backgrounds gain a better understanding of each other’s roles. Some joint visits were already going on and one health centre was now surplus to requirements

• Policies for fall prevention, infection control etc were now the same across all hospitals and care homes. Care homes were now being seen less as a place to spend the last few years of a person’s life and more a place where they could go for a short spell.

• It was noted that NHS Highland had been granted a “licence to occupy” care homes but, for technical accounting reasons, the assets remained with the council.

• Enhanced pharmacies were being developed across the area.

• An advocacy service was now being established in care homes.
• Multi-disciplinary teams had been established in north and west of the partnership area.

• It was suggested that redesign opportunities are “huge”, though it was acknowledged that this takes time and requires goodwill and trust.

• Strategic commissioning is a vital part of the process, for which everyone needs to be at the table. The partnership was pursuing commissioning techniques that had been developed elsewhere in the world and which insisted on patients and careers being involved.

• It was also suggested that there was an integration job to be done within NHS as well as across other agencies. Housing had not yet been integrated but all adult services have been. Integration was said to be a process, not an event. The emphasis was on shifting the balance of care and health and not about isolating people in their own home.

• Finally, there was a need to continue evidencing success.
Public Bodies (Joint Working) (Scotland) Bill

Members took part in a study visit hosted by the West Lothian Community Health and Care Partnership (CHCP) on Monday 30 September 2013. The aim of this visit was to assist the Committee in its consideration of the Public Bodies (Joint Working) (Scotland) Bill at stage one.

The delegation visited REACT (the Rapid Elderly Assessment Care and Treatment Team) at St John’s Hospital, Livingston; First Steps to Health and Wellbeing, Broxburn; and finally, met with the Mental Health and Mental Wellbeing Steering Group for Children and Young People at the Civic Centre in Livingston.

Members Present: Richard Lyle MSP, Aileen McLeod MSP and Nanette Milne

West Lothian CHCP staff and officers:

REACT
Scott Ramsay, Consultant Physician & Geriatrician, St John’s
Linda Yule, Team Leader, REACT
Suresh Sanders, Community Geriatrician, St Michaels Hospital and REACT
First Steps to Health and Wellbeing
Chris Dickson, Health & Fitness Development Manager, West Lothian Leisure
Shena Brown, Respiratory Facilitator
Mental Health and Mental Wellbeing Steering Group
Susan Johnstone, Team Manager, Children and Young People Team
Mike Moss, Counsellor, Children and Young People Team

West Lothian CHCP
Anne McMillan, Executive Councillor, West Lothian Council
Jim Forrest, Director, West Lothian CHCP
Marion Christie, Head of Health, CHCP
Jennifer Scott, Head of Social Policy, CHCP
Carol Bebbington, Primary Care Manager, CHCP
Pamela Main, Senior Manager Community Care, CHCP

Summary of discussion

West Lothian Community Health and Care Partnership

West Lothian CHCP was set up in 2005 with the aim of enhancing and developing the delivery of integrated health and social care services to the population of West Lothian. The CHCP is headquartered at the West Lothian Civic Centre in Livingston, which also houses the West Lothian Command Centre of Police Scotland, the Sherriff and Justice of the Peace Courts, Crown Office and Procurator Fiscal service, Scottish Children’s Reporter Administration and the Scottish Fire and Rescue Service. CHCP staff were very positive in their views of how this co-location of agencies had helped to encourage integrated working.

REACT
REACT is a new service in West Lothian for over 75s to offer an alternative to hospital admission as well as supporting early discharges from hospital and provides rapid assessment of adults in their own homes. The service operates on a 9-5 Monday-Friday basis, however there is also a 24/7 crisis care service.

Members visited the REACT base at St John’s Hospital and met with members of the REACT team.

The REACT service has enjoyed notable success in terms of reducing hospital admissions.

Members heard that the initiative had led to greater levels of interaction between primary and secondary care than anywhere else in Scotland. There were also good links with care agencies and the voluntary sector. The nature of the service had increased the degree of personalisation of care provision. For example, it was noted that REACT had the ability to make referrals to care homes. There were also good links with local pharmacists.

Most referrals originate from GPs. After some initial hesitance, the team had observed a growing confidence amongst GPs to work with the team in taking decisions on referrals.

A database is maintained recording qualitative data, including response times, the time spent by patients in the service, details of follow-up contacts, mortality figures and the length of hospital stays resulting from referrals and the related number of bed days saved.

The team consists of:

1 (whole time equivalent) consultant
1 doctor
4 nurses
4 physiotherapists
4 occupational therapists, and
1 speech and language therapist

First Steps to Health and Wellbeing

First Steps to Health and Wellbeing is an exercise referral scheme run in partnership between West Lothian Leisure and the CHCP, based at the Strathbrock Partnership Centre in Broxburn. The aim of the scheme is to increase physical activity levels in referred patients and encourage longer-term commitment to exercise and activity. 28% of participants continue to use West Lothian Leisure sites beyond 12 weeks (the national average is 10%). 90% of those who continue in the project for 12 weeks remain in it at 26 weeks.

The scheme has seen around 7,500 people through its service since establishment in 2007. Sessions are delivered in appropriate venues within communities, for example community halls. In addition, facilities are available on the acute admissions ward at St John’s, including a fully-equipped gym.

The service is jointly funded 50-50 by West Lothian Council and West Lothian Leisure, and jointly accountable, reporting to the CHCP. Unlimited access is
available for the first 12 weeks, thereafter monthly membership is £22.50 (half price for benefits recipients) and community activities are charged at £2.50 per session.

**Mental Health and Mental Wellbeing Steering Group for Children and Young People**

Members met with representatives of the Mental Health / Mental Wellbeing Screening Group, an initiative between health, education and social policy, which aims to streamline mental health and mental wellbeing services for children and young people. The Group works with local groups and organisations across the three policy areas.

Referrals are managed by a screening group, which comprises Children’s Counsellors, Resilience Worker and Mental Health link worker services. Referrals are discussed by these specialist workers and they decide what service is most appropriate, and advice is provided and any follow-up action is initiated. Early intervention is central to the Group’s work, allowing quick identification of what services are required – a discussion that involves all service providers. The voluntary sector is also involved.

There is continuity of counselling services from early years through school age children to post-school/younger people. 191 children have been seen in the first 6 months of its existence. The service has achieved a 100% attendance rate as a result of its initial screening processes.

As well as GP referrals, counsellors also have a presence in GP surgeries and attend schools, which have facilities available to them.

Overall, the initiative has been well received by partners in education and health, primarily because it has sped up the process of screening and referral.
Health and Sport Committee

Public Bodies (Joint Working) (Scotland) Bill

Lothian Centre for Inclusive Living

Members of the Health and Sport Committee, Richard Lyle MSP, Aileen McLeod MSP and Nanette Milne MSP attended an event organised by the Lothian Centre for Independent Living (LCiL) on Monday 30 September 2013. This was arranged in conjunction with Inclusion Scotland, the Independent Living in Scotland Project (ILiS), Self-Directed Support Scotland (SDSS), and members of the Independent Living Movement.

LCiL organised this event to provide the Committee with the opportunity to hear directly from a cross-section of disabled people and disabled people’s organisations (DPOs) their views of the Public Bodies (Joint Working) (Scotland) Bill, which the Committee was considering at stage one.

Participants were divided into small discussion groups, with one Member allocated to each group.

Central to the overall theme of the event was the document ‘It’s our world too: 5 Asks for a better Public Bodies (Joint Working) (Scotland) Bill’. This document consisted of evidence pulled together from disabled people at a series of workshops organised by ILiS. In summary, the ‘5 asks’ (www.ilis.co.uk) are:

1. Independent living, equality and human rights should be explicit in the principles and outcomes of health and social care integration.
2. Disabled people must be considered as full and equal stakeholders and co-producers in health and social care integration.
3. Disabled people, other users of the integrated systems and the wider third sector should be involved in leading on the principles of an integrated system and on how money within it is spent.
4. Social Care (Self Directed Support) (Scotland) Act 2013 and Public Bodies (Joint Working (Scotland) Bill 2013 must work together to promote seamless care provision.
5. The integration agenda should not further entrench health inequalities.

The overriding theme that emerged from each of the discussion groups was that the principles of independent living and human rights should lie at the heart of the Bill.

On the Bill itself, points raised by participants included:

- there is a need to formally link the Bill to the Self-Directed Support Act: “SDS and health and social care integration should work together”.
- It “should be about supporting people to participate in society and lead an ordinary life”.
The issue of ‘portability of care’ was raised for people who had moved from one part of the country to another.

Comments against the intentions of the Bill included:

- “health and social care integration as perceived will make things worse”; and
- one participant was concerned that “there’ll be less money, less care, less resources”.
- Other concerns in relation to integration included a silo-working mentality; and
- the fact that Health Boards covered several local authority areas.

Regarding the involvement of disabled people and DPOs, participants were clear that disabled people should “have a seat at the table” right from the start and that DPOs should also be involved to represent disabled people at all levels in the integration process. Participants wanted to see proactive support offered by the new integrated boards; that is to say disabled people shouldn’t need to request services when they are already known to health and social care providers.

Participants stressed the important role of GPs, who in some cases, may be the sole source of support for disabled people.

Some issues of oversight were raised:

- some participants felt that the Ombudsman lacked independence - the ‘community health council’ model was suggested as an alternative as this is a panel of people who use the system and so understand it by direct experience.
- It was felt that an independent monitoring system would oversee a fairer distribution of services to disabled people; and the Bill should contain provision for an independent review body to consider complaints (as current systems for handling complaints weren’t felt adequate).

Participants raised other points in relation to current systems that they hoped the legislation would address, including:

- the time taken by social work services to put provisions in place, which can lead to ‘bed-blocking’;
- a concern that the current system lacks a continuity of care, so for example, disabled people are repeatedly asked to explain their circumstances to different people.
- There was also concern raised of a lack of awareness-raising about disability and long term chronic conditions in BME communities.

Finally, there was some concern about the integration of budgets between health and social care systems, particularly where the first is predominantly free at the point of use and the other has charges associated with it.
Introduction

1. The Public Bodies (Joint Working) (Scotland) Bill (referred to in this statement as ‘the Bill’) gives Scottish Ministers a power in Section 12 to make an order that makes provision for the membership, proceedings, powers and other matters with regard to the integration joint board. Section 12 as introduced sets out;

12(1) The Scottish Ministers may by order make provision –

   a) about the membership of integration joint boards,
   b) about the proceedings of integration joint boards,
   c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions,
   d) about the supply of services or facilities to integration joint boards by their constituent authorities,
   e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.

(2) Without prejudice to section 49(1)(a), an order under this section may make different provision in relation to different integration joint boards.

(3) The Scottish Ministers may by scheme make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of a constituent authority.

By virtue of section 49(4) of the Bill, orders under this section will be subject to the negative procedure.

The Scottish Government intend to propose amendments at Stage 2 to this section which will have the effect of broadening the scope of Ministers’ powers under section 12.

The effect of these amendments would be to confer an additional power on Ministers to make provision by order:

   a) enabling integration joint boards to establish committees for any purpose,
   b) about such other matters relating to any such committee as the Scottish Ministers think fit, and
   c) enabling an integration joint board to delegate to its chief officer, any other member of its staff or any such committee functions delegated to the integration joint board in pursuance of an integration scheme.
**Integration Joint Board**

2. The Bill requires Health Boards and local authorities to agree a model of integration. Where partners agree to put in place a Body Corporate, an integration joint board will be established to oversee the integrated arrangements and onward service delivery. The integration joint board will exercise control over a significant number of functions and a significant amount of resource. It is essential that the process of how the Board will operate, and by whom, is set out within an order to put in place the robust arrangements required for this level of responsibility over public services and finances.

3. In the first instance, Scottish Ministers intend to use the powers set out in Section 12 to create the appropriate order to achieve this level of assurance and give the integration joint board the necessary powers to discharge its functions. This will largely draw on powers in Section 12(a), (b) and (e) to set out the standard arrangements for integration joint boards as concerning their membership and proceedings. Ministers also intend to limit the use of the powers in Section 12(1)(c), (d) and (3) to allow integration joint boards to enter into agreements or contracts which are necessary for them to carry out their duties under the Bill. For example, as part of the preparation and implementation of a strategic plan, it is likely that an integration joint board will require to receive professional advice, such as legal or accounting advice, or when making arrangements in relation to premises, equipment and staff, among other things.

4. The powers in Section 12 would also be used if local partners and Scottish Ministers agree to empower an integration joint board to deliver services in the exercise of integrated functions at some point in the future. Scottish Ministers have confirmed their intention that integration joint boards will not be empowered in this way in the first instance. This policy statement therefore, focuses on the orders that Scottish Ministers intend to make under Section 12 in the first instance and does not consider the possible future use of orders under section 12 in relation to empowerment of these bodies to deliver services.

**Proposed provisions to the membership and proceedings of the integration joint board**

*Membership of the integration joint board*

5. Scottish Ministers intend to set out in the order two categories of membership for the integration joint board. The first category is voting members, made up of representatives nominated by the Health Board and the local authority. The second category is non-voting advisory members of the integration joint board.

*Voting members of the integration joint board*

6. The Body Corporate model of integration creates a new legal entity that binds the Health Board and the local authority together into a joint
arrangement in which they are equal partners. The voting membership of the integration joint board is to reflect this equality in its membership arrangements to ensure that there is joint decision making on the Board.

7. Following consultation with stakeholders, policy work has been taken forward to strike the right balance with regards to how the voting membership should be established. It is intended that the order will reflect the following arrangements:

- The local authority and the Health Board must nominate the same number of representatives to sit on the integration joint board;
- The Health Board and the local authority must agree on the number of representatives that they will each nominate, subject to the provision described below;
- They must put forward a minimum of three nominees each, and local authorities can insist on a maximum of 10% of their full council number.
- The local authority will nominate councillors to sit on the integration joint board;
- The Health Board will nominate non-executive directors to sit on the integration joint board;
- Where the Health Board is unable to fill all their places with non-executive directors they can then nominate other appropriate people to fill their spaces (such as GPs or other clinical staff) but these people will require the approval of Scottish Ministers;
- Where Health Boards intend to nominate ‘other appropriate people’ to an integration joint board they would need to submit the list of proposed nominees to the Scottish Ministers with the integration plan when it is sent for approval.
- After this time, Health Boards would need to submit proposed nominations to Scottish Ministers for approval as and when they arise;
- Where Ministers have approved a nominee, the Health Board would need to obtain Ministerial approval to remove the members from the integration joint board.
- A Health Board must have at least two non-executive directors on each of the integration joint boards created within their geographical area.

8. The Scottish Ministers intend to use the power under section 1(4)(e) to require the Health Board and local authority to set out in the integration plan the detail of these arrangements agreed locally.

Non-voting members of the integration joint board

9. The integration joint board will make decisions about how health and social care services are planned and delivered for the communities within their areas. To do this effectively, they will require professional advice, for example, to ensure that the decisions reflect sound clinical and financial practice. It is also essential that integration joint boards have a duty to include key stakeholders within the decision making processes to take advantage of their advice and experience. The intention is to set out a minimum requirement for advisory membership in the order, and to allow local flexibility
to add additional nominations as the Health Board and local authority see fit. It is intended that the minimum advisory membership required will be:

- The identified Clinical Director of the Health Board;
- The Chief Social Work Officer of the constituent local authority;
- The Health Board Director of Finance or the local authority Section 95 Officer;
- A staff-side representative;
- A third sector representative;
- A carer representative;
- A service user representative;
- The Chief Officer of the integration joint board appointed under section 10(1) of the Bill.

10. The ways in which the members of the integration joint board are to be identified and appointed to the Board will differ. The first three are professional officers of the Health Board or the local authority and will be appointed because of the role they fulfil. It is intended that the integration joint board co-opt the staff-side, third sector, carer and service user representative once the integration joint board is established. The Scottish Government will provide guidance about the most appropriate way of doing this and if there are key groups that should be involved.

11. Locally, the integration joint board might wish to add additional non-voting members in an advisory capacity, perhaps because they are a key stakeholder locally or because they would seek more representation from a particular group. Alternatively, this might occur because the integration joint board have included functions outwith the minimum scope and they require additional professional advice; for example, from children’s services or housing.

12. The integration joint board will have the ability to co-opt further non-voting members as they see fit.

Chair and Vice Chair

13. It is intended that the chair and vice chair will be drawn from the voting membership. If a local authority nominated member is to serve as chair, then it is intended that the vice chair will be a member nominated by the Health Board and vice versa. It is intended that the member of the Integration joint board drawn from the Health Board who will serve as chair/vice chair is a non-executive Director. It is intended that the chair will have a casting vote, and the Scottish Government will provide guidance regarding the use of the casting vote.

14. It is intended that the appointment to chair and vice chair will be time-limited and that they rotate at least every three years. It is intended that if, at the end of this period, a local authority nominated member has served as chair, a Health Board nominated member (who is also a non-executive director) will then be elected to the chair and vice versa.
15. Health Boards and local authorities will need to agree who will serve as chair and vice chair and the period for which they will serve (if less than three years) and then rotate. Scottish Ministers intend to use the power set out in Section 1(4)(e), to require that this is included within the integration plan.

**Removal of voting members**

16. It is intended that the order will provide a mechanism for Health Boards and local authorities to remove and replace the voting members that are drawn from their respective organisations. The only exception to this will be if the Health Board has sought approval from Scottish Ministers to put forward a member who is not a non-executive director. In these circumstances, it is intended that the Health Board will be required to seek approval from Scottish Ministers to remove the member from the integration joint board.

17. The Health Board and the local authority will not be able to remove members that are drawn from each other’s organisations, so the Health Board could not remove a councillor who has been chosen to serve as a member by the local authority and vice versa.

18. It is intended that where the Health Board or the local authority remove a board member then they must nominate a new member at the same time. The ability of the Health Board and local authority to remove members includes all members including the chair and the vice chair. It is intended that the Health Board and the local authority will not be required to provide reasons for removing a member and can do so at any time but must provide the member with one month’s notice of the decision.

19. The provisions in relation to the removal and replacement of voting members are additional to the general provisions set out below. Therefore, it is intended that a voting member can also be removed if they are guilty of a serious breach of the code of conduct, imprisoned for an offence, etc. Removal under these circumstances would be automatic and the Health Board or the local authority would be required to nominate a new member.

**Multi-council integration joint boards**

20. The Bill provides for a Health Board to enter into integrated arrangements with more than one local authority where there is more than one local authority within the Health Board’s area. The current permutations of multi-council arrangements range from two local authorities to one Health Board, to six local authorities to one Health Board.

21. It is currently intended that the order setting out general requirements for integration joint boards will apply only where an integration plan has been prepared by one Health Board and one local authority. Given the complexity of describing the permutations of multi-local authority integration joint boards, the provisions of the order that relate to membership, voting and chairing will not apply to integration plans involving more than one local authority.
22. It is intended that in this circumstance the Health Board and the local authority will be required to present to the Scottish Ministers a proposal of how the governance arrangements will work (including the membership, the voting and chairing of the integration joint board). A proposed provision will be made in an order under section 1(4)(e) requiring details of these arrangements to be set out in the integration plan so that the Scottish Ministers may take it into account when deciding whether to approve the integration plan.

**Engaging in contracts**

23. It will be necessary for the integration joint board to have powers to enter into contracts so that they can seek professional advice and assistance, and make arrangements for staff and premises to carry out its functions. It is intended that the order will give such powers to the integration joint board so that it is able to discharge its functions under the Bill.

**Financial Advice**

24. Scottish Ministers intend to require that the Health Board and the local authority agree a financial management and reporting process for the integrated budget and set this out within the integration plan. To further strengthen the requirements for financial management, the Scottish Ministers intend to include within this order the requirement that the Chief Officer seeks advice from the Health Board Director of Finance and the Local Authority Section 95 Officer on financial matters.

**Intended provisions as to general operation of the integration joint board**

25. Scottish Ministers intend to include in an order a number of general provisions that will apply to all categories of the integration joint board. The areas noted below mirror those in the Health Board (Membership and Procedure) (Scotland) Regulations 2001 and The Community Health Partnership (Scotland) Regulations 2004.

**Term of Office**

26. It is intended to restrict the length of time that members can sit on the integration joint board to three years, and make a provision to provide that would enable a member to be eligible for re-nomination. Members who have membership due to the position that they hold, such as the Chief Social Work Advisor, will automatically be re-nominated while they remain in post.

**Expenses of members**

27. It is intended that the integration joint board will have the ability to pay any reasonable expenses (travel and subsistence) that members incur as they carry out the business associated with their membership of the board.

**Committee structure**
28. It is intended to allow the integration joint board to put in place a sub-committee structure should that be desirable.

Resignation and removal of members

29. It is intended that members will be able to resign their membership of the integration joint board at any time during their term in office by giving notice to the chair of the integration joint board. The integration joint board would need to inform the relevant Health Board or local authority should that member be a voting member. If a member misses three consecutive meetings then the integration joint board will be able to remove the member, if it is satisfied the absences were not due to illness. If this occurs in the case of a voting member, the integration joint board will need to seek agreement from the Health Board or the local authority. It is intended that, if a member brings the integration joint board into disrepute through their actions, they can be removed from the integration joint board.

Disqualification

30. It is intended that the order will set out those that are disqualified from being nominated or co-opted as a member of the integration joint board and will include those who have been imprisoned for longer than three months, dismissed (other than being made redundant) from a Health Board or a local authority, have been declared bankrupt or have been struck off as a practising health or social care professional.

Proceedings

31. It is intended that the order will require each integration joint board to make standing orders for the carrying out of the business of the integration joint board that will include, but are not restricted to:

- Calling of meetings;
- Notice of meetings;
- Quorum;
- Conduct of meetings;
- Conflict of Interest;
- Records.

The Scottish Government
January 2014
Policy Statement - integration joint monitoring committee  
Section 16(1)(a-d)

Introduction

1. The Public Bodies (Joint Working) (Scotland) Bill (referred to in this statement as the Bill) gives Scottish Ministers powers to prescribe the membership, proceedings, powers and other matters with regard to the integration joint monitoring committee. These matters are to be prescribed by order under section 16(1) of the Bill which provides:

16(1) The Scottish Ministers may by order make provision about –

   a) the establishment of integration joint monitoring committees,
   b) the membership of integration joint monitoring committees,
   c) the proceedings of integration joint monitoring committees,
   d) any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

By virtue of section 49(4) of the Bill, orders under this section will be subject to the negative procedure.

Integration Joint Monitoring Committee

2. The Bill requires Health Boards and local authorities to agree one of four models of integration. Three of these models are described as ‘delegation between partners’ and allows the delegation of functions and budgets between statutory partners. Section 4(b)(c)(d) of the Bill sets out these three models of delegation that partners can undertake.

- Delegation of functions by the local authority to the Health Board;
- Delegation of functions by the Health Board to the local authority;
- Delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

3. Section 14(2)(a) of the Bill provides that where the Health Board and the local authority agree a ‘delegation between partners’ model of integration, they are required to jointly establish an integration joint monitoring committee for the purpose of monitoring the carrying out of the integration functions for the integration authority area.

4. It is intended that the integration joint monitoring committee will hold the body or bodies to whom the functions are delegated to account for the delivery of integrated services and provide assurances to the Health Board and the local authority of the progress that is being made to achieve the national health and wellbeing outcomes. It will have the ability to write reports and make recommendations to the lead agency, where it sees fit, and is key to providing on-going scrutiny and joint accountability of the integrated arrangements.
5. Scottish Ministers intend to use the powers set out in Section 16(1)(a-d) to ensure that operation of the integration joint monitoring committee is robust.

Intended provisions as to membership and proceedings of the integration joint monitoring committee

Membership of the integration joint monitoring committee

6. Scottish Ministers intend to set out in an order a single category of membership, all of whom shall have the same rights and responsibilities. It is intended to set out a minimum requirement for the membership of the integration joint monitoring committee but also allow flexibility for additional members to be added. It is intended that the minimum required membership will be:

- 2 nominations drawn from the local authority (Councillor);
- 2 nominations drawn from the Health Board (Non-executive director);
- Chief Social Work Officer;
- Associate Medical Director / Clinical Director;
- Health Board Director of Finance / local authority Section 95 Officer;
- Staff-side representative (on behalf of both Local Government and the NHS);
- Third Sector representative;
- Carer representative;
- Service User;
- Any other members as required by the Health Board or the local authority.

7. The ways in which the members of the integration joint monitoring committee are to be identified and elected to the Committee will differ.

8. It is intended that the nominees from the local authority and the Health Board will be nominated directly to the integration joint monitoring committee by the local authority and the Health Board.

9. It is intended that the professional officers of the Health Board and the local authority will be nominated because of the statutory role that they fulfil, in the case of the Chief Social Work Officer and the local authority Section 95 Officer, or because they have been identified by the Health Board as the appropriate person for the Clinical Director or Health Board Director of Finance.

10. Scottish Ministers intend to provide by order that the chair of the integration joint monitoring committee is to seek and recruit the staff-side, third sector, carer and service user representative once the integration joint monitoring committee is established. The Scottish Government will provide guidance about the most appropriate way of doing this and if there are key groups that should be involved.
11. Locally, the integration joint monitoring committee might wish to add additional non-voting members in an advisory capacity, perhaps because they are a key stakeholder locally, because they would seek more representation from a particular group, or alternatively because the integration plan includes delegation of functions beyond adult health and adult social care, which will require additional professional advice; for example, from children's services or housing.

12. It is intended that the order will give the chair of the integration joint monitoring committee the ability to elect further non-voting members as they see fit.

Chair and Vice Chair

13. It is intended to require the Health Board and the local authority to agree who will chair the integration joint monitoring committee and, in agreement with each other, change the chair of the integration joint monitoring committee by giving the chair one month’s notice in writing.

Removal of members

14. It is intended to allow the local authority and the Health Board to change the members that they nominate at any time. They do not need to provide a reason for changing their nominated members but must provide the member with one month’s notice of the decision. At the time of removal they should provide a substitute for the member for appointment to the integration joint monitoring committee.

Multi-council lead agency arrangements

15. The Bill provides for Health Boards to enter into integrated arrangements with more than one local authority where there is more than one local authority within the Health Board’s area. The current permutations of multi-council arrangements range from two local authorities to one Health Board to six local authorities to one Health Board.

16. It is currently intended that an order will apply where there is one Health Board and one local authority, and that, given the complexity of describing the permutations of multi-local authority integration joint monitoring committee, the provisions of the order that relate to membership and chairing will not apply to integration plans involving more than one local authority.

17. It is intended that in this circumstance the Health Board and the local authorities will be required to present to Scottish Ministers a proposal of how the governance arrangements will work (including the membership and chairing of the integration joint monitoring committee). It is intended that provision will be made in an order under section 1(4)(e) requiring details of the arrangements to be set out in the integration plan so that the Scottish Ministers may take it into account when deciding whether to approve the integration plan.
Intended provisions as to general operation of the integration joint monitoring committee

18. Scottish Ministers intend to include in the order a number of general provisions that will apply to all integration joint monitoring committees. The areas noted below are similar to those in the Health Board (Membership and Procedure) (Scotland) Regulations 2001 and The Community Health Partnership (Scotland) Regulations 2004.

Term of Office

19. It is intended to restrict the length of time that members can sit on the integration joint monitoring committee to three years, and to provide that a member is eligible for re-nomination. Members who have membership due to the position that they hold, such as the Chief Social Work Advisor, will automatically be re-nominated while they remain in post.

Expenses of members

20. It is intended to allow the integration joint monitoring committee the ability to pay any reasonable expenses (travel and subsistence) that members incur as they carry out the business associated with their membership of the committee.

Committee structures

21. It is intended to allow the integration joint monitoring committee to put in place a sub-committee structure should that be desirable.

Resignation and removal of members

22. It is intended that members will be able to resign their membership of the integration joint monitoring committee at any time during their term in office by giving notice to the chair of the integration joint monitoring committee. The integration joint monitoring committee would need to inform the relevant Health Board or local authority should that member nominated by them. If a member misses three consecutive meetings then the integration joint monitoring committee will be able to remove the member, if it is satisfied the absences were not due to illness, and with agreement of the Health Board and the local authority. It is intended that if a member brings the integration joint monitoring committee into disrepute through their actions then they can be removed from the integration joint monitoring committee with agreement of the Health Board and the local authority.

Disqualification

23. It is intended that the order will set out those that are disqualified from being nominated or co-opted as a member of the integration joint monitoring committee and will include those who have been imprisoned for longer than three months, dismissed (other than being made redundant) from a Health
Board or a local authority, have been declared bankrupt or have been struck off as a practicing health or social care professional.

Proceedings

24. It is intended that the order will require each integration joint monitoring committee to make standing orders for the carrying out of the business of the integration joint monitoring committee that will include, but are not restricted to:

- Calling of meetings
- Notice of meetings
- Voting
- Quorum
- Conduct of meetings
- Conflict of Interest
- Records

The Scottish Government
January 2014
Introduction

1. This note summarises Ministers' intentions in relation to the regulations that will be made under section 1(3)(e) of the Public Bodies (Joint Working) (Scotland) Bill. These regulations will prescribe information about prescribed matters that must be included within an integration plan.

The power conferred on Ministers is:

1 (3) An integration plan is a plan setting out –

   (e) prescribed information about such other matters as may be prescribed.

Section 48(1) of the Bill provides:

(1) In this Act – “prescribed” means prescribed by regulations.

Regulations under this power will, by virtue of section 49(4) of the Bill, be subject to negative parliamentary procedure.

Background

2. The Bill and the associated regulation will require that the Health Board and the Local Authority agree and include within the integration plan three broad categories of detail:

3. Firstly, the context and scope within which the integration authority will operate. This includes agreements such as the scope of the functions delegated, the resources delegated, and the model of integration. The requirement to include these arrangements are as provided for in Section 1(3)(a-d) and associated provisions within the Bill.

4. Secondly, key areas that will ensure effective joint working and decision making. This would include areas such as dispute resolution, data sharing and complaints handling. Scottish Ministers will use the power in Section 1(3)(e) to set out the areas that must be agreed and included within the integration plan. The regulation will provide for flexibility to allow the Health Boards and local authorities to add further areas of local agreement that they feel would aid integrated working into the integration plan.

5. Thirdly, arrangements that the integration authority should implement to provide the necessary assurance to the accountable officers of the Health Board and the local authority that the integration authority has fit for purpose arrangements for the discharge of functions and the associated resources. This includes the arrangements for finance governance and clinical and care governance. Scottish Ministers will use the power in Section 1(3)(e) to set out these areas of agreement within the integration plan. It is notable that the integration plan does not legally bind
the integration authority. However Scottish Ministers intend to use their powers in section 40 of the Bill to direct integration authorities to comply with the integration plan in respect of these matters as they are fundamental to the safe and effective operation of health and social care services.

**Summary of matters to be prescribed in regulations**

Ministers intent to provide that all integration plans must include:

- An agreement on clinical and care governance;
- An agreement and arrangements for the settling of liability;
- The inclusion of financial detail as noted above;
- An agreed process for dispute resolution;
- An agreed process for data sharing;

Ministers intend to provide that, where the integration model described in 1(4)(d) is chosen the integration plan must include:

- Details of the integration joint board arrangements and
- Details of agreed local measures and performance reporting arrangements.

Ministers intend to provide that, where the integration model described in 1(4)(a), (b) or (c) is chosen the integration plan must include:

- Details of the integration joint monitoring committee.

**Detail of matters to be prescribed in regulations**

**Clinical and Care Governance**

6. Clinical and care governance is a system that assures that care, quality and outcomes are of a high standard for users of services and that there is evidence to back this up. It includes formal committee structures to review clinical and care services on a multidisciplinary basis and defines, drives and provides oversight of the culture, conditions, processes, accountabilities and authority to act of organisations and individuals delivering care.

7. Health Boards are under a statutory duty to put in place and maintain clinical governance arrangements and local authorities have similar duties for social care provisions, many of which are discharged through the statutory role of the Chief Social Work Officer. These systems currently provide a holistic framework within their respective organisations.

8. In general, the responsibility for professional oversight in both health and social care services flow back to a lead professional. Be it the Chief Social Work Officer, the Medical Director, the Nurse Director etc. Whilst there will be clinical representation on integration joint boards, this will not be a substitute for detailed clinical and care governance arrangements that practically assure the quality of services, professional regulation and audit of incidents.
9. It is also intended that regulations will require that the integration plan sets out the details of the clinical and care governance arrangements that will be used by the Integration Authority to provide assurance that services are delivered in line with current duties and responsibilities.

10. The Scottish Government will also provide guidance setting out matters that Ministers expect the Health Board and local authority to agree and put in place. Policy officials have set up a working group that is considering the guidance that will be provided to Integration Authorities, Health Boards and Local Authorities about the practical operation of clinical and care systems for the integrated functions and how they relate to those functions that have not been delegated to assure that there are common standards across all health and care services.

Financial Governance

11. The Health Board and the local authority need to make decisions and agreements about the resources that will be included within the integrated budget, and the arrangements that will provide assurance to the local authority section 95 officer and the Health Board Director of Finance to discharge their duties.

12. Ministers intend to make provision in regulations to require that the integration plan sets out the agreements that have been reached in relation to the financial management and performance monitoring of money paid to the integration authority.

13. Specifically, the following details should be agreed and set out in the integration plan:
   - Financial Monitoring and performance management arrangements for the integration authority;
   - Payment schedule;
   - Process for treatment of over/underspends;
   - Process for re-determining (in year) the allocations to the integration authority (to be used in extremis);
   - Arrangements for risk management;
   - Arrangements for information management;
   - Arrangements for asset management and capital;
   - Permitted use of reserves;
   - Process for sharing the net assets of the integration authority on winding up.

14. The Scottish Government will also provide detailed guidance for each of the areas specified above.

Liability arrangements

15. It is intended to amend the Bill so that it provides for liability to be attributed in line with normal legal principles, in particular the principle that the person liable for any claim is the person with actual control over the circumstances giving rise to the claim. This will have the effect that any of the parties involved in integrated
arrangements may, depending on the circumstances, be held liable for a claim arising from the exercise of delegated functions.

16. Ministers also intend to use regulations to require that the integration plan must include details of any agreement made in relation to liability by the Health Board and the Local Authority. The Scottish Government will provide guidance to partners on this matter.

Dispute resolution

17. The successful operation of integrated arrangements is predicated on Health Boards and local authorities reaching agreement about some fundamental aspects of those arrangements and maintaining an on-going working relationship.

18. Scottish Ministers believe that, as far as possible, decisions should be made and agreed locally, without Ministerial intervention. To aid this process, it is intended that regulations will provide that Health Boards and local authorities must include an agreed mechanism for ‘dispute resolution’ in the integration plan.

Data sharing

19. The integration authority, for the purposes of fulfilling their statutory responsibilities, require anonymised demographic information to determine how services should be delivered rather than the personal data that is held on clinical and care systems. In this way, the Health Board and the local authority remain the data controls for this personal information.

20. To effectively integrate services at a delivery level and plan a package of care for an individual, it is important that professionals have access to the relevant data. This can happen through close working and the establishment of multidisciplinary teams or through allowing different professionals to access different records held across health and care systems. This sharing of personal data is sensitive and needs to be closely managed to ensure that an individual’s privacy is respected.

21. As the data controllers for health and care information it is important that Health Boards and local authorities set out a process for how data sharing issues will be managed for integrated functions and teams, and how systems and databases will be aligned to aid professional decision making. Ministers will require in regulations that Health Boards and local authorities set out this detail within their integration plan.

Local measures and performance reporting

22. This requirement applies only to the integration model described in Section 1(4)(a).

23. Health Boards and local authorities have responsibility for delivering a wide range of targets, measures and improvements either at a national level or in response to local circumstance and need. Under the body corporate model of
integration they will delegate a significant amount of their resource and associated functions that would have been used to deliver, or impact upon these other local measures.

24. It is therefore important that the integration plan sets out the outcomes and targets that the integration authority might contribute to the wider delivery that Health Boards and local authorities are accountable for. It is important that a process is set out that would describe how the Integration Authority would take responsibility for any of these areas and the performance management arrangements that would need to exist to provide assurances to all parties.

25. Ministers intend to set out in regulations a requirement that Health Boards and local authorities include in their integration plan:
   • the outcomes and targets that integration authorities will be expected to contribute to; and
   • the expected performance management arrangements that would need to be put in place.

Integration Joint Board

26. This requirement applies only to the integration model described in Section 1(4)(a).

27. The regulations that underpin the creation of the Integration Joint Board (made under section 12) will give Health Boards and local authorities some flexibility to determine the governance arrangements of the integration joint board. Scottish Ministers will require that they set out these areas of local agreement within the Integration plan so that they are agreed before Ministers lay an order before Parliament to create the Integration Joint Board. Ministers intend that regulations under section 1(3)(e) will require that the following details are set out within the integration plan;

   • The number of members of the integration joint board that will be drawn from the Health Board
   • the number of members of the integration joint board that will be drawn from the Local Authority
   • The arrangements that have been made in relation to the Chair of the integration joint board.

28. also It is also intended that regulations will prescribe that, in the case where two or more Local Authorities wish to enter into a body corporate arrangement with a Health Board, the detailed arrangements that have been agreed for the integration joint board must be included in the integration plan.

Integration Joint Monitoring Committee

29. This requirement applies only to the integration models described in Section 1(4)(b-d).
30. The regulations that underpin the creation of the integration joint monitoring committee (prescribed under section 16) will give Health Boards and local authorities flexibility in determining much of the governance arrangements for the integration joint monitoring committee. Scottish Ministers intend to require that these local agreements are included within the integration plan so that they are agreed before the lead agency takes responsibility for integrated functions.

31. It is also intended that regulations under section 1(3)(e) will require that the following details are set out within the integration Plan;

- The number of members of the integration joint monitoring committee that will be drawn from the Health Board;
- The number of members of the integration joint monitoring committee that will be drawn from the local authority;
- The arrangements for administrative support of the Integration Joint Monitoring Committee;
- The arrangements for and financing of the integration joint monitoring committee;
- Additional non statutory members that will be added to the integration joint monitoring committee.

32. Ministers also intend regulations to prescribe that, in the case where two or more local authorities wish to enter into a lead agency arrangement with a Health Board, the detailed arrangements that have been agreed for the integration joint monitoring committee must be included in the integration plan.

The Scottish Government
January 2014
Policy Statement – Integration Plan Consultation
Section 6(2)(a)

Introduction

1. This statement summarises Scottish Ministers’ intention in relation to the regulations that will be made under 6(2)(a) of the Public Bodies (Joint Working) (Scotland) Bill (referred to in this statement as the Bill). This gives Scottish Ministers the power to make regulations that prescribe such persons or groups of persons that the Health Board and the local authority must consult in the development of the integration plan. The power is;

Section 6 - Consultation

6 (2) Before submitting the integration plan for approval under section 7, the local authority and the Health Board must jointly consult –

   a) Such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed
   b) Such other persons as the local authority and the Health Board think fit.

By virtue of section 48(1) of the Bill “prescribe” means prescribed by regulations. By virtue of section 49(4) of the Bill, regulations under this section will be subject to the negative procedure.

Consultation on the integration plan

2. Section 1 of the Bill requires Health Boards and local authorities to jointly prepare an integration plan for the area of the local authority. The purpose of the integration plan is to establish the context and provide the necessary clarity for the arrangements in which the integration authorities will operate. It will set out the governance arrangements for the integration authority, functions and budgets to be delegated; outcomes to be achieved; the model of integration to be implemented; and a range of other topics that Ministers will specify.

3. It is essential that the local authority and the Health Board share the proposed integration plan widely with those who have an interest in the delivery or receipt of health and social care within the geographic boundaries of the proposed integration authority. This would include other integration authorities or local authorities whose resident populations access services primarily through the same Health Board.

4. Ministers intend to consult on the basis that regulations will specify that the following people or groups of people must be jointly consulted on the development of the integration plan;

   • Health professionals who operate within the boundaries of the proposed integration authority;
   • Staff of the Health Board who operate within the boundaries of the proposed integration authority;
• Users of health care who reside within the boundaries of the proposed integration authority;
• Carers of users of health care who reside within the boundaries of the proposed integration authority;
• Commercial providers of health care who operate within the boundaries of the proposed integration authority;
• Non-commercial providers of health care who operate within the boundaries of the proposed integration authority;
• Social care professionals who operate within the boundaries of the proposed integration authority;
• Staff of the local authority who they see as relevant who operate within the boundaries of the proposed integration authority;
• Users of social care who reside within the boundaries of the proposed integration authority;
• Carers of users of social care who reside within the boundaries of the proposed integration authority;
• Commercial providers of social care who operate within the boundaries of the proposed integration authority;
• Non-commercial providers of social care who operate within the boundaries of the proposed integration authority;
• Local authorities or integration authorities who operate within the geographic boundaries of the same Health Board;
• Non-commercial providers of social housing who operate within the boundaries of the proposed integration authority;
• Recognised representative bodies, representing the interests of specific age, condition or illness groups who operate within the boundaries of the proposed integration authority.

The Scottish Government
January 2014
Introduction

1. The Public Bodies (Joint Working) (Scotland) Bill (referred to in this statement as the Bill) gives Scottish Ministers the power in section 32(4) to make regulations that prescribe such persons or groups of persons that the integration authority, Health Board and the local authority must consult and take account of the views of, for decisions that may significantly affect services in a locality. The relevant provision of the Bill is as follows:

32 Carrying out of integration functions: localities

(1) This section applies where a person carrying out an integration function for the area of a local authority proposes to take a decision which the person considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function.

(2) In subsection (1), “locality” means a locality of an area as set out in the strategic plan in pursuance of section 23(3) (a).

(3) The person must take such action as the person thinks fit with a view to securing that the groups mentioned in subsection (4) are involved in and consulted on the decision.

(4) The groups referred to in subsection (3) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

2. Section 32(4) provides a power for Ministers to prescribe the groups which must be consulted.

3. By virtue of section 48(1), “prescribed” means prescribed by regulations. Section 49 sets out additional provisions in relation to subordinate legislation under the Bill. By virtue of section 49(4), regulations under this section will be subject to the negative procedure.

4. Ministers therefore require to prescribe by regulations a list of persons who must be consulted before a decision is taken under section 32(1).

Locality Consultation

5. The development of locality planning arrangements is an essential part of the integration reform agenda. By virtue of section 23(3), all strategic plans prepared under the Bill require to make provision about localities. A locality is a defined ‘natural community’ that is primarily brought together because the resident population have similar health and social care needs. Considering the area of an
integration authority in this way allows for better planning of services as they are better aligned to the needs of communities.

6. It is also the best place for engaging and involving health and social care professionals in the planning and delivery of services, because the areas are small enough that those planning for the community that they are serving whilst having an understanding of their needs. It draws together those professionals that work alongside each other on a regular basis to allow, frontline staff to discuss and plan for tangible changes to service provision, something that is essential to keeping the majority of professional staff engaged.

7. Evidence shows, however, that the most effective services are those that are developed and designed in partnership with local communities. Local communities, users and their carers are best placed to know what services they actually want, and what benefit they derive from the existing arrangements. This intelligence will be essential for integration authorities if they are to deliver improved outcomes.

8. The Scottish Government intends to consult on the basis that the regulation will stipulate that the following people or groups of people must be consulted when a decision is proposed to be taken under section 32(1):

- General Practitioners;
- General Practitioner practice managers;
- Social Workers;
- Mental Health Officers;
- Nurses;
- Allied Health Professionals;
- Pharmacists;
- Dentists;
- Opticians;
- Scottish Ambulance Service;
- Public Health professionals;
- Local authority Councillors;
- Users of services;
- Unpaid carers of the users of services;
- Non-commercial providers of health or/and care services;
- Commercial providers of health or/and services;
- Non-commercial providers of social housing.

The Scottish Government
January 2014
Policy Statement – Consultation Group  
Section 26(2)

Introduction

1. This statement summarises Scottish Ministers’ intentions in relation to the Regulations that will be made under section 26(2) of the Public Bodies (Joint Working) (Scotland) Bill. These regulations will prescribe such persons or groups of persons that the Health Board and the local authority must consult in the development of the strategic plan. The power conferred on Scottish Ministers, underlined within the wider section, as introduced is:

Section 26 - Establishment of consultation group

(1) For the purpose of preparing a strategic plan, an integration authority in relation to the area of a local authority is to establish a group comprising—

(a) where the integration authority is an integration joint board, one person nominated by each of the local authority and the Health Board which prepared the integration plan in pursuance of which the integration authority was established,

(b) where the integration authority is a Health Board, one person nominated by the local authority with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its functions,

(c) where the integration authority is a local authority, one person nominated by the Health Board with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its functions,

(d) one person in respect of each of the groups mentioned in subsection (2), being a person who the integration authority considers to be representative of that group, and

(e) such other persons as the integration authority considers appropriate.

(2) The groups referred to in subsection (1)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(3) The procedure of the group is to be such as the authority determines.

(4) The integration authority may pay to members of the group such expenses and allowances as the authority determines

2. By virtue of section 48(1), “prescribed” means prescribed by Regulations. Section 49 sets out additional provisions in relation to subordinate legislation under the Bill. By virtue of section 49(4), Regulations under this section will be subject to the negative procedure.

3. An amendment to the Bill at stage two is proposed which would have the effect of re-naming the consultation group the “strategic planning group”.

Strategic Planning

4. Section 23 of the Public Bodies (Joint Working) (Scotland) Bill requires the integration authority to prepare a strategic plan for the area of the local authority. A strategic plan is a document that sets out the arrangements for carrying out the integrated functions, and also explains how these arrangements are intended to achieve the national outcomes. Each strategic plan should last for a minimum three years, although the actual planning period of each plan can be longer (so an integration authority can set out a five or ten year plan but must review it at least every three years). The plan should be subject to a continual cycle of analysis and review.

5. Depending on the model of integration chosen, the group must involve members nominated by the local authority or the Health Board, or both, as set out in subsection (1)(a), (b) and (c). In effect, this provides for the partners who prepared the integration scheme and are party to the integrated arrangements to be involved in the development of the strategic plan. In addition, once a draft strategic plan is prepared, the integration authority will be required to seek the views of a range of relevant stakeholders, to be prescribed by Scottish Ministers as having an interest. The integration authority can appoint others as it feels appropriate. The integration authority is to determine the procedure of the group and may pay members of the group expenses and allowances.

6. In order to gain an understanding of local need and demand, integration authorities must take account of the views of those that provide services and of those that use services. The Policy Memorandum that accompanies the Bill makes clear that, as part of the strategic planning process, integration authorities will be required to:

- Embed patients/clients and their carers in the decision-making process;
- Treat the third and independent sectors as key partners; and
- Involve GPs, other clinicians and social care professionals in all stages of the planning work, from the initial stages to the final draft.

7. The regulations will specify the groups that must be represented in the consultation group. Subject to discussion within the National Steering Group on Joint Strategic Commissioning, these groups may include:

- Health professionals who operate within the boundaries of the proposed integration authority;
- Users of health care who reside within the boundaries of the proposed integration authority;
- Carers of users of health care who reside within the boundaries of the proposed integration authority;
- Commercial providers of health care who operate within the boundaries of the proposed integration authority;
- Non-commercial providers of health care who operate within the boundaries of the proposed integration authority;
• Social care professionals who operate within the boundaries of the proposed integration authority;
• Users of social care who reside within the boundaries of the proposed integration authority;
• Carers of users of social care who reside within the boundaries of the proposed integration authority;
• Commercial providers of social care who operate within the boundaries of the proposed integration authority;
• Non-commercial providers of social care who operate within the boundaries of the proposed integration authority;
• Representative of recognised bodies representing the interests of specific age, condition, or illness groups;
• Neighbouring Health Boards, local authorities and integration authorities that may be affected by the strategic plan;
• Housing providers;
• Representatives of localities as provided for in proposed amendment to s26.

8. It is expected that the groupings themselves will agree representative nominees for appointment by the integration authority. It will remain up to each integration authority as to the actual numbers appointed, which might be single or multiple representation.

9. The Scottish Government will issue extensive guidance on the development of strategic plans to ensure consistency of approach across Scotland.

The Scottish Government
January 2014
Introduction

1. This statement summarises Scottish Ministers' intentions in relation to the regulations that will be made under section 1(6)(a) of the Public Bodies (Joint Working) (Scotland) Bill 2013.

Power as introduced –

1(6) The Scottish Ministers may by regulations prescribe—

(a) Functions of local authorities that must, may or may not be delegated under an integration plan,

(b) functions of Health Boards that must, may or may not be delegated under an integration plan,

(c) functions of local authorities or Health Boards—
   (i) that must be delegated under an integration plan other than in prescribed circumstances,
   (ii) that may be delegated under an integration plan only in prescribed circumstances,
   (iii) that may not be delegated under an integration plan in prescribed circumstances,

(d) functions of local authorities or Health Boards that may be delegated under an integration plan only if other prescribed functions are also delegated to the same person under the plan.

Ministers intend to propose a significant revision of section 1 by amendment at stage 2. This would remove the above power and substitute a new section 1(4) as follows:

1(4) The integration models are—

(a) delegation of functions by the local authority to a body corporate that is to be established by order under section 9 (an “integration joint board”) and delegation of functions by the Health Board to the integration joint board,

(b) delegation of functions by the local authority to the Health Board,

(c) delegation of functions by the Health Board to the local authority,

(d) delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

(4A) A local authority may delegate a function under an integration scheme only if the function is conferred by an enactment listed in schedule (Enactments conferring on local authorities functions which may be delegated).

(4B) A Health Board may delegate a function under an integration scheme only if the function is prescribed.

(4C) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (b) is to apply under the scheme.
(4D) The Scottish Ministers may by regulations prescribe functions of Health Boards which Health Boards must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (c) is to apply under the scheme.

(4E) If the integration model mentioned in subsection (4)(d) is to apply under an integration scheme either—
(a) the local authority must delegate the functions prescribed under subsection (4C) so far as the functions are exercisable in relation to persons of at least 18 years of age, or
(b) the Health Board must delegate the functions prescribed under subsection (4D) so far as the functions are exercisable in relation to persons of at least 18 years of age.

(4F) The Scottish Ministers may by regulations prescribe functions of Health Boards that a Health Board—
(a) must delegate under an integration scheme other than in prescribed circumstances,
(b) may not delegate under an integration scheme in prescribed circumstances.

(4G) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities may not delegate in prescribed circumstances.

(4H) The Scottish Ministers may by regulations remove an enactment from schedule (Enactments conferring on local authorities functions which may be delegated).

2. Section 1 of the Bill requires a Health Board and a local authority to enter into an integration plan and provides for a number of models of integration including the delegation of functions by a local authority to a Health Board, by a Health Board to a local authority or by a Health Board and local authority to an integration joint board. The Bill as introduced provides for regulations to prescribe any function of a local authority as a function which must may or may not be delegated.

3. Scottish Ministers intend bring forward amendments to section 1 at Stage 2. By virtue of these, it is intended to restrict the range of local authority functions that can be delegated under the Bill to specific “social care” functions. By virtue of the amendment, a list of enactments which may be delegated will be set out in a Schedule of the Bill.

4. It is intended at Stage 2 to further restrict Scottish Ministers’ powers in prescribing local authority social care functions in so far as those set out in the schedule, so that Scottish Ministers can only require the delegation of social care functions insofar as they relate to adults. It is proposed that the age limit of 18 be used to define “adults”.

5. Thus, the Bill would provide that –

(a) Ministers are only able to permit a local authority to delegate social care functions, from a list of enactments as set out in the Bill and
Ministers are only able to require a local authority to delegate those functions insofar as they relate to adults.

**Background**

6. The legal framework which confers “social care” functions on local authorities can be found across a wide range of different pieces of legislation. These functions are considered key to the establishment and promotion of a comprehensive and integrated health and social care service across Scotland.

7. Local authorities, with partner organisations, purchase and provide a wide range of social work and social care services in order to carry out their legal functions. These services include services to children, young people, adults and families, promoting empowerment, independence, safety and protection. Services are provided for people of all ages and their carers, who have a range of care and support needs. Across all care groups, while some individuals receive a service voluntarily, others will have social work involvement as a result of statutory responsibilities.

8. Central to this for social work services is the Social Work (Scotland) Act 1968 which places a duty on all local authorities to “promote social welfare” and governs their duties in this area. Although most duties are given to local authorities some roles are allocated to specific staff, such as, Mental Health Officers (MHO’s) who are social workers specialising in mental health issues.

9. Access to services is based on an assessment of need, which is carried out by local teams. These teams include, Children and Families, Criminal Justice, Adult Mental Health or Learning Disability Assessment and Care Management Teams. The teams are responsible for carrying out assessments or investigations and for developing appropriate care and support plans as a response to identified need. They also carry out the on-going monitoring and review of care and support, providing a response to changing needs. In addition, the teams offer carers’ assessments and care management services to carers.

10. Teams can be staffed by social Workers and community care assistants or integrated with other professionals, who work in partnership, with other agencies and with service users and their carers to ensure that the support and care services provided are as person centred and flexible as possible.

11. The Scottish Social Services Council’s Code of Practice States that Social service workers must:

- Protect the rights and promote the interests of service users and carers;
- Strive to establish and maintain the trust and confidence of service users and carers;
- Promote the independence of service users while protecting them as far as possible from danger or harm;
- Respect the rights of service users whilst seeking to ensure that their behaviour does not harm themselves or other people;
- Uphold public trust and confidence in social services;
- Be accountable for the quality of their work and take responsibility for maintaining and improving their knowledge and skills.
12. Scottish Ministers intend to make regulations under section 1(4B) to prescribe that the following functions must be delegated by a local authority where the model of integration is that set out in section 1(4)(a), (b) or (d).

- Social Work Services for adults and older people;
- adults with physical disabilities, learning disabilities,
- mental health problems,
- drug and alcohol problems;
- adult protection; and domestic abuse, (including carers) covering: community care assessment teams,
- support services,
- care home services,
- adult placement services,
- health improvement services,
- housing support services,
- day services,
- local area co-ordination,
- respite provision,
- occupational therapy services,
- re-ablement services, equipment and telecare.

Policy Statement - Strategic Plan Consultation
Section 27(5)

Introduction

1. This statement summarises Scottish Ministers’ intention in relation to the regulations that will be made under section 27(5) of the Public Bodies (Joint Working) (Scotland) Bill. These regulations will prescribe such groups of persons that the integration authority must consult having developed a draft strategic plan. The power, underlined within the wider section, at introduction is:

Section 27 Steps following establishment of consultation group

(1) Having established a group under section 26, an integration authority in relation to the area of a local authority is to—
(a) prepare proposals for what the strategic plan should contain, and
(b) seek the views of its strategic planning group on the proposals.

(2) Taking account of any views expressed by virtue of subsection (1)(b) the integration authority is then to—
(a) prepare a first draft of the strategic plan, and
(b) seek the views of the group on the draft.

(3) Taking account of any views expressed by virtue of subsection (2)(b), the integration authority is then to—
(a) prepare a second draft of the strategic plan,
(b) send a copy to—
   (i) the persons mentioned in subsection (4), and
   (ii) such other persons as it considers appropriate, and
(c) invite the recipients to express views (within such period as the integration authority considers appropriate) on the draft.

(4) The persons referred to in subsection (3)(b)(i) are—
(a) where the integration authority is an integration joint board, the local authority and the Health Board which prepared the integration plan in pursuance of which the integration joint board was established,
(b) where the integration authority is a local authority, the Health Board with which the local authority prepared the integration plan in pursuance of which the integration authority acquired its delegated functions,
(c) where the integration authority is a Health Board, the local authority with which the Health Board prepared the integration plan in pursuance of which the integration authority acquired its delegated functions, and
(d) persons who the integration authority considers to be representative of each of the groups mentioned in subsection (5).
(5) The groups referred to in subsection (4)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(6) In finalising the strategic plan, the integration authority must take account of any views expressed by virtue of subsection (3)(c).

2. By virtue of section 48(1), “prescribed” means prescribed by regulations. Section 49 sets out additional provisions in relation to subordinate legislation under the Bill. By virtue of section 49(4), regulations under section 27 will be subject to the negative procedure.

Background

3. Section 23 of the Public Bodies (Joint Working) (Scotland) Bill requires the integration authority to prepare a strategic plan for the area of the local authority. A strategic plan is a document that sets out the arrangements for carrying out the integrated functions, and how these arrangements are intended to achieve the national outcomes. Each strategic plan should last for a minimum of three years, although the actual planning period of each plan can be longer (so an integration authority can set out a five year or a ten year plan but must review it after every three years). The plan should be subject to a continual cycle of analysis and review.

4. Section 26 puts an obligation on the integration authority to establish a strategic planning group. Under section 27(1) and (2), the integration authority must seek and take account of the views of this group in preparing a strategic plan. Having sought and taken account of these views, section 27(3)(b) sets out that the integration authority is to send a draft of the strategic plan to other interested stakeholders. Section 27(4) (d) and (5) together allow the Scottish Ministers to prescribe certain groups whose views should be taken account of in the strategic planning process. Representatives of each prescribed group must be provided with a copy the draft strategic plan. The integration authority may also consult more widely if it feels this is appropriate. Any views on the draft expressed by the persons who are consulted must be taken account of by the integration authority, by virtue of section 23(6).

5. The Policy Memorandum that accompanies the Bill makes clear that as part of the strategic planning process, integration authorities will be required to:

- Embed patients/clients and their carers in the decision-making process;
- Treat the third and independent sectors as key partners; and
- Involve GPs, other clinicians and social care professionals in all stages of the planning work, from the initial stages to the final draft.
6. It is essential that the integration authority shares the draft strategic plan widely with those who have an interest in the delivery or receipt of health and social care within the geographic boundaries of the integration authority. This would include other integration authorities or local authorities whose resident populations access services primarily through the same NHS Board.

7. Scottish Government officials are discussing the groups that should be included in this process with the National Steering Group on Joint Strategic Commissioning. Subject to the views of the Group, it is envisaged the regulation will specify the following groups that should be included within the consultation –

- Health and social care professionals who operate within the boundaries of the proposed integration authority;
- Users of health and/or social care who reside within the boundaries of the proposed integration authority;
- Carers of users of health and/or social care who reside within the boundaries of the proposed integration authority;
- Commercial providers of health and/or social care who operate within the boundaries of the proposed integration authority;
- Non-commercial providers of health and/or social care who operate within the boundaries of the proposed integration authority;
- Recognised representative bodies, representing the interests of specific age, condition or illness groups;
- Other Health Boards, local authorities and integration authorities that might be affected by the strategic plan;
- Housing providers.

8. This list would be the core groups that should be consulted. Integration authorities would be able to consult with such other local groups as they consider to have an interest.

The Scottish Government
January 2014
Policy Statement – Performance Reports

Section 33(3)

Introduction

1. The Public Bodies (Joint Working) (Scotland) Bill (referred to in this statement as ‘the Bill’) gives Scottish Ministers the power in section 33(3) to make regulations that prescribe the form and content of performance reports. The relevant power in the Bill as introduced is as follows:

33 (3) The Scottish Ministers may by regulation prescribe –

   a) The form and content of performance reports,
   b) The period during which performance reports must be published.

2. By virtue of section 49(4) of the Bill, regulations under this section will be subject to the negative procedure.

3. Ministers intend to propose an amendment to this section of the Bill which would remove (b). Instead the Bill will set out that an performance report must be published within four months of the end of the reporting year. Regulations will therefore not be made in relation to the period during which performance reports must be published.

The power as proposed to be amended is:

33 (3) The Scottish Ministers may by regulation prescribe –

   a) The form and content of performance reports,

Background

4. Integration authorities will have responsibility for the planning and resourcing of a significant proportion of health and social care services within Scotland. It is important that the integration authority reports and accounts for their activities so the public are able to assess the progress made to improve outcomes by the integration authority that serves them.

5. Whilst the duties and responsibilities that come with the management of public finances will require local performance management arrangements to be put in place and external audit by scrutiny bodies, it is important that there is a robust public reporting mechanism which includes the key information that will allow the public to assess performance and provide the transparency and openness required of public agencies.

6. The performance report needs to provide a basis for national comparison between different integration authorities, whilst retaining flexibility for integration authorities to reflect on their local circumstance and particular population needs. It needs to report on the key elements of the reform.
Form and content of performance reports

7. It is intended that regulations made under this power will require that the performance report is to include consideration of all the functions that are set out within the integration plan and the associated budget.

8. Ministers also intend to provide in regulations will that the report must include an assessment of the following elements:

- Progress against the national health and wellbeing outcomes;
- Progress against a suite of key measures and indicators that will be noted in statutory guidance;
- Progress against the integration delivery principles with particular reference to strategic and locality planning;
- An overview of the integrated budget and the proportional changes within it;

In addition where the integration plan provided that an integration model set out in section 1(4)(b)(c) or (d) would be used, it is intended that regulations will require the performance report to include:

- Details of correspondence with the integration joint monitoring committee during the reporting year.

The Scottish Government
January 2014
Introduction

1. This policy statement relates to the power of the Scottish Ministers to make regulations under the Public Bodies Joint Working (Scotland) Bill to prescribe functions of a Health Board which must, may or may not be delegated to an integration authority under an integration plan. The relevant powers in the Bill as introduced are set out in section 1(6), which provides:

1(6) The Scottish Ministers may by regulations prescribe—

(a) Functions of local authorities that must, may or may not be delegated under an integration plan,

(b) functions of Health Boards that must, may or may not be delegated under an integration plan,

(c) functions of local authorities or Health Boards—
(i) that must be delegated under an integration plan other than in prescribed circumstances,
(ii) that may be delegated under an integration plan only in prescribed circumstances,
(iii) that may not be delegated under an integration plan in prescribed circumstances,

(d) functions of local authorities or Health Boards that may be delegated under an integration plan only if other prescribed functions are also delegated to the same person under the plan.

A proposed amendment to Ministers’ powers to prescribe functions for delegation under section 1 would replace the above section with the following provisions:

<(4A) A local authority may delegate a function under an integration scheme only if the function is conferred by an enactment listed in schedule (Enactments conferring on local authorities functions which may be delegated).

(4B) A Health Board may delegate a function under an integration scheme only if the function is prescribed.

(4C) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (b) is to apply under the scheme.

(4D) The Scottish Ministers may by regulations prescribe functions of Health Boards which Health Boards must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (c) is to apply under the scheme.

(4E) If the integration model mentioned in subsection (4)(d) is to apply under an integration scheme either—
(a) the local authority must delegate the functions prescribed under subsection (4C) so far as the functions are exercisable in relation to persons of at least 18 years of age, or
(b) the Health Board must delegate the functions prescribed under subsection (4D) so far as the functions are exercisable in relation to persons of at least 18 years of age.

(4F) The Scottish Ministers may by regulations prescribe functions of Health Boards that a Health Board—

(a) must delegate under an integration scheme other than in prescribed circumstances,
(b) may not delegate under an integration scheme in prescribed circumstances.

(4G) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities may not delegate in prescribed circumstances.

(4H) The Scottish Ministers may by regulations remove an enactment from schedule (Enactments conferring on local authorities functions which may be delegated).

2. Health Boards will be required to delegate certain functions, depending on the integration model that is used under their integration plan. The integration models are set out in section 1(4), which provides:

1 (4) The integration models are—

(a) delegation of functions by the local authority to a body corporate that is to be established by order under section 9 (an “integration joint board”) and delegation of functions by the Health Board to the integration joint board,
(b) delegation of functions by the local authority to the Health Board,
(c) delegation of functions by the Health Board to the local authority,
(d) delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

Delegation of Functions

3. The main purpose of the integration plan is to set out the major considerations and areas of agreement that must be reached before formally integrating functions and resources. Scottish Ministers intend to prescribe a list of functions of Health Boards that ‘must’ be delegated and also to prescribe those functions that a Health Board ‘may’ delegate under an integration plan. Any functions not listed in the ‘must’ or ‘may’ lists are by default not delegable under an integration plan.
4. The Scottish Government proposes to require that a Health Board must delegate all of its functions as they relate to adult primary and community health services and the proportion of acute sector provision that will be part of integrated arrangements. Scottish Ministers intend to make regulations under Section 1 providing that functions in this class must be delegated.

5. The Scottish Government proposes to require that those functions of a Health Board that may be delegated under an integration plan are those functions that may be delivered alongside adult primary and community care, such as primary and community care for children and young people. Scottish Ministers intend to make regulations under Section 1 providing that functions in this class may be delegated.

6. The functions of a Health Board that are not to be available for delegation will include matters such as the provision of regional and national services, functions relating to education and research facilities of Health Boards and some specific duties, such as the registration of professionals. These will not be listed in regulations. Instead the functions which will not be delegable will be those which do not appear in the Regulations as functions which a Health Board may delegate.

7. Annex A provides an illustrative list of the types of functions which Ministers are considering prescribing that must be delegated. The Scottish Government intends to informally consult with Health Boards about the content of this list and it is likely, therefore, that the annexed list be altered to reflect these discussions to ensure that the delegation of functions of Health Boards is properly provided for in legislation.

8. The list of functions that Health Boards ‘may’ delegate is under development. The Scottish Government intends to informally consult with Health Boards about the content of this list once a draft has been developed.

The Scottish Government
January 2014
Annex A

List 1 – Functions which must be delegated
This list is comprised of those functions which Ministers intend to prescribe as functions that must be delegated in their entirety in as far as they relate to primary and community health care and the proportion of acute sector provision that will be part of integrated arrangements.

Fiona Sinclair
Local Government and Regeneration Committee
Committee Memorandum on the Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) Scotland Bill

INTRODUCTION

The Committee reports to the Education and Culture Committee and the Health and Sport Committee as follows—

1. The Local Government and Regeneration Committee agreed to take evidence at Stage 1 on the Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill in relation to the delivery of local government services. Both bills include proposals for joint working between local government and public bodies. Our main focus of interest in the Bills is the proposals for integrating and sharing public services. The proposals for the integration of public services are inextricably linked to issues covered in recent and ongoing inquiry work, particularly the public service reform inquiry.

COMMITTEE INTEREST

Introduction
2. The Children and Young People (Scotland) Bill (“the CYP Bill”), aims to put children and young people at the heart of planning and delivery of services and ensure that their rights are respected across the public sector. Part 3 of the CYP Bill aims to improve the way in which services support children and families by promoting cooperation between planning children’s services, placing the child at the centre of this process.

3. The Public Bodies (Joint Working) (Scotland) Bill (“the PBJW Bill”), provides the framework which will support improvement of the quality and consistency of health and social care services through the integrated delivery of health and social care in Scotland. This framework permits integration of other local authority services with health services.

4. Our interested is in how the Bills, with related key aims, complement each other and work together to help deliver and support the Public Service Reform agenda.

Approach
5. We agreed to consider those parts of the Bills relevant to its remit. We did not issue its own call for evidence but included questions in the Health and Sport Committee call for evidence, as lead committee for the PBJW Bill. For the CYP Bill, we considered evidence submissions received by the Education and Culture Committee, the lead committee for this Bill.
6. We targeted specific organisations to supply written evidence given the Bills may have an impact on them. Written submissions were received from—

- Association on Directors of Education in Scotland;
- Argyll and Bute Council;
- Audit Scotland on behalf of the Auditor General for Scotland and the Accounts Commission;
- Coalition of Care and Support Providers (CCPS);
- Children in Scotland;
- Childrens Hearings Scotland;
- COSLA;
- GPs at the Deep End;
- Housing Coordinating Group;
- Midlothian Community Planning Partnership;
- NHS Ayrshire and Arran;
- Police Scotland;
- Royal College of General Practitioners;
- Scottish Fire and Rescue Service (SFRS);
- UNICEF UK, and
- West Lothian Community Planning Partnership.

7. We took oral evidence from relevant witnesses in a single evidence session on Wednesday 4 September 2013—

- NHS Ayrshire and Arran;
- GPs at the Deep End;
- East Ayrshire Council;
- North Ayrshire Council, and
- Housing Coordinating Group.

8. Finally, we then took oral evidence from the Cabinet Secretary for Health and Wellbeing, Alex Neil MSP (“the Cabinet Secretary”) and the Minister for Children and Young People, Aileen Campbell MSP (“the Minister”) jointly, on both Bills.

9. Our findings and recommendations are reported to the respective lead committees, and to the Parliament, in this memorandum.

FINDINGS AND RECOMMENDATIONS

Is there a consistency of approach across legislation?

10. Our recent inquiry into Public Services Reform in Scotland had a strong focus on partnership, joint working and shared services in line with the Christie Commission recommendations. A significant part of that work was looking at Community Planning Partnerships (“CPPs”) which are a key delivery agent in driving forward public service reform. During that inquiry we were informed that the forthcoming Community Empowerment and Renewal Bill (“CER Bill”) will include

---

provisions strengthening relationships and responsibilities of partners in CPPs in order to improve accountability and ultimately enhance joint working.

11. We expect to be the lead committee for consideration of the forthcoming CER Bill and have noted that the provisions requiring joint or integrated working in the PBJW Bill and the CYP Bill are inextricably linked. They all share the overarching purpose of public sector reform.

12. Evidence taken by us generally acknowledges the desirability of better integration of services while ensuring that the approaches taken to integration across the public sector remain compatible. Evidence highlighted actions that need to be undertaken to ensure that links and relationships between the new partnerships, CPPs and Single Outcome Agreements work.

13. Consultation responses on Part 3 of the CYP Bill referred to the need for a linkage to other legislation, in particular the PBJW Bill, the forthcoming CER Bill and recent legislation on self-directed support. There was concern that between the CYP Bill and the PBJW Bill, two processes for service planning were being established. The Royal College of Nursing suggested that this showed ‘little strategic thinking’2. Disability groups highlighted their particular concern for well integrated systems of service provision across age groups, policy areas and geographical areas.

14. Both the Cabinet Secretary and the Minister in evidence stated similar aims for their Bills, principally ‘improving outcomes for service user’ while recognising that the approach taken differed. The Bills, we were told, “complement one another”3 and “will streamline structures and make it easier to see the focus for partnership working”4.

15. The Cabinet Secretary in evidence told us that—

“...the umbrella for all of this is the Government’s guiding principles and strategic objectives, which include not only community empowerment and renewal but public sector reform, to ensure that better-quality services are delivered more cost effectively and timeously; patient-centred healthcare and social care; and, indeed, person-centred education. Those underlying principles are not restricted to my bill, Aileen Campbell’s bill or Derek Mackay’s community empowerment bill; they are universal and part and parcel of our broad principled agenda for changing Scotland for the better.”5

16. COSLA noted clear links between the PBJW and the integration of adult health and social care services and suggested that it was possible “some local partnerships may wish to consider the inclusion of children’s services in those arrangements.”6

5 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2535.
6 COSLA written submission:
17. We support the drive for public services reform and recognise the desirability of taking a flexible approach, endeavouring to identify an approach which fits the particular policy.

18. Argyll and Bute Council noted—

“...implementation of joint working will require a major culture change for both the Local Authority and our NHS colleagues, there will need to be changes in behaviours and attitudes and a willingness to overcome obstacles, driven by strong and enthusiastic leadership. We need to improve on staff and community involvement and overcome risk aversion to achieve truly customer-led service delivery. We also face financial and logistical challenges, particularly given the rurality of our environment; however it is clear that unless we achieve both economies of scale and economies of skill, through this opportunity for joint working, we will not be able to meet the demographic-demand challenges of the future.”

19. We agree with the sentiments expressed in that comment. We would like to see a mechanism put in place to monitor and review the approaches taken to ensure that lessons can be learned across portfolios and best practice identified across the boards. We note the submission by Audit Scotland which states that “it is essential that services are able to work well together to respond to needs whilst making the best use of existing resources and delivering high quality services.”

20. In the following section we consider specific system issues raised in evidence.

System issues

21. A number of ‘system’ issues were raised in evidence which were categorised by one witness as “strategic planning systems”. These included the necessity for processes to communicate well with each other and about duplication of statutory frameworks requiring multiple plans for children.

22. We heard from NHS Ayrshire and Arran that—

“A significant amount of work needs to be done to resolve the systems that we have and to ensure that we are working to a common system and a common language. In Ayrshire and Arran we have AYRshare; we hope that that will take us some way down that road, but there is still a need for the organisations that we work with—education, social work and health—to have their own systems underneath all of that. That is an industry in itself and they all have different reporting mechanisms that work within that.”
23. In our recent work we have increasingly been hearing about benefits accruing from co-location of buildings and people. East Ayrshire indicated that “co-location of certain services has been a really positive move”. Although it was made clear that while co-location is helpful, the key is improved information sharing. This is true for both electronic communications, but better yet, and more simple, by professionals talking to one another. Co-location can of course assist this process, but is not a prerequisite for conversations and information sharing to take place.

24. Written evidence from GP’s at the Deep End noted that—

“Our faith in the instrumental efficacy of technology and proliferation of process-orientated tasks should not displace what is essential to effective integration working practices, namely sustained professional relationships that are built on mutuality and trust.”

25. Collaboration between GPs and other partners exists on many different levels. Working collaboratively promotes a collective determination to reach objectives where sharing information and experiences contributes to a more detailed local knowledge of individual patients and their families. This is vital to planning effective support services for patients, addressing their unmet health needs and anticipating when they will need to access specialized services.

26. The Cabinet Secretary indicated that he “would not like to prescribe that co-location is always a prerequisite to approving any delivery plan” before adding that “in the examples that I have seen, co-location is definitely very advantageous.”

27. We welcome all moves towards co-location of services recognising local solutions are required to meet local needs. We agree with the evidence of NHS Ayrshire and Arran that—

“good communication and professionals talking to professionals to ensure that we are talking the same language and that we understand the issues will be critical to the whole process.”

The role of GPs

28. The evidence we received from GPs at the Deep End highlighted the central and critical role that doctors can, and do, have with those affected by these Bills—

“General practice is the main public service that is in regular contact with virtually the whole of the general population, with substantial cumulative knowledge and experience of people’s problems and consistently reported high levels of public trust. These intrinsic features make General Practices the natural hubs around which integrated care should be based, with groups of General Practices supported, within the context of local service
planning, to deliver integrated care in partnership with secondary care, area-based NHS services, social work and community organisations.\textsuperscript{16}

29. In evidence the Cabinet Secretary was keen to stress the role that the health sector will play under the PBJW Bill and referenced work that had been commissioned by government to look at where the public health function would sit in future. **We encourage this approach and urge that the role of GPs as key partners is embedded into development, planning and delivery under both Bills.\textsuperscript{17}**

**Role for the Housing Sector [Public Bodies (Joint Working) (Scotland) Bill]**

30. In evidence to us the Housing Coordinating Group made an eloquent plea for greater recognition and inclusion on the face of the PBJW Bill as a partner within integrated authorities. Suggesting that the success of the new integrated authorities—

“...will largely depend on effective joint strategic commissioning to which the housing sector can make a crucial contribution. The current arrangements for involving the housing sector have not produced a consistent nor adequate approach and the Bill, as it stands, could result in an ‘integrated authority’ deciding not to involve the housing sector as a partner. To ensure that housing issues, and the housing sector, form an integral part of contributing to the delivery of national outcomes, the HCG urges that the contribution of the housing sector be recognised within the legislation, urging the new ‘integrated authorities’ to involve their strategic housing partners.”\textsuperscript{18}

31. Going on to say that—

“Housing providers offer varying levels of care and/or support to vulnerable adults and older people, and have long been committed to working with colleagues in health and social care to enable people to continue living in the community rather than institutional settings. There are examples where this has happened already and the Bill could promote this approach more widely across the country. The housing sector has much to contribute to this agenda.”\textsuperscript{19}

32. The Housing Coordinating Group expressed concerns that they may not be involved by new integrated authorities at the strategic level stating that “proper engagement with the housing sector in both planning and delivery will be required.”\textsuperscript{20}

\textsuperscript{16} GPs at the Deep End written submission: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/GPs_at_the_Department_end.pdf [Retrieved 19 Sept 2013].

\textsuperscript{17} Local Government and Regeneration Committee, *Official Report*, 4 Sept 2013 Col 2527.

\textsuperscript{18} Housing Coordinating Group written submission: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/Housing_Coordinating_Group.pdf [Retrieved 19 Sept 2013].

\textsuperscript{19} Housing Coordinating Group written submission: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/Housing_Coordinating_Group.pdf [Retrieved 19 Sept 2013].

\textsuperscript{20} Ibid.
33. The Cabinet Secretary agreed it was essential that the housing sector be involved, noting that there is a stream of work ongoing—

“...to best ensure that the housing function is involved at grass-roots level in the partnerships. It may not necessarily be the case that housing bodies are separately represented on partnership boards, but I think that the most important element is what happens in the localities underneath the partnership board area. That is where the close working relationship between health, social work and housing is vital.”

34. The Minister also emphasised the specific requirement to consult social landlords at section 10 of the CYP Bill when preparing a children’s plan.

35. We agree that the housing sector need not be represented on partnership boards in all cases, but would expect that in situations when housing is likely to be central to the delivery of successful partnership working, they are involved at board level.

Measuring outcomes, costs and benefits

36. Both Bills seek to set in place policies which have the aim of improving outcomes for users, carers and their families. The PBJW Bill seeks to plan and deliver quality and sustainable care services. Similarly the CYP Bill through early intervention and preventative spend is also intended to produce benefits both in the short and also increasingly the long term.

37. This has challenges in measuring outcomes and benefits as Jim Carle eloquently described—

“Public organisations are quite used to looking for short-term gains over one, two or three years, but we are not used to looking at someone who will be born today and the benefits for them or the reduction in their uptake of services in later life.”

38. Children in Scotland suggested “that current performance and reporting requirements are linked to earlier, specific policies and strategies and they may not reflect the shift of focus towards prevention, early intervention and the early years.”

39. Audit Scotland in their submission on behalf of the Auditor General for Scotland and the Accounts Commission suggested that looking ahead—

“Any outcome measures must be transparently reported and available to the public and this information should be used to drive improvement. National measures are useful but partners also need a mechanism for

---

22 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2524.
24 Children in Scotland written submission, paragraph 21: [http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/ChildreninScotland1.pdf](http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/ChildreninScotland1.pdf) [Retrieved 19 Sept 2013].
ensuring local needs and priorities are met and for measuring the
difference that specific services are making to the individual.  

40. We explored how outcomes and benefits can be measured. Witnesses agreed that numbers are available but that they focus on costs, are generally short term measuring the impacts of existing services. It is “harder to look at less tangible issues such as wellbeing in communities and longitudinal things”.

41. The Cabinet Secretary in response noted that outcomes are not on the face of the PBJW Bill for two reasons—

“One is that outcomes change. The outcomes that you would set today would be very different from the outcomes that you would have set, say, five years ago. I suspect that they would also be very different from what they would be in five or 10 years’ time as service provision changes—how we do things in these fields changes continually. Therefore, if you put the outcomes in the bill, you would need to introduce primary legislation every time you wanted to amend them. The national outcomes will be set out in secondary legislation.”

42. We are content that outcomes should not be placed on the face of either Bill for the reasons given. We draw the Scottish Government’s attention to the Audit Scotland submission and we will, as part of our ongoing work in scrutinising benchmarking by local authorities, look closely at the measures introduced and crucially how they are used to learn from others and improve performance.

The role of CPPs

43. Since we published our original report on Public Services Reform the Scottish Government have advised that community planning has been significantly strengthened. Recent review work by the Accounts Commission for Scotland and Auditor General for Scotland, together with internal quality assurance processes, have identified a range of key strengths as well as some key areas for development which chime with some of our findings.

44. CPPs will have key roles to play if the overarching aims of these Bills are to be realised. We note the views of Audit Scotland, on behalf of the Auditor General for Scotland and the Accounts Commission for Scotland in their submission that—

25 Audit Scotland submission on behalf of the Auditor General for Scotland and the Accounts Commission, paragraph 17: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/Audit_Scotland.pdf [Retrieved 19 Sept 2013].
26 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2508.
27 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2533.
“There is a need for a clear articulation of how these new arrangements fit with CPPs given the significant leadership and co-ordinating role for local public services that the Scottish Government/COSLA see for CPPs in their Statement of Ambition for Community Planning and Single Outcome Agreements.”

45. We heard in evidence how well the North Ayrshire Council CPP works with their integrated children’s services partnership. We note that the forthcoming CER Bill will seek to strengthen further the roles and responsibilities of partners in CPPs. In the meantime we consider it important that the Scottish Government provide clarity around implementation of the Bills and how they fit with the role of CPPs in the new partnerships and arrangements.

Consultation with service users and role of third sector

46. In our recent work we have taken a close interest in the extent to which service users are consulted and the methods used to engage them. We have been critical of engagement practices, in particular tendencies towards doing things to people as opposed to undertaking meaningful consultation. We note that neither Bill requires consultation at the level of individual service users although we were told by the Cabinet Secretary that for the PBJW Bill—

“The planning and delivery principles in the bill encapsulate the Christie commission’s principles by putting the person at the centre of service planning and delivery and require a focus on prevention and anticipatory care planning.”

47. We acknowledge that both Bills require levels of consultation and were pleased to be told that “it is essential that we have real engagement with local communities” and of the need “for communities to inform professional practice”.

48. The Minister indicated that guidance will make the role of the child and family “explicitly clear”.

49. The Cabinet Secretary responded to criticisms we received from the third sector, for example the Coalition of Care and Support Providers in Scotland, about the lack of community involvement in the PBJW Bill at the planning, design and delivery stages. He indicated that he envisaged the third and independent sector being represented on boards in every case. Adding that involvement in service redesign and consultation exercises “will be required”.

50. We note the determination of the Scottish Government to involve service users and the third sector at every stage, we recognise this need not be set out on the face of the Bills and expect guidance to make the roles of

---

36 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2529.
all parties clear. We are interested in what role the National Community Planning Group will have in the preparation of guidance.

Transition arrangements for children to adult services

51. Consultation responses on the CYP Bill from both Capability Scotland and For Scotland's Disabled Children highlighted the need for good planning when young people move from children's services to adult services, or move between local authority boundaries. Young disabled people will use services planned under the CYP Bill and under the PBJW Bill.

52. We asked the Minister how the quite different mechanisms for integrating services will improve children’s transition to adult services. In response she suggested that the transition will in future be “far smoother” adding—

“I believe that there are two big differences between dealing with children and dealing with adults. First, there is the very crucial role that the education system plays with children and for which there is no equivalent for adults, particularly older people. Secondly, children by definition do not legally have the capacity to make decisions for themselves. However, adults do and I note that there are special arrangements for adults with incapacity. The fact that these two bills cross-reference each other means that we are singing from the same hymn sheet—and that is very important.” 37

Named Person provision [Children and Young People (Scotland) Bill]

53. Although not a matter falling within our remit, we received evidence in relation to Part 4 of the CYP Bill, the Named Persons provision. We draw to the attention of the Education and Culture Committee the exchanges which took place on the Named Persons provision at our meeting on 4 September.38 In particular we highlight the concerns raised around time, burdens and resources on both health and education professionals in undertaking this role as well as questions around continuity of provision. We also draw attention to the outstanding issue of who should be the named person for children being home educated.

54. In drawing this to attention we are not expressing any view on the substantive issue.

37 Local Government and Regeneration Committee, Official Report, 4 Sept 2013 Col 2534.

ANNEXE A: EXTRACT OF MINUTES

19th Meeting, 2013 (Session 4), Wednesday 12 June 2013

Public Bodies (Joint Working) (Scotland) Bill (in private): The Committee considered its approach to the scrutiny of the Bill at Stage 1, and agreed that it wished to consider those parts of the Bill relevant to its remit. The Committee also agreed not to issue its own call for written evidence, but to ask to include questions in the call for evidence being issued by the Health and Sport Committee, as the lead committee for Bill. Furthermore, the Committee agreed to take oral evidence on the Bill, after the summer recess, and to report its findings and recommendations to the lead committee, by way of a memorandum.

Children and Young People (Scotland) Bill (in private): The Committee considered its approach to the scrutiny of the Bill at Stage 1, and agreed that it wished to consider those parts of the Bill relevant to its remit. The Committee also agreed not to issue its own call for written evidence, but to consider relevant submissions received by the Education and Culture Committee, as the lead committee for Bill, in response to that committee’s call for written evidence. Furthermore, the Committee agreed to take oral evidence on the Bill, after the summer recess. Given the parallels in policy between the Bill and the Public Bodies (Joint Working) (Scotland) Bill - in relation to issues such as joint working and the development of shared services - the Committee agreed to take oral evidence from relevant witnesses, jointly, on both Bills. Finally, the Committee agreed to take evidence from the relevant Scottish Ministers on both Bills, and to report its findings and recommendations to the lead committee, by way of a memorandum.

22nd Meeting, 2013 (Session 4), Wednesday 4 September 2013

Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill: The Committee took evidence on the Bills from—

Jim Carle, Child Health Commissioner, NHS Ayrshire and Arran;
Dr Anne Mullin, GPs at the Deep End;
Eddie Fraser, Head of Community Care, East Ayrshire Council;
Carol Kirk, Corporate Director (Education and Skills), North Ayrshire Council;
Mary Taylor, Chief Executive, Scottish Federation of Housing Associations, and Member of the Housing Coordinating Group;
Alex Neil, Cabinet Secretary for Health and Wellbeing, Aileen Campbell, Minister for Children and Young People, Kathleen Bessos, Deputy Director Integration and Reshaping Care, John Paterson, Divisional Solicitor (Food Health and Community Care), Alison Taylor, Team Leader Integration and Reshaping Care, Philip Raines, Head of Child Protection and Children's Legislation, and Magdalene Boyd, Solicitor (Communities and Education), Scottish Government.
Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill (in private): The Committee considered the evidence received.

24th Meeting, 2013 (Session 4), Wednesday 25 September 2013

Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill (in private): The Committee considered a draft memorandum to the lead committees on the Bills. Subject to various amendments, the memorandum was agreed to.
Children and Young People (Scotland) Bill and Public Bodies (Joint Working) (Scotland) Bill: Stage 1

The Convener: Agenda item 5 is an oral evidence-taking session on two bills that are currently undergoing parliamentary consideration: the Public Bodies (Joint Working) (Scotland) Bill and the Children and Young People (Scotland) Bill. The bills are being considered by the Health and Sport Committee and the Education and Culture Committee, respectively.

Although this committee is not a formal secondary committee for the consideration of the bills, each of the bills might have a significant impact on the functions of local government in Scotland in relation to the delivery of adult and children’s services. In keeping with the Presiding Officer’s agenda for more focused and joined-up working by committees, we have decided to hold this one-off evidence-taking session on both bills with some key witnesses and to report our findings to the lead committees.

The aim of the session is to ensure that the bills are scrutinised from a local government perspective as well as to deliver joined-up scrutiny of cross-cutting legislation by the committees of the Parliament. This session will also inform the committee’s on-going work on the implementation of the Christie commission principles across the public sector in Scotland.

The witnesses have made written submissions, which members have before them. We have also received a further 13 written submissions from other organisations, and we have had regard to the written submissions that were given to the lead committees.

I welcome Jim Carle, the child health commissioner with NHS Ayrshire and Arran; Dr Anne Mullin, from the general practitioners at the deep end group; Eddie Fraser, the head of community care in East Ayrshire Council; Carol Kirk, the corporate director for education and skills at North Ayrshire Council; and Mary Taylor, the chief executive of the Scottish Federation of Housing Associations and a member of the housing co-ordinating group.

We are rather short of time, but do any of our witnesses wish to make a short statement?
Mary Taylor (Scottish Federation of Housing Associations and Member of Housing Co-ordinating Group): I would welcome the opportunity to do so. I will try to be brief.

It is clear that housing seems to be absent from the debate about the integration of health and social care, so we are delighted to have an opportunity to speak to the committee today. The housing sector—on whose behalf I am speaking; I am not here solely on behalf of the SFHA—supports the broad aims of joined-up working and improved outcomes in relation to health and wellbeing. We see ourselves as already making significant contributions to outcomes around healthy living and independent living, and positive outcomes for individuals and communities.

We support the broad thrust of what is happening, but the focus on the institutional and structural aspects of integration without reference to housing creates a risk that, in our view, this committee could do something to address. For example, in the papers for today’s meeting, there is virtually no mention of housing, other than in the paper from the housing co-ordinating group. That might be what you would expect, but I am here to make the case for revising the proposals as they stand in order to allow better strategic engagement with the housing sector, from strategic commissioning down to locality planning at whatever scale that turns out to be.

Unless the housing sector, which has experience of strategic planning and has the practical capacity and appetite to make a contribution on the ground, is involved, there is a risk that there will be poorer-quality and more expensive outcomes than might have been achieved with housing involvement at an earlier stage. That is not what we want for ourselves or for our older generations and relatives.

The Convener: That was an extremely useful contribution, so I will begin by following it up.

In the past, there were moves to create homes for life. However, we have seen various welfare reform changes, with more to come, which kind of impede that ambition—I am thinking of the bedroom tax and so on. Of course, this Parliament does not have powers to address those issues at the moment, which is probably an impediment to what you would like to see. Do you wish to comment on that?

Mary Taylor: I am not going to elaborate on the bedroom tax, in the interests of time. I could go on at great length, but all that I would say is that it does not completely undermine the sector’s capacity, although it certainly erodes it and we are working to address that.

There are all sorts of issues, particularly in the engagement of the housing sector in strategic planning through the local housing strategy and housing contribution statements, and, as I said earlier, it would be a risk to the objectives and goals of the integration exercise to miss the opportunity to involve housing in those things.

The Convener: Would it be fair to say that those changes do away with the concept of homes for life?

Mary Taylor: Not necessarily. There are a number of people affected by the bedroom tax, but there are also a number of people who are not affected by it, and there is no requirement on anybody to move as such. The English regime for housing policy is quite different from the Scottish one, and Alex Neil, when he was Minister for Housing and Communities, made it quite clear that there was no suggestion that the homes for life notion was going to be done away with.

I point out that, in speaking for the housing sector, I am speaking not only for social housing providers. Our housing co-ordinating group involves people who work right across the spectrum, including care and repair projects that help elderly owner-occupiers to undertake repairs to their homes and to engage the services that they need to keep them living independently in their homes. This is not just about social housing.

The Convener: Thank you. There are obviously high expectations for both bills and for what services can be expected to achieve. People are obviously looking for improvements once the bills come into place. When do you think that the benefits will start to be demonstrated?

Jim Carle (NHS Ayrshire and Arran): I believe that the benefits are already becoming manifest and have been for some time. Children’s services, in the broadest sense, have been working towards a similar integration agenda, understanding that by working together we can produce better outcomes for children and young people.

The challenge for us is measuring the impact of, for example, the early years collaborative over a longer period of time. Public organisations are quite used to looking for short-term gains over one, two or three years, but we are not used to looking at someone who will be born today and the benefits for them or the reduction in their uptake of services in later life. Children’s services have been working hard on that agenda, and we hope that the two new bills will go some way to supporting that new process.

Dr Anne Mullin (GPs at the Deep End): From a general practice perspective, working in deprived areas we have not seen benefits yet.

We are looking from a slightly different standpoint from other services that are represented on the panel. The deep end group
thinks that there is potential in the legislation, and we would like to explore some of that potential with the Scottish Government. We have outlined specific proposals in areas where we feel we could and should make a difference, but that needs to be supported with all the things that we have suggested in our proposals, such as the additional time for consultations that we need when working with very comorbid people in deprived areas; support for serial encounters in general practice, which are key to people’s holistic and long-term care; attached staff who are specifically named social workers, addiction workers and health visitors; and a nationally enhanced service for vulnerable children. The list goes on.

We have outlined those proposals, and members can access those documents. If the proposals are incorporated and recognised, we feel that general practice can play its part with our other partners in primary care.

The Convener: Having visited some doctors’ surgeries during the recess—everybody thinks that we take long holidays, but it is actually more work—I am aware of the need for increased consultation times. Surgeries that I visited made a plea for that, but I believe that your contract is governed by a deal with the UK Government. Is that correct?

10:30

Dr Mullin: There is perhaps some scope for that now. I am not involved in contract negotiations, which are for the British Medical Association, but there is some appetite to revisit the contract and consider what could be more appropriate for the national health service up here. The primary care services in Scotland and England bear no resemblance to each other any more. We feel that primary care is far more protected up here and we want to develop the role of general practice, particularly in the equalities agenda. We feel that it is very important for us to get involved.

The Convener: You would say that it would be best for the BMA to negotiate with the Scottish Government rather than the Westminster Government over many of these things.

Dr Mullin: That is my opinion, yes.

Carol Kirk (North Ayrshire Council): I concur with Jim Carle that we are already seeing a lot of the benefits. I chair our integrated children’s services partnership, which has representatives from the police, health, social services, housing and the voluntary sector. Over the years—particularly the past two years—we have seen a significant coming together in specific actions in relation to children. Before that, we would come together much more around a project.

The situation has now changed and we are looking at significantly different ways of working together. We are considering the co-location of health visitors within our early years establishments and we have established a multi-agency domestic abuse team, which is having a major impact on the number of children who are referred to the children’s panel. There is a lot of good joined-up working on specific issues such as those, and it is beginning to bear fruit.

Within the North Ayrshire community planning partnership, we are considering putting our children’s services into the health and social care partnership along with adult services. With my other hat on, I am the director of education and skills, and it does not cause me anxiety that health is no longer going to be part of the council as such. I think that the networks and the work on the ground are solid enough that it does not matter what headings we have on the management structures. If there is working together in an integrated and effective way, it matters less where the budget sits and where the managers and the reporting structures are.

Our partnership reports directly to the CPP, which takes a very active role—as does the chief officers group—in monitoring the outcomes for children. As Jim Carle said, that proves a challenge, as some of the short-term measures are not easy to define. In some of the work that we are doing, particularly with our youngest children, we are seeking long-term societal change and there is a challenge in that. I am happy to see the focus on integrated children’s services in the bill, but we need to be careful that we are not creating additional planning structures instead of refining the planning structures that we have both at the corporate level and at the level of the individual child.

The Convener: Thank you. It is refreshing to hear that a CPP seems to be working well in that regard. Getting it right for every child has played a part. Can you outline the importance of what that programme has achieved? Has there been any resistance within the CPP to a move to preventative spend?

Carol Kirk: GIRFEC has been a catalyst in changing a lot of the thinking. We have established local resourcing groups, which have been in place for four or five years. That has meant that multi-agency teams can provide a very quick response for children who need additional support but who are not at the level at which the reporter is approached and compulsory measures of care are sought. That has served us well both in keeping children out of compulsory care and in preventing situations whereby they are either out of school or out of the local authority. We have seen significant change around that.
A significant piece of work around GIRFEC has been carried out across the three Ayrshire councils. The information-sharing project, which is called AYRshare, started in South Ayrshire and has been rolled out to North Ayrshire. In essence, the three integrated children’s services planning groups came together to take things forward. We think that the approach will help all the agencies that are involved to get a handle on issues much more quickly and to be able to share information at that level.

GIRFEC has significant strengths and I think that people are signed up to it. There are issues to do with the planning around GIRFEC. We still have additional support needs planning, so there is sometimes an issue for us and for people in health about which plan to have for a child. There is still a bit of a cluttered landscape, but that will probably change over time.

I have not detected a reluctance in relation to preventative spend. However, there is significant difficulty in disengaging in relation to costs that are incurred for children who require a residential placement or intensive support, in order to invest in support further down in the early years.

Our joint chief officers and the CPP have made significant investment. We have put more than £1 million into preventative spend for young children, which meant that hard decisions had to be made elsewhere. There is not an unwillingness to spend in that way; it is just that there are groups of young people at the upper end of the spectrum who need continuing support, and it is difficult to disengage the money that is being spent on them so that it can be diverted elsewhere.

The message is beginning to get out that preventative spend is having an impact. It is having an impact on the number of exclusions from school and the number of young people whom we place outwith the authority, and there are fewer referrals to the reporter. There is hard evidence that spend is effecting change.

Mary Taylor: The convener asked when the benefits will materialise. As other people said, to some extent the benefits are already materialising.

That is true even in relation to housing planning and the development of new services that are preventive in essence and that aim to be low cost. That can happen where there are good relationships such as my colleagues on the panel have described. However, for every area where there are good working relationships there is an area—if not many areas—where working relationships are not necessarily good.

In particular, I cite the experience of the reshaping care change fund. Change fund plans have often been developed without reference to housing and without recognition that housing can achieve a huge amount upstream, at costs that are relatively low in the context of health budgets. Until relatively recently, people had not even got to the point at which they had the opportunity to sign off change fund plans—and that has happened only after a lot of pushing.

That is part of the argument for stronger recognition of the role that housing can play and for not leaving things to chance and the accident of good relationships.

Eddie Fraser (East Ayrshire Council): As members might have anticipated, I concur with most of what other witnesses have said. I emphasise the need for continued partnership working with housing in the new health and social care partnerships. We all know that there will be demographic change and that the number of older people will grow. Older people need appropriate housing so that they can continue to live in the community.

In my area, the focus of the council house building programme has been on houses for older people and how we can build houses that can support adults who have complex needs—that is the other area in which close partnership working with housing is needed.

We absolutely support de-institutionalisation and people living in their communities, but the fact is that we have individual support packages costing £200,000 dotted all over a town instead of some way of delivering them effectively through a type of core and cluster model. The issue is very much to do with the link between care and housing, and we in East Ayrshire have been able to deliver some successes in that respect.

I also agree that through housing we can get some early wins not just for organisations but for individuals. If by working through care and repair we can get simple things such as handrails installed without the need for elaborate assessment processes, people get what they need quickly and it proves cost effective. Indeed, one of our major successes has been the ability to put money into such areas through the change fund.

We have also been able to give money to the voluntary sector in order to give people practical support. Older people get depressed if they have to sit and look at an overgrown garden, and providing money to certain voluntary organisations that get young people into work and to do Scottish vocational qualifications while, at the same time, giving older people some practical support has proved to be a big success for us.

As for other early wins, co-location of certain services has been a really positive move. We have a number of good examples where such co-location has helped to increase communication. For example, the co-location of all our mental
health and learning disability services has given us immediate wins.

We have also been able to develop our intermediate care and enablement services to support early discharge from hospital and prevent admissions. Indeed, our statistics show how successful we have been in consistently improving the delayed discharge situation and, most important, in helping older people stay at home.

One of the positives of the proposed changes is that everyone will be clearer about how to access services. It will certainly help if, instead of general practitioners making referrals to a whole range of different people, we have clarity about who they can refer to. Having quicker decision making instead of decision making by committee will also make things clearer for us.

We also have to look at locality working, because we cannot have separate approaches to that issue in the various bills that are around at the moment. We have single communities, and we have to consult those communities together; after all, the priorities for those communities and how they want some of the national priorities to be implemented should come from them.

In that respect, it is essential that we have real engagement with local communities and that our local GPs are involved in that process. With the development of community health partnerships, we have lost the engagement of GPs in local healthcare co-operatives. We need GPs to come back into the process in a meaningful way that allows them to see the changes that are being made and to influence what is going on in communities.

The bills contain many opportunities, but it only makes sense to do this together on the front line at community level.

Anne McTaggart: Do our health colleagues foresee any practical issues for local authorities and health boards in trying to implement both bills together?

Jim Carle: Yes, there are a number of issues. Aligning both processes will be problematic and what could be regarded as strategic planning systems will give us issues. However, we are not going to run away from them; instead, we are going to grab and make the best of them.

There will be problems in ensuring that the two processes communicate well with each other. In planning for the implementation of the Children and Young People (Scotland) Bill, we need to be conscious of actions that are being taken on the other side. The recognition of the need to work better together did not come as early in the process as we would have wished, but it is now there and we are starting to build from that basis.

However, the fact that we are dealing with two separate processes that come from slightly different perspectives has been problematic, and it would have been much more helpful had they been brought together much earlier in the process.

An awful lot more could have been learned from the experience of children and young people’s services under GIRFEC and the processes that we have had to go through. Carol Kirk mentioned a number of gains. Under GIRFEC, we have had to look at culture, systems and practice. What we have done well is to change our culture and move away from our silo working practices towards having, on occasion, large meetings at which we work through all of our issues, recognise that we have more than one audience for anything that we are trying to deal with and move forward from that. However, we see the potential hurdles and are working towards dealing with them.

10:45

Dr Mullin: We could have a long discussion on where things could again go very badly wrong in Glasgow, as happened last time, so it is important to get it right this time. Purely from a GP perspective, one of the biggest lessons is on the need to engage directly with general practice. There are different models in Glasgow’s community health partnerships but, in Glasgow south, where I am from, we have a large established GP committee that engages with senior management to discuss policy and to consider local initiatives. That committee has minuted meetings, we report back to local colleagues and we have set up learning events and so on, so the situation is progressing. We feel that that should be built on, because it is a good way of implementing stuff that comes to us that sometimes seems very hierarchical and full of bureaucratic speech.

For example, we just want to know whether, if a GP identifies that someone has an unmet need, there is actually a service that the patient can be put into. At the moment, there is a mismatch. In our anticipatory care planning, we go out and visit housebound elderly people, who were traditionally chopped out of the QOF, or quality and outcomes framework. We now identify a lot of unmet need, but we do not have the resources to match the need. The discussion needs to be linked into the experience of children and young people’s services under GIRFEC and the processes that have been brought together much earlier in the process. An awful lot more could have been learned from the experience of children and young people’s services under GIRFEC and the processes that we have had to go through. Carol Kirk mentioned a number of gains. Under GIRFEC, we have had to look at culture, systems and practice. What we have done well is to change our culture and move away from our silo working practices towards having, on occasion, large meetings at which we work through all of our issues, recognise that we have more than one audience for anything that we are trying to deal with and move forward from that. However, we see the potential hurdles and are working towards dealing with them.

At the moment, there is a mismatch. In our anticipatory care planning, we go out and visit housebound elderly people, who were traditionally chopped out of the QOF, or quality and outcomes framework. We now identify a lot of unmet need, but we do not have the resources to match the need. The discussion needs to be linked into the views of those experienced professionals who can inform the process about what needs to happen in parallel as the work progresses. We realise that that is not quick work—it is slow work—but it has to be a two-way thing.

Carol Kirk: There have been particular issues for health colleagues, who have some very complex arrangements. For example, I know that health representatives on our group often have
complex reporting arrangements that they need to go through. The two chief officers in the CPP have managed to cut through some of that, but a considerable amount of work is required. Therefore, there is potential to simplify a lot of what we do. We need to learn from the work on integrated children's services in taking forward integration of health and social care, but we also need to learn from the work that has been done in adult services on how we create the momentum to make some of the changes. Perhaps a bit of joined-up learning still has to happen on that.

The Convener: Ms Taylor, do you want to comment?

Mary Taylor: We did not comment on the Children and Young People (Scotland) Bill at all. All that I would say is that, in the consultation on the integration of health and social care, children's services and housing services were lumped together. Given that, in this committee, a focus on children's services tends to exclude a focus on housing services, my only plea is that, in the absence of housing provisions in the Public Bodies (Joint Working) (Scotland) Bill, the committee should still pay attention to the housing dimension of the argument.

The Convener: I think that you have got that message across, Ms Taylor.

Eddie Fraser: We need to be careful that we do not lose anything in the changes. Community health partnerships currently have a responsibility for people from cradle to grave—for children, adults and older people. If we move to health and social care partnership committees that have a responsibility only for adults and older people, we need to be careful that children's services are not left sitting without an easy strategic voice in community planning partners such as councils and health boards. In taking the agenda forward together and planning across both bills, we need to ensure that the change is for betterment and that there is no loss of strategic planning.

The Convener: Does Anne McTaggart want to respond to any of those comments?

Anne McTaggart: No, that is fine. Thank you.

Margaret Mitchell: Dr Mullin mentioned that GPs are doing good things but they sometimes run out of resources. One way of addressing that—I put this point to all the panel—would be to ensure that positive outcomes are assessed and logged. Particularly for local authorities, will the new requirements be integrated into benchmarking? How do you assess the outcomes—both positive and negative, as you can learn from the negatives, too—and then do things differently? Perhaps we can go round the panel and ask people about that.

We have heard positive things this morning about how people are sharing and integrating services, which is welcome news. Equally, we have heard good things from CPPs in the past that have not then materialised in local communities. It would be helpful to have a little more detail on how you will pin this down.

Eddie Fraser: We can evidence that through numbers. Sometimes, that is about the number of hospital admissions for people over 75. We can also evidence it through measures such as the number and proportion of our elderly population who stay at home. It is much harder to look at less tangible issues such as wellbeing in communities and longitudinal things. If we do preventative spend, we need to do it so that people do not need certain health and social care services in 20 years’ time. That applies to everything from the 50-year-old male with an alcohol problem to unborn children. We must look at how we do that, but it is sometimes difficult to do and it will be longitudinal.

We can use indicators. One issue is the extent to which we put together anticipatory care plans. I accept that, unless we follow those up, we have gone through a process without improving someone’s life but, if we can put such plans in place, we can show that we have improved someone’s life. We currently have indicators that show what the situation is, but it is much harder to capture the positive and tangible things that we will see as we take the approach forward.

Mary Taylor: First, some of our colleagues in the housing co-ordinating group are actively working with the outcomes group on the definition of the outcomes and on the targets and indicators that go with all of that. Our general view is that wellbeing is not sufficiently addressed and that there is still too much focus on the costs and impacts of existing services rather than on the services that there might be in future, but I do not want to rehearse that in greater detail now.

Secondly, some members of the SFHA have undertaken social return on investment studies into the impact of the benefit of services and those have shown the value of the services concerned. I can send you details of a project done by Link Housing Association, which showed that, for every pound that it invested in an advice and information service, it got £27 of value back. A study by Hanover (Scotland) Housing Association, Bield Housing Association and Trust Housing Association looks at the value of adaptations for older people. I can send you details of those studies.

The Convener: I think that we have seen them before, but we would be happy to see them again.

Carol Kirk: An issue with benchmarking is that it tends to be done against individual services and
individual parts of the service. For example, it is easy for me to benchmark in education and we are benchmarked to the hilt across other services. Schools benchmark against other schools and benchmarking is embedded in the system.

We are also good at benchmarking against children at the acute end, if you like. We are good at benchmarking around looked-after children and children who come into the child protection world. Benchmarking around children when there are issues of wellbeing or neglect is quite difficult and we tend to rely on input measures—on what we are doing to address the issue—as there is a conceptual difficulty in benchmarking the impact that we have. However, we have done quite a lot of work to try to identify indicators and we think that we are getting there by looking at the stretch aims of the early years collaborative. We are working back to establish how we get there and which measures tell us that we are getting there.

We have taken forward an investment in the Solihull approach to parenting jointly with East Ayrshire Council, South Ayrshire Council and NHS Ayrshire and Arran. We can measure how many people are using the approach and what impact they feel that it is having on their clients or the families that they deal with, but it is difficult to develop hard measures of what it is saving us and what difference it makes to the wellbeing of children. A lot of work is going on in that area, but it is still in its infancy.

Margaret Mitchell: Previously, you gave us a good example of something tangible when you referred to the number of exclusions from school going down, but I take the point that it is not always possible to give such examples.

Dr Mullin: We could look at the epidemiology of the statistics that are being collected on issues such as unscheduled admissions to hospitals and the number of days that elderly people spend in hospital before they get moved to a nursing bed. I agree that some of the more qualitative outcomes take longer to develop, because we often need to involve the patient or client in the research agenda, and that work requires commitment.

There are a lot of short-term measure outcomes, but there are not a lot of long-term measure outcomes. A lot of our evidence on early interventions comes from the Olds study, which is on-going. We have nothing similar to that here, but we were prepared to look 20 years down the line at what happened earlier, and how we prevented something from happening. Social return on investment was mentioned. Action for Children published an interesting report about a family intervention project in Northampton and the money that was saved if it intervened early on.

There are ways of pulling together research strands into an integrated proposal. The GPs at the deep end group is working on that. We are very keen to do that research, but it would need to be resourced to give us the staff and the ability. At the moment, there is very little evidence to show for all the work that is going on.

Jim Carle: The question is excellent and quite difficult to answer for a number of reasons, but I agree with what my colleagues have said.

GIRFEC gives us the model for change and a common language so that we can communicate with one another. However, we need to develop a number of areas in a much more integrated way. We need to develop better systems for looking at contribution and developing the contribution analysis that looks at all the different systems that contribute to the wellbeing of a child, at how we measure or quantify the benefits that those systems can bring together and the impact that they have on the child.

We need to move away from looking at children in the sense of talking about what we do with a five-year-old, for example, and pick up on the life-course approach. What do we do when we are preparing young people for parenthood? What do we do to help new parents to develop? How can the issues that were identified during the early years be carried forward into primary and secondary school? How do we measure that across the life course of the child? There needs to be some sort of longitudinal analysis of the benefits of the different contributions that are made across the different systems.

One key benefit of joint working is that we all come to the table with a number of different skills. A public health approach to the issues would be extremely beneficial and helpful. As a science, public health has the skills to enable us to develop a proper contribution analysis. We need to ensure that, once we have established an agreed way forward, we stick to it over a long enough period of time to see the benefits coming from the process in which we engage just now. For example, the early years framework is helpful and positive. It gives us a good focus on prevention and the early identification of issues and it gives us the opportunity to engage positively with parents.

One of the key things that has been missing from our discussion so far is the contribution that communities can make to the process. How many of the answers to the questions that the professionals are asking lie within communities? They can inform professional practice.

The combination of approaches from the different disciplines and sciences that are involved will help to take us forward. However, we do not yet have systems that can measure the total
contribution to an individual child over their life course, and that is very much what we want to have a look at and start to develop.

**Margaret Mitchell:** Finally, I want to ask about the implications of the provision in the Children and Young People (Scotland) Bill that every child should have a named person. Do the witnesses have concerns about that? Is it necessary? Sadly, some children have chaotic lifestyles, so many different public bodies might have to share information. It would be helpful if you could give us your views on that.

**Jim Carle:** In Ayrshire and Arran, systems are well advanced. We know that our health visiting team will pick up the role of named person for the under-fives. Our midwifery service will be working hard to take that forward.

If we are to do more than just implement the wording of the bill and instead try to achieve the bill’s aim of a much better society in Scotland, and if we are to improve our culture, we have to consider the amount of time that it will take to engage with more difficult families. We believe that that is a significant burden that will, I admit, build up over a period of time for our midwifery and health visiting services.

11:00

We have time to meet our statutory obligations and we are doing that fairly well, but if we are to have a conversation with a new mum around alcohol, how it relates to foetal alcohol syndrome and the impact that that could have on her, her children and her family over the later life course, that requires the development of a relationship. The current systems do not allow for that on every occasion. That approach also requires the development of good communication skills and the ability to raise difficult issues and agendas, which will be problematic.

We are asking the health visitor, as the named person, to co-ordinate all the information that comes from a number of services and pull it together to adopt a basic analysis to identify whether there are issues for the particular family, and then to pass on those issues. However, that will take a significant time, and we are not confident at present that the resources are there in those services to enable that.

We will be able to perform our services according to the word of the legislation, but that is not our issue. If you really want us to get behind the issues that exist and find resolutions for them, that will take time and resources, and at present they are not there. We expect to see investment being recycled, if you like, from the money that is being put into the early years collaborative later in the life course. We hope to see a reduction in the number of children who are looked after and accommodated, for example. However, we do not have systems that can identify where those savings have been made, because that will perhaps happen 10 to 15 years later. Then there are questions about how to recycle that funding back into the early years to continue the process and build on it.

There are a number of challenges in the issue that Margaret Mitchell asked about.

**Dr Mullin:** I agree with a lot of what Mr Carle has said. For the under-fives—pre-schoolers—it is logical to have health visitors as the named person. For schoolchildren, there is a massive gap. If a child becomes vulnerable at four or five, they will probably still be vulnerable at six, seven and eight, but I do not believe that there is enough capacity for that work to be on-going in a meaningful way in the education system.

I am quite relaxed about the named person idea. Most people have a named general practitioner, and GPs are often the source of referral for many different agencies that are looking for bits of information or have something to tell us about a family or individual. I would like the GPs—and GPs at the deep end have stated this desire strongly—to have far more involvement with vulnerable children and families. There needs to be something more substantive in general practice.

**Carol Kirk:** There is a challenge for a lot of services. We have discussed whether, given that probably more than 98 per cent of three to five-year-olds are in early years provision where they are seen every day by nursery practitioners, the named person would have been better situated in that place. We have raised that on a number of occasions.

We have been operating with GIRFEC and the GIRFEC guidance for some time, but it is not easy. In primary schools, the headteacher or the additional support needs co-ordinator, who is often either a depute or a principal teacher, usually gathers information from a range of agencies. That can be quite complex and time-consuming, even before the information is looked at. The issue is not that there is a lack of willingness but that the capacity that is required to do that is a strain on the system.

However, that is perhaps not as much of an issue as that of looking at a young person with more complex needs and the transfer from that approach to someone being the lead professional. That tends to sit with social services, but that is not necessarily where it should sit. In some cases, it would be better for it to sit with the school or with a health professional. A bit more work is needed.
on that to free up the time for the appropriate professionals to take that role.

In our consultation on the issue with parents, we had quite a kickback about the term “named person”. A number of our parent councils expressed significant concern about it, with people saying, “I should be my child’s named person.” When we explained the concept behind it, they were fine with it, but their initial reaction to the name was not one of unqualified approval. That is a challenge. We need to be explicit about what the role is and how it will be implemented. Some of the things around information sharing and the shared systems that will be used will make the process less onerous, but there is still an issue about how that comes together.

We are also concerned about the issue of who the named person is for children who are home educated. Local government education departments have no locus in that regard. With regard to health, who would take that forward for young people of primary and secondary school age? That is not explicit in the legislation. If we want to have a net to catch every child, we should be aware that there is a group of children that could slip through that net.

The Convener: Miss Taylor, this is not really your field.

Mary Taylor: That is correct. I have nothing to add.

Eddie Fraser: I concur with Carol Kirk. There is a difference between the most vulnerable children, who have a lead professional and multi-agency involvement, and the wider population of children, in relation to whom the concept involves allowing easy, named access to that world and enabling proportionate access to professionals rather than having people who are involved with them every day of their lives and who take over some of the role of parents.

Margaret Mitchell: Miss Taylor, do you have no locus in this? Some information about housing and what is going on in a home can be very pertinent. I would imagine the SFHA might have something to say in that regard.

Mary Taylor: A social landlord might have an understanding of what is going on in a home—that occurred to me as I listened to the responses. However, we have opted not to make any formal comment in that regard, and I do not want to simply react to things today. I think that the important point is that the landlord’s relationship is primarily with the householder, who will always be an adult, even if they are 16, 17 or 18.

The Convener: It would be fair to say that housing assistants throughout the country play a major role in finding difficulties and pointing them out, but they are unlikely to be the named person in this regard. That is the key thing. That is why I said that this was not really your field. I am sure that housing assistants and housing visitors will continue to do what they have been doing in this regard for many years.

Mary Taylor: It is not because we are not aware of chaotic lifestyles or whatever. I could elaborate on that, but this is not the place.

Richard Baker: Carol Kirk said that there was a potential to simplify structures to benefit services, which is something that we would all support. She also said that we need to be careful that we do not just create additional structures rather than simplify the structures in a way that will make the process easier.

Will the Scottish Government get that balance right? Obviously, we are also considering the Public Bodies (Joint Working) (Scotland) Bill. Is the balance right as the proposals stand, or does it need to be worked on further?

Carol Kirk: It possibly needs to be worked on further. Even in the Children and Young People (Scotland) Bill there is much more of a statutory imperative around children’s services planning, which I think that people would welcome, but I would ask why we need a plan on corporate parenting that sits outwith that. I cannot see why that would not be merged into the same plan, given that the plan is concerned with a range of vulnerable children.

With regard to issues around the individual children, there is a complex framework, not only for local government but for parents. GIRFEC provides a structured and helpful way of planning for a child, in the round, and I am supportive of that. However, it crosses over with, for example, a co-ordinated support plan for a child who has complex needs. The additional support needs legislation does not sit entirely comfortably with the guidance around GIRFEC. It is possible to merge them, but it would still involve having two statutory frameworks, which does not make sense to professionals working in the area and probably makes less sense to parents.

The Convener: I return to a point about GIRFEC. I mentioned that I visited some doctors’ surgeries during the recess. I am interested in systems that do not talk to one another and which complicate the spread of information. What are your experiences of that? Could a bit of common sense and a bit of gumption be applied to deal with some of that? Do we overly complicate such systems?

Jim Carle: Yes, it is a real issue. The professionals are good at communicating with one another, but if we want to deal with the issues that are on the table, we need to have a better look at
that issue. I will pronounce this really carefully, but the Scottish Government needs to GIRFEC itself; it needs to look at the interrelationship between different bits of legislation, how they cut across each other and the number of demands that have been put on different aspects of professional organisations.

We do not need conflicting legislation. We do not need legislation that tells us to report to 16 different organisations, all on the same subject. A number of issues that we are dealing with in local authority and health board areas come from that source.

A significant amount of work needs to be done to resolve the systems that we have and to ensure that we are working to a common system and a common language. In Ayrshire and Arran we have AYRShare; we hope that that will take us some way down that road, but there is still a need for the organisations that we work with—education, social work and health—to have their own systems underneath all of that. That is an industry in itself and they all have different reporting mechanisms that work within that.

Somebody who sits in my position frequently answers the same questions to a number of different aspects of the Scottish Government. Again, that is about public money and public time that could be used better and more effectively on the issues that we have to deal with—issues that the other members of the panel have outlined so well.

The Convener: The term GIRFEC has to be said very carefully—I nearly did not say it the right way there.

Dr Mullin: Sensitive data sharing is a real issue for general practice and other agencies: how you filter what you talk about informally, in corridor chat and various other ways, and what you are prepared to put down on paper.

With child protection issues, it is fairly straightforward. I do not think that many GPs wring their hands over that. If they suspected anything, they would divulge that information quite readily. However, we are talking about the majority of vulnerable children in this country—probably about 20 per cent of 1 million children—who have unmet needs. The sharing of information around the subtleties of parenting and all the issues around deprivation and so on is a big piece of work that still needs to go on because some parents are very reluctant—naturally enough—for you to speak to other agencies about their own personal, private lives because that impacts on their parenting skills.

The only way round that is for extensive work to be done between the front-line GPs and social work, which is probably the main referral agency if you are talking about catapulting into the child protection system or legislative intervention. Otherwise, the majority of children who are vulnerable in general practice will just be signposted to other services for support; they are not being signposted into prosecuting the parents because they are battering their children. We are talking about parents who are not coping, for whatever reason.

A lot of such information comes into the consultation and the issue is how that is filtered. It is about experience—having experienced GPs who have met a lot of children and families in their lifetime—but it is also about having the work supported within the GP contract.

The Convener: I ask everyone to be brief, because I am hoping to get another question in. Ms Kirk, please.

Carol Kirk: That is right. The particular issue is not at the child protection end; it is the very large group of children for whom poverty and difficult home circumstances are impacting. We need to get much better at direct communication around that issue that possibly does not involve social services.

With AYRshare, one thing that we have considered—in fact, we had a meeting about it yesterday—is how GPs can have automatic access to the system. They might have a wee concern because they do not feel that some information can be shared of its own right but, if they have access to what other professionals have put on the system, that maybe builds a picture and allows them to say that they have a real concern. Achieving that level of shared information as easily as we can is a real issue for us.

11:15

Eddie Fraser: One of my responsibilities is to run out-of-hours social work services across Ayrshire. Working with three social work systems and trying to get out-of-hours health information is a difficult challenge. Improved information sharing, whether it be electronic or, better still, just talking to each other, would be a real move forward. That is where co-location comes in. I mentioned some of the services that we have co-located, such as mental health and learning disability services. In that situation, a social worker will just go along to the learning disability nurse and say, “Will you come out with me today and see this?” That communication happens and it works. On another level, we need to consider how to develop electronic information systems. I know that, through the Public Bodies (Joint Working) (Scotland) Bill, some money is being made available to move that on, but that has been a challenge for us for at least the past decade.
John Wilson: I want to follow up on a point that Mr Fraser made earlier, although my question has been partly answered in the previous round of answers. Mr Fraser referred to the fact that GPs are not as actively involved in the community health partnerships as they could be. My concern about the named person and protecting vulnerable young people is about how we ensure a smooth transition from pre-school to the school period and that the appropriate professional is the named person. For pre-school, that person could be the health visitor, but when the child starts school, it could be a social worker, a teacher or someone else. Might that give rise to issues? We must ensure that every child has a named person who can not only gather information but give it to other professionals to ensure that the child is protected.

Eddie Fraser: At a very basic level, one measure of success is that the child and family know who the named person is. Sometimes, in my service, when someone is asked whether they have a social worker, the answer will be yes, but they will give the name of somebody who left two years ago. Sometimes, the answer will be no, but we know that the person has a social worker. There are real issues about whether the role of named person will fulfil its function. You are right that children move through systems. If the approach is to be successful, who the named person is must be clearly communicated to the child and family. Families continually tell us that the lack of continuity in the people who support them is a real issue. I know that GP colleagues will say that, a lot of the time, the continuity comes through the practice.

Carol Kirk: The key to the issue is good relationships between early years establishments and health visitors. Health visitors will have a huge case load of children for whom they are the named person. When those children transit from the early years establishments to school, the named person will become someone in the school although, if the child is very vulnerable, the health visitor might retain that role until an appropriate time for handover. The key issue is to ensure that transition meetings take place and transition plans are produced for any children about whom a health visitor has a concern. Linking the health visitors directly to the early years establishments and involving them in the transition to primary 1 is the key way of ensuring that that happens. Another key issue is ensuring that, when a child moves into primary 1, the parents know who the named person is.

Mary Taylor: I wanted to come back on the previous question, but I am happy to wait until the end if you want.

The Convener: Fine. Dr Mullin?

Dr Mullin: I do not want to go into too much detail about the named person for over-fives. That is still something that has to be worked out. We are still often the referral point for older children, because agencies have withdrawn for whatever reason, because they do not need help any more, or because they have become vulnerable again. Because most people have a named GP, services or people will come to the GP. There is a big schism between education and general practice; there is not enough dialogue there.

The deep end has talked about integrated working and attached workers, but the only way to make any of the systems work is to have integration of communication. It is about professionals being able to communicate with and understand one another, and child health in general practice has been peripheral to many of those developments, although we are often the central point of referral for many agencies. The deep end has a clear view on that, which is outlined in our proposals.

Jim Carle: I agree 100 per cent with what Carol Kirk said. We need to align health visitors carefully with early years establishments, and a good relationship needs to be built and maintained in that process. My concern for health visitors is about the resource requirements and the additional burden that that will bring. GPs are the critical partners in most of what we do in children’s and young people’s services. They are the pivotal point around which families revolve, so communication systems must be developed well to support their practice. If there is a hierarchy within the system, they are among the most valuable partners.

Our difficulty is in assessing what happens with health visitors beyond the age of five, when the burden of being the named person is placed on our education colleagues, who must have good support systems in place. We are new to the whole process. We do not yet have a huge amount of experience of those transition arrangements, but good communication and professionals talking to professionals to ensure that we are talking the same language and that we understand the issues will be critical to the whole process. The strength behind that is that we have well-established communication frameworks where we can raise those issues, and we will find shared resolutions. However, the problems should not be underestimated, either in terms of the additional resource required or in terms of the critical nature of the relationship between health visitor and early years establishments.

The Convener: Miss Taylor, I shall let you come back very briefly.

Mary Taylor: On the general issue about systems not talking to one another, there is an
operational dimension, which we have spent a lot of time talking about, and a strategic dimension. The operational dimension intersects with the housing system in the sense that, for example, someone who is leaving care and who may have had a history of social work interventions as a child may then be at risk of homelessness and may enter the housing system as a social tenant through the homeless route. There is an interesting issue there about how much information passes with that person to the people who take him or her on as a landlord, to enable them to understand what interventions have worked and who has been involved in the past. Operational practice is much patchier than it really should be.

With regard to the other side of the operational information, I know that there are projects in Glasgow where housing associations are actively working with police and fire services to ensure that they get effective data sharing, information sharing and knowledge sharing at a local scale, so that they can tackle problems on a preventive basis. They have been able to document the extent to which they have saved lives and extensive budgets on vandalism, fire damage and other things.

However, I return to the point that I made at the beginning, about strategic information. There is a whole lot of information around strategic planning that relies on decent data sharing and integration of practice around strategy, and that is where housing can make a significant contribution—but only if it is required.

John Wilson: I have no further questions.

The Convener: I thank the witnesses for their evidence, which has been useful.

11:24

Meeting suspended.

11:33

On resuming—

The Convener: We move to our final panel. I welcome from the Scottish Government Alex Neil, the Cabinet Secretary for Health and Wellbeing; Aileen Campbell, the Minister for Children and Young People; Kathleen Bessos, deputy director for integration and reshaping care; John Paterson, divisional solicitor for food, health and community care; Alison Taylor, team leader for integration and reshaping care; Philip Raines, head of child protection and children’s legislation; and Magdalene Boyd, solicitor for communities and education.

I ask the cabinet secretary to make opening remarks.

The Cabinet Secretary for Health and Wellbeing (Alex Neil): Thank you for inviting Aileen Campbell and me to make statements and answer questions. I will confine my remarks to the Public Bodies (Joint Working) (Scotland) Bill, which deals with the integration of adult health and social care. The bill’s purpose is to provide a framework for the integration of health and social care, with the aim of improving outcomes for service users, carers and their families. That is at the heart of our policy.

We are legislating for national health and wellbeing outcomes that will underpin the requirement for health boards and local authorities to plan effectively together to deliver quality and sustainable care services for their constituent populations. It is important that the bill aims to bring together the substantial resources of health and social care to deliver joined-up, effective and efficient services for the increasing number of people with longer-term and often complex needs, many of whom are older.

The bill requires health boards and local authorities to establish integrated arrangements through partnership working and it requires statutory partners to integrate via one of two models—delegation to a body corporate that is established as a joint board, or delegation to each other as a lead agency, which involves three possible models. Health boards and local authorities will be required to delegate functions and budgets to the integrated partnerships, and secondary legislation will set out such matters and will cover adult primary care and community care, adult social care and aspects of acute hospital services.

Integrated partnerships will be able to include other services, such as children’s services, when a local arrangement is made to do so. That already works well in areas across Scotland, such as West Lothian and Highland.

Each partnership will be required to establish locality planning arrangements, which will provide a forum for local professional leadership of service planning. Integrated partnerships will also be required to prepare and implement strategic commissioning plans that will use the totality of resources that are available across health and social care to plan for local populations’ needs. It is important that professionals, service users, GPs and the third and independent sectors will be embedded in that process as key decision makers.

The bill is in the context of public service reform. Alongside the Children and Young People (Scotland) Bill, which Aileen Campbell is leading, it is part of the Government’s broader agenda to
deliver public services that better meet the needs of people and our communities. The Public Bodies (Joint Working) (Scotland) Bill provides a legislative framework for partnership working at strategic and local levels that involves professionals, service users and partners. The planning and delivery principles in the bill encapsulate the Christie commission’s principles by putting the person at the centre of service planning and delivery and require a focus on prevention and anticipatory care planning.

As for why we need to legislate, my predecessor, the Deputy First Minister, proposed to Parliament in December 2011 the introduction of the bill, which had cross-party consensus. We are all aware of attempts in the past to integrate the services, with greater or lesser success. Underpinning the process with a legislative requirement is essential to achieving our objective.

We are not starting with a blank sheet. In many areas across Scotland, bodies are already working in partnership to deliver integrated services. We have considered the evidence from across the UK and we are mindful about applying it in Scotland. However, I am clear that, to achieve consistent progress, it is necessary to set out in legislation a framework that is not too prescriptive and will deliver the necessary changes to meet the future demand on services. I welcome the opportunity to provide further clarity on the bill to the committee.

The Convener: Does the minister have anything to add?

The Minister for Children and Young People (Aileen Campbell): Yes. Good morning and thank you for inviting me to give evidence on part 3 of the Children and Young People (Scotland) Bill—on children’s services planning—which was introduced in Parliament on 17 April. The bill is fundamental to securing the Scottish Government’s aim of making Scotland the best place in the world to grow up in. Through the bill, the Scottish Government aims to ensure that children’s rights properly influence the design and delivery of policies and services. The bill aims to improve how services support children and families, to strengthen the role of early years support in children’s and families’ lives and to ensure better permanence planning for children and their families.

The report of the Christie commission on the future delivery of Scotland’s public services highlighted that services must better meet the needs of the people and communities that they serve. In welcoming the report, we set out a vision of reform through early intervention and preventative spending, greater integration and partnership locally, workforce development and a sharper and more transparent focus on performance.

The Children and Young People (Scotland) Bill will be fundamental to our achieving those ambitions on rights and services. It aims to put Scotland at the forefront of providing services that give children, young people and their families what they need and deserve, and find better ways of offering better life chances to each and every child in Scotland.

I am delighted to have an opportunity to speak to the committee about part 3 of the bill, which is on children’s services planning. In recent years, there has been increasing integration in how public bodies develop, plan and operate services to support children and young people. However, unless services work together, there is a danger that something important will be missed and a child or young person’s wellbeing will suffer. Children and young people need not just co-ordinated services but services that share an holistic approach to wellbeing and early intervention. Children deserve services that routinely and consistently consider the full spectrum of their needs.

Part 3 sets out the duty of local authorities and health boards, with the assistance of other public bodies and third sector organisations, to work together to develop joint children’s services plans every three years. The intention is that bodies that are responsible for expenditure and for planning and delivering services will work together to improve the wellbeing of all children and young people in their area.

Currently there is no requirement for public bodies to report collectively on how the lives of children and young people are improving. To give the public and children and young people a full picture of how wellbeing is being promoted, supported and safeguarded, local authorities and health boards will report each year on the extent to which they have achieved the aims of their children’s services plan. That will enhance the implementation of getting it right for every child and make a direct and accountable link for the public between local services and outcomes for children and young people.

I hope that I have given the committee some useful background information. I will be happy to take questions from the committee on part 3.

The Convener: Thank you, minister. The evidence that we heard today on the difference that GIRFEC has made was mainly positive. However, a few things cropped up, one of which was the perennial question about communication and systems that do not talk to one another. How will we tackle the issue, which causes great difficulty sometimes?

Another interesting issue that was raised was how we deal with named persons for children who
are home educated, given that an educationist would normally be the named person for a child of school age. Will you respond to those points, minister?

Aileen Campbell: It is good to hear that you had such a positive session on GIRFEC. As you know, GIRFEC has been around for a while. The bill provides the opportunity to embed the approach further, putting the child at the heart of the design and delivery of services.

You asked about communication. Part 3 is about ensuring that joint working happens. I think that this morning the committee heard good examples of joint working and the strong relationships and good communication that are crucial to the delivery of services that a child or family needs.

There is the joint services element of the bill, and we want a reporting mechanism that brings together local authorities and health boards. We will ensure that such an approach is standardised and embedded in the bill, to ensure that there is an holistic approach that reflects the child’s holistic needs and promotes the child’s wellbeing.

As the bill progresses through the Parliament, I know that the Education and Culture Committee, which is the lead committee, will take a strong interest in the named person aspect, because of the issues that have arisen in that regard. From our point of view, the named person is a big part of the GIRFEC approach. It is about ensuring that services are delivered consistently, that families have a point of contact and that support is in place.

We are well aware of the issues that have arisen in relation to home-educated children. We are working with stakeholders to ensure that, through guidance for example, procedures are put in place to reflect the parental choice to educate a child at home—it is right that there is such a choice, because the parent is the person who knows the child best. We will ensure that that is reflected in the bill and in the guidance.

The Convener: Mary Taylor, the chief executive of the Scottish Federation of Housing Associations, told us this morning that the housing sector is not really taken into account in either bill. She thinks that the sector has a major part to play in integration. Will you comment on that, cabinet secretary?

11:45

Alex Neil: Absolutely. I agree with Mary Taylor that it is essential to involve the housing sector, particularly the social housing sector. Many of the issues that we are dealing with, whether delayed discharge, aids and adaptations or a range of other issues, clearly require the involvement of housing associations and local authority housing departments. We have a stream of work going on, which I commissioned a few months ago, to see how we can best ensure that the housing function is involved at grass-roots level in the partnerships. It may not necessarily be the case that housing bodies are separately represented on partnership boards, but I think that the most important element is what happens in the localities underneath the partnership board area. That is where the close working relationship between health, social work and housing is vital. Both the ministerial steering group and the bill steering group are looking at how best to achieve that.

The Convener: Minister, do you want to follow up on that?

Aileen Campbell: Yes. Section 10(1)(b)(ii) in part 3 of the Children and Young People (Scotland) Bill explicitly refers to consulting “such social landlords as appear to provide housing in the area of the local authority”.

when the local authority is preparing a children’s services plan, so there is explicit recognition of the role that housing can play in a child’s wellbeing.

The Convener: Thank you.

Margaret Mitchell: Good morning. It is clear from the very comprehensive opening statements from the cabinet secretary and the minister that both bills contain provisions that require consultation on their respective shared services provision. Section 6(2)(a) of the Public Bodies (Joint Working) (Scotland) Bill requires consultation to be with “such persons or groups of persons appearing to the Scottish Ministers to have an interest”.

Section 10(2)(a) of the Children and Young People (Scotland) Bill requires consultation with organisations that “represent the interests of persons who use or are likely to use any children’s service”.

However, neither bill appears to require consultation with individual service users.

Despite your emphasising that the provisions are based on the Christie commission recommendations and that we are putting children at the heart of the process, the fact of the matter is that, as you have explained it so far, there does not seem to be a requirement to consult the child or the young person.

Aileen Campbell: As Margaret Mitchell correctly notes, the ethos of the bill is getting it right for every child and putting the child at the centre of service design and delivery. The bill mentions setting out guidance on how consultation might take place on potentially bringing into the
planning process third sector providers and whoever else is appropriate, which will include the child and the families. However, as we develop the guidance, we can certainly make it explicitly clear that consultation should recognise the role of the child and the family and ensure that they have a full and active role in the service design and delivery that is going on around them.

Margaret Mitchell: May I put a specific, quite technical question to you, minister? You will be aware that the Children (Scotland) Act 1995 drew everything affecting children into a single act. The act had three overarching principles, but the key one was to require the child to be given the opportunity to express their views. Obviously, their welfare is required to be a paramount consideration and there is the requirement that the minimum proportion of state intervention be preferred over disproportionate intervention in family life. Subsequent legislation affecting children and young people—for example, on children's hearings and adoption—has ensured that those requirements are incorporated, but that is not the case with the Children and Young People (Scotland) Bill. Why is that?

Aileen Campbell: Again, the bill takes appropriate account of the child and the family. That is the ethos of GIRFEC, which is about ensuring that services provide support to families when they need it and that such intervention is appropriate and timely, and is delivered at the right point to avoid crises, given that intervention is most effective when it is done as early as possible.

It is worth recognising that the 1995 act is still in place and that our aim is to ensure that we make the bill as good as it can be, that we can work things through in consultation with stakeholders and that our guidance reflects the points that you have raised as much as it can.

Philip Raines (Scottish Government): Section 9, which relates to the aims of the children's services plan and sets out many of the principles that we want to underpin the planning of children's services—and, by extension, the way in which children's services are carried out—makes it clear that planning should take place in a way that "best safeguards, supports and promotes the wellbeing of children in the area concerned ... is most integrated from the point of view of recipients, and ... constitutes the most efficient use of available resources".

We wanted to make many of those principles explicit in the bill to ensure that they underpin the planning that takes place. As the minister has said, we will work with stakeholders on the detail of that and how that will work in practice as we develop guidance.

Margaret Mitchell: The fact that the issue is not implicit in the bill as it has been in other bills has led some to comment that this is a duty on public services rather than anything in particular to do with the rights of the child. That, I think, is the technical point.

Do you wish to comment on the suggestion made by an earlier witness that, in view of this legislation and potentially competing legislation, the Scottish Government should GIRFEC itself?

Aileen Campbell: Should what itself?

The Convener: GIRFEC itself.

Margaret Mitchell: They were referring to getting it right for every child. The suggestion was that the Scottish Government should look at the various bits of legislation that might compete with, conflict with or duplicate one another.

Aileen Campbell: The bills complement one another; in fact, a lot of work has been done to ensure that not just these two bills but all the bills that we introduce complement one another. From my point of view, the Children and Young People (Scotland) Bill is about ensuring that the United Nations Convention on the Rights of the Child is taken far more into account in the work that we as a Government do. That applies not just to this bill but to all our work across Government, regardless of whether we are talking about legislation. The Government has been working in a joined-up way to ensure that the bills are complementary and that the work of Government in future dovetails and provides the good outcomes that we expect to emerge from the bills that we are presenting today.

Margaret Mitchell: Did you hear the previous panel's evidence?

Aileen Campbell: I did not catch it all. Did you wish to raise a specific issue?

Margaret Mitchell: I simply refer you back to the specific examples of conflicting legislation and duplication that were highlighted and suggest that the previous panel's evidence on that specific point might be worth looking at.

The Convener: I am sure that, as per usual, the minister will do so.

Richard Baker: Although the previous panel was very enthusiastic about the potential for integrating and improving services through legislation, the witnesses asked that, in pursuing this agenda, we were careful not to create new and additional structures instead of simplifying things. How would you allay such concerns?

Alex Neil: To some extent, the legislation will streamline structures and make it easier to see the focus for partnership working. We have clearly specified that one of two models must be adopted:
the lead agency model that has been adopted in the Highland area or the joint corporate body model, which I think will be adopted in most if not by all of the rest of Scotland. As a result, there is scope for many existing committees to be streamlined. For example, one of the consequences of the enactment of the Public Bodies (Joint Working) (Scotland) Bill will be that there will be no need for separate CHPs because their work will in effect be incorporated into the partnership. Moreover, with the introduction of a more formal structure, the many formal and informal organisations involving health boards and local authorities at local level can be collapsed. In that way, the legislation will simplify the structure.

The role of the chief officer in the partnership will also be crucial because they will do two things: first, report to the partnership board—or the lead agency, if a lead agency model has been adopted—but, secondly, report to the respective chief executives of the local authorities. For example, such an approach has been up and running very successfully in West Lothian for eight years now and integration and co-ordination at parent organisation level have been substantially enhanced as a result of the partnership’s work.

I should stress that, from day 1, we want the acute health sector to be actively involved in the partnerships. When we involve acute care in the community, many of the barriers that exist between the primary care sector and social care, and between the primary and secondary care sectors, start to get broken down. A good example of that is the hospital at home programme that NHS Lanarkshire initiated, which is now being rolled out across the country. I think that that will remove barriers and bureaucracy, cut red tape and lead to much more localised provision.

In addition, we have commissioned—jointly with our colleagues in the local authorities—some work to look at where the public health function would sit in future. In the post-war situation, the public health responsibilities were given exclusively to local authorities. Under Ted Heath, they were transferred exclusively to the new health boards. South of the border, they have been split up between the health boards or their equivalents and the local authorities. My view is that a successful public health policy requires the health boards and the local authorities, with their respective remits, to work in an integrated fashion. I think that an opportunity exists, particularly in public health, not just to enhance the service, but to break down the barriers that have traditionally existed between the different sectors and to streamline the entire process.

Richard Baker: That is helpful, but there is still a concern about the details of what is proposed and how it will work in practice. In its submission to the committee on the two bills, Audit Scotland said:

“Significantly, the relationship between CPPs and the new integrated health and social care arrangements ... and changes to children’s services ... are not clear.”

Will greater clarity be provided on some of the working arrangements before the bills are finalised?

Alex Neil: I am surprised by that comment, because I believe that Audit Scotland is represented on the group that is chaired by Pat Watters, the former leader of the Convention of Scottish Local Authorities, which is looking specifically at enhancing the role of the CPPs in relation not just to health and local authorities, but to the entire public sector operation at local level.

It is likely that the output from that group, which includes representatives from a wide range of organisations including COSLA and the Society of Local Authority Chief Executives and Senior Managers, will take forward in a substantial way greater co-ordination and integration of services across the board at local level. In particular, I know—because I am a member of the group—that it has had serious and in-depth discussions about the need for bodies such as health boards and local authorities, and others, to discuss annually their strategic budget proposals before they agree to implement those proposals, in an effort to ensure that across the public sector, in each local authority area, we maximise the impact of the public pound. Therefore, I am surprised that Audit Scotland has made that comment.

Richard Baker: Well, it has made it, so—

Alex Neil: I draw your attention to the work of the group that is chaired by Pat Watters.

Richard Baker: I am sure that you and Pat will discuss the matter—

Alex Neil: Absolutely.

Richard Baker: I do not want to labour the point, but it is worth reflecting on the fact that Audit Scotland raised the issue specifically in relation to CPPs.

Alex Neil: Pat’s group is looking specifically at the role of CPPs and how there can be much greater integration and co-ordination across the public sector in each local authority area.

The Convener: I am sure that the committee will talk to Mr Watters again shortly, because we said that we would.

Stuart McMillan: Good morning, panel.

My question is directed mainly at the cabinet secretary. The Public Bodies (Joint Working) (Scotland) Bill is, obviously, about public bodies; it is not about other organisations. Prior to the
summer recess, the committee concluded the latest instalment of its inquiry into public services reform. An issue that came up in all three of the stages of the inquiry that we undertook was community and third sector involvement in the shaping and delivery of public services.

During one of the visits that I undertook over the summer, a council of voluntary services made the point that the Public Bodies (Joint Working) (Scotland) Bill appears to make no mention of community involvement. Now, I accept that the bill is about public bodies rather than about communities per se, but it appeared to that CVS that the bill is about something that is being done to people rather than in conjunction with the community. Should there be a wider discussion with communities to provide that involvement?

Alex Neil: Let me make it clear that, as should be evident from the policy memorandum and from the bill itself, we see the third and independent sectors as having a very important role not just in the delivery of services but in the design and architecture of services.

I think that there is a bit of a misconception here, and let me explain why. Because the health board and the local authority are the public fund holders, only they have a vote on the partnership board. However, as we have seen in West Lothian and elsewhere, the third and independent sectors are represented on the boards. We would envisage that happening in every case because the third and independent sectors clearly have a major role to play. Obviously, we need to ensure that there is no conflict of interests, because we cannot have people who are competing in a tender for service delivery simultaneously sitting on the board. However, those governance issues are not new and have been with us for a long time.

You just need to look at West Lothian, which is a kind of exemplar for the joint corporate body model in Scotland, to see that the third and independent sectors have a role not only in terms of board membership but—more important, actually—in designing and delivering services at the locality level. They are heavily involved in that. Also, where there are any proposals for service redesign, the third and independent sectors are involved in the process and in the consultations on the redesign of services. I would take West Lothian as a very good example. We would expect that kind of standard of consultation with, and standard of involvement of, the third and independent sectors to be followed. Indeed, we will require that, and we will incentivise the use of the third and independent sectors where that is appropriate.

Stuart McMillan: That is helpful, thank you.

The Convener: Cabinet secretary, you have mentioned that West Lothian is probably the exemplar for this kind of work. In the evidence from East Ayrshire Council earlier today, we heard that co-location can help a lot in that regard. Obviously, West Lothian Council has its new civic building, where teams from across the public sector can work side by side at desks next to one another. That seems to make joint working easier. In your opinion, is co-location required to ensure that all these things work properly?

Alex Neil: I would not like to prescribe that co-location is always a prerequisite to approving any delivery plan, but I must say that, in the examples that I have seen, co-location is definitely very advantageous. In the East Ayrshire Council headquarters building on London Road in Kilmarnock, the co-location of services there is definitely a huge advantage in providing for integrated delivery.

I draw your attention to a pilot project that is being run in the mining village of Dalmellington in East Ayrshire. That joint project, which involves the third sector as well as the local authority and the health board, is using telehealth to help older people with co-morbidities. Over the 21 months that the pilot has been running, the GP in charge says that, for the 20 older people with co-morbidities who are involved in the pilot, there has been a reduction in hospitalisation of that cohort group that has been of the order of 70 per cent. That is a very practical example.

Similarly, in your part of the world, convener, in Aberdeen and Aberdeenshire, social workers are co-located in some of the NHS Grampian community hospitals. In Fife, although the partnership boards have not yet been set up formally—they are still prototypes—there is already co-location of health and social workers, for example in Dunfermline, and there is no doubt that it adds great value to the quality and efficiency of service delivery.

The Convener: We have heard your Dalmellington story before, cabinet secretary, and I am glad to hear it again, as I have been telling it elsewhere.

Minister, do you have anything to add on co-location?

Aileen Campbell: The cabinet secretary said co-location is not a prerequisite for greater integration, but the anecdotal evidence from the service user's point of view is convincing. If someone needs a bit of extra support, they can go to a service that is co-located with social workers, GPs or whoever and they do not face the stigma that is attached to seeking help from that service because they are entering a building in which a
variety of different services are provided. People can be a bit more proactive in seeking help and can feel reassured that there will not be any stigma attached to that and that people will not start talking about them. The anecdotal evidence from the point of view of the service user is compelling regarding how they feel when they enter a place where different services are co-located. They find that a good experience for them.

The Convener: Thank you very much.

John Wilson: Good afternoon, cabinet secretary and minister. Cabinet secretary, you have spoken about integration measures. According to our Scottish Parliament information centre briefing, there will be two broad models of integration, which will be broken down into four different models. The first model is the body corporate model, under which local authorities and health boards will come together to form a joint board that will be separate from the local authorities and health boards and will be led by a chief officer. Do you see that chief officer being separate from the health board and the local authority, and will that require the creation of a new post?

Alex Neil: It will be a statutory post after the bill has been passed. That said, we must be pragmatic. Again I refer to West Lothian, where the chief officer has come from a health board background but is on the senior management team of both the local authority and the health board. The important thing is that the chief officer reports primarily to his or her own board but also has a line of responsibility to the chief executive of the local authority and to the health board. In West Lothian—and, indeed, in other areas where it is earlier days than in West Lothian—that arrangement has worked very well.

John Wilson: What I am trying to get at is whether we will see the creation of a new administrative structure for the delivery of services. If we create a new administrative structure, how will that be paid for?

Alex Neil: By definition, the partnership board is a new administrative structure because such boards do not exist at present, and the role of the chief officer is a new position in that sense. The important thing in paying for that is the integrated budget. I will give you a good example. I have been encouraging local authorities and health boards up and down the country to follow the example of West Lothian and establish a step-up, step-down centre as one way of improving the transition from hospital back into the community. The centre has also contributed to the elimination of delayed discharges in West Lothian. If West Lothian did not have a partnership board, the health board’s and the local authority’s respective shares of the funding for the project would have to go through separate decision-making processes within both the local authority and the health board, through the committee structure and all the rest of it.

When you have integrated budgets, that is decided internally, within the partnership board. The decisions can be made quicker but, more important, they will be taken in the context of the strategic plan that is laid down and agreed by the partnership board, which would obviously have to be endorsed by both the health board and the local authority. You get much quicker decision making and much more co-ordinated and integrated approaches. The evidence from north and south of the border—from Torbay, for example—is that the quality of the decision making is far better. Most important, not only do you end up with far better outcomes, but those outcomes are delivered far more cost effectively, which is a big prize.

John Wilson: I welcome what you said about West Lothian, but you are not promoting the West Lothian model throughout Scotland; four different models of integration can be taken from the proposals that are before local authorities and health boards. Would it not have been better to have applied the West Lothian model of integration throughout Scotland, so that a uniform model would be adopted by all local authorities and health boards?

Alex Neil: From day 1, including under my predecessor, Nicola Sturgeon, this has been an iterative process of discussion between us, the local authorities, which have been represented by COSLA and SOLACE, and the third and independent sectors. My approach to the development of the models, and indeed to the whole bill, has been to try to get consensus among the local authorities, the health sector, the Scottish Government and the third and independent sectors. On the basis of those bodies’ experience, track record and expertise in delivering the services, they are all pretty much of the opinion that there should be a degree of choice so that each area can decide how best to deliver in their area. Highland has decided on a particular variation of the lead-agency model and all the indications are that it is beginning to work well and to deliver substantially improved services and outcomes.

We have said all along that it would be inappropriate for us to sit in Edinburgh and prescribe every detail of the arrangement in each of the 32 local authority areas. How you would structure services in Glasgow, where you have one health board and six local authorities, is completely different from how you would structure them in the Borders, where you have one local
We are saying that the principles that matter to us are that there is a statutory underpinning to the integration of adult health and social care and that there is an integrated board, budget and strategic plan. That is why the bill sets out the framework. Within that framework, we are saying to local people, “You decide what’s best for your area, because politicians and civil servants sitting in Edinburgh don’t know enough about what’s happening in your local area to dictate to you how all the i’s are dotted and all the t’s are stroked.”

John Wilson: Having said that, can you assure us that the reporting and monitoring regime carried out by the Scottish Government will be consistent across all models of integration used by health boards and local authorities?

Alex Neil: Absolutely. We have said clearly that, in measuring success, the key thing that we are interested in is the national outcomes. You might ask why the outcomes are not on the face of the bill. They are not there for two reasons. One is that outcomes change. The outcomes that you would set today would be very different from the outcomes that you would have set, say, five years ago. I suspect that they would also be very different from what they would be in five or 10 years’ time as service provision changes—how we do things in these fields changes continually. Therefore, if you put the outcomes in the bill, you would need to introduce primary legislation every time you wanted to amend them. The national outcomes will be set out in secondary legislation.

Secondly, I am not going to take a unilateral decision on what those outcomes will be. All along, we have proceeded on a partnership basis with our friends in the local authorities and the third and independent sectors, and I think that this will work much better if we can get agreement on what the national outcomes should be and on how we measure success. We are more likely to achieve success if from day 1 everyone is signed up to what has been defined as success.

12:15

John Wilson: I am well aware that outcomes should not be set out in the bill. After all, you will know from your own constituency, cabinet secretary, that things can change dramatically with one report.

Alex Neil: They have improved enormously in the past two years.

John Wilson: I am glad that you have friends in local government throughout Scotland.

Anne McTaggart: Now that we are into the afternoon, I wish the cabinet secretary and minister good afternoon.

I have two quick questions. How will the quite different mechanisms for integrating services that are set out in each bill improve children’s transition to adult services?

Alex Neil: I will let Aileen Campbell take the lead on this question, but I point out that the Public Bodies (Joint Working) (Scotland) Bill, which deals with adult health and social care, does not make a statutory requirement with regard to the integration of health and social care per se. However, coming back to the examples of the Highlands and West Lothian, I note that, in both cases, even with their different administrative arrangements it was agreed almost from day 1 that they needed to integrate their children’s health and social care services.

I believe that there are two big differences between dealing with children and dealing with adults. First, there is the very crucial role that the education system plays with children and for which there is no equivalent for adults, particularly older people. Secondly, children by definition do not legally have the capacity to make decisions for themselves. However, adults do and I note that there are special arrangements for adults with incapacity. The fact that these two bills cross-reference each other means that we are singing from the same hymn sheet—and that is very important.

Aileen Campbell: Some of the consultation responses to the lead committee have acknowledged that the transition from children’s to adult services can be challenging. The two bills allow for greater planning in both services; the Public Bodies (Joint Working) (Scotland) Bill will help to provide far more planning in adult services, while the Children and Young People (Scotland) Bill will require improvements in children’s services to recognise the breadth of different people and services involved in a child’s life. The fact that the two systems will improve planning will give us the ability to make the transition far smoother than might have been the case in the past. Indeed, that is the benefit of having these two approaches; greater emphasis on planning and improvement from children’s point of view to reflect the breadth of services involved in a child’s life will enable a better transition to adult services, which will also be improved through better planning.

Anne McTaggart: With regard to CPPs, how do these bills tie into the proposed community empowerment and renewal bill?

Alex Neil: Obviously, the community empowerment and renewal bill has a wider remit; it is not entirely about, but very much has an
emphasis on, physical assets, how the community obtains such assets and such matters. However, the umbrella for all of this is the Government’s guiding principles and strategic objectives, which include not only community empowerment and renewal but public sector reform, to ensure that better-quality services are delivered more cost effectively and timeously; patient-centred healthcare and social care; and, indeed, person-centred education. Those underlying principles are not restricted to my bill, Aileen Campbell’s bill or Derek Mackay’s community empowerment bill; they are universal and part and parcel of our broad principled agenda for changing Scotland for the better.

Aileen Campbell: I echo the cabinet secretary’s comments. When we seek to help families and children, we must ensure that we build from an asset-based approach—indeed, the chief medical officer is keen to promote approaches that build from a family’s strengths—and I think that that dovetails very nicely with the community empowerment work that Derek Mackay will be taking forward.

Local authorities already publish children’s services plans and West Lothian, for example, sets out very clearly how such plans integrate with the wider CPP family. The fact that structures are already in place to reflect community planning needs will also be reflected in how we move forward on this issue, with CPPs no doubt playing a crucial role in making the improvements that we expect to emerge from the Children and Young People (Scotland) Bill. I also imagine that our approach will reflect the single outcome agreements that local authorities will be finalising.

I hope that that covers your question.

The Convener: Thank you very much for that useful evidence.

Before I move the meeting into private session, I ask for everyone’s co-operation in clearing the room quite quickly. We need to get through a lot of business before we meet the European commissioner at 1 o’clock.

12:21

Meeting continued in private until 12:45.

1. The potential benefits which might accrue from shared working arrangements, both for the organisations involved and for those in receipt of services;

In June 2013 Ayrshire and Arran NHS Board approved the following:

- The adoption of the body corporate model for the integration of health and social care, between Ayrshire and Arran Health Board and each of the three Ayrshire Local Authorities
- The creation of a Transition Integration Board and thereafter a Shadow Integration Board in each Local Authority area to plan for the establishment of formal Health and Social Care Partnerships in North, South and East Ayrshire under the direction of Integration Joint Boards
- The establishment of the post of Chief Officer for the North, South and East Ayrshire Health and Social Care Partnerships
- The appointment process for the Chief Officer to each Health & Social Care Partnership.

This process was mirrored by each of our Local Authority Partners through their own systems. It should be noted that Ayrshire and Arran Health Board has three Councils within its boundaries.

A requirement of this model is the establishment of an Integration Joint Board in each partnership area. To progress this, arrangements are being made for a Transition Integration Board to be in place as soon as practicable followed by a Shadow Integration Board from 1 April 2014 with the Integration Joint Board being established by 1 April 2015, or in line with the timetabling as set out in the final legislation.

As we progress we will continue to build upon our positive and well established relationships with our Local Authority partners. We anticipate that the establishment of the joint management teams will result in a number of benefits.

Efficiencies and benefits are anticipated to arise as follows:

- The focus on outcomes (providing this is reflected in performance regimes)
- The introduction of locality planning – this should streamline community engagement across the four sectors and maximise the opportunities for
an assets based approach while engaging local users, carers and professionals in an agenda which is real for them. It should also bring a sharper focus on tackling health inequalities

- The principle of joint and equal responsibility – this should help reduce “hand offs” between the statutory agencies
- The engagement of the third and independent sectors as strategic partners – this is already helping to shape effective plans in services for older people
- A logical framework reflected in the flow of the Bill from the model of integration to the integration plan to the strategic plan with consistent integration planning principles throughout – this will bring a much higher level of consistency and focus to joint endeavour
- Stronger working relationships with adult services resulting in a more family focused approach
- Enhanced working relationships with our third sector partners
- Improved information sharing.

2. The rationale for having a separate approach in both Bills to establishing joint working arrangements.

Although the subject matter of the Bills is different, there are significant similarities in the approach taken to achieve the underlying aim of integrated or shared services. Both Bills have implications for the development of shared services involving local government, the health service and other parts of the public service. We would accept that it is necessary to have two separate Bills given the subject matter but it would have had a number of advantages if the approaches could have been more closely aligned.

3. In what area potential savings might arise?

It is difficult to offer a definitive statement as children’s services in implementing GIRFEC (Getting It Right for Every Child) and the Early Years Collaborative have had a clear focus on integration and better joint working for a number of years, and we would anticipate that the implementation of the Children and Young People (Scotland) Bill and Public Bodies (Joint Working) (Scotland) Bill would further enhance this process. We can however reasonably anticipate that savings would result from the following:

- An improved approach to making investment and disinvestment decisions based on a clear process and evidence base and best use of integrated resources
o Greater potential to reduce costs through a joint strategic commissioning process which is based on improving outcomes at both a strategic and individual level, supports effective service change and views issues from a user’s perspective

o Enhanced processes for early identification and intervention for example:

Effective and secure sharing of information within and between agencies is fundamental to the protection of children. AYRshare is a mechanism for sharing information across partner agencies will lead to a more effective integrated approach to assessment, single child’s plan and common chronology ensuring we are compliant with the GIRFEC transformational change programme. It will link current computer systems and support business processes. Enabling coordinated and efficient support, well informed personnel working in partnership, enhancing our ability to achieve appropriate and timely interventions leading to improved outcomes.

o Better outcomes for our Children and Young People

o Enhanced information sharing (Specifically between Adult and Children’s services)

o A more integrated strategic approach

o More effective use of current resources (reducing any overlap in service delivery)

o Significant potential to streamline services that are currently delivered by both the LA and Health.

4. Whether there are any issues around the proposals covering consultation on, and development of, strategic plans/service plans between the respective areas involved?

There is a need to ensure that staff are fully engaged and consulted in the decision making process leading to implementation, with regard to both Bills. A consistency of approach across all staff groups is critical as is gaining commitment from staff which should be regarded as a marker for success.

NHS Boards will require, in strategy, policy and performance to make explicit children’s rights and steps taken to comply with this section of the legislation. This will require a culture shift across health services and whilst it is welcomed, it poses certain challenges. Further guidance on implementation and monitoring performance would be welcome and this would also help to support a consistent approach across the country.
It is suggested there will be particular challenges for those who work in services where the adult is the primary receiver of care and their understanding as to compliance with children’s rights in practice is crucial to the implementation of the legislation. In addition, health practitioners may face conflict in balancing the rights of adults receiving care with those of the adult’s children.

NHS Boards will require clarity on the role of the corporate parent and the implications of this. Consideration will need to be given to the role of adult health services in particular in relation to those 16-25 years and action taken to ensure they understand the legislation and the interface with vulnerable adult legislation.

Concern about possible duplication of effort e.g., preparing a children’s services plan and a corporate parenting plan. We will be required under the new bill to produce individual children’s plans which will bring together all of the relevant information and resulting actions but we still have a requirement under the Education (Additional Support for Learning) (Scotland) Act 2004 for individual support plans.

The Children and Young People’s Health Strategy for Ayrshire and Arran, sets out the broad vision for improving and promoting health, developing health services and addressing inequalities for children and young people in Ayrshire and Arran. This document forms the health chapter of each of our Local Authority partners Integrated Children’s Services Plans. This supports an equitable approach to meeting and addressing the health needs of our children and young people. Our plan for the establishment of three Health and Social Care Partnership’s in North, South and East Ayrshire has the potential to result in a significant variance in agreed priorities which may result in an inequitable approach.
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from NHS Ayrshire and Arran - Paper 2

Background information

<table>
<thead>
<tr>
<th>1.</th>
<th>Do you agree with the general principles of the Bill and its provision?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Yes. The general principles and provision are welcomed and follow on from the previous consultation on the Scottish Government’s proposals, responses made, and the Scottish Government’s subsequent response to these.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2.</th>
<th>To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?</th>
</tr>
</thead>
</table>
|    | The Bill sets out a coherent framework within which integration can be progressed but leaves room for local partnerships to develop “best fit” solutions within statutory boundaries. It is felt that this strikes a good balance and it is believed will help to achieve the stated policy objectives.  

The extent to which the stated policy objectives will be achieved will be largely determined by two factors: (1) moving from a focus on outcomes at a high strategic level to personal outcomes for individuals to ensure seamlessness at point of service delivery (2) effective locality plans which link to, and heavily influence the Integration Authority strategic plans. |

<table>
<thead>
<tr>
<th>3.</th>
<th>Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.</th>
</tr>
</thead>
</table>
|    | The coherence of the policy objectives is a key strength. They will have to be followed through at a personal and locality level supported by an approach which values enablement and coproduction.  

Aspects of the policy memorandum are welcome reminders:  

- “Integration is not an end in itself – it will only improve the experience of people using services when partner organisations work together to ensure that services are being integrated as an effective means for achieving better outcomes”;  
- “legislation alone will not achieve the scale or improvement that is required . . . Leadership is key, locally and nationally . . .” |
4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>It may be that the following will be picked up in regulations etc but as it stands, the Bill could be strengthened in the following areas:</td>
</tr>
<tr>
<td>a)</td>
<td>public accountability arrangements – section 33 mentions a performance report. It may be helpful to link this to a focus on outcomes for avoidance of doubt;</td>
</tr>
<tr>
<td>b)</td>
<td>statutory public engagement responsibilities – for instance it would be helpful to clarify the position of Public Partnership Forums (PPFs). In Ayrshire, the PPFs have proven to be very effective support to public engagement arrangements across the totality of health provision;</td>
</tr>
<tr>
<td>c)</td>
<td>consultation arrangements – various references are made to issues such as the preparation of the integration plan but there is a substantive issue to be addressed concerning any implications for consultation arrangements in relation to proposals for service change made by the Integration Authority;</td>
</tr>
<tr>
<td>d)</td>
<td>following on from this, it may be helpful to clarify approval processes in instances where a strategic plan proposes major service change. In particular whether the Cabinet Secretary will continue to hold what would effectively be veto powers over the Integration Authority’s plans;</td>
</tr>
<tr>
<td>e)</td>
<td>whilst it is helpful that the Bill makes consistent reference to integration planning principles these are silent on the need to ensure effective clinical / care governance;</td>
</tr>
<tr>
<td>f)</td>
<td>staff governance is a statutory requirement of NHS Boards and the Bill is fairly silent on what arrangements (if any) Integration Authorities will be required to put in place.</td>
</tr>
<tr>
<td>g)</td>
<td>there is a need to be more explicit about how the Integration Authority will be scrutinised jointly, by external scrutiny agencies;</td>
</tr>
<tr>
<td>h)</td>
<td>in terms of analytical review of the Bill as a whole, there may be a case for considering whether the balance between what is on the face of the Bill and what will be in regulations could be improved. For instance while regulations will define the scope of integration, it is on the face of the Bill that the responsibilities of a Chief Officer are subject to the agreement of Scottish Ministers.</td>
</tr>
</tbody>
</table>
5. What are the efficiencies and benefits that you anticipate will arise from your organisation from the delivery of integration plans?

Efficiencies and benefits are anticipated to arise as follows:

- the focus on outcomes (providing this is reflected in performance regimes);

- the introduction of locality planning – this should streamline community engagement across the four sectors and maximise the opportunities for an assets based approach while engaging local users, carers and professionals in an agenda which is real for them. It should also bring a sharper focus on tackling health inequalities;

- the principle of joint and equal responsibility – this should help reduce “hand offs” between the statutory agencies;

- the engagement of the third and independent sectors as strategic partners – this is already helping to shape effective plans in services for older people;

- a logical framework reflected in the flow of the Bill from the model of integration to the integration plan to the strategic plan with consistent integration planning principles throughout – this will bring a much higher level of consistency and focus to joint endeavours;

- an improved approach to making investment and disinvestment decisions based on a clear process and evidence base and best use of integrated resources;

- greater potential for a joint strategic commissioning process which is based on improving outcomes at both a strategic and individual level, supports effective service change and views issues from a user’s perspective.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integration plans will bring a rigour to setting out what the Partnership is responsible for and how it will be funded. Coupled with the strategic plan setting out how the Partnership will deliver its responsibilities it will give greater transparency to how all of this directly relates to improving outcomes. Crucially, however, it must also link to effective locality plans which should capture how refreshed relationships between the statutory, third and independent sectors and local communities can also improve outcomes.
### 7. Other Comments

There will be a need to ensure that there is sufficient Non-Executive Director capacity within NHS Boards to support the effective running of the Integration Authorities. This may be a particular challenge for NHS Boards with several Local Authorities within their Board area.
General comments concerning General Practice and the Two Bills from A Deep End Perspective

As a GP the barriers that prevent me working more closely in partnership are excessive workload, uncertainty and anxiety over job security, high turnover of staff, short life span of community projects, bewildering array of services and pathways, lack of time and difficulty in getting hold of people, dysfunctional and overly large planning committees, incomprehensible and verbose communications from on high, abstract rationalist planning that disparages experience and organically developed systems, a remorseless rise in demand and expectations, a self-defeating emphasis on measurable factors that undermines the quality of interpersonal relationships and care.

Deep End GP

General practice is the main public service that is in regular contact with virtually the whole of the general population, with substantial cumulative knowledge and experience of people’s problems and consistently reported high levels of public trust. These intrinsic features make General Practices the natural hubs around which integrated care should be based, with groups of General Practices supported, within the context of local service planning, to deliver integrated care in partnership with secondary care, area-based NHS services, social work and community organisations.

The Deep End Report 18 on Integrated Care (Annex A) lists the essential ingredients of an integrated care approach. Attached workers, lay link workers and protected time are keys to joint working. Local leadership needs respect, support and representation (not consultation) within locality planning and acknowledgement of practitioners’ experiential knowledge to develop an ‘ecology of practice’ (Fisher & Owen, 2008).
In front line care the two main barriers to integrated care are firstly, the inverse care law, whereby practices serving the most deprived areas are insufficiently resourced to meet patients' needs, and secondly, poor links between general practices and many other area-based health and social services. These challenges are clearly stated in Deep End Report 12 on Vulnerable Children and Families (Annex B). This report highlights the frustration of practice teams who remain limited in their ability to deal with children with unmet needs in vulnerable family settings. Current policies aimed at family support unfortunately often fail to explicitly outline the contribution of General Practice to child safeguarding.

The policy memorandum for the Children and Young People Bill makes no reference to General Practice, while the memorandum for the Public Bodies only refers to General Practitioners as a group to be consulted. There is no recognition of general practice as the natural hub of local health systems, based on its intrinsic features of population contact and coverage, continuity, cumulative knowledge and trust.

Although many services are involved in caring for children, practice teams often have additional substantial contact with and knowledge of a child’s family, including the health of parents and carers, which is relevant to understanding child well-being on a case by case basis. Most GPs recognize and value the continuity with families and possible opportunities for early intervention that should define universal child health care within the primary care structure. This remains an unrealized aspiration at present because the system does not support the full potential of General Practice’s contribution towards safeguarding children.

General Practitioners at the Deep End address this concern in Report 20 What can NHS Scotland do to prevent and reduce health inequalities?, which advocates for a National Enhanced Service for Vulnerable Families (Annex C), providing a more explicit role and additional pro rata support for general practices serving vulnerable families in very deprived areas.

**Working Outside A Managerialist Framework**

Locality planning is not just about commissioning and budgetary planning but about organically growing trust, relationships and local systems that make integrated working and smoother decision-making possible. Front line staff and volunteers are the people who will or will not work as partners to make services more integrated and seamless for patients. However, they need to be given the resources to be able to do this, and not loaded with endless targets developed remotely. I hope this legislation will not be another missed opportunity to create the kind of organisational environment which makes it possible to grow this kind of trust and people-based system of care that patients expect and deserve. Deep End GP

General Practitioners at the Deep End welcome the different approach in Scotland, from the rest of the UK, which encourages localism, favouring less central control
and trusting professionals to work with and shape policy development (Greer, 2005). However, the Joint Bodies Bill appears concerned mainly with a second attempt at the structural integration of current local health and social care organizations. Policy consolidation is not a linear process, as the recent attempt at Community Health Partnerships has shown, resulting in ineffective integrated care for patients and widespread professional scepticism about the new arrangements.

General Practitioners at the Deep End question any assumption that the budgetary and accounting arrangements of senior managers are the key factors in enabling or preventing partnerships. In reality this superstructure rests on a foundation of human factors that are not given sufficient weight in these proposals.

The Joint Bodies Bill only mentions general practice in terms of how general practices working in localities should be represented within the new joint working arrangements. It is also important to consider the essential ingredients of care arrangements providing integrated continuity of care for large numbers of people. At present the opportunities for GPs to engage directly with locality planning arrangements are limited, patchy and inconsistent.

Specific Questions

Q1. What benefits which might accrue from shared working arrangements, both for the organisations involved and for those in receipt of services?

- It is important to acknowledge that despite the consensus that collaboration within health and social care is more effective than single agency approaches there are substantial problems associated with the adoption of this principle.

- Documented problems include a lack of definitional clarity surrounding partnership, endless organisational restructuring and barriers between core and third sector agencies. A general lack of valid evidence of improvement to service delivery and user outcomes means that we know ‘relatively little about what works’ (Glasby & Dickinson, 2008, p.38)

- It is imperative to acknowledge that policy imperatives can lead to unintended consequences in the delivery of services. The increasing bureaucratisation of managerial systems has resulted, we believe, in fragmentation of health service provision.

- Services that Deep End GPs regard as attached and intrinsic to effective universal and targeted health provision (e.g midwifery services, pact teams and health visitors) are now professionally and strategically removed from General Practice, resulting in less opportunity to provide a coherent effective health service. There are additional barriers to effective working between primary and secondary that Deep End Report 18 on Integrated Care (Annex A) highlights, especially in relation to the provision of seamless care for the frail elderly population. Within the hospital setting, perverse waiting time targets and financial penalties result in difficulties for vulnerable children who often miss hospital appointments and are not offered second appointments.

- The Deep End Project has outlined how general practice can contribute to the conceptual and theoretical coherence of partnership working, by developing community based solutions, better use of support services and increased patient participation in their own health and well-being.

- Our proposals build on the work already taking place in General Practice where the serial encounter is key to developing holistic unconditional healthcare and where General Practice may be the most suitable setting to promote resilience in communities and empower patients and their carers in managing their health needs (Mola, 2013).

- Collaboration between GPs and other partners exists on many different levels. Working collaboratively promotes a collective determination to reach objectives where sharing information and experiences contributes to a more detailed local knowledge of individual patients and their families. This is vital to planning effective support services for patients, addressing their unmet health needs and anticipating when they will need to access specialized services.
The complexity of health issues that are a consequence of multimorbidity, beginning earlier in Deep End practice patients, requires informational continuity and continuity of care to ensure that services are best matched to the patient’s requirements. The Deep End believes that General Practice is the natural hub of such a health care system partly because of the serial encounter between GPs and their patients and the detailed health information that is held in patient records. If the ethical considerations to sharing sensitive information are explored at the outset of the integration agenda then it is more likely that professionals will be able to better plan patient care that is acceptable to patients.

We know a great deal about the psychosocial consequences of adverse early years experiences. We also know that a robust primary care health system is important to improving the wellbeing of vulnerable children and their families (Klevens & Whitaker, 2007; Scribano 2010). Given that almost all children and families have a named GP and will consult with their GP regularly we need to promote the role of general practice in supporting vulnerable children. The Deep End has provided a detailed proposal that both clarifies the role of GPs in child safeguarding and describes the structural process to allow this. The legislation if interpreted appropriately, can underpin this process and ultimately General Practice can contribute to better outcomes for vulnerable children.

If we are allowed to maintain organizational autonomy but promote mutuality between professionals then reciprocity and trust will become embedded into the process. This will build effective teamwork as professionals begin to mutually understand the concepts of ‘unmet needs’ and ‘vulnerability’. The principle underlying collaboration is to improve patient care. In order to do this requires a framework that provides the time required to develop formal and informal means of interaction between professional groups strengthens and stabilizes team working and also makes the lines of responsibility clearer when planning health and social care provision.

Q2 What is the rationale for having a separate approach in both bills to establishing joint working arrangements?

From a GP perspective this is not relevant. In GP consultations in practice or during houses visits we are presented with dilemmas that are resolved pragmatically with practical solutions. What is valuable is having an extensive network of readily accessible interagency contacts when planning the support of vulnerable patients and time to co-ordinate the support package. This may be required immediately or developed over time depending on the patient’s circumstances. Joint planning arrangements are strategic processes that should be guided by the frontline professionals and remain patient centred if we are to achieve the aims of the integration agenda.

Within the context of vulnerable children and families the strategic planning aspect of joint working arrangements should ensure that the
options to GPs are multifaceted. This should be encapsulated within the Children’s Plan and recognise that vulnerable children are often sign-posted by general practitioners to supportive services. Most vulnerable children do not reach thresholds of intervention that would trigger involvement of statutory services. The ‘targeted’ intervention is frequently embedded within the universal provision of child health care in general practice. It is incumbent on the relevant health authority to recognise this important gatekeeper role for general practice as it establishes its role as a ‘corporate parent’. The mechanism for GPs to inform this process as it is developed would require the contractual arrangement that the Deep End has suggested in its report.

- In respect of adult services the newly formed ‘Integration Authority’ must be prepared to canvas GP views widely on the implementation and evaluation of the integration agenda. There should be very direct lines of communication between this body and general practice, other professionals and patients as the changes are implemented.

Q3  **In what areas might potential savings arise?**

- The compelling arguments for greater integration of health are driven by rising demand for service and the need to reduce public expenditure. However, there is a lack of economic evaluation of cost effectiveness across studies (Ellis et al, 2006) therefore the savings remain theoretical and are yet to be realised.

- There are potential savings in adult services for example, if pooled budgets in health and social care genuinely result in less time spent in hospital for elderly patients who can be discharged into nursing homes. It remains unclear however how barriers to transferring savings in secondary into primary care will be removed.

- In children’s services savings may result from minimising the consequences of adverse childhood experiences that persist into adulthood. These might include time lost at work through illness and injury, absent school attendance in the short and long term, indirect costs of special education, adult mental health and other healthcare services and the costs to judicial system. Many of these costs savings would be indirectly related to interventions in childhood which would include the pro-active identification of vulnerable children in a primary care setting. This would require a different approach to the economic evaluation of such interventions.

- There are not only potential economic savings through the integration of health and social care services. There are intangible savings for example reducing mental anguish and social stigma and are applicable to both adult and children’s services.
Q4 What other issues are there around the proposals covering consultation on, and development of, strategic plans/service plans between the respective areas involved?

- In adult services irrespective of how the ‘integration authority’ is realised there should be robust mechanisms that ensure the engagement with frontline professionals who are tasked with implementing the policy. This is challenging to achieve in General Practice but having a GP lead for each locality/practice and an infrastructure to engage widely with colleagues through for example, protected learning events, would ensure that policy directives are meaningfully guided and influenced by local population needs.

- Governance and accountability processes need to be widely understood and transparent to uphold the integrity of the integration agenda and discourage professional scepticism about the contribution of integration of health and social care. There should be clarity about individual and collective accountability at all levels of strategic planning and during each stage of the implementation of the integration agenda.

- Integration of health and social care and its evaluation are long term processes. Both should be evaluated using a robust research approach specifically because there is a lack of a convincing evidence base for integration of health and social care (Cameron & Lart et al 2013). The Deep End in collaboration with the South Glasgow CHP has proposed such a project but this requires a sustained commitment from Government to support the work and allow frontline professionals and patients to participate in the development of the integration agenda.

- Well intentioned reforms must not exacerbate the margin of error when dealing with the complexity of family circumstances with respect to safeguarding children which are often attributed to deficient interagency working and a failure to share information. Standardisation and micromanagement of decision making in situations where evidence can often be ambiguous and contradictory defeats the purpose of having an integrated system because it cannot support complex decision making in its human, social and organisational context. The Deep End believes that a ‘light-touch’ system design is required whose purpose is not to intensify the bureaucracy of professional working but to free up time, support flexibility and intelligent professional discretion to cope with the contingencies of situations as they arise on a case by case basis. The professionals and patient experience should be driving the development of integrated services, not the system.

- Our faith in the instrumental efficacy of technology and proliferation of process-orientated tasks should not displace what is essential to effective integration working practices, namely sustained professional relationships that are built on mutuality and trust. The Deep End research proposal
outlines very clearly the importance of acknowledging the multifaceted aspects of vulnerability and how this maybe inculcated into an agenda that supports professional involvement in vulnerable patient groups in a meaningful way. For example biological, neurological and psychosocial factors may be relevant to the definition of the vulnerable adult or child but in the context of knowledge sharing between professionals this process is ‘slippery’ (difficult to codify) and ‘sticky’ (difficult to share across boundaries) (Reder & Duncan, 2003). Furthermore, acknowledging that non-electronic communication is a component of reaching sound inter-professional agreement (Saario, Hall & Peckover, 2012) is vital to avoid fallacious circular reasoning in complex decision making. If we are to achieve the aims of the integration agenda time must be given to professionals to have regular face-to-face meetings to discuss their own anxieties and share professional opinion in often emotionally and morally charged cases to sustain confidence in their decision making.

INTEGRATED CARE

This report and recommendations draw on research evidence, previous Deep End reports and discussion groups at the second national Deep End conference at Erskine on 15 May 2012.

- To avoid widening inequalities in health, the NHS must be at its best where it is needed most.
- The arrangements and resources for integrated care should reflect the epidemiology of multimorbidity in Scotland, including its earlier onset in deprived areas.
- Better integrated care for patients with multiple morbidity and complex social problems can prevent or postpone emergencies, improve health and prolong independent living.
- Policies to provide more integrated care must address the inverse care law, whereby general practitioners serving very deprived areas have insufficient time to address patients' problems.
- Patients should be supported to become more knowledgeable and confident in living with their conditions and in making use of available resources, for routine and emergency care.
- The key delivery mechanism for integrated care is the serial encounter, mostly with a small team whom patients know and trust, but also involving other professions, services and resources as needs dictate.
- The intrinsic features of general practice in the NHS, which make practices the natural hubs of local health systems, include patient contact, population coverage, continuity of care, long term relationships, cumulative shared knowledge, flexibility, sustainability and trust.
- Health and social care professionals working in area-based organisations (e.g. mental health, addiction and social work services) should be attached to practices, or groups of practices, on a named basis.
- Practices should be supported to make more use of community assets for health via a new lay link worker role.
- The quality and timeliness of hospital discharge information should be a consultant responsibility and audited as a key component of the quality of hospital care.
- Practices needed protected time to share experience, views and activities, to connect more effectively with other professions, services and community organisations, to develop a collective approach and to be represented effectively.
- Collective working between general practices is best achieved with groups of 5/6 practices, as shown by the Primary Care Collaborative and Links Project. Larger groupings are less likely to achieve common purpose.
- Locality planning arrangements should be based on representation (not consultation), mutual respect and shared responsibility.
81 practitioners and managers from Greater Glasgow and Edinburgh, including 19 Deep End GPs, met on Thursday 09 September 2010 at the Beardmore Conference Centre, Clydebank, for a discussion about policies and practices for children and families.

- Practitioners and managers agree that there are not enough resources to respond to need, resulting in a focus on fire fighting, raised thresholds for engagement and missed opportunities for early intervention.
- Local teams are often aware of vulnerable children and families before serious problems develop, but lack the resources to intervene and to make a difference. Investments are needed in home support, free nursery places and other ways of supporting families.
- The many suggestions made in this report can result in greater efficiency, especially via better joint working, but do not address the fundamental problem of resources.
- Hundreds of professional teams are involved in providing care for vulnerable children and families, and all need to work well, both individually and as components of an integrated system.
- The system needs accurate information on the numbers and distribution of vulnerable children and families, including but not restricted to children on child protection registers, as a basis for resource distribution, audit and review.
- Effective joint working depends on colleagues being well informed concerning each others’ roles, how they may be contacted locally and the constraints under which they work.
- Information about the progress of particular cases needs to be shared between professions and services, so that each is aware of what is happening. There is an urgent need for bespoke IT which links systems and professionals.
- Pregnancy is an important opportunity to demonstrate the integration of professionals and services working to identify and help vulnerable mothers and their families.
- Professionals and services should be accountable not only for their own contribution but also how this connects with the contributions of others. The “connectedness” of care should be a major policy, management and practitioner objective, concerned not only with joint working around crises, but also continuity of care as required throughout childhood.
- Professionals acquire local knowledge and develop trusted relationships with families that are crucial for long term preventive care. There is a need to support and retain such staff, to value the relationships they have developed and to use the information they acquire, via regular multidisciplinary meetings.
ANNEX C : From Deep End Report 20

WHAT CAN NHS SCOTLAND DO TO PREVENT AND REDUCE INEQUALITIES IN HEALTH?

Vulnerable children and families

Current thinking
It is uncontested that vulnerability in early years and beyond impacts adversely on child and adult physical and psychological dimensions of well-being. [1–2] A conservative estimate of the economic cost of the vulnerable child to society in the UK is £735 million annually [3].

Where is general practice?
The Deep End manifesto and reports on vulnerable families [4–5] clearly outlined the contribution that general practice can make to safeguarding children and families. GPs contribute to the process of ongoing family assessment and support [6–7] and are well placed to understand the specific challenges that result in the vulnerable family and the vulnerable child [8].

A skilled and long term professional relationship, built on trust, that provides a low-level of inquiry into the circumstances of the vulnerable family [9] is key because vulnerable parents are often avoidant and suspicious of supportive services [10]. Furthermore, the majority of vulnerable children will not meet sufficient thresholds of harm or endangerment that will trigger formal child protection proceedings [11].

The Deep End has consistently highlighted the ‘multiple jeopardy’ that economically poor and disadvantaged families face [12] with poverty an enduring characteristic of families who would be considered vulnerable. The Deep End recognises the clear association between disadvantage with social class and adverse effects on child health in the first 10 years of life [13] with increased mortality rates [14]. The impact of poverty and the accumulative effect of negative factors on health outcomes of vulnerable children are highlighted in the Deep End Austerity Report [15].

This publication contextualises current research concerns to real-life narratives of vulnerable families who are living within the constraints of swingeing cuts across health and social care budgets.

That said, knowing and stating our contribution to supporting children and families is of limited value if general practice does not have the strategic support within policy directives and contractual obligations to undertake this challenging area of health care.

Current policy – is it collective and inclusive?
Whilst we welcome the acknowledgement of the role of the GP in Scotland’s national child protection framework [16] and the RCGP child health strategy [17] this is not replicated in other important policy directives. For example GIRFEC, whose ethos is at the heart of government policy in ensuring that all children in Scotland are ‘safe, healthy, achieving, nurtured, active, respected, responsible and included’ [18–19] and the National Parenting Strategy [20], do not mention GPs. This is disappointing
given that the newly instated 30-month child development check will address issues of 'child development and physical health, parenting capacity and family matters including domestic abuse and parent-child relationships, along wider parental health such as smoking, alcohol or drug abuse, and mental and physical health' [20]. It is obvious to the Deep End group where the obligation to general practice provision lies in addressing this agenda.

Given that there has been a noticeable decline in preventative child health care in general practice since the implementation of 'Hall 4' [21], the Deep End have advocated for a National Enhanced Service for Vulnerable Families (NES). This approach will not diminish the reach of a universal child health care system but recognises the need to reduce disadvantage in vulnerable families by developing services according to the needs of the community.

How would the proposal work, both internally within practices, and externally in practices' relationships with others?
The NES is a collaborative model that promotes organisational learning where all involved professionals meet regularly to discuss their vulnerable children caseloads. It is hypothesised there would be immediate gains in terms of improved health outcomes and consistent support for vulnerable children.

The NES would build on the work that is already done in some GP practices where GPs have regular and minuted meetings with their health visitors but it remains 'unofficial' as there is no contractual requirement to do so. Across practices the NES could be the basis of a protected learning event to disseminate results (similar to the COPD pilot in the South Glasgow CHP) and would include other relevant professionals in the learning agenda.

The attached social worker is not a new idea for general practice and many practices have positive experiences of working with a named social worker across health and social care domains. It would seem axiomatic that the unmet needs of vulnerable children and families require that both professions collaborate but there is a paucity of evidence of effective practices in complex families where health and social care professionals have intervened [22].

The NES provides the mechanism to improve a positive working environment where professional roles are clarified and shared understanding of the language of vulnerability is achievable. It also begins to address a pressing need to meaningfully research the complexity of child welfare outcomes in ‘real world’ situations [23].

How would progress be consolidated, with practices learning from each other?
A rolling programme of protected learning events funded through the CHP structure. There is a learning coordinator within each CHP (these appear to be new posts but are welcome if they have this remit). Of equal importance is recording the long term outcomes of vulnerable children that would require substantial investment in preventative health care and would provide a robust research database.
**How would individual practices and groups of practices be accountable for the additional resource?**

At present there is no mechanism for GPs within CHPs to be directly responsible for monies spent. Financial sector spending would have to be carefully evaluated with appropriate management support and would require robust accountability and governance structures.

**Is the proposal for all practices, with each being resourced pro rata according to need, which could be taken forward within local areas; or something for Deep End practices only, requiring a network approach?**

This would not be exclusive to Deep End practices as the NES is embedded within the principles of universal health care for children. Realistically, it would be anticipated that the strong influence of poverty on child health outcomes and vulnerability would ensure a greater proportion of vulnerable children would be identified within Deep End practices. Nonetheless, the NES would be relevant to all practices in Scotland.

**Who are the significant partners/funders and how can they be influenced?**

SG, HBs, health and social care professions. There is an expectation that SGPC and the BMA will acknowledge the call for greater emphasis on child health matters within the forthcoming contract negotiations. This would reflect the profession’s aspiration for an improvement to the structure of child health care provision in general practice and primary care. This is envisaged under a broader approach of child safeguarding that at present remains patchy and inconsistent.

Local Government and Regeneration Committee
Children and Young People (Scotland) Bill
Submission from North Ayrshire Community Planning Partnership

1. The potential benefits which might accrue from shared working arrangements, both for the organisations involved and for those in receipt of services;

The Public Bodies (Joint Working) (Scotland) Bill requires local authorities and health boards to adopt formal partnership arrangements. In June 2013 the Council and the Health Board approved proposals to move forward with a “Body Corporate” model. A Chief Officer for the partnership will be jointly appointed in the Autumn, and a joint committee will be established to oversee the development of the partnership with a view to this taking operational responsibility from April 2014. We envisage there will be a joint management team established before this date. The immediate benefits will relate to shared management and accommodation. As we progress with our strategic plan we expect to identify agreed priorities for the partnership in relation to joint service delivery. This will result in the identification of further benefits for both organisations.

Public Sector and Third Sector partners should work together at a local level with the aim of realising an increased share of public sector expenditure for the Third Sector through engagement in service design, commissioning and procurement activities.

Strategic commissioning provides the basis for assessing and forecasting needs, agreeing desired outcomes, considering options, planning the nature, range and quality of future services and working in partnership to put these in place.

By bringing other partners resources into the mix in a more meaningful way, this could improve CPPs more widely and would help pave the way for the Community Empowerment and Renewal Bill.

Within the Children and Young People (Scotland) Bill, the proposal is to strengthen children's planning and to reinforce the development of integrated service delivery across the range of partners. While we welcome an approach that streamlines planning for children we are concerned about possible duplication of effort e.g., preparing a children’s services plan and a corporate parenting plan (rather than incorporating the latter into the former). We are also concerned that any crossover with the ASN legislation needs to be dealt with if the landscape is to be clarified especially around the need for a separate child’s plan.

In terms of the benefits to those in receipt of service, we are clear that this is the main driver behind both pieces of legislation. In North Ayrshire we intend to place our Social Services children and families service within the Health and Social Care Partnership and we believe this will strengthen our service delivery to vulnerable children by working closely with services provided to their parents/carers e.g., mental health and substance misuse. At the same time we will ensure that the links between the universal services within health and education are strengthened and we
have a programme to deliver prevention and early intervention initiatives across the children’s services partnership. This involves social work and health staff being located with early years staff. We already have co-located services with Police Scotland.

We have identified a range of outcomes across all care groups and would intend to identify our priorities for development and implementation within both our HSCP integration plan and our Children’s Services Plan. For example,

**Older People**
- Through integrated teams working locally.

**Outcomes**
- Prevent hospital admissions
- Sustain people safely at home
- Maximise independence.
- Reduce social isolation.
- Support Carers.

**Vulnerable Children**
- Through co-located teams including social workers/health visitors/early years staff/teachers.
- Through specific joint initiatives.

**Outcomes**
- Sustain more children at home.
- Improve outcomes for children who are neglected.
- Reduce admissions to residential schools.
- Maximise independence for children with disabilities.
- Improve transition between child and adult services.
- Improve support to families and carers.

These are two examples of our current considerations. The key aspect will be how we implement our redesigned services to reduce barriers from the point of view of those who use the services.

2. **The rationale for having a separate approach in both Bills to establishing joint working arrangements.**

Presumably the difference in approach relates to the difference in the range of partners involved in adult and children’s services. There are particular issues about the need for clear partnership agreements between the universal services of health and education. The HSCP shares a common client/patient group within adult services and a common client/patient group of vulnerable children.

3. **In what area potential savings might arise?**

In relation to the Public Bodies (Joint Working) (Scotland) Bill, this is a difficult question to answer at this stage and is one of the difficulties within integration. Local authorities have made substantial savings over the past four years, while the NHS
has been protected. This is likely to mean the level of savings available without affecting operational capacity will be less for local authorities. It will be a challenge to maintain costs within existing budgets. Therefore our key benefit must come from integration through i) reducing duplication at the point of service delivery and streamlining some senior management, but mostly middle management; ii) improved deployment of resources as a result of better planning; iii) implementation of the neighbourhood planning approach so that services are focused on the areas where they will have the biggest impact; and iv) common priorities.

We are also considering how the range of ‘support services’ required by health and social services would be best delivered. At this stage it is not possible to say if this will lead to efficiencies or if in fact some may require additional initial investment ‘Support services’ include; Finance; Human Resources; Legal Services; IT and Property; Facilities Management.

Further savings or investment redirection will be achieved as the partnerships progress.

We have developed a range of initiatives to improve services to elderly people through the Older People’s Change Fund.

For the past two years we have also been funding a range of prevention and early intervention initiatives for children which we are tracking in relation immediate impact and efficiencies down the line.

We would be happy to provide further information if the committee was interested.

4. Whether there are any issues around the proposals covering consultation on, and development of, strategic plans/service plans between the respective areas involved?

The main issue in relation to consultation and development of plans will be around timing to ensure we do not duplicate effort or create consultation fatigue. There will be clear structures established within the HSCP to involve the full range of stakeholders and we will need to utilise these as far as possible. We have developed a “neighbourhood planning approach” within North Ayrshire which brings together all the Community Planning partners. We would see this as a key way of reducing disruption and maximising synergy. We believe this approach fits with the requirements of both Bills.
1 Introduction

1.1 The Housing Coordinating Group (HCG) welcomes this opportunity to contribute to the Committee’s stage 1 scrutiny of the Public Bodies (Joint Working) Scotland Bill.

1.2 The HCG consists of the Association of Local Authority Chief Housing Officers (ALACHO); the Chartered Institute of Housing in Scotland; the Scottish Federation of Housing Associations (SFHA); Glasgow and West of Scotland Forum of Housing Associations (GWSF); the Housing Support Enabling Unit (HSEU); and Care and Repair Scotland. Thus, this evidence comes from representative bodies of strategic housing authorities, social housing providers (councils, housing associations and co-operatives), the housing profession, and many third sector providers particularly Care and Repair services. To reflect our common views, in this response we use the collective term “the housing sector”.

1.3 Together we make a very significant contribution to national outcomes on health and well-being by:

- Co-ordinated strategic planning of the supply and quality of housing and related services across tenures and stages of life;
- Providing individuals with information and advice on housing options;
- Directly providing or facilitating, ‘fit for purpose’ housing for rent and for sale / part sale, that gives people choice and a suitable home environment;
- Providing local, personal, preventative services such as aids and adaptations, and care and repair or “handyperson” schemes;
- Building capacity in local communities.

This paper sets out a response to each of the committee’s questions.

1.4 In summary, the housing sector supports the principles of integration for improved outcomes set out in the Bill and understands the need for legislation to promote joint working to pursue these principles. The success of the new ‘integrated authorities’ will largely depend on effective joint strategic commissioning to which the housing sector can make a crucial contribution. The current arrangements for involving the housing sector have not produced a consistent nor adequate approach and the Bill, as it stands, could result in an ‘integrated authority’ deciding not to involve the housing sector as a

---

1 The Joint Improvement Team has provided support and assistance to the Housing Coordinating Group
To ensure that housing issues, and the housing sector, form an integral part of contributing to the delivery of national outcomes, the HCG urges that the contribution of the housing sector be recognised within the legislation, urging the new ‘integrated authorities’ to involve their strategic housing partners.

2 How will the proposed legislation affect the ‘housing sector’?

2.1 Housing planning and housing services already play a fundamental role in providing ‘homes or a homely setting’ for those using health and social care services particularly as people face long term conditions.

2.2 Housing providers offer varying levels of care and or / support to vulnerable adults and older people, and have long been committed to working with colleagues in health and social care to enable people to continue living in the community rather than institutional settings. There are examples where this has happened already and the Bill could promote this approach more widely across the country. The housing sector has much to contribute to this agenda.

2.3 The Bill sets out a requirement on local authorities and health boards to set up new integrated authorities’ but leaves it to local areas to decide whether and how to involve the housing sector. The possibility that any ‘integrated authority’ could lack the involvement of the housing sector at a strategic level is of some concern. Whilst the need to maintain a focus on housing issues in order to achieve the outcomes of integration has been acknowledged, proper engagement with the housing sector in both planning and delivery will be required.

3 What do you see as benefits that can accrue from the proposed legislation?

3.1 The main efficiencies and benefits potentially arising from integration plans are likely to be improved living conditions for our tenants and residents rather than benefits accruing directly to housing organisations themselves. There is increasing recognition of the preventative benefits of housing investment such as keeping people safe at home longer through the timely provision of appropriate housing adaptations, or the reduction of respiratory illness through efficient modern central heating systems. The housing sector argues for an investment dividend arising from an established link between housing investment and a consequential reduction in other more expensive forms of provision such as hospital treatment or long term stays in care homes.

3.2 The ‘housing sector’ has much to contribute to achieving the objectives of integration but its contribution would be put on a more secure footing through a continued commitment to the Housing Contribution Statements (HCSs) and through Community Planning Partnership arrangements to ensure that housing issues and housing sector are properly tied in with Joint Strategic Commissioning plans (JSCPs) and the delivery of the national outcomes.
being developed – the first three of which are particularly pertinent to housing: Healthier Living; Independent Living and Positive Experiences and Outcomes.

3.3 The development of a set of national outcomes will be fundamental in pursuing this objective and we look forward to further opportunities to reflect on the way housing related issues are reflected in the national outcomes and indicators.

3.4 There are also efficiencies and benefits to be had for the housing sector to work with integrated authorities rather than separately with social care and health. Equally, it is important that integrated authorities work with the housing sector otherwise the opportunity joint working presents will be lost in some areas. One way to ensure that this joint working occurs is to require the new partnerships engage formally with the strategic function of housing in local authorities and delivery of housing more generally. This is too important to leave to chance.

3.5 A central policy objective of the Bill is to provide ‘joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so’. The requirement that integration authorities share a budget and that they develop JSCPs mark a real step change from previous aspirations about joint working and are key strengths of the Bill. The housing sector has much to contribute to the overall policy objective but its role and contribution needs to be strengthened, as set out below.

3.6 The policy memorandum (para 9) states, and we agree, that an aim of the legislation is to deal with the variations in quality across the country. The forthcoming review of National Care Standards provides a significant opportunity to explore the scope to align regulatory standards with the principles of the Bill and the associated national outcomes being currently being developed.

3.7 The policy memorandum, which suggests (paras 98 onwards) that the scope of Bill should extend to adults of all ages, creates an opportunity to offer more consistent approaches to people with similar conditions or situations irrespective of their age. This may particularly assist those living in areas of deprivation, especially those with long term conditions, who are likely to face poorer health outcomes.

3.8 The Bill requires an integration authority to consult with service users where it decides to change the arrangements for carrying out of integration functions. Consultation is required where an authority wants to make changes ‘significantly affecting provision of service in an area’. This could be interpreted to include large tendering exercises, in which case this new duty might provide a means of ensuring that there is a process of consultation with service users in relation to such exercises. This is to be welcomed in order to achieve better outcomes for those using services.

4 Are there any concerns that you have around the proposed legislation?
4.1 The success of the new partnerships will largely depend on effective joint strategic commissioning plans (JSCP). It has already been acknowledged that housing plays a part in effective planning and Housing Contribution Statements (HCS) were introduced in 2012/13 as a way of highlighting the potential housing contribution to existing JSCPs. This first round of HCSs has been reviewed by the Joint Improvement Team and various issues have been highlighted. Whilst we acknowledge the challenge that local partnerships faced in developing and agreeing HCSs within a short timescale we nevertheless think it important to take the opportunity to learn lessons from the exercise.

4.2 The review found that although HCSs were submitted with partnerships’ JSCPs, only a minority actually integrated issues around improving housing and housing related services into the body of the JSCP. There was a tendency for the HCS to appear as a “bolt on”. HCS could be the key mechanism for linking Local Housing Strategies with JSCPs, and will be vital for the housing sector to play a strategic role in meeting the national outcomes associated with integration of health and social care. The housing dimension of integrated planning needs to be dealt with within the JSCP rather than sitting on the margins. In other words, we believe the best place for housing to demonstrate its actual and potential contribution to improving outcomes for people within the health and social care system is through proper integration of housing issues within JSCPs.

4.3 To further the integration of housing issues in JSCPs there needs to be a shared understanding of data relating to housing, health and social care, and a shared commitment to producing meaningful information from such datasets for planning purposes. We note that a review of the guidance relating to Housing Need and Demand Assessment (HNDA) is currently underway. This will consider explicitly improvements needed to aid our collective understanding of the housing needs of vulnerable groups such as older people and those with particular needs, and we propose that revised HNDAS be regarded as part of the toolkit required for JSCPs.

4.4 Together with ALACHO and SFHA, the JIT is currently surveying the sector to extend understanding of the housing sector’s experience of the first round of HCS. The review of HCSs submitted in March 2013 identified that these tended to consider housing with care and adaptations, but there was concern about a lack of focus on housing advice, lower level housing support services and other housing related services. The sector, working with the Scottish Government will use the information obtained to provide feedback and advice to practitioners across the housing health and social care sectors on how the housing contribution to JSCPs might be improved.

4.5 The Bill sets out integration across all adult age groups rather than simply older adults and this seems appropriate given the experience of housing providers in deprived areas where the onset of long term conditions tends to happen at a lower age. We note, however, that much of the Bill continues to

---

2 Housing Need and Demand Assessments are undertaken to assess local housing need and demand to inform the development of local housing strategies and development plans.
focus solely on the needs of older people and suggest this should be addressed if the principles set out in the Bill are to be pursued effectively.

4.7 Effective leadership at a local level will be crucial if the required change is to be implemented. The role of social landlords as a community anchor at a local level could be fundamental to helping to link leaders within public bodies with local people and leaders in the voluntary sector and in community based organisations. The Bill could be strengthened by requiring integration authorities to work with housing and the third sector as partners rather than simply adhering to principles to engage with ‘community and local professionals’. As a comparison, there is currently in place a requirement that Reshaping Care for Older People Change Fund plans are signed off by four signatories: the NHS Board, the local authority, the third sector and the private sector. We would urge that the housing sector be given formal recognition as a signatory for future integration plans in addition to the third sector.

4.8 There is a lack of clarity about the elements of funding which will go into integrated budgets and the extent to which local authority budgets currently directed at housing related services, such as housing support for homeless people, will be expected to be part of this. If each integration authority is left to decide this there is a risk that the financial context within which housing related services operate will become increasingly complex, to the detriment of the individuals who currently benefit from such services, with an increased risk that the policy objectives set out in the Bill will not be achieved.

4.9 Social landlords and many of the individuals they serve are already dealing with financial uncertainty resulting from welfare reform. It will be important that the financial arrangements introduced under the Bill do not destabilise housing related services further.

4.10 The HCG agrees with the planning and delivery principles as set out in the Bill (sections 4 and 25). These are in line with those originally set out in the consultation document and have gained the support of housing professionals across the sector. The ‘housing sector’ has much to contribute to the objectives of integration and the opportunity to put this on a more secure footing should not be missed.
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from Association on Directors of Education in Scotland

Part 3 Children's Services Planning

1. We support the requirement, the aims and the process indicated for the Children's Services Plan. However, in section 13, we believe that the prime aim should be to focus on the outcomes for children and young people rather than the mechanisms for planning.

2. In relation to guidance in Children’s Services Planning, it would be important to ensure that there are long term evaluations of the impact on children and families rather than reportable short term proxy measures which may divert attention from the long term aims of the legislation.

3. We have significant concerns around section 17 and the default powers of the Scottish Ministers. This appears to be focused almost entirely on the role of Scottish Ministers to change structures and to direct resources rather than a consultative and meditative role where they feel that Councils and Health Boards are not achieving best outcomes required for children. This has significant implications for local authorities which were not made explicit during the consultation period.

4. There is no suggestion anywhere else in the document that joint boards are a prerequisite for effective Children’s Service Planning. As an organisation with particular interest in education we would have concerns that decisions could be made to divert resources from this function to support underfunded pressures in other areas of children’s services. This would appear to be increased centralisation of decision making which does not sit comfortably with local democratic responsibility for services.

Association on Directors of Education in Scotland
August 2013
Local Government and Regeneration Committee
Public Bodies (Joint Working) Bill
Submission from Argyll and Bute Council

1. I refer to your letter of 26th June and would offer the following comments which have not been formally considered by the Council given the timescale for reply but nevertheless I trust that it will be helpful.

2. Argyll & Bute Council welcomes the introduction of the Bill, whilst recognising the challenges, going forward, that are inevitable during a period of transformational change.

3. The key objectives identified by the Christie Commission and the intent of the Bill provide us with the impetus to make the changes required to deliver our vision for the people of Argyll & Bute. The remote and rural nature of this area means that we have already, of necessity, developed a strong Health and Care Strategic Partnership that supports many excellent, and some award winning, integrated services. Through Reshaping Care for Older People (RCOP) and the move to Joint Commissioning we have further enhanced that partnership by fully involving the Third and Independent sectors as equal partners on the RCOP Project Board and in all of the associated workstreams.

4. Over the last 4 years we have developed a comprehensive joint reporting framework for adult care services, with monthly reporting that both informs strategic decision making and supports pro-active operational management.

5. We recognise that both service delivery and performance reporting need to continue to move towards an outcome-focused approach, going forward. We have recently hosted presenters from the Swedish Esther Network and we are considering how we can implement that model in Argyll & Bute.

6. Implementation of joint working will require a major culture change for both the Local Authority and our NHS colleagues, there will need to be changes in behaviours and attitudes and a willingness to overcome obstacles, driven by strong and enthusiastic leadership. We need to improve on staff and community involvement and overcome risk aversion to achieve truly customer-led service delivery. We also face financial and logistical challenges, particularly given the rurality of our environment; however, it is clear that unless we achieve both economies of scale and economies of skill, through this opportunity for joint working, we will not be able to meet the demographic-demand challenges of the future.

7. At present we are looking towards a Body Corporate model of implementation. We have appointed a project team to scope the Council's position and inform our
Elected Members and we look towards commencing joint planning for integration, with our NHS colleagues, in the early autumn.

8. The Argyll and Bute Council has supported the Children and Young People Bill through the COSLA consultations. In particular the Council welcomes the:

- Emphasise on Children and Young People’s Rights
- Promotion of GIRFEC principles (child’s plan and named professional)
- Extension of early years support (minimum 600 hours for 3 and 4 year olds)
- Improving permanence planning and LAC outcomes (right of care leavers to be assessed for support until their 25th year)
- Defining of corporate parenting and the duties of the corporate parent

9. The Council are, however, cautious as to the accuracy of the take up assumptions and the actual cost of implementation. The position taken by CoSLA in subsequent negotiations with the Scottish Government in respect of the financial arrangements reflects these concerns in detail and highlights discrepancies in funding for local government in comparison with recurring funding arrangements for the NHS. The Council are also concerned that there are proposals similar those in the recent Bill on Health and Social Care integration to give Ministers powers to establish Joint Boards, including the transfer of staff and functions from councils and Health Boards, if both sides fail to deliver integrated children’s services planning as set out in the Bill.

10. I would highlight the following link to further detail of the council’s position in relation to the Children and Young Persons Bill:

Roddy McCuish
Leader
Local Government and Regeneration Committee

Submission from Audit Scotland on Behalf of the Auditor General for Scotland and the Accounts Commission

Introduction

1. Audit Scotland is the public sector audit agency undertaking the external audit of the majority of public sector bodies in Scotland. We do this on behalf of the Auditor General for Scotland (for the NHS and central government) and the Accounts Commission (for local government). We provide this written evidence to assist the Local Government and Regeneration Committee with its interest in the Public Bodies (Joint Working) (Scotland) Bill and the Children and Young People (Scotland) Bill and their potential impact on local authority functions and partnership/joint working.

2. The Auditor General and the Accounts Commission welcome the opportunity to comment on the implications of the Bills and how the joint working arrangements established by them will link with the work of Community Planning Partnerships (CPPs).

Issues highlighted in audit work

3. This response draws on a wide range of audit work, in particular our report on Improving Community Planning in Scotland (March 2013). This report highlights that there is now a renewed focus on community planning which provides a clear opportunity to deliver a step change in performance. This will require strong and sustained shared leadership. There are many examples where joint working is making a difference for specific communities and groups across Scotland. However, our report concluded that overall, and ten years after community planning was given a statutory basis, CPPs are not able to show that they have had a significant impact in delivering improved outcomes across Scotland.

4. Over a number of years, Audit Scotland has highlighted the need to improve how public services work together to meet the needs of the people of Scotland and make the best use of available resources. We have highlighted in several reports the need for barriers to partnership working to be addressed. It is encouraging that both the Public Bodies (Joint Working) (Scotland) Bill and the Children and Young People (Scotland) Bill seek to address these problems. However, questions remain about the implications for CPPs and the responsibilities of local government from the introduction of these Bills.

5. There are a series of key issues not addressed within the Bills or the associated documents, and further information is needed to understand how these changes will work in practice. Significantly, the relationship between CPPs and the new integrated health and social care arrangements (through the Public Bodies (Joint Working) (Scotland) Bill) and changes to children’s services (through the Children and Young People (Scotland) Bill) are not clear.

6. There is a need for a clear articulation of how these new arrangements fit with CPPs. We noted in Improving Community Planning in Scotland that:

“There is a risk that wide-ranging reforms of public services in Scotland creates tensions between national and local priorities for change. Significant changes are under way aimed at integrating health and social care services, creating national police and fire services and regionalising colleges, all of which are important
community planning partners. It is essential that those who lead and manage local public services work together to ensure that they are providing public services in ways that make sense locally, while delivering the stated intention of the reforms. Equally, the Scottish Government has a key role to play by:

- ensuring ‘joined-up’ approaches to reform across government
- clearly and consistently setting out how it expects services to be provided in an integrated way
- streamlining policy guidance and arrangements for measuring performance across different parts of the public sector, and making sure they are consistent with each other.

At present, it is not clear how important aspects of the community planning review and health and social care integration developments are being integrated. For example, how policy guidance on governance and accountability arrangements is being coordinated and how performance reporting requirements will be aligned.”

7. It is still unclear, now the Public Bodies (Joint Working) (Scotland) Bill has been published, how some of these tensions will be resolved. There are similar issues with the Children and Young People (Scotland) Bill, for example, how the requirement to produce a children’s services plan will fit with the work of the CPP in each local area.

8. It essential that sound governance and accountability arrangements are in place, that organisations are able to respond flexibly to local needs and that there is some national monitoring of progress in improving services in line with policy intentions. Any new governance and accountability arrangements should be effectively aligned with existing arrangements.

9. The new integrated arrangements will be responsible for directing significant resources, representing a significant proportion of local government services. Under the Public Bodies (Joint Working) (Scotland) Bill, the new integrated partnerships may opt to include other services, such as services for children. Given the potential scale of these integrated arrangements, in terms of both the resources involved and the policy areas covered, it is even more important that the links to CPPs are clear and fully understood. There are also tensions between the introduction of a statutory partnership for health and social care services and the non-statutory CPPs. We have provided more detailed written evidence to the Health and Sport Committee to assist its scrutiny of the Public Bodies (Joint Working) (Scotland) Bill which you might find helpful. (Full submission set out in appendix 1). In relation to the Public Bodies (Joint Working) (Scotland) Bill, it is unclear how the external audit function will be funded and arranged and how it will work in practice. In taking forward the new arrangements, consideration will need to be given to audit committee and scrutiny arrangements, alongside the external audit issues we have raised.

10. The Public Bodies (Joint Working) (Scotland) Bill gives Ministers powers to make certain decisions about how services are planned and delivered locally, including powers to issue directions to local authorities, health boards or integration joint boards, about the functions related to the Bill, or in the integration plan. These powers are significant and need to be carefully considered given the unique position of local government as democratically accountable to their local communities.

11. The Children and Young People (Scotland) Bill covers a wide range of services for children. The Bill includes provisions for enforcement, which state that if a local authority or health board do not comply with the planning requirements or with
Ministerial guidance about these plans then Scottish Ministers can transfer their children’s services planning function to other health boards or local authorities or require joint boards to be established to plan services. This has significant implications for local authority services and needs to be considered further in taking forward the new arrangements. We note that the extent of the proposed ministerial powers set out in the Bills are different, with the powers in the Children and Young People (Scotland) Bill greater than those indicated in the Public Bodies (Joint Working) (Scotland) Bill.

12. There is significant overlap between the agencies involved in CPPs and those who will need to be involved in the arrangements set out in the Bills. This is another reason why there needs to be clarity about the role of various organisations in these joint working arrangements, their focus and how their performance will be measured, in order to make best use of resources in the local area. There is a risk that this may lead to duplication and a cluttered partnership landscape if this is not fully addressed.

13. Links between various performance management and reporting arrangements are unclear, for example, how the children’s services plan will link to the Single Outcome Agreement for each CPP. There are lessons to be learned from other partnership arrangements. When commenting on Community Justice Authorities in An Overview of Scotland’s Criminal Justice System, we noted:

“Although CJAs were established in 2007, there are no agreed measures to assess their performance or impact. As a result, CJAs use a range of different performance indicators developed locally with different systems for reporting and presenting data. CJAs have recently agreed to improve information sharing and to look at developing a common set of core measures and associated information requirements.

The lack of agreed performance indicators across the range of services designed to reduce reoffending means the cost-effectiveness of different local projects cannot be compared.”

14. Any outcome measures must be transparently reported and available to the public and this information should be used to drive improvement. National measures are useful but partners also need a mechanism for ensuring local needs and priorities are met and for measuring the difference that specific services are making to the individual.

15. Finally, the Committee is interested in views about the impact on local authority functions. It is difficult to be specific about the potential impact from the Public Bodies (Joint Working) (Scotland) Bill, given the needed for further details in key areas (see appendix 1). The Children and Young People (Scotland) Bill will potentially have a significant impact on local authority services. This includes specific changes, such as increasing early learning and childcare, but also the potential for a major change in how services are controlled, through the ministerial powers noted above.

Further information

16. We hope that you find our comments helpful and should you require any further information please contact Fraser McKinlay, Director of Performance Audit and Best Value, Audit Scotland, 18 George Street, Edinburgh, EH2 2QU, e-mail fmckinlay@audit-scotland.gov.uk.
Appendix 1

SCOTTISH PARLIAMENT HEALTH AND SPORT COMMITTEE

PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL

WRITTEN SUBMISSION BY AUDIT SCOTLAND ON BEHALF OF THE AUDITOR GENERAL FOR SCOTLAND AND THE ACCOUNTS COMMISSION

Introduction

1. Audit Scotland is the public sector audit agency undertaking the external audit of the majority of public sector bodies in Scotland. We do this on behalf of the Auditor General for Scotland (for the NHS and central government) and the Accounts Commission (for local government). We provide this written evidence to assist the Health and Sport Committee’s scrutiny of the Public Bodies (Joint Working) (Scotland) Bill.

Background

2. The Auditor General and the Accounts Commission welcome the opportunity to comment on the Public Bodies (Joint Working) (Scotland) Bill and to contribute to the future integration of adult health and social care in Scotland. This submission refers to the experience and audit evidence gathered through the work Audit Scotland has carried out on our behalf. This response draws on a wide range of audit work, but in particular Audit Scotland’s reports on Review of Community Health Partnerships (June 2011) and Commissioning social care (March 2012).

3. The Committee invites comments on a number of questions and we have focused our response around them.

Question 1: Do you agree with the general principles of the Bill and its provisions?

4. We support the principle that public services should be designed around the needs of the service user, and that public bodies should seek to overcome the organisational barriers that get in the way of delivering seamless integrated health and social care. Over a number of years, Audit Scotland has highlighted the need to improve how health and social care services work together to meet the needs of the people of Scotland. It is essential that services are able to work well together to respond to needs whilst making the best use of existing resources and delivering high quality services. We have highlighted in several reports the need for barriers to partnership working to be addressed and the importance of having a joint vision and clear priorities for the use of shared resources. It is encouraging that the Bill seeks to address these problems.

5. In our previous report on Community Health Partnerships (CHPs), we highlighted that a more systematic and joined-up approach to planning and resourcing health and care services is needed to ensure that health and social care resources are used efficiently. We saw few examples of good joint planning underpinned by a comprehensive understanding of the shared resources available. This message was echoed strongly in our work on Commissioning social care where we found slow progress with strategic commissioning and limited joint working. One of our concerns about CHPs related to their lack of strategic influence over how resources were used.
in the local area. The principles in the Bill aim to improve these issues, however, the change needed is significant and this is a challenging agenda.
Question 2: To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

6. The Bill requires NHS boards and councils to work together to meet the needs of the people in the local area. There are specific aspects of the Bill that should address some of the concerns we have raised in previous audit work and help to achieve the stated policy objectives. In particular, the obligation to prepare, publish, monitor and report against a local integration plan, and involve and consult with service users and carers in developing the plan, should provide a focus for driving forward the policy intention of the legislation. The extent to which this will be effective will be dependent at least in part on the quality and effectiveness of local leadership and the commitment of local partners to the plan and to the delegation and sharing of resources. Similarly, the role of the Integration Joint Monitoring Committee will be important in providing oversight and challenge.

7. However, the change needed is significant and there are some areas of the Bill where more detail is needed.

- It is not clear from the Bill how local people will be engaged in the changes proposed, whether the new partnerships will be central or local government bodies and how audit arrangements will operate.

- To date, GPs, clinical professionals and social care staff have not been fully involved in service planning and resource allocation for health and social care services. The lack of influence that CHPs have had over overall resources has been a barrier to professional staff engaging with CHPs. This needs to be addressed because these professional staff influence a large proportion of the health and care budget as a result of their decisions. The role of professionals is unclear in the Bill.

- The Bill provides little detail about how locality arrangements might work in practice. There needs to be a real contribution from professional staff groups to informing how resources are used and services improved.

8. In our report on Community Health Partnerships, we highlighted that partnership working between one or more organisations is challenging due to the differences in accountability arrangements and differences in organisational cultures, planning and performance and financial management. The proposals set out in the consultation appear to address some of these challenges but greater clarity is needed in some areas, include how acute NHS resources will be affected and how funds will flow via the new arrangements. The real test will be how the partnerships work in practice.

9. There are lessons to be learned from other partnership arrangements. When commenting on Community Justice Authorities in An Overview of Scotland’s Criminal Justice System, we noted:

   “Although CJAs were established in 2007, there are no agreed measures to assess their performance or impact. As a result, CJAs use a range of different performance indicators developed locally with different systems for reporting and presenting data. CJAs have recently agreed to improve information sharing and to look at developing a common set of core measures and associated information requirements. The lack of agreed performance indicators across the range of services designed to reduce reoffending means the cost-effectiveness of different local projects cannot be compared.”
10. The proposals set out in the Bill seek to avoid some of the above limitations, for example, the expectation that the local strategic plan will have regard to national health and well-being outcomes should ensure a greater focus on performance expectations.
Question 3: Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

11. Our reports on CHPs and Community Planning Partnerships (CPPs) highlight the importance of applying certain key principles to underpin successful partnership working. It is encouraging that the Bill recognises the importance of these key issues, including the need for leadership, vision, clear roles and responsibilities and for risks to be identified and managed. Accountability arrangements and processes also need to be clear. Partners should have a shared understanding about what success looks like and that there are arrangements in place to monitor and publically report on progress. Although these issues are identified in the Bill, this needs to be an area of focus when the Bill is implemented.

12. We have commented in a number of our reports about the lack of joined-up, transparent and comparable performance measures for health and social care services. This makes it very difficult to build a clear picture of relative performance and does not help the public or the Scottish Parliament to be assured about the quality and efficiency of the service. Therefore, we welcome the proposal for a set of nationally agreed outcome measures. When taking the Bill forward, it is important to be clear how these new measures will fit with existing frameworks such as Single Outcome Agreements (SOAs) and HEAT.

Question 4: Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

13. There are a number of key issues not addressed within the Bill or associated documents, and further information is needed to understand how these changes will work in practice. If these issues are not addressed in the Bill, they need to feature in subsequent implementation guidance. These issues fall into six main areas:

- **Resources.** In previous audit work we have highlighted that, for successful partnership working, it is essential that budgets and resources are clearly set out and agreed by all partners. The partners should be clear about the rationale for how money is allocated and spent, and efficiencies should be sought through sharing of resources and improved ways of working. There needs to be transparency about how devolved budgets have been determined and what resources are included in the devolved budget. Our work has shown that these key principles have not been applied fully in partnerships in Scotland to date.

From the information in the Bill, there are clear potential risks and tensions around how organisations will determine which budgets will be included in the integrated budget and the implications of this for their own governance and accountability arrangements. It is essential that there is clarity at a local level about governance and accountability arrangements and how risks will be identified and managed, and that there are effective dispute resolution arrangements in place. There is no minimum requirement for resources or services to be included in the new arrangements. This creates a risk of significant differences of approach across the country.

Linked to this point, it is unclear from the Bill the role that other policy areas will play, specifically housing. It is important that the new arrangements maximise the valuable contribution that housing can play in improving care and support for older people. More details on how self-directed support and personalisation of care will be addressed through the new partnerships would also be useful.
• **Links between health and social care integration and Community Planning.**
  The relationship between the new partnerships and the existing Community Planning Partnerships (CPPs) is not clear from the Bill. There is a need for a clear articulation of how these new arrangements fit with CPPs given the significant leadership and co-ordinating role for local public services that the Scottish Government/COSLA see for CPPs in their Statement of Ambition for Community Planning and Single Outcome Agreements. That document identifies community planning arrangements as being at the core of public service reform and ‘providing the foundation for effective partnership working within which wider reform initiatives, such as the integration of health and adult social care… will happen.’ Specifically it is not clear how accountability and outcomes/performance management will link between CPPs and the new health and social care partnerships. It essential that sound governance and accountability arrangements are in place. Any new governance and accountability arrangements should be effectively aligned with existing arrangements to avoid further complicating approaches to governance and accountability - we noted in our report on Community Health Partnerships that:

  “Approaches to partnership working have been incremental and there is a cluttered partnership landscape. CHPs were set up in addition to existing health and social care partnership arrangements in many areas. This has contributed to duplication and a lack of clarity of the role of the CHP and other partnerships in place in a local area. There is scope to achieve efficiencies by reducing the number of partnership working arrangements”

Given that the new integrated arrangements will be responsible for significant resources, and may opt to include other services, such as services for children, it is even more important that the links to CPPs are clear and fully understood.

• **Implications for audit and scrutiny arrangements.** The Bill does not set out whether the corporate body will be a local government or central government body. This has significant implications for financial arrangements and for the audit function. There are other potential issues for auditing and other scrutiny arrangements because of these changes. Specifically, if local partners opt to establish a body corporate there will be implications for internal and external audit arrangements. For example, the VAT status of the new body will need to be clarified. These issues have implications for audit and inspection arrangements as well as Parliamentary scrutiny. Furthermore, there are different budgeting cycles for NHS and Local Government bodies. It is also unclear from the Bill and associated documents, how the external audit function will be funded and arranged and how it will work in practice. In taking forward the new arrangements, consideration will need to be given to audit committee and scrutiny arrangements, alongside the external audit issues we have raised. There is a need for more detail on how these integrated services will be regulated and inspected through the work of Healthcare Improvement Scotland and the Care Inspectorate to ensure that there is appropriate independent public assurance about the performance of the new partnerships.

• **Governance arrangements.** The Bill sets out plans for a Chief Officer. This addresses one of our concerns that the existing CHP model was not given sufficient powers and authority to lead on key decisions about how resources are used in the local area. However, there are challenges and tensions with this proposed approach and the role and remit of the Board of the NHS board and the council elected members. There needs to be clear arrangements for any disagreements between the partners, including disagreements about finances, services, performance, and leadership to be resolved. The Chief Officer may be accountable for significant
resources; therefore, the leadership dynamic within both the NHS board and the Local Authority will be shifted by this arrangement. It is essential that there is more clarity about how the Chief Officer will report into the NHS board and into the Local Authority, and that clear performance management and accountability arrangements are put in place.

- **The role of health and care professionals.** The Bill recognises the importance of health and social care professionals being at the heart of making the partnerships a success. However, there is a lack of detail on how this will work in practice. We recognise the need for a degree of local flexibility to allow partnerships to respond to local needs, but we have noted in previous audits that historically these professional groups, such as GPs, have not played a key role in partnership working to date. Their involvement will be critical to the success of the new arrangements.

- **Ministerial powers.** The Bill gives Ministers wide-ranging powers to make certain decisions about how services are planned and delivered locally, including powers to issue directions to local authorities, health boards or integration joint boards, about the functions related to the Bill, or in the integration plan. These powers are potentially significant, in particular in relation to the role and responsibility of local government. For that reason, more information on the circumstances in which Ministers might seek to exercise these wide-ranging powers would be useful.

**Question 5: What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

14. The new arrangements will require NHS boards and councils to improve and share information on how resources are used locally for specific groups within the local community. Audit Scotland has highlighted a number of gaps in information which could be addressed through this approach. Specifically, we have highlighted previously a lack of information on community services to inform how best to use shared resources for the local area. The new arrangements may make it easier for health and social care providers to see their services as part of a single system of care, making it easier to reduce overlaps and to ensure that people receive the care they need, while best use is made of existing resources.

15. We recognise the major challenge in integrating health and social care services. We have previously commented that there has been no large-scale shift in the balance of care to community services and on the lack of joint resourcing in Scotland, and consider that many partnerships will find agreeing on the resources to devolve to the integrated budget difficult. Our recent report on Commissioning social care found that there was a way to go to develop how services are planned and commissioned within a single agency, not least between partners. This will be a major change for partners and require strong leadership, investment and support to make the change.

**Question 6: What effect do you anticipate integration plans will have on outcomes for those receiving services?**

16. The intention from the Bill is for a clear change to how services are planned and managed as a result of the proposals. The Scottish Government, and local agencies, will need to consider the potential cost implication of these changes and the impact on professional staff who deliver frontline services. The focus should be on improving outcomes for local people as well as on integrating systems and services. The introduction of a core set of national outcome measures and the requirement on
partners to jointly plan and use their resources to best meet local needs are welcome. The Bill provides the opportunity for better coordination of services and making better use of available resources at a local level.

17. Any outcome measures must be transparently reported and available to the public and this information should be used to drive improvement. National measures are useful but partners also need a mechanism for ensuring local needs and priorities are met and for measuring the difference that specific services are making to the individual.

18. The Scottish Government, together with NHS boards and councils, will need to ensure there is minimum disruption to existing services and service users during the move to better integration. NHS boards and councils need to continue to deliver services to those who need them during this period of change and must ensure that people are not adversely affected. Whilst these changes are under way, it will be important to maintain the progress made by CHPs at a local level.

Further information

19. We hope that you find our comments helpful. Should you require any further information please contact Fraser McKinlay, Director of Performance Audit and Best Value, Audit Scotland, 18 George Street, Edinburgh, EH2 2QU, e-mail fmckinlay@audit-scotland.gov.uk.
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from Children in Scotland

1. Children in Scotland is the national umbrella agency for organisations and professionals working with and for children, young people and families, with around 400 members. We welcome the opportunity to respond to the Finance Committee’s call for evidence on the National Performance Framework, as part of the process of scrutinising the Scottish Government’s draft Budget for 2014-15.

2. Our comments in this submission reflect our remit to support and promote improved outcomes for children, young people and their parents/carers, so our contribution focuses on these aspects of the NPF.

General Observations.

3. The National Performance Framework project was always going to be a major challenge to deliver and the Scottish Government is to be commended for its ambition in drawing together a hierarchy of strategic objectives, supported by national outcomes and key indicators. The shift of focus towards measuring outcomes, rather than inputs and processes was also a positive development. However, while we welcomed the inclusion of some outcomes and indicators in the NPF directly related to children and young people, they only represent around 16% of the 50 indicators in the Framework and only two indicators relate directly to pre-school children.

4. Children in Scotland has also welcomed the major shift of policy towards the principles of prevention, early intervention and a strong focus on the early years. As we note below, however, we consider that it is too early to come to a reasoned view as to whether resources are following the shift of policy to any significant extent.

The NPF as a means of measuring improved outcomes for children, young people and families.

5. Life chances and outcomes for children and young people are directly affected by a whole range of environments and issues covered by the NPF eg deprivation, housing, play and recreational space, health and other inequalities, public safety etc. We suggest, therefore, that scrutiny of only the few indicators which refer to children and young people would present a seriously incomplete and potentially misleading picture of progress in dealing with the many aspects of Scottish life which affect children.
6. Rather than focus solely on the specific outcomes and indicators relating to children and young people, we recommend, therefore, that the Scottish Government must take a broader overview across all relevant elements of the NPF to ensure that it can present a full picture of progress in improving outcomes in a positive and sustainable way for the youngest members of Scottish society.

**Choice of outcomes and indicators.**

7. We are aware that the Scottish Government is not directly responsible for day to day delivery of the services which will, in reality, determine whether improved outcomes are generated for our children, young people and their families. Therefore, identifying available and consistent data and information from a wide range of service providers, notably local government and the NHS Boards, was always going to be a major challenge.

8. There was always unease, however, that the indicators directly affecting children and young people were dictated by what information was readily available, rather than what would be the optimum measures to show that the lives and opportunities for our children and young people are being improved. While the limited national outcomes aimed directly at children and young people are laudable, we have significant reservations as to whether the related national indicators are sufficient to show if they are being delivered.

9. For example, the indicator “improving children’s services” seems focused entirely on child protection inspection results. It is clearly important to know that child protection services are scrutinised and improved where needed, but we suggest that this indicator either needs to be retitled “improving child protection services” or the range of services covered by the indicator needs to be widened. The Care Inspectorate’s new methodology goes beyond child protection services, so there is perhaps an opportunity to realign this indicator to cover a wider range of services which, we believe, would be the more desirable and meaningful option.

10. Inspection reports are essentially retrospective audits on the performance of services, rather than measurement of sustained and improved outcomes for those who use them. This contention applies to the indicators around positive inspections of schools and pre-school settings. These are valuable in reassuring parents and funders that providers are offering high quality services, but we would argue that they say little about the experiences of children and young people and whether outcomes for them are actually improving and thus contributing to meeting the associated national outcomes.

11. The national indicators around healthy birth weight, dental health, weight and physical activity are certainly useful as quantifiable ways of looking at the health and development of children but they are effectively proxy measures. We are not convinced that what are statistical snapshots tell us nearly enough for anyone to take a reasoned view on whether outcomes for our children are improving, particularly in respect of the early years.
Proposals for improvement.

12. Children in Scotland accepts that, in the current financial environment, developing expensive and extensive new data collection systems may not be a viable option and we recognise the benefits of using existing and consistent data sources wherever possible. Our question remains, however, as to whether the national indicators which are directly aimed at children and young people really provide the right and right amount of information to show progress in meeting the associated national outcomes.

13. Children in Scotland also questions whether advances in Scottish Government policy priorities aimed at children, young people and parents/carers (and their associated measures) have resulted in the NPF being overtaken and sidelined as far as looking at progress in improving outcomes for children and young people. In suggesting this, we see considerable and positive scope to create a more meaningful and streamlined framework and better alignment between the Framework and other current and developing measures of improved outcomes for children and young people.

14. The current planning and policy environments relating to children and young people are very complex. In our view, they do not link up well, thus adding to bureaucracy and lack of clarity for practitioners, planners, policy makers and families. Children in Scotland has been concerned for some time that planning for children’s services, a legal requirement under the Children (Scotland) Act 1995, is largely peripheral to wider Community Planning and the associated Single Outcome Agreement (SOA) process. As we indicate earlier in this submission, outcomes for children and young people are affected by a wide range of environmental and societal factors and we firmly believe that plans for direct support to children and young people should not be seen as separate from wider community development.

15. The duty on local authorities to produce and publish children’s services plans is augmented in the Children and Young People Bill, currently at Stage 1 in Parliament. Children in Scotland’s evidence to the Education Committee suggests that there should be formal links between Community Plans, SOAs and Children’s Services Plans. In our view, the Bill provides an opportunity to make these much needed links and for the Scottish Government to look again at whether SOA targets/outcomes adequately cover the interests of children and young people.

16. The Bill also describes a “wellbeing framework” based on the Getting It Right for Every Child (GIRFEC) principles of Safe, Healthy, Achieving, Nurtured, Active, Respected, Responsible and Included (SHANARRI). Our understanding is that there is to be a suite of indicators and measures to help demonstrate progress, based on SHANARRI principles and that these should be included in progress reports on delivery of children’s services plans.

17. Children in Scotland considers that it would both sensible and feasible to use measures and indicators, based on the SHANARRI framework, as a
foundation for reporting at locality level, aggregate such information to Community Planning Partnership level and then include it in national reporting eg through SOAs, which, ultimately, would feed into the National Performance Framework. This would provide “bottom up” performance information to aid direct service providers at locality level, local policy and planning partnerships, national government and Parliament in respect of assessing successful delivery of national outcomes, policy priorities and resource allocation.

18. If the SHANARRI indicators are well designed and measured consistently, this would ultimately provide the National Performance Framework with a wider range of more meaningful and relevant information on how children and young people are faring in Scotland.

19. Children in Scotland also believes that the Growing Up in Scotland research outcomes could serve as a useful input to the national outcomes set out in the NPF, again making better use of existing sources of information.

20. Growing Up in Scotland (GUS) is a large-scale and ongoing longitudinal research project aimed at tracking the lives of several cohorts of Scottish children from the early years, through childhood and beyond. The research covers key domains which are very relevant to the national outcomes in the NPF, including cognitive, social, emotional and behavioural development, physical and mental health and wellbeing, childcare, education and employment, home, family, community and social networks, involvement in offending and risky behaviour.

Opportunity to rationalise and streamline indicators.

21. We suspect that many current performance and reporting requirements are linked to earlier, specific policies and strategies and they may not reflect the shift of focus towards prevention, early intervention and the early years.

22. We suggest, therefore, that the Scottish Government should take the opportunity to review the plethora of performance and other reporting information it currently gathers (and plans to gather in future) in respect of improving outcomes for children and young people. As matters stand, Children in Scotland would contend that there is a need for greater cohesion and scope for significant rationalisation which could save scarce human and financial resources that could be better used to support front line services and improve outcomes.

23. For example, we understand that an ongoing project, the Early Years Collaborative, is developing a new suite of stretch aims and targets, based around a quality improvement model. While Children in Scotland has always welcomed greater emphasis on the early years, we suggest that the Scottish Government should be invited to set out in detail how these new measures fit with GIRFEC/SHANARRI indicators, the indicators which underpin the Early Years Framework and the reporting requirements in the Children and Young People Bill. Our hope is that these could be rationalised and streamlined, rather than creating additional burdens on hard-pressed service providers.
24. There is also a major issue around the availability of robust baseline data to form the foundations from which progress can be monitored and the Scottish Government should ensure that it has sufficient baseline information to support improved indicators and measures in respect of improving outcomes for children and young people.

**Links between NPF priorities and spending decisions.**

25. Children in Scotland welcomes the policy intentions and rationale behind shifting resources towards prevention, early intervention and the early years, including the prospects of generating savings to the public purse in the short, medium and long terms. However, it seems to us that there is no consistent understanding or definition of what prevention and early intervention mean in practice, so we question how effective any attempt to categorise and quantify the allocation of resources would be.

26. In addition, it is very difficult to obtain information on how much is spent in Scotland on supporting children’s services and to track trends. Local authority financial returns are one complex, source of information. Our understanding is that NHS spend on children and young people is almost impossible to identify, due to the way in which budgets are structured. Against this backdrop (coupled with the virtual removal of ring fenced budgets for local government), we suspect that it will be difficult for the Scottish Government and for Parliament to measure from a meaningful baseline whether there is a shift of resources towards the prevention and early intervention priorities.

27. Another factor which will conspire against shifting resources is that this initiative has come about at a time of severe pressures on public sector budgets and we know that local authorities and other providers are already struggling to meet their existing legal obligations to children and families. We consider that there is very little in the way of “slack” in the financial system which would allow a major shift of resources, while still ensuring that current statutory duties are met.

28. While the Scottish Government’s Change Fund is a useful incentive, our partners have pointed out to us the dilemma they face in transferring increasingly scarce resources to meet revised priorities, particularly identification of the budgets which might be reduced and the consequences of doing so. For example, existing children and families with multiple, complex and challenging needs will still require extensive and expensive support over time and reduction or withdrawal of support could have very serious consequences for all concerned.

29. Given the serious financial conditions facing the public sector in Scotland, we suggest that policy makers, planners and practitioners need to take careful stock of current activities to ensure that they are delivering improved outcomes for children and families and value for money. Where there is spending on provision that is clearly failing to deliver, shutting down such activities and transferring resources into services and actions that have been
proven to work, may be another option to free up human and financial capital. Diverting resources into prevention and early intervention priorities would certainly be welcome, but it is equally important to have common definitions, measures and indicators to ensure that such resources are delivering genuine and sustainable improvements to outcomes.

30. The desired transitions in resource terms will, in our view, take much longer to emerge and progress is likely to be slow and variable across Scotland. The consequence of this is likely to be that the improvement in outcomes for children and young people envisioned by the Scottish Government, and supported by Children in Scotland, will take longer to emerge. We are not advocating a shift away from the policy aims of prevention, early identification of problems and early intervention from the earliest years in a child’s life, but offering something of a “reality check” in managing expectations.

Conclusion.

31. In conclusion, Children in Scotland supports the rationale and aims which underpin the National Performance Framework, but we can see considerable scope to enhance the range and quality of information on children and young people that feeds into it. In this submission, we offer suggestions which, we hope, might provide more relevant and comprehensive information, while streamlining the means of reporting at local and national levels.

32. While we believe that it is too early to respond in detail to all the questions posed by the Finance Committee, we wish the Scottish Government, Scottish Parliament and the key national and local agencies who plan and deliver services for children and young people every success in making these ambitious and laudable changes to the ways in which services for children, young people and families are planned, provided and funded.

Jackie Brock
CHIEF EXECUTIVE.
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from Children’s Hearings Scotland

Introduction

1. Children’s Hearings Scotland (CHS) is a Non-Departmental Public Body established under the Children’s Hearings (Scotland) Act 2011, which entered into force on 24 June 2013. CHS assists the National Convener with the delivery of her functions in relation to the recruitment, selection, appointment and re-appointment, training, retention and support of volunteer panel members within the Children’s Hearings System. Further information about CHS and the National Convener can be found on our website www.chscotland.gov.uk.

Children and Young People (Scotland) Bill: Part 3

2. CHS welcomes the strengthening of the legal framework for children’s services planning. However, at this stage we have some reservations about the duty being imposed on the National Convener. There are two reasons for this. First, children’s hearings themselves are not providing a service to children and families and panel members have no direct role in children’s lives, other than the critical role of decision makers within the care and justice tribunal for children and young people and families. Secondly, there is an additional complexity in relation to compliance with the European Convention on Human Rights (ECHR) and the need to maintain the independence of the children’s hearing.

3. We would welcome clarity and additional guidance to ensure that specific duties and expectations of different agencies and public bodies are set out to promote a real understanding of roles and responsibilities within the children’s planning framework.

4. We also think it is disappointing that the involvement of children, young people and families is not addressed within these sections of the Bill.

Public Bodies (Joint Working) (Scotland) Bill: s44

5. CHS welcomes the proposal contained in s44 to allow the Common Services Agency to enter into arrangements to provide legal, technical and administrative services with, amongst others, public authorities. In relation to this, we strongly welcome the statement in para 138 of the Policy Memorandum that the delivery of shared services by the Common Services Agency will “not be mandatory and it will remain a matter for these bodies themselves to determine the benefits of engaging with the Common Services Agency.” We consider it essential that the use of the services provided by Common Services Agency be optional. For example, in relation to legal services we would welcome the opportunity to discuss the provision of assistance with employment, property or contractual issues but in relation to legal
advise and assistance on matters relating to the Children’s Hearings System, the specific expertise required could not be provided by the Common Services Agency. If it became mandatory to use the Common Services Agency to provide shared legal services CHS and the National Convener would be at a significant disadvantage to the current position in this respect.

6. CHS currently has agreements with the Scottish Children’s Reporter Administration (SCRA) for the provision of human resources, procurement, payroll and transactional finance services, with National Records of Scotland (NRS) for procurement services and with the Scottish Government Information Service and Information Systems (ISIS) department for IT services. Based on this experience we think it is essential that the basis on which the shared service operates is crucial. In particular it is essential that the service provided is flexible, responsive, and is capable of being tailored to individual public authorities. Public authorities are a diverse group and have different needs depending on their size and the area in which they operate. It is important, therefore, that the service provided by the Common Services Agency is capable of being customised to the needs of the particular public body.

Children’s Hearings Scotland

August 2013
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from Coalition of Care and Support Providers

1. CCPS welcomes the opportunity to contribute to the Committee’s consideration of the Public Bodies (Joint Working) (Scotland) Bill (the ‘Joint Working Bill’) and the Children and Young People (Scotland) Bill (the ‘Children’s Bill’), in relation to the proposals relating to children’s services planning and shared services that they respectively contain. We have provided some initial feedback to both the Health and Sport Committee and the Education and Culture Committee on these two bills. The following points are drawn from those submissions and focus on the benefits and concerns for care and support providers, in relation to service planning.

Re Joint Working Bill

2. We have three points to note in relation to the proposals for service planning: firstly, the need to strengthen the role of the third sector in strategic planning; secondly, to make specific provision for the independent scrutiny of planning processes; and thirdly, the need to clarify the links between planning processes elsewhere (e.g. existing community planning via the CPP, and proposals for service planning in the Children’s Bill).

3. We very much welcome the emphasis in the Joint Working Bill on ‘strategic planning’. Ss. 23-30 provide for a framework for joint strategic planning, based on a set of integration delivery principles and include the establishment of a ‘consultation group’ to develop and agree the strategic plan.

4. While we strongly support the requirement for joint strategic commissioning, the involvement of non-statutory partners needs to be significantly strengthened. We are concerned that the Bill does not adequately reflect the policy intentions set out in the policy memorandum, which says: ‘... the full involvement of the third and independent sectors, service users and carers, will be embedded as a mandatory feature of the commissioning and planning process. This will strengthen the cross-sector arrangements that have been established during the first two years of the Change Fund.’

5. The Joint Working Bill places duties on integration authorities to consult the third sector (and, in certain sections, to consult third sector service providers specifically). In our view this duty is not strong enough. The third sector, and providers specifically, should be treated not as consultees, but as full partners in the planning

---

1 At page 24.
and delivery of care and support. Otherwise, the effect of the Bill will be to ‘downgrade’ the third sector (and indeed the private sector) from the status it has already been accorded in respect of similar processes for Reshaping Care for Older People and the Change Fund, where relevant plans must be signed off by four partners equally: the NHS Board, the local authority, the third and the private sectors. To underline this point, we note that the Financial Memorandum identifies the costs of clinical involvement in locality planning (estimated at £3 million, points 88 and 89) but no cost is identified for involvement of the third sector in either locality or strategic planning, which perhaps tells its own story.

6. We have also argued that there needs to be a level of independent scrutiny of the strategic planning process. However, the Joint Working Bill makes no reference to any requirement for independent scrutiny of integration authorities in respect of quality, performance or the achievement of national outcomes. The Health and Sport Committee has supported CCPS in promoting the view that poorly commissioned care poses as much of a risk as poorly delivered care: it is therefore a major disappointment that whilst the policy memorandum is specific on the need for independent scrutiny of strategic commissioning\(^2\), the Bill itself makes no reference to it.

7. Linked to the above point, the Bill’s requirements for integration and strategic planning do not appear to be sufficiently co-ordinated with related legislative instruments (both existing and proposed). We are aware, for example, that the Joint Improvement Team (JIT)’s recent survey of progress on integration indicated that a fair number of partnerships are considering including children’s services in their integration plans. This raises a question about how integration plans in these areas should interact with the requirements set out in the Children’s Bill with respect to children’s services planning, and/or to requirements regarding community planning more generally. There is a risk that these various pieces of legislation will lead to a multi-layered, yet unco-ordinated, set of planning requirements for public authorities.

Re Children’s Bill

8. There are two principal issues we have raised in connection with the proposals in Part 3 of the Children’s Bill, which reflect similar concerns raised in respect of the Joint Working Bill. The first is that we would like to see the engagement of the third sector more clearly embedded in the joint services planning; and second, related to this, we would like to see greater consistency between the joint planning proposals in the Children’s Bill and the Joint Working Bill, as well as greater clarity about how the different planning processes will relate to each other.

9. The proposals in the Children’s Bill for service planning build on the provisions in the Children (Scotland) Act 1995 but appear to fall short of the level of collaborative

---

\(^2\) At para 131 onwards.
strategic planning that is being developed in the context of the integration of adult health and social care noted above. The Joint Working Bill provisions on strategic planning, while not going as far as we would like, appear to be a significant step up from the more basic 'duty to consult' requirements in Part 3 of the Children’s Bill, not least because they require the involvement of a range of stakeholders (including voluntary sector service providers) from the beginning of the planning process, and include both a set of principles and a structure for the process.

10. Interestingly, while there is only a basic ‘duty to consult’ with voluntary sector service providers in the Children’s Bill, there appears to be a ‘duty’ placed on voluntary and independent sector providers, social landlords and others (in s.10(6)) to ‘meet any reasonable requests to participate or to contribute to the preparation of the plan’.

11. We welcome wide participation in the planning process, but we query the extent to which this legislation can place ‘duties’ on non-statutory bodies. Thus we would like to see clarification of the meaning of this provision in relation to both the policy aim and the legal impact. As set out above, we consider the approach taken in the context of the Joint Working Bill, (where duties are placed on statutory bodies to undertake a process of joint planning that includes voluntary sector providers and others) to be a better model.

12. In the context of involvement in strategic planning, it is notable that the financial memorandum for the Children’s Bill anticipates no extra costs as a result of these planning proposals based on the assumption that local authorities already have a duty to produce integrated children’s services plans. As with the Joint Working Bill, there is no consideration given to the costs that might come with wider participation in the planning process by voluntary sector providers and others. However, we think that there will be potential costs to voluntary sector providers, not just from engagement with the planning process but also in connection with the duties to provide information, advice and assistance (e.g. ss.14, 26, and elsewhere in the Bill) and that this should be reflected in the financial memorandum.

CCPS August 2013

About CCPS
CCPS is the coalition of care and support providers in Scotland. Its membership comprises more than 70 of the most substantial third sector providers of care and support, supporting approximately 270,000 people and their families, employing over 45,000 staff, and managing a combined total annual income in 2009-2010 of over £1.2 billion, of which an average of 73% per member organisation relates to publicly funded service provision.
Care and support in the third sector

The third sector is at the forefront of quality care and support in Scotland. More than a third of all care and support services registered with the Care Inspectorate are provided by third sector organisations. In many areas of care and support for adults and older people – including care home provision, care at home and housing support – third sector services receive a higher proportion of ‘very good’ and ‘excellent’ quality gradings from the Care Inspectorate than their counterparts in either the public or the private sector.
Introduction

1. COSLA welcomes the opportunity to provide written evidence to the Education and Culture committee on the Children and Young People Bill. We have been pleased by the inclusive way that Scottish Government has worked with COSLA in the development of the Bill and we hope to continue this positive approach in evidence to Parliament.

2. We acknowledge that this response is longer than we would typically submit on a Bill. However, the legislation is arguably the most significant change to children’s services since devolution so we believe all sections need to be considered carefully. The Bill is positive and ambitious, and it is worth emphasising that COSLA supports the policy intentions behind much of the Bill. As a result the majority of our work on the development of the Bill has focused on practical challenges of implementation and the resources required by local authorities.

3. The Children and Young People Bill is a complex piece of legislation with significant financial implications for local authorities. The accuracy of the Scottish Government’s analysis and therefore the funding that would be made available depends on a large number of assumptions that will not be fully tested until the Bill is implemented. Councils have concerns over the future financial impact of the policies and that for this reason the financial implications to local authorities require in-depth scrutiny during the parliamentary passage of the Bill. COSLA has gained a confirmation from the Scottish Government that it is the intention to fully fund the requirements of the Bill, but with the implementation stretching beyond both the current spending review period and the end of this current parliament in 2016 then future budgetary decisions would be dependent on the result of several spending reviews. The commitment made by this administration to fully fund the Bill must be honoured in future years by whatever Government is in power and kept under on-going review. We also believe that it will be necessary for both COSLA and Scottish Government to jointly scrutinise and monitor the spend on this legislation, to ensure that local government is and continues to be sufficiently resourced to carry out the new duties that will be enacted.

Summary of Bill

4. COSLA supports the policy intentions of the Bill’s proposals on:

- Children’s rights;
- Children’s services planning and Getting it Right for Every Child;
- Early learning and childcare, and
- Looked after children.

5. However, we have a number of important points to make on the implementation of Bill proposals, and the financial implications of the legislation. COSLA will be
responding to the Finance Committee call for evidence in relation to the Financial Memorandum for the Bill, but we also provide summaries of comments on the financial issues in this submission of evidence. We also have a small number of concerns with specific proposals in the Bill - chiefly relating to new powers being sought by Ministers and proposed changes to the Children’s Hearings Scotland Act. These and other issues are discussed in more detail in the sections below.

**Part 1 - Rights of Children**

6. Children’s rights are well embedded within the practice of local government. We believe that no public sector organisation is likely to object to the proposal for realisation of children’s rights as stated in the proposals. Issues around transparency of decision making and policy implementation and scrutiny are of equal importance to local government, as other public sector organisations. COSLA has maintained since the Bill proposals were consulted upon in 2012 that we remain of the view that the duty of due regard need not extend beyond ministers when councils are already addressing children’s rights. Local authorities have already made much progress especially in the school setting, in terms of the promotion of children’s rights.

7. A number of organisations such as the Children’s Parliament are working with children on this issue. In explaining rights issues to children, it often provides clarification for adults working and caring for children and young people that the focus of the rights in the UNCRC are not about giving children the right to say no, but rather the ability to feel safe, secure and healthy with their help, guidance and support. We believe that this understanding helps and empowers children and young people.

8. COSLA remains of the view that organisations and structures such as the courts and Children’s Hearings need to acquire a clear understanding of the UNCRC in terms of their dealings and undertakings to children and young people. In that context, we are prepared to accept the proposals as set out in part 1 of the Bill.

**Part 2 - Commissioner for Children and Young People**

9. COSLA would be concerned if the use of the proposed additional powers as set out in Part 2 of the Bill became a “naming & shaming” exercise. Equally we would be concerned if the additional powers were to be used in a way that would duplicate both the existing complaints procedures & external inspection by Education Scotland and the Care Inspectorate. While we acknowledge that the Explanatory Notes for the Bill make reference to the Commissioner not duplicating roles of other organisations, this still leaves an opening for the Commissioner to investigate something that would be better handled by another agency.

10. It is our view that any powers should be used only as a last resort after all other avenues are exhausted.

11. Equally, we are clear that there needs to be clear guidance available to councils on what the UNCRC means for them in the delivery of children’s services, in light of Part 1 of the Bill, as well as Guidance on how and in what circumstances the
Office of the Commissioner will have the scope to implement the additional powers.

**Part 3 - Children’s Services Planning**

12. For many years, COSLA has argued for better integration of public services locally. Whilst we therefore accept the intention behind the Bill to improve integration and planning for Children’s services, COSLA believes that to be effective in practice any Bill proposals must not exist in a vacuum and should add value to other existing arrangements.

13. In particular, we want to be sure that Children’s services planning contributes to and is driven by the wider Community Planning arrangements that all partners are engaged in locally. This should be the forum through which partners should come together to develop partnership approaches to improving outcomes. For example there is an existing duty for local authorities to produce integrated children’s services plans, linked to Community Planning. Although we would argue that more needs to be done to put CPPs at the centre of reform our view is that this Bill should be an opportunity to drive that work forward in the context of children’s services, and avoid any chance of competing agendas or duplication arising.

14. It is therefore important that Committee considers how the Bill sits within this existing landscape; the activity going on to strengthen community planning, and alongside the developing Community Empowerment Bill which will set out in statute the new framework for Community Planning.

15. There are also clear links to the current proposals on the integration of adult health and social care services and it is possible that some local partnerships may wish to consider the inclusion of children’s services in those arrangements. Ultimately, it will be for individual local authorities and their health board counterparts to make that determination. We would also add that other organisations/people with an interest in children’s services within the voluntary or private sector that are not always directly connected to CPPs will also have a key to play in these tasks and should be equally covered by the proposals.

16. There is one aspect to the proposals in children’s services planning with which COSLA does not support. Part 3 paragraph 17 proposes Ministerial powers to establish joint boards, should there be concern that insufficient progress is being made in terms of integration. This was a late addition to the Bill, and one which had not been previously discussed with COSLA. Whilst we can understand the desire on the part of any Government to ensure the successful implementation of its policies, the discretionary powers taken within this section of the Bill are extensive and allow for the transfer of staff, property and functions to the new boards.

17. The powers appear also to be linked to section 16 of the Bill which concerns powers to issue direction to public bodies, including local authorities. Section 16 is a concern in itself as it allows Ministers with the broad scope to issue directions to local authorities and health boards on the exercising of their functions. We firmly believe that decisions on the operation of services, including how best to
tackle outcomes, are best taken at the local level in close collaborations with partners. Taken together one interpretation of sections 16 and 17 is that local authorities and health boards could be restructured if directions of Ministers were not followed to the liking of the Government of the day.

18. This is a concern for anyone who champions local democracy, but given our good relationship with Government it is strange that Ministers feels the need to seek such strong powers. Local government has demonstrated a strong commitment to both the Bill and children’s services improvement generally and we have a strong track record of arguing for better, outcomes focused integrated services. This is consistent with our representation to the Christie Commission and our recent work to agree a vision for local government. We are also uncomfortable with notion that Parliament is being asked to grant powers to Ministers to restructure the public sector in a way that normally would require the full scrutiny afforded to primary legislation. It is possible to argue that these powers not only undermine local democracy, but national democracy too.

19. COSLA is completely opposed to the powers described in paragraph 17 and have made this point already to Government. Our principled position as agreed by our Convention is that there is no need for such powers, and that they should be removed from the Bill.

Part 4 - Provision of Named Persons
20. Scottish local government has been delivering the Getting It Right for Every Child approach for some years and recognises the value of GIRFEC in the improvement of children’s services. The proposal that the Named Person role should sit with local government, with the inference, though not expressly set out, that the role should sit with with schools in terms of their contact with children and young people from 5 to 18 years is welcome. It is clear that outside the family or care structure, children and young people have the most contact with school teaching and support staff. The Financial Memorandum provides for resources to be made available to provide GIRFEC training for senior teaching and support staff in schools and provide resources for backfill, while training is undergone. COSLA has worked with Scottish Government in testing these figures based on the current situation. As noted in the introduction this is a necessary area that will need to be monitored and scrutinised in future years to ensure funding is available for the provision to be sustainable.

Part 5 - Child’s Plan
21. The value of a Child’s Plan is already recognised since the GIRFEC approach was launched. COSLA has worked with Scottish government to promote the approach across local authorities. It is reasonable therefore that COSLA continues to support in principle, the proposals regarding a Single Child’s Plan. The idea of a child’s plan is one that we completely support, but there is a need to consider how the plan relates to other plans. The best example is the coordinated support plan which is set out in ASL legislation. We understand that Government is looking at how coordinated support plans sit with respect to the child’s plan – with the option that a CSP could form part of the child’s plan where this is appropriate being perhaps the best solution. In an ideal world we would not require two pieces of legislation – this Bill and ASL legislation – to describe
different aspect of children’s services planning, but it is the practical reality on the ground that is most important. It is therefore important that legislation and guidance makes clear how both the child’s plan and coordinate support plans will operate in practice.

22. In principle COSLA would accept that children, young people and families should be involved in the development of a Child’s Plan, where possible. However, in practical terms, while local authorities will seek to improve life chances for children and young people, managing expectations against practicality and the needs of other vulnerable members of the community will continue to be addressed by councils.

**Part 6 - Early Learning and Childcare**

23. COSLA supports the expansion of early learning and childcare as proposed in the Bill. The proposals in the Bill came about as a result of considerable joint discussion between COSLA, ADES and Scottish Government. This is also the most costly section of the Bill, and from the start COSLA recognised the very significant implications of the proposals on local authority resources.

24. The figures within the financial memorandum were developed through the work of COSLA with local authorities. They are the best figures we have for the implementation of this section of the Bill, and it is worth noting that local authorities have indicated that they are broadly happy that they are an accurate assessment of implementation costs in line with the agreed approach to delivering this aspect of the Bill, that is, to deliver the 600 hours in as practical a way as possible and without the additional requirement of more flexibility for parents. However, as we have already outlined the implementation of the Bill will stretch beyond the end of this spending review, which means it needs to be recognised that it is future budgets that will determine how effectively this policy can be implemented. Parliament needs to be aware that any shortfall in future funding will be felt by local government and ultimately parents and children.

25. Following discussions with Scottish Government we agreed that the Bill would require local authorities to deliver the increased hours in as practical way as possible by August 2014 with no immediate requirement for more flexibility for parents. This recognised practical challenges facing local authorities, and the short lead time to implement the additional hours in time for the start of the academic year 2014/15. In subsequent years additional flexibility will be introduced gradually, in consultation with parents, and within the overall resources made available by Scottish Government. Delivering increased flexibility is more complex and costs more money as a result, so it is important to understand that local authorities will only be able to implement what they are funded to deliver. Local authorities have the flexibility to tailor future delivery of 600 hours of early learning and childcare to meet local needs, incorporating the views of parents.

26. On the basis that these issues have been agreed with Scottish Government, we support the proposals outlined in the Bill.

**Part 7 - Corporate Parenting**
27. COSLA has long been an advocate of corporate parenting and has been an enthusiastic supporter of publications such as ‘These are our Bairns’. This section of the Bill is important as for the first time it will set out a legal definition of what it means to be a corporate parent, and extend this to other public bodies – the corporate family, to extend the analogy.

28. We agree that a definition of Corporate Parenting should refer to the collective responsibility of all public bodies and those acting on their behalf to provide the best possible care and protection for looked after children. In addition, it would be helpful if other public bodies or community planning partners have their roles clarified to achieve better outcomes through joint working. This will require the updating of guidance on corporate parenting.

29. We have to be clear though that the corporate parent cannot act in the same way as a birth parent. As such, any definition requires to define the parameters of the responsibility lucidly and to manage expectations in terms of the financial and human resources it would involve. However, local authorities and other public bodies can and do use their influence and weight in innovative ways to support both children in care, and those who have recently left it.

30. It is also important to note that any formalised definition of corporate parenting will have practical resource challenges in terms of on-going training/briefing sessions to ensure organisational wide commitment for councils and other community planning partners. At the same time though it should be acknowledged that there are some real examples of good practice around the country in relation to corporate parenting from councils that should be promoted.

31. One concern that we have on part 7 of the Bill again relates to powers of Scottish Ministers to issue direction to public bodies – including democratically elected local authorities. As with part 3 of the Bill we are not certain why Ministers feel they need to seek the ability to direct public bodies as set out in section 58. Local government has shown a strong commitment to the concept of corporate parenting in recent years and developed a good partnership with Government. Local and Scottish Government have a shared goal for improving lives of looked after children, so it seems disproportionate for Ministers to require the ability to issue directions. On a practical note we would also argue that the powers presuppose that Ministers somehow know better than local agencies about how to meet the needs of children in their care. We do not doubt Government’s commitment on this subject, but the experience of elected members and local professionals across all agencies and services must be respected.

Part 8 - Aftercare
32. COSLA is supportive of the policy intent of the extension of aftercare provision to young people that have previously been looked after. We understand that Government are looking for authorities to provide a level of support broadly consistent with what is provided currently on a discretionary basis for 19-21 year olds. However, paragraph 60, sub-section 8 states that Ministers will determine such types of support, the detail of eligibility will not be determined until secondary legislation. It is therefore important to emphasise that the full
implications of this policy on local authorities will not be known until the secondary legislation is passed.

33. Currently, there is no equivalent legislation or statutory guidance for such type of support for 19-21 year olds. The decision on eligibility is made by the local authority, as they have the skills and expertise to assess the individual case. Potentially paragraph 60, sub-section 8 could restrict the provision local authorities can offer and could lead to a difference in the provision that is currently provided and the provision that could be provided after the legislation is implemented. It also restricts the flexibility a local authority has to amend the elements of support available to eligible kinship carers to reflect changing circumstances or the future identification of further support needs.

34. The assumptions that Government make on the number of young people leaving care and percentage of young people expected to be successful in applying for support seem reasonable and are based on national statistics and the experience of local authorities.

35. Our concern on this issue is one that we have no way of knowing what the impact of welfare reform will be on this group of young people, so there is every possibility that the numbers seeking assistance may not fall as much as expected. Early indications of the impact of welfare reform show significant increases of presentations in many authorities for this service.

36. Further, COSLA has less certainty over the accuracy of the costings of this aspect of the Bill due to the difficulties for local authorities in estimating the financial impact. In particular, we are not convinced that the Scottish Government have accurately estimated the average annual cost of support (£3142 per young person). This figure includes an estimate that the average cost for travel would be £400 per year; that emergency payments up to £200 per year could be payable and that payments to outside agencies (such as for third sector support) would be around £1500. It also includes an estimate of staffing costs required to support the young person. From discussions with local authorities we believe that these costs underestimate the actual cost of supporting a young person who has left care. In particular we are aware that some local authorities have indicated a concern that travel costs are not realistic and do not factor in cost of travel particularly in rural areas.

37. Finally, if the subsection detailed above remains in the Bill the actual cost will not be clear until secondary regulations have been passed potentially leading to a gap in funding which could undermine the intention of this section of the Bill.

Part 9 - Counselling Services

38. We believe the intention of this section of the Bill is to ensure that families in the early stages of distress are provided with support. The move towards early intervention is welcomed by COSLA however the provisions set out within Part 4 19 (5) already provide for this to happen under the functions of the “named person”. This section of the legislation may therefore duplicate the earlier section.
39. Further, if the section remains the term “counselling” used is unhelpful and should be replaced with support. Counselling is a specific form of formal support that will not be appropriate for all families. All forms of support (e.g. family group decision making, drug and alcohol support groups etc) should be considered after an assessment of need is carried out. Also, as there is no definition of ‘eligible child’ within the Bill it is difficult for local authorities to be able to assess the impact of this. As things currently stand local authorities are to provide undefined counselling services to parents or those with parental rights and responsibilities of an undefined group of children.

40. Further, it should be noted that as consequence of this provision children and families may also be brought into the care system at a far earlier stage than is currently the case.

Part 10 - Support for Kinship Care

41. The policy intention of kinship care orders is to help families become more able to deal with the issues which they face, without the need for formal care. The number of children looked after in formal kinship care arrangements has grown significantly in recent years and is projected to increase further. A mechanism that provides families with a better alternative to formal care is therefore welcome. It has also been well discussed over the last few years that the growth in kinship care and the corresponding increasing in kinship care allowances have put pressure on local government finance. By transferring parental rights to carers, the orders should allow families to better access other financial benefits from the DWP. The Government believes that this should go some way to reduce the financial pressure on local authorities, but it also, just as importantly, minimises the distinction between kinship care and the lives of other families.

42. In the end how successful orders prove to be at reducing payment of kinship care allowances will depend on how attractive the orders are to families. At this point of time it is difficult to project accurately how many families will take out a kinship care order. Uptake will depend on a number of factors such as impact of welfare reform, the support provided by authorities and the detail of how orders will operate - including eligibility and length of support – which will be set in secondary legislation. The interplay of these variables makes it difficult to know for certain whether the financial assumptions made by Government are accurate. Again, we would reiterate that local authorities will only be able to implement what they are funded to deliver.

43. The accuracy of the financial assumptions is the biggest issue that we have discussed with Scottish Government. When COSLA discussed with local authorities the financial implications of this aspect of the Bill no national picture emerged, and it is clear that local authorities have found it difficult to evaluate the future impact of the policies. With accuracy depending on the financial assumptions made, without actually implementing the legislation and testing the assumptions for real, there will always be a degree of risk for local authorities. For example, the Scottish Government predicts a 6.5% continual annual increase until 2019-20 of those applying for a kinship care order. Over the past 3 years Falkirk Council have seen around a 30% increase whilst Inverclyde has seen a 37% increase since 2011. Both Councils, in different ways, have proactively
supported families to move to kinship care orders. Whilst not all local authorities have experienced such significant increases this clearly demonstrates the potential increases local authorities are likely to face if the order is popular with kinship carers (which is the intention). Further, we are aware that the recent experience of some authorities of the introduction of Adoption Orders shows that the financial costs to councils were underestimated. Additionally, the assumptions relating to estimating the take-up and level of costs per Order made by Scottish Government that underpin the figures for this complex area are numerous, increasing considerably the potential for the actual costs to differ from the estimated costs.

44. The figures which have been developed by Scottish Government are a genuine attempt to assess the cost/benefits of kinship care orders. It is our hope that kinship care orders are a success and provide an alternative to formal care for some families. However, with considerable uncertainty over how many families will take up an order, the financial risk facing local government is potentially significant. The exact size of this risk depends on how accurately Scottish Government has modelled the take up of kinship care orders. We therefore believe it is necessary that both COSLA and Scottish Government jointly scrutinise and monitor the spend on this legislation to ensure that local government is, and continues to be, sufficiently resourced to carry out the new duties that will be enacted.

Part 11 - Adoption Register
45. Local authorities always put children first and will have good reasons for currently not using the register. We are aware, for example, that some local authorities already recruit enough people who are willing to adopt to meet the needs of children in their area. Councils in this position may therefore not feel an urgent requirement to join the register. Presently, consortia arrangements work very well between local authorities in various parts of the country.

46. COSLA accepts that the development of the national register is a positive one and we are aware that its usage is rising. It provides local authorities with another option when trying to place vulnerable children with adoptive families across Scotland. However, the proposal to move to a national adoption register through compulsion for local authorities should only be considered where there is complete confidence that it is in the interests of children to do this.

Part 12 - Other Reforms - Children’s Hearings
47. As mentioned in the summary to this submission, the sections of the Bill which relate to amendments to Children’s Hearings (Scotland) Act 2011 give us concern. During the passage of the 2011 Act through Parliament COSLA raised some real concerns about centralisation of services and the establishment of a new national body – Children’s Hearings Scotland (CHS) – to run what had been local services. In particular we were worried that the newly established office of National Convener would only have to consult local authorities when drawing up area support teams. There was no requirement to reach a mutual agreement. For COSLA it seemed inappropriate that an unelected official should have this power, and that it was actually more appropriate for the Convener to have to
reach agreement with local authorities concerned. In the end Parliament agreed with our position.

48. The proposed amendment in section 69 reverses the decision taken by Parliament and reinstates the original intention of Government. This is not something that COSLA can support. Whilst we have been told by both CHS and Government officials that the Convener would listen closely to views of local authorities concerned, there is still an issue of principle about the head of national body potentially acting against a decision of a democratically elected authority.

49. We are also very concerned about the proposal in section 70 to allow the National Convener to effectively compel a local authority to deliver specific support services to area support teams. At the moment CHS has to reach agreement with councils on support services. We expect that the dialogue between CHS and individual authorities is not always easy given the financial constraints faced by the whole public sector. Nonetheless, we would argue that this dialogue is necessary and allows for mutual agreement to be reached. This has to be preferable to the potential forcible allocation of staff, property and services against the will of the local authority, and potentially to the detriment of other services.

50. We would ask that Parliament considers carefully whether it is appropriate for the National Conveners of CHS to have these powers. It is COSLA strongly held view that the 2011 Act should not be amended as proposed in the Bill.

**Part 12 - Other Reforms – School Consultations**

51. COSLA currently does not have any comment to make on this section. However, we have a long standing interest in this area and will be responding to the Government’s consultation on possible changes to the Schools (Consultation) (Scotland) Act 2010. We would be happy to provide the Committee with additional evidence on any changes to the Bill that might be proposed at stage 2.

**Conclusion**

52. We acknowledge this is a long and complex response, but this matches the length and complexity of the Bill. COSLA has been working on the Bill for many months and would be happy to use our experience to help the Committee’s scrutiny of the legislation. We would therefore be happy to attend oral evidence sessions and to work with the Committee and individual members on all aspect of the Bill.

24 July 2013
1. Getting it Right for Every Midlothian Child (GIRFEMC) is a partnership within the Community Planning Partnership in Midlothian. The GIRFEMC Board includes representation from elected members, the Council, NHS, Police Scotland, Midlothian Youth Platform, voluntary sector, SCRA and the Child Protection Committee.

2. The GIRFEMC Board welcomes the Scottish Government’s request for our views as to how the proposed joint working arrangements established in the Children and Young People (Scotland) Bill will link with the work of the Midlothian Community Planning Partnership.

3. The Children and Young People (Scotland) Bill is founded on the key principles of early intervention and prevention that are designed to deliver better outcomes, more efficient use of public funds and sustainable economic growth.

4. For 2013/14 Midlothian took the opportunity to review its Community Planning process and have amalgamated the Single Outcome Agreement and Midlothian Community Plan which is known as the Single Midlothian Plan. Midlothian Council made clear its commitment to and civic leadership role for community planning by ceasing to have a separate corporate strategy, instead agreeing to adopt the Single Midlothian Plan as the Council’s strategic document. This places community planning at the centre of the ‘way forward’ for council services and requires each service plan within the Council to demonstrate how it will support the delivery of shared outcomes. Public sector partners have also agreed to use the Single Midlothian Plan as the strategic context for their service planning in the area and a Chief Finance Officers’ Group has been established, reporting to the board, to align budgets with priorities and support the planning cycle. This is work in progress and the current year’s plan does not yet reflect a shared budgeting approach.

5. The Community Planning Partnership structure includes service users in a variety of ways, from formal user groups in community care, to seeking the views of young people on specific topics through the Midlothian Youth Platform, including supporting these young people to undertake their own consultations with their peers. We recognise that the views of services users and the public is a vital part of the process and acknowledge that further work needs to be carried out in this area.
6. Each year we carry out a strategic assessment of the priorities in the Single Midlothian Plan and invite members of the public to have input. The responses received are incorporated into our strategic planning event where we discuss and agree our priorities for the forthcoming year. The GIRFEMC thematic group carries out consultation with service users and their families throughout the year and the introduction of the Children and Young People (Scotland) Bill will require additional consultation.

7. Midlothian is working closely with Colin Mair of the Improvement Services in relation to the Single Midlothian Plan and in his feedback he has said that he is pleased with our plan but we need to concentrate on fewer priorities to enable us to do them better.

8. There is an expectation that each Community Planning Partnership will demonstrate how it is giving priority to six of the 16 national outcomes. Midlothian has decided that it will focus on: -

- Economic recovery and growth
- Employment
- Early Years
- Safer and stronger communities and reducing reoffending
- Health inequalities and physical activity
- Outcomes for older people.

Midlothian has set Economic recovery and growth, Early Years and Positive destinations for young people leaving school as its key priorities.

9. In December 2012 the Council agreed to adopt the following principles across all Council services: -

- Communities are partners in service design and delivery
- Services are targeted and focused
- Best value outcomes are delivered through partnership working

For the Midlothian to achieve its aspirations significant and transformational change is required. The public have confirmed that they wish to be actively involved as partners in decision making and local service development and that resources should be redirected towards preventative approaches and to reduce inequality, even if this means the reduction of other services.

10. Throughout all priority setting exercises we ensure that our partner organisations are included with joint working at the heart of our successes in delivery of the Single Midlothian Plan’s priorities and we propose to continue to develop this when the Children and Young People (Scotland) Bill is introduced.
Local Government and Regeneration Committee
Children and Young People (Scotland) Bill
Submission from Police Scotland

I refer to the above and provide the following comment on behalf of Police Scotland.

I note at the outset that the Children and Young People (Scotland) Bill has provided guidance on wellbeing within section 74 whilst there would appear to be no such clarity in the Public Bodies (Joint Working) (Scotland) Bill. I would ask for clarity as to whether this is a deliberate position, to leave the matter silent in the latter, or if the terms set out in section 74 are intended to be a precedent applicable to both Bills.

I have hereafter provided comments related to both Bills.

The Children and Young People (Scotland) Bill

Police Scotland welcome this legislation and the clarity related to children’s rights, children's services planning, the provision of a named person service and the guidance on information sharing; all of which will promote, support or safeguard the wellbeing of the child or young person. The Bill seems entirely consistent with a drive to improve outcomes for our communities through improved joint working.

As discussed above, the provision set out in sections 74(1) and 74(2) assist greatly when advising Officers and Staff as to how we may best assess when a child is in need of support and provides a framework on which we can relay this information to partner agencies.

In particular, the role of the named person will substantially benefit and support cases where we engage with children and young people and have concerns related to their wellbeing. This opportunity for early and effective intervention, through appropriate and measured steps, will assist to prevent any escalation of concerns and minimise the opportunities for harm.

The proposals arising from this Bill affect Police Scotland as follows;

1. As a single service we have opportunities to consistently apply the principles of the Bill across the country, whilst allowing for local arrangements and engagement with partner agencies.
2. Application of the Indicators as set out in sections 74(1) and (2) supports our national training strategy and how we instruct our Officers and Staff to recognise, record, assess and share concerns appropriately.
3. The provision of a named person provides clarity on notification processes for low level concerns; and will support existing arrangements in place for child protection cases where an immediate investigation is required.
4. The duty to help the named person also provides clarity and an avenue for appropriate support to be sought when required.
5. The provision of a child’s plan will assist the Police to work more effectively with partners.

The Public Bodies (Joint Working) (Scotland) Bill

Whilst the Police Service of Scotland is not specifically mentioned in the Bill, we acknowledge that through our functions we have a clear role to play in supporting the health and wellbeing of our communities. It is a fact of Policing that we are called to attend at many varied scenarios, and our Officers and Staff are frequently the first point of contact where concerns are identified and provide opportunity for early intervention.

As indicated in the opening paragraphs above, we note the strong reference to wellbeing and would welcome consideration of the clarity provided by the above Children and Young People (Scotland) Bill being provided in this respect also.

Clearly, the Police Service of Scotland work across and with all Local Authorities and Health Board areas hence we would appreciate being involved in any consultations locally related to the development of integration plans.

Observations

The main focus of expenditure within the Public Bodies (Joint Working) (Scotland) Bill is clearly aimed at adult services. There may be value in some provision and comment being provided on impact, if any, against universal provision.

There may also be value in considering how this Bill links with the Adult Support and Protection (Scotland) Act 2007, which sets out a threshold for notifications of concerns to Local Authorities with a duty to investigate. There are many situations where the Police come across concerns, which do not meet that threshold, however uncover circumstances of concern related to a multiple of factors. As discussed above, clear definitions and understanding of ‘wellbeing’ would greatly assist in this regard.

Malcolm Graham
Assistant Chief Constable
Local Government and Regeneration Committee

Children and Young People (Scotland) Bill

Submission from the Royal College of General Practitioners

The Royal College of General Practitioners (RCGP) is the academic organisation in the UK for general practitioners. Its aim is to encourage and maintain the highest standards of general medical practice and act as the ‘voice’ of general practitioners on education, training and issues around standards of care for patients.

The College in Scotland came into existence in 1953 (one year after the UK College), when a Scottish Council was created to take forward the College’s interests within the Scottish Health Service. We currently represent over 4750 GP members and Associates in Training throughout Scotland. In addition to a base in Edinburgh, the College in Scotland is represented through five regional faculty offices in Edinburgh, Aberdeen, Inverness, Dundee and Glasgow.

Comments

Advocating children’s rights and the ability to hold organisations and services to account is important. It will be interesting to see how it works out and what legal challenges are made. We very much hope that it improves outcomes for all children and young people and especially the most vulnerable.

1. We welcome the Children and Young People (Scotland) Bill and support its general aspirations. Specific areas that are valuable include clarification of the ‘named person’ role, improvements in permanency planning for looked after children and the provision of better early learning and childcare. We do, nevertheless, have some concerns about the lack of specificity in the draft bill in relation to provision of services to children under three years of age.

2. The only universal services used by almost all parents of children under three years are midwifery, health visiting and general practice. Each of these professions has a specific role in supporting parents, and in recent years a range of well-intentioned but ultimately misguided policies has led to a fragmentation both of the services that each is able to offer and to inter-professional communication. Examples include: recent failures of communication between midwives and GPs since the Refreshed Maternity Services Framework; the abolition of universal preventive child health contacts between six weeks and school entry in 2005 (partially reversed this year); the ending of the training of health visitors in child developmental assessment since 2001; the introduction of corporate caseloads and skill mix teams in health visiting, leading to loss of continuity of care; the disengagement of health visitors from general practices; and a progressive disengagement of GPs from the delivery of preventive
child health services. Effective preventive spending could substantially reverse these trends.

3. Our specific recommendations are as follows:
   - That the named person for preschool children should always be a qualified health visitor
   - That the professional title ‘health visitor’ be restored to its former statutory status, with specific reference to training and expertise in child development and parenting support
   - That all those working with preschool children should have a duty to report concerns about those children’s health, wellbeing and development to the named health visitor
   - That health visitors should have a statutory duty to communicate concerns about child wellbeing and development to general practitioners and to others as required
   - That general practices should have a named, attached health visitor.
   - That health visitors should have a maximum caseload of 200 children under five years, with smaller caseloads being allocated to those working in areas of deprivation or those working with high risk groups.
   - That each child should have the right to an annual assessment of developmental progress before the age of five years by a qualified health visitor or in exceptional cases by a general practitioner. These assessments should include investigation of language development, motor function, social behaviours, capacity for attention and of the parent’s relationship with the child. We know that developmental vulnerability cannot be adequately predicted on the basis of pre-existing risk factors. Furthermore there is now substantial evidence that many children with remediable problems have failed to have these problems addressed since the introduction of Scotland’s bold policy of abolishing its universal child health surveillance programme. This policy, at variance with practice in all other developed nations, should be reversed.
   - These assessments should be considered as a child’s right: parents and carers should not be considered to have an automatic right to refuse on behalf of their child. There is some evidence that children who are not seen at preventive care contacts are more likely to have problems. Failure to find ways to include all children in a universal child health programme (there are, for example, good systems for ensuring universal coverage in the Netherlands), thus risks increasing social inequity.

Specific Details within the proposals

4. SPICe document

P13 5th para re the NHS: The proposals are likely to involve at least 1 extra hour/year per child of GP work in assessing and report writing (at present often done as a goodwill gesture, but with increased level of accountability needed and increased interagency co-operation, more GP work is envisaged. To make it sustainable, costs and GP capacity needs to be factored in).
P14 “Well-being” is defined by the child being safe, healthy, achieving, nurtured, active, respected, responsible and included. “Well-being” examples would help compare one case with another so we know where the threshold is. Many children in “normal” families go through times of life when their well-being is compromised so help in knowing when to signal this would be of value. We agree we should include “Welfare” as well as well-being.

P16 Information Sharing – It would be helpful for GPs to include something from the GMC’s “Protecting Children and Young People” 2011 document. Once information has been shared without the permission of the parents or child or young person, it is difficult to keep track of what they don’t know has been shared so we would recommend that in most cases the child or young person or parent is informed when information is shared (except where it poses more risk). We attach a useful Information Sharing summary by Jonathon Leach, an RCGP member.

Early Years provision
We support good quality Early Years’ provision, but it has to be more than a crèche facility. Early identification of learning and developmental issues through proper play and learning facilities, supervision, teaching and reporting from the Early Years to the parents and GPs should be encouraged.

Looked After Children and Care Leavers
We support the proposals aimed at supporting the transition from care to independent adult life which has been sadly lacking. We support stability of placements, registration with a GP and communication with GPs on a regular basis.

P23 Counselling
Although it is clarified in the text that this means Family Mediation therapy or group therapy for those families listed. We would question the evidence of effectiveness of this expensive and potentially time-wasting exercise unless clear targets, time frames and penalties are used. Too often children and young people are returned to abusive families because of feigned compliance with “counselling”. The ones who are shown to respond are generally the milder, more straightforward cases (such as Domestic Abuse where the abused partner separates and institutes effective exclusion).

P25 Kinship care
Kinship care is challenging and the carers are often silent about their difficulties except to the GP. Those taking on kinship care need ongoing support. The children or young people have extra needs and their well-being has already been compromised.

Adoption
The proposals appear to shorten delays and unnecessary bureaucracy which very often occur in the adoption process so we hope these lead to better outcomes for those children and young people.
Reports on Corporate Parenting and Children’s Rights
Having to make regular reports on children’s and young people’s rights should keep the issue at the forefront of the corporate mind which is welcome but will involve ongoing costs.

5. Policy Memorandum

The aims of the policy are admirable. We note that those being home-schooled are not mentioned. Concerns over this group of children should prompt their inclusion in these excellent plans to improve the welfare and well-being of children and young people.

Section 1.43 Respecting, recognising, children’s rights. RCGP has many contacts in the third sector and regularly comments and supports publications connected with improving care pathways for children and young people and responding to feedback and complaints. Examples include the Contact a Family leaflet on accessing GPs, the Meningitis Trust “Yellow Book”, the Foetal Alcohol Disorders charity educational materials for GPs. RCGP is working with the National Children’s Bureau after their report (2013) “Opening the door to accessing GPs”.

Conclusion

Providing a lot of support in early years is most likely to have long lasting benefit, the evidence supports this and this is emphasised in the document. What is missing for us is supporting young adults who are out of work. GPs routinely spend a great deal of time writing letters of support for people who, due to ongoing health conditions, would have great difficulty in obtaining and maintaining work. There appears to be no organisation or person that we can refer these individuals to for support and training. We need to invest in these young people who should have a personal responsibility to contribute to society but in return society should have a responsibility to offer opportunity and training for all young people so that they have a future. The cost of this would be offset by later savings in social, medical and societal costs.

(10) RCGP 2022 Vision
Requests for access to Medical Records for Safeguarding Reasons
PCCSF documents © Jonathan Leach 29/05/2013

1. General Practice is increasingly being requested to supply clinical information for safeguarding reasons. On most occasions the decision to divulge information is straightforward, however it can become problematic and especially when third party information is requested (for example when it relates to the medical care of parents or carers).

2. Requests for information are usually made by social care colleagues who are governed by very similar professional guidances to health professionals. Both nationally and locally, reviews of cases reveal that frequently it is failing to pass on information that leads to harm. Whilst health professionals correctly are sometimes concerned about divulging sensitive clinical information, guidance from the General Medical Council (and others) is that a doctor is more likely to be criticised for not passing on relevant information.

3. Guidance on when and how information is to be divulged is available from a range of Organisations these include:

1. The General Medical Council

Confidentiality is important and information sharing should be proportionate to the risk of harm. You may share some limited information, with consent if possible, to decide if there is a risk that would justify further disclosures. A risk might only become apparent when a number of people with niggling concerns share them. If in any doubt about whether to share information, you should seek advice from an experienced colleague, a named or designated doctor for child protection, or a Caldicott Guardian. You can also seek advice from a professional body, defence organisation or the GMC. You will be able to justify raising a concern, even if it turns out to be groundless, if you have done so honestly, promptly, on the basis of reasonable belief, and through the appropriate channels.

Your first concern must be the safety of children and young people. You must inform an appropriate person or authority promptly of any reasonable concern that children or young people are at risk of abuse or neglect, when that is in a child’s best interests or necessary to protect other children or young people.

You must be able to justify a decision not to share such a concern, having taken advice from a named or designated doctor for child protection or an experienced colleague, or a defence or professional body. You should record your concerns, discussions and reasons for not sharing information in these circumstances.

Additionally, the GMC provides the following guidance\(^3\):

Ask for consent to share information unless there is a compelling reason for not doing so. Information can be shared without consent if it is justified in the public interest or required by law. Do not delay disclosing information to obtain consent if that might put children or young people at risk of significant harm.

Tell your patient what information has been shared, with whom and why, unless doing this would put the child, young person or anyone else at increased risk.

Get advice if you are not sure what information to share, who to share it with or how best to manage any risk associated with sharing information.

2. Working Together to Safeguard Children 2013\(^4\) provides the following guidance:

Effective sharing of information between professionals and local agencies is essential for effective identification, assessment and service provision.

Early sharing of information is the key to providing effective early help where there are emerging problems. At the other end of the continuum, sharing information can be essential to put in place effective child protection services. Serious Case Reviews (SCRs) have shown how poor information sharing has contributed to the deaths or serious injuries of children.

Fears about sharing information cannot be allowed to stand in the way of the need to promote the welfare and protect the safety of children.

**What to do if a request for information is received**

4. Given the very clear advice on the requirement to share information the following process is recommended with the clear understanding that there would need to be good reasons not to share relevant information.

Upon receipt for a request for information:

1. Confirm the identity of the requestor and *bona fide* nature of the information requested. This should usually be in writing and should include some information on why request is being made.
2. Confirm whether you hold any information on the patient
3. Consider whether consent to release information can be sought and if possible, gain consent. In some cases this is possible, whereas in others (for example when

---

\(^4\) Working Together to Safeguard Children - Department for Education 2013
a Police investigation is taking place), it maybe inappropriate and/or potentially unsafe.
4. If releasing information without consent, document your reasoning.
5. If not releasing information, document any advice sought and your reasoning.
6. Reply in a timely manner to the requestor providing relevant information.
7. If in doubt seek advice - this is available from local child protection specialists (such as the Named GP for Safeguarding or Named Nurse) or from Defense Organisations.
Local Government and Regeneration Committee
Children and Young People (Scotland) Bill
Submission from Scottish Fire and Rescue Service (SFRS)

How the proposals will affect the Service

The proposals will have a number of implications for the SFRS; the Service seems to fit the definition of an “other service provider” of “children’s services”.

In terms of the proposals, the SFRS may be consulted and have an opportunity to participate in or contribute to the preparation of the children’s services plan and agree the plan. These requirements would apply to any subsequent review of the plan. The SFRS would then be responsible for providing any services or related services in accordance with the plan.

If the SFRS participated it would require to have regard to any guidance issued by the Scottish Ministers after having responded to any related consultation about the guidance and additionally would be required to comply with any direction issued by Scottish Ministers.

The SFRS facilitates children’s participation in projects such as young firefighter programmes, fire reach, etc., albeit subject to the availability of funding which was previously sourced externally. Such children’s projects could potentially fall within the definition of children’s service or related service (i.e. service or support) in that it would be capable of having a significant effect on the wellbeing of children. Certainly, if not available to children generally then on occasion such projects are introduced with the stated aims and objectives of addressing children with needs of a particular type e.g. awareness of fire risks and home fire safety; deterring fire setting; deterring fire hydrant vandalism etc., although such projects are not in themselves an SFRS function at this time. The Scottish Government’s 2009 report entitled “Scotland Together”, acknowledged the importance of Fire and Rescue Service safety programmes for children and young people.

The perceived benefits that can accrue

The proposals should promote a standardised, multi-agency approach to the delivery of children’s services and it is anticipated that such action would deliver better outcomes for children and young people across Scotland.

Concerns that the Service has around the proposed legislation

Participation in inter-agency (emergency services and charity) sports projects, such as street football to deter anti-social behaviour does not appear to be caught by the definitions.
Does the Bill fit with the reform process

It is anticipated that the proposals will support a standard, formalised approach to planning and service delivery. As such it is expected that the Bill will assist the SFRS to achieve the aims of fire reform; in particular the proposals will assist to improve local services and strengthen the connection between fire services, communities and local authorities.

The Public Bodies (Joint Working) (Scotland) Bill

The role of the SFRS in the joint boards and any role the SFRS expects to have in future

It is anticipated that effective partnership working between the SFRS, local authorities and health services will continue to take place through Community Planning Partnerships.

It would be beneficial for the SFRS to be appropriately involved in planning and decision making in line with its role as a Community Planning partner agency.

With respect to Part 2 Shared Services, would the SFRS as a non-departmental body of Scottish Government fall within the definition of “persons” as currently provided for at Section 44(2)? If not, it should be included as it may wish to partake of the services narrated at Section 44(3) if these were to prove best value for public monies. The SFRS appears to fall within the definition of “Scottish public authority” provided for at Section 126 of the Scotland Act 1988 but this position is not confirmed.

Anticipated efficiencies and benefits that will arise for the SFRS from the delivery of integration plans

It is intended that integration plans will support the effective delivery of the National Performance Framework and Single Outcome Agreements. The SFRS corporate planning framework and associated key performance indicators reflect these aims and objectives. As such there are perceived benefits for the SFRS, for example more effective management of individuals who are in receipt of services and are at specific risk from fire for some reason; perhaps people suffering poor health including mental health, or addiction for example. The Scottish Government’s 2009 report entitled “Scotland Together”, acknowledged the link between house fires and casualties, and a range of health and other factors.

Anticipated effect that integration plans will have on outcomes for those receiving services

Integration should achieve a standard, formalised approach to planning and service delivery and such action should deliver better outcomes for service users.

Does the Bill fit with the reform process
It is expected that the Bill will assist the SFRS to achieve the aims of fire reform, specifically in relation to improving local services and integration with community planning partnerships.
Local Government and Regeneration Committee
Children and Young People (Scotland) Bill
Submission from UNICEF UK

Overview
1. UNICEF UK advocates for the protection and promotion of children’s rights, and UNICEF has a specific role under the United Nations Convention on the Rights of the Child (UNCRC) to give advice and assistance to States Parties in implementing children’s rights. This brief submission is intended to support the Local Government and Regeneration Committee to consider Part 3 of the Children and Young People (Scotland) Bill in light of related legislation. It focuses primarily on how obligations under the UNCRC can be effectively mainstreamed through children’s services planning and delivery.

2. UNICEF UK welcomes the leadership shown by successive Scottish governments in implementing the UNCRC, and commends the intention of the Bill to make rights a reality for children. We recognise that the rights measures in the Bill – when taken together – give new focus to children’s rights in Scotland, but are disappointed they do not amount to a stronger imperative for Ministers and public authorities to respect and protect children’s rights.

3. It is fundamentally important that the Children and Young People provide a clear and robust child rights framework for the delivery of children’s services across Scotland. This is not only to reflect the evolution of a child rights focus at a national level but also to ensure all children, regardless of their circumstances or geographical location, have the opportunity to develop to their full potential. With this in mind, we urge the Committee to actively consider the following issues in its scrutiny of Part 3 of the Bill:

   i. The Bill fails to create a systematic children’s rights framework for Scotland, within which both government decision-making and local service delivery will sit. This cultural and legal disconnect can be addressed through better integrating the rights and well-being provisions in Parts 1 and 3 of the Bill.

   ii. Complementary duties on those whose decisions and actions affect children and young people – namely public authorities – to act to give better effect to the UNCRC, rather than simply to report on what they have done to implement it.

   iii. Bringing together duties on children’s rights and children’s services reporting in order to put children’s rights at the heart of children’s services planning and delivery, improve the effectiveness of local reporting mechanisms, and to reduce the burden on public authorities.

Incorporating the UNCRC into Scots law
4. As the Committee will be aware, the UNCRC was adopted by the United Nations in 1989 and ratified by the UK Government in 1991. It was the first internationally binding human rights treaty to comprise the full range of civil, political, economic, social and cultural rights. It is a unique instrument in that it focuses on these rights in the context of the particular needs of children. The
UNCRC contains 42 substantive rights for every child under the age of 18, and places corresponding duties on governments to support children to realise those rights and develop to their full potential.

5. UNICEF UK’s experience and recent research shows that legislative steps are essential for embedding the UNCRC within legislation, policy, practice and attitudes towards children. The step-by-step approach taken by successive governments to child rights implementation has led to significant inconsistency and gaps in the extent to which children are able to enjoy the full extent of their rights. The direct incorporation of the UNCRC into Scots law would make its principles and provisions a reality for children, placing duties on Ministers and public authorities to respect and protect children’s rights, and allowing children to challenge violations of their rights. This approach would provide not only the foundation for a sustainable culture of children’s rights in Scotland but also the most effective and immediate way of putting “children and young people at the heart of planning and delivery of services and [ensuring] their rights are respected across the public sector.”

6. For more detail on the case for incorporation and UNICEF UK’s analysis of the child rights duties on Ministers in Part 1 of the Bill, see our submission to the Education and Culture Committee dated July 2013.

Building a child rights framework for local government

7. Part 3 of the Children and Young People Bill sets out a series of duties related to children’s services planning to achieve the full implementation of GIRFEC across Scotland and improve the well-being of children. These duties inter alia require local authorities and health boards (hereafter referred to as public authorities) to prepare children’s services plans every three years and report annually on their implementation. The aim of a children’s services plan is to safeguard, support and promote the well-being of children in a local area.

8. Clearly, one of the notable challenges in drafting the Children and Young People Bill has been in joining up a well-being approach to children’s services with the broader children’s rights framework Scottish Government aspires to. This disconnect risks undermining attempts to “make rights real” for children and young people in Scotland. The Bill could successfully embed children’s rights across the design and delivery of law, policy and services impacting on children and young people, but to achieve this a child rights framework needs to be introduced within children’s services planning, through which public authorities can safeguard, support and promote the rights and well-being of children in their area.

2 See consecutive reports from Together (the Scottish Alliance for Children’s Rights) on the State of Children’s Rights in Scotland
3 UN Committee on the Rights of the Child (2003), General Comment 5, paragraphs 19-20
4 Transposing the UNCRC into Scots law in the same way that the European Convention on Human Rights was transposed into UK law through the Human Rights Act 1998. This is within the power of Scottish Government and Scottish Parliament, see Aidan O’Neill QC (2012), Legal opinion for UNICEF UK.
5 Children and Young People (Scotland) Bill: Policy Memorandum, paragraph 2
9. There are many opportunities to do this within the existing clauses in the Bill, not least of which is looking creatively at how comparable duties on well-being, planning and reporting can be broadened in scope to embed a child rights based approach and include explicit duties on child rights implementation\(^7\), and also at how these reporting duties can be streamlined to enable a more efficient, effective and coherent picture of local service provision for children across local authority areas. It is also important that these duties, in and of themselves, reflect the principles of the UNCRC. For example, the planning duty in Clause 10 should explicitly reference children as a group that should participate in the development of the children’s services plan.

10. Although we welcome the greater focus that the duty on public authorities in Clause 1 (2) to \textit{report} steps they have taken to implement children’s rights will put on the UNCRC at local level, it is important to recognise that the duty is not yet accompanied by any obligation on public authorities to \textit{act} to better implement the UNCRC. This is important because it is often at the local level that children experience rights violations. This omission will have a serious impact on the extent to which a rights culture can truly be developed in Scotland – without a children’s rights duty on public authorities to reflect a duty on Ministers, the legal machinery for promoting and securing children’s rights is weaker than it otherwise could be.

11. We would like to see public authorities placed under a positive duty to implement the UNCRC to ensure that children’s rights genuinely become the framework for services and decisions that affect children and young people in Scotland. Such duties would also provide consistency across public functions both geographically but also no matter by whom those functions are delivered – local authorities, health boards, the private sector or the voluntary sector\(^8\).

12. The systematic consideration of children’s rights, and the use of a child rights based approach to delivering services for children, is essential to ensuring children’s rights are respected, protected and realised, no matter who the child is or what their personal circumstances are. UNICEF UK’s experience in developing rights-respecting programmes at a local level\(^9\), evidence from the national implementation of the Rights of Children and Young Persons (Wales) Measure 2011, and learning from the roll-out of GIRFEC to date all underline the importance of training and capacity-building on the application of children’s rights in order to improve outcomes for children. With this in mind, we strongly support the new duty on Ministers to promote awareness and – importantly – understanding of the UNCRC in Part 1 of the Bill. However, from a local implementation perspective, we would like further clarification from Ministers on

\(^7\) For example, within clauses 9 (aims of children’s services plan), 10 (process for children’s services plan), and 13 (reporting on children’s services plan)
\(^8\) UN Committee on the Rights of the Child (2005), \textit{General Comment 5}, paragraphs 40-44 – State Parties have a responsibility for ensuring the compliance of non-State actors with the UNCRC; the reporting duty on public authorities in clause 2 as it currently stands does not cover those delivering public functions such as private or voluntary sector providers.
\(^9\) UNICEF UK’s programmes in Scotland comprise the Baby Friendly Initiative, Rights Respecting Schools, and Child Rights Partners (the latter currently in development)
how this duty will be delivered (and resourced) in relation to those delivering services for children and young people.\textsuperscript{10}

\textsuperscript{10} UN Committee on the Rights of the Child (2008), \textit{Concluding observations: United Kingdom of Great Britain and Northern Ireland}, paragraph 21
Thank you very much for the opportunity to contribute to the Local Government and Regeneration Committee’s examination of both the Children and Young People (Scotland) Bill, and the Public Bodies (Joint Working) (Scotland) Bill1 in terms of their implications for local authority functions and partnership/joint working.

West Lothian Community Planning Partnership has considered these pieces of legislation, and how the proposed joint working arrangements established by them will link with the development work of our partnership and are pleased to offer the following comment, -

“West Lothian Community Planning Partnership is a mature, strategic alliance with well established arrangements for joint working and achieving partnership outcomes. We have recently completed the draft version of our new Single Outcome Agreement – to be titled Achieving Positive Outcomes – which focuses on ‘tackling inequality’. The development of the new SOA has been guided and informed by forthcoming legislations and concurrent and independent reform processes and builds on an already well advanced governance structure and partnership understanding of key emerging issues such as prevention, early intervention and outcomes approaches.

The emerging agendas and proposed new legislation likely to relate to the development of the new Bills mentioned are unlikely to be against the direction of travel already agreed by the CPP Board and underpinning structures. The processes already underway to review the CPP governance structure and performance management arrangements are being developed with these potential changes in mind. The visions within these proposed legislation fit with our own ambitions for the wider community of West Lothian.”

I hope this response is useful,

Lorraine Gillies
Finance Committee

7th Report, 2013 (Session 4)

Report on The Financial Memorandum of the Public Bodies (Joint Working) (Scotland) Bill

Published by the Scottish Parliament on 26 September 2013
Finance Committee

7th Report, 2013 (Session 4)

Report on The Financial Memorandum of the Public Bodies (Joint Working) (Scotland) Bill

The Committee reports to the lead committee as follows—

INTRODUCTION

1. The Public Bodies (Joint Working) (Scotland) Bill was introduced in the Parliament on 28 May 2013.

2. The Policy Memorandum states that “the Bill is designed to establish a framework to support the integration of local authority and health board functions. The Bill will permit Scottish ministers to require the integration of, as a minimum, adult health and social care, based on the principles of a person-centred approach to service planning.”

3. The Bill provides for two distinct models of integration: delegation between partners (also referred to as lead agency arrangements and implemented by NHS Highland and Highland Council) and delegation to a body corporate model, under which a joint board is established hold an integrated budget and to allocate it between the constituent health board and local authority or authorities.

4. Under Standing Orders Rule 9.6, the lead committee is required, among other things, to consider and report on the Bill’s Financial Memorandum (FM). In doing so, the lead committee is also required to consider any views submitted to it by the Finance Committee (“the Committee”).

5. In June 2013, the Committee agreed to seek written evidence on the Financial Memorandum from a range of organisations potentially affected by the Bill. A total of twenty submissions were received.\(^1\)

6. At its meeting on 11 September 2013, the Committee took oral evidence from stakeholders and the Scottish Government bill team.

\(^1\) The written submissions are available at: http://www.scottish.parliament.uk/parliamentarybusiness/CurrentCommittees/65999.aspx
7. Following the evidence session, further information was provided by the Bill team in relation to current targets for delayed discharge in terms of the national performance framework and the calculations used to reach some of the estimated efficiency costs set out in the FM.

8. The Bill provides for a framework to support the integration of local authority and health board functions and, permits Scottish Ministers to require the integration of, as a minimum, adult health and social care. The focus of the written and oral evidence considered by the Committee can be captured under the following headings—

- estimates of the financial implications of the Bill
- costs of transition
- realising efficiencies.

**ESTIMATES OF FINANCIAL IMPLICATIONS OF THE BILL**

9. The FM provides estimates based on the two models of integration provided for by the Bill; delegation between partners and delegation to a body corporate.

10. The FM estimates potential efficiencies of between £138 million and £157 million for health boards and local authorities from the combined effect of anticipatory care plans, reducing delayed discharge and reducing variation. However, the FM also notes—

    “That there is considerable uncertainty around these estimates and the eventual outcome and phasing will be dependent on local decisions taken by partners on resource allocation through their strategic plans.”

11. A number of the costs arising from the Bill will depend on the overall shape of the integration models that are chosen across Scotland. The Committee noted that, in discussing the potential costs arising under Part 1, the FM states—

    “...the likely case is based on the assumption that all partners, with the exception of Highland, will opt for delegation to a body corporate; this reflects feedback on the preference of partnerships between the two mains models.”

12. The uncertainties acknowledged by the Scottish Government in the FM were also commented on in written submissions. For example, Scottish Borders Partnership noted—

    “...the figures in the paper are very much estimates at this time and agree that much more research and a robust evidence base will be needed to ensure the financial assumptions accurately reflect the costs and,
importantly, the potential opportunities to both local authorities and the NHS arising from integration. Given the limited information, it is not possible to comment on the completeness of the financial implications at this stage.\footnote{Scottish Borders Partnership. Written submission, paragraph 7.}

13. Dumfries and Galloway Council also commented on this matter—

“At paragraph 35, the FM recognises that there is considerable uncertainty around the estimates in relation to projected efficiencies. It is important to recognise that this qualification applies not only to the projected efficiencies but also to a range of other estimates and timescales reflected in the document. This uncertainty is not unreasonable at this stage.”\footnote{Dumfries and Galloway Council. Written submission, paragraph 12.}

14. Other responses noted that there is ongoing work being undertaken in order to fully inform the development of integration models. For example, East Dunbartonshire Council commented—

“The five workstreams being taken forward by the Integrated Resources Advisory Group will fully inform the development. For reference these are:-

- Accounting Treatment and VAT
- The Financial Reporting
- Controls and Assurance
- Financial Management, Planning and Finance Function
- Capital and Assets.”\footnote{East Dunbartonshire Council. Written submission, paragraph 2.}

15. The Convener asked the Bill team to explain how much uncertainty they estimated that there is. In response, the Bill team stated—

“On uncertainty, part of the challenge for us is that, as in all health and social care systems in developed countries, the issues at work are highly complex. There is a wealth of evidence but that is, in itself, complex. Drawing down what potential improvements are available requires a multifaceted calculation.”\footnote{More information about the Integrated Resources Advisory Group is available at: http://www.scotland.gov.uk/Resource/0041/00416904.pdf}

16. The Committee notes that the move towards integration that the Bill provides for is complex to deliver and that at this stage it is not unreasonable for there to be uncertainty as to the costs of establishing the framework for, and the delivery of, integrated services.

17. Nonetheless, the Committee is concerned about the level of uncertainty surrounding the estimated costs set out in the FM. It will be important for

review and monitoring of the costs to be undertaken throughout the implementation of the Bill and the Committee intends to include this as part of its wider and ongoing commitment to monitor the delivery of the shift to preventative spending.

18. The Committee suggests that the lead committee may also wish to actively monitor the cost of the implementation of the Bill by asking the Scottish Government to provide regular updates on the work of the integrated resources advisory group and on the establishment of the health and social care partnerships provided for in the Bill.

COSTS OF TRANSITION

19. Parts 1, 2 and 3 of the Bill set out the provision which will result in costs of transition, recurring and non-recurring, falling on the Scottish Government, local authorities, health boards and other public bodies.

20. A description of the “transitional non-recurrent costs to the Scottish Government associated with Bill implementation” states that the SG “will provide approximately £16.7m” to health boards and local authorities “as partners in integration joint boards or lead agency arrangements, on a proportional basis for transitional costs, to implement the organisational development and other change management functions necessary.” It further states, however, that “in moving to these arrangements, it is reasonable to assume that health boards and local authorities will realise opportunity costs, which will be expected to support transitional arrangements.”

21. The Committee sought clarification from the Bill team as to what the opportunity costs are likely to be. The Bill team explained—

“The method that we used to calculate the transition costs was to take the Highland example…and remove from its costs any costs that do not apply under the bill, such as children’s services costs and costs that are specific to the lead agency model, to give us a transition cost estimate for the integrated joint board or body corporate model.”

In carrying out that calculation, we understood from Highland that it incurred some costs on which it did not have to expend expenditure; it covered them by reallocating resource from other budgets in its programme. We noted that as a potential opportunity for other partnerships to follow in due course, but we did not apply it to our calculations, so the estimate for transition costs in the financial memorandum makes no assumptions for opportunity costs.”

Identification of transition costs on local authorities

22. A number of responses commented that the costs on health bodies are more clearly identified and addressed than costs on local authorities, including in relation to the transitional costs identified in relation to Part 1 of the Bill.

---

9 Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)), paragraph 38.
23. For example, ADSW commented—

“The...non-recurring Scottish Government investment is either targeted to Health Boards or retained to fund central government support or third sector initiatives. While we understand that CHP leadership posts will be deleted by the Bill, other management posts, including those in some local authorities, are also at risk of deletion as partnerships develop integrated management structures... Therefore we think that potential redundancy and redeployment costs will be significantly larger than those contained in the FM.”

24. This was echoed by Glasgow City Council—

“Focus of the Financial Memorandum is on the additional recurring and non-recurring costs likely to be incurred by health, with an incorrect underlying assumption that all additional local authority costs can be met from within existing resources.”

25. Dumfries and Galloway Council identified both the displacement of local authority staff and the costs of non-clinical care professionals in locality planning as areas where costs are not addressed in the FM—

“One particular point is that the FM focuses mainly on those costs likely to be incurred by the Health sector and does not sufficiently recognise those costs likely to be incurred by local authorities. For example:

- Paragraph 50 indicates that while there will be displacement costs associated with displaced Community Health Partnership posts, it is assumed that no such costs should be incurred by local authorities; and
- Paragraph 89 provides an estimate of costs associated with clinical involvement in locality planning but does not recognise potential costs associated with the involvement of other care professionals.”

26. In oral evidence to the Committee, East Dunbartonshire Council commented, in relation to organisational redevelopment, that—

“Some costs are reflected in the financial memorandum, such as those for the appointment of joint accountable officers and for the displacement of community health partnership managers – under the bill, those posts will go. However, there seems to be no reciprocal provision for the local authority side, which has management or leadership posts that will go under the new arrangements as well as management structures that are underneath them.”

27. The Bill team explained that the specific focus of the FM is on changes that arise directly as a result of provisions in the Bill—

---

11 ADSW. Written submission, paragraph 32.
12 Glasgow City Council. Written submission, paragraph 2.
“...we included a provision for the potential displacement cost of CHP general managers. We have not included any other posts, as the CHP general manager posts are the posts that will be directly removed as a result of the bill.”

28. The Bill team also commented on the information that they are able to use on the basis of the pilot in the Highland area—

“We recognise that the various partnerships are at different stages, but some of them are already implementing what they call shadow arrangements and some have already appointed people to posts, so there are different partnerships that we can use to give us a bit more assurance — or not — about costs... We would hope that the fact that the partnerships have more time to put their arrangements in place will allow them to resolve potential issues and to work through any potential for redeployment.”

29. It is clear from the evidence provided to the Committee that local authority stakeholders have significant concerns that the transition costs they will face have not been fully considered and are not reflected in the FM.

30. The Committee is not convinced that the explanation provided by the Bill team gives sufficient reassurance about the capacity for partner organisations to absorb any costs that arise for staff displacements that occur as a consequence of the provisions in the Bill.

31. The Committee recommends that the lead committee asks the Scottish Government why funding has not been provided for local authority staff displacements that may occur directly as a result of the requirements of the Bill.

Recurrent Cost Implications to Health Boards and Local Authorities from Provisions in Part 1 of the Bill

32. The estimated total recurrent cost to health boards and local authorities would be £4.55 million per annum for delegation between partners and £5.6 million per annum for delegation to a body corporate.

33. The FM does not specify whether these respective total costs would be incurred in the event that all health boards and local authorities adopted the same model exclusive of the other, but the Bill team has confirmed this to be the case. It would therefore seem reasonable to assume that the total recurring annual costs arising from the provisions in Part 1 of the Bill could be expected to be somewhere between the two figures.

Achieving a VAT neutral solution for both partnership models

34. The costs under Part 1 of the Bill identify £35,000 for the development of VAT guidance with HMRC. This guidance would be a necessary part of ensuring a VAT neutral solution could be delivered for the delegation to a body corporate.

model. (Existing HMRC guidance allows for a VAT neutral solution to the delegation between partners model.)

35. However, the potential cost exposure should a VAT neutral solution not be achieved is identified in the FM as a recurrent cost of £32 million per annum. The FM does not comment on any funding being provided to meet any cost exposure in the event that a VAT neutral position cannot be agreed with HMRC.

36. The current understanding of the issue in relation to the VAT status of the delegation to a body corporate model was set out by the Bill team in oral evidence to the Committee—

“HMRC has advised us that, in its opinion, the integration joint board – the body corporate model – is not a taxable person because it does not provide services. However, the bill includes provision that, at some point in the future, a body corporate might be empowered to do so. In that case, in HMRC’s view, the body corporate would become a taxable person and the questions of section 33 or section 41 status – in terms of the Value Added Tax Act 1994 – would need to be decided on.”\(^\text{17}\)

37. A number of responses comment on this issue, with South Lanarkshire Council stating that—

“The position in respect of reclaiming VAT is critical and requires to be confirmed in order to inform the formation of the optimum partnership model.”\(^\text{18}\)

38. ADSW commented, in relation to both VAT and staff harmonisation costs, that—

“The Financial Memorandum correctly identifies the risks to VAT recovery and staff pay and conditions harmonisation, and estimates their potential annual costs at up to £32m and up to £27m respectively. It is a matter of concern that the FM does not commit the Scottish Government to fund these pressures should they occur in the future.”\(^\text{19}\)

39. Falkirk Council also raises the question of an undertaking to review costs in the light of experience—

“This is particularly true in the case of VAT where there is a presumption that a VAT cost neutral solution will be found but a potential additional cost of £32m per annum if such a solution is not found.”\(^\text{20}\)

40. When questioned on this issue by the Committee, the Bill team set out the most current position—

\(^\text{18}\) South Lanarkshire Council. Written submission, paragraph 17.
\(^\text{19}\) ADSW. Written submission, paragraph 3.
\(^\text{20}\) Falkirk Council. Written submission, paragraph 7.
“We are close to a resolution on VAT. We have been working effectively with Her Majesty’s Revenue and Customs on the issue and have had good engagement with it. We are not yet at the point of a formal decision, but the advice that we are getting on the model that we have proposed is that, on the face of it, HMRC is in agreement with our working assumptions, which would mean that there would not be an additional VAT burden.”

41. The Committee notes that the potential exposure to VAT could represent a significant recurrent cost to local authorities. The Committee invites the lead committee to request an update from the Scottish Government on discussions with HMRC and confirmation of whether any additional funding would be made available should a VAT neutral solution not be found for the body corporate model.

Information technology costs

42. The FM provides £0.75 million up to 2014/15 for the purposes of developing IT in relation to management information to support strategic planning. In evidence to the Committee, the Bill team outlined that—

“The information we have used to support the figures in the financial memorandum is based on a project that we have had underway for a number of years, which is called the integrated resources framework.”

“The experience in health over the past five years or so has certainly been very much about the convergence of systems as opposed to creating new systems, and focusing on the standardisation of clinical information as well as the data itself. The approach very much fits the wider e-health strategy of using existing systems and accepting that sometimes the answer is not a one-size-fits-all system for every part of the country.”

43. ADSW commented on the costs going beyond those identified as falling to the central Information Service Division—

“The FM rightly notes the need to improve management information and to develop IRF jointly linked patient/client activity and cost datasets. However, all costs are seen as ISD’s, with partnerships accessing data remotely. This under-states the need for greater analytical and intelligence capacity within partnerships, and also the need to invest in IT improvements locally.”

44. North Ayrshire Council also commented on this issue from the perspective of multiple local authorities working with a single health board—

“Insufficient ICT developments and recurring costs e.g. within Ayrshire the three local authorities operate different social work management information systems.”

23 ADSW. Written submission, paragraph 33.
24 North Ayrshire Council. Written submission, paragraph 3.
45. Glasgow City Council shared this view and commented that—

“There is insufficient ICT development and recurring costs to allow for improved data sharing of information held on Health and local authority information systems. We need to integrate our IT systems so that information is only recorded once to improve the experience for the service user.”

46. The lead committee is invited to ask the Scottish Government what discussions it has had with local authorities and health boards about the IT developments that will be necessary to improve data sharing. In particular the lead committee may wish to ask whether additional funding has been requested and, if so, why there is no discussion of this in the FM.

Harmonisation of terms and conditions for staff transferring between partner organisations

47. The FM states that, in the event that partners choose to “transfer some staff between them in order to better integrate delivery teams,” they will do so under TUPE arrangements. It goes on to note that in such cases, “there is a risk of a potential cost to partners in terms of harmonisation of terms and conditions, including equality of pay; the risk is different depending on which model of financial integration is chosen.”

48. The FM notes that staff moving from local authorities to health boards would be likely to migrate to more advantageous NHS terms and conditions but where the reverse was the case, there would “be a risk of an equal pay claim from the existing local authority staff.” It further notes the potential for such transfers to result in surpluses or deficits in pension funds but states only that “the SG is considering options for a solution to this issue and no estimate has been included in the scenarios at paragraph 121.”

49. Paragraph 121 of the FM provides “three estimates for costs associated with staff transfer under the two main models of integration” ranging from the lowest cost scenario of £nil per annum “where all partnerships opt for delegation to a body corporate model (except Highland)” to a mid-cost scenario costing £13.5 million “where half of partnerships opt for delegation to a body corporate model and half opt for delegation between partners model,” and finally to the highest cost case of £27 million per annum “where all partnerships opt for delegation between partners model with functions delegated to health boards and adult social care staff transferring to Boards.”

50. The FM predicts that “most partners will use the body corporate model” and states that “it is not intended that staff will transfer to the body corporate, but partners may nonetheless choose in time to transfer some staff between each other in the same way as under delegation between partners.”

51. In such circumstances, the FM states that “the situation would be similar to those under delegation between partners outlined above,” before noting “an additional theoretical risk” that staff may bring future claims “on the grounds that

25 Glasgow City Council. Written submission, paragraph 9.
they undertake similar duties but work for separate employers on different pay, terms and conditions, within an integrated system.”

52. However, the FM then states that “given the contingent nature of staff transfers under delegation to a body corporate, in the scenarios for potential costs described below, we have assumed that no staff will transfer under this model and have therefore assumed no harmonisation costs.”

53. On this point, Dumfries and Galloway Council noted—

“…it is important to recognise that there are significant risks associated with a number of areas, including those where the FM has assumed that the impact will be nil or cost neutral... the estimated costs associated with potential staff transfers and the harmonisation of terms and conditions indicate that these issues/costs are expected to be relatively small. Again, given the potential amounts involved and the uncertainty associated with issues such as potential pay claims, it should be recognised that there are significant risks associated with this assumption.”

54. North Ayrshire Council also commented on—

“Wider concerns around the emergence of additional staffing costs pressures and integrated teams develop. Specific examples include; harmonisation of terms and conditions – a particular issue where similar services are being provided e.g. support services; jobs being evaluated on different bases; concern re the NHS no redundancy policy and current and future pension risk around potential transfer of employees between funded and unfunded schemes and rising employer contributions.”

55. The Committee recommends that the lead committee asks the Scottish Government to provide further information about—

- the number of partnerships that have confirmed they will use the model of delegation to a body corporate
- what options are being considered in relation to the pension funding issue set out in paragraph 116 of the FM, including estimated costs and the provision of funding
- whether any additional funding would be provided to partnership bodies in the event of equal pay claims being successful.

Cost Implications to other Public Bodies from Provisions in the Bill

56. The FM states that “the performance of partnerships in achieving the nationally agreed outcomes and other relevant outcomes in relation to the delegated functions will be assessed jointly by Healthcare Improvement Scotland

---

26 Dumfries and Galloway Council. Written submission, paragraph 13-14.
and the Care Inspectorate” and estimates that “these bodies will undertake six inspections per year” at a cost of £173,362 per joint inspection.”

57. North Ayrshire Council stated—

“In the section which deals with impact on other agencies additional inspections costs have been identified, it is not clear why this would be additional to rather than different from the current inspection arrangements. Any additional costs for external inspectorates require to be matched with partnership funding to prepare for additional inspection. There is a view that rationalisation of the current inspectorates is possible as the HSCPs develop.”

58. Scottish Borders Partnership also commented—

“Additional inspection costs are identified for inspection agencies but the association costs of preparing for inspection both in the NHS and Local Authorities are not factored in.”

59. The FM further notes that “additional resource, longer term, will also be required to fund the Care Inspectorate and Healthcare Improvement Scotland for scrutiny of strategic commissioning,” estimating that this will result in a recurrent cost of £670,000 per annum.

60. However, in its submission to the Committee, Healthcare Improvement Scotland noted—

“The costings included in Part Three are estimates that were based on particular assumptions at the time of the consultation. In practice those assumptions may change and this may impact on Healthcare Improvement Scotland’s financial requirements… For Healthcare Improvement Scotland to comply with the Bill, it will be necessary to review the appropriate skills and resources to conduct the required inspections. We will consider the associated financial implications in the context of our broader financial strategy. Additional costs may require some uplift to our baseline funding which is currently reducing on an annual basis and any uplift will have to be agreed with Scottish Government finance colleagues.”

61. The Committee suggests that the lead committee requests details from the Scottish Government of any further discussions it has had with Healthcare Improvement Scotland about the estimated costs, and provision of additional funding, for delivering inspections under an integrated model.

62. The FM states that, at present, “whilst the Common Services Agency (CSA), commonly known as NHS National Services Scotland, may provide goods and services to NHS bodies in Scotland generally, it may only provide a limited range

28 Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)), paragraph 122.
30 Scottish Borders Partnership. Written submission, paragraph 9.
31 Healthcare Improvement Scotland. Written submission, paragraphs 4 and 6.
of goods and services to other public bodies.”\textsuperscript{32} The Bill seeks to change this so the CSA can “offer services such as legal, procurement, counter fraud and IT support to the wider public sector, which have the potential to produce operating and cost efficiencies.”\textsuperscript{33} The FM then states that “costs to the public sector will be cost neutral. There will be no increase in the level of the Common Services Agency budget as a result of it delivering services to the wider public sector.”\textsuperscript{34}

63. NHS National Services Scotland has provided a submission which identifies a number of risks but also highlights that there is ongoing national work to manage those risks. The risks identified include—

- That revenue may fall if the procuring entity changes given that Health Boards are currently required to buy some services from the CSA
- How compliance with procurement procedures would operate and be ensured given the existing provisions that enable the sourcing of optional goods and services from the CSA by Health Boards (and vice versa) without the need for a formal procurement process.

64. \textbf{With reference to the ongoing national work cited in the submission from the CSA, the Committee suggests that the Scottish Government is asked what action has been taken to address the risks identified and on what basis the Parliament can be certain that this change will be cost neutral to the public sector.}

\section*{REALISING EFFICIENCIES}

\subsection*{Challenges to realising efficiencies}

65. Beyond the costs identified in the FM as arising directly from the Bill, a number of comments were received on the difficulties that will be presented in terms of the statutory partners being able to realise the efficiencies that will support the intention of the Bill, specifically the transfer of resource from acute service provision and the impact of demographic change.

66. East Dunbartonshire Council commented—

“\textit{There is no focus on the issues arising from the delegation of budgets and resources under each of the 2 options available which is a key area of concern and will have far reaching implications in the medium/longer term and the realism attached to releasing resources from budgets tied into acute budget without de-stabilising hospital provision.”}\textsuperscript{35}

\begin{footnotesize}
\begin{itemize}
\item \textsuperscript{32} Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)), paragraph 96.
\item \textsuperscript{33} Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)), paragraph 97.
\item \textsuperscript{34} Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)), paragraph 99.
\item \textsuperscript{35} East Dunbartonshire Council. Written submission, paragraph 5.
\end{itemize}
\end{footnotesize}
67. BMA Scotland addressed the reduction of acute hospitalisation but also comment on the demographic pressures in relation to service demands—

“Growing numbers of frail elderly patients with multiple physical co-morbidities, and often with dementia, will produce significant pressure on hospital-based services, undermining the perception that the funding necessary for quality community-based healthcare can be found solely through the transfer of resources from secondary care. There is often an assumption that the only way to develop community services is to move funding from secondary to primary care, or health to social care, rather than considering the overall resource envelope and whether that needs to change.”\(^\text{36}\)

68. The Association of Directors of Social Work (ADSW) stated—

“For the integration vision to be achieved, health and social care partnerships need to unlock the budgets currently funding emergency inpatient admissions. ADSW is extremely concerned that the Scottish Government may set the minimum inpatient budgets to be transferred to Partnerships at too low a level to deliver the step change required.”\(^\text{37}\)

69. NHS Highland noted that from experience—

“It is not clear yet, but just to hold the line in acute spend might be a good result, given the demographic increases and pressures in the acute sector. We are not yet confident that we can take large amounts of fixed costs out of the acute sector. That is untested. We are confident, however, that having all the resources in one place can only help with that.”\(^\text{38}\)

70. East Dunbartonshire Council stated that—

“There needs to be more consideration of how we meet the pressures that will be caused by demographic growth. Although integration will go some way towards addressing that, it would have been helpful had the financial memorandum set out the extent of the issue that we are going to be dealing with over the next 20 years, if we are indeed going to be predating efficiency savings on that basis.”\(^\text{39}\)

71. Responding to questions on this, the Bill team stated—

“The bill focuses on enabling parts of the NHS to use resources better across the entire spectrum of care. At present, there are artificial disconnects between boards and local authorities, all of which affect expenditure in each of those sectors. The bill’s premise is that, by bringing those things together and focusing on them all, we can better allocate the resource…

\(^{36}\) BMA Scotland. Written submission, paragraph 9.

\(^{37}\) ADSW. Written submission, paragraph 3.

There are efficiencies to be made through reallocating resources, but that will not be sufficient to offset demographic change, and we indicate that in the financial memorandum.”

72. Further expanding on this, the Bill team also reiterated the approach to integration—

“It is not really about handing money over; it is about bringing money together to reflect the care journey of the growing population of need, which largely consists of people who are frail and in their older years, but also includes other adults who have multiple and complex needs.

We are focusing in particular on the importance of strategic planning effort across primary care, social care and the particular aspects of acute hospital care that we believe lend themselves to being redesigned in favour of prevention. The key is the bringing together rather than the handing over.”

73. The Committee invites the lead committee to ask the Scottish Government what level of resource transfer from acute services provision has been identified as being required to deliver the change to delivery of integrated services. The lead committee may also wish to ask what impact this is anticipated to have in ensuring that sufficient resource remains to deliver acute services.

Efficiencies identified in the FM

74. The FM sets out three areas in which efficiencies can be realised that would release money to support the provision of integrated health and social care. These areas are—

- Anticipatory care plans
- Delayed discharge
- Reducing variation.

Anticipatory care plans

75. The FM identifies potential savings of £12 million from putting in place anticipatory care plans, explaining that this estimate is based on extrapolated figures from a study carried out in Nairn. The Committee questioned how robust the Nairn study is and the likelihood of the findings from there being deliverable elsewhere.

76. In response, the Bill team stated—

“The study is robust. It was published in the British Journal of General Practice, is second-tier and has been peer-reviewed. However, although its evidence is transferable to other partnerships in Scotland, it is contingent on

---

having an integrated approach. Nairn fostered an integrated approach between health and social care, with locality and integrated teams working closely together and a reactive response to admissions. There is no question but that it is transferable. Indeed, a subsequent study across other settings supports our initial assessment and indicates a £16 million saving.”

77. **The FM does not provide any detail of the how the estimate of £12 million has been reached.**

78. **The lead committee may therefore wish to ask the Scottish Government to provide the calculations and assumptions that led to the estimate included in the FM.**

*Delayed discharge*

79. The FM outlines anticipated efficiencies of £22 million per annum for a maximum 14 day delay in individuals being discharged from hospital. This would tie in with the NHS Scotland performance target of no-one being inappropriately delayed for more than 2 weeks by April 2015.

80. In considering the challenges of meeting that target, the Committee notes the comments made to it in oral evidence. East Dunbartonshire Council stated—

“From my perspective, to go from 28 to 14 days is asking a lot of the social work teams that will need to provide assessments in that timescale... To reflect realistic expectations about that, it might be worth considering the extent to which other partnerships are achieving the current 28-day target. As that moves to 14 days, it will become more and more difficult for teams physically to get people out in those timescales.”

81. NHS Highland also commented on this issue and what experience from other integration projects might demonstrate—

“...I think that we have set ourselves a target of beating that target. However, we currently have issues with delayed discharges, so we are looking at care-home capacity and at-home capacity. Now that such matters are under our direct control, it is in our gift to address the problem, whereas in the past we had to negotiate with the council on a joint response... I do not have the figures to hand, but I think that evidence from Torbay, where there is a similar model to the Highland model, suggested that fairly good results on delayed discharges have been achieved from the integration approach.”

82. The July 2013 statistics from the Scottish Government’s Information Services Division, set out in the table below, provide information about the achievement of delayed discharge targets.

---

### Table

<table>

</tbody>
</table>

#### 83.
Given that the existing 28 day target was not delivered by April 2013, the lead committee is invited to pursue with the Scottish Government whether there can be any degree of certainty that 14 day target, upon which the savings set out in the FM are predicated, will actually be met in the anticipated timescale.

**Reducing variation**

#### 84.
The largest area of efficiency identified in the FM is £104 million per annum from reducing variation in per capita expenditure. To ascertain the certainty with which the figures in the FM can be regarded, the Committee sought clarification from the Bill team of the methodology used to calculate the potential efficiencies from reducing variation. The clarification provided is set out at Annexe B of this report.

#### 85.
The FM notes that this efficiency relates only to healthcare expenditure and does not include social care expenditure “due to the confounders for variation in per capita social care expenditure”. The confounders are identified as; differences in local democratic decisions, input costs, prevalence of unpaid care, the relative size of the voluntary sector or inefficiencies.

#### 86.
Referring to the estimation of costs around reducing variation, the Bill team explained—

“*We are indicating that, through the integration proposals, the difference in expenditure per head will be evident to the partnership and there will be a basis for scrutinising that. However, we are unsure about the processes that the partnerships will follow and the decisions that they will make in reviewing that information and informing their allocations subsequently. That is the uncertainty in that area. It is more uncertainty about the decisions that partnerships will take than uncertainty about the figures.*”

#### 87.
Asked how the provisions of the bill would make a difference in terms of the existing knowledge of differences in health board expenditure across partnership areas, the Bill team stated—

“We think that the bill’s provisions will give it [variation] more prominence and that there will be at least the potential for partners to scrutinise why expenditure per head in, say, Edinburgh is different from that in Midlothian. It will allow comparison of the outcomes to be achieved for the additional

---

expenditure per head and conclusions to be drawn from that. We hope that in
due course that would then inform partners’ strategic spending decisions.”

88. The Committee notes the projected savings are substantial and invites
the lead committee to ask the Scottish Government how confident it can be
that this efficiency will be realised in practice and, if not, what implications
that has for other aspects of the delivery of integrated health and social
care, such as the shift of resources from acute provision.

CONCLUSION

89. The lead committee is invited to consider this report as part of its
scrutiny of the FM for the Public Bodies (Joint Working) Scotland Bill.

---

ANNEXE A: EXTRACT FROM THE MINUTES

21st Meeting, 2013 (Session 4) Wednesday 11 September 2013

Public Bodies (Joint Working) (Scotland) Bill: The Committee will take evidence on the Financial Memorandum from—

Jean Campbell, Planning and Development Manager, East Dunbartonshire Council; Nick Kenton, Director of Finance, NHS Highland; Frances Conlan, Bill Team Leader, Christine McLaughlin, Deputy Director Finance Health and Wellbeing, Paul Leak, Integrated Resources Framework Lead, and Alison Taylor, Policy Lead, Scottish Government.
The bill’s premise behind integration is around effecting a shift in resources from emergency admissions to community-based alternatives. Obviously, there must be sufficient budget under the control of the single accountable officer to enable that and to effect that kind of change. There might be some risks if there is not enough in the pot, if you like, and the financial memorandum does not delve into risks that might arise in trying to deliver the agenda.

The Convener: The next paragraph says:

“A significant omission appears to be an estimate of the cost of the rising demographic of older people requiring a service ... given there are savings predicated on the way this will be delivered into the future.”

Can you comment further on that and talk a wee bit more about risks, which you touched on?

Jean Campbell: The financial memorandum does not go into any great detail on estimations of costs that will come from demographic growth. Studies suggest that, by 2031, we will be looking at an increase of £2.5 billion being needed in the budget. The efficiency measures that are highlighted in the financial memorandum will go some way—although not a lot of the way—towards trying to address some of that pressure.

Obviously, a lot of the efficiencies that are built into the financial memorandum are about assumptions about delivery in terms of delayed discharge and the effectiveness of anticipatory care planning. I suppose that there are risks around how successful that will be in delivering the efficiencies that are outlined in the bill, and the extent to which that will deliver in relation to the demographic pressure that we know is out there, but which is not as evident in the financial memorandum as it could be. However, certainly, work has been done elsewhere on the issue.

The Convener: Mr Kenton, would you like to comment on what we have heard so far?

Nick Kenton (NHS Highland): It is true that the bill does not delve into the impact of demographic changes. Of course, those changes are happening irrespective of the bill or integration so, in a sense, those costs are not directly relevant to the bill, so I suggest going down the route of integration as a way of trying to mitigate the impact of demographic change rather than building such mitigation into the cost of the bill. I agree with Jean Campbell that the sort of offsets that are quoted in the financial memorandum are fairly high-level costs that try to give an overview of the bill. They also rely on releasing fixed costs from the acute sector, and there are risks around that.

The key point is that the demographic changes will happen whether the bill is passed or not, and we need to address those rather than get hung up on them as part of the scrutiny of the bill.
The Convener: In NHS Highland’s submission, you say that it is reasonable to assume that the financial implications will be in line with the estimates that are made in the financial memorandum, and that the assumptions seem to be reasonable.

You also touch on an issue that the committee and the Scottish Government has wrestled with when you say:

“It is worth noting that the integration of budgets between partner bodies requires a high degree of trust and openness—and this is as much about leadership and culture as legislation.”

I think that we would all agree with that. How confident are you that that will be delivered? I know that NHS Highland has some experience of the issue.

Nick Kenton: The issue of the financial implications works on two levels. The first level concerns the costs of making the transition; I think that the bill makes a reasonable attempt to quantify them. They are quantifiable, but they pale into insignificance when compared with the wider implications of sharing budgets for real. My view is that it is hard to legislate for that—it has to be done with a degree of openness and transparency that is hard to set down in legislation. We had to place trust in our counterparts in Highland Council. It is no secret that, during our first transitional year, we had some challenging negotiations in relation to the money, but we came through that and were always open and above board.

Our move to integration began in December 2010. About a dozen key people in various parts of the organisation took that forward, working with a high degree of openness and trust. Our partnership agreement is 400 pages long. That might sound like a large document, but it does not cover every eventuality. Even in the first year, we found that issues arose that were not covered by the partnership agreement. What we always said was that, if we have to have recourse to the agreement, we have failed, to some degree, because we should be able to agree things as partners without having to go to the book.

Jean Campbell: The success of the bill will lie in its effecting a culture change in how organisations work together. In terms of money, there needs to be openness and an open dialogue between partners to effect the shifts that need to happen and to ensure that there is a realism about how that can be done. Obviously, getting the key people involved will be pivotal to ensuring that.

Nick Kenton: One thing that we found in the first year was that even with that level of openness and trust, there were times when we were almost not talking the same language from an accounting point of view, because the regimes were so different. Sometimes, there were misunderstandings rather than disagreements, and we had to work through those as we went along. It was a real learning experience; we would be happy to share that experience with colleagues who are interested in learning from our model.

The Convener: I want to talk about some of the wider issues that have been discussed. NHS Highland’s submission says:

“The wider financial consequences of integration are difficult to quantify but our belief is that these will be beneficial rather than a cost burden.”

However, you also say that

“the bill does not seem to make provision for the potential costs of transferring ownership of assets (or long term leasing of assets).”

You also point out

“the potential efficiencies from reducing delayed discharges”—

which we have touched on already—

“reducing variation and anticipatory care plans are presumably based on ‘full cost’ estimates which are therefore not fully realisable unless fixed costs are reduced as a result of the changes.”

Is there an opportunity to reduce those fixed costs? Could you comment more widely on those matters?

Nick Kenton: There is an opportunity to reduce fixed costs. It is very challenging, and it is a medium to long-term goal. As we always said when we went down our integration route, the first two years would be about bedding in and almost “business as usual”—that is the phrase that we used. In transferring £89 million and 1,500 staff one way and £8 million and 200 staff the other way, all the pensions, payroll and accounting treatments were transferred, too, so there was real potential for things to go wrong. Our hope is that all the resources for adult services being in one place in the health service will bring opportunities.

We touched on the demographic pressures earlier. It is not clear yet, but just to hold the line in acute spend might be a good result, given the demographic increases and pressures in the acute sector. We are not yet confident that we can take large amounts of fixed costs out of the acute sector. That is untested. We are confident, however, that having all the resources in one place can only help with that.

Property demonstrates a feature of the differences in accounting regimes. At the moment, we are delivering services from care homes that remain owned by Highland Council, but the services that we deliver from there are delivered by staff whom we now employ; they moved over from Highland Council. We would like to lease the buildings or own them, but even if Highland
Council wishes to sell them to us for £1—which it might be prepared to do—the accounting regime in the national health service will not allow that to happen easily. We are working with colleagues in the Scottish Government to find a way round that.

The transfer itself would be a cost. When an asset is owned in our NHS system, a cost or depreciation is paid on it; it is a real cost. In the local government system, it is a notional cost. There are significant differences in the accounting regimes. At the moment that is, in accounting terms, probably the biggest barrier to moving forward, although we are working closely with colleagues in the Scottish Government to resolve that.

Jean Campbell: We do not have the same experience that Nick Kenton has had in Highland, but natural efficiencies will come from integration in relation to management posts when there is co-location, for example. That makes delivery of services much more real for people, and efficiencies come from that. A lot can be done around information and communication technology systems by integrating them a lot more and by streamlining processes. It would be a lot more efficient to input information only once, for example.

The bigger costs and the shift of resource from the acute sector result in questions about whether that might eventually result in ward closures or the closure of buildings and so on, but those are probably quite a long way away—that is probably quite aspirational, given the demographic pressures and the fact that, even if we are able to free up beds, there are other areas of pressure in the health service that would quite easily suck up that resource for other purposes. Natural efficiencies could be made by way of assets, perhaps involving co-location and ICT systems, but the bigger aim around wards, hospitals and beds is probably longer term.

The Convener: I will ask one more question before I let the rest of the committee in. This question is to you, Ms Campbell, although Mr Kenton can of course comment, too. What concerns do you have in relation to potential equal-pay claims for staff who will be working more closely together?

Jean Campbell: There are provisions in the bill such that if we were to use the lead commissioning model, with rafts of staff—under the Transfer of Undertakings (Protection of Employment) Regulations—TUPEing over, there might be natural harmonisation of pay claims as teams come together. There are differences in the pay and conditions of occupational therapists, for example, so in an integrated occupational therapy team, people could see that their counterparts from either the health service or the local authority might be on more advantageous terms and conditions. As a result, there would, naturally, be pay claims around that. That issue might not arise as instantly as it would under a lead-commissioning model, but under a body-corporate model, it might well emerge as teams come together.

10:15

The Convener: Do you have any idea of the cost implications for a health board area of, say, the size of NHS Greater Glasgow and Clyde?

Jean Campbell: I could not comment on that.

The Convener: That would certainly be difficult to estimate.

NHS Highland is much further down the road with all this, so Mr Kenton obviously has more experience in this area. What is your view on the matter?

Nick Kenton: It is certainly worth pointing out that pay claims are a risk. I summarise our approach as proceeding with caution. We do not have a harmonisation policy, but if posts become vacant or if there is a redesign, we are—where we can—moving posts over to the relevant pay scale for the new employer. As I have said, however, we are proceeding with caution.

The Convener: I open the session to colleagues around the table; Malcolm Chisholm will be the first to ask questions.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I agree with Nick Kenton that integration can mitigate the effects of demographic change, but I suppose that that will happen only if it works properly and shifts the balance of care in a way that structural change on its own will not.

However, even assuming that it does shift the balance of care, I have to say that I do not really agree with you that demography is irrelevant, because the whole implication of the financial memorandum is that quite large savings can be delivered by reducing delayed discharge, by putting in place anticipatory care plans and by “reducing variation”. You might want to comment on what is involved in reducing variation, but we would all agree that reducing delayed discharge and anticipatory care plans are good things. However, because of demography, there is no way that they will produce those savings, which means that in that sense the financial memorandum is highly misleading.

Nick Kenton: Perhaps I did not previously express myself as I meant to. My point in response to Jean Campbell’s comment—that demographics need to be included as a cost of the bill—was that those costs will happen whether or not the bill is passed and that the issue is
therefore not directly relevant to the costs of the bill. However, it is—as I think you have suggested—a relevant part of the context and we need to be aware of it. Indeed, for me, it is one of the issues in support of the bill.

Malcolm Chisholm: Do you agree with that, Ms Campbell?

Jean Campbell: The context of that comment is our view that in seeking to predicate efficiency savings on the basis of the bill, it is relevant to consider the extent of demographic growth in order to see the extent to which integration would deal with certain issues. There needs to be more consideration of how we meet the pressures that will be caused by demographic growth. Although integration will go some way towards addressing that, it would have been helpful had the financial memorandum set out the extent of the issue that we are going to be dealing with over the next 20 years, if we are indeed going to be predicated efficiency savings on that basis.

Malcolm Chisholm: Obviously you fully understand that, but the problem is that many local authority submissions about the bill assume that significant resources can be released from acute budgets to pay for the development of services in the community. If people think that that is going to be possible, they are being misled because of the demography issue. It might be more possible in some parts of Scotland than in others; it certainly will not be possible in NHS Lothian, given our demography.

I suppose that this question is more for Nick Kenton, given his health experience. To what extent would NHS Highland be able to release money from acute budgets to shift the balance of care?

Nick Kenton: That is our aim, but at the moment we do not have a timescale. As I said, the change is a medium to long-term issue. We are looking to keep the ship steady for two years before we try to do anything clever, as it were. I do not have a glib answer to your question, but we certainly want to do what you suggest and we think that it is more likely to happen if all the resources are in one place than if there are organisational divisions between the resources.

Malcolm Chisholm: I was also puzzled by the comment in the financial memorandum that quite a lot of the savings are going to come from “reducing variation”. After all, variation can be a good or a bad thing. It might be a bad thing because it shows that the service is inefficient, or it might be a good thing because it shows that the service is better. I am interested to hear your comments about making savings by reducing variation.

Nick Kenton: We should be looking at variation across the whole NHS and local government, and not just in the context of integration. We in Highland certainly need to focus on that issue. You are absolutely right to suggest that sometimes variation can be completely appropriate, but we need to understand the issue, bring it to light and challenge it.

Malcolm Chisholm: Thank you. Those are all the questions I have, for now.

John Mason (Glasgow Shettleston) (SNP): One of the things that strikes me in all of this is that we are starting with two organisations—local government and health boards—and ending up with three. On the surface, it seems that that might make things even more expensive because there will be more bureaucracy: before a pound is spent, it will have to be approved three times rather than just twice. Is that assumption wrong?

Nick Kenton: I am not sure who you are directing the question to.

John Mason: The question is for both of you.

Nick Kenton: There are only two statutory bodies in the lead-agency model, and even under the terms of the bill the situation in Highland would not need to change much. We would need a joint committee, but we already have a strategic commissioning group that involves both organisations and which actually looks fairly similar to the proposed joint committee. As I have said, the Highland model still has only two statutory bodies.

John Mason: So, you have just been transferring between yourselves without the need for a third organisation to do all that.

Nick Kenton: That is correct.

John Mason: It has been suggested that a third organisation could be set up to do all that.

Nick Kenton: I think that that is correct with regard to the other model, but that is probably a question for the Scottish Government.

John Mason: Why did you not go down that route?

Nick Kenton: When we considered which model to introduce, there was no bill; instead, our model was put together under the terms of the Community Care and Health (Scotland) Act 2002. When in 2010 we first looked at the various models, a third-party model was considered. I am not sure whether that would have required legislation, but the view was that putting in place another body would simply put more boundaries into the system instead of eliminating them.

John Mason: That is very much my point. Do you share that concern, Ms Campbell?
Jean Campbell: The key will be in what the guidance says and the level of autonomy that the body corporate will have. It seems from the bill that the body will have quite a lot of autonomy over decisions about the pots of money that are allocated to it, and that it will be able to set clear direction on allocation of resources across the landscape to meet key outcomes. However, the bodies that sit at the back—the local authority and the health board—will need to agree those outcomes and the strategic or joint strategic commissioning plan for allocating the resources.

We should also remember that each year efficiencies will be applied to our separate annual budgets. The body corporate will be a separate entity that might have quite a lot of autonomy, but people will be concerned about two separate bodies in the background having a say over the amount of money going in and where that money should go, and about the fact that the body corporate cannot be completely autonomous and cannot make decisions without having regard to those two bodies. I think that such a move will create additional bureaucracy.

John Mason: I am quite concerned by those comments. At the moment, if £10 million goes into, say, social work, social work decides how that money is spent. In the future, however, that £10 million might be transferred to the new organisation. How hands-on will social work be with that £10 million? Will it simply hand the money over and let the new body get on with it, or will it be quite involved in decisions on how that money is spent?

Jean Campbell: The guidance will be key in setting out how that money is dealt with once it is transferred. That said, the council might transfer £10 million one year, but the next year it might have to make 3 per cent efficiencies and so might deduct 3 per cent from that £10 million, put in place a process for allocating efficiency savings or ask the body corporate to make those savings. There will need to be a dialogue between the council and the body corporate about the level of funding and the extent to which it will have a say over what happens to that funding. The guidance will make clear the level of autonomy the body will have in such decisions.

The bill suggests that the body corporate will be quite autonomous but, as the years pass, it will have to meet the efficiency pressures—or whatever else might be going on in the background—that are faced by its parent bodies. It will have to comply with those efficiencies just as happens with money that is allocated to education or sports and leisure. Everybody must contribute to the bigger agenda and the overall council and health strategies. As I said, the body corporate will be autonomous and be able to do what it likes with that £10 million, but it will have to make the efficiencies that the parent bodies must deliver on, too.

John Mason: Your council, which is relatively small, deals with Greater Glasgow and Clyde NHS Board. Will there be one joint body for Greater Glasgow and Clyde?

Jean Campbell: That has still to be determined.

John Mason: That is not determined.

Jean Campbell: It is not. Under the bill, each local authority area will have a partnership agreement, so we would expect East Dunbartonshire Council to have its own partnership agreement. However, we share hospital provision with six other local authorities.

John Mason: I presume that your council will want to ensure that the £10 million that it puts into the pot benefits its residents rather than, for example, Renfrewshire residents.

Jean Campbell: Or Glasgow residents—yes.

Nick Kenton: When Highland Council transferred the £89 million, NHS Highland had a debate with it about how much influence and control or otherwise the council would have over that funding. We debated whether we should focus on the inputs—the staff and all the transferred budgets—or the outcomes. We are in a state of flux, but we prefer to look at the outcomes and how we deliver with the £89 million rather than how many social workers have been appointed or whatever. That debate has yet to be resolved but, as we mature, I hope that we will move towards looking at the outcomes that each of the other agencies has delivered, rather than focusing on the exact amount transferred.

John Mason: I realise that neither of you is directly answerable for my next topic but I will ask the question anyway. I understand that Healthcare Improvement Scotland and the Care Inspectorate would come in and do the inspections and so on. That has the potential for duplication. Is it your understanding that both bodies would do the same thing or would they do different things?

Jean Campbell: They currently do different things—Healthcare Improvement Scotland looks at the quality of healthcare and the Care Inspectorate looks at the quality of social care delivery. However, I understand that the bodies are moving towards joint inspections.

Our child protection services have just had a joint inspection, which looked at how organisations work together to deliver jointly on outcomes. The Care Inspectorate is certainly moving towards delivering such an approach. Were that approach to continue, it would perhaps eradicate the
duplication that is out there, but that has cost implications.

**John Mason**: To be sceptical, that sounds as if two people are turning up to inspect something together, although that is probably better than two people turning up and inspecting it separately. Would it ultimately be better if just one person turned up and did the inspection? That would save 50 per cent.

**Jean Campbell**: Yes. I hope that that is the way that things will go. When the Care Inspectorate came along, it looked at the whole joint landscape of child protection delivery and how we work jointly to deliver on related outcomes. When the healthcare inspectorate comes along, I hope that it will take cognisance of that care inspection and that that will inform the level of inspection that it does. As things develop, I hope that that will come together a lot more.

**John Mason**: Mr Kenton, do you share the view that it will be in the longer term that inspections join up?

**Nick Kenton**: I am not sure that we have a formal organisational view on that, so I will speak in a personal capacity. On the one hand, joining up and integrating the inspectorate regime and the care at the same time seems to make sense; on the other, we must ensure that we do not lose expertise. For example, if the national health service is running care homes, we need to ensure that the standards applied are not the ones that apply to hospitals, as otherwise we will end up with inappropriate responses. In principle, it makes sense to join up the regimes, but we must keep an appropriate inspectorate regime for each part of the organisation.

**John Mason**: In your experience of bringing together two organisations—or at least of joint working—was there a big financial input from outside or did you cover that with your own resources?

10:30

**Nick Kenton**: We had support from the Scottish Government to the tune of about £1.5 million, of which about £900,000 was for the direct costs of transition. Because we were first in the queue, some costs have not applied to other organisations. The model that we used also had some costs for human resources support that would not necessarily apply under other models.

The rest of the support concerned differences in accounting regimes. For example, if health service staff carry their leave forward beyond the end of the financial year, the health service is required to provide for that as if the time was paid for, whereas that accounting requirement does not exist for the council. We needed help to cover some transitional changes, but that was the scale of the support.

**John Mason**: So you just needed to get the accountants to behave themselves.

**Michael McMahon (Uddingston and Bellshill) (Lab)**: Like the deputy convener, I am interested in the costs of organisational development. Paragraph 53 of the financial memorandum states:

“Support will be necessary at all levels in the new partnerships, including the establishment of new integration joint boards, or integration joint monitoring committees, through to education and training for frontline practitioners, working in new ways to support service users.”

That is perhaps a statement of fact. Does the financial memorandum take into account the costs of that organisational redevelopment? What cost implications will there be for the establishment of the new bodies?

**Jean Campbell**: Some costs are reflected in the financial memorandum, such as those for the appointment of joint accountable officers and for the displacement of community health partnership managers—under the bill, those posts will go. However, there seems to be no reciprocal provision for the local authority side, which has management or leadership posts that will go under the new arrangements as well as management structures that are underneath them. Health and social work management teams will need to be joined up to deliver on the new agenda, but the fact that those arrangements could have redundancy and displacement costs in local authorities is not reflected.

**Nick Kenton**: In the Highland model, there was no new body to staff up. We have had to restructure on the back of integration, but that has been broadly cost neutral for us.

I am not aware of any new costs for training front-line staff. As I said in an earlier answer, the initial two years are business as usual for front-line staff. Although the staff involved are now paid from a different payroll and are part of a different organisation, the delivery of front-line care is pretty much the same, so I do not see that additional training is a particular issue for them in the short term.

**Michael McMahon**: Given that the new arrangements will apply across the whole of Scotland, have you considered how the provision in the financial memorandum will apply overall rather than just from your own perspective? The changes will apply to all health boards and local authorities, so there will be cost implications. We need to consider whether the Scottish Government has taken those cost implications into account in its planning for the financial arrangements.
Nick Kenton: I can answer only from an NHS Highland point of view, so that is probably a question for the Scottish Government officials who will appear on the next panel.

The Convener: Committee members have no further questions, so I will finish with a question to each of you, although both of you might want to respond to each question. Ms Campbell, your submission says:

“Delayed Discharges—predicated on a maximum 14 day delay in hospital—is this realistic and achievable?”

Do you believe that the target is realistic and achievable?

Jean Campbell: To establish whether the target is achievable, it would be helpful to see how successful partnerships across Scotland are in achieving the current 28-day target. Certainly, I know that our authority had no delayed discharges when there was a six-week target but, in the months leading up to the current 28-day target as well as in the initial months of having it, we had some delays against it, although we are now achieving it.

The bill identifies efficiencies from using care homes and home care rather than hospital admissions, but it does not recognise that, for example, assessment teams will need to run twice as fast to undertake assessments and get people out of hospital. From my perspective, to go from 28 to 14 days is asking a lot of the social work teams that will need to provide assessments in that timescale.

Although we in East Dunbartonshire are relatively successful in attaining the targets for delayed discharge, I am aware that performance is not consistent across Scotland. To reflect realistic expectations about that, it might be worth considering the extent to which other partnerships are achieving the current 28-day target. As that moves to 14 days, it will become more and more difficult for teams physically to get people out in those timescales.

The Convener: Mr Kenton, is the new target realistic and achievable?

Nick Kenton: This is not my direct area of expertise, but I think that we have set ourselves a target of beating that target. However, we currently have issues with delayed discharges, so we are looking at care-home and care-at-home capacity.

Now that such matters are under our direct control, it is in our gift to move resources to address the problem, whereas in the past we had to negotiate with the council on a joint response. Our system should make the target more doable, but that is not to say that it is not a challenge. I do not have the figures to hand, but I think that evidence from Torbay, where there is a similar model to the Highland model, suggests that fairly good results on delayed discharges have been achieved from the integration approach.

The Convener: My final question is to Mr Kenton, although Ms Campbell might also want to comment. Your submission states that it is important to have

“sufficient local discretion to achieve the objectives the government has set out ... However, we felt that there must be a level of flexibility ... The emphasis should be on functions and not services per se to ensure that the total resource required to deliver that function is included in the integrated pot.”

Can you expand on that a wee bit?

Nick Kenton: That relates to my earlier point that we cannot legislate for everything and write everything down. Although we have a 400-page partnership agreement, it does not cover all eventualities. We need to encourage flexibility to allow partnerships to find their own local solutions.

The wording in our submission is perhaps a bit clunky, as it should have referred to “outcomes” rather than “functions”—instead of talking about “functions and not services”, it should have said “outcomes and not services”. Rather than get hung up on the minutiae of the budget transfer, we should talk about what outcomes a partnership wishes to see.

Jean Campbell: I agree that we need to focus on the outcomes that we want to deliver, although it is hard to get away from the practicalities of transfers, partnership agreements and all the minutiae required to make those happen. At the front line, we need to do the best for older people, who do not want to be in hospital and want good-quality care at home. To deliver those outcomes for older people, we need to look at what we need in the pot.

The Convener: Before I call this evidence session to a halt, do you want to make any further points to the committee?

Nick Kenton: No, thank you.

Jean Campbell: No.

The Convener: Thank you both very much. We really appreciate the responses that you have given to our questions.

I call a short recess until 10.45.

Meeting suspended
The financial memorandum estimates potential efficiency savings of between £138 million and £157 million for health boards and local authorities from the combined effect of anticipatory care plans, reduced delayed discharge and reduced variation. However, the memorandum also notes that “there is considerable uncertainty around these estimates”.

Those uncertainties have been acknowledged by a number of people who have submitted evidence to the committee. For example, Scottish Borders partnership stated that “much more research and a robust evidence base will be needed”.

Dumfries and Galloway Council said that “there is considerable uncertainty around the estimates in relation to projected efficiencies.”

How much uncertainty do you estimate there is, and how did you arrive at the relatively narrow range of between £138 million and £157 million?

Alison Taylor (Scottish Government): I will begin with a general statement on the policy and then hand over to my colleagues, who did the calculations. Would that be best?

The Convener: Sure—I am happy with that.

Alison Taylor: On uncertainty, part of the challenge for us is that, as in all health and social care systems in developed countries, the issues at work are highly complex. There is a wealth of evidence, but that is, in itself, complex. Drawing down what potential improvements are available requires a multifaceted calculation.

Paul Leak (Scottish Government): The efficiency savings are estimated across three areas: anticipatory care plans, the reduction in delayed discharges and the reduction in variation. The range relates to the calculation for delayed discharges, for which there were two assumptions—14 days and 72 hours. That explains the difference in the range.

The basis of the calculation for variation is that we can track the expenditure for health boards by population down to partnership areas. For instance, we can track how much expenditure by Lothian NHS Board is spent across the four partnerships in Lothian. That shows that there is variation. Even though there is an average spend per head across Lothian, Tayside or wherever, there is variation in the spend per weighted head for the populations of the partnership areas.

We are indicating that, through the integration proposals, the difference in expenditure per head will be evident to the partnership and there will be a basis for scrutinising that. However, we are unsure about the processes that the partnerships will follow and the decisions that they will make in reviewing that information and in forming their allocations subsequently. That is the uncertainty in that area. It is more uncertainty about the decisions that partnerships will take than uncertainty about the figures.

The Convener: Colleagues will drill down into that, so I will resist the temptation to ask further questions on the issue.

On transitional, non-recurrent costs, the financial memorandum tells us that “it is reasonable to assume that Health Boards and local authorities will realise opportunity costs, which will be expected to be used to support transitional arrangements.”

What are those opportunity costs likely to be? I know that a table is provided but, for the Official Report, will you tell us a bit more about that?

Paul Leak: The method that we used to calculate the transition costs was to take the Highland example, as Mr Kenton indicated, and remove from its costs any costs that do not apply under the bill, such as children’s services costs, and costs that are specific to the lead agency model, to give us a transition cost estimate for the integrated joint board or body corporate model.

In carrying out that calculation, we understood from Highland that it incurred some costs on which it did not have to expend expenditure; it covered them by reallocating resource from other budgets in its programme. We noted that as a potential opportunity for other partnerships to follow in due course, but we did not apply it to our calculations, so the estimate for transition costs in the financial memorandum makes no assumptions for opportunity costs.

The Convener: We have received written evidence from some local authorities, and a representative of East Dunbartonshire Council has given oral evidence today. In its submission, East Dunbartonshire Council says:

“There is no focus on the issues arising from the delegation of budgets and resources under each of the 2 options available which is a key area of concern and will have far reaching implications in the medium/longer term and the realism attached to releasing resources from
bargains tied into acute budgets without de-stabilising hospital provision.”

Will you respond to that?

Paul Leak: From my understanding of the response that was given earlier, I think that that refers to the fact that we did not include in the bill the potential benefits of the redesign of secondary care by referring specifically to that. It could be argued that some of the potential efficiencies from reducing delayed discharges reflect that.

Alison Taylor: There has previously been helpful discussion about the difficulties associated with releasing any resource from acute spend and the need to incorporate acute spending and activity in what I would describe as the strategic planning process that we are laying out for the integrated systems. The main focus in policy terms is that we do not believe that we can deliver better outcomes for people unless we ensure a strategic planning process that reflects the entire journey of care. The assumptions that are worked in about redesign of all types of provision—primary care, community care and hospital care—depend largely on the local opportunity for improvement.

Christine McLaughlin can add more from a health perspective.

Christine McLaughlin (Scottish Government): The bill covers an overall approach in relation to scope. A number of submissions have referred to the extent to which scope is included in the financial memorandum, and the memorandum sets out the total spend on adults, although it does not specify in great detail the components of resources that will come within the scope of a plan. That work has been taken forward through the integrated resources advisory group, which I chair and which includes directors of finance from local government and health, the Association of Directors of Social Work, Audit Scotland, the Chartered Institute of Public Finance and Accountancy and other bodies. The issue is how to get the best use of the total resources; we have tried to outline that up front in the financial memorandum. This is not just about what things cost and what can be identified as tangible savings but about the wider question of making best use of the total resources available.

If members are interested, I can provide the committee with details of further work in which we have asked partners to give us information about the scope of resources that each partnership is looking to put into the overall scope of the plan, but that is not identified in the financial memorandum. I had the sense that that was where some of the responses were coming from; they were about quantifying the scope. I do not know whether that answers your question.

The Convener: To a degree, it does. I will continue on costs, which are fundamental to the financial memorandum. A number of people who have submitted evidence have said that the costs on health bodies are more clearly identified and addressed than the costs on local authorities are. Why is that?

Alison Taylor: That partly reflects the fact that the financial memorandum reflects the costs incurred under the bill. As the bill—if and when it is enacted—will take community health partnerships off the statute book, it will have a direct impact on management arrangements that health boards have had in place to support CHPs.

Paul Leak: We did not have the time to consult on the financial memorandum, so we took the opportunity to work informally with the ADSW and the Convention of Scottish Local Authorities to identify costs that local government might incur. We reflected all those costs in the financial memorandum.

In addition, we used the resources advisory group that we have established to advise us on the bill’s resource implications. We did not share the detailed figures with the group, but we shared with it all the headings and areas of cost that we had identified, to get a broader assessment of the costs that might apply. We used Highland as the model for the transition costs, but we captured all the costs that both partners in Highland incurred, which we incorporated, with adjustments, into the financial memorandum.

The Convener: You mentioned the ADSW, which believes that management posts are more likely to be deleted than is being suggested. It therefore says:

“we think that potential redundancy and redeployment costs will be significantly larger than those contained in the FM.”

Alison Taylor: As you will be aware, in the discussion with previous witnesses and in other discussions on the issue, there has been some reflection on the need to ensure that local systems have the flexibility to put in place arrangements that best suit local needs and which provide a smooth, sustainable and robust transition from current patterns of provision to a more integrated model. We have worked closely with representatives of the ADSW and other pertinent bodies in formulating the figures, as Paul Leak indicated. We have not been able to fathom in detail what such changes might amount to in a general sense, because they tend to be particular to local systems.

Paul Leak: Most of the CHP general manager posts are funded by boards, but some are part funded by boards and local authorities, so the estimate of the displacement costs in relation to
those posts addresses the costs that boards and local authorities will incur. That calculation relates just to the displacement of CHP general managers, as those posts are directly affected by the bill.

The Convener: An issue that North Ayrshire Council, which is the council for my constituency, commented on was “Insufficient ICT developments and recurring costs”.

The three local authorities in my area are coterminous with a single health board. According to North Ayrshire Council, "within Ayrshire the three local authorities operate different social work management information systems."

That will be an even greater issue in the Greater Glasgow and Clyde area, although perhaps less so in Lanarkshire.

What has been taken into account in that regard? There is clearly a concern that the financial implications have not been given as much consideration as those local authorities think that they should have been given.

Paul Leak: We have included in the financial memorandum costs specifically for a project to improve management information to support strategic planning. Strategic planning is a key proposal in the bill. The information that we have used to support the figures in the financial memorandum is based on a project that we have had under way for a number of years, which is called the integrated resource framework. It links health and social care data at an individual client/patient level and aggregates that up to larger geographies—general practitioner practice areas, CHP boundaries or local authority districts.

Having based the figures in the financial memorandum on work that is under way, we propose to roll out that work to all partnerships in Scotland so that, by the time the bill is implemented, we will have linked health and social care management data that can be used by partnerships to inform their strategic planning. The figures that we have included in the financial memorandum are based on actual costs that are incurred at the moment, which have been scaled up.

The process does not involve a standardisation of systems. Essentially, it uses existing systems, draws the data in and presents it back to partners in a way that they can access.

11:00

The Convener: Thanks for that. That is very helpful.

Christine McLaughlin: I know that a number of responses suggested that a new IT system is needed. The experience in health over the past five years or so has certainly been very much about the convergence of systems as opposed to creating new systems, and focusing on the standardisation of clinical information as well as the data itself. The approach very much fits the wider e-health strategy of using existing systems and accepting that sometimes the answer is not a one-size-fits-all system for every part of the country.

That is the straightforward answer to why we have not included a very large, multimillion pound figure for IT systems at this point.

The Convener: Okay. Thank you.

I have a further point before I open up the discussion to the committee. On the clinical negligence and other risks indemnity scheme—CNORIS, which is an acronym that I do not think many of us were familiar with before we came to the bill—Falkirk Council notes in its submission:

“In respect of Clinical Negligence and Other Risks Insurance, the FM notes that the costs of obtaining indemnity from the market might be prohibitive but makes no mention of additional costs that might arise from extension of the scheme.”

Can you talk us through your thinking in that area? What might the additional costs be?

Christine McLaughlin: CNORIS is not an insurance scheme as such; rather, it is a risk-sharing scheme that is mandatory across all NHS boards. Basically, it allows the total costs of claims in any one year to be shared on an agreed basis across all the members. Currently, it does not provide for social care functions. The reason for the scheme being in the bill is to extend its provision so that, if local authorities wished to join it for the functions that are defined in the bill, they can do so. In respect of additional costs, a premium would not be put in place; it is simply about sharing costs.

This is how I envisage the scheme working if social care functions were included. We would need to have a way of identifying the risks associated with those services to be able to attribute across all members the total costs incurred in any one year. We think that it is unlikely that there would be additional costs. In fact, the scheme was put into the NHS to try to make the best use of resources and avoid anyone having to hold reserves for any potential high-value claims. The aim was to have a smoothing effect across all the service.

Going out to market for services in health does not make a great deal of financial sense because of the potential for high-value claims in areas such as obstetrics. The proposal potentially allows social care functions to benefit from the same risk-sharing agreement. The strength in the NHS
scheme is that all boards work to very similar clinical risk management standards and procedures, and one would want to maintain that integrity for anyone who joins the scheme.

I have had discussions with people who have asked about the scheme more generally. There is nothing to prohibit anyone else from looking to set up a similar scheme for other functions, but we have focused on the functions that are within the scope of the bill.

The Convener: Thank you for that comprehensive response. I now open up the discussion to colleagues.

Malcolm Chisholm: I will start with the issue of reducing variations, in relation to which Paul Leak gave the helpful Lothian example. However, I am still struggling to see how that works. That is the largest potential efficiency, but I genuinely do not really understand it.

Paul Leak said that there would be uncertainties about the decisions taken by the partnership. To stick with his Lothian example, it is not clear to me how things would be different. There are variations among the four local authorities, but there are four different partnership boards, so I am not quite sure how the bill will change anything fundamentally in that regard.

Paul Leak: We considered very carefully the figures for the financial memorandum. We started by looking at the variation in health and social care expenditure across partnership populations. However, we were aware that some of the variation in local authority expenditure per head might be due to political decisions, so we took that out of the equation. That left us with the variation across partnership areas in health board expenditure. To stick with the Lothian example, that gave us expenditure figures per head of population for the four partnerships in Lothian, which, when they were averaged out, gave Lothian’s spend per head across the whole of the Lothian population.

The premise is that, through the bill’s provisions and the establishment of the partnerships, that variation will be apparent. I think that it is apparent in some boards at the moment, but it is perhaps a marginal issue. We think that the bill’s provisions will give it more prominence and that there will be at least the potential for partners to scrutinise why expenditure per head in, say, Edinburgh is different from that in Midlothian. It will allow comparison of the outcomes achieved for the additional expenditure per head and conclusions to be drawn from that. We hope that in due course that would then inform partners’ strategic planning decisions. What I tried to explain earlier about the uncertainty in the figures is that we are unsure about the decisions that partnerships will take when they are presented with the information. We are therefore saying that there is variation and that there are potential efficiencies but that it is up to the partners to act on that information.

Malcolm Chisholm: I will not pursue that, but I am sceptical about it. We already have separate partnership boards in Lothian, so I am not quite sure why they would not be able to act now if they wanted to.

Paul Leak: The question is whether that information—the total health and social care expenditure on adults in Midlothian, West Lothian and so on—is being reported at the moment. I am not sure that it is. At the moment, I think that all that is reported is information about the direct budgets that the CHPs manage. However, the fuller information will include figures on the use of all the services by the population, which will show quite material variation.

Malcolm Chisholm: Okay. That leads me on to my next question. You referred to the uncertainty about decisions taken by partnerships, but that also goes to the financial heart of the bill. Is that just about decisions taken by partnerships? Surely the totality of the resource that they have will be determined not by the partnership but by the council and the health board. I agree with the bill’s objectives and everything that you have said about the best use of total resources and so on, but it is still not clear to me how it will work in practice.

My question is perhaps a policy one. Is the Government comfortable with allowing 32 decisions in Scotland by health boards and local authorities on how much money goes in? That will be fundamental to all that is being proposed. The particularly important decision will be about how much money goes into acute services. I do not quite see how all that is going to work in practice in an equitable way. Is there a case for having more central direction of how much goes into the integrated budget?

Paul Leak: I will answer that unless Alison Taylor wants to.

Alison Taylor: There are several points in there that we might respond to. Paul Leak will start.

Paul Leak: Alison can address policy issues afterwards.

The resource advisory group that we have established is producing professional guidance for boards and local authority finance leaders on the process for setting the initial budget and subsequent budgets. The guidance will set out all the factors that should be considered by the partners in deciding what should be in the budget. One of the factors will be any movement by the parent bodies to remove some of the variation. For example, in discussions between a partnership...
and a parent body about the subsequent allocation to the partnership, the latter might argue that the parent body was allocating £50 per head less to it than to the next-door partnership while expecting it to achieve the same outcomes as that partnership. The discussion will then be around what can be amended. Therefore, the process will involve discussion between the parent body and the chief officer in the partnership about the resource that is being allocated.

Malcolm Chisholm: That will drive up costs, because no one will say to the parent body, “You’re allocating us £50 more than you’re allocating to the next partnership.”

Paul Leak: The challenge is for the parent body to say, “We’re allocating you £50 more than before. We’re setting you a differential efficiency target to achieve the same outcomes.”

Alison Taylor: Christine McLaughlin might want to speak about how local integrated budgets are arrived at and agreed, and about the interaction and support that we are putting in place around that with local partnerships. I go back to the discussion on variation and a point that Paul Leak made a few minutes ago about the investment that we are making in improving the provision of linked data at the local level. As he said, that will go below the partnership level as we work through the process and build on the experience of the integrated resource framework.

One of the things that we have learned from that experience, which is on-going, is that the data that comes out of that work gives local clinicians a great opportunity to look at variation between their own practices. That is absolutely not an area in which bureaucrats would wish to be involved, with one saying that one kind of variation was good and another suggesting that something was not right. Colleagues who are senior clinicians and senior medical officers have been involved in leading conversations at the local level that reflect on variation in spend activity and outcomes and what that means for local practice. Obviously, it is through primary care that we see a lot of unplanned admissions, so that transparency around activity and what is going on ought to be helpful in improving quality and outcomes, particularly for a frail elderly population.

I will hand over to Christine McLaughlin to talk about acute budgets.

Christine McLaughlin: Throughout the discussions that we have had on acute budgets, it has become evident that there are two different approaches: effort can be focused either on how much is in the pot or on the outcomes that will be delivered. We have got to the point of thinking that it is more productive to focus on the outcomes. As the committee will know, there are well-defined performance management arrangements in place for local authorities and health, so delivery of outcomes will be integral to those arrangements. We are not saying that we are leaving arrangements entirely to the discretion of local partnerships. If we do not see the outcomes that we expect to see, that would just fall within the normal management arrangements that already exist.

The point that Alison Taylor made was about transparency of information and the ability to compare and benchmark. In the Scottish Government, we anticipate a lot more investment of time and energy and a lot more focus across the NHS and local government more generally than just on this part of the spend, but there is a real benefit in having much more management information that will allow better decision making.

To put all that together, it is important to make sure that there is enough scope in here to make sure that the partnerships really work, but we would prefer to focus our efforts in that regard on the extent to which the required outcomes are delivered.

Malcolm Chisholm: My final question—

The Convener: Paul Leak wants to come back in.

Paul Leak: I just want to emphasise Christine McLaughlin’s point. The main focus for hospital provision in the bill is on unplanned admissions. A significant proportion of our hospital capacity is taken up with unplanned admissions, particularly of elderly people. I do not know whether this will be done through regulations, but we will target particular specialties for partners to include within the scope of the strategic plan. A relatively small number of specialties are responsible for most of the unplanned admissions bed days for elderly people so, through the bill’s provisions, we will direct partners to include those within the minimum scope of the strategy.

Malcolm Chisholm: That leads on to my final question, because the most difficult question is about the acute budgets. We had a representative of East Dunbartonshire Council here earlier, and I was struck by how many different local authorities Greater Glasgow and Clyde NHS Board has to negotiate with. It is difficult to see how that will work in practice. Your answer implies that you will give guidance or direction on which aspects of hospital budgets will have to be included.

I suppose that this goes back to the point about demographics. We all accept the objectives around late discharge and anticipatory care, but the hospital specialties that you are thinking of will still have all their beds filled because of the demographics.
The bill’s approach is based on the idea of a stable elderly population, which would allow us genuinely to reduce the need for hospital beds and build up community services. However, everybody in Lothian tells me that, while they have to increase community provision, they also have to keep hospital beds—in fact, they are increasing the number of acute beds at present.

11:15

It is not clear to me whether the thinking behind the savings is right, or how, in practice, you can include acute services budgets. Are you basically saying that each health board will include a budget for acute services? In some cases, I do not see how that can be done. Are you saying that boards will put in a small amount of money to increase the amount of community provision? What will that do? As you must know, that is one of the NHS’s concerns about the bill.

Glasgow is a good example. If there are a number of local authorities all trying to chip away at the health budget, and yet the board still has to run all the same hospitals—one of which is currently being rebuilt—with the same number of beds, I do not see how that will work in practice.

Paul Leak: I will address the technical points. The bill focuses on enabling parts of the NHS to use resources better across the entire spectrum of care. At present, there are artificial disconnects between community provision and acute provision within boards, and between boards and local authorities, all of which affect expenditure in each of those sectors. The bill’s premise is that, by bringing those things together and focusing on them all, we can better allocate the resource.

We think that there are efficiencies to be made through that process, as we indicate in the financial memorandum. If we compare the performance of our systems with that of integrated systems in other parts of the UK—for example, the care trust in Torbay and the system in North East Lincolnshire—we can see clearly that they have much lower bed day rates than we do.

There are efficiencies to be made through reallocating resources, but that will not be sufficient to offset demographic change, and we indicate that in the financial memorandum. The bill is about using the resources that we have now more efficiently and planning strategically across all the sectors to enable better use of resource in the future.

Alison Taylor: I reiterate what Paul Leak says, which goes back to the point that I made earlier. It is not really about handing money over; it is about bringing money together to reflect the care journey of the growing population of need, which largely consists of people who are frail and in their older years but also includes other adults who have multiple and complex needs.

We are focusing in particular on the importance of a strategic planning effort across primary care, social care and the particular aspects of acute hospital care that we believe lend themselves to being redesigned in favour of prevention. The key is the bringing together rather than the handing over.

As Paul Leak says, there is of course a large unknown quantity—as has been discussed a great deal this morning—with regard to the opportunity for redirection and reprovision. However, we believe that there is evidence to suggest that such an opportunity exists.

The primary aim of the job that we were given of bringing together policy and legislation was to seek a mechanism that makes much better use of the current resource envelope. If we do not make better and more efficient use of what we have now, we will certainly not be equipped to deal with demographic change. As Paul Leak said, the financial memorandum—specifically at paragraphs 34 and 35—states that we note and are reflecting on the impact of demographic change more broadly.

Malcolm Chisholm: Surely we are bringing such aspects together now. The bill sets up a body corporate, to which resources will be handed over, but you are proposing that we move a step on from that, and have a body that is, in a certain sense, separate from health boards and local authorities.

Alison Taylor: As we reflected on how we could integrate in the broadest and most straightforward sense, it struck us that—to return to what Mr Kenton said earlier—we could follow the type of model that Highland has used. It has also been used, to good effect, in some places down south, where—to put it in the simplest terms—one body hands something to the other, which takes the lead, and the money and the functions go together in that way.

Alternatively, we reasoned that we could take a different path and bring functions and resources together by creating something in the middle of a health board and a local authority that might resemble the overlap in a Venn diagram. That is what we have sought to do, but I challenge the idea that it is separate from the health board and the local authority.

The governance arrangements that we have in mind, which we have described in the accompanying material and which we have started to outline in appropriate terms for legislation, have a clear, strong role for the health board and the local authority. The objective of the exercise is to maximise their mutual support for each other as
regards delivering services for a common population of need. We do not see that as a separate exercise.

Also, as the bill stands, the duties that are placed on that joint board relate to strategic planning. It is conceived as a central point where the health board and local authority interests must come together to plan together for the population of need, to maximum effect for the population and to maximise the potential efficiency and effectiveness of the organisations themselves.

My colleague Frances Conlan will add to that.

**Frances Conlan (Scottish Government):** In terms of the technical aspects of the bill, there is a strong role for the health board and the local authority in relation to strategic planning. The duties are on the body corporate, as described in the bill. However, there is a clear duty on that body corporate to fully consult the health board and the local authority to ensure that they are full partners in that strategic planning process.

**Malcolm Chisholm:** It is probably beyond the remit of this committee, but I merely add that both NHS Lothian and the City of Edinburgh Council think that there is a big gap between the policy memorandum and what the bill actually says. That issue needs to be ironed out in the committee process.

**Michael McMahon:** The witnesses have already had a heads-up on the area that I am concerned about, and it is not dissimilar to Malcolm Chisholm’s point. There is an element of dancing on the head of a pin when considering whether a new integration joint board or an integration joint monitoring committee is a different institution from what already exists. However, the fact is that they are referred to in the financial memorandum as separate entities.

We have to take into account education and training when it comes to the organisational redevlopment. When the financial memorandum says that

“Support will be necessary”.

I assume that that is not flags, banners and cheerleaders and that we are talking about financial support. There is a cost involved in that. We heard from Mr Kenton that Highland did not have a take on that, because it is not going to work under that system, but concerns have been raised that the cost implications of the transformation are not adequately addressed in the financial memorandum. Will you comment on that?

**Paul Leak:** The estimates for organisational development that are included in the financial memorandum were based on estimates by—goodness, I have forgotten the name.

**Alison Taylor:** It was the Scottish Social Services Council and NHS Education for Scotland.

**Paul Leak:** They were estimates for providing organisational development for the members of the integration joint boards. In addition, we are looking to develop the strategic planning capabilities within partnerships, and that is included in the estimate from the SSSC.

**Michael McMahon:** In the response that I had earlier, there was a comment on management positions being lost and redundancy costs being incurred. Have those costs been included in the financial memorandum?

**Paul Leak:** Yes. I do not have the reference point, but we included a provision for the potential displacement cost of CHP general managers. We have not included any other posts, as the CHP general manager posts are the posts that will be directly removed as a result of the bill.

**Michael McMahon:** Have numbers been discussed in relation to that and can those numbers be achieved through voluntary redundancies?

**Paul Leak:** We have set out three scenarios for the CHP general managers. One is that all the general managers are successful in applying for the chief officer posts in the joint boards; another is that none is successful in securing a chief officer post; and the third is a midway point, where half the general managers are successful. For each scenario, we then calculated the potential displacement costs, depending on the number of general managers who are not successful. In each case, we assumed that half of the people who were not successful would be made redundant and half would go on to a redeployment register and then subsequently be re-employed. I am just trying to find my notes on that.

**Christine McLaughlin:** While Paul is doing that, I will mention that we are in a fortunate position in having had a pilot of which we can take cognisance in developing the costs. However, we are aware that there was a slightly different position in Highland, partly because of the speed of implementation there.

We recognise that the various partnerships are at different stages, but some of them are already implementing what they call shadow arrangements and some have already appointed people to posts, so there are different partnerships that we can use to give us a bit more assurance—or not—about costs. Some of the partnerships have set up their shadow arrangements without additional costs being incurred, but the situation will be different in each partnership. Some might have costs because of their particular circumstances and structures, whereas others might incur insignificant costs—there is a bit of a spectrum. We would hope that
the fact that the partnerships have more time to put their arrangements in place will allow them to resolve potential issues and to work through any potential for redeployment.

Paul Leak: Paragraph 51 of the financial memorandum, on page 31 of the explanatory notes, says:

“If none of the 28 displaced Community Health Partnership general managers “are successful ... the ... cost would be £3.5m incurred in 2014/15 and £1.3m”

in the two subsequent years. If half of them are successful, it would be proportionately lower—it would be

“£1.8m incurred in 2014/15 and £0.7m”

for the two years after that.

John Mason: Continuing on the same theme, I refer to a point in the NHS Highland submission that the convener quoted earlier. It states:

“It is worth noting that the integration of budgets between partner bodies requires a high degree of trust and openness - and this is as much about leadership and culture as legislation.”

We had the example of Glasgow where, basically, that did not work. Do you feel that the bill will be sufficient, even if people do not get on with each other? Does it actually depend on attitudes?

Alison Taylor: None of us would make the leap to saying that legislation alone is sufficient, but our position and ministers’ position is that, given the shape of population need, it is reasonable, in the light of the experience of the last several years of partnership working, to place particular emphasis at this stage on the importance of effective integrated working.

In this instance, legislation can place the importance of working effectively together on a different footing. In relation to public sector leadership, it can become something that is defined in statute as necessary, which places it in a different context. Alone, however, legislation is not enough. The financial memorandum reflects on issues such as organisational and leadership development, which are key to tackling the challenges ahead. We are not starting with a clean sheet in that regard, but there is a renewed emphasis on those issues as we reflect on developing need. It is a mixed picture.

John Mason: From what I can see at a distance, Highland seems to be a good example of where things have worked well. However, my concern is that, if we repeat the process 32 times, there might be one or two cost implications. The committee’s job is to be a bit sceptical about that. If the new joint board, or whatever it is called, develops a life of its own and we effectively have three legal entities all trying to relate to one another, there are cost implications in that.

Alison Taylor: The joint board has to have some life of its own. It is meant to lead strategic planning in an integrated way, which has been set out in a fairly novel manner. However, it needs to be carefully and closely bound into a relationship with the health board and local authority. Those are the points that Frances Conlan reflected on.

You are right to say that we have seen success in Highland. There are other examples of areas that are well down the path of developing an integrated approach although, for the reasons that Mr Kenton raised, nobody at this stage is actually doing the joint board arrangement as it is described in the bill. We can learn from examples such as Edinburgh, West Lothian, West Dunbartonshire and other places that have an integrated approach in place.

Where there are challenges—we all know that there will be areas where there are specific challenges in any programme of change, particularly for something so significant—we will need to provide support and improvement support. We have established arrangements in place to help with local development as necessary and as the programme rolls out.

I am not sure whether my colleagues who have worked directly on the detail of the financial memorandum want to add any comments.

Paul Leak: No.

11:30

John Mason: I asked the representative from East Dunbartonshire Council whether, if it hands over £10 million to the joint body, that money will have to be double accounted for, because the joint body will have to scrutinise exactly what the £10 million is used for and East Dunbartonshire will also scrutinise exactly where it goes. If they do not do that, will the auditors criticise them? I fear that there might be duplication.

Alison Taylor: I recognise your concern. It is of key importance to us that, in the pursuit of improved outcomes, we do not create a whole new bureaucracy and a whole new science. I will hand over to Christine McLaughlin to reflect on how we are handling the issue.

Christine McLaughlin: The resources group is focused on the accounting impact of the arrangements, with the focus being on doing it once and being able to take an approach that we use. Hosted arrangements are in place in many services. Glasgow is a good example of such an approach being taken, because often one part of the system or one council takes the lead on a
service and provides it to others. There are some pretty tried and tested ways of ensuring that a service can be provided somewhere and that that does not result in duplication of effort, whether in accounting, bureaucracy or the administration of the people who are involved.

Our approach in the bill is to achieve transparency through the accounting process and to avoid going down the multiple accounting route or having additional bureaucracy. At this point, we do not anticipate increases in the number of staff, because staff already work in the area in CHPs and local authorities. There is nothing to suggest that there is a need to overlay anything on top of that structure. We are looking at how we can use the existing resources and infrastructure as far as possible.

**John Mason:** Do you anticipate that the specific problem that Highland Council identified with properties moving between the two sides will arise? How would that be dealt with?

**Christine McLaughlin:** We are aware of that issue, which relates to the lead agency model. There is a way of dealing with that whereby assets would be retained under local authority provision.

I am fairly confident in saying that, until now, with every issue that we have identified as an issue to be resolved, we have either resolved it or there are a couple of different options for ways in which partnerships can resolve it. Those are all probably in the category of technical issues that arise because we are working within the existing structures in local authorities and health boards. There is pretty much a way through all those issues, and we will obviously try to ensure that any solutions do not have additional financial implications.

**John Mason:** Is the VAT issue one that has been resolved, or is it one for which there are a few options?

**Christine McLaughlin:** We are close to a resolution on VAT. We have been working effectively with Her Majesty’s Revenue and Customs on the issue and have had good engagement with it. We are not yet at the point of a formal decision, but the advice that we are getting on the model that we have proposed is that, on the face of it, HMRC is in agreement with our working assumptions, which would mean that there would not be an additional VAT burden.

We are clear that we are not looking to do something that creates additional opportunity on VAT, but are looking to create a VAT neutral position. All our risk mitigation is about ensuring that we deal with the issue early and have good engagement, because from the outset we have been relatively confident that there is an approach that would not increase the VAT costs to local authorities.

**Gavin Brown (Lothian) (Con):** I want to go through a few parts of the full financial memorandum, if I may. However, before I do so, I want to clarify something. Did Paul Leak say that there was no time to consult on the financial memorandum?

**Paul Leak:** I may have used the wrong terminology. Frances Conlan will expand on that.

**Frances Conlan:** We consulted with ADSW and COSLA and with our third sector and independent sector colleagues on some of the assumptions and estimates that we have identified and are in the financial memorandum. I suppose that Paul Leak was referring to a formal consultation that might involve a wider distribution and a wider stakeholder group.

**Gavin Brown:** To be clear, you spoke to some stakeholders, but there was no formal consultation. Why was there no time for a formal consultation?

**Frances Conlan:** It was felt that the best approach was to use existing examples around the country, as my colleagues have said. Using Highland as an example, we decided that speaking to colleagues who have already made good progress on the integration of services, such as West Lothian Council and East Dunbartonshire Council, and then speaking to specific professional groups and stakeholder groups that were involved in key areas, such as the third sector, which is a big provider of care services, would be the most efficient use of our time in identifying the estimates that are in the financial memorandum.

**Gavin Brown:** Forgive me for labouring the point, but did you do that because you thought that it was a better way of working or because of the pressure of time?

**Frances Conlan:** We felt that it was the most appropriate engagement method. In fact, we have received feedback from colleagues and stakeholders to the effect that they were receptive to that approach.

**Gavin Brown:** Thank you for clearing that up.

The convener raised the issue of efficiencies, and Malcolm Chisholm raised the specific point about reducing variation. I want to go through the three categories of efficiencies in a bit more detail. I feel that the financial memorandum is a bit light. It has a bit of blurb and then it produces a figure. As a member of the Finance Committee, I find it difficult to know where the figures come from and whether they are right. We are given a figure of £104 million for reducing variation, but it could have said £204 million and I would not have
known whether that was right, based on the information in the financial memorandum.

On delayed discharges, the savings are estimated to be between £22 million and £41 million per annum. What would need to happen in order to save £22 million a year? I have to say that my background in health issues is poor, but my understanding is that that would be the saving if nobody stayed in hospital for more than 14 days. Is that correct?

**Paul Leak:** Yes. To arrive at that figure, we took the total days that are spent in hospital following the point at which people are clinically ready to go home—we counted 14 days from that point, and basically took the subsequent days that were spent in hospital. The total delayed discharge equates to something like 80 wards across Scotland, so it represents a material level of resource. The assumption was that, if there was sufficient community capacity in community health district nursing and social care to prevent those delays, those patients could go home. However, the resource that would be released from that would need to be recycled into the provision of that community capacity.

We calculated the total resource that is used for those post-14-day delays and took away from that any fixed and semi-fixed costs, so that we were left with the direct costs that should be able to be released. We then offset from that the cost of the estimated social and health care that would need to be provided in the community. The net figure was £22 million.

**Gavin Brown:** How likely is it that we will get to a stage at which nobody is delayed for more than 14 days? Is that a realistic goal or is it a best-case scenario?

**Paul Leak:** We need to recognise that we are in a dynamic situation, as we have discussed. We have increasing demand due to demographic change, so any efficiencies that we make might just create capacity to cope with increased demand in future. Nevertheless, we need to make those efficiencies, particularly in relation to delayed discharges, as the evidence is that elderly people start to experience functional decline after three days. There is, therefore, an imperative to get people home or into a homely setting as soon as possible.

Given the scale of the issue—it is not marginal; it is a material level of resource—and the clinical and care imperative, partners should, through strategic planning, be able to reorganise the resources and create the capacity that is needed in the community. They should, if you like, be able to prioritise resources to create that capacity. Of course, the question to which we do not know the answer is whether that will simply create capacity for increased demand in future.

**Gavin Brown:** Obviously, such a goal is desirable and everyone wants it but, coming back to my initial question, how likely is it and how long will it take to happen?

**Paul Leak:** The evidence from the integrated systems in Torbay, North East Lincolnshire and the Isle of Wight shows that they do not have delayed discharges and that that is possible through the redirection of resources.

**Gavin Brown:** The projected £12 million saving from anticipatory care plans is based on the Nairn study. How robust is that study and how likely is it that what happened in Nairn will be replicated elsewhere?

**Paul Leak:** The study is robust. It was published in the *British Journal of General Practice*, is second-tier and has been peer reviewed. However, although its evidence is transferable to other partnerships in Scotland, it is contingent on having an integrated approach. Nairn fostered an integrated approach between health and social care, with locality and integrated teams working closely together and a reactive response to admissions. There is no question but that it is transferable. Indeed, a subsequent study across other settings supports our initial assessment and indicates a £16 million saving.

**Gavin Brown:** The third and largest category of saving is from reducing variation. Malcolm Chisholm has already asked about that, but is the £104 million in efficiency savings to be achieved through having no variation whatever in health boards? Where do we need to get to in order to realise such a saving?

**Paul Leak:** With a four-partnership health board, we assumed that the partnerships with more than the average level of variation would in time be able to get down to the average but there would still be variation within the partnership. The saving is not achieved by removing all variation.

**Gavin Brown:** You say in the financial memorandum that such differences could be “due to differences in local democratic decisions, input costs, prevalence of unpaid care, the relative size of the voluntary sector or inefficiencies.” Are you not relying on almost all variation being down to inefficiencies?

**Paul Leak:** That sentence relates to variation in social care expenditure. For those reasons, we removed that from the analysis and focused on the variation in health board expenditure, controlling for the population’s demographic profile and differences in need—or so-called demand-side
issues. That left historical supply-side decisions as the only explanation for variation.

Gavin Brown: Can you get some of your workings to us? As I said in my opening remarks, the £104 million seems to have been just plucked out. It might be absolutely right, but I have no way of knowing.

Paul Leak: I can prepare an explanation for you.

Gavin Brown: Finally, on the issue of VAT, which is covered in the financial memorandum but has not yet been raised, your view, at least on 28 May when the bill was introduced, was that the bill was likely to be VAT neutral. However, South Lanarkshire Council has said that VAT is “critical”—obviously it will be critical if it costs £32 million—and that the issue “requires to be confirmed in order to inform the formation of the optimum partnership model”.

ADSW has also expressed concern, asking whether the Scottish Government is going to “fund these pressures should they occur”.

Has anything happened on this matter since 28 May? Are you in a position to confirm whether the bill will be VAT neutral?

Christine McLaughlin: I think that my earlier answer stands. We are still having constructive dialogue with HMRC, but we do not yet have a formal position from it on the matter. Its verbal response to the information that we have provided is that it agrees with our logic that takes us to a VAT-neutral position, but I do not want to commit it to anything at this point, because more work still has to be carried out. However, the position is encouraging.

Gavin Brown: I will not ask you to overreach but, just to be absolutely clear, are you saying that, as it stands, HMRC’s verbal position is that the bill will definitely be cost-neutral?

Christine McLaughlin: I am sorry, but that is not what I said. As Paul Leak was at the most recent meeting with HMRC, I ask him to confirm the position.

11:45

Paul Leak: The VAT issue is different for the different models. HMRC has advised us that, in its opinion, the integration joint board—the body corporate model—is not a taxable person because it does not provide services. However, the bill includes provision that, at some point in future, a body corporate might be empowered to do so. In that case, in HMRC’s view, the body corporate would become a taxable person and the question of section 33 or section 41 status—in terms of the Value Added Tax Act 1994—would need to be decided on.

For the lead agency model, the matter is slightly more settled, as there is existing HMRC guidance that relates to the Department of Health in England. With HMRC, we have been developing a Scottish version of that. In fact, NHS Highland has recently had a decision on the basis of that model that has allowed it to achieve a VAT-neutral position. We will build on that to produce Scotland-wide guidance.

Gavin Brown: For the financial memorandum, your position is that it is likely that the arrangements will be cost neutral. Is that a fair description?

Paul Leak: Yes.

Christine McLaughlin: That is certainly our working assumption, if I may put it like that. Our working assumption is that the arrangements will be VAT neutral. From our discussions so far with HMRC, there has been nothing that would change our position on that.

Jean Urquhart (Highlands and Islands) (Ind): Many of my points have already been answered in responses to earlier questions, but I have a couple of questions.

Nick Kenton mentioned earlier that NHS Highland and Highland Council have a 400-page agreement. He seemed to say that, on reflection, that was probably too detailed. Given the Scottish Government’s culture around looking at outcomes through single outcome agreements and so on, is there a bit of a mismatch in respect of agencies such as health boards? In what is a very complex situation, could such matters be simplified?

Also, the language of “integration joint boards” slightly conjures up the idea that we are creating another tier of governance. Having been associated a wee bit with the Highland experience in its early days, I cannot remember that being an issue, although that was perhaps because there was already joint working in other areas. The creation of a joint board seems to be an option, whereas I would have thought that we would be anxious for that not to happen.

Alison Taylor: Fortunately, as we have developed the policy underlying the bill, we have had the opportunity to reflect on evidence from elsewhere. As my colleagues have mentioned, evidence from one or two places in other parts of the United Kingdom demonstrates that there are significantly better outcomes from what we might describe in informal terms as better integrated working. We have been able to learn from those places.

A key lesson from all the evidence that we have reviewed—both from the written evidence and
from talking to and visiting people—is that there are no fixed structural models that will deliver better integration just by virtue of being imposed on an existing system. None of us would expect that, and I think that common sense and experience tell us that. However, there are characteristics of successful systems that we can pick up on, which is what we have tried to do in the policy and the bill. Four key characteristics, which we always return to in our discussions with people, are that better outcomes come from integrated systems where people plan together for their populations of need, where they bring their resources together, where they bring clinical leadership to the forefront of what they are doing and where they exhibit strong general leadership.

Regarding the detail that needs to be covered in what one might describe as the partnership agreement between the health board and the local authority, an important lesson that we have learned from other places is that the partnership agreement needs to be as detailed as it needs to be for local circumstance but it needs to be given thorough consideration. As Mr Kenton reflected, it is hard to anticipate every eventuality that might arise, but at the same time we do not want to end up with a massive new bureaucracy. We are currently investing effort in starting to look at the sort of guidance that will be beneficial to local partnerships to ensure that their partnership agreement captures sufficient information to deal with future challenges and to nail down the parameters of the partnership arrangement without being overwhelming. As Christine McLaughlin reflected, for financial matters, the fact that we have a living example in Scotland in Highland is tremendously helpful. We have quite a lot of work under way and we recognise the risks that are involved, but we need to offset those against the risk of failing to act.

On the language of “joint boards”, we all recognise that there is a potential tension. The reason why I have reflected on evidence from elsewhere is because the idea of planning for the population of need and bringing resources together—not just money, although that is tremendously important, but the human resources that support service delivery—seems to be what helps to shift outcomes. There are good reasons in some areas why people might not want to use the lead agency model, so we needed to provide an alternative. In describing an integration joint board, we have attempted to describe an arrangement that knits together the health board and local authority to provide the focus for that population-based planning and bringing together of the two sets of resources for delivery.

The Convener: That has exhausted questions from committee members, but I want to ask a couple more questions before we wind up. First, what target, if any, is there for delayed discharges under the national performance framework?

Alison Taylor: Ministers have established a new target for delayed discharge this year. Local partnerships are currently working towards delays of no more than 28 days—I look to Paul Leak to confirm that—and we are moving towards a 14-day target. If Paul Leak can check the timescale, that would be helpful.

Paul Leak: I will just check.

Alison Taylor: A considerable amount of effort is being invested in trying to shift the pattern of delayed discharge, in part because there is anecdotal evidence—this would apply to any such situation—that having a target makes it easier for people to focus on the issue. There is also an opportunity for improvement. Would it be best if we wrote to the committee on that point?

The Convener: Yes. I asked the East Dunbartonshire Council representative about the issue because its submission expresses concern about how realistic the 14-day target might be for some local authorities and health boards to achieve.

Alison Taylor: Ministers have reflected quite carefully on the improvement in delayed discharge over recent years in Scotland. There has been a tremendous degree of progress.

The Convener: The financial memorandum includes a dramatic graph to illustrate that.

Alison Taylor: Yes, the graph is dramatic. Evidence from elsewhere suggests that there remains opportunity for improvement. We shall write to the committee with details of the timescales for the new targets.

The Convener: Thank you.

The point of the bill is to provide improved efficiency, better outcomes and lower costs to the taxpayer, but is the bill not a bit of a halfway house? Is it not time—I am not asking for a political answer on this—to cut the Gordian knot? For example, in Ayrshire, where we have three local authorities and a health board, the local authorities already work closely with the health board and they share among themselves functions such as payroll and council tax collection. Given that they are already coming closer, could we not be more responsive to people’s needs if we had one organisation that fully merged local authorities with health boards? Could that not provide more strategic overview and reduce costs while perhaps allowing us to resurrect some of the local town councils, which people still talk about some 40 years after they were abolished, to provide locally responsive services? Could you perhaps comment on that? [Laughter.]
I ask you to comment from an efficiency, better outcomes and lower costs perspective rather than a political one.

**Alison Taylor:** Any question on public sector reform more broadly is one that we would refer to ministers.

**The Convener:** Somehow, I thought that that might be your answer, but I decided to take a chance anyway—it has certainly woken up Jamie Hepburn.

I thank committee members for their questions and our witnesses for their answers. That being all that we have on our agenda today, that is the end of today’s meeting.

Supplementary written evidence

Scottish Government Bill Team
1. The Association of Directors of Social Work (ADSW) is the professional association representing senior social work managers and Chief Social Work Officers in local government in Scotland. Health and Social Care Integration is one of two major policy initiatives – the other being Self Directed Support – that will transform adult social care. The financial underpinning for the integration legislation is a matter of some importance. We warmly welcome the Committee’s invitation to all organisations that have an interest in, or which may be affected by, the Financial Memorandum to the Public Bodies (Joint Working)(Scotland) Bill.

2. The implementation costs and financial impacts of the Bill are very difficult to estimate, partly because councils and health boards are still in the process of deciding which services are in scope and which of the two main integration models to adopt. We wish to acknowledge that the Financial Memorandum is a helpful and thoughtful document, drawing upon a wide range of evidence and analyses to help identify the key financial issues and estimate the range of likely implementation costs.

3. Our response follows the questions set out in the Finance Committee questionnaire. In summary, ADSW’s view is that:

- Legislation is likely to be better framed following consultation on draft Bills. In this case there was formal consultation on the policy proposals, but not on a draft Bill.
- For the integration vision to be achieved, health and social care partnerships need to unlock the budgets currently funding emergency inpatient admissions. ADSW is extremely concerned that the Scottish Government may set the minimum inpatient budgets to be transferred to Partnerships at too low a level to deliver the step change required.
- The Financial Memorandum’s estimates of the savings that integration may deliver (between £138m and £157m) are problematic. Even so, they are acknowledged to fall well short of the demographic pressures. According to the Final Business and Regulatory Impact Assessment, published alongside the Bill, “by 2031 total annual costs will exceed today’s by £2.5 billion, at today’s prices” – this is 16 to 18 times larger than the Memorandum’s estimates of savings.
- The Scottish Government is committed (in paragraph 68) to funding one-off implementation costs of around £16.3 million, but it is a matter for regret that there is no funding commitment to the recurring costs for health boards and local authorities arising from the Bill.
- Transition team cost estimates seem reasonable, as do those for CHP leadership redundancy and redeployment costs, but there is no recognition that some local authorities are likely also to face redundancy and redeployment costs for adult social care senior management.
• Some of the recurring costs for health boards and local authorities are likely to be understated and would benefit from further work, especially in relation to locality planning, IT, performance information, and financial and activity analysis.
• The Financial Memorandum correctly identifies the risks to VAT recovery and staff pay and conditions harmonisation, and estimates their potential annual costs at up to £32m and up to £27m respectively. It is a matter for concern that the FM does not commit the Scottish Government to fund these pressures should they occur in future.
• A larger financial risk facing local authorities is that integration will in future erode the basis for charging for non-residential social care services, putting at risk income of around £43m. This issue is not discussed in the Financial Memorandum.
• Finally, integration in tandem with other policies – prevention and more concerted action on health inequalities – is likely to reduce rather than eliminate the financial impacts of demographic change on health and social care. ADSW believes that a wider review of future options for the resourcing of health and care is required in Scotland, similar in scope (but not necessarily in outcome) to reviews undertaken in England by Derek Wanless\(^1\), Andrew Dilnot\(^2\), and others.

**ADSW RESPONSES TO FINANCE COMMITTEE QUESTIONS**

**Consultation**

*Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?*

4. The Scottish Government did not consult on the contents of a draft Bill, but on the integration proposals for integration. The consultation paper\(^3\) did not include “financial assumptions” – that is, the implementation costs of health and social care integration, now covered in the Financial Memorandum to the Public Bodies (Joint Working)(Scotland) Bill. There is therefore a marked contrast with the consultation process for Self Directed Support, which included three\(^4\) formal consultations – one on the policy, and two on the draft legislation. There has been no formal consultation on the draft integration Bill or the associated Financial Memorandum.

5. As a general principle, ADSW believes that legislation is likely to be better framed following consultation on draft Bills.

6. ADSW responded\(^5\) to the Scottish Government consultation in September 2012. Our main comments on financial issues, such as pooled budgets, concerned the need to include a significant share of NHS acute inpatient budgets within the

---

\(^4\) A fourth SDS consultation is currently underway on regulation and guidance following the Act passing into law in January 2013.

scope of the new Health and Social Care Partnerships, and the need for a more fundamental review of the future resourcing of health and social care in Scotland:

ADSW supports the intention to integrate budgets and would seek clarity regarding the establishment of these arrangements and the volume of resource to be included from the acute sector and other forms of institutional care. The Association believes that a wider review of the resourcing of health and care in the context of demographic demand is required, similar to the Dilnot review undertaken in England. Equally, there should be more focus on self-directed support and its impact on budgetary arrangements. Joint outcome based commissioning should continue to be a key driver towards outcomes focused change.

7. We also drew attention to charging issues in social care, compared to NHS services free at the point of delivery.

8. ADSW is represented on the Adult Health and Social Care Bill Advisory Group, and on the working groups that are preparing draft guidance, including the Integrated Resources Advisory Group which is considering the financial issues associated with pooled budgets, rather than the Bill implementation costs. Members of the Association also participated in the five Practitioner Engagement Events organised by the Scottish Government last summer as part of the consultation.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

9. As stated above, there was no formal consultation on the draft FM. The normal process of government involves civil servants, and sometimes Ministers, meeting with professional associations, to discuss relevant issues in confidence. The Association has been involved with COSLA in such meetings on aspects of the draft legislation and associated documents, including the draft Financial Memorandum. Since there was no formal consultation, it would not be appropriate to comment on whether ADSW’s comments have been accurately reflected in the published Financial Memorandum.

Did you have sufficient time to contribute to the consultation exercise?

10. Yes, the Scottish Government’s formal consultation ran from 8 May to 11 September 2012.

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

11. The Bill has financial implications for adult social care currently provided by councils, as well as for NHS services in scope. For both council and health boards, the financial implications are of two kinds: (1) the substantial issues involved in delegating budgets and other resources on either of the two main models of integration; and (2) the shorter term issue of resourcing implementation. While the latter is the proper focus of the Financial Memorandum, ADSW wishes to draw the Committee’s attention to a key issue of concern about the extent to which acute inpatient resources are within scope of health and social care integration.
12. The Scottish Government clearly stated the case for change in its 2012 consultation paper. Health and social care integration was necessary to address the “two key disconnects” within the system:

The first disconnect is found within the NHS, between primary care (GPs, community nurses, allied health professionals etc.) and secondary care (hospitals). The second disconnect is between health and social care. (para 1.2)

13. Addressing these disconnects would allow the balance of care to shift from institutional care to services provided in the community, and resources to follow people’s needs (para 1.8). This would support more preventative strategies based on “assessment, treatment, rehabilitation and support in the community” (para 1.10) – a strategic change now made urgent by the ageing of the population and by increasing numbers of people with long term conditions or disabilities.

14. The most recent ISD “Integrated Resources Framework” information on the balance of care for older people (we do not yet have this for all adults) is shown below – hospitals and care homes account for nearly 60% of spend, and nearly 31% of all health and social care spend is on acute emergency admissions (£1.4 billion):

![IRFScotland - 65 plus health and social care 2011/12](source)

Source: available on request from Christine.Mcgregor@scotland.gsi.gov.uk

15. For the integration vision to be achieved, health and social care partnerships need to unlock the budgets currently funding inpatient admissions. They would do this by having control over a significant proportion of inpatient budgets – focussing
on specialities with high rates of emergency admissions – which in the short term would be returned to hospitals to manage current bed capacity, but in the medium to longer term would be used to take beds out of the system to fund the expansion of preventative and community based health and social care services. This would be achieved by joint strategic commissioning which would specify the hospital and community based services needed over the forward planning period to deliver better outcomes for public expenditure on health and social care.

16. There are three potential problems with this delivery model, all with potential solutions:

- First, funding. If successful, the model will reduce future demand for inpatient care but is unlikely to eliminate the need for more funding to address increased demand due to demographic change. Change funding is also needed to cover double running costs enable the expansion of community health and social care that is necessary to provide less expensive alternatives to inpatient admission. Unless demographic and change funding continues, these shifts in the balance of care will be difficult to make on the scale required. We return to this issue at the end of this submission.

- Secondly, many hospital catchments cover several local authority areas. Transferring relevant parts of hospital budgets between different health and social partnerships carries risks of destabilising hospital management. ADSW believes that these risks can be managed but that further work is required on mitigation measures as a matter of some urgency.

- Thirdly, there are issues of power. Health Boards are reluctant to lose control over in-patient budgets, and local authorities have analogous concerns about loss of control over social care. Within the medical profession “acute specialties often have the loudest voice”6. These are serious challenges that the national and local work underway on governance and cultural change needs to address.

17. While these three problems are all challenging, ADSW believes that they can be resolved, given political will and leadership. The acid test will be the quantum of acute budgets transferred to partnerships. ADSW believes that there is general agreement that all or most mental health and learning disability inpatient budgets, and those for non-obstetric GP beds, and any other continuing care or community hospital beds, should transfer to health and social care partnerships. In 2009-10, all of general psychiatry, psychiatry of old age, learning disability, and non-obstetric GP beds, accounted for adult spend of around £621 million, or about 18% of total inpatient spend on adults (aged 15+ for this illustrative modelling).

18. At the time of writing there is less agreement about the budgets for other inpatient specialisms. However, if we are serious about the resource following the person, and establishing commissioning budgets genuinely capable of reducing emergency admissions and shifting the balance of care, then our focus needs to be

---

on redesigning the emergency care pathway. This would mean transferring inpatient budgets for range of acute and other inpatient resources including: front door (accident and emergency), general medicine and receiving services, and those specialisms which are mainly emergency-driven: such as medicine of the elderly, rehabilitation medicine, and palliative medicine— all of which currently spend more than 70% of their annual budgets on unplanned admissions. Their combined spend on adults in 2009-10 was just under £1 billion. With the £621 million mentioned earlier, the combined budgets of £1.6 billion amount to 46% of the total inpatient spend but 64% of expenditure on emergency inpatient admissions. (In time, there is also a case for further extending the commissioning budgets to include other specialism such as respiratory medicine, renal medicine and cardiology, which also currently spend more than 70% of their annual budgets on unplanned admissions).

19. The Scottish Government is currently preparing guidance on this issue. We are extremely concerned that this may set the minimum inpatient budgets to be transferred to Partnerships at too low a level to deliver the step change required. Without control over a significant proportion of inpatient budgets, the new Health and Social Care Partnerships will not be able to commission the changes to the whole system of care that are necessary to achieve the vision for integration; by itself “joint strategic planning”, without responsible power over budgets, will prove to be insufficient.

20. This is now the most important financial issue concerning health and social care integration. Our comments on the implementation costs and savings in the Financial Memorandum are in the next section.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

21. The FM does not project costs and savings over 15 years for each service. The timescale for the Scottish Government costs in Part One is the five years 2012/13 to 2016/17; for recurrent costs to health boards and local authorities in Part Two, the timescale is 2014/15, then recurring costs from 2015/16. The earlier “Background” section of the FM mentions demographic cost pressures to 2030 arising from the ageing of the population, which paragraph 34 implies are much larger than “potential efficiencies” arising from health and social care integration. We comment first on demographic cost pressures and the potential savings from integration described in the “Background” section of the FM.

Demographic cost pressures and savings

22. Paragraph 34 states:

The Bill will enable Health Boards and local authorities to plan and deliver holistic integrated health and social care services and to improve efficiency in allocation and utilisation of their joint resources. In summary, it is estimated that the potential efficiencies for partnerships from the combined effect of Anticipatory Care Plans, reducing Delayed Discharge and reducing variation, to be between £138m and £157m. These potential efficiencies should be considered in the context of the scale of the projected increase in expenditure
attributable to demographic change, noted in paragraph 17, and will need to be reinvested within the partnerships in order to help meet demand.

23. ADSW welcomes this acknowledgement that any savings require to be reinvested. The FM refers in paragraph 17 to demographic projections of the increasing numbers of older people in Scotland but does not give data on costs. That can be found on page 5 of the Final Business and Regulatory Impact Assessment published\(^7\) by the Scottish Government alongside the Bill:

The challenge for health and social care services is seen in projections for demographic change in terms both of the expected growth in the older population and in terms of rising costs for health and social care for all ages. Over the next 20 years health and social care costs in Scotland are expected to rise by a total of £2.5 billion, so that by 2031 total annual costs will exceed today’s by £2.5 billion, at today’s prices.

24. The figure of £2.5 billion is consistent with the figures on page 11 of the Finance Committee’s recent report on Demographic change and an ageing population (February 2013) for the middle estimate (scenario 3) for health and social care demand projections. It is considerably larger than the savings estimates of between £138m and £157m contained in the FM.

25. The FM savings estimates are problematic. The anticipatory care savings of £12m per year are modest and are based on grossing up a small pilot project\(^8\) in Nairn (para 29). Anticipatory care planning\(^9\) is used to support people living with a long term condition to plan for an expected change in health or social status. It also incorporates health improvement and staying well. Completion of a common document called an anticipatory care plan is suggested for both long term conditions and in palliative care. The results of the Nairn pilot were encouraging, but grossing up potential savings to Scotland from a study of 96 patients receiving ACP in Nairn is bound to involve a wide margin of error.

26. Delayed discharge: Chart 1 at paragraph 25 of the FM shows a dramatic fall in the number of people in hospital whose discharge is delayed from over 3,000 in early 2002 to under 500 in April 2008, since when numbers have fluctuated. The FM acknowledges that “progress has been more difficult in recent years” but does not explain why. The Final BRIA identifies “Savings from reduced cost shunting e.g. reduced delayed discharges” as one of the benefits of integration (also mentioned at para 159 of the Policy Memorandum). Certainly for some individuals with high cost care needs there have difficulties in securing the joint NHS and council funding to support timely discharge from hospital; however, such “cost shunting” cases are not sufficiently numerous to explain the difficulty in making further progress to reduce

---

\(^7\) Final Business and Regulatory Impact Assessment (May 2013) http://www.scotland.gov.uk/Publications/2013/05/3959
delayed discharges. Data from Edinburgh, for example, suggests other causes: a 5.4% increase in home care hours in 2012-13, compared to the previous year, still left delayed discharge numbers at much the same levels. As more people are discharged, their beds are filled with new admissions who in turn become delayed.

27. The FM states that delayed discharge can be reduced by “by reallocating expenditure from hospital to community based health and social care to facilitate timely departure from hospital and provide alternatives to admission to hospital”. If no-one waited for more than 14 days £22m per year could be saved, increasing to £41m if no-one waited for more than 72 hours (paragraph 27). These calculations are based on the cost differences between inpatient beds and a weighted average of residential and home-based care. However, unless longer term investment capable of reducing future admission to hospital is increased, these savings are unlikely to be realised. The goal must be to ensure that GPs can get direct access to services or resources to care for someone at home as easily as it is currently to admit someone to a hospital or care home. In turn this requires that all GPs know about the services and resources available in Partnerships, and know that using them will deliver better outcomes for their patients.

28. The £104m savings modelled in the FM from “reducing variation” in health spend per weighted population down to the average are even less convincing. The statement that “For healthcare, the variation cannot be explained by differences in need across partnership populations or in input costs and may be due to inefficiencies” (para 30) assumes that populations weighted by the “NRAC” resource allocation variables adequately reflect all spending needs – a bold claim for any resource allocation formula, however good. Moreover annual health board budget allocations still reflect the phased changes from the previous “Arbuthnot” allocation formula to the current National Resources Allocation Committee (NRAC) formulae. So variation in NRAC standardised spend per head could reflect imperfections in the measures of need, transitional allocations, or externalities such as council spend (acknowledged in para 30), levels of unpaid care, inputs by of the third sector, etc

Implementation costs

29. The first point to note is that the Scottish Government is committed (in paragraph 68) to funding one-off implementation costs of around £16.3 million (table 1 on page 28) in “Part One” of the FM, but makes no similar commitment in relation to the “recurrent cost implications to health boards and local authorities set out in “Part Two”. ADSW discussions with civil servants indicate that these will not be funded. Part Two also contains some potentially high, if uncertain, costs from VAT exposure and potential staff pay and conditions harmonisation. Finally, throughout the FM there is a sense in which NHS costs are better understood and supported than local authority costs.

30. In Part One, the largest non-recurring transitional cost is for “Transition Team” costs intended to cover “leading and overseeing the transition arrangements” in each partnership. These are modelled for the 31 partnerships (Highland is already funded), using Highland’s costs adjusted for services out of scope, and potential savings from “opportunity costs” (ie part-use of existing posts) and potential
“economies of scale” (in Health Boards covering more than one partnership). Three scenarios are modelled (para 45):

- **“Prudent likely case”**: all 31 partnerships adopt the body corporate model with economies of scale – **£9.8m** over the two years 2014/16 (this is the figure shown in the FM tables);
- **“Lowest cost case”**: as above but able also to realise “opportunity cost” savings – **£6.4m** over the two years 2014/16;
- **“Highest cost case”**: all 31 partnerships adopt the delegation between partners model but with no economies of scale or opportunity costs – **£22.6m** over the two years 2014/16.

31. In reality the scope for opportunity cost savings will vary between individual councils and health boards. Councils for example are busy with implementation planning for Self Directed Support, as well as developing prevention strategies and service redesign to balance budgets: funding to release senior management staff time to plan for integration is both needed and welcome. The “prudent case” estimates included in the FM appear to be around the right size, but would need to be increased if, as seems likely, 2-3 partnerships adopted the delegation between partners model which has higher implementation costs. Further work is also required on the fairest distribution approach for these funds.

32. The remaining non-recurring Scottish Government investment (in FM Table 3) is either targeted to Health Boards (eg CHP leadership redundancy/redeployment costs) or retained to fund central government support or third sector initiatives. While we understand that CHP leadership posts (25.6 WTE) will be deleted by the Bill, other management posts, including those in some local authorities, are also at risk of deletion as partnerships develop integrated management structures (even if employment contracts for joint posts remain for a time with one or other of the parent bodies). Therefore we think that the potential redundancy and redeployment costs will be significantly larger than those contained in the FM.

33. The FM rightly notes the need to improve management information and to develop IRF jointly linked patient/client activity and cost datasets. However, all costs are seen as ISD’s, with partnerships accessing data remotely. This under-states the need for greater analytical and intelligence capacity within partnerships, and also the need to invest in IT improvements locally.

34. Part Two of the Financial Memorandum concerns the recurrent cost implications to Health Boards and Local Authorities from provisions in Part 1 of the Bill. The amounts depend on which integration model is chosen, and have been modelled, it would appear, as two scenarios: all 31 partnerships (excluding Highland) adopt the body corporate model or all adopt the delegation between partners (lead agency) model – for ease of reference these are shown together in the table below:
## Recurring costs to health boards and councils (future years as for 2015/16)

Source: Finance Memorandum Tables 5 and 4.

35. The **Chief Officer** costs are based on 30WTEs for Scotland – presumably the assumption here is that one other partnership will follow Highland in opting for a lead agency model – and are net of deleted CHP General Manager costs. The £150k for **financial recording and reporting** is for additional internal audit work under the body corporate model. The £800k for financial costs teams is for additional NHS finance staff to deal with the additional complexity of financial management following the inclusion of some hospital services within integrated budgets. There are no additional sums for increased complexity of local authority reporting. Clinical involvement in locality planning has been costed on “best practice” but appears to consider only NHS clinicians, not social work professionals. The linked dataset and analysis costs (together £750k) support both strategic planning and commissioning and performance management.

36. As already mentioned, the FM does not state that the Scottish Government funding would be provided to cover these recurrent cost implications for Health Boards and Local Authorities, and we understand that these costs will not be **funded**. While the sums are small, both health boards and local authorities are under severe fiscal pressure and it is reasonable to expect the Scottish Government to fund these additional costs of legislation to assist effective implementation.

37. The table above does not include **risks of £32m** per year associated with the possible change in **VAT recovery status** for integrated services which depends on whether HMRC considers body corporate partnerships as service providers, rather than the parent Health Boards and Councils (see para 73-79). The table also does not include potential savings from **asset rationalisation** between Health Boards and
Councils (paras 90-92). Costs associated with **harmonisation of staff terms and conditions** are also not included in the table and are seen in the Financial Memorandum as only applying to partnerships that adopt the delegation between partners (lead agency) model. But if all partnerships adopted that model then staff harmonisation costs are estimated nationally at **£27m per year** (paragraph 121). ADSW believes that the FM understates the impacts on staff conditions of service, including pension arrangements, of the inevitable mergers of NHS and council social care operational and management teams in the future under both models.

38. The FM regards the extension of the Clinical Negligence and Other Risks Indemnity Scheme (**CNORIS**) to social care in Part 2 of the Bill to be “cost neutral” (para 82), presumably because CNORIS is based on pooled self-insurance. ADSW would require a better understanding of the risk and cost implications for local authorities of using CNORIS before it could comment on whether this is cost-effective compared to other approaches to risk management.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

39. Local authorities, and health boards, are under severe fiscal constraint yet face rising demand. The Scottish Government is funding one-off costs, but not recurring costs. The recurring costs identified in the FM are modest (although some of them appear to be under-estimates) but the big unknowns are the risk of £32m per year if VAT recovery status changes, and up to £27m per year if harmonisation of staff terms and conditions proves necessary as integration progresses. There is also a risk to social care charging income (discussed further under Question 9 below).

40. Local authorities and health boards are funded mainly or wholly by the Scottish Government, who, as a matter of principle, should adequately fund legislative changes.

**Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?**

41. **Margins of uncertainty** are acknowledged in the FM. The authors have clearly made as much use as possible of Highland’s implementation costs, adjusting them for potential differences between the delegation between partners and the body corporate models, and attempting to show the impacts of varying assumptions about opportunities costs and economies of scale.

42. The **timescales** adequately reflect the Scottish Government’s expectation about the progress of the Bill through Parliament and the likely implementation date. On that basis implementation costs are expected to be higher in 2014/15 and then taper off over the following two years. This seems reasonable.

43. However, much of the detail about integration is not set out in the Bill but is dependent on Ministerial regulations and guidance that have not yet been issued for consultation (at the time of writing). It is understood that these will set out **de minimus** expectations on such matters as the services and budgets that shall be in scope. Partnerships are likely to vary in the extent to which they move forward
beyond the bare minima, and in the timescales involved, and in turn this will affect the phasing of their requirement for implementation funding. The FM does not describe how funding will be released to partnerships, and whether it can be carried forward if local phasing does not fit that assumed in the FM tables.

44. It would be useful if further work could be done jointly on the implementation cost estimates, perhaps overseen by the Integrated Resources Advisory Group, in the run up to the actual spending decisions for 2014/15.

**Wider Issues**

**Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?**

45. Our responses to earlier questions cover this point, with the exception of an issue raised in the **FM Annex**, which covers wider Scottish Government investment relevant to the Bill. Here the largest item is for the **Change Fund for Reshaping Care for Older People**, described in para 130 as “bridging finance”. These funds total £300m over the four years 2011/12 to 2014/15 (£80m/£80m/£80m/£70m) and in addition are being topped up by local authorities. The Fund is currently set to end on 31 March 2015.

46. The Change Fund has been an essential and very welcome development. However the fundamental problem of temporary funding was identified in ADSW’s submission to the Committee’s recent inquiry into the fiscal implications of demographic change, and was quoted at paragraph 103 in the published final report:

> New services funded by the Change Fund for Older People are financially sustainable only if they support a shift in resources from acute, emergency inpatient bed use to community- and home-based health and social care, thus allowing some hospital resources to close. Such changes are likely to be contentious. It is essential that closures are not perceived as service cuts, and this will require strong leadership and high profile public debate. During the period of transition, the need for double running costs for hospital needs and increased community and home based services is likely to be larger than the total Change Funds made available.

47. The Change Fund should not end in 2015 but is needed to continue to provide bridging finance to enable in-patient bed reductions to be achieved in order to release monies to support the expansion of preventative initiatives and more community-based services capable of reducing future needs for acute hospital in-patient care. The level of Change Funding will need to be increased to allow innovation to be further developed for adults aged 18-64 with complex care needs.

---

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

48. At the time of writing it is not clear whether or not there will be other future costs associated with the health and social care integration policy, apart from those identified earlier (particularly the VAT and pay harmonisation issues). However, there will be issues around charging for social care as integration progresses, and more joint teams and posts are established and in future it will be less and less clear what is “health” and what is “social care”: indeed, the policy intention is for care to be seamless. Not only will social care charges become more difficult to understand for service users, apart perhaps from charges for residential care, they will become more difficult for partnerships to levy for integrated services. As the FM notes (pars 12), income from charging for local authority charging for adult social care was £43m in 2010-11, a significant sum for partnerships.

49. Future costs that might arise from the subordinate legislation associated with the current Bill will need to be assessed when the draft regulations and guidance are available for comment (if not consultation).

50. Finally, depending on how the Scottish Government deals with the issue of acute inpatient budgets, discussed earlier, health and social care integration, together with the wide range of prevention work-streams and more concerted action on health inequalities, could do much to reduce the financial impact of increasing numbers of older people and people of all ages with disabilities and long term conditions. However, these policies are most unlikely to reduce the fiscal impacts of demography to zero. If GDP growth rates returned to their 30-year pre-austerity average, then the full cost of additional services required by 2030 would be affordable, provided there was appropriate political leadership and sufficient societal support for increased spending on care. If the long boom is past, then tougher choices are inevitable. Either way, ADSW believes that a wider review of future options for the resourcing of health and care is required in Scotland, similar in scope (but not necessarily in outcome) to reviews undertaken in England by Derek Wanless, Andrew Dilnot and others.
Introduction
1. BMA Scotland welcomes the opportunity to provide the Finance Committee with written evidence on the Public Bodies (Joint Working) (Scotland) Bill which requires NHS boards and local authorities to integrate adult health and social care services.

2. The British Medical Association is a registered trade union and professional association representing doctors from all branches of medicine. The BMA has a total membership of around 140,000 representing 70% of all practising doctors in the UK. In Scotland, the BMA represents around 16,000 members.

3. In responding to the financial memorandum supporting this Bill, it is important to consider the context within which plans for integration are taking place.

4. The single biggest challenge to health and social care services now and in the long term is the increasing number of elderly people with multiple physical problems, cognitive impairment and increasingly complex care needs. Projected future demand for elderly care services indicate that there will be 21% more people aged 75+ in Scotland by 2016, compared with 2006, and 83% more by 2031. Assuming demand increases in line with this growth and that current service models remain the same, this would require an average real increase in the NHS budget of 1.2% per year, every year. Healthcare spending is concentrated in the last year of life, but as people live longer, they are more likely to have more complex needs for both health and social care over extended periods. Older people’s social care budgets will also need to be increased significantly. An aging population combined with a difficult public spending environment poses a very significant challenge.

5. The Financial Memorandum sets out the costs associated with the introduction of the structures required to facilitate the introduction of integrated working, however it does not address the subsequent detail of the cost of integration of services and whether or not additional funding will be allocated to provide quality health and social care to local populations. The BMA believes that while considering the primary legislation to establish the structures that will facilitate integration, it is vital that politicians consider the subsequent financial consequences of this significant reform of health and social care services. The primary focus of integration of care must be about improving outcomes for patients, not a cost saving measure.

6. The British Medical Association has been involved in the consultation process in the lead up to the publication of this Bill, two BMA representatives also sit on the Government’s Bill Advisory Group.

---

1 “Funding health and social services for older people – a qualitative study of care recipients in the last year of life”, Hanratty, B et al, *Journal of the Royal Society of Medicine, May 2012*
7. During the consultation process we raised the following points which have not been adequately reflected in the Bill or supporting information.

**International experience/evidence**

8. The current evidence regarding the impact of integrated care is comparatively limited. While evidence from North America and Europe does indicate that integrated health and social care systems for older people demonstrate positive results on many indicators, researchers have highlighted specific and significant gaps in the existing evidence base in relation to costs, patient experience and clinical outcomes. It is essential that care for individual patients is funded and provided as a whole package, for example that there are comprehensive and fully funded care plans in place and improved co-ordination following hospital discharge; fragmented care for older people should be replaced with an integrated care pathway co-ordinated across the spectrum of care providers, including the third sector.

**Shifting the balance of care**

9. We support the aspiration to reduce acute hospitalisation, however the promotion of admissions avoidance, particularly of older people, must not restrict the appropriate access to the best care at times of medical need, and patient safety and quality of care must be prioritised at all times. The overall intention should be to maintain as many people at home as is possible, safe and appropriate, but there also needs to be recognition of, and planning for, an expansion in the number of those requiring some form of residential care. While an increased proportion of patient assessment and care will be community based, quality hospital-based health care will need to be maintained and developed for those who need it. No matter how well community-based services are planned and delivered, many patients will continue to require hospital assessment and treatment. Growing numbers of frail elderly patients with multiple physical co-morbidities, and often with dementia, will produce significant pressure on hospital-based services, undermining the perception that the funding necessary for quality community-based healthcare can be found solely through the transfer of resources from secondary care. There is an often an assumption that the only way to develop community services is to move funding from secondary to primary care, or health to social care, rather than considering the overall resource envelope and whether that needs to change.

10. Due to already excessive levels of workload there is no capacity for general practice to take on any further planned (or unplanned) work without the addition of new resources, including significant investment in infrastructure. A comprehensive assessment is needed of the likely resources, required to meet the needs in both primary and secondary care of a population with a higher proportion of elderly and very elderly patients and a rising prevalence of long term conditions. Without adequate planning and investment for both sectors, Scottish Government to shift the balance of care and integrate adult health and social care may be unachievable.

Comments specific to key points in the Financial Memorandum

Support to third sector

11. According to the financial memorandum, it is intended, via regulations, that integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. We would agree that there is a need to engender closer working relationships between health boards, local authorities and the third and independent sector, but there should be clarity on the exact nature of this involvement, how representation would be achieved and perhaps more importantly how this non-statutory sector would have influence over the resources in the statutory health and local authority structures.

Delegation

12. The Financial memorandum supporting the bill highlights the intention to delegate resources between partners to create an integrated budget (paragraph 65). However the BMA believes that it would be essential for locality structures to have budgetary authority if they are to genuinely influence the provision of services locally. We would therefore welcome more information on the Government’s intentions as to how authority would be delegated between the Joint Integration Boards and the local structures.

Clinical Leadership

13. The financial memorandum has set out specific costs for ‘clinicians’ involvement in locality planning’ (Table 5) that is required for clinical leadership.

14. An Audit Scotland review of Community Health Partnerships\(^6\) highlighted the lack of engagement of GPs as a key factor in the failure of many of these organisations and unless this is explicitly addressed during the legislative process, then there is a risk that the failures will be repeated. During the consultation process, BMA Scotland has welcomed the Scottish Government’s commitment to a strengthened role for clinicians, but it must ensure that the new Joint Integration arrangements are clinically driven and supported by management to avoid the pitfalls of CHPs.

15. It is vital, therefore, that this funding for clinical leadership is protected and sustained, in order to allow clinicians to both be involved with and drive planning at a local level, there must be a clear commitment to value senior doctor time sufficiently and make time available in secondary care job planning or commission GP time. It is essential that to ensure that doctors are supported to engage with the new the Joint Integration Boards or locality structures, that this resource is provided to back-fill their clinical absence and ensure that patient care is not compromised as a result of clinical engagement. For example, in the case of a GP, they may require to provide locum cover for time spent away from the practice undertaking their ‘integration role’.

\(^6\) Audit Scotland Community Health Partnerships, June 2011
Harmonisation of terms and conditions

16. In our evidence to the Health Committee, we have sought clarification that appointment of staff by a body corporate will be in line with current arrangements for negotiated TCS. In relation to Section 2.4 of the Financial Memorandum, it makes it clear that under harmonisation of TCS, transfers will be made via TUPE rather than using a public sector exemption. The flexibility within the legislation over the transfer (or not) of staff could result in a piecemeal picture of different structures across Scotland with some areas virtually unchanged, some with transfers between the pre-existing employers in either direction and some with transfers into the new body corporate.
Analysis of the Financial Implications

1. In giving thought to the financial implications of the bill, three broad areas need to be considered: the potential of integrated arrangements to deliver efficiency savings; the mechanics of operating integrated budgets in pursuit of those objectives; and the additional cost to public authorities as a result of the bill.

Potential Efficiency Savings

2. A common definition of an efficiency saving is doing more for the same resource or doing the same with less resource. The financial memorandum makes clear that in respect of health and social care integration, the objective is to do more with the same:

   potential efficiencies should be considered in the context of the scale of the projected increase in expenditure attributable to demographic change... and will need to be reinvested within the partnerships in order to help meet demand.¹

3. This is because our ageing population is predicted to increase demand for health and social care services by between 18.4% and 28.7% between 2010 and 2030.² This equates to a potential funding gap in the order of £2.5billion against current levels of investment. So the context for developing integrated services is not about being able to reduce public expenditure on health and social care – no serious commentator thinks that is advisable; rather, it is about doing more (i.e. dealing with increasing demand) within existing resources to improve outcomes.

4. Even then, the financial memorandum presents something of a conundrum. The main areas it identifies which are capable of using resources more efficiently are in respect of delayed discharge; anticipatory care; and reducing per capita cost variation. However, all of these efficiencies are contingent on being able to reallocate resources currently tied up in institutional settings. Delayed discharge efficiencies can be achieved by ‘reallocating expenditure from hospital to community based health and social care’;³ anticipatory care plans could result in lowering emergency admissions ‘if alternative care options were available to local care professionals, patients and carers’; and reducing per capita variation – which depends on reducing consumption of health and care resources to the average cost per head for the partnerships – will likewise depend on alternative care pathways being available.

¹ Financial Memorandum, paragraph 34
² Financial Memorandum, paragraph 18
³ Financial Memorandum, paragraph 27
5. COSLA wholeheartedly agrees with the need to shift the balance of care. However, some would argue that the impact of increasing demand has not been fully factored into the Scottish Government’s analysis. Our colleagues in NHS Scotland continue to believe that a more efficient health and care system will be able to stifle demand for secondary care – but not reduce it below current levels. If that supposition is accurate, then we will be unable to make the cash-releasing savings from the acute sector in order to invest upstream in community based alternatives; and if we cannot invest in community based alternatives, we will not be able to stifle demand for acute care. In other words, there is a very real risk of a vicious cycle emerging over the next few years in circumstances of flat or limited growth in public expenditure.

6. However, if we are simply using the NHS acute sector inefficiently, and there is a capacity to disinvest, then a different set of challenges emerge, which are more political in nature: we are going to have to close services. Now this may be the right thing to do – it may improve outcomes and deliver higher quality care – but we can anticipate these being highly unpopular decisions. We need to be able to inhabit this new landscape – and bring the public with us.

7. Even then, however, we are calling on the Scottish Government and Parliament to resolve the longer-term funding challenges associated with the cost of health and social care to the public purse in Scotland. We are confident that the pressures building on the health and care system over the next twenty years cannot be met by better integrated services alone: the integration of health and social care is necessary but ultimately insufficient as a means of eliminating the £2.5billion funding gap that is likely to emerge.

The Mechanics of Integrated Budgets

8. COSLA agrees that a fully integrated budget – and the use of the ‘total resource’ - is necessary to give effect to integrated service planning and commissioning in pursuit of a common set of outcomes. However, there are a number of operational challenges which flow from the delegation of resources.

9. The policy memorandum sets out three main risks to Local Authorities and Health Boards as a result of operating an integrated budget:

- Budget setting;
- In-year financial performance management; and
- Management of acute sector provision.

10. Taking these matters in turn, there are a range of practical considerations that require some thought. For example, in delegating a budget to another party (whether the Health Board or a body corporate), the local authority would need to be assured that the duties of the Section 95 Officer can still be adequately performed.

11. In addition, the actual budget-setting process will need to be further considered. It will be important that the management of efficiencies/uplifts is agreed by both parent bodies and takes into account of the broader Scottish Government
settlement and inflationary/demand pressures before coming to an agreement. It will be also be necessary to synchronise the formal budget setting timelines between councils and Health Boards.

12. For Health Boards with more than one local authority in their area, budgets will need to be discerned for each partnership area, and tensions may emerge as we move from historical spending patterns to weighted capitation. It is vital that the delegated budget from both parent organisations is completely transparent.

13. In terms of in-year financial management, the potential for cross-subsidising activity would be heavily proscribed for both councils and NHS Boards (both councils and NHS Boards currently use cross-subsidisation as a tool to manage pressures) and this would require greater levels of discipline in spending – and, importantly, solutions to be developed for the management of over-spend. While this is clearly a job for partnerships locally, it is arguably too simplistic to suggest that overspend in social care budget lines becomes a council problem or overspend on prescribing an NHS problem.

14. Finally, on the stability of the acute sector, our NHS colleagues are concerned about their ability to manage District General Hospitals which serve a regional population base (across several local authority areas). The route of this concern would seem to be in the requirement to distribute a significant part of the acute hospital resource to the body corporate, which will then ‘commission’ the level of acute care that reflects population need. Were some of those partnerships to identify a different usage pattern in respect of the consumption of acute resource, it is argued that this could leave these institutions having to build a budget from several different sources without an over-arching strategic plan for usage. What is more, there is concern about what happens in the event that the commissioning partnership uses more acute resource than it had intended to under the joint commissioning plan.

15. We recognise that the scenario of a single Health Board with an irregular spread of District General Hospitals spread across a number of Local Authorities (the most common position in Scotland) is a particular challenging environment in which to progress the integration agenda and does not come without operational risk to the acute sector. However, it would be wrong to insulate the NHS acute budget from partnerships’ commissioning objectives and therefore we need to develop solutions that are capable of managing that risk. For example, there will need to be a supra-partnership agenda around the strategic development of the acute sector within and between Health Boards. We would suggest that this supra-partnership agenda is linked to individual Partnership Agreements. We also need to develop analytical capacities to map cost and activity data across health and social care partnerships. The Integrated Resource Framework pilots are instructive in this regard but now need to be rolled out to ensure that all partnerships have the requisite ability to examine cost and activity within the system.

16. In light of all of the technical challenges set out above, COSLA believes that National Guidance will be required to assist in the delegation of budgets to partnership level.
17. In addition to the issues set out in the policy and financial memorandum, COSLA has worked with local authority Directors of Finance and we would want to draw the Committee’s attention to a number of additional technical issues which are subject to on-going work with the Scottish Government:

- Accounting treatment and VAT
- Financial recording and reporting
- Financial controls, assurance and risk
- Financial planning, financial performance management and finance function
- Capital and assets

18. VAT is a particular concern for COSLA. We are seeking early clarification from Scottish Government and HMRC as to the VAT arrangements that would obtain under the body corporate model. Further thought also needs to be given to the VAT implications of the body corporate acquiring more general financial powers in the future.

Costs of the Bill

19. In general terms, we welcome the Scottish Government’s commitment to funding one-off implementation costs of around £16.3 million, but we are disappointed that there is no funding commitment to the recurring costs for health boards and local authorities arising from the Bill.

20. Having consulted with Local Authority Directors of Finance, we would offer the following observations on the costs of implementing the bill:

- We anticipate that there will be an increased audit burden on statutory partners and therefore the stated additional cost of £150k across Scotland seems too low. The financial recording and reporting costs are likely to increase, irrespective of the integration model adopted;
- We are unsure that funding for the Chief Officer can be met from the current CHP General Managers’ salary.
- We are also disappointed to note that financial provision is being made to the NHS for CHP leadership post-holders who are displaced as a result of the development of partnerships, yet no similar resources, either recurring or non-recurring, are being made available to local authorities.
- We think that other management costs could emerge within the parent bodies as a result of the restructuring caused by the formation of partnership boards;
- The anticipated recurring costs associated with ICT seems low;
- Additional costs associated with development of financial information has been identified for the health sector only;
- It is unclear whether any assumptions have been made around remuneration for Board Members;
• The assumption that support services for the joint boards can be funded from existing CHP support services is unrealistic; not all CHPs currently have the full range of support services that will be required in the new Partnerships.

• Section 45 talks about extension of schemes for meeting losses and liabilities for health service bodies. We have a concern that this will allow NHS to carry reserves from one year to another.

• The Financial Memorandum correctly identifies the risks to VAT recovery and staff pay and conditions harmonisation, and estimates their potential annual costs at up to £32m and up to £27m respectively. We are concerned that the Financial Memorandum does not commit the Scottish Government to fund these pressures should they occur in future.

• Should staff transfer be required, we believe that the TUPE implications are significant and potential financial solutions may not meet TUPE regulations.
Consultation

Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

1. Yes, Dumfries and Galloway Council contributed to the Strategic Partnership’s (our Community Planning Partnership) joint response to the Scottish Government’s consultation on proposals for the Integration of Adult Health and Social Care in September 2012; no specific comment was made on any financial assumptions.

Do you believe your comments on the financial assumptions have been accurately reflected in the Financial Memorandum (FM)?

2. N/A.

Did you have sufficient time to contribute to the consultation exercise?

3. Yes.

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

4. The FM reflects a range of estimates and assumptions which, understandably at this stage, are at a high level. The approaches outlined to explain the basis of the estimates are reasonable but the limited supporting information on the underlying calculations and assumptions makes it difficult to assess their accuracy at this stage.

5. The FM (paragraph 35) does recognise that there is considerable uncertainty around the estimates in relation to projected efficiencies. It is important to recognise that this qualification also applies to the cost estimates reflected in the document.

6. One particular point is that the FM focuses mainly on those costs likely to be incurred by the Health sector and does not sufficiently recognise those costs likely to be incurred by local authorities. For example:

- Paragraph 50 indicates that while there will be displacement costs associated with displaced Community Health Partnership posts, it is assumed that no such costs should be incurred by local authorities; and
- Paragraph 89 provides an estimate of costs associated with clinical involvement in locality planning but does not recognise potential costs associated with the involvement of other care professionals.
Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

7. It is recognised that projecting estimated costs and savings over a 15 year period is extremely difficult, particularly in an area of service which will be impacted upon by a range of issues including demographic pressures. One concern regarding the accuracy of the estimates is the risk that, as is often the case where significant change/reform is being advanced, there is a tendency to overstate the potential savings and understate the potential costs.

8. As reflected at 4 above, the range of estimates and assumptions reflected in the FM, understandably at this stage, are at a high level. Greater detail on the basis of the estimates, and the underlying assumptions, would help support an assessment of their reasonableness and accuracy.

9. It is noted that the transition costs estimates are based on the integration of adult health and social care functions only. Where a wider set of services are considered for integration this may obviously impact on the cost and savings estimates.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

10. Assessing the ability of organisations to meet the costs associated with the Bill requires to take into account the wider consideration of the appropriate level of funding available to support adult health and social care. Given the increasing level and complexity of demands, the level of Scottish Government funding available to support this area of service will obviously have a key impact on Councils’ and NHS Boards’ ability to meet the costs of the Bill.

11. Dumfries and Galloway Council and NHS Dumfries and Galloway are jointly focused on maximising opportunities to deliver improved service provision together with greater efficiencies. At this early stage it is difficult to assess the extent to which the costs associated with the Bill can be met by the Council and NHS Dumfries and Galloway.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

12. At paragraph 35, the FM recognises that there is considerable uncertainty around the estimates in relation to projected efficiencies. It is important to recognise that this qualification applies not only to the projected efficiencies but also to a range of other estimates and timescales reflected in the document. This uncertainty is not unreasonable at this stage.

Wider Issues

Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

13. The FM provides useful information and reasonably based estimates for the costs associated with the Bill. However, it is important to recognise that there are
significant risks associated with a number of areas, including those where the FM has assumed that the impact will be Nil or cost neutral.

14. For example, the FM at paragraphs 73 - 79 assumes that the VAT implications of integration under both the Delegation Between Partners and the Delegation to a Body Corporate approaches will be cost neutral. While this may not be an unreasonable assumption at this stage, it should be recognised that there are risks associated with this assumption, particularly given the amounts involved.

15. Similarly, the estimated costs associated with potential staff transfers and the harmonisation of terms and conditions indicate that these issues/costs are expected to be relatively small. Again, given the potential amounts involved and the uncertainty associated with issues such as potential equal pay claims, it should be recognised that there are significant risks associated with this assumption.

**Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?**

16. Given the extent of change associated with the Bill and the complexity of the areas of service being covered, there is the potential for subsequent/subordinate legislation to be required. At this stage it is very difficult to assess the potential financial implications of such further change.
1. No provision made in the FM for Council staff redundancy costs, with only CHP leadership displacement costs included. There is a possibility depending on the shape and extent of integration that management structures will be designed that could result in Council chief officers also being displaced.

2. The issue of ensuring appropriate VAT structures and compliance remains a fundamental risk to IHSC. Development of procedures etc with HMRC is the extent of the VAT "costs" within the FM. Failure to achieve appropriate VAT status / dispensations could result in £30m+ additional costs to IHSC. “It is likely that a VAT neutral position is attainable” – this must be confirmed as soon as possible, as failure to achieve this position will present real financial difficulties to each partnership.

3. Development of a joint information management system has been identified as necessary, with initial development costs of £750k assumed to fall to the Scottish Government, and ongoing recurring costs of £250k thereafter falling to partnerships. I have two initial concerns with this:

   - Timescales to develop, test and deploy the system will be extremely challenging and based on previous IT system implementations must be a risk. The implication of failing to hit the target would be a need for alternative options to be implemented as an interim measure. No cost provision has been assumed for this.
   - The cost of £750k appears to relate to a national system that will provide information to local partnerships. Is this a sufficient “budget” to deliver? What about local information sharing systems – these have not been costed. Will the SG system also deliver local opportunities or will 32 other systems also be required to be developed and subsequently supported?

4. External audit fees (additional) have been estimated at £150k (i.e. approx £5k per partnership). Is this based on Audit Scotland estimates as it seems very low.

5. Additional costs of £800k per annum are included for financial costing teams at NHS level. One of the over-riding principles of integration was that the cost of supporting it should not be greater than that already in place to support current delivery models. This must be a concern; although availability of robust, reliable and accurate data will be an absolute must for effective management of the IHSC partnerships.

6. The support functions (HR, finance, etc) are assumed to be cost neutral (other than costing teams noted above), and this accords with the approach we are taking locally.
7. Efficiencies from asset rationalisation have been excluded – these may take a longer timeframe to be achieved and will be a key element of future year savings proposals and targets.

8. The use of the Common Services Agency to deliver for all public sector organisations has been “permitted” in the Bill. This is quoted as offering potential for savings / efficiencies. Great care will require to be taken before use is made of the CSA by local authorities, where currently expertise is maintained in-house (at a local level). Issues around legal and contractual advice are of major importance and a poor decision can have a significant financial and reputational impact.

9. The development of CNORIS to include social care functions delivered by Local Authorities will require significant and detailed consideration by Council risk management / insurance teams. Savings on premiums will need to be carefully balanced against the indemnity provided and the underlying financial risks this might present to the organisation.

10. Use of HubCo while not unexpected, will require to be carefully managed as there remains concerns over the capacity of HubCo to deliver on the scale that is currently anticipated before adding in additional developments. Equally, detailed analysis needs to be carried out on each project to ascertain if additional revenue savings can indeed be achieved through the use of HubCo.

11. The accounting treatment of pensions will be a crucial factor, particularly when you consider the statutory mitigation local authorities currently “enjoy”. This assumes that staff who transfer will retain the right to be LGPS members – is this a given?

12. The additional costs of performance and inspection is worrying as this implies there will be increased activity. In the post-Crerar landscape we would expect less onerous inspection activity. I fully accept it will be different, but do elements of current work not drop off to be replaced by the new work?
Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
1. The Council contributed to and supported the consultation responses from COSLA and CIPFA Directors of Finance Section and contributed to the consultation on the integration policy generally as opposed to specific elements of a draft bill.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
2. The five workstreams being taken forward by the Integrated Resources Advisory Group will fully inform the development. For reference these are:-

- Accounting Treatment and VAT
- The Financial Reporting
- Controls and Assurance
- Financial Management, Planning and Finance Function
- Capital and Assets

3. Individual Council comments were not provided to the financial memorandum (per above) so we would not be able to determine whether responses were reflected in the bill.

Did you have sufficient time to contribute to the consultation exercise?
4. Yes – timescales for responses to the consultation on the integration policy were extended for wider consultation and this gave ample time to respond and seek political input into the process.

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?
5. The FM focuses on the resourcing issues in relation to the implementation of the agenda and in this regard, the range of financial implications has been accurately reflected. There is no focus on the issues arising from the delegation of budgets and resources under each of the 2 options available which is a key area of concern and will have far reaching implications in the medium / longer term and the realism attached to releasing resources from budgets tied into acute budgets without destabilising hospital provision.

6. A significant omission appears to be an estimate of the cost of the rising demographic of older people requiring a service (per paragraph 18 of the FM) given
there are savings predicated on the way this will be delivered into the future. In terms of the costs associated with the Bill implementation there is provision for the displacement of CHP leadership staff, however an absence of any provision for the displacement of local authority staff which if management teams are to come together to deliver on joint outcomes there will inevitably be management efficiencies on both sides of the partnership. The establishment of transition arrangements is predicated on being able to realise opportunity costs, but it is not clear what these relate to. Support to develop strategic plans and inform performance management requires a linked patient/client level health and social care dataset and information system and the costs built in to establish this across Scotland appear low given the experience with MGF funding which sought a solution to this issue without any real success. There are costs built in for the appointment of a chief officer but no recognition of other posts which will require to be appointed to support this role where evidence across already established CHCP constructs shows an overall increase in the costs associated with establishing new structures, including start-up and recurring ICT costs.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

7. The range of cost considerations seems reasonable, however without having the detail on the underlying assumptions and costs associated each area, it is not possible to determine if these are accurate.

8. The savings assumptions are predicated on a 3 key areas:
   • Delayed Discharges – predicated on a maximum 14 day delay in hospital – is this realistic and achievable? Look to success of change fund programmes and partnership performance against the current 28 day target.
   • Anticipatory care planning needs to be effective – limited success locally from this initiative and the basis for estimating the likely savings from this area being predicated on a small study undertaken in Nairn may be problematic.
   • Reducing variations in cost per head across partnership areas without any clarity on what causes these variations and the fact that these variations may be justifiable. Requires more in depth analysis to establish the reasons for variation.

9. Accordingly to fully assess these figures further detail should be released.

10. Work is ongoing within the IRAG workstreams and VAT presents a significant uncertainty.

11. The harmonisation of terms and conditions is also an area with cost implications which needs to be considered and quantified.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

12. Cost implications should be further refined and if further set-up costs or bridging finance is required this should be provided by Scottish Government.
Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

13. Range of cost provided but without the detail on the underlying factors which sits below these assumptions it is hard to form a view as to whether they are accurate. The estimates fall within wide ranges with an acknowledgement of the uncertainties which may be present, however how this leads to effective planning is unclear and individual partnership experiences will vary greatly in terms of allocation of any funding.

Wider Issues
Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

14. As per 4.

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

15. Potential equal pay claims for staff working more closely together doing broadly the same role but within differing organisation on different terms and conditions.

16. Investment in research analysis to provide an robust evidence basis for assumptions being made across a number of areas.
1. In providing this written evidence to the Finance Committee, Council officers have answered the Committee’s written questionnaire further below. By way of introduction, the Council supports the overall drive to improve outcomes by integrating health and social care services which it believes can build upon the improvements already made through joint working with our partners, and that integration should bring further benefits for service users, carers and communities.

General points
2. Officers have a number of concerns about the governance and accountability arrangements of the mechanisms proposed in the Bill, which they believe will break the link of local accountability if left unaltered. They also are concerned about Ministers being able to make decisions that affect local authorities without the agreement of the authorities concerned. Officers consider there may be scope for better use of consultative guidance rather than prescription. They acknowledge that one of the stated aims of Ministers is for consistency in health and social care across Scotland, but at the same time they would like the Committee to bear in mind the current ability of councils to make decisions as to how to profile their spending, and the accountability of elected members ultimately through the ballot box. Local democratic oversight is important if we are to avoid a collection of localised quangos making decisions, or having decisions made for them by Ministers, without reference to local needs, plans, priorities and strategies. There must be flexibility to respond to local need and produce an appropriate balance of care for local communities.

3. Officers are concerned for example that the full incorporation of a body corporate and the possible use of subordinate legislation by Ministers, as proposed in the Bill, will remove democratic local accountability from the process.

4. Given that the decisions of the body corporate can impact directly on the Council and on the Health Board and, crucially, on the services they provide to local people, officers think it appropriate that the Council should have the capability to have decisions of the body corporate “called in” and scrutinised by Council. For example, if the body corporate decided to close a local care home, we would expect there to be some democratic scrutiny of this decision. We note that community health partnerships were a formal subcommittee of the Health Board but no such arrangement is proposed for the body corporate. The fact that elected councillors will be members of the body corporate is not sufficient, as they will be required to act in the best interests of the body corporate (however those interests may be defined) and not of the Council as a whole (nor of the people of the area).

5. Officers are also concerned about the management of integrated budgets, in particular budget-setting, in-year financial performance management and the
management of acute sector provision. They believe that national guidance will be required to facilitate the creation of delegated budgets at partnership level.

6. One particular governance issue for local authorities is the potential for conflict relating to the statutory role of a council’s S95 officer if budgets are passed to an independent body corporate. Council officers would like to explore the continuing role and influence of GP Services in models of care. They also would be interested to participate in acute service redesign with the aim of supporting reinvestment in preventative social work and primary care services.

Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

7. Yes, East Lothian Council responded to Scottish Government consultation on this issue. We commented in very general terms on financial issues.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

8. It is difficult to say as it is not clear how figures have been calculated.

Did you have sufficient time to contribute to the consultation exercise?

9. In the opinion of Council officers, the consultation exercises could not themselves have delivered the detail required for the implementation of this Bill; it is still very much a “work in progress”.

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

10. Officers believe that the FM has not made sufficiently clear the financial implications for local authorities (and possibly others). It is not clear as to how the figures have been calculated and we cannot say whether they accurately reflect implications for this Council. (It might have been more helpful if the FM had laid out the implications for each Council/health board and come to a total as a result.) It would not be appropriate to make the assumption that all local authorities will be affected to a similar degree. In East Lothian, for example, we have a particularly high (and growing) proportion of the population who are older people:

- the number of people aged over 65 is forecast to grow by 77% between 2010 and 2035;
- the number of households is projected to grow by 39% between 2010 and 2035 compared to a growth of 23% in Scotland as a whole;
- the main component of the increase in the number of households is forecast to be a large increase in the number of households containing one adult;
- the number of households in which the head of household is aged over 75 is forecast to double between 2010 and 2035;
the numbers of long-stay residents aged 65+ in care homes have stayed relatively stable over a ten-year period;
the numbers of people receiving free personal care at home in East Lothian have increased by around 50% in the past 7 years;

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

11. See above.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

12. No, officers do not believe the Council can meet extra costs. It has no extra resources and its Adult Wellbeing budget is already under significant pressure. An ageing population will only increase demand. Much more work needs to be done on modelling the costs and resources.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

13. No. There is insufficient information in the FM to do this.

Wider Issues

Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

14. It is unlikely that the FM has captured all the costs associated with the Bill. The cost of integration itself will also include:

- partnership development;
- accommodation moves;
- transition to appropriate (shared) IT systems and equipment;
- development of financial information;
- increased audit costs;
- reskilling the workforce.

15. These costs will be incurred by local authorities and health boards.

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

16. In the case of this Bill, the proposed powers for Ministers to prescribe by regulation are so wide-ranging that it is difficult to quantify the costs that might be incurred through the potential use of subordinate legislation. This is of real concern and deserves more attention.
Consultation

Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

1. Falkirk Council commented on the consultation, however, there was a lack of specific financial assumptions in the consultation and there was a lack of clarity about how the costs associated with implementing any new requirements would be funded. There are now more specific assumptions laid out in the FM but it is acknowledged that there is considerable uncertainty around the estimates.

Did you have sufficient time to contribute to the consultation exercise?

2. Yes

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

3. Partly. In respect of Clinical Negligence and Other Risks Insurance, the FM notes that the costs of obtaining indemnity from the market might be prohibitive but makes no mention of the additional costs that might arise from the extension of the scheme.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

4. Most of the estimated costs and savings are based on information which is currently available however patterns and trends can be highly volatile and so we would urge consideration caution around these figures. In particular we would suggest that:–

• The estimated costs of providing a linked patient/client level health and social care data set and information system in our view are seriously under estimated. Despite significant investment nationally and locally a solution to the challenge of providing a linked information system is still no in sight.

• The potential efficiency savings of between £138m and £157m arising from combined effect of Anticipatory Care Plans, reducing delayed discharge and reducing variations lack sufficient detail to enable reliance to be placed on these figures.
If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

5. In view of the comments in relation to question 5, particularly those relating to anticipated efficiencies, Falkirk Council will have some concerns about how the costs associated with the Bill would be met.

6. In respect of recurring costs, there is no specific mention of additional funds being made available. This could only be accommodated by re-directing or reprioritising existing resources. In the current climate of limited resources and increasing demand, it is important that any costs arising from implementing new requirements are met by the Scottish Government.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

7. Paragraph 35 of the FM notes that there is considerable uncertainty around these estimates and that the eventual outcome and phasing will be dependent on local decisions taken by partners on resource allocation and utilisation through strategic plans. The extent to which anticipated efficiencies can be relied upon is also of concern. Under the circumstances, it would give partners greater comfort if there was an undertaking to review costs in the light of experience, with an undertaking that any increase would be fully funded by the Scottish Government. This is particularly true in the case of VAT where there is a presumption that a VAT cost neutral solution will be found but a potential additional costs of £32m per annum is anticipated if such a solution is not found.

Wider Issues
Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

8. The costs identified by the FM are wide ranging but other costs may become apparent through experience. Also, paragraph 119, assumes that no staff will transfer under the body corporate model and there would therefore be no harmonisation costs. However, paragraph 117 notes that partners may nonetheless choose in time to transfer some staff between each other and the cost risk of harmonisation is contingent on future decisions to transfer staff. Paragraph 78 also confirms that should Scottish Ministers decide at a future point to extend the remit of the body Corporate to have employment and contracting powers, the VAT status of the body corporate in less clear and potentially £32m per annum could be at risk.
FINANCE COMMITTEE CALL FOR EVIDENCE
PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL: FINANCIAL MEMORANDUM

SUBMISSION FROM FIFE COUNCIL

Comments requested on
1. The wider financial impacts of the health & Social Care Bill
2. Any technical financial issues which the bill presents
3. Specific commentary on the Financial Memorandum. Including views on whether we are content that the integration Agenda will actually deliver everything that the Financial Memorandum sets out.

The wider financial impacts of the health & Social Care Bill
• The bill seems to go way beyond that which is necessary for the proposed “Integrated Budget” for the “Corporate Body” for Integration of Health & Social Care. Advice from Colin Crawford (SG) is that the “Corporate Body” will not have employees, will not have assets, and will not enter into contracts.
• The bill mentions transfer of staff (19) but I am unsure if this refers only to where staff are transferred between NHS and Local Authorities, or also includes the “Corporate Body”.
• The bill appears to cover far more than simply NHS and Social Work.
• The bill (Section 44) would allow the Common Services Agency for the Scottish Health Service to enter into agreements with, amongst others, Scottish Public Authorities.
• Section 45 of the bill mentions extension of schemes for meeting losses and liabilities of health service bodies. I do not understand if this allows NHS to carry reserves from one year to another.

EXPLANATORY NOTES
Integration Plans – same local authority and Health Board area
Four models, including
• The local authority and the Health Board delegate functions to an integrated joint board established as a body corporate. (The other three models cover delegation of functions from one to the other or both to both).
• Scottish Ministers can approve an integration plan which sets out that functions will be delegated to the integration joint board, which will have the functions specified in the integration plan delegated to it.
• Chief Officer – Section 10 (of the bill) requires the integration joint board to appoint a member of staff to be its chief officer (but might be seconded to the integration joint board). The integration joint board will not necessarily be given powers to employ its own staff.

• Other staff – Section 11 – Scottish Ministers might give integration joint boards the ability to appoint other staff.

• Section 12 – subsection (3) provides for Scottish Ministers to make schemes for the transfer to an integration joint board of staff, property, rights, liabilities, or obligations of a local authority or a Health Board, where considered appropriate.

SECTION 19 – Transfer of staff effect on contract of employment -
46. Subsection (2) provides that where, before the day of transfer, a person who is to be transferred informs their original employer that they do not wish to transfer employment, the person’s contract of employment is terminated on the day before the day of transfer. The effect of this is that a person who does not wish to transfer does not have to do so but instead his or her contract will end immediately before the transfer would have taken place.

SECTION 37 – Information-sharing – allows information-sharing.
SECTION 38 – Grants to local authorities may be made by SG for costs incurred under Part 1 of the Bill.

FINANCIAL MEMORANDUM
Chart 1, on page 25 seems to show a great improvement in reducing the number of days between a patient being ready for discharge and being discharged, over the period from April 2001 to January 2013.

Para 27 states what seems to me to be the crux of the matter.
27. For this estimate, the bed days used by delayed patients (excluding those who are complex cases) were converted into bed weeks. For the baseline expenditure the bed weeks used by delayed discharge patients were costed at an adjusted cost per bed day, and for the projected expenditure post integration, those bed weeks were costed at a weighted average rate of residential care, home care, and care at home. These estimates suggest that reducing delayed discharge by reallocating expenditure from hospital to community based health and social care to facilitate timely departure from hospital and provide alternatives to admission to hospital, could generate potential efficiencies of around £22m per annum for a maximum 14 day delay. If partnerships wish to be more ambitious and move beyond the target, a further £41m of potential efficiencies may be generated for a 72 hour limit for delays.

33. The costs per head are adjusted for local population need, using the resource allocation formula weightings, to ensure that it does not include variation that is driven by differences in local population need. If costs per head in the higher cost partnerships are reduced to the average cost per head for the partnerships with the relevant Health Board, this could generate potential efficiencies of around £104m per annum. (HE – depends on robustness of costs and definitions).
34. The Bill will enable Health Boards and local authorities to plan and deliver holistic integrated health and social care services and to improve efficiency in allocation and utilisation of their joint resources. In summary, it is estimated that the potential efficiencies for partnerships from the combined effect of Anticipatory Care Plans, reducing Delayed Discharge and reducing variation, to be between £138m and £157m. These potential efficiencies should be considered in the context of the scale of the projected increase in expenditure attributable to demographic change, noted in paragraph 17, and will need to be reinvested within the partnerships in order to help meet demand.

**VAT**

(HE – much of this is not required if the Corporate Body is not to have assets and contracts).

58. Health Boards and/or local authorities will be required to delegate resources and functions, under delegation between partners arrangements, to the host organisation, that is the partner that will be responsible for the delivery and management of functions on behalf of the other partner, or to the body corporate. Health Boards and local authorities will incur a number of non-recurrent and recurrent costs associated with financial governance of the delegated functions and resources.

These documents relate to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013.

59. Different VAT arrangements pertain in Health Boards and local authorities. Health Boards are section 41 bodies (VAT Act 1994) for VAT purposes, such that they can only reclaim VAT on certain specified services. In contrast, local authorities are section 33 bodies (VAT Act 1994) and, with a few minor exceptions, have full VAT recovery. The different VAT status of the partners complicates the recovery of VAT on goods and services purchased through the resources in an integrated budget and this introduces risks for recurrent resources. This is considered in detail in the recurrent costs section below. There is existing HM Revenue and Customs (HMRC) guidance for the delegation between partners model, and the Scottish Government will work with HMRC to tailor this to the Scottish context and to develop new guidance for the delegation to a body corporate model. Professional advisors have been appointed by Scottish Government at a non-recurrent cost of £35k.

60. In addition, each partnership will have to obtain agreement from HM Revenue and Customs on a case-by-case basis, which will involve preparation of financial statements. Based on experience in Highland, this will be marginal and is covered by the non-recurrent transitional costs outlined above. There will be a cost to HM Revenue and Customs for the process of application and approval of the integrated VAT arrangements for each partnership. Scottish Government officials are working with HM Revenue and Customs on these matters.
VAT: delegation to a body corporate

77. Unlike with the delegation between partners model, where HMRC guidance allows a VAT neutral solution, there is no guidance available for this model. Consequently, there is a risk that VAT currently reclaimed by local authorities is no longer able to be recovered under the VAT arrangements in the body corporate. However, Scottish Government appointed VAT advisors have indicated that the key factor in determining recovery of VAT in this model will be the extent to which the body corporate delivers services, and that the proposed arrangements are likely to be interpreted by HMRC as the body corporate re-allocating the integrated budget and for delivery by Boards and local authorities; consequently, it is likely that a VAT neutral position is attainable. (HE – this might also affect the ability to charge rental income (mostly funded by HB, as the corporate body would become the landlord, and if the corporate body is not a local authority or a Registered Social Landlord, then higher levels of rent are not allowed)

78. Note that should the Scottish Ministers extend, at a future juncture, the remit of the body corporate to be allowed to take advantage of employment and contracting powers, then there is a risk that HMRC will revise their view and conclude that the body corporate is in fact providing services. Under this contingency, the VAT status of the body corporate is less clear and the recovery of VAT is at risk. The full extent of potential exposure for this risk is a recurrent cost of £32m p.a. based on the estimated total VAT recovered by local authorities for adult social care services.

79. The Scottish Government is working with its advisors and HMRC to develop new guidance for the delegation to a body corporate model, based on the same principal of VAT neutrality that informs the guidance for delegation between partners. The likely position, therefore, is that there will be no additional cost under the new arrangements for VAT.

Support to the third sector

62. It is intended, through secondary legislation, that integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. The Scottish Government recognise the key role non-statutory, not-for profit providers of health and social care services play in the provision of care, working in partnership with statutory partners. It is expected that there will be a degree of overlap between these activities and those currently required for third sector participation in community planning and in developing change fund commissioning plans. (HE – there are lots of large and medium sized providers that are registered as Scottish Charities, most of which make a profit – are these to be considered as “not for profit”? Approx 80% of current providers of Adult Placements are registered as Charities).

Capital and assets

66. There are likely to be non-recurrent costs associated with carrying out due diligence reviews on assets and liabilities transferred to the host partner in the delegation between partners model. The estimate for these, based on the Highland experience, is included in the transition costs noted above. Under delegation to a
body corporate, it is not intended that the new bodies will own capital assets, so there is no need to provide for costs associated with carrying out due diligence reviews on transferred assets and liabilities as is the case for delegation between partners model. This will result in a small reduction in the cost required for the transition team, but this will be offset by the small additional cost required for developing the Standing Orders etc. for the new body.

Health and social care activity information

67. To provide partnerships with information for developing their strategic plans and to inform performance management, a linked patient/client level health and social care dataset and information system will be required. It is likely to be more efficient that this be developed as a national solution by Information Services Division and for partnerships to access their data remotely. Non-recurrent estimates for the development of this, based on a preliminary assessment by ISD, are £250k in 2013/14 and £500k in 2014/15. (HE – does this include costs to be carried by Local Authorities? If so, then I suspect that the estimated cost is low).

Other financial governance: for both models

87. The inclusion of hospital services in the integrated budget will necessitate a greater emphasis on hospital activity and cost in Health Board financial management and financial planning systems, which will require investment in costing teams. The estimate for this is £800k p.a. based on increasing the capacity of Health Boards costing teams to a proportionately consistent level. (HE – I do not understand why this would have a greater impact on Hospital Boards than Local Authorities).

99. It is difficult to accurately gauge the level of uptake off the Common Services Agency’s shared services across the wider public sector as this is not a mandatory measure - rather it is for public bodies themselves to determine the benefits of using the services provided by the Common Services Agency. However, what is apparent is that the costs to the public sector will be cost neutral. There will be no increase in the level of the Common Services Agency budget as a result of it delivering services to the wider public sector. (HE – but, if some work left Las and was done by CSA, then there would be a saving in LA costs).

114. Where staff transfer to the Health Board, the initiative for harmonisation would be with the Board; experience from Torbay and North East Lincolnshire, where staff transferred to the Care Trusts, was that the Trusts encouraged transferred staff to migrate onto the same terms and conditions as their new colleagues and that this helped to establish multi-disciplinary co-located teams and deliver truly integrated services. Although staff would be free to remain on TUPE terms and conditions, it is unlikely because migration of staff onto NHS terms and conditions would be to their individual advantage.

115. Where staff transfer to the local authority, the initiative for harmonisation would be with the local authority in the same way as in the case above, but there would also be a risk of an equal pay claim from the existing local authority staff. (HE – There are other staff issues re pay and pensions, but until there are employees in the corporate body, there is no problem).
Data sharing and information technology

137. The Scottish Government eHealth budget currently includes a dedicated budget of £2m p.a. to support Health and Social Care IT integration (HE – how much support is this? What are the likely costs for NHS and Las?) The NHS and local authorities have invested significant amounts in previous years to put in place modern IT systems. The focus of future work will be on exploiting the capabilities of these systems to improve information sharing.

138. The eHealth Strategy17 published in Autumn 2011 included a commitment to produce a Health and Social Care IT strategy (by early 2014) in partnership with local authorities. In addition, a Data Sharing Technology Board (DSTB) has been established under local authority chairmanship and is meeting regularly. This Board is responsible for decisions on the existing infrastructure and the development of consensus on the way forward. The Board undertakes this role in a broader context of co-operation between stakeholders through their role in the development of the Health and Social Care IT Strategy.
1. Given the diversity of arrangements across health board and local authorities it is recognised that assessing the financial implication of the Bill is likely to have been challenging. The provision of information on the underlying assumptions, while certain aspects are challenged below, is helpful in understanding the initial assessment of additional costs. The diversity of current arrangements will make distribution of any additional funds across Partnerships complex.

2. Focus of the financial memorandum is on the additional recurring and non-recurring costs likely to be incurred by health, with an incorrect underlying assumption that all additional local authority costs can be met from within existing resources.

Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
3. Yes, however as no indicative costs were quoted in the consultation, we did not comment.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
4. N/A

Did you have sufficient time to contribute to the consultation exercise?
5. Yes.

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?
6. We do not believe that the FM accurately reflects all the costs. Provision is being made for funding CHP leadership post holders who are displaced as a result of the development of partnerships, with no similar resources, either recurring or non-recurring, being available to local authorities.

7. Whilst the staffing impact may not be as easily identifiable for local authorities as it is for CHPs, leadership posts may be impacted by the appointment to the Chief Officer posts in local authorities and a provision should be made for this.

8. Our experience of CHCPs in Glasgow resulted in additional costs for staffing to manage and support the integration agenda. There has not been any consideration either to the loss of economies of scale for other management costs.
where only elements of the current services are included within the new HSCP. We also had a number of challenges in relation to equal pay, all of which resulted in increased costs.

9. There is insufficient ICT development and recurring costs to allow for improved data sharing of information held on Health and local authority information systems. We need to integrate our IT systems so that information is only recorded once to improve the experience for the service user.

10. The financial IT systems will require to be adapted for the new reporting arrangements and to allow additional information and analysis to be provided by local authorities. The FM only makes provision for additional costs for the health sector.

11. There is likely to be additional costs associated with locality planning, increased levels of consultation and engagement of wider stakeholders. Additional funding should be made available for this.

12. VAT continues to be a significant risk for the HSCPs budget.

13. The FM also understates the costs associated with governance and audit (both internal and external). Our experience is that over the initial set up period and first thee to five years of the partnership, audit reviews will be required more frequently.

**Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?**

14. The savings that have been projected are based on a number of assumptions and the average costs used in the calculation appear on the low side. A significant number of clients who are discharged back into the community require a nursing input and it appears that this has not been costed.

15. Also to shift resource out of the Acute sector will require ward and/or hospital closures and the government has stated that there will not be further closures. The calculation does not appear to take account of the demographic challenges and the additional costs that this will bring. The savings are over optimistic.

**If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?**

16. The Scottish Government should be providing sufficient funding to local authorities to fund this change. At this point in time, the FM does not make sufficient provision for local authorities.

**Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?**

17. The FM has understated the complexity and risk that could come with some of the areas, i.e. around VAT and equal pay. Some of these challenges may only arise over time as the partnerships develop.
Wider Issues

Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

18. As detailed above, the costs appear to be understated for local authorities and potentially other stakeholders.

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

19. There may well be further costs associated with the Bill, for example through subordinate legislation, however it is not possible to quantify these at this stage.
Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
1. Healthcare Improvement Scotland responded jointly with the Care Inspectorate to the Scottish Government's consultation document published in May 2012. Our response focussed on the broader financial assumptions but did refer to the need to understand how the integrated services will manage a budget and potential financial pressures, as well as for the need for the powers (including financial authority) to be set out.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
2. The comments made were general in nature.

Did you have sufficient time to contribute to the consultation exercise?
3. Yes. Healthcare Improvement Scotland and the Care Inspectorate were closely involved with the evolution of the Bill and contributed to a number of the working groups.

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details.
4. Part Three of the Financial Memorandum refers specifically to the joint work of Healthcare Improvement Scotland with the Care Inspectorate. The costings included within Part Three are estimates that were based on particular assumptions at the time of the consultation. In practice those assumptions may change and this may impact on Healthcare Improvement Scotland’s financial requirements.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?
5. Healthcare Improvement Scotland is concentrating on a specific scrutiny role in this response and would not comment more widely on the costs and savings throughout the Financial Memorandum.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?
6. For Healthcare Improvement Scotland to comply with the Bill, it will be necessary to review the appropriate skills and resources to conduct the required inspections. We will consider the associated financial implications in the context of
our broader financial strategy. Additional costs may require some uplift to our baseline funding which is currently reducing on an annual basis and any uplift will have to be agreed with Scottish Government Finance colleagues.

**Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?**

7. The estimates in Part Three reflect current estimates but there will be a need to carefully consider implications as scrutiny evolves. We will involve Government colleagues in this.

**Wider Issues**

**Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?**

8. Healthcare improvement Scotland does not have the experience to comment on other aspects of the costs within the Bill.

**Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?**

9. Healthcare Improvement Scotland provided a response to the Health and Sport Committee call for evidence on 2nd August 2013. This makes it clear that the role of scrutiny is central to ensuring high quality services and outcomes and could be enhanced. There will be a need to consider how any shift in scrutiny impacts on the costs incurred by Healthcare Improvement Scotland.
Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
1. The Dumfries and Galloway Strategic Partnership submitted a joint response to the consultation on the Scottish Government’s proposals to integrate adult health and social care. The response made no specific comment on the financial assumptions as set out in the consultation process.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
2. N/A

Did you have sufficient time to contribute to the consultation exercise?
3. The timescale for responding to the consultation was sufficient to provide a detailed response. The initial consultation document was based on a number of generic models for integration which have since been analysed to provide a greater level of detail. It would have been more beneficial had the initial consultation given greater clarity on the detailed options available for consideration.

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?
4. The NHS Board and Council have yet to formally agree on the appropriate model for social integration in Dumfries and Galloway and therefore, cannot yet produce a robust financial model to quantify the costs of integration. The FM provides a helpful indication of the broad cost parameters forecast as part of the integration agenda. The Bill does recognise that the current costing estimates are at a high level and will require to be refined as part of the implementation process. Clarity on the treatment of VAT, terms & conditions and asset accounting will be emerging challenges that will shape the size of the financial envelope.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?
5. The FM has attempted to quantify the cost of the Bill over the medium to long-term. The FM is a reasonable estimate of the cost of its implementation. The complexity of the client group and the 15 year timescale, would indicate that the costs over such a timescale are at best a guide for service provision. The assumptions underpinning the costing work will be refined as implementation progresses to improve the accuracy of the estimate. Other demand issues may
impact on the cost envelope such as the impact of Welfare Reform and the technological advances that continue to be made.

**If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?**

6. While the strategic partnership considers the eventual shape of configuration for Dumfries and Galloway it is too early to confirm the additional cost of integration. It is clear that both the NHS and Council are focused on implementing the bill to maximise the opportunities to deliver improved service provision together with greater efficiencies. The cost envelope is currently being modelled to greater understand the financial impact to the partnership, however, outstanding technical issues still require to be resolved at a national level. The issues are well documented within the FM.

**Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?**

7. The FM identifies the key areas of risk and uncertainty to the introduction of the Bill. The quantification of costs will be dependent on local determination and at this stage can only be utilised as a useful guide.

**Wider Issues**

**Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?**

8. The FM is a reasonable attempt at quantifying the costs of integration at this current time. Experience tells us that during periods of significant change there is a potential that the public sector will under estimate the actual costs of the reorganisation and overestimate the savings generated.

9. In Dumfries and Galloway, the Council and Health Board are working jointly to maximise service improvements from the introduction of the Public Bodies (Joint Working) (Scotland) Bill.

**Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?**

10. With the complexity of the service change it would be anticipated that at some future point additional legislation maybe required which would have a financial impact. At this stage it would not be feasible to quantify the financial impact.
Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

1. Yes we responded. Our comments relating to finance were limited to the questions posed in the consultation. For instance, in our response to question 9 we felt that Health Boards and Local Authorities should be free to choose whether to include the budgets for other CHP functions – apart from adult health and social care – within the scope of the Health and Social Care Partnership and in our response to question 10 we agreed that the two models described can successfully deliver the government's objective to use money to best effect for the patient or service user, whether they need “health” or “social care” support? However, we expressed a view that the Lead Agency model would be more effective model for this.

2. In our response to question 12 we agreed that if Ministers provide direction on the minimum categories of spend that must be included in the integrated budget, it would provide sufficient impetus and sufficient local discretion to achieve the objectives the government has set out.

3. However, we felt that there must be a level of flexibility to enable that local response but if the direction is too limited the desired outcomes may not be achieved. The emphasis should be on functions and not services per se to ensure that the total resource required to deliver that function is included in the integrated pot.

4. In response to question 13 we did not think that the proposals described for the financial authority of the Jointly Accountable Officer would be sufficient to enable the shift in investment that is required to achieve the shift in the balance of care. We felt there was a danger this would continue to lead to decisions made in isolation.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

5. We are pleased to see that the Bill allows a degree of flexibility in the financial arrangements. There are other matters that may have financial consequences we are aware of (which we did not refer to in our response as they were not really covered in the questions) but we are pleased to see these reflected in the Bill - such as an acknowledgement of the need to review the Clinical Negligence & Other Risk Insurance Scheme, the issue of harmonisation of terms and conditions plus the potential issue of pension deficits transferring along with staff under the delegation between partners model.
Did you have sufficient time to contribute to the consultation exercise?

6. Yes

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

7. The direct costs of integration for the north Highland model are already largely quantified and accounted for. There are outstanding issues regarding IM&T provision. There is also an outstanding issue regarding the potential leasing of Care Homes from Highland Council to NHS Highland (or a full transfer of ownership) as the differing accounting regimes between local authorities and NHS bodies are currently proving challenging. The differing VAT regimes have implications for both these outstanding issues but this is acknowledged in the FM.

NHS Highland will incur costs in establishing an integration model with Argyll & Bute Council. These are not yet quantified in any detail but it is reasonable to assume they will be in line with estimates made in the FM.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

8. Forecasting this far in advance is very challenging. The assumptions seem reasonable with the caveat around the potential cost of transfer of assets - see question 6.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

9. As noted above - the majority of the implementation costs are identified and covered for the north Highland model with the exception of IM&T costs (which could be significant) and the potential costs for leasing or transferring Care Homes. The latter could be very significant indeed - in reality this would prevent a transfer being made or a leasing solution from being pursued. NHS Highland continues to be in dialogue with the Scottish Government with a view to resolving this issue.

It is worth noting that the integration of budgets between partner bodies requires a high degree of trust and openness - and this is as much about leadership and culture as legislation.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

10. The FM does seem to be clear that the figures are estimates. It is perhaps not quite so clear that the potential efficiencies from reducing delayed discharges, reducing variation and anticipatory care plans are presumably based on 'full cost' estimates which are therefore not fully realisable unless fixed costs are reduced as a result of the changes.
Wider Issues

*Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?*

11. As noted above - the bill does not seem to make provision for the potential costs of transferring ownership of assets (or long term leasing of assets). This could be viewed as an accounting issue rather than a funding issue per se, but the consequences are manifested as funding issues due to the differences in the accounting regime between the partner bodies.

*Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?*

12. Not aware of any future direct transitional costs of integration arising from the Bill. The wider financial consequences of integration are difficult to quantify but our belief is that these will be beneficial rather than a cost burden.
INTRODUCTION
1. Lothian NHS Board and its four local authority partners supported the general principles in their joint response to the May 2012 consultation, and have already appointed Joint Directors for each local authority area. Shadow Health & Social Care Partnership Boards are in place in West Lothian and in Edinburgh, and being established in Midlothian and East Lothian.

EXECUTIVE SUMMARY
2. NHS Lothian believes that integrated functions and resources should produce greater efficiencies. However it is important to note that efficiencies do not always lead to cash-releasing savings. If we were able to reduce the number of people delayed in our system this would release beds, which in itself is an efficiency and is also an important aspect of quality of care for the patient. If we can free up beds we then have more capacity and this in turn would allow us to reduce the number of people boarding or even the need to cancel elective, scheduled operations due to a lack of available beds.

3. The process of implementing re-design often requires upfront investment, particularly alternatives to hospital admission. Resources across the public sector have been severely constrained in recent years and one initiative that would be important to see continue is that of the investment made through the Change Fund for Older People. This is particularly important given the projected demographic changes in Scotland and Lothian, and the growth in the prevalence in dementia, offer two primary challenges to resources:

- The ability to continue to provide routine services, and
- The inevitability that the overall costs of providing health & social care services to the over 75s will rise in real terms.

5. Integration gives an opportunity to mitigate the impact of some of the growth in demand for specialist forms of care at home, care in residential settings or care in hospital.

6. The rate of admission to hospital will have to be massively reduced just for hospital services to stand still, let alone release resources for alternative methods of service provision. If a material amount of resources is to be released from hospital care, this would require the closure of some acute hospital facilities. There is extremely limited evidence of this being done quickly or successfully in Scotland in recent years and this would require full partnership support, engagement and consultation.
**Did you take part in either the Scottish Government consultation exercise which preceded the Bill and, if so, did you comment on the financial assumptions made?**

7. Yes.

8. Lothian NHS Board submitted a joint response with its four partners to the consultation in September 2012 with an overarching introduction by the Board’s Chief Executive.

9. The response reflected the differences in each local authority area and a commitment to developing a continued local response to national priorities, whilst promoting a consistent and coherent approach to delivery mechanisms in securing improved health and care outcomes.

**Do you believe your comments on the financial assumptions have been accurately reflected in the FM?**

10. Yes.

11. We welcome the acknowledgement of the risk and uncertainty associated with the financial effect in paragraph 35 in the FM and its re-emphasis in the invitation sent out to Boards and other public bodies by the Finance Committee on 2nd July 2013.

12. There are substantial issues with regard to addressing the financial implications of delegation of functions, which can only be properly defined by detailed work in each local authority area.

**Did you have sufficient time to contribute to the consultation exercise?**

13. There was sufficient time to draft a response to the consultation exercise in September, however it was not possible to produce an agreed unified submission by the stated deadline for this review by the Finance Committee. This was because the process of taking the draft through the review process of several local authorities took longer than we had originally anticipated but it is important to state that NHS Lothian and its partners have been consistent in the responses submitted to the recent Call for Evidence through the Parliament’s Health and Sports Committee.

**If the Bill has any financial implications for your organisation do you believe that these have been accurately reflected in the FM? If not please provide details.**

14. Sections 9 to 36 of the FM set out the totality of the financial resource envelope for health and social care in Scotland, and the potential opportunities for efficiencies in utilisation of the resource.

15. In particular sections 27 to 33 set out the assumptions around the calculation of savings of between £138m and £157m that could offset the projected increase in expenditure attributable to future demographic growth pressures on the resources available.

16. In this particular area, the savings assumptions are:-
• Calculated at full cost
• Assume the mix of post discharge care being provided is consistent.

17. These assumptions represent a significant simplification of the issue. The actual delivery of “savings” will be affected by the following factors

• Releasing financial resources from existing infrastructure (e.g. property and other overheads) will take time.
• Release of resource is not necessarily linear in that patients who still require Acute and other Institutional Care but be more frail and ill than the average of patients currently in such institutions.
• It is hoped that integration will reduce delayed discharges. However this will happen on a patient by patient basis and any immediate benefit may be spread over a number of wards and hospitals. The numbers of occupied bed days released from any particular specialty would have to reach a critical mass before any discernible benefits can be achieved i.e. closing a ward or a hospital.
• Many savings will be dependant on initial funding to support the change programme. If the source of that funding is the release of existing resources, then it is subject to all of the points above.

22. The above factors restrict the ability to satisfy the need (identified in paragraph 34) that potential savings are “re-invested within the partnerships in order to help meet demand. Local planning must recognise this restriction in the immediate planning period within the parameters set out in paragraph 36 of the FM.

23. More specifically:
• In paragraph 27 the delayed discharge savings are based on a direct cost per bed day component of excess stays above performance targets. Direct costs consist of the cost of medical, AHP and nursing staff. Once delayed discharges are released, it is more likely that those staff will be deployed into managing the care of the acute patients who have been waiting to re-occupy the bed space rather than closing services down.
• In paragraph 29 the anticipatory care plans savings (£12m) are an extrapolation of the results of a two practice study within one locality. As such it may not be a reliable estimate.
• In paragraphs 30 to 33 the £104m savings estimate relies on a benchmarking technique across the partnerships. It is far more likely that the differential in healthcare costs per person across partnerships reflect differing approaches to the apportionment and allocation of overheads between acute and community care across Boards than major differences in efficiency. It appears to be inequitable that allowance is made for confounders for variation in per capita social care expenditure without similar allowance being made for potential confounders in healthcare expenditure. The research base on which the FM conclusion on healthcare per capita costs was drawn was based on an unpublished research paper that had not been peer reviewed.

26. The conclusion from the above is that whilst there are undoubted efficiencies arising from the integrated management of resource, they may not
be immediately cash releasing. Those resources eventually releasable will derive from a critical mass in beds less occupied becoming available, or through integrated management of workforce cost dynamics such as sickness absence and alignment to activity peaks.

27. Boards and Councils have been gradually exposed to a financial planning tool to compute the totality of resource consumed by the patients/clients of partnerships. This is labelled the Integrated Resource Framework (IRF). The inputs to the IRF model are largely based around the full costs of healthcare provision and as such are unsuitable as a basis for commissioning currency in evaluating the size of the resource flows anticipated in sections 13, 17 and 18 of the Bill.

28. NHS Lothian Board along with its Council partners has set out a resource framework based on direct controllable costs embedded in existing budgets to set the resource envelope being managed across partnerships. This includes Prescribing, Family Health Services costs and “hosted services” (managed by one CHP on behalf of the others across Lothian).

29. In addition, and to meet expectations of local stakeholders, a managed resource element for associated acute services is being identified for performance management reporting purposes. However it is recognised that this acute resource will not form part of the commissioning currency for the HSCP. This should enable stability in management of the residual acute resource across the Health Board area.

30. In conclusion, the resource currency for commissioning of services should be based on direct controllable costs with appropriate risk management arrangements for hosted and shared services across the HSCPs agreed by the partner organisations as part of the planning agreement.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

31. The uncertainties surrounding the transition to the new HSCPs and the underlying assumptions with regard to how these operate in governance and operational terms are recognised in the FM and accordingly we have no reason to dispute the detail of the ranges of costs estimates provided for recurrent and non recurrent costs set out in Tables 3, 4 and 5.

32. Paragraph 73 to the FM set out the risk in terms of VAT recovery in terms of transfers from Council to Health Boards in terms of delegated functions. Tax efficiency should not be the sole arbiter of the service strategy but efforts should be made where possible to mitigate the effects and the Board welcomes the efforts to achieve overall tax neutrality of the service transfers for the delegated functions model. Discussions with Scottish Government in the period up to and including the consultation have revealed a preference for a “four transaction model” of body corporate in the initial stages. The Board is hopeful that this model, if adopted, would help to achieve a VAT neutral solution to the body corporate model in line with paragraph 77 of the FM.

33. The Board notes the variable cost impact of pay harmonisation scenarios set out in paragraph 121 of the FM. Although delegation of function to the Health Board.

4
The Board is of the view that the pension cost scenario set out in paragraph 116 of the FM may be manageable. Whilst transfer into Health Board terms and conditions may give rise to more favourable and thus higher costs the Board has managed its exposure to issues on Equal Pay effectively since the new Agenda for Change pay structures were implemented in 2004. One area not clarified is whether legacy issues on Equal Pay in local authorities have been dealt with and the obligations of the transferor and transferee in respect of such liabilities.

34. The conclusion overall is that the costs set out in the Financial Memorandum for transitional change and recurrent additional costs are not unreasonable but their accuracy will be ultimately determined by the nature of the partnership mix, the resolution of the VAT neutrality issue and the subsequent development of the legislative powers through subordinate legislation.

If relevant are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur. If not, how do you think these costs should be met?

35. Over the long term the costs outlined should be met from the resource identified. In the transitional period, bridging finance will be necessary to manage the impact of non-cash release of resource, the costs of change and the impact of any subsequent change in the nature of the relationships across the HSCPs and the contributor bodies. Additionally the level of flexibility in the use of the Change Fund identified within the Scottish budget up to 2015 will be critical to the contribution towards the bridging of the immediate resource implications, as set out in paragraph 130 of the FM.

Does the FM accurately reflect the margins of the uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

36. Subject to the issues raised in the responses to 4. and 5. above the FM has made reasonable efforts to identify the risks associated with the implementation of the Bill. Each local HSCP will require to undertake detailed work as part of its planning process to identify specific risks and opportunities arising from integration of functions. In addition the Integrated Resources and Advisory Group set up by the SGHSCD has set out a series of preparatory activities to mitigate the financial aspects of implementation risks covering the financial clauses in integration agreements, procurement issues, due diligence and post implementation review of the integrated budgetary management in the shadow year.

Do you believe that the FM reasonably captures costs associated with the Bill? If not what other costs might be incurred and by whom?

37. Yes. The FM has attempted to identify the costs associated with implementation in the initial phases of the Bill. The savings estimates, however, have a greater degree of potential volatility and risk.

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?
38. Legislation is likely to be used to change the nature of the relationship between the current Boards and Councils and the new partnerships which will include a more precise definition of the nature and powers of the corporate body, its officers, and Scottish Ministers.

39. In addition, the assumption on the future role of the NSS in managing the transactional elements of integrated financial frameworks without negotiated resource transfers from other (territorial) boards may require to be considered in more detail. There is a body of existing work in NHS Scotland to deliver shared financial services and integrated workforce recording which may be subject to disruption and this needs to be carefully managed.

40. In evidence to the Health and Sport Committee we stated that the legislation in setting out to be wide-ranging and permissive has or appears to have, gone well ahead of the briefing to the service on how the new structure of governance will work. The bill offers many opportunities which Lothian and its partners recognise, however early changes to the governance arrangements have an unquantifiable potential to increase the recurrent costs (beyond the “four transaction” model) and the disruption to established services that are configured to provide a uniform service across Council boundaries within a single board and already developed shared services providing a uniform service across NHS Scotland.
FINANCE COMMITTEE CALL FOR EVIDENCE
PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL: FINANCIAL MEMORANDUM
SUBMISSION FROM NHS NATIONAL SERVICES SCOTLAND

Consultation
Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
1. Yes. We responded to the consultation on the Integration of Adult Health and Social Care. We did not specifically comment on the financial assumptions, but we did comment that a cost impact assessment should be carried out for staff transfers.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
2. Yes. The likely costs and risks form part of the FM.

Did you have sufficient time to contribute to the consultation exercise?
3. Yes

Costs
If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?
4. We believe that the Bill has implications for our organisation’s revenue and for our costs, in both Part 1 and Part 2.

5. We would also like to clearly state that whilst we identify a number of risks in our response, and in particular in response to this question 4, we are involved in ongoing national work to manage these risks.

Part 1
6. It seems likely that in at least some parts of Scotland, Part 1 will lead to new public sector entities being created – the ‘body corporate’ model. It is not clear if these new entities will be procuring services in the medium or longer term.

7. In the remainder of the country, public sector bodies would opt for the ‘lead agency’ model, which also potentially changes the entity which is currently procuring services from NSS.

8. The implications of Part 1 on NSS future revenue are therefore two-fold:
   - Health Boards are currently required to buy some services from NSS; Local Authorities do not operate with the same requirements – e.g. use of NHS Central Legal Office, National Distribution Centre. If the procuring entity changes, then our revenue may fall and we would need to try to manage our costs down accordingly, which may be difficult if some costs are fixed in the
short to medium term (e.g. staff costs or property costs); conversely there
may be an intended or unintended consequence on any entity requiring it to
buy NSS services when it does not currently do so, with implications for their
current staff and/or third party contracts

- In addition, Health Boards currently source optional goods and services from
NSS within the EU procurement regulations but without the need for a formal
procurement process as it is seen as spending money that is already wholly
within the health service budget. We operate a strategic sourcing team which
procures over £1bn p.a. of goods and services for NHS Scotland and we are
not clear how much of that spend they would continue to need to develop and
service. Under either the ‘lead agency’ or the ‘body corporate’ model, it has
not been made clear to us who the future procuring entity might be and hence
how compliance with procurement regulations would operate and be ensured.
We are of the view that there is a strong risk that without careful planning and
clear guidance up front, these changes may be disruptive and expensive for
all concerned.

9. Costs:
- We buy over £150m p.a. services from NHS Boards for NHS Scotland
patients for nationally commissioned specialist services without having to go
through formal procurements – the opposite of the income point above in
terms of procurement regulations. If any of those services in future are
provided by Local Authorities or by new bodies corporate, will the same
situation persist? If NSS has to go through procurement processes, that will
require additional resource. Also, if a contract is then awarded to a non-NHS
Scotland provider for a service currently provided to patients by NHS Scotland
(or to a non-Local Authority provider for a service currently provided by a
Local Authority), there may be implications for the sustainability of other care
currently provided by those same NHS or Local Authority staff and/or facilities.

10. Part 2
NSS recognises and appreciates the time and dedication shown by Scottish
Government and its officials, and many others to enact the Public Services Reform
Order (“PSRO”) with effect from 29th June 2013. This allows NSS to offer its services
to customers other than health bodies and very clearly lays out our role in the way
we would like to see it reflected in the final Bill.

We are actively pursuing these new opportunities currently and initial discussions
with Scottish Government and a number of public sector bodies suggest that there is
a genuine demand for our services to create public value.

If the Bill were to restrict in some way what has already been put into law through the
PSRO, not only would that, in our view, reduce benefits to the Scottish public sector
together with our associated future income, it could also leave NSS looking to further
reduce capacity and that might be hard to achieve in the short to medium term.
Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

11. We have had the benefit of reviewing the Financial Memorandum but have not been part of the team developing the extensive and detailed work which sits behind it. Our reading of the FM alone suggests several areas where we would seek further assurances as to how the models have been constructed and these are set out in Appendix A.

12. One overall observation would be around risk and reward. The bill projects costs of c£34m in years 1-5 and an ongoing c£7m p.a. new cost to the public sector. The range of savings compared to those costs is c£138m–c£157m p.a. and would seem to be a good return on that investment. However, paragraphs 9-11 of the FM state the total spend by Health Boards and local authorities on adult social care to be over £11bn p.a. The savings therefore represent only c1% of annual spend. This would appear to be a modest target for a programme which will absorb considerable public sector resource over a number of years. One alternative or activity which could sit alongside the Bill would be to dedicate more resource to prescribing and aim to reduce by c10% only the NHS Scotland prescribing budget and generate similar savings. Other choices or complementary activity might be to look at property costs or workforce costs.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

13. Yes, subject to clarification on the risks mentioned above. We believe that the Bill will not create significant incremental costs for our organization and are therefore content that any costs could be met. However, we are mindful that the creation of additional public sector entities could create a different and more complex landscape for us to work with effectively and may therefore cause incremental costs to NSS.

14. We note that section 99 does not envisage increases in budgets and specifically indicates no increase to that of the Common Services Agency (the legal name for NSS). In a landscape of significant public sector reform, there may be a requirement for NSS to provide further shared services that may increase NSS’ budget whilst offsetting public sector costs in excess of this. NSS, over the last five years, has made CRES of £37m and will continue to do everything possible to increase its productivity and efficiency.

15. The core reason for NSS extending our services beyond the NHS has been to deploy in support of integrated Health and Social Care, making our shared services available where desired. As utilization of our services is completely optional, we only expect growth if it is in the interests of the Public Bodies using our services, i.e. it offsets other larger costs whilst improving quality.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

16. Yes, apart from two concerns:
- Paragraphs 64 and 65 of the Explanatory notes set out a requirement for three-year strategic plans. We believe that to energise effective public sector reform on this scale will require vision and dedication to address large elements of how health and social care are delivered - workforce, property, prescribing, IT etc. Many of these staff arrangements, third party contracts, property leases and other costs are relatively fixed in the shorter term. We therefore consider that change will take much more than three years and so a longer planning horizon is essential or at least desirable.

- Paragraphs 104-111 on joint ventures are unclear as to how this will work alongside existing activity – e.g. HubCos – and therefore how the bill provides a further savings opportunity.

**Wider Issues**

*Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?*

17. See 5 above.

*Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?*

18. We have no comment to make.

*In addition to the questions below, please add any other comments you may have which would assist the Finance Committee's scrutiny of the FM.*

19. Our additional comments which do not naturally sit under the specific consultation questions are:

- **Shared services:**
  - This could be seen as a missed opportunity to properly establish a public-sector shared services entity with appropriate governance
  - We are not clear how this bill is linked to the SG shared services agenda – e.g. for support services

- **It is interesting that the invitation has gone out to collective bodies for Local Authorities (COSLA, SOLACE), but not to anything equivalent for Health Boards (e.g. NHS National Planning Forum)**

- **Paragraph 99 of the Explanatory notes states that section 37 allows for information sharing. In order to maximize benefits and best enable person-centred care and access to information about them, what consideration has been given to requiring information sharing rather than only allowing it?**
APPENDIX A

When reviewing the FM, we noted areas where further assurance would be helpful to clarify if benefits and cost have been over-stated or under-stated. Specifically:

- Savings opportunity: It would appear that some savings may not have been included:
  - Paragraph 91 refers to the opportunities from revenue property cost savings but no estimate appears to have been made
  - Paragraph 86 refers to the potential benefits from rationalization of support services, but no estimates appear to have been made and no timescales or ambition set

- Savings risk: Some savings may have been overstated:
  - Paragraphs 24 et seq in the FM deal with delayed discharge. They focus on the impact of transferring costs of care. They project savings of £22m to £41m p.a. from delayed discharge. These would be overstated to the extent that they are not realised as cash savings due, for example, to the increased cost of the care which prevents the delay in discharge and/or other patients consuming those resources instead – e.g. to reduce waiting times
  - In paragraph 30 of the FM, reference is made to the poor data on variation, particularly in adult social care. Paragraph 33 then states a single figure of £104m p.a. as the saving from reducing variation. A range of savings in this area would appear more appropriate, particularly given that total savings (paragraph 34) are only projected to be £138m - £157m p.a. and this is the major element of them

- Cost risk: Some costs may not have been included:
  - Paragraph 78 of the FM highlights a VAT risk of £32m p.a. for VAT currently recovered by local authorities on adult social care. This does not appear to be set out as a cost or a reduction in savings. Equally, there could be a VAT opportunity for costs currently incurred by section 41 bodies which in future are costs borne by section 33 bodies

- Cost opportunity: Some costs may be overstated unless it can be proven that they are actually incremental costs to the overall public purse – e.g.:
  - there is a reported (paragraph 89 of the FM) direct cost of £3m p.a. for clinicians involvement in locality planning, but does this mean that the Scottish public sector would spend £3m p.a. more on clinicians than it does now? Or is some of the cost in fact because the public body paying clinicians changes but the overall public sector cost does not change?
  - The transition team costs of £9.8m (FM paragraph 37). If any of these are existing public sector staff, the incremental cost to the public purse will be lower
  - Scrutiny cost in paragraph 123 of £670k p.a. Again, are there other savings to offset (e.g. internal audit)? Why would more integration and fewer ‘moving parts’ lead to higher scrutiny costs for the system overall?
FINANCE COMMITTEE CALL FOR EVIDENCE

PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL: FINANCIAL MEMORANDUM

SUBMISSION FROM NORTH AYRSHIRE COUNCIL

General
1. Given the diversity of arrangements across health board and local authorities it is recognised that assessing the financial implications of the Bill is likely to have been challenging. The provision of information on the underlying assumptions, while certain aspects are challenged below, is helpful in understanding the initial assessment of additional costs. The diversity of current arrangements will make distribution of any additional funds across Partnerships complex.

2. Focus of the financial memorandum is on the additional recurring and non-recurring costs likely to be incurred by health, with an incorrect underlying assumption that all additional local authority costs can be met from within existing resources. The response below focuses on the three areas on which feedback has been requested.

The wider financial impacts of the health & Social Care Bill
Part One Transitional Costs
3. Comments regarding each of the components of the Transition Costs are noted below;

- Limiting transition team costs to the minimum will not encourage partnerships to include a wider range of services
- Provision is being made for funding CHP leadership post holders who are displaced as a result of the development of partnerships, with no similar resources, either recurring or non-recurring, being available to local authorities, this creates an inequity in respect of local authority senior managers who are unsuccessful in securing a post in the new partnership
- Due to the complexities of one health board with multiple local authorities there is a concern that this will result in additional costs rather than deliver economies of scale,
- Insufficient ICT development and recurring costs e.g. within Ayrshire the three local authorities operate different social work management information systems
- Welcome the non-recurring costs for third sector support, but consider this to be insufficient and a requirement for an element to be recurring.

Part Two Recurring Costs
4. Concern that the identified recurring costs are insufficient to meet the requirements of the Bill. Examples include;

- there is an assumption that the balance of funding for the Chief Officer can be met from the current CHP General Managers salary, North Ayrshire
operates a virtual CHP with no services managed by the CHP and no CHP General Manager post,

- consideration is not given to loss of economies of scale for other management costs where only elements of current services are included within the new HSCP
- low value attached to external audit
- additional costs associated with development of financial information identified for the health sector only additional costs associated with clinicians involvement in locality planning is considered insufficient, also unclear why the additional costs relate only to clinicians and not wider stakeholders recurring costs around strategic planning limited to management information, anticipated that additional costs, linked to increased levels of consultation and granularity, will be incurred difficult to comment on the sufficiency of additional investment around care economists due to lack of information on current resources no funding to support governance, unclear the assumptions that have been made around remuneration for Board Members the assumption is that support services for the HSCP can be funded from existing CHP support services is not supported; the North Ayrshire CHP does not have any support services. In addition there are concerns around loss of economies of scale in existing services and the need to support the new partnership.
- VAT continues to be a significant risk for the HSCPs.
- Wider concerns around the emergence of additional staffing cost pressures as integrated teams develop. Specific examples include; harmonisation of terms and conditions – a particular issue where similar services are being provided e.g. support services; jobs being evaluated on different bases; concern re the NHS no redundancy policy and current and future pension risk around potential transfer of employees between funded and unfunded schemes and rising employer contributions.

5. Use of NHS National Services Scotland requires to be considered at an individual partnership level to establish whether it will deliver best value for money. A local concern around use of centralised services is the impact on local jobs and the local economy. This is of greater concern in North Ayrshire where unemployment is the highest in Scotland and health employment is low due to no general hospital in the area and limited local community health services.

6. A better understanding of the risk and cost implications for local authorities of using CNORIS is required.

7. In the section which deals with impact on other agencies additional inspection costs have been identified, it is not clear why this would be additional to rather than different from the current inspection arrangements. Any additional costs for external inspectorates require to be matched with partnership funding to prepare for additional inspection. There is a view that rationalisation of the current inspectorates is possible as the HSCPs develop.

**Any technical financial issues which the Bill presents**

8. The main technical issues were covered in the joint DoFs response to the original consultation. These issues are being pursued across the five work streams.
Specific commentary on the Financial Memorandum. Included in this we would welcome views on whether you are content that the Integration Agenda will actually deliver everything that the Financial Memorandum sets out.

9. A limited number of under developed examples are provided on the anticipated efficiencies from the integration of health and social care; as such it is difficult to place reliance on these. A particular concern is noted around the ability to reduce the per capita variation in health services, elements of which may be justifiable.

10. Management and delegation of resources at a locality level will create challenges for Partnerships, in terms of effective management and potential for further loss of economies of scale.

11. It is clear that there will be challenges in shifting resources from acute to early intervention and prevention with the significance of any savings from the development of the HSCP likely to be lost in the wider demographic challenge. The development of HSCPs will not remove the requirement for a greater level of investment to support rising demographics.
FINANCE COMMITTEE CALL FOR EVIDENCE

PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL: FINANCIAL MEMORANDUM

SUBMISSION FROM SCOTTISH BORDERS PARTNERSHIP

Consultation

Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

1. Scottish Borders Council and NHS Borders welcomed the opportunity to comment as part of the consultation exercises which preceded the Bill.

2. These comments were included as part of the Joint Directors of Finance national response. The comments made were general comment regarding the bill and were not directly around any of the financial assumptions contained within the document.

3. In addition NHS Borders and SBC submitted a joint response as part of the consultation process proceeding the Bill.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

4. The comments submitted at that time did not cover the detail of the costs/savings, however the response did cover some of the challenges of integration. These included areas around VAT, capital and assets, although we feel these have been picked up, or are confident these will be covered, within the guidelines and regulations that are due to be issued.

5. We would like to note that issues are becoming clearer and we are confident that good progress has been made.

Did you have sufficient time to contribute to the consultation exercise?

6. Yes

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

7. The Partnership notes the figures in the paper are very much estimates at this time and agree that much more research and a robust evidence base will be needed to ensure the financial assumptions accurately reflect the costs and. Importantly, the potential opportunities to both local authorities and the NHS arising from integration. Given the limited information available It is not possible I to comment on the completeness of financial implications at this time. The Partnership is still in early days and continues to develop.
8. The paper focuses on doing more with the same resources. Many efficiencies do appear to be grounded around unplanned admissions to hospital and presumably a reduction in beds. Due to the demographics and increased dependency the release of resource will be challenging. There is a clear challenge to release resources away from hospital based care (including admissions) to elsewhere on the care pathway in line with the need to shift the balance of care.

9. More specifically there are a number of issues that need to be fully explored:

- There is a concern around potential displacement costs across the Partnership and the impact of these.
- Concern around assumptions that savings will be made on CHP general managers. There may also be displacement costs for Local Authority staff that may need to be considered.
- Concern that estimated third sector costs may not be sufficient to support full involvement in the partnership.
- Additional inspection costs are identified for inspection agencies but the associated costs of preparing for inspection both in the NHS and Local Authorities are not factored in. Given the assumption that integrated working will be more efficient and effective it is not clear how this assumption has been applied to the costs identified for inspection agencies where it would be anticipated there will be some efficiencies by applying a joint approach to inspection.
- There is an assumption that through redesign of services NHS and Local Authorities will be able to realise short term efficiencies that can be redirected to fund the implementation of further transitional change. There is clearly no guarantee that this will be the case or indeed that any savings will be sufficient. The Partnership would welcome more detail on this as there will be additional costs to be met in terms of set up the integration plan and the partnership agreement.
- Cost of clinical (GPs and consultants) involvement may be significantly higher as they are key to success and will need to be fully considered.

Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

10. Please see comments in response to question 4.

11. It would appear that costs seem to be over 6 years rather than 15 years.

12. Potential savings may take longer to be realised within the timescales detailed for example, integrated support services due to different systems and pay Terms & Conditions. It is essential that this is fully considered and scoped before savings are profiled into plans.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

13. Please see comments in response to question 4 and 5.

14. There are still a significant number of risks and challenges which require full consideration. Prioritisation would be essential and would allow impacts to be considered on other key projects.
Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

15. Overall the Partnership feels that the assumptions based on current information are reasonable.

16. It is important to note that costs are already being incurred as preparations have already begun.

Wider Issues

Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

17. Set up costs will be incurred in moving forward and some of these have already been required, especially in relation to:

- Consultation on the Integration Plan
- Set up costs in relation to the Pathfinder Board
- Joint Integration Director Post
- Double running of the CHCP and the new Joint Board

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

17. Not at this time

Any other comments:

18. The Partnership is disappointed that the Change Fund will not continue into 2015/16.

19. Scottish Government may need to have regard to the implications for Integration when setting budget allocations nationally.

20. Overall we welcome the opportunity to comment and look forward to further guidelines and regulations.
Consultation

Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?

1. Yes.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?

2. No.

3. Some of the issues identified in the response to the consultation exercise which preceded the Bill still require to be clarified e.g.

   - The role of the Section 95 Officer in local government in relation to the operation of the partnership;
   - The recognition of statutory responsibilities in respect of specific social care services and the impact of these on financial budgets and governance arrangements;
   - The impact of performance monitoring on the future use of financial resources to achieve agreed partnership targets as they develop. In this regard, the balance achieved between the autonomy of the partnership, the accountability of local government to the electorate and the authority of the Scottish Government in relation to the activities of the health board still requires to be further considered and agreed.
   - The range of technical challenges associated with managing integrated budgets. It is recognised however that these issues are being progressed by the Scottish Government, COSLA and the Directors of Finance.

Did you have sufficient time to contribute to the consultation exercise?

4. Yes.

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?

5. There are financial implications for local government which have not been accurately reflected in the Financial Memorandum.

6. Additional costs incurred by local authorities cannot be met from within existing resources. The Financial Memorandum assumes this and does not recognise this as a key issue for local government. Instead, the Financial
Memorandum concentrates on the additional recurring and non-recurring costs likely to be incurred by health.

7. Additional recurring and non-recurring costs may be incurred as a result of existing post holders being displaced when the new partnership arrangement is established. This will affect both the local authority and the health board however, there is no provision to meet these costs within the Financial Memorandum. The only provision relates to CHP Leadership posts. There is no recurring or non-recurring funding available to meet the cost of staff displaced from local authority posts as a result of the integration. Depending on the model of integration adopted and the detail of the integration plan, there is a probability that existing local authority posts will be affected by the integration. It is not yet possible to confirm which posts will be affected or the number. Funding should be made available to meet any associated costs incurred by local authorities. The strategy to deal with the impact on the recurring cost of displaced staff beyond the first three years of the integration plan would also require to be agreed and funded where necessary.

8. The support arrangements for the new partnership, in particular the transitional arrangements, have not been fully developed at this stage. The additional costs and the timescale associated with these support arrangements cannot therefore be confirmed. These costs would relate to ICT, financial monitoring and reporting and personnel requirements. As the extent of these costs is unknown, the assumptions contained within the Financial Memorandum cannot be relied upon as complete. Only the additional costs associated with the development of financial information have been identified for the health sector only. The assumption has also been made that support services for the new partnership can be funded from existing CHP support services and this may not be sufficient.

9. As highlighted above, the duties of the Section 95 Officer in respect of local authority budgets delegated to the partnership requires to be clarified.

10. The annual budget setting processes of the local authority and the health boards will require to be harmonised.

11. The strategic financial objectives of each partner will require to be addressed to quantify the total resources available to the partnership. Target efficiency savings and annual uplifts for each partner will impact on this.

12. The partnership would require to develop a financial strategy to respond to overspends and underspends which emerge during the year.

13. Further consideration requires to be given to how the duties on local authorities will interface with health duties. An example of this is Self-Directed Support and the imminent requirement to identify individual budgets for service users to use for their support plans.

14. Financial recording and reporting costs are likely to be an additional cost incurred irrespective of the integration model adopted. A provision for these costs should be included in respect of the “Delegation between partners model” detailed at table 4 on page 35.
15. There is no recurring or non-recurring funding available to meet the additional cost associated with new IT requirements including amendments to existing financial systems.

16. Economies of scale have been achieved in respect of the management of a range of services within local authorities. Where only some of these services are now included in the new partnership arrangement, the remaining services will still have to be managed within the local authority. The economies of scale previously secured will be lost and there is no provision for this additional recurring cost for local authorities within the Financial Memorandum.

17. The position in respect of reclaiming VAT is critical and requires to be confirmed in order to inform the formation of the optimum partnership model.

18. It is not clear why additional inspection costs would be incurred. The current inspection arrangements would require to be reviewed to reflect the new partnership arrangements but it is anticipated that the costs associated with this requirement could be met from within existing budgets established to meet inspection costs.

**Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?**

19. No.

20. The Financial Memorandum does not make any provision for demographic growth and the financial impact this will have on both health and social care services in the future. Although better integrated services will improve outcomes for individuals, it will not release sufficient funds to address the full impact of demographic growth. Additional funding must be made available to fund this gap.

21. As the partnership model develops, it is anticipated that new cost pressures will emerge as a result of the more effective integration of teams. Existing terms and conditions may have to be harmonised and pension policies reviewed. There may also be the potential for retrospective equal pay claims. The Financial Memorandum does not make provision for these and there is no recurring or non-recurring funding available. These new costs cannot be met by local authorities.

22. Reliance is being placed on the conclusion that there will be no additional costs associated with indemnifying staff whose roles change as a result of assuming new responsibilities to support integration. The change in staff responsibilities is likely to happen to ensure the development of innovative practice between health and social care services is progressed and the service improvements are achieved.

23. There will be recurring costs beyond April 2015 of the integrated service delivery arrangements already in place as a result of the Reshaping Care for Older People agenda. The Change Fund ends on 31\(^{st}\) March 2015. In order to continue to support the current programme of integrated service delivery, consideration should be given to continuing the Change Fund during the initial period of the transition.
If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?
24. No.

25. Additional investment funding for local authorities and health boards is required.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

27. Please refer to the issues raised in response to questions 4 and 5. Until the new partnership model is agreed and the range of issues identified for further consideration is clarified, it is not possible to confirm the accuracy of the Financial Memorandum.

Wider Issues
Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?
28. The role of the acute services within the integrated partnership should be further considered, particularly the impact of unplanned or inappropriate admissions on resources and financial budgets and the opportunities to re-design services to better respond to emergencies. The role of the general practitioners and other medical staff is also critical in this regard given their decision-making responsibilities for hospital referrals and admissions.

29. Before any sound conclusion can be drawn about the effectiveness of reducing delayed discharges, an assessment of the extent of, reasons for and impact of hospital re-admissions needs to be undertaken.

30. The integration of health and social care services will not release sufficient funds in the earlier years of the transition to meet the impact of demographic growth which is already being experienced, particularly within community based health and social care services. As a minimum, the extension of the current Change Fund is required to maintain the progress made to date and to help address the funding gap emerging as a result of demographic growth.

Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?
31. It is not possible to comment on this at this stage. As partnerships develop, it is likely that future cost pressures will emerge, particularly, as highlighted above, in relation to the harmonisation of employee terms and conditions and pensions.

32. Once the initial arrangements are agreed and established, the partnership will have autonomy to make decisions on what the total budget is spent on without reference back to the partners. There is no provision to enable the local authorities to influence these financial decisions as the partnership moves forward. The
outcome of future partnership commissioning strategies may result in additional costs for local authorities and/or health boards.
1. Q1 - In terms of the wider financial impacts of the Bill these are covered in the Background section of the Financial Memorandum (FM). In particular the FM in paras 27, 29 and 33 identify potential savings of between £138m and £159m. It is recognised later, at para 35, that there is considerable uncertainty around these estimates of potential savings, and this is clear due to the number of variables and dependencies that would need to work in the right way in order to see such savings. There is an expectation that by moving more towards early intervention and preventative support that use and cost of more acute services can be achieved, however this would require a freeing-up of resources from these acute provisions to allow the investment in the early intervention services. There must also be a danger that the early intervention does nothing but simply delay the intake to acute provision for a few years and the demand actually does not diminish overall and in fact the total cost of overall provision is actually increased.

2. The main area where potential savings are identified is in relation the variation if cost and by reducing variation costs will come down. This does seem like a potential area for cash savings to be generated by different commissioning or procurement or treatment regimes. However there may be appropriate and justifiable reasons for some or all of the variations. The text at Para 30 advises that for health spend the variation is unexplained and for social care the picture is less clear...and the potential for health being lower due to high social care spend or vice versa suggested in this Para further muddies the position.

3. Given the above vagueness in the FM regarding these potential savings it is difficult to place too much reliance on them. When also taking into account the stated need (Para 34) to be reinvested in partnerships to help meet projected future demand. This gives the impression that the Government feel there is no need to fund the future demand pressures as partnerships will be able to self-fund through efficiencies - despite the efficiencies being clearly described in the FM as being effectively crude estimates with little evidence to support them per Para 30. There must also be doubts about the practical ability of the acute provision (both NHS and social care) to actually provide resource release to non-acute services. This will be particularly difficult in terms of NHS where it is likely that the acute provision will not be part of the future integrated service and even if the acute provision was to be part of future integrated services, based on past experience and future demand pressures these services are more likely to place funding pressures on partnerships rather than bring efficiency / resource release opportunities.

4. Q2 - the main technical issue which remains is in relation to the treatment of VAT, and while the FM suggests there will be solutions developed, it would be better if this position had been finalised and agreement with HMRC in place by now. This remains a risk to the funding of the future integrated partnership and it is difficult to
understand how MSPs can be asked to make a decision on integration while there remains any doubt as to the financial implications in this regard.

5. Q3 - The issues are covered in the response to Question 1 above.

6. In relation to some of the specific cost implications identified:

At Para 85 it had been understood until now that there would be no additional audit burden and that the cost of auditing the financial governance would not increase due to the new legislation. For example in West Dunbartonshire there is a CHCP in place which is audited through the normal audit processes of the parent bodies. If, however there is now expected to be additional financial governance audits required of the new bodies then the additional cost of £150k seems low for the whole of Scotland, given that there will be a number of new complex bodies to be audited. On a linked issue perhaps the Bill would allow for a reduction in the number of currently silo-ed and increasingly over-lapping national audit/inspection/improvement bodies? Such a reduction could be used to free-up much needed resource to be transferred to the new partnerships to assist in meeting the costs of care given the predicted demographic changes over the next few years.

7. Para’s 117 to 121 talks about potential cost in the future arising from harmonisation of employee terms and conditions. This doesn't really consider the level of risk of this actually being required due to future partnership models, and if so it would appear to be a cost that is left to the future partnerships to deal with.
Consultation

Did you take part in either of the Scottish Government consultation exercises which preceded the Bill and, if so, did you comment on the financial assumptions made?
1. The previous consultation paper did not include any financial assumptions resulting from integration but rather asked several questions around integrated budgets and use of joint resources. West Lothian Council as part of the West Lothian Community Health and Care Partnership responded to this.

Do you believe your comments on the financial assumptions have been accurately reflected in the FM?
2. As stated above, there was no previous consultation on financial assumptions or a draft financial memorandum. Therefore, it is not relevant to comment on whether the West Lothian Council’s comments have been accurately reflected in the published Financial Memorandum.

Did you have sufficient time to contribute to the consultation exercise?
3. The consultation was issued on 2 July 2013 for return by 23 August 2013. Given this covered the holiday period this was a relatively short consultation timescale which was adequate for an officer response on financial matters, but if covering policy matters also would have been insufficient time.

Costs

If the Bill has any financial implications for your organisation, do you believe that these have been accurately reflected in the FM? If not, please provide details?
4. The Bill has financial implications for West Lothian Council in terms of both one off costs and recurring costs. The council along with the West Lothian Community Health and Care Partnership are still discussing the format and scope of the future model in West Lothian. The scope of integration remains uncertain and given this it is difficult to quantify the financial implications for West Lothian Council. Given this it is not possible to say if the financial implications to the council have been accurately reflected.

5. The Financial Memorandum is helpful in setting out the key financial issues and providing an estimate of the costs for these. Given the question is to individual organisations, it would have been of assistance to show these costs at a Local Authority and Health Board level although it is appreciated that, in the spirit of integration and genuinely shared resources, this split should not be necessary.
Do you consider that the estimated costs and savings set out in the FM and projected over 15 years for each service are reasonable and accurate?

6. The FM does not project costs and savings over 15 years for each service. The timescale for costs to health boards and local authorities is 2014/15, then recurring costs from 2015/16.

7. One off costs associated with the bill have been estimated at £16.3 million. The largest element of this for Transition Teams is based on the Highland model but this may not be relevant for other partnerships. Costs are included for redeployment and redundancy costs, but only for Health CHP management roles. It is however possible that as a result of integration other management roles will no longer be required in organisations and it is therefore likely that the costs in the FM are understated. It is noted that Scottish Government funding will be made available for these one off costs.

8. The additional recurring costs associated with the Bill to local authorities and health boards have been estimated at between £4.55 million and £5.6 million per annum for the whole of Scotland. There remain risks to these additional cost assumptions, particularly the treatment of VAT under integration models. While this is a relatively small amount, there is no similar confirmation in the FM that Scottish Government funding will be provided for these costs. Both councils and health are under severe financial constraints in terms of funding settlements and very significant demand and demographic driven cost increases, and, as such, it would in accordance with previous practice regarding new legislation it would be anticipated that these costs would be met by additional funding from the Scottish Government.

9. In terms of savings, these are very much focused on the health board area of Partnerships and relate to reducing delayed discharge, anticipatory care savings and reducing variation in health care spend. The estimated savings associated with these areas is between £138m and £157m per annum.

10. West Lothian CHCP has met zero delay discharge targets over a prolonged period and therefore there is unlikely to be savings resulting from this. More widely, savings can only be made in this area through a reduction in the number of beds. If performance against zero delayed discharge is improved across Scotland, but the beds are filled with new admissions to meet other demands or to reduce waiting lists, then there is no saving available. The care costs for the clients who have been discharged will have reduced but cost to community care will have increased with no shift in resource possible from Acute. This is a major issue that needs to be fully considered, and recognised in future funding settlements.

11. The assumptions made in arriving at Anticipatory Care and Reducing Variation are acknowledged to be high level and it is difficult to assess how accurate or reasonable they are.

12. It is noted that the FM suggests that the efficiencies identified will require to be reinvested within the partnerships to help meet increasing cost demands. The Final Business and Regulatory Impact Assessment published by the Scottish Government in May 2013 highlighted that over the next twenty years, health and social care costs in Scotland are expected to exceed today’s by £2.5 billion, at
today’s prices. This is likely to require a full evaluation of public service provision and cost to secure a sustainable model for public services.

If relevant, are you content that your organisation can meet the financial costs associated with the Bill which your organisation will incur? If not, how do you think these costs should be met?

13. Local authorities, and health boards, are under severe fiscal constraint yet face very significant rising demand for care, largely as a result of demographic pressures. The FM notes that the Scottish Government is funding one-off costs, but the same assurance is not given for recurring costs. There remains uncertainty over the recurring costs identified in the FM and it is considered that the Scottish Government should commit to fully funding the cost of legislative changes.

Does the FM accurately reflect the margins of uncertainty associated with the estimates and the timescales over which such costs would be expected to arise?

14. The margins of uncertainty are referred to in the FM and it is acknowledged that the cost estimates of integration are very difficult to quantify. It is noted that the implementation costs of the Highland’s integration model have been used in several instances, with adjustments made to attempt to show the impact of varying assumptions on integration.

15. The timescales and costs reflect the anticipated progress of the Bill through Parliament and the proposed implementation date.

16. However, there remains a lack of detail around integration requirements and it is anticipated that this will come from Ministerial regulations and guidance that have not yet been issued. Until we have the detailed regulations, it is not possible to forecast the costs with any certainty.

Wider Issues
Do you believe that the FM reasonably captures costs associated with the Bill? If not, which other costs might be incurred and by whom?

17. Responses to questions four to six cover this point.

18. In addition, it is noted that the Reshaping Care for Older People Change Fund is referred to in the Annex to the FM. The Change Fund has been an essential and welcome development. However there is uncertainty over the continuation of the Change Fund beyond 2015/16.

19. It is strongly felt that the Change Fund should continue beyond 2015/16 to provide ongoing finance to help shift the balance of care from Acute services. This will be vital to support the objectives of integration and help release monies to support increased community-based services capable of reducing future needs for acute hospital in-patient care.
Do you believe that there may be future costs associated with the Bill, for example through subordinate legislation? If so, is it possible to quantify these costs?

20. Future costs that might arise from the subordinate legislation associated with the current Bill will need to be assessed when the draft regulations and guidance are available for comment. It is not possible to quantify these costs. As previously noted, the expectation would be that the Scottish Government would fund any further costs associated with legislation.
SUPPLEMENTARY EVIDENCE FROM THE SCOTTISH GOVERNMENT BILL TEAM

Thank you for providing the Bill team with the opportunity to give evidence on the Public Bodies (Joint Working) (Scotland) Bill, under consideration at Stage 1. You asked for further information on two points in relation to the Financial Memorandum:

- To provide an explanation of the methodology used to arrive at the estimated £104 million efficiencies that could be generated by reducing variation, which I attach at annex A, and
- To provide more information about timescales for delayed discharge targets, specifically in relation to the targets under the National Performance Framework (as it ties in with the HEAT targets).

The Scottish Ministers have consistently stated that they do not want a single person delayed unnecessarily in hospital as it is not good for the patient, not good for the NHS and not an effective use of public money.

Patients who are delayed are predominately older, frail people, often with a number of long-term complex care needs. Matching suitable care to their individual needs can often take time, particularly where there are issues regarding the patients capacity, and guardianship needs to be sought through the courts.

An expert group was jointly established to consider delayed discharge by the Scottish Government and COSLA in September 2010. The Group submitted a final report to the Deputy First Minister, who was then Cabinet Secretary for Health and Wellebing, who accepted all the Group’s recommendations. The report recognised the substantial achievement over recent years in achieving the zero 6 week standard for delays, but noted that, from an outcomes perspective, this improvement obscured the fact that a 6 week delay in hospital discharge is too long in nearly all cases. The Group recommended that major cultural and behavioural change is required to move to a position where discharges routinely take place in days not weeks, and that people are discharged either to their own home or to the place from which they were admitted.

The Scottish Ministers agreed revised delayed discharge targets in October 2011, as follows:

- By April 2013, no-one is inappropriately delayed for more than 4 weeks
- By April 2015, no-one is inappropriately delayed for more than 2 weeks

Health Boards and local authorities are now working towards achieving the new targets. Developments in Intermediate Care, along with the Bill’s requirement to integrate health and social care, will go some way to helping achieve this target.

The delayed discharge target is one of a range of performance and improvement measures aimed at improving care pathways and reducing the length of hospital admissions. It links closely with the HEAT target to reduce the rate of emergency inpatient bed days for people aged 75+.
Annex A

Methodology for calculating variation

Intra-Health Board Variation: Quantifying potential reductions in expenditure

1. This note describes the method and results of an exercise to use Integrated Resource Framework (IRF) data to quantify potential reductions in expenditure due to efficiencies arising from integration.

2. The basic approach compares the expenditure per head by partnership, within Health Boards. In order to ensure that the comparison is robust, National Resource Allocation Committee (NRAC) formula weights are used to adjust the crude partnership populations to take account of variation in the need for health care.

3. The NRAC formula weights are constructed to capture the age/sex profile and the Morbidity and Life Circumstances of the local populations, and take account of the variation in the unavoidable excess costs of the provision of health care across urban-rural geographies.

4. The potential reduction in expenditure is defined as the difference between the mean expenditure per (needs adjusted) head across the Health Board and expenditure per (needs adjusted) head in those partnership where expenditure is above that Health Board mean. The proposition is that partnerships, where expenditure per head is above the Health Board mean, will be able to bring expenditure per head down to the (current) mean Health Board expenditure per head.

5. The calculation is illustrated in the table below, using Tayside as an example. This shows that Angus has expenditure per (NRAC) weighted person of £1,674, which is £131 above the mean of £1,544 for the three partnerships. Reducing that spend to the mean of £1,544 would generate potential savings of £14 mn for Tayside.

Delegated Powers and Law Reform Committee

48th Report, 2013 (Session 4)

Public Bodies (Joint Working) (Scotland) Bill

Published by the Scottish Parliament on 24 September 2013
Delegated Powers and Law Reform Committee

Remit and membership

Remit:

1. The remit of the Delegated Powers and Law Reform Committee is to consider and report on—
   (a) any—
   (i) subordinate legislation laid before the Parliament or requiring the consent of the Parliament under section 9 of the Public Bodies Act 2011;
   (ii) [deleted]
   (iii) pension or grants motion as described in Rule 8.11A.1; and, in particular, to determine whether the attention of the Parliament should be drawn to any of the matters mentioned in Rule 10.3.1;
   (b) proposed powers to make subordinate legislation in particular Bills or other proposed legislation;
   (c) general questions relating to powers to make subordinate legislation;
   (d) whether any proposed delegated powers in particular Bills or other legislation should be expressed as a power to make subordinate legislation;
   (e) any failure to lay an instrument in accordance with section 28(2), 30(2) or 31 of the 2010 Act; and
   (f) proposed changes to the procedure to which subordinate legislation laid before the Parliament is subject.
   (g) any Scottish Law Commission Bill as defined in Rule 9.17A.1; and
   (h) any draft proposal for a Scottish Law Commission Bill as defined in that Rule.

Membership:

Christian Allard
Richard Baker
Nigel Don (Convener)
Mike MacKenzie
Margaret McCulloch

Delegated Powers and Law Reform Committee

48th Report, 2013 (Session 4)

Public Bodies (Joint Working) (Scotland) Bill

The Committee reports to the Parliament as follows—

1. At its meetings on 3 and 24 September 2013 the Delegated Powers and Law Reform Committee considered the delegated powers provisions in the Public Bodies (Joint Working) (Scotland) Bill at stage 1 (“the Bill”)\(^1\). The Committee submits this report to the Health and Sport Committee as lead committee for the Bill under Rule 9.6.2 of Standing Orders.

2. The Scottish Government provided the Parliament with a memorandum on the delegated powers provisions in the Bill (“the DPM”)\(^2\).

OVERVIEW OF BILL

3. This Bill was introduced by the Scottish Government on 28 May 2013. The Health and Sport Committee is the lead Committee. The Bill is also being considered by the Local Government and Regeneration Committee.

4. In broad outline, the Bill provides a framework with a view to the improvement of the quality and consistency of health and social care services, through the integration of health and social care services in Scotland. The functions of local authorities and Health Boards which may be integrated are not however limited by the Bill to health and social care functions. Four “models of integration” between local authority and Health Board functions may be used, by agreement subject to the approval of the Scottish Ministers. On default if an integration plan is not submitted to Ministers, they may specify functions to be delegated to an integration joint board (Part 1).

5. The Bill also provides for the Common Services Agency (also known as NHS National Services Scotland) to provide goods and services to public bodies

---

\(^1\) Public Bodies (Joint Working) (Scotland) Bill [as introduced] available here: http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32s4-introd.pdf

\(^2\) Public Bodies (Joint Working) (Scotland) Bill Delegated Powers Memorandum available here: http://www.scottish.parliament.uk/S4_Bills/PB_-_DPM.pdf
including local authorities *(Part 2, section 44)*. It also provides for the Scottish Ministers to form a wider range of joint venture structures in relation to persons providing functions and services under the National Health Service (Scotland) Act 1978, to seek to make the most effective use of resources *(Part 3, section 46)*. There is new provision that a Health Board may, with the agreement of another Health Board and the Scottish Ministers, carry out on behalf of that other Board any function of the other Board *(Part 3, section 47)*.

6. The Bill also extends the scheme for meeting losses and liabilities of health service bodies which is run by NHS Scotland on behalf of the Scottish Ministers, to local authorities and “integration joint boards” established under Part 1 *(Part 2, section 45)*.

7. The Policy Memorandum outlines that the Bill is designed to establish “a framework for integration between Health Boards and local authorities of, as a minimum, adult health and social care based on the principles of a person-centred approach to service planning” *(paragraph 32)*. The Scottish Government published its consultation on proposals for such integration in May 2012.

8. At its meeting of 3 September the Committee agreed to write to Scottish Government officials to raise various questions on the delegated powers. This correspondence is reproduced at the Annex.

**DELEGATED POWERS PROVISIONS**

9. As noted above the Committee considered each of the delegated powers in the Bill.

10. At its first consideration of the Bill, the Committee determined that it did not need to draw the attention of the Parliament to the following delegated powers:

Section 5 – Power to prescribe national outcomes

Section 6(2) – Consultation

Section 7(1) – Approval of integration plan

Section 9(2) – Functions delegated to integration joint board

Section 9(3) – Functions delegated to integration joint board- prescribed day

Section 10(5) – Chief officer of integration joint board

Section 11 – Other staff of integration joint board

Section 14 – Functions delegated to local authority or Health Board- prescribed day

Section 21(5) – Effect on delegation of functions

Section 22(8) – Further powers of persons to whom functions are delegated- order by the Scottish Ministers
Section 23(4) – Requirement to prepare strategic plans

Section 26(2) – Establishment of consultation group

Section 27(5) – Steps following establishment of consultation group

Section 32(4) – Carrying out of integration functions: localities

Section 33(3) – Integration authority: performance report

Section 36(2) – Winding-up of an integration joint board

Section 38(2) – Grants to local authorities

Section 41 – Guidance

Section 45(3) – Extension of schemes for meeting losses and liabilities of health service bodies

Section 48(1) – Interpretation

Section 50 – Ancillary provision

11. Subsequently, in light of the written responses received by the Committee, it agreed that it did not need to draw the Parliament’s attention to the following delegated powers:

Section 12(3) – Integration joint boards: further provision- schemes for transfer of staff, etc.

Section 22(1) to (7) – Further powers of persons to whom functions are delegated

Section 39(2)(b) – Default power of Scottish Ministers (establishment of an integration joint board)

Section 39(2)(c) – Default power of Scottish Ministers (prescribed day)

Section 40 (Directions)

Section 52(2) and (3) (Commencement)

12. The Committee’s comments and, where appropriate, recommendations on the other delegated powers in the Bill are detailed below.
Section 1(3)(e) – Integration plans: same local authority and Health Board area- prescribed information about other prescribed matters

Power conferred on: the Scottish Ministers  
Power exercisable by: Regulations  
Parliamentary procedure: Negative procedure

Provision

13. Section 1(3)(e) provides for the power to prescribe by regulations, information about such matters as may be prescribed, for inclusion in an integration plan.

Comments

14. The Committee initially asked the Scottish Government to provide some examples of the information and matters that could be prescribed for inclusion in an integration plan. The response annexed sets out in paragraph 2 the range of such matters which it is intended could be prescribed in the regulations.

15. The Scottish Government provided further explanation to the Committee (paragraphs 3 to 6 of Annex B), as to why this power is needed in principle, and why it is intended that the matters which may be prescribed under section 1(3)(e) would go beyond those set out in section 1(3)(a).

16. Given the underlying policy proposals on what integration plans may contain, the Committee accepted the explanation for the need for this delegated power in principle (as opposed to seeking to set out the additional information in the Bill).

17. The Committee notes however that while this power is to prescribe further information for inclusion in integration plans, the range of matters which could be prescribed as set out in paragraph 2 of the response concern matters which could be of significance, such as the further arrangements for an integration joint board or joint monitoring committee to be implemented in the plan beyond the “model of integration”, arrangements for financial management of an integrated budget, or any arrangements for transfer of staff. The range of further matters that could be prescribed is also not limited to those arrangements.

18. The Committee therefore asks the Scottish Government, in relation to the power in section 1(3)(e), to consider in advance of Stage 2 of the Bill whether the significance of the matters which could be prescribed in regulations under this power is such that the affirmative procedure could be a more suitable level of Parliamentary scrutiny of the exercise of this power, rather than the negative procedure.

19. The Committee asks for further comment on this in the Scottish Government’s response to this report.
Section 1(6) – Integration plans: same local authority and Health Board area-

prescription of functions

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

Provision

20. The regulations under section 1(6)(a) and (b) are intended to prescribe the range of functions of local authorities and Health Boards which either must, may, or may not be, delegated under an integration plan.

Comments

21. The Committee asked the Scottish Government to explain why it is appropriate that section 1(6) provides that the Scottish Ministers have a discretion, rather than a requirement, to make the regulations.

22. It is confirmed in response that the Scottish Ministers intend to use this power to prescribe the minimum set of functions that must be delegated to the integration authority, and also to specify those functions which may or may not be delegated. In line with the policy memorandum, the regulations will set out adult health and adult social care functions which must be delegated.

23. The Scottish Government recognises that given the intention to require the delegation of certain functions, it would be more appropriate to require the Scottish Ministers to make such regulations. The Scottish Government will, therefore, bring forward an amendment at stage 2 to this effect.

24. The Committee also noted that section 56 of the Local Government (Scotland) Act 1973 is not expressly amended by, or referred to in, the Bill. Subsections (6) and (6A) of that section provide that a local authority’s functions with respect to setting amounts of council tax, borrowing money, approving annual investment strategies or reports, and determining applications for planning permission for a certain class of property, shall be discharged only by the authority. By subsection (7), a local authority shall not make arrangements for the discharge for any of their functions under the Animal Health Act 1981 by any other local authority.

25. Section 1 does not provide for any exclusion of those significant functions in the 1973 Act, from the powers to prescribe the functions which may be delegated in terms of an integration plan, and agreed to be set out in a plan.

26. The Committee therefore asked the Scottish Government whether there is any intention to affect the operation of section 56(6), (6A) and (7) of the 1973 Act. If not, it asked whether amendment of the Bill at Stage 2 would be proposed, so that “integration functions” could never extend to those functions. The Government has undertaken to consider this further in advance of Stage 2.
The scrutiny procedure applied to the powers in section 1(6)

27. The Committee considered that the Delegated Powers Memorandum for the Bill has not explained satisfactorily why the negative procedure was the appropriate level of scrutiny of the powers in section 1(6). The powers are very significant within the Bill, as the regulations will provide for the range of functions which must, may, or may not be, delegated under an integration plan.

28. The Scottish Government, in recognition of the significance of these powers, has considered it more appropriate that the exercise of them should be subject to scrutiny by Parliament by the affirmative procedure. It undertakes to bring forward an amendment at stage 2 to this effect.

29. The Committee notes that, in relation to the power in section 1(6), the Scottish Government has undertaken to bring forward an amendment at Stage 2, to require the Scottish Ministers to make the regulations under this power, rather than having a discretion to do so. The Committee will consider the proposed amendment after Stage 2.

30. The Committee also notes that the Scottish Government has undertaken to consider whether any amendments at Stage 2 need to be made to address the operation of the provisions in section 56(6), (6A) and (7) of the Local Government (Scotland) Act 1973, as they relate to the powers in section 1 of the Bill. The Committee asks for further comment on this in the Scottish Government’s response to this report.

31. The Committee also notes that the Scottish Government has undertaken to bring forward an amendment at Stage 2 which would provide that the exercise of the powers in section 1(6) would be subject to Parliamentary scrutiny by the affirmative procedure.

Section 12(1) and (2) – Integration joint boards: further provision

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative procedure</td>
</tr>
</tbody>
</table>

Provision

32. Section 12(1) provides that the Scottish Ministers may by order make provision about various aspects of joint integration boards, including their membership and proceedings. Such boards may be established under section 9. An order may make different provision in relation to different integration joint boards.

33. Any integration joint boards which are established under the Bill will be public authorities which will either undertake or direct the carrying out of functions delegated by the constituent local authorities and health boards.
Comments

34. The Committee asked the Scottish Government why this power needs to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint boards. It also asked why it could not be drawn to contain provision for the permissible number of members of an integration joint board (for instance by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular board); and contain provision for who may be a member.

35. It is indicated in response to the Committee (Annex B, paragraphs 10 and 11) that there are policy reasons for seeking a flexible approach as to the number of members, and who may be a member. It has been considered important that this provision strikes an appropriate balance between establishing a common framework for integration, while at the same time ensuring that it is not prescriptive at such a level of detail as to stymy local innovation. It is considered important that the powers should allow provision as to the membership, proceedings etc. of integration joint boards to be modified, as integration develops.

36. The Committee accepts the Scottish Government’s explanation of the perceived need for proposing a wide power in relation to the membership of joint boards, in principle. It considers it appropriate however to draw the proposed scope of the power in section 12(1)(a) to the attention of the Health and Sport Committee as the lead committee for the Bill.

37. The Committee accordingly draws the attention of the lead committee to the power in section 12(1)(a). This power proposes to enable the Scottish Ministers by order to make provision about the membership of integration joint boards, without any limitations as to the number of members of a particular board that may be prescribed, or as to who may be prescribed as members.

Section 15 – Transfer of staff where functions delegated to local authority or Health Board

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

Provision

38. Section 15 provides for a power of the Scottish Ministers to make a scheme for the transfer of staff from a person who is to delegate functions under the possible “integration models” between local authorities and Health Boards described in section 1(4), except for the “corporate body” model.

Comments

39. In summary, as in relation to section 12(3), the Committee asked the Scottish Government to explain the reasons for taking this power, the circumstances in which the power might be used to transfer staff between a local authority and a
Health Board, and why it is appropriate that any scheme is not subject to Parliamentary procedure.

40. The Government’s response (Annex B, paragraphs 17 to 20) is to similar effect as for section 12(3), in relation to the proposed contractual and administrative nature of any scheme for transfer of staff, and why it has been considered not appropriate to provide that a scheme should be subject to Parliamentary scrutiny, nor published.

41. However, the response also explains that this power is similar to the current power in the Community Care and Health (Scotland) Act 2002 (“the 2002 Act”), which is repealed by the Bill. It is explained that Highland Partnership has transferred staff under that power.

42. The Committee understands that section 15 of the 2002 Act currently confers powers on local authorities and NHS bodies in accordance with regulations made by Ministers to enter into arrangements for the delegation of certain functions. Specifically in terms of section 15(4)(c) of the 2002 Act, regulations may make provision as respects the provision of staff in connection with any such arrangements, including the transfer and secondment and terms and conditions of staff. (The regulations are subject to the negative procedure in terms of section 23 of the Act).

43. The Committee understands therefore that while there is a current power in the 2002 Act to enable transfer of staff arrangements, the form of exercise of that power is by regulations which are published as a Scottish statutory instrument, not an unpublished scheme. It appears therefore that the Bill proposes a downgrading of the level of Parliamentary scrutiny of the power to transfer staff, where functions are delegated under an integration plan between a local authority and Health Board (by one of the integration models under section 1(4)(b), (c), or (d)).

44. The Committee therefore accepts the power in section 15 to make a scheme for the transfer of staff where functions may be delegated to a local authority or Health Board, in principle.

45. However it draws to the attention of the lead committee that the exercise of this power would not be subject to Parliamentary scrutiny. The Committee understands that the current power to make provision for any transfer or secondment of staff contained in the Community Care and Health (Scotland) Act 2002, where arrangements may be entered between local authorities and NHS bodies for the delegation of functions, is exercisable by Regulations which are subject to Parliamentary scrutiny by the negative procedure (sections 15(4)(c) and 23 of that Act).

46. In contrast, the power in section 15 of the Bill to make provision about the transfer of staff, where functions are delegated to a local authority or Health Board, is proposed to be exercisable by a scheme which would not be published as a Scottish statutory instrument, nor subject to Parliamentary scrutiny.
47. The Committee understands therefore that section 15 proposes to remove scrutiny by the Parliament, in comparison with the similar power in the 2002 Act which would be repealed by the Bill.

Section 16 – Integration joint monitoring committees: further provision

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative procedure</td>
</tr>
</tbody>
</table>

Provision

48. Section 16(1) provides that the Scottish Ministers may by order make provision about the establishment of, membership of, and the proceedings of, integration joint monitoring committees, and any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

49. Any such committees will be public authorities which would monitor the carrying out of “integration functions” for the area of a local authority.

Comments

50. Similarly to the power in section 12 to prescribe the membership of integration joint boards, the Committee asked the Scottish Government for explanation why this power requires to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint monitoring committees.

51. The Scottish Government considers that, as for the power in section 12, flexibility as to the membership of integration joint monitoring committees will enable Ministers to put in place a framework to allow integration authorities to develop governance arrangements that suit local circumstances (Annex B, paragraph 21).

52. The Committee accepts the Scottish Government’s explanation of the perceived need for proposing a wide power in relation to the membership of joint boards, in principle. As for the power in section 12(1)(a) however, it considers it appropriate to draw the proposed scope of this power to the attention of the Health and Sport Committee as the lead committee for the Bill.

53. The Committee accordingly draws the attention of the lead committee to the power in section 16(1)(b). This power proposes to enable the Scottish Ministers by order to make provision about the membership of integration joint monitoring committees, without any limitations as to the number of members of a particular committee that may be prescribed, or as to who may be prescribed as members.
Section 36(3) – Power to make provision in consequence of new integration plan- scheme about transfer of staff, etc.

**Power conferred on:** the Scottish Ministers  
**Power exercisable by:** Scheme  
**Parliamentary procedure:** None (and not in the form of an SSI)

**Provision**

54. Section 36(3) provides that in consequence of the replacement of an integration plan by a new plan, the Scottish Ministers may, by scheme, make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

**Comments**

55. In summary, the Committee asked the Scottish Government to explain the reasons for taking this power, and to explain the circumstances in which the power might be used to transfer staff, property, etc., upon a new integration plan being substituted under section 35. It also asked why it has been considered appropriate that the exercise of the power should not be subject to Parliamentary scrutiny.

56. The Government’s written response (Annex B, paragraphs 26 to 29) has provided an explanation to the Committee why this further power to make a scheme is considered to be required.

57. Similarly to the power in section 15, this power in consequence of the substitution of a new integration plan (upon a change of the local authority which prepared the plan, or the integration model), would enable Ministers to make schemes for transfer of staff, property, rights, liabilities or obligations between a local authority and a Health Board (as well as to or from an integration joint board).

58. The Committee accepts the explanation why these powers are required in principle. However it considers it appropriate to draw to the attention of the lead committee the difference between the level of Parliamentary scrutiny which is proposed to be applied to these powers, in comparison with the powers currently available to transfer staff between a local authority and a Health Board in the Community Care and Health (Scotland) Act 2002. As for section 15, it is proposed that a scheme under this provision would not be subject to Parliamentary scrutiny, nor be published as a Scottish statutory instrument.

59. The Committee also asked the Scottish Government why section 19 applies where (by virtue of section 12(3) or 15(1)) a scheme is made for staff transfer, to set out the effects on contracts of employment, but section 19 does not provide that it applies when this power in section 36(3) is exercised.

60. The Scottish Government has considered this further, and concluded that section 19 should indeed apply when this power is exercised. It will consider whether an amendment at stage 2 is necessary to give that effect.
61. The Committee therefore accepts the power in section 36(3) to make a scheme in consequence of the replacement of an integration plan by a new plan, in principle.

62. However it also draws the attention of the lead committee to the same matter as for the powers to make a scheme in section 15, as regards the scrutiny of the exercise of this power. Section 36 similarly proposes to remove scrutiny by the Parliament, in comparison with the analogous power in the Community Care and Health (Scotland) Act 2002 to set out arrangements for the transfer of staff which would be repealed by the Bill.

63. The Committee notes that the Scottish Government will consider in advance of Stage 2 whether an amendment is required, to give effect to the intention that section 19 should apply, when the power in section 36(3) is exercised to make a scheme for the transfer of staff.

Section 39(2) – Default power of Scottish Ministers

Provision

64. Section 39(2)(a) to (e) lists five default powers which the Scottish Ministers may exercise, where a local authority and a Health Board fail before the day prescribed under section 7 to submit an integration plan for approval by them.

65. The functions of a local authority and a Health Board which may be specified under section 39(2)(a) on default to be delegated to an integration joint board are not limited by the prescription of functions by regulations under section 1(6). Section 1(6) relates to the prescription of functions which must, may, or may not be, delegated under an integration plan. Section 39(2) applies where such a plan has not been submitted for approval.

Comment

66. The Scottish Government has confirmed that it does not intend for the functions that may be specified under section 39(2)(a) to go beyond those that would be prescribed by regulations under section 1(6). It undertakes to consider whether a Stage 2 amendment is necessary to effect this.

67. The Committee also sought explanation why there is a difference of approach between the powers contained in section 1(6) and section 39(2). The exercise of the powers under section 1(6) are proposed to be subject to the negative procedure, but the exercise of the powers under section 39(2)(a), (d) and (e) to specify the functions to be delegated to an integration joint board and other matters are not proposed to be subject to scrutiny by the Parliament.

68. The Scottish Government has explained (Annex B, paragraph 31) that the policy intention is in that respect to take a consistent approach with the powers to prescribe by regulation the functions which may be delegated between local authorities and Health Boards in terms of the Community Care and Health (Scotland) Act 2002. The entering of arrangements for the actual selection of
individual functions or parts of a function for delegation by a particular health board or local authority is not subject to further scrutiny by the Parliament under the 2002 Act.

69. The Committee accepted that explanation in principle, given the policy intentions underlying section 39.

70. The Committee notes that the Scottish Government will consider in advance of Stage 2 whether an amendment is required, to give effect to the intention that the functions which may be specified under section 39(2)(a) on default to be delegated to an integration joint board would not go beyond those that would be prescribed by regulations under section 1(6).
ANNEX A

Correspondence with the Scottish Government

On 3 September, the Delegated Powers and Law Reform Committee wrote to the Scottish Government as follows:

Section 1(3)(e) – Integration plans: same local authority and Health Board area- prescribed information about other prescribed matters

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

1. Section 1(3)(e) provides for the power to prescribe by Regulations, information about such matters as may be prescribed, for inclusion in an integration plan.

2. The Committee asks the Scottish Government:
   - To provide some examples of the information and matters that could be prescribed for inclusion in an integration plan?
   - Why the power is drawn to permit any matters to be prescribed (about which prescribed information would need to be included in a plan), without provision that such matters should relate to the matters which the plan will set out in accordance with section 1(3)(a) to (d)?

Section 1(6) – Integration plans: same local authority and Health Board area- prescription of functions

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

3. The regulations under section 1(6)(a) and (b) are intended to prescribe the range of functions of local authorities and Health Boards which either must, may, or may not be, delegated under an integration plan.

4. The Committee asks the Scottish Government:
   - To explain, therefore, why it is appropriate that section 1(6) provides that the Scottish Ministers have a discretion, rather than a requirement, to make the regulations?

5. Section 56 of the Local Government (Scotland) Act 1973 is not expressly amended by, or referred to in, the Bill. Subsections (6) and (6A) of that section provide that a local authority’s functions with respect to setting amounts of council
tax, borrowing money, approving annual investment strategies or reports, and determining applications for planning permission for a certain class of property, shall be discharged only by the authority. By subsection (7), a local authority shall not make arrangements for the discharge for any of their functions under the Animal Health Act 1981 by any other local authority.

6. Section 1 does not provide for any exclusion of those significant functions in the 1973 Act, from the powers to prescribe the functions which may be delegated in terms of an integration plan, and agreed to be set out in a plan.

7. The Committee asks the Scottish Government:

- To confirm, in relation to the scope of the powers therefore, whether there is any intention to affect the operation of section 56(6), (6A) and (7) of the 1973 Act.

- If not, would amendment of the Bill at Stage 2 be proposed so that “integration functions” could never extend to those functions?

8. The Committee considers that paragraph 12 of the Delegated Powers Memorandum has not explained satisfactorily why the negative procedure rather than the affirmative procedure (or super-affirmative procedure) is a more appropriate level of scrutiny of the powers in section 1(6). The powers are very significant, as the regulations will provide for the range of functions which must, may, or may not be, delegated under an integration plan.

9. The Committee asks the Scottish Government to explain this further.

Section 12(1) and (2) – Integration joint boards: further provision

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative procedure</td>
</tr>
</tbody>
</table>

10. Section 12(1) provides that the Scottish Ministers may by order make provision about various aspects of joint integration boards.

11. The Committee asks the Scottish Government:

- Why this power needs to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint boards?

- Why could this power not be drawn more narrowly, to-

  (a) contain provision for the permissible number of members of a joint board (for instance by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular board), and
(b) contain provision for who may be a member (given that any joint boards will be public authorities which will either undertake or direct the carrying out of functions delegated by the constituent local authorities and health boards)?

Section 12(3) – Integration joint boards: schemes for transfer of staff

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (provided by section 49), and not in the form of a Scottish statutory instrument

12. Section 12(3) provides that the Scottish Ministers may by scheme make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of a local authority or a Health Board.

13. The Delegated Powers Memorandum explains that (as a matter of policy) it is envisaged that any integration joint board established under the Bill will not necessarily require to employ staff, the delivery of functions is likely to be carried out by the constituent local authorities and health board, and the option of direct employment of staff by a joint board is included as a safeguard, if locally agreed arrangements fail to work.

14. The Committee asks the Scottish Government:

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff, property etc. to an integration joint board?

- To explain why it is necessary for this power to include the transfer of property, rights liabilities or obligations as well as staff, when the similar power proposed in Section 15 in relation to the other “integration models” between a local authority and Health Board is restricted to the transfer of staff?

- To explain why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

Section 15 – Transfer of staff where functions delegated to local authority or Health Board

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

15. Section 15 provides for a power of Ministers to make a scheme for the transfer of staff from a person who is to delegate functions under the possible
“integration models” between local authorities and Health Boards except for the “corporate body” model.

16. The Committee asks the Scottish Government:

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff between a local authority and a Health Board?

- To explain why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

Section 16 – Integration joint monitoring committees: further provision

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative procedure</td>
</tr>
</tbody>
</table>

17. Section 16(1) provides that the Scottish Ministers may by order make provision about the establishment of, membership of, and the proceedings of, integration joint monitoring committees, and any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

18. The Committee asks the Scottish Government:

- Why this power need to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint monitoring committees?

- Why could this power not be drawn more narrowly, to—
  
  o (a) contain provision for the permissible number of members of such a committee (for instance by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular committee), and
  
  o (b) contain provision for who may be a member (given that any such committees will be public authorities which will monitor the carrying out of “integration functions” for the area of a local authority)?
Section 22(1) to (7) – Further powers of persons to whom functions are delegated- directions

Power conferred on: An integration joint board, local authority or Health Board (as the case may be)
Power exercisable by: Directions
Parliamentary procedure: None

19. Section 22(1)(a) enables integration joint boards to direct the local authorities or the Health Board that have delegated functions to it in accordance with an integration plan, to carry out a function on its behalf. Section 22(1)(b) enables a local authority or Health Board which has had functions delegated to it in accordance with an integration plan to direct the local authority or Health Board which delegated the function to it to carry out the functions on its behalf.

20. The Committee asks the Scottish Government:

- To explain the reasons for taking the powers, and the circumstances in which directions could be used?
- To explain why it has been considered that the powers are appropriate to be exercised in the form of written directions, rather than a form of subordinate legislation such as an order.
- Whether it is intended that the directions would be published on being made, and if so, should this be provided for?

Section 36(3)– Power to make provision in consequence of new integration plan- scheme about transfer of staff, etc.

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

21. Section 36(3) provides that in consequence of the replacement of an integration plan by a new plan, the Scottish Ministers may, by scheme, make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

22. The Committee asks the Scottish Government:

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff, property, etc., upon a new integration plan being substituted under section 35?
- Why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?
• Why does section 19 apply where by virtue of section 12(3) or 15(1), a scheme is made for staff transfer, to set out the effects on contracts of employment, but section 19 does not provide that it applies when this power in section 36(3) is exercised?

• To explain why it is considered appropriate that the power in section 15 enables schemes about the transfer of staff (only), where an integration plan sets out one of the 3 integration models apart from the model where an integration joint board is established, and yet this power in section 36(3) extends to making provision about transfer of staff, property, rights, liabilities or obligations, when a new integration plan setting out one of those models is substituted under section 35?

Section 39(2)(a)– Default power of Scottish Ministers

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative</td>
</tr>
</tbody>
</table>

23. Section 39(2)(a) to (e) lists 5 default powers which the Ministers may exercise, where a local authority and a Health Board fail before the day prescribed under section 7 to submit an integration plan for approval by them.

24. It appears that the functions of a local authority and a Health Board which may be specified under section 39(2)(a) on default to be delegated to an integration joint board are not limited by the prescription of functions by regulations under section 1(6). Section 1(6) relates to the prescription of functions which must, may, or may not be, delegated under an integration plan. Section 39(2) applies where such a plan has not been submitted for approval.

25. The Committee therefore seeks clarification from the Scottish Government as to whether that is in the intended position?

26. Contrary to the exercise of the powers under section 1(6) (which are proposed to be subject to the negative procedure), the exercise of the powers of the Ministers under section 39(2)(a), (d) and (e) to specify the functions to be delegated to an integration joint board and other matters are not proposed to be subject to scrutiny by the Parliament. The specification of these matters by the Ministers does not require to be made in a Scottish statutory instrument, nor is there provision for publication, nor consultation requirements prior to the specification.

27. The Committee therefore seeks an explanation as to why that difference of approach has been considered appropriate, as between the powers in section 1(6) and section 39(2)?
Section 39(2)(c)– Default power of Scottish Ministers- prescribed day

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative

28. Section 39(2)(c) provides that on the failure of a local authority and Health Board to submit an integration plan for approval, the Ministers may require the authority and Health Board to delegate the specified functions to the joint board before the “prescribed day” which is prescribed by Regulations.

29. The Committee asks the Scottish Government:

- To clarify whether this provision is intended to be a power to prescribe a day, which is separate from the power in section 9(3), or whether it is intended only to refer to that power?
- Whether this could be clearer, given that section 39(1) and section 9(1) state that the sections apply to different circumstances and it appears that “the prescribed day” is not defined in the Bill?
- If section 39(2)(c) is intended to be a separate power, to explain the reasons for taking the power, and why it is considered appropriate that its exercise is subject to the negative procedure.

Section 40– Directions

Power conferred on: the Scottish Ministers
Power exercisable by: Directions
Parliamentary procedure: None

30. Section 40 enables Ministers to give binding, written directions to a Health Board, local authority or an integration joint board.

31. The Committee asks the Scottish Government:

- To provide full explanation is sought of the reasons for taking these powers (which could be applied generally across a range of functions as well as to specific delegated functions), how the power to direct could be used, and the choice of direction as the appropriate procedure?
- To please explain in what circumstances this could introduce powers of direction by the Scottish Ministers over functions which are presently either not subject to such power, or subject to direction by another authority, and why this would be appropriate?
Section 52 – Commencement

Power conferred on: Scottish Ministers
Power exercisable by: Order
Parliamentary procedure: Laid only

32. Section 52(2) provides that the provisions of the Act (other than the general provisions in sections 49, 50, 52 and 53) come into force on such day as the Scottish Ministers may by order appoint.

33. The Committee asks the Scottish Government:

- If it is agreed that the effect of section 49 of the Bill read with section 30 of the Interpretation and Legislative Reform (Scotland) Act 2010 is that it is proposed that a commencement order under section 52(2) will be laid in Parliament (and would be scrutinised by this Committee)?

34. Section 49 proposes that an order making transitional, transitory or savings provisions for the purposes of or in connection with the coming into force of the Bill is subject to the negative procedure (except where textual amendment of an Act is proposed). However section 49 also proposes that a commencement order made under section 52(2) which contains transitory or transitional provision or savings would be laid, but not subject to further procedure. This appears to be inconsistent, as the Parliamentary procedure will depend on whether the Scottish Government chooses to make a commencement order or a separate order under section 50(1)(b).

35. The Committee asks the Scottish Government asks to consider this further.
ANNEX B

Correspondence with the Scottish Government

On 10 September 2013, the Scottish Government responded as follows:

1. This letter sets out the Scottish Government’s response to the Delegated Powers and Law Reform Committee’s letter of 3 September. The Scottish Government thanks the Committee for their comments and the opportunity to consider these matters. In doing so, this letter seeks to provide an explanation of the following matters:

Section 1(3)(e) – Integration plans: same local authority and Health Board area- prescribed information about other prescribed matters
Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

To provide some examples of the information and matters that could be prescribed for inclusion in an integration plan?

2. The Scottish Government consider that a range of matters additional to those set out in subsections (3)(a) to (d) may require to be prescribed for inclusion in the integration plan. These matters will set out the integration partnership arrangements by which a Health Board and Local Authority agree to implement and deliver the aims of the Bill and which the Scottish Ministers will wish to be assured are in place. These include—

- The arrangements for the Integration Joint Board or the Joint Monitoring Committee (respectively, depending on which model of integration is used); The arrangements for clinical and care governance;

- The arrangements for financial management of the integrated budget;

- The arrangements where any staff are transferring between statutory partners;

- How the integrated arrangements will interact with such of the health and social care functions and responsibilities of the Health Board and Local Authority as are not delegated to the integrated arrangement.
Why the power is drawn to permit any matters to be prescribed (about which prescribed information would need to be included in a plan), without provision that such matters should relate to the matters which the plan will set out in accordance with section 1(3)(a) to (d)?

3. The intention is for the prescribed matters to go beyond those set out in section 1(3)(a) to (d).

4. It is important that the Health Board and local authority, in setting out the matters in section 1(3)(a) to (d), take a collaborative approach to how the integrated arrangements will work, specifically around practical issues such as clinical and care governance, financial governance and staffing resources. Such matters are essential to the success of, and building confidence in, the arrangements entered into by the Health Board and local authority, and to the engagement and confidence of a wide range of key local stakeholders such as clinicians. Experience from integration of health and social care in Highland and evidence from across the UK suggests that whilst a number of the matters set out in the integration plan will relate to the matters which the plan will set out in accordance with section 1(3)(a) to (d), to assure effective joint working arrangements, it may be necessary to require Health Boards and local authorities to set out their agreed arrangements on a broader range of matters which go beyond those specified in section 1(3)(a) to (d).

5. It would be possible to attempt to define these and set them out in the Bill, but this is likely to be futile as (a) it may stifle innovation by requiring that certain matters are addressed in the plan, implying that a particular approach must be adopted to integration at a micro level, and (b) as integration develops, so too are models of integration (within the broad framework established by the Bill). It is difficult to predict what those developments will require in terms of matters which should be addressed in an integration plan in 5 or 10 years’ time.

6. It is for those reasons that there is no restriction that matters prescribed under section 1(3)(e) must relate to the matters which the plan will set out in accordance with section 1(3)(a) to (d).

Section 1(6) – Integration plans: same local authority and Health Board area-prescription of functions

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

To explain, therefore, why it is appropriate that section 1(6) provides that the Scottish Ministers have a discretion, rather than a requirement, to make the regulations?

7. The Scottish Ministers intend to use this power to prescribe the minimum set of functions that must be delegated to the integration authority, and also to specify those functions which may or may not be delegated. In line with the policy memorandum, the regulations will set out adult health and adult social care functions which must be delegated. The Scottish Government recognise that
given the intention to require the delegation of certain functions it would be more appropriate to require the Scottish Ministers to make such regulations. The Scottish Government will, therefore, bring forward an amendment at stage 2 to this effect.

To confirm, in relation to the scope of the powers therefore, whether there is any intention to affect the operation of section 56(6), (6A) and (7) of the 1973 Act.

If not, would amendment of the Bill at Stage 2 be proposed so that “integration functions” could never extend to those functions?

8. The Scottish Government are grateful to the Committee for raising this point and will consider whether any amendments at stage 2 need to be made.

*The Committee considers that paragraph 12 of the Delegated Powers Memorandum has not explained satisfactorily why the negative procedure rather than the affirmative procedure (or super-affirmative procedure) is a more appropriate level of scrutiny of the powers in section 1(6). The powers are very significant, as the regulations will provide for the range of functions which must, may, or may not be, delegated under an integration plan.*

*The Committee asks the Scottish Government to explain this further.*

9. The Scottish Government recognises the significance of the powers in section 1(6). In recognition of this, the Scottish Government consider it more appropriate that these powers be subject to affirmative procedure. The Scottish Government will, therefore, bring forward an amendment at stage 2 to this effect.

Section 12(1) and (2) – Integration joint boards: further provision

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative procedure</td>
</tr>
</tbody>
</table>

- Why this power needs to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint boards?

- Why could this power not be drawn more narrowly, to-

  (a) contain provision for the permissible number of members of a joint board (for instance by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular board), and

  (b) contain provision for who may be a member (given that any joint boards will be public authorities which will either
undertake or direct the carrying out of functions delegated by the constituent local authorities and health boards)?

10. In developing this provision, the Scottish Government had regard to the breadth of responsibility which the integration joint board will have to plan and deliver health and social care, and indeed the substantial resources that will be delegated to it. We also took account of the wide range of matters for which provision would require to be made in relation to an integration joint board to ensure its effective and efficient operation, and the desirability of establishing a consistent approach across Scotland.

11. The Scottish Government consider the breadth of this power necessary in order to give the Scottish Ministers flexibility to respond to the different ways in which Health Boards and local authorities approach integration within the framework set out in the Bill. It is important that the Bill strikes an appropriate balance between establishing a common framework for integration across Scotland, whilst at the same time ensuring that it is not prescriptive at such a level of detail as to stymy local innovation. Section 12(2) specifically recognises that a one size fits all approach may not be appropriate for all aspects of the membership, proceedings, general private law powers, etc., of joint boards. In addition, joint boards will operate in a dynamic environment and it is considered important that the structure of the Bill is such as to allow provision as to the membership, proceedings etc. of integration joint boards to be modified as integration develops. For example, the powers required in circumstances where the integration joint board carries out the delegated functions will be different to those where delivery is undertaken through the Health Board and local authority.

Section 12(3) – Integration joint boards: schemes for transfer of staff

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (provided by section 49), and not in the form of a Scottish statutory instrument

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff, property etc. to an integration joint board?

- To explain why it is necessary for this power to include the transfer of property, rights liabilities or obligations as well as staff, when the similar power proposed in Section 15 in relation to the other “integration models” between a local authority and Health Board is restricted to the transfer of staff?

- To explain why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?
12. The Scottish Government have taken this power in order to permit the integration joint board to employ staff, and so that, if services are to be delivered by an integration joint board directly, then the Scottish Ministers can make a scheme to transfer staff, property, rights, liabilities and obligations from the Health Board and local authority to the integration joint board. Whilst, it is not currently intended that the integration joint board delivers services but instead directs the Health Board and local authority to carry out the delegated functions, it is possible that, in the future, due to the success and effectiveness of integration and service redesign and innovation, the integration joint board consider it appropriate to employ staff and deliver services. In such circumstances, the Scottish Government consider that it would be desirable to be able to transfer staff, property, rights, liabilities and obligations. Furthermore, it may be appropriate to transfer staff to the integration joint board to carry out administrative and operational support functions.

13. The Scottish Government considers it necessary for this power to include transfer of property, rights, liabilities or obligations as well as staff so as to enable the integration joint board to fully transact in the possible future circumstances described above – for example, having existing contracts transferred to it. Section 15 is restricted to the transfer of staff between a local authority and Health Board to facilitate effective integration in a ‘lead agency’ arrangement where the Health Board and local authority delegate functions to each other or to one another. In contrast, these provisions of the Bill are specifically directed towards the body corporate model of integration.

14. The Scottish Government does not consider it necessary that the exercise of the power in section 12(3) be subject to Parliamentary scrutiny because it relates to what is essentially an administrative matter.

15. Any scheme will be designed to facilitate delivery of a policy which the Parliament will have already approved through passing of this section and section 19 of the Bill. By its nature, any scheme created under this provision will make detailed provision as to the transfer of individual properties, members of staff, contractual rights and liabilities, etc. As such they are likely to contain personal information and commercially sensitive information. It would be unusual for documents of this nature to be subject to Parliamentary scrutiny.

16. It would be possible for the Health Board and the local authority to transfer staff, property, rights, liabilities and obligations to the integration joint board themselves by agreement. That would of course involve no Parliamentary scrutiny as it is simply a matter of contract between the three parties. The purpose of the section 12(3) power is only to facilitate the making of such a transfer without the need for detailed and complicated contractual arrangements which are likely to be costly to create and administer, and may involve a level of uncertainty.
Section 15 – Transfer of staff where functions delegated to local authority or Health Board

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff between a local authority and a Health Board?

- To explain why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

17. The Scottish Ministers currently have a similar power under section 16 of the Community Care and Health (Scotland) Act 2002, under which Highland Partnership have transferred staff. Section 16 of the 2002 Act is repealed by section 51(2). Section 15 will be used in similar circumstances where a Health Board and local authority agree to a transfer of staff.

18. The Scottish Government does not consider it necessary that the exercise of the power in section 15(1) be subject to Parliamentary scrutiny because it relates to what is essentially an administrative matter designed to facilitate delivery of a policy which the Parliament will have already approved through passing of section 19 of the Bill.

19. By its nature, any scheme created under this provision will make detailed provision as to the transfer of individual members of staff, contractual rights and liabilities in relation to them, etc. As such they are likely to contain personal information and may contain commercially sensitive information. It would be unusual for documents of this nature to be subject to Parliamentary scrutiny.

20. It would be possible for the Health Board and the local authority to transfer staff between them by agreement. That would of course involve no Parliamentary scrutiny as it is simply a matter of contract between the two parties. The purpose of the section 15 power is only to facilitate the making of such a transfer without the need for detailed and complicated contractual arrangements which are likely to be costly to create and administer, and may involve a level of uncertainty.

Section 16 – Integration joint monitoring committees: further provision

Power conferred on: the Scottish Ministers
Power exercisable by: Order
Parliamentary procedure: Negative procedure

- Why this power need to be drawn widely, to permit any provisions by order about (and so to determine) the membership of integration joint monitoring committees?
• Why could this power not be drawn more narrowly, to—
  o (a) contain provision for the permissible number of members of such a committee (for instance by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular committee), and
  o (b) contain provision for who may be a member (given that any such committees will be public authorities which will monitor the carrying out of “integration functions” for the area of a local authority)?

21. The Scottish Government considers that the same reasoning applies to this provision as applies to section 12 of the Bill. The Scottish Government considers that this power enables the Scottish Ministers to put in place a framework to allow integration authorities to develop integrated governance arrangements that suit local circumstance and have therefore drawn the provisions widely. This flexibility will include creating sub-committees, paying expenses to members and some of the procedural detail similar to that included within the Community Health Partnership (Scotland) Regulations 2004.

Section 22(1) to (7) – Further powers of persons to whom functions are delegated - directions

Power conferred on: An integration joint board, local authority or Health Board (as the case may be)
Power exercisable by: Directions
Parliamentary procedure: None

• To explain the reasons for taking the powers, and the circumstances in which directions could be used?

• To explain why it has been considered that the powers are appropriate to be exercised in the form of written directions, rather than a form of subordinate legislation such as an order.

• Whether it is intended that the directions would be published on being made, and if so, should this be provided for?

22. It is intended that integration will lead to services being planned and delivered in a seamless joined up way. To enable this, functions will be delegated by the Health Board and local authority to the integration joint board, which will then lead preparation of a strategic plan for the delivery of health and social care. It is likely that this plan will result in services being redesigned and delivered by integrated teams within the Health Board and local authority.

23. However, where functions are delegated to the integration joint board, it is not the intention of the Scottish Ministers that the integration joint board will
necessarily deliver the relevant services. Instead the integration joint board may direct the Health Board and local authority in line with the arrangements set out in its strategic plan. Therefore, the Scottish Government considers it necessary for the integration joint board to be able to direct the Health Board and local authority in order for it to be able to ensure delivery of the strategic plan.

24. Careful consideration was given to how the integration joint board would ensure delivery of the strategic plan where this is to be done through the Health Board and the local authority. Taking account of the fact that these directions would be directive only upon Health Boards and local authorities (and not any other person such as a private individual), that the integration joint board would only have such functions as are delegated to it by the Health Board and the local authority, that the Health Board and local authority will be involved in preparing the integration plan which the directions are designed to implement and that the directions are likely to be of a very detailed administrative nature, the Scottish Government considers that the exercise of the power is suitable for direction rather than any form of secondary legislation. A similar approach is taken to the use of direction making powers in both the Scottish health service (see s2(5) of the National Health Service (s) Act 1978) and in social care (see s5 of the Social Work (S) Act 1968).

25. It is not intended that the directions be published, although it is expected that they would be available to anyone who wished to see them by virtue of the Freedom of Information (S) Act.

Section 36(3)– Power to make provision in consequence of new integration plan- scheme about transfer of staff, etc.

- Power conferred on: the Scottish Ministers
- Power exercisable by: Scheme
- Parliamentary procedure: None (and not in the form of an SSI)

- To explain the reasons for taking this power, and explain the circumstances in which the power might be used to transfer staff, property, etc., upon a new integration plan being substituted under section 35?

- Why it has been considered appropriate that the exercise of this power should not be subject to Parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

- Why does section 19 apply where by virtue of section 12(3) or 15(1), a scheme is made for staff transfer, to set out the effects on contracts of employment, but section 19 does not provide that it applies when this power in section 36(3) is exercised?

- To explain why it is considered appropriate that the power in section 15 enables schemes about the transfer of staff (only), where an
integration plan sets out one of the 3 integration models apart from the model where an integration joint board is established, and yet this power in section 36(3) extends to making provision about transfer of staff, property, rights, liabilities or obligations, when a new integration plan setting out one of those models is substituted under section 35?

26. The Scottish Government have taken this power so that if, for example, a Health Board and two local authorities decide to move from two separate integration plans to a single integration plan with a single integration joint board, then the Scottish Ministers can make a scheme to transfer staff, property, rights, liabilities and obligations from the existing joint boards (and possibly also from the Health Board and local authority) to the new integration joint board. This will facilitate delivery of services by or through the new integration joint board.

27. The Scottish Government considers it necessary for this power to include transfer of property, rights, liabilities or obligations as well as staff so as to enable the integration joint board to fully transact in the circumstances described above – for example, having existing contracts transferred to it.

28. The Scottish Government does not consider it necessary that the exercise of section 36(3) be subject to Parliamentary scrutiny because it relates to what is a detailed administrative matter designed to facilitate delivery of a policy which the Parliament will have already approved through passing the Bill and secondary legislation under it. It would be possible to achieve the same effect as a scheme made by the Scottish Ministers by parties entering into a range of agreements for transfer – reflecting the administrative nature of the scheme.

29. The Scottish Government has considered whether section 19 should apply when the power in section 36(3) is exercised, and concluded that it should, and will consider whether an amendment at stage 2 is necessary to give that effect.

### Section 39(2)(b)– Default power of Scottish Ministers

- **Power conferred on:** the Scottish Ministers
- **Power exercisable by:** Order
- **Parliamentary procedure:** Negative

It appears that the functions of a local authority and a Health Board which may be specified under section 39(2)(a) on default to be delegated to an integration joint board are not limited by the prescription of functions by regulations under section 1(6). Section 1(6) relates to the prescription of functions which must, may, or may not be, delegated under an integration plan. Section 39(2) applies where such a plan has not been submitted for approval.

The Committee therefore seeks clarification from the Scottish Government as to whether that is in the intended position?

30. The Scottish Government does not intend for the functions that may be specified under section 39(2)(a), to go beyond those that are prescribed by
regulations under section 1(6). The Scottish Government will, however, consider whether an amendment is necessary.

Contrary to the exercise of the powers under section 1(6) (which are proposed to be subject to the negative procedure), the exercise of the powers of the Ministers under section 39(2)(a), (d) and (e) to specify the functions to be delegated to an integration joint board and other matters are not proposed to be subject to scrutiny by the Parliament. The specification of these matters by the Ministers does not require to be made in a Scottish statutory instrument, nor is there provision for publication, nor consultation requirements prior to the specification.

The Committee therefore seeks an explanation as to why that difference of approach has been considered appropriate, as between the powers in section 1(6) and section 39(2)?

31. The powers to establish the framework within which functions can be selected for delegation is subject to Parliamentary scrutiny – and that is entirely appropriate. However, the actual selection of individual functions or parts of a function in relation to delegation by a particular Health Board or local authority is not – whether that selection is made by the Health Board and local authority under section 1 or by the Scottish Ministers under section 39. In both cases, the selection of individual functions or parts of a function is not subject to Parliamentary scrutiny. This is consistent with the procedure that currently exists under the 2002 Act.

Section 39(2)(c)– Default power of Scottish Ministers- prescribed day

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Regulations</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>Negative</td>
</tr>
</tbody>
</table>

- To clarify whether this provision is intended to be a power to prescribe a day, which is separate from the power in section 9(3), or whether it is intended only to refer to that power?

- Whether this could be clearer, given that section 39(1) and section 9(1) state that the sections apply to different circumstances and it appears that “the prescribed day” is not defined in the Bill?

- If section 39(2)(c) is intended to be a separate power, to explain the reasons for taking the power, and why it is considered appropriate that its exercise is subject to the negative procedure.

32. Under section 39(2)(c) the Scottish Ministers can require a local authority and a Health Board to delegate the specified functions to the integration joint board before the “prescribed day”. Subsection (1) of section 39 provides that the section applies only where a local authority and Health Board fail before the day which is prescribed for the purposes of section 7 to submit an integration plan for the approval of the Scottish Ministers under that section. “Prescribed” is defined in
section 48(1) of the Bill as meaning prescribed by the Scottish Ministers by regulations. So the day prescribed under section 39(2)(c) will be different from that prescribed for the purposes of section 7. As to parliamentary procedure, we consider that the negative procedure is appropriate here given that the section comes into play only as a last resort in cases where the Health Board and local authority fail to comply with the requirements of section 7.

Section 40 – Directions

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>the Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Directions</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>None</td>
</tr>
</tbody>
</table>

- To provide full explanation is sought of the reasons for taking these powers (which could be applied generally across a range of functions as well as to specific delegated functions), how the power to direct could be used, and the choice of direction as the appropriate procedure?

- To please explain in what circumstances this could introduce powers of direction by the Scottish Ministers over functions which are presently either not subject to such power, or subject to direction by another authority, and why this would be appropriate?

33. The Scottish Ministers already have wide powers of direction in relation to the exercise of their functions by Health Boards (s2(5) of the 1978 Act). The Scottish Ministers also already have wide powers to direct local authorities in relation to the exercise of their functions in the field of social work (including social care) (s5 of the 1968 Act). As such, section 40 only extends their existing direction making powers marginally to take account of the Bill and its effect. That is to say – (1) to confer powers on the Scottish Ministers to direct in relation to new functions arising under the Act and - potentially - a small number of social work functions not covered by section 5 of the 1968 Act and which may be delegated by, or specified in, an integration plan, and (2) to confer powers on the Scottish Ministers to direct integration joint boards, which did not previously exist.

34. Except as regards existing social work functions not covered by section 5 of the 1968 Act. It is appropriate to confer powers as per (1) and (2) as to do otherwise would leave lacuna created by the Bill itself. It is appropriate to extend the range of social work functions in the field of social care to which the Scottish Ministers direction making power extends as that reflects the broad policy which has existed since the 1968 Act was enacted – namely that the Scottish Ministers would have a broad direction making power in relation to the exercise of social work functions by local authorities.

Section 52 – Commencement

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>Order</td>
</tr>
</tbody>
</table>

31
Parliamentary procedure: Laid only

Section 52(2) provides that the provisions of the Act (other than the general provisions in sections 49, 50, 52 and 53) come into force on such day as the Scottish Ministers may by order appoint.

- If it is agreed that the effect of section 49 of the Bill read with section 30 of the Interpretation and Legislative Reform (Scotland) Act 2010 is that it is proposed that a commencement order under section 52(2) will be laid in Parliament (and would be scrutinised by this Committee)?

35. The Scottish Government agree that this is the effect of section 49 of the Bill, read with section 30 of the Interpretation and Legislative Reform (Scotland) Act 2010. This is consistent with usual practice whereby commencement orders are laid in Parliament but are not subject to any further Parliamentary procedure.

Section 49 proposes that an order making transitional, transitory or savings provisions for the purposes of or in connection with the coming into force of the Bill is subject to the negative procedure (except where textual amendment of an Act is proposed). However section 49 also proposes that a commencement order made under section 52(2) which contains transitory or transitional provision or savings would be laid, but not subject to further procedure. This appears to be inconsistent, as the Parliamentary procedure will depend on whether the Scottish Government chooses to make a commencement order or a separate order under section 50(1)(b).

The Committee asks the Scottish Government asks to consider this further.

36. The Scottish Government consider that it is appropriate that there should be two mechanisms for the making of transitional, transitory or savings provisions for the purposes of, or in connection with, the coming into force of the bill. It is anticipated that the provisions of the bill would in the main, be commenced using an order under section 52(2). However, the separate power under section 50(1)(b) would also allow any complex transitional, transitory or savings provisions to be considered by Parliament.
Public Bodies (Joint Working) (Scotland) Bill: The Committee considered the delegated powers provisions in this Bill at Stage 1 and agreed to seek further information from the Scottish Government.
Public Bodies (Joint Working) (Scotland) Bill: Stage 1

10:15

The Convener: Item 5 is consideration of the delegated powers in the Public Bodies (Joint Working) (Scotland) Bill at stage 1. The committee is invited to agree the questions that it wishes to raise in written correspondence with the Scottish Government on the bill’s delegated powers, and the responses that are received will help to inform a draft report on the bill that the committee will consider at a later date.

Section 1(3)(e) provides for the power to prescribe by regulations “information about such ... matters as may be prescribed” for inclusion in an integration plan. Does the committee agree to ask the Scottish Government to provide some examples of the information and matters that could be prescribed for inclusion in an integration plan and to ask why the power has been drawn to permit any matters to be prescribed about which prescribed information would need to be included in a plan without provision that such matters should relate to the matters that the plan will set out in accordance with section 1(3)(a) to (d)?

Members indicated agreement.

The Convener: Given that the regulations under section 1(6)(a) and (b) are intended to prescribe the range of functions of local authorities and health boards that either “must, may or may not be delegated under an integration plan”, does the committee agree to ask the Scottish Government to explain why it is appropriate for section 1(6) to provide that Scottish ministers have the discretion, rather than a requirement, to make the regulations?

Members indicated agreement.

The Convener: The bill neither expressly amends nor refers to section 56 of the Local Government (Scotland) Act 1973, subsections (6) and (6A) of which provide that a local authority’s functions in respect of setting amounts of council tax, borrowing money, approving annual investment strategies or reports and determining applications for planning permission for certain classes of property shall be discharged only by that authority. Under section 56(7) of the 1973 act, “a local authority shall not make arrangements ... for the discharge for any of their functions under the Animal Health Act 1981 by any other local authority.”
Given that section 1 of the bill does not provide for any exclusion of those significant functions in the 1973 act from the powers to prescribe the functions that may be delegated in terms of an integration plan and agreed to be set out in a plan, does the committee agree to ask the Scottish Government to confirm, in relation to the scope of the powers, whether there is any intention to affect the operation of section 56(6), (6A) and (7) of the 1973 act? If not, could the bill be amended at stage 2 to ensure that “integration functions” could never extend to those functions?

Members indicated agreement.

The Convener: The committee might also consider that paragraph 12 of the delegated powers memorandum does not satisfactorily explain why the negative procedure rather than the affirmative or super-affirmative procedure provides a more appropriate level of scrutiny of the powers in section 1(6). The powers are significant, as the regulations provide for the range of functions that “must, may or may not be delegated under an integration plan”.

Does the committee agree to ask the Scottish Government to explain that further?

Members indicated agreement.

The Convener: Section 12(1) provides that the Scottish ministers may by order make provision about various aspects of joint integration boards.

Does the committee agree to ask the Scottish Government why the power needs to be drawn widely to permit any provisions by order about, and so to determine, the membership of integration joint boards and why it could not be drawn more narrowly, to contain provision for the permissible number of members of a joint board—for instance, by stating a minimum or maximum number of members within which parameters an order could specify the number of members of a particular board—and also to contain provision for who may be a member, given that any joint boards will be public authorities that will either undertake or direct the carrying out of functions delegated by the constituent local authorities and health boards?

Members indicated agreement.

The Convener: Section 12(3) provides that the Scottish ministers may, by scheme, make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of a local authority or a health board.

The delegated powers memorandum explains that, as a matter of policy, it is envisaged that any integration joint board established under the bill will not necessarily require to employ staff, that the delivery of functions is likely to be carried out by the constituent local authorities and health board, and that the option of direct employment of staff by a joint board is included as a safeguard, if locally agreed arrangements fail to work.

Does the committee agree to ask the Scottish Government to explain: the reasons for taking the power and the circumstances in which the power might be used to transfer staff, property and so on to an integration joint board; why it is necessary for the power to include the transfer of property, rights, liabilities or obligations as well as staff, when the similar power proposed in section 15 in relation to the other integration models between a local authority and health board is restricted to the transfer of staff; and why it has been considered appropriate that the exercise of the power should not be subject to parliamentary scrutiny, nor provision made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

Members indicated agreement.

The Convener: Section 15 provides a power for ministers to make a scheme for the transfer of staff from a person who is to delegate functions under the possible integration models between local authorities and health boards, except for the corporate body model.

Does the committee agree to ask the Scottish Government to explain the reasons for taking the power and the circumstances in which it might be used to transfer staff between a local authority and a health board, and why it has been considered appropriate that the exercise of the power should not be subject to parliamentary scrutiny, nor provision made for the publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument?

Members indicated agreement.

The Convener: Section 16(1) provides that the Scottish ministers may by order make provision about the establishment, membership, and proceedings of integration joint monitoring committees and any other matter relating to the operation of integration joint monitoring committees that the Scottish ministers think fit.

Does the committee agree to ask the Scottish Government why the power need be drawn so widely to permit any provisions by order about, and so to determine, the membership of integration joint monitoring committees, and why it could not be drawn more narrowly to contain provision for the permissible number of members of such a committee—for instance, by stating a minimum or maximum number of members, within which parameters an order could specify the number of members of a particular committee—and provision for who may be a member, given
that any such committees will be public authorities, which will monitor the carrying out of integration functions for the area of a local authority?

Members indicated agreement.

The Convener: Section 22(1)(a) enables an integration joint board to direct the local authorities or the health board that have delegated functions to it in accordance with an integration plan to carry out a function on its behalf. Section 22(1)(b) enables a local authority or health board that has had functions delegated to it in accordance with an integration plan to direct the local authority or health board that delegated the function to it to carry out the functions on its behalf.

In relation to the power to make directions under sections 22(1) to (7), does the committee agree to ask the Scottish Government to explain: the reasons for taking the power and the circumstances in which directions could be used; why it has been considered that it is appropriate to exercise the power in the form of written directions, rather than in a form of subordinate legislation such as an order; and whether it is intended that the directions would be published on being made and, if so, whether that should be provided for?

Members indicated agreement.

The Convener: Section 36(3) provides that, in consequence of the replacement of an integration plan by a new plan, the Scottish ministers may by scheme make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a health board as they consider necessary.

Does the committee agree to ask the Scottish Government to explain: the reasons for taking this power and the circumstances in which it might be used to transfer staff, property and so on upon a new integration plan being substituted under section 35; why it has been considered appropriate that the exercise of this power should not be subject to parliamentary scrutiny, nor that provision should be made for publication of a scheme, nor that it should be made in the form of a Scottish statutory instrument; why section 19 applies where by virtue of section 12(3) or 15(1) a scheme is made for staff transfer to set out the effects on contracts of employment, but does not apply when the power in section 36(3) is exercised; and why it is considered appropriate that the power in section 15 enables schemes about the transfer of staff only where an integration plan sets out one of the three integration models apart from the model where an integration joint board is established, and yet the power in section 36(3) extends to making provision about transfer of staff, property, rights, liabilities or obligations when a new integration plan setting out one of those models is substituted under section 35? That was a question.

Members indicated agreement.

The Convener: Section 39(2)(a) to (e) lists five default powers that the Scottish ministers may exercise where a local authority and a health board fail before the day prescribed under section 7 to submit an integration plan for approval by them.

It appears that the functions of a local authority and a health board that may be specified under section 39(2)(a) on default to be delegated to an integration joint board are not limited by the prescription of functions by regulations under section 1(6). Section 1(6) relates to the prescription of functions that must, may or may not be delegated under an integration plan. Section 39(2) applies where such a plan has not been submitted for approval.

Does the committee therefore agree to seek clarification from the Scottish Government as to whether that is the intended position?

Hanzala Malik: Why is this only about health boards working with local authorities? Why is it not about local authorities working with local authorities as well?

The Convener: My advice from the clerk is that that is a very interesting question, but it is a question for the lead committee. At the end of the day, it is a policy question; there is no mention of delegated powers in it. I must encourage you to ask that question of the lead committee.

Hanzala Malik: Can I not ask it here?

The Convener: No, simply because it is probably not within our powers to put it.

Hanzala Malik: We are asking a series of questions. I just wonder why we are limiting ourselves to the national health service and not including local authorities. I would be grateful if this committee could ask. We are simply asking a question and saying that there is perhaps an opportunity that we have not explored.

The Convener: I think that may be a fair question. I will take comments from other members.

Stewart Stevenson: Could Hanzala Malik perhaps explain that a little further? I am really not sure what question is being asked. If the question that I am hearing is, “Why are there not delegated powers to allow local authorities to create joint authorities?”, I suspect that I know the answer, which is that the powers already exist. However, I am not sure that that is the question that is being asked. I find it difficult to take a position because I am not quite sure what question is being asked.
The Convener: I think that is the question as I hear it. I think that Hanzala Malik is asking why we are talking only about the integration of local authorities and health boards that are contiguous before they start and why we could not have local authorities joining up with local authorities, which by definition would be neighbouring, in such a way that they could provide joint services. We can think of circumstances in which that would be helpful—indeed, it does happen and such services probably already exist.

Stewart Stevenson’s point might well be a fair one: that power already exists.

Hanzala Malik: I am not sure that it does. That is why I asked the question. We are focusing on two areas: local authorities and the NHS. The convener has alluded to what I was thinking about. Sometimes there are clusters or hubs and it may well be beneficial for local authorities to be clubbing together in that way.

10:30

Stewart Stevenson: The reason why I responded in the way that I did is that Aberdeen City Council and Aberdeenshire Council already do a great deal of that. I am not trying to shut down the question entirely, but I am very familiar with my own area and I cannot identify from my knowledge of one of the local authorities in my constituency what powers are currently lacking, because there is considerable joint working and there are joint arrangements.

The Convener: The powers that we have to consider are the delegated powers within the scope of the bill as it is before us. If it is restricted in the way in which I think it is, we cannot ask that question in the context of the report because that is not in the bill. However, the question is perfectly decent and I am sure that the member will want to explore it outside this committee. The subject committee might want to consider whether all the options that should be available are available, but that is outside our remit, certainly within the context of this particular set of questions.

Hanzala Malik: Okay. I will perhaps take that up with the lead committee.

The Convener: Contrary to the exercise of the powers under section 1(6), which it is proposed will be subject to the negative procedure, it is not proposed that the exercise of ministerial powers under section 39(2)(a), (d) and (e) to specify the functions to be delegated to an integration joint board and other matters be subject to parliamentary scrutiny. The specification of those matters by ministers does not require to be made in a Scottish statutory instrument and nor is there provision for publication or consultation requirements prior to the specification. Does the committee therefore agree to seek an explanation as to why that difference of approach to the powers in section 1(6) and those in section 39(2) has been considered appropriate?

Members indicated agreement.

The Convener: Section 39(2)(c) provides that, on the failure of a local authority and health board to submit an integration plan for approval, the ministers may require the authority and health board to delegate the specified functions to the joint board before the day that is prescribed by regulations.

Does the committee agree to ask the Scottish Government to clarify whether that provision is intended to be a power to prescribe a day that is separate from the power in section 9(3) or whether it is intended only to refer to that power; whether that could be clearer, given that sections 39(1) and 9(1) state that the sections apply to different circumstances and it appears that the prescribed day is not defined in the bill; and, if section 39(2)(c) is intended to be a separate power, to explain the reasons for taking the power and why it is considered appropriate that its exercise is subject to the negative procedure?

Members indicated agreement.

The Convener: Section 40 enables ministers to give binding, written directions to a health board, local authority or an integration joint board.

Does the committee agree to ask the Scottish Government to provide a full explanation of the reasons for taking those powers, which could be applied generally across a range of functions as well as to specific delegated functions, how the power to direct could be used, and the choice of direction as the appropriate procedure; and to explain in what circumstances that could introduce powers of direction by the Scottish Government over functions that are currently not subject to such powers or to direction by another authority, and why that would be appropriate?

Members indicated agreement.

The Convener: Section 52(2) provides that the provisions of the act other than the general provisions in sections 49, 50, 52 and 53 will come into force on such day as the Scottish ministers may by order appoint.

Does the committee agree to ask the Scottish Government whether it is agreed that the effect of section 49 of the bill, read with section 30 of the Interpretation and Legislative Reform (Scotland) Act 2010, is that it is proposed that a commencement order under section 52(2) would be laid in the Parliament and would be scrutinised by this committee?

Members indicated agreement.
The Convener: Section 49 proposes that an order that makes transitional, transitory or savings provisions for the purposes of or in connection with the coming into force of the bill is subject to the negative procedure, except where textual amendment of an act is proposed. However, section 49 also proposes that a commencement order that is made under section 52(2) and that contains transitory or transitional provision or savings would be laid but would not be subject to further procedure. That appears to be inconsistent, as the parliamentary procedure will depend on whether the Government chooses to make a commencement order or a separate order under section 50(1)(b). Does the committee agree to ask the Scottish Government to consider that further?

Members indicated agreement.
Dear Duncan

I very much welcome the 11th Report of the Health and Sport Committee, stage 1 report on the Public Bodies (Joint Working) (Scotland) Bill. In particular, I welcome the support of the Committee regarding the principles of integrating health and social care with the aim of improving outcomes for service users, especially those with multiple long term and often complex needs, carers and their families.

As the report notes, there is a clear need for legislation to provide the framework for driving forward change and improving outcomes for people using health and social care services; not enough progress has been made under the current permissive legislation. As the report also notes, however, the Scottish Government also recognises that leadership and issues of culture are key to effective integration; this is clear from those examples of good practice that can be seen already in Scotland, and from evidence from further afield.

I attach the Scottish Government response to the Committee’s comments in the stage 1 report.

ALEX NEIL
Scottish Government response to the 11th report of the Health and Sport Committee stage 1 Report on Public Bodies (Joint Working) (Scotland) Bill

Para 62 - 63

The Committee notes that, while most of the evidence it received is supportive, in principle, of the body corporate model, a number of detailed concerns remain around the governance arrangements.

Specifically, the Committee notes, from the evidence, firstly, that a degree of confusion remains over the relationship between the joint board (under the body corporate model) and its parent bodies – the relevant NHS board and local authority. While the Committee understands that the chief officer will be accountable to the board, there is much less clarity, at this stage, on how the joint board, the NHS board and the local authority will relate to each other and how this will work in practice. The Committee also notes that there is no requirement for the parent bodies to sign off the strategic plan. It is clear that it is for the body corporate to sign off such a plan. However, the Committee would welcome clarity as to the recourse of a parent body should it be unhappy with any strategic plan. The Committee therefore invites the Cabinet Secretary, in his response to this report, firstly, to set out his plans in more detail regarding the governance arrangements and specifically to address in detail how it is expected that the bodies concerned will relate to each other.

1. The Scottish Government notes the Committee’s comment and request for further clarity regarding governance arrangements in the body corporate model. The Scottish Government is taking forward further work, with partners in the NHS and local government, setting out more fully a description of the Bill’s provisions as they relate to governance and accountability arrangements and, alongside that, explaining the practical effect of these arrangements “on the ground”. It is important that partners are fully engaged in this key piece of work, which will be considered by the Governance and Accountability Working Group for integration, and by other specific key stakeholders such as Chief Executives of Health Boards and local authorities. I attach a copy of the current draft of this paper at Annex A.

2. The Committee will wish to note that the Scottish Government intend to bring forward an amendment at stage 2, which will enable a Health Board and local authority jointly, where the body corporate model is used, to require a new strategic plan where they consider the strategic plan as drafted would prevent them, or is preventing them, from meeting the national health and wellbeing outcomes, the integration planning and delivery principles, or their duties in regard to carrying out the delegated functions.

Para 64-65

Secondly, the Committee notes the power at section 12(1) of the Bill for the Scottish Ministers to make provision by order (either generally or making different provisions about different joint boards) about the membership, proceedings and general powers of joint boards, the supply of services or facilities to joint boards by local authorities or health boards and any other matter as they think fit in relation to the establishment or operation of joint boards. These are wide-ranging powers, but currently it is unclear how they might be used. The Committee therefore calls on the Cabinet Secretary to set out in
detail the kinds of circumstances in which he considers that it would be appropriate to use the powers set out in section 12(1) of the Bill.

The Committee also recognises that much of the subordinate legislation that is to follow the enactment of the Bill will, rightly, be the subject of consultation. Nevertheless, it would be helpful if drafts of some of the proposed regulations could be made available for consideration by stakeholders before the Bill has completed its parliamentary passage.

3. In developing section 12(1) of the Bill, the Scottish Government had regard to the broad responsibilities that will provide the context in which the integration joint board will plan and oversee delivery of health and social care services, and indeed the substantial resources that will be delegated to it. The Scottish Government also took account of the wide range of matters for which provision would require to be made in relation to an integration joint board in order to ensure its effective and efficient operation, and the desirability of establishing a consistent approach across Scotland, while allowing appropriate “space” for local arrangements to be flexible in response to local needs.

4. The Scottish Government considers the breadth of this power necessary in order to give the Scottish Ministers flexibility to respond to the different ways in which Health Boards and local authorities approach integration within the framework set out in the Bill. It is important that the Bill strikes an appropriate balance between establishing a common framework for integration across Scotland, with full regard for effective and appropriate governance arrangements, whilst at the same time ensuring that it is not prescriptive at such a level of detail as to stymie local innovation. It is these reflections on the importance of ensuring strong, effective and appropriately consistent governance arrangements around Scotland that have influenced the powers set out under section 12(1) that refer to membership, proceedings, supply of services or facilities, and the operation of integration joint boards.

5. The powers set out under section 12(1) also refer to giving integration joint boards general powers, such as, for example, powers to contract, acquire or dispose of property or borrow money. While it is intended that certain limited powers will be given to integration joint boards initially, to allow them to make the necessary arrangements for fulfilling their obligations under the Bill, it is not intended that broad powers will be given to integration joint boards in the first instance. However section 12(1) is drafted in such a way that if, in future, it were considered appropriate for the integration joint board to provide services directly, there is a power for the Scottish Ministers to provide for this by regulations. We envisage different possible circumstances in which the Scottish Ministers might empower integration joint boards in this way to deliver services directly, i.e., by employing staff, entering into contractual arrangements with providers, owning property, etc.:

- The Scottish Ministers might choose to take this step if a local integration joint board were functioning particularly well, and there was local agreement by the three parties to the arrangement – the Health Board, local authority and integration joint board itself – that the integrated arrangement should be empowered to deliver services itself.

- On the other hand, the Scottish Ministers might use this power in light of poor progress towards integration in a partnership area, in order to empower the integration authority to deliver real improvement.
6. These powers reflect the Scottish Government’s belief that Health Boards and local authorities can use the opportunity provided by integration to deliver a step change in outcomes for people. They also take account of the evidence that demonstrates real change in delivering health and social care services is needed now in order to meet the needs of our ageing population – the status quo is not an option – and the reality that delivering major change in the way large organisations deliver their business is challenging and requires, in this context, strong local and national leadership to succeed.

7. The Committee will wish to note that the power at 12(1) does not enable the Scottish Ministers to directly appoint members of the integration joint board as was suggested at the evidence session and as recorded at paragraph 56 of the Report.

8. The Scottish Government acknowledges the Committee’s request that drafts of some of the proposed regulations should be made available for consideration by stakeholders before the Bill has completed its parliamentary passage. The key thing is that the Scottish Ministers’ policy on how they intend to use these powers is set out in a way that is clear and easily understood. Draft legislation is not the best way to achieve that, and may also be misinterpreted as suggesting that the Scottish Ministers have already determined the content of legislation before consultation. With that in mind, officials will progress preparation of a statement of the policy which the Scottish Ministers are minded to deliver (subject to the outcome of consultation) in relation to each of the principle powers to make secondary legislation.

Para 84 – 85

The Committee also welcomes the Bill’s provision that NHS boards and local authorities will be jointly accountable for delivery of the national outcomes locally. This should help to cement joint partnerships and reinforce the message that health, wellbeing and care are not the sole responsibilities of any single agency. NHS boards, local authorities and, indeed, third and independent sector partners all have an important role to play.

Finally, the Committee believes that, while it is clearly helpful to have national outcomes, the most important outcomes are those for the individual patient, and it is important to bear in mind that the national outcomes must be focused on continuous commitment to improving these individual outcomes.

9. The Scottish Government welcomes and agrees with the Committee’s comments that the focus on national outcomes must be to ensure continuous improvement in improving outcomes for individuals. The health and wellbeing outcomes are about improving the lives of all those who have health and care needs. The focus of the national outcomes is therefore generic, relevant and applicable across a broad range of needs. The Scottish Government would expect indicators, which will be set out in guidance, and indeed other outcomes, to sit underneath the national health and wellbeing framework and to set out specific priorities at an individual level.

Para 102 -105

The Committee notes that there are different views within the evidence about whether the provisions in the Bill to enable Ministers to require services to be integrated beyond adult health and social care are appropriate.
The Committee also notes the strong representations it received arguing that it was essential that housing services be included within the proposed integration arrangements.

The Committee notes the indication by the Cabinet Secretary that the Scottish Government will be lodging amendments at Stage 2 that will restrict the services that require to be integrated under the Bill to adult health and social care.

While the Committee notes concerns about statutory integration of additional services, it would support a permissive and flexible approach that would allow health boards and local authorities, if they so wished, to develop the integration of appropriate services in cases where it would improve the service and be of benefit to service users.

10. The Scottish Government recognises that there is a range of views regarding the range of services that the Scottish Ministers should require for inclusion in integrated arrangements, and has been clear that the Bill should permit local flexibility beyond adult health and social care.

Para 116 – 117

The Committee appreciates that the Bill is an enabling and permissive one that leaves much for local determination, and that flexibility is welcome. However, witnesses believed that what is set out in the Bill and the Policy Memorandum has been insufficient, or at least requires additional detail, to give them a clear enough picture about how the existing and planned legislation and existing local decision-making partnerships are expected to inter-relate.

The Committee therefore calls on the Scottish Government to consider in more detail, and report back to the Committee, firstly, how the Bill is expected to work alongside the Social Care (Self-directed support) (Scotland) Act 2013 and the Children and Young People (Scotland) Bill (when enacted); and secondly, how the proposed integration joint boards will work alongside existing community planning partnerships. Additionally, the Committee invites the Cabinet Secretary to consider whether there is a need to include guidance on these matters within the statutory guidance that is expected to follow the passage of the Bill.

11. The Committee has asked about the relationship between the provisions in the Children and Young People (Scotland) and the Public Bodies (Joint Working) (Scotland) Bills, as well as the on-going work on community planning and the Social Care (Self-Directed Support) (Scotland) Act. The range of changes shows the Scottish Government’s determination to take forward the principles of the Christie Commission, ensuring that there is more effective, more joined-up planning between bodies at local level. They all share the similar core principles and shared aims with respect to future planning.

12. With respect to Community Planning Partnerships (CPPs), the children’s services plans set out in the Children and Young People (Scotland) Bill will feed into wider community planning processes. As with other public sector bodies, there is a mutual relationship between CPPs and the children’s services plans. On the one hand, CPPs and their constituent partners will take account of the needs of children and young people in local communities, as set out in the children’s services plans. On the other, Single Outcome Agreements (SOAs) will set the framework for planning in children’s services through the local, high-level priorities agreed by each CPP.
13. With respect to the Public Bodies (Joint Working) (Scotland) Bill, while the Children and Young People (Scotland) Bill requires planning for children’s services across the whole range of public bodies, the Public Bodies (Joint Working) (Scotland) Bill focuses on the planning and delivery of health and social care services specifically. The children’s services planning proposals of the Children and Young People Bill build on the existing good practice in planning that local authorities have been taking forward as part of their responsibilities under the Children (Scotland) Act 1995. The new proposals will put in place an overarching framework and a mechanism for strategic coordination of planning of all key services affecting the wellbeing of children and young people. Should local authorities and Health Boards decide to include children’s services in their integration plans, the planning requirements of the Public Bodies (Joint Working) (Scotland) Bill, will feed into developing the plans required of the Children and Young People (Scotland) Bill. Full alignment will be pursued through the parallel development of guidance for the duties in both Bills.

14. Turning to integration of health and social care and reform of community planning; these are both significant and important aspects of public service reform in Scotland, and of the Scottish Government’s response to the recommendations of the Christie Commission – in terms of improving outcomes, assuring efficiency and focussing on preventative action. Like other key public sector bodies, integration authorities will be expected to play a strong and effective role in supporting the work of community planning to achieve better outcomes for communities on shared local priorities.

15. The relationship between Community Planning Partnerships and integration authorities will not be hierarchical. CPPs provide a mechanism for different partners in public service delivery to come together to plan effective co-ordinated provision. Integration authorities, whose function will be to plan for and deliver, as a minimum, adult health and social care services, will be partners in the process of community planning.

16. As with other public sector bodies, there is a two way relationship between CPPs and integrated partnership arrangements. On the one hand, CPPs and their constituent partners must ensure that the new integrated services are connected to their wider assessment of the needs of local communities and that the outcomes to be delivered by partnership arrangements are reflected in SOAs and wider CPP planning. On the other, CPPs and SOAs must support the integration of adult health and social care services and integrated partnership arrangements by, for example, connecting other agencies such as police and fire to the work of the integrated partnership arrangement.

17. The Scottish Government is working to ensure that the key outcomes that partnership arrangements will be working towards complement and fit with the outcomes set out in Single Outcome Agreements. Over time, there will be an expectation on CPPs to reflect the nationally agreed outcomes for adult health and social care in their SOAs, along with such other outcomes and measures as are agreed locally.

18. The Scottish Ministers, COSLA and the Chair of the National Community Planning Group have co-signed an Agreement on Joint Working on Community Planning and Resourcing, which requires CPPs and community planning partners to be clear about total collective resources available, and ensure resources are deployed towards priority outcomes.
19. We expect the Integration Authority, just like other public sector partners, to bring its budget and resource planning assumptions to the CPP and, just like other partners, to consider how those resources can best be used to achieve the outcomes set out in the SOA.

20. Local authorities and Health Boards are undertaking detailed budget and resource planning work to facilitate the integration of adult health and social care services. This will provide important learning for CPPs.

21. The legal duties under the Social Care (Self-Directed Support) (Scotland) Act 2013 (the “SDS Act”) – i.e., the duties to offer and provide specific choice mechanisms such as direct payments or individual services funds – relate to long-standing local authority social care functions found in the Social Work (Scotland) Act 1968 and Children (Scotland) Act 1995. As such, the legal duties on SDS choices are placed on local authorities rather than the NHS (other than where the local authority duties are formally delegated to the NHS). However, the Scottish Government’s national SDS strategy also makes it clear that “health services need to be an integral part of the overall effort to increase self-directed support”.

22. The Public Bodies (Joint Working) (Scotland) Bill will create an integrated health and social care budget and a single set of joint outcomes. In this respect, integration creates a positive policy environment for the Health Boards to play an integral part in SDS policy and practice. If we are to deliver the aspirations set out in the National SDS Strategy it is vital that we take full advantage of this opportunity.

23. The Scottish Government will continue to foster effective links between the two policies via the following activities:

- A national “SDS and integration” working group which will help a) to inform the regulations and statutory guidance in support of the Public Bodies (Joint Working) (Scotland) Bill and b) to develop a national strategy in relation to the role of the NHS in delivering greater choice and control to individuals.

- A dedicated national lead on SDS and Health, based within the Scottish Government’s Self-directed Support policy team

- The potential for Scottish Government to fund dedicated SDS development officers within a small number of volunteer Health Boards will also be explored. This will enable the relevant Health Boards to develop detailed strategies and processes to underpin their role in SDS.

Para 137 – 142

The Committee recognises the concerns of the third sector and its wishes to be fully involved in the strategic planning process under the new integrated arrangements. The Committee also recognises the good practice that can be demonstrated by the third and independent sector in the social care field, the value that it offers and the creativity that it can bring to the planning process. The Committee fully accepts that it is important that the third and independent sectors be seen as key partners as the process of integration is taken forward.

The Committee considers, however, that the Policy Memorandum does recognise the contribution made by the third and independent sectors and this may well be the
appropriate place for it to be recognised. The duties set out in the Bill are placed on public bodies that were established by other statutes. Third and independent sector bodies are not established in this way, have their own governance and management arrangements and are not accountable to the Scottish Parliament or to the Scottish Ministers. This, as a number of witnesses have noted, limits what can be contained in the text of the Bill about the third and independent sectors.

The Committee also notes the evidence of representatives of third sector service-providing bodies, about the potential conflict of interest that might arise were third sector bodies to be directly involved in designing and commissioning services for which the sector might subsequently be expected to tender.

The Committee is also mindful of the comments of the BMA, calling for clarity on the exact nature of third sector involvement, how representation would be achieved and how the sector would have influence over the resources in the statutory health and local authority structures.

The Committee is reassured on the role of the third and independent sectors by the references to them in the Policy Memorandum and by the reassurances given by the Cabinet Secretary in evidence to the Committee. The Committee also considers that, though much of the written evidence referred to the third sector generically, there is probably a need to distinguish between the third sector that provides services and the third sector that represents users, which is considered in the next section of the report.

Nevertheless, the Committee acknowledges the strength of feeling on this issue, particularly in the third sector. The Committee therefore calls on the Cabinet Secretary to consider whether there is any way of strengthening the commitment to the involvement of the third and independent sectors in the integration process.

24. As I noted at Committee, and have reiterated throughout the development of the Bill, I fully recognise and value the vital role played by the Third and Independent sectors. The Scottish Government continues to have helpful and positive discussions on matters relating to integration with their representatives. The Bill provides for a number of opportunities for the effective involvement of a range of stakeholders including the third and independent sectors and this will also be set out in regulations. I am of the view that, in addition to prescribing their involvement via regulations, the most effective mechanism to assure the sectors’ full engagement in integration is via strong guidance to accompany the legislation, which will provide a thorough underpinning for effective partnership and cross sector engagement at all levels; and through developing further the effective engagement through existing partnership and improvement work, such as that taken forward in relation to Reshaping Care for Older People and the Change Fund for Older People’s Services.

25. I note the Committee’s comment about the need to distinguish between Third sector providers of services and those that represent users and will undertake to ensure this is fully considered in the development of guidance.

Para 151 -153

The Committee notes that involvement of carers, patients and services users and organisations representing them is not made explicit on the face of the Bill, although there is a consistent theme of their involvement throughout the Policy Memorandum.
The Committee notes the difficulties (which also apply to the third sector, as discussed in a previous section) of specifying the involvement of non-statutory bodies on the face of the Bill. Nevertheless, the Committee invites the Scottish Government to consider whether anything further can be done by way of amendment to provide carers and carers’ organisations with reassurance that their involvement in the design and production of future integrated services is guaranteed.

The Committee also invites the Scottish Government to consider the proposal from the Scottish Health Council that a single standard for participation, linked to a national outcome, be developed.

26. The Scottish Government is committed to ensuring that both carers’ organisations and carers themselves are fully involved in the planning, shaping and delivery of services and support. This is clearly articulated in the policy memorandum, and regulations will set out requirement to include carers in integrated partnership arrangements. Indeed, this is one of the key commitments in the Carers Strategy, Caring Together. We have made clear to local authorities and Health Boards that they must carry out this commitment at local level. We believe that whilst a lot of progress has been made, there is more to do. Guidance on strategic commissioning will make clear that the commitment extends to involvement in the design and delivery of future integrated services. Moreover, as made clear in the Statement of Intent published on 1 October 2013, it is the Government’s intention to bring forward legislation to Parliament to support carers and young carers, subject of course to the outcome of consultation.

27. The Scottish Government believes there should continue to be supported, meaningful and effective involvement of people in service planning and improvement and each Integration Authority should agree the formal structure it will use to involve the public in the planning and design of health and social care services and policies in that area.

28. The Participation Standard developed by the Scottish Health Council currently measures how well NHS Boards communicate with and involve the people and communities they serve. The Scottish Government are content to explore the development of a single standard for participation, as suggested by the Scottish Health Council and to look at the level of detail it might be appropriate to provide in guidance relating to this.

Para 159 – 161

The Committee notes that work on developing quality assurance is being taken forward by the Care Inspectorate, Healthcare Improvement Scotland and others. The Committee looks forward to receiving details of this and calls on the Scottish Government to provide an update in its response to this report.

The Committee is sympathetic to the arguments put forward by the Royal College of Nursing and invites the Scottish Government to consider whether quality care principles should be embedded within the integration principles set out in the Bill.

The Committee would also welcome clarification from the Cabinet Secretary on how it is anticipated that the nationally agreed outcome measures will articulate with existing frameworks such as Single Outcome Agreements (SOAs) and HEAT targets.

29. The Care Inspectorate and Healthcare Improvement Scotland are developing a new methodology for the joint inspection of adult services. Elements of the new methodology were initially tested in three community partnerships, and a further two
pilots of the full methodology are currently taking place. An important part of this work includes the development of new quality assurance methods that verify and evaluate judgements as part of the scrutiny process. A consultation has sought views on the attached quality indicator framework which takes cognisance of the health and wellbeing outcomes established by the Bill, the Healthcare Quality Strategy and other relevant standards such as the Dementia Standards. The consultation closed on the 11 November 2013. Analysis of views received will now take place and a finalised quality indicator framework will be in place for the start of the new inspection year on 01 April 2014.

30. The Scottish Government established a Clinical and Care Governance working group in May 2013 to consider and develop guidance for Integration Authorities on how clinical and care governance should be assured through the new arrangements. The group last met on 1 November 2013 and agreed to develop a high level document that describes care governance roles and responsibilities for social care to mirror ‘Governance for Quality Healthcare in Scotland – An Agreement’ (http://www.scotland.gov.uk/Resource/0042/00427583.pdf) and develop some fundamental principles that should underpin the development of local arrangements. These two documents will provide local partnerships with the basis from which to develop clinical and care governance arrangements that will assure quality in integrated service delivery. They will support closer working between health and social work services through a shared understanding of the common themes and language that underpin health and social work worlds. The group is aiming to develop these resources by March 2014 and then further consider if other guidance is required. I will provide Committee with this information when it is available.

31. In addition, the Scottish Government is working constructively with a range of stakeholders, including the RCN, on possible amendments to the Bill around the integration planning and delivery principles and embedding quality care principles.

32. Single Outcome Agreements reflect the breadth of activity and national policy priorities across Community Planning Partnerships. The national health and wellbeing outcomes are a specific mechanism for ensuring that Health Boards and local authorities are jointly and equally accountable for planning and delivery of effectively integrated services to support individuals to live healthy independent lives.

33. There is a concerted effort to make best use of currently available national measures such as those collected for Scotland Performs, HEAT and Community Care Outcomes as well as national experience surveys. Whilst there may currently be gaps in information collection at a national level, it is the intention to ensure that any new data is helpful and useful at a local planning level. The performance report by the integration authority will provide the mechanism via which the national outcomes will be monitored.

Para 177 -178

The Committee notes the comments of some witnesses regarding the embedding of human rights principles within legislation. The Committee also notes that it received similar representations during its Stage 1 scrutiny of the Social Care (Self-directed Support) (Scotland) Bill. In response to the Committee's Stage 1 report, the Scottish Government agreed to consider the issue further, and subsequently brought forward amendments requiring that local authorities take reasonable steps to facilitate the principles that the rights (of a person choosing one of the SDS options) to dignity and to
participate in the life of the community were to be respected. These principles are drawn from Article 27 of the United Nations Universal Declaration of Human Rights.

The Committee accepts that all legislation passed by the Scottish Parliament requires, under the Scotland Act 1998, to be fully compliant with the European Convention on Human Rights. Nevertheless, the Committee invites the Scottish Government to consider whether there might be an appropriate way of amending the Bill to ensure that human rights principles are more explicitly stated in the text of the Bill.

34. As the Committee notes, the Scotland Act enshrines the European Convention on Human Rights as a fundamental standard which the Scottish Parliament and the Scottish Government must respect in all their action, including legislative acts. With human rights firmly entrenched at the heart of Scotland’s existing constitutional, legal and institutional structures, our plans for integration of health and social care have strong foundations to build upon. The integration principles enshrined in the Bill focus on improving individual wellbeing from the perspective of person-centred and population-based planning and provision of care, which adds further value to our commitment to responding to and respecting the needs of the individual. I am therefore of the view that no further legislative provision is necessary to reflect human rights in the Bill. Indeed, I would go further – including specific mention of the need to respect Convention rights in this Bill but not in others may have the undesirable effect of implying that the duty to respect human rights in other fields is somehow diminished, an implication which is clearly to be avoided.

Para 202 - 206

The Committee notes the evidence it heard about the importance of GPs being fully supportive of and engaged with the proposed arrangements for the integration of health and social care. Along with all its witnesses, the Committee accepts that this will be absolutely vital if integration is to be successful in the longer term.

The Committee also notes the Cabinet Secretary’s comments about the lessons that have been learned with the experience of CHPs, the statutory basis that the new arrangements will have and the commitment that GPs, along with other professionals and the third and independent sectors will be “embedded” in shaping the redesign of services and seeks further clarification about how this will be achieved.

There was some evidence, however, from the doctors’ organisations that there is no spare capacity within the GP system to allow participation in planning and design of the new integrated arrangement without arrangements being made to cover, for example GPs attending meetings. The Committee invites the Cabinet Secretary to consider this point in more detail and report back to it on what arrangements the Scottish Government proposes in order to address this issue.

The Committee notes the Cabinet Secretary’s announcement on 5 November 2013 that the Scottish Government intends to “modernise” the GP contract as part of a review of access to GP practices across Scotland, which is to be undertaken in partnership with the BMA Scotland. The Committee calls on the Cabinet Secretary to consider what role the revised contract can play in encouraging or helping GPs to play a full role in the integration process.

The Committee also notes that there is provision at section 26(4) of the bill for the integration board to pay to members of the consultation group, established as part of the strategic planning process, such expenses and allowances as it determines. The
Committee invites the Scottish Government to consider whether this provision could helpfully be extended to cover participation in the locality planning process.

35. Embedding professionals and non-statutory partners in shaping the redesign of services is key to the success of these proposals and will be largely driven by two elements of the reform, strategic planning and locality planning arrangements. The strategic planning process sets how the integration authority will deliver improved outcomes for its communities over the medium to long term and locality arrangements drive short term planning, the delivery of services and the response to local in-year challenges. Regulation will require that professionals, the third and independent sectors, service users and carers are the participants in these processes, supported by the Integration Authority, to ensure it is they that lead decision making whilst leaving the actual arrangements to local determination to aid a flexible approach to match local circumstance.

36. The Scottish Government recognises that the legislative framework can only deliver so much and different partnerships, professionals, stakeholders, users are starting from different points, with differing relationships and perspectives and that ultimately it is a change in the culture that will deliver improved outcomes rather than the governance arrangements or consultative duties of public bodies. The Scottish Government is committed to supporting organisational and workforce development and actively supporting partnerships to develop locality arrangements.

37. As the Committee notes, I have announced that the Scottish Government intends to review access to GP practices in partnership with the BMA Scotland, as part of work to “modernise” Primary Care across Scotland. The Scottish Government continues to meet with the Scottish General Practitioners Committee of the BMA in regard to the on-going development of the General Medical Services Contract in Scotland, and how GP Contract supports the move towards the 2020 vision of more services provided in a primary and community setting. The Scottish Government is working with the Scottish General Practitioners Committee of the BMA to reduce the workload and bureaucracy associated with the GP Contract in Scotland to free up time to spend with patients.

38. The issue of GP engagement in the planning and development of the integrated health and social care arrangements forms part of these discussions. The detail of these discussions remains confidential within the contract negotiations.

39. The Scottish Government notes the suggestion that the provision to reimburse members of the consultation group is extended to participants in locality planning process. The policy intention has always been to ensure that partnerships are able to reimburse expenses as this will be fundamental in securing the participation of non-statutory partners and independent contractors. The Scottish Government will take this under consideration for stage 2.

Para 233 -236

The Committee notes the evidence it received about locality planning, almost all of which was positive albeit with a few caveats.

The Committee is also fully supportive of the idea of locality planning, which will be essential if services are to redesigned in a bottom-up way that engages individuals and local communities in a flexible way that delivers the best possible outcomes for patients and other service users.
It is recognised that the Bill provides little detail on how locality planning will work in practice and is not prescriptive about the model to be used. The Committee understands that this is a cause for concern among some of its witnesses. However, the Committee accepts the Scottish Government’s argument that it is important that there is a high degree of local flexibility and opportunities for local areas to develop the model most appropriate to that area. There should be sufficient experience developed over the last 10 years through community planning, community health partnerships and the development of local consultation on a wide range of issues to enable partnerships to have the capacity to develop appropriate locality planning methodologies.

The Committee understands that work on developing methodologies for locality planning is continuing through the various working groups associated with the Bill implementation, but asks that the Cabinet Secretary respond to the Committee indicating how the principles of locality planning set out in the Policy Memorandum can be reflected in the Bill.

40. The Scottish Government believe that the Integration planning and delivery principles set out in Sections 4 and 25, and the integrated governance arrangements that Partners must put in place adequately provide for the fundamental principles that underpin successful locality planning arrangements. The Bill provides for some locality planning arrangement and the Joint Improvement Team is co-ordinating a piece of work on behalf of the Scottish Government with a number of national improvement agencies and third sector partners to inform the development of locality planning guidance and learn and share from local practice. The work began in September 2013 and is due to finish in March 2013 and is broken into three stages. The first is to map and link the current improvement and support activities and opportunities. The second is to invite Partnerships to participate in an appreciative inquiry dialogue and thirdly to facilitate a series of focus groups with a cluster of partnerships to reflect on emerging themes. This programme of work will help to identify areas where more support from improvement agencies can add value, create a better picture of how partnerships are progressing with locality planning now and feed into the development of statutory guidance.

Para 247 -248

The Committee notes the concerns expressed in written and oral evidence about the potential for “cost creep” and the possibility that, were this to happen, it would be likely to affect certain groups of patients and people disproportionately. The Committee recognises these concerns and invites the Scottish Government to indicate what measures it proposes to take to reassure these groups and individuals who might be most likely to be affected by cost creep.

The Committee will also wish to continue to monitor this issue as the implementation of the Bill, when enacted, is rolled out.

41. Services which are chargeable at present will remain chargeable under the Public Bodies (Joint Working) (Scotland) Bill; this legislation does not introduce any changes regarding which services are charged for and which are provided free at point of delivery. Nevertheless, I recognise the concerns raised by Committee regarding the possibility of cost creep for the individual as service provision becomes more integrated across the NHS and local government, and more care is provided within community settings. The Scottish Government will continue to work with COSLA, local authorities and stakeholders on charging. COSLA’s non-residential charging guidance working group, for example, aims to reduce the variation in charging policies across Scotland, working with stakeholders including disability organisations to...
Para 260 – 264

The Committee notes the comments of COSLA and others on the extent to which the cost assumptions are accurate and whether sufficient financial provision has been made.

The Committee fully accepts that the drive towards integration, although intended to deliver better outcomes for patients, is also about helping make more efficient and effective use of public funds invested in health and social care through NHS boards and local authorities. In that sense, the expectation is that, through integration, better and more efficient services will be able to be provided for approximately the same level of overall resource.

The Committee also accepts that work and discussions are on-going on the detailed financial arrangements that will be put in place as the implementation of the Bill rolls out. The Committee agrees with the Finance Committee that it is not unreasonable for there to be uncertainties about the costs of the Bill at this stage, and also agrees with it that there will be a need for on-going monitoring. However, the Committee also agrees with witnesses who indicated that further clarity on these matters, as the Bill progresses, would be helpful.

Finally, the Committee welcomes the Finance Committee’s commitment to continue to monitor financial aspects of the implementation of the Bill as part of it’s monitoring of the delivery of the shift to preventative spending and its suggestion that the Health and Sport Committee also continue to monitor implementation issues as they arise.

The Committee would expect to carry out this role as part of its wider, general role of scrutinising the Scottish Government and holding it to account as regards its delivery of health and sport matters, but there will be opportunities to monitor developments in more specific detail over the remainder of the parliamentary session as appropriate.

42. I acknowledge the Committee’s request regarding provision of further information on financial arrangements as the Bill progresses. In terms of measuring the effectiveness – in terms of outcomes – and the financial implications of integration, our work with ISD to develop a linked patient/client level health and social care dataset and information system will provide a rich evidence base for local strategic planning activity, and for local and national understanding of local performance. I have also asked my officials to establish a working group to consider the medium and long term financial consequences of supporting our ageing population within the context of integrated health and social care arrangements. I will be pleased to provide an update on both of these areas of work in due course.

43. The Committee may also wish to note that, in terms of financial management, the Scottish Government's Integrated Resources Advisory Group, whose members are finance professionals from the NHS and local government, is developing detailed guidance for finance managers under integrated arrangements. I will also provide an update on that work should the Committee find that helpful.

Para 279 – 280

The Committee would intend to continue to monitor progress on this over the remainder of the parliamentary session, but in the meantime asks the Cabinet Secretary to clarify the extent to which there is expected to be variation between health boards. The Committee
questions whether it would be the case, for example, that larger percentages would be expected to be within scope for transfer in the smaller board areas that have fewer specialised services, than would be the case in the larger boards such as NHS Greater Glasgow or Clyde or NHS Lothian.

The Committee would also be interested to learn from the Scottish Government the outcome of discussions with COSLA about the level of resources that local government would be expected to contribute to integrated budgets.

44. I welcome the Committee’s intention to monitor progress regarding inclusion of acute budgets in integrated strategic planning arrangements. There will, as the Committee, notes, be some variation in terms of the proportion of Health Board total budgets that are included in integrated arrangements, depending on the scope of services provided in the Health Board area that fall within areas of activity that will be required for inclusion in integration. Services provided on a national or regional basis will not be included in integrated arrangements, for example, and these are provided by the larger Health Boards, which will mean that, in any comparison between larger and smaller Health Boards, the former will include a smaller proportion of total acute hospital budgets in their local integrated arrangements. However, it is important to note that the same stipulations will apply to all Health Boards in terms of which types of care (and thus which budgets) must be included in the integrated arrangements. These requirements will be set out via regulations. An amendment introduced at stage 2 will set out that only adult social care functions must be included in the integrated arrangement; money will follow functions, with the result that it will be a requirement for all of adult social care spend, as defined in legislation, to be included in the integrated budget.

Para 286

The Committee notes that the Cabinet Secretary is “reasonably confident” that there will be no VAT implications arising from the Bill’s provisions. Nevertheless, the Committee would welcome an update in due course, when the final outcome of discussions with HMRC has become clear.

45. The SG discussions with HMRC are on-going and we expect to reach a conclusion by the end of December. The current position in respect of the two integration models is as follows:

- **Body Corporate** - HMRC have confirmed the Scottish Government view that the Integration Joint Board, as initially empowered in the Bill, is not a taxable person. The Scottish Government will consider carefully the effect stage 2 amendments may have on this position.

- **Lead agency** - this model is the subject of the on-going discussions, in which we are testing the proposed solution with data from four Health Boards and their local authority partners; we expect to conclude this analysis in the next few weeks.

46. The Scottish Government remains reasonably confident that the discussions with HMRC will result in there being no VAT implications arising from the Bill’s provisions and will provide an update to the Committee when they are complete.

Para 290
The Committee did not have time to put this question to the Cabinet Secretary during his appearance before it on 1 October 2013. However, the Committee is aware of historical difficulties in attempting to join up different electronic records and in IT procurement, which invariably seem to lead to rapidly rising costs. The Committee therefore invites the Cabinet Secretary to address the Finance Committee question in the Scottish Government response to this report.

47. The eHealth Strategy 2011-17 made a commitment to engage with stakeholders across the health and social care community to develop a strategy that clearly articulates the technology related requirements to support information sharing between partners and therefore enable integrated care. An Information Sharing Board (ISB) was established in 2011 to provide overall guidance and governance in this area, and has membership (both business and technical leaders) representing local delivery partnerships across Scotland. The ISB is providing initial oversight of the development of the strategy. A draft document has been developed, with considerable stakeholder engagement over the course of 2013, and defines some key principles for information sharing. It looks beyond the underpinning technology that is needed for effective information sharing and communications and includes areas such as Information Governance and standards. This work has informed some key requirements for the Scottish Wide Area Network (SWAN) procurement. Plans are in place to consult more widely on this initial draft early in 2014.

48. A key principle of the draft strategy is the support for local partnerships to develop innovative technology solutions for information sharing that suits their local ways of working. The general approach will be incremental, re-using existing assets where appropriate. However, locally led developments will be guided by an appropriate set of standards to ensure that information sharing is possible, when required, at a national level. The local partnerships will come together through national groups to promote a collaborative approach and ensure that there is no unnecessary duplication of effort, especially when it comes to systems that are used widely by multiple organisations (as mentioned above, SWAN will become a key technical infrastructure enabler as organisations join the service).

49. Developments in this area are being supported by £2m annual funding in this spending review period, which was agreed prior to the Bill being introduced. This funding is being used to support an existing national information sharing system (EDISON), develop national standards, commission activity by local partnerships that will have wider benefit, and provide all local partnerships with an allocation (based on an agreed formula) to enable local developments (£1m of this has been allocated to local partnerships in 2013-14, and £1.5m is earmarked for 2014-15). This funding is ‘enabling’ in nature and is not intended to meet the full cost of systems development and support for all partnerships across Scotland. Partner organisations are also contributing their own funding based on local business cases that provide local benefits and savings.

Para 293

The Committee understands that this work is in progress and requests that the Scottish Government provide an update on progress on this issue in its response to this report.

50. Healthcare Improvement Scotland is currently developing its six year strategy. This will take into account the workforce and financial implications of meeting all the duties upon it. This will include the effective and efficient use of the total budget allocation to
Healthcare Improvement Scotland. As part of the wider strategy review, Healthcare Improvement Scotland will shortly be consulting on its future scrutiny and inspection plan. This will include joint inspections with other agencies such as the Care Inspectorate.

Para 304 – 306

The Committee, while fully supportive of the proposals for integration, recognises the potential for progress to be hindered as a result of staffing issues. While detailed staffing arrangements are a matter for negotiation between the local authorities, the health boards and the relevant trades unions, there may well be matters of principle, such as some of those mentioned by UNISON and others, that could best be agreed centrally at a national level.

While the Committee has no wish to entrench cultural barriers and reinforce professional boundaries, both of which would limit the potential success of the Bill, there is a need for clarity and consistency on staff issues that may be raised by integration of different staffs working for different employers and coming from different professional backgrounds. These would include issues related to professional standards, codes of conduct and the role of regulatory professional bodies.

The Committee therefore calls on the Scottish Government, in its response to this report, to set out the steps that it is taking to identify the relevant issues and the work that it plans to do with the appropriate professional bodies, trades unions and others to resolve them.

51. As the Committee report notes, detailed staffing arrangements will be a matter for the integration authorities, Health Boards and local authorities and for local negotiation and decision-making. The Scottish Government does, however, recognise that some of the matters raised by UNISON and others will benefit from national discussions and, potentially, action or guidance. The Scottish Government has established Human Resources Working Group on Integration (HRWG) to consider those workforce issues arising from integration proposals. The group’s members are drawn from local government, the NHS, COSLA, trade unions (including UNISON national officers from both NHS and council settings) and Scottish Government officials. The Group is considering a range of HR issues, including whether each matter needs national agreement – and if so, what the mechanism should be for reaching such agreement – or whether local agreement is more appropriate. Draft guidance has also been developed by the Group and shared with local partners on, for example, joint appointments.

52. In addition, the Scottish Government has established a Workforce Development Strategic Group, which is considering how best to address issues of workforce cultures, practice and development to support development of a workforce that supports and delivers integrated support and services. A number of partners who have responsibilities in this area of work, such as the Scottish Social Services Council, NHS Education for Scotland and the Institute for Research and Innovation in Social Services, have already been working collaboratively over the last year or so on a range of developments intended to support cross-sector and multi-professional training and practice. Many of the new programmes of work for these organisations are being planned with integration as a key driver for their work; for example, the SSSC’s review of the social work degree will take into account the need to develop professionals with the skills and knowledge to work in the context of integration.
Integration of Health and Social Care – Governance, Accountability and Operational Delivery under integrated arrangements

November 2013

Introduction

1. This paper sets out key aspects of governance and accountability arrangements under the Public Bodies (Joint Working) (Scotland) Bill. Its purpose is two-fold:

a) To explain, in outline, the Bill’s provisions as they relate to issues of governance and accountability; and

b) To explore, also in outline, how integrated arrangements will actually work on the ground.

2. Clearly, there must be synergy between these two aspects of integration: practical arrangements on the ground can only work if the legislative framework enables them to do so. However, it is important to remember that legislation itself does not provide a set of instructions for how to make integrated arrangements work. It would be fruitless to examine the Bill for every detail of how practicalities will work; it would also be undesirable to set legislation out on that basis, constraining as it would the opportunity for local innovation and adaptation appropriate to local circumstance. Leadership – at local and national levels – will be key to making integration work, and no legislative provision yet devised can generate or guarantee effective leadership.

3. Legislation can, nonetheless, establish effective requirements for accountability and transparency regarding outcomes. The underlying principle of the Public Bodies (Joint Working) (Scotland) Bill is that Health Boards and local authorities must take joint and equal responsibility for the delivery of nationally agreed outcomes for health and wellbeing, and with this in mind the Bill is written to provide a framework to enable effective local integration of health and social care.

4. The aims of the Bill are:

- to support improvement in terms of the quality and consistency of health and social care services in Scotland;
- to enable local partners to, more effectively and consistently, plan for and provide seamless, joined up quality health and social care services; and
- to ensure that resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs.

5. The focus of the Bill is on establishing cohesive planning and delivery arrangements spanning Health Boards and the social care responsibilities of local authorities, with teams whose members are integrated in relation to their shared objectives, whatever local employment and management arrangements are in place.

6. The Bill also reflects the vital contribution of the third and independent sectors in enabling delivery of better outcomes as well as the statutory roles of Health Boards and local authorities.
7. The purpose of this paper is to set out the practicalities of how these aspirations will take effect within the context of the new integrated arrangements. Guidance will, in due course, set out the Scottish Ministers’ expectations for the factors that should be taken into account when establishing local arrangements.

8. The paper is organised under a series of headings that relate directly to those aspects of integration most relevant to questions of governance and accountability, as follows:

- Accountability
- Planning for integrated services
- Operational delivery of integrated services
- Liability

9. Under each heading, a brief description of the Bill’s provisions is followed by a short explanation of intended practice on the ground.

10. Annex (i) provides further information on financial accountability.

**Accountability**

**Body Corporate Model**

**The Bill**

11. Where partners agree locally to set up a body corporate arrangement, the Bill requires that:

- The Health Board and local authority agree an integration plan, setting out local arrangements for integration, within the parameters established by the legislation. Regulations will set out which functions must be included within the integrated arrangement – these will cover adult social care, adult primary and community health care, and aspects of adult secondary health care.

- The integration plan will be submitted to the Scottish Ministers for approval so that an Order can be laid in Parliament to establish the integration joint board as a legal entity.

- Where Ministerial approval is not given in the first instance, the Scottish Ministers will provide detailed feedback and a timescale for the Health Board and local authority to agree an amended plan.

- Once established by Order, the duties of the integration joint board are to appoint a chief officer, develop and maintain a strategic plan and ensure the delivery of the functions delegated to it, using the resources delegated to it.

- Once the chief officer is appointed and the strategic plan is developed and agreed responsibility for planning and overseeing delivery of the delegated functions passes formally to the integration joint board.

**In practice**

12. A key priority of these reforms is to ensure that the integrated health and social care arrangement is empowered to deliver real change, and, particularly, to shift the balance of care in favour of preventative and anticipatory care based in communities.
13. Incorporating the integration joint board, and then delegating control of functions and resources to it from the Health Board and the Local Authority, gives the integration joint board the power to plan and act as necessary to improve outcomes.

14. Nevertheless, the intention is not to establish the integration joint board as an entity acting separately from the Health Board and local authority, or without regard to wider issues of patient and service user wellbeing and public service effectiveness. The integration joint board is in practice bound to the accountability arrangements of the Health Board and local authority in two ways:

a) The integration joint board is established via agreement between the Health Board and local authority. The terms of this agreement are described in the integration plan, which will set out the context within which the integration joint board must operate. An amendment to the Bill will set out arrangements to allow the Health Board and local authority to revise the integration plan if, as time passes, it becomes apparent that local arrangements could be improved.

b) Voting members of the integration joint board will be drawn from Health Board and Council members. It will be up to the Health Board to decide its members of the integration joint board, and it will be for the Council to decide its members. Regulations will set out rules about the maximum size of integration joint boards, to ensure that they operate effectively and efficiently. If the Health Board wishes to appoint other representatives to the integration joint board, perhaps because it does not have enough non-executive members to serve the various integration joint boards in its area, those appointments will be subject to Ministerial approval. It will be up to the Health Board and local authority to agree, via the integration plan, chairing arrangements for the integration joint board.

15. Integration joint boards need to be empowered to act, which is achieved by giving them legal personality and enabling them to hold the functions and resources delegated to them, but at the same time must retain a close relationship to the Health Board and local authority.

Lead Agency Model

The Bill

16. Where partners agree locally to set up a lead agency arrangement, the Bill requires that:

- The Health Board and local authority agree an integration plan, setting out functions and resources that will be delegated between the Health Board and local authority. The integration plan must also set out which functions of the lead agency will be managed and planned for “in conjunction with” the delegated functions. In other words, the integration plan must set out the same, full range of functions under this model as must be described under the body corporate model. In this way, services will be managed in an integrated way in order to deliver improvement along the entire journey of care. For example, where adult social care is delegated to the Health Board, the integration plan must set out the delegated functions (adult social care functions) and also the functions to be managed in conjunction with those functions (i.e., adult primary and community health care, and aspects of adult secondary health care, as required under regulations).
• An amendment to the Bill will set out that, where the lead agency model is used, in order to assure the integrity of the integrated model, functions must be delegated in such a way that adult health and social care services are managed and led by one statutory body (either the Health Board or local authority).

• The integration plan will be submitted to the Scottish Ministers for approval.

• Where Ministerial approval is not given in the first instance, the Scottish Ministers will provide detailed feedback and a timescale for the Health Board and local authority to agree an amended plan.

• Once the integration plan is approved by the Scottish Ministers, the delegating agency will delegate functions and resources to the lead agency, which is responsible for producing the strategic plan and delivering services.

• An integration joint monitoring committee is established to provide oversight of the integrated arrangement. Membership of the integration joint monitoring committee is agreed by the Health Board and local authority as part of the integration plan.

• An amendment to the Bill will require Health Board and local authority to provide the integration joint monitoring committee with reports, information and assistance about delivery of services, so that it can exercise its duty to provide oversight of the integrated delivery arrangements.

In practice

17. In the lead agency model, functions and resources, and therefore responsibility for delivery, pass from one statutory body to the other.

18. The integration joint monitoring committee’s role is one of oversight, not executive decision making. The Health Board and local authority will be under a duty to provide reports, information and assistance so that the committee is able to provide this oversight of the integrated delivery arrangements. The integration joint monitoring committee will write reports of its findings and make recommendations to the lead agency in those reports. The lead agency will be under a duty to have regard to those recommendations and will need to respond to the committee indicating, what, if any, action it has taken in response.

19. The membership and arrangements for executive support of the integration joint monitoring committee will be left to the Health Board and local authority to agree and set out within their integration plan.
Planning for integrated services

Both models – body corporate and lead agency

The Bill

20. The Bill requires that:

- The integration joint board or lead agency must develop a strategic plan that sets out the arrangements for carrying out of the integrated functions and how these arrangements will contribute to the delivery of the national health and wellbeing outcomes. By “integrated functions” we mean either the functions delegated to the integration joint board, or, where the lead agency model is used, the functions delegated to the lead agency plus the functions that will be managed in conjunction with the delegated functions.

- The integration joint board or lead agency must have regard to the integration delivery principles and the national outcomes set out in legislation in the development of the strategic plan.

- The integration joint board or lead agency must establish a consultation group to support and inform development of the plan. The integration joint board or lead agency must pay regard to the views of the consultation group in the development of the strategic plan.

- Where the body corporate model is used, the integration joint board must consult the Health Board and the local authority regarding development of the strategic plan.

- The strategic plan must establish localities within the geographical area covered by the integration arrangement.

- The strategic plan must be reviewed on a regular basis to ensure that it remains fit for purpose.

In practice

21. Strategic planning is the heart of the Bill and is the mechanism via which integrated arrangements will be able to effect real improvements in service provision and outcomes. It will be particularly important that strategic planning takes account of the views of non-statutory partners and professionals working in local systems.

22. Strategic planning also sets the context for locality arrangements, which will be vitally important in driving forward the required shift in the balance of care in favour of community and preventative provision, and in embedding an assets based approach to service planning and delivery. Locality planning provides the mechanism, in particular, for ensuring primary care practitioners are tied into strategic planning and integrated arrangements.

23. We recognise that it is important that strategic planning for integrated functions and services must work effectively within the broader context of Health Board and Council activity.

24. A challenge arises in this respect where the body corporate model is used. Strategic planning for integrated functions cannot be contingent on Health Board and local authority approval, or the integration joint board will not be empowered to deliver change.
25. Where the body corporate model is used, an amendment to the Bill will enable the Health Board and local authority, acting jointly, to direct the integration joint board to prepare a new strategic plan. Such a direction must explain the Health Board’s and local authority’s reasons for requiring a new strategic plan, and must demonstrate that the Health Board and local authority agree with one another that the existing strategic plan would prevent them, or is preventing them, from complying with:

- the integration planning principles;
- the national health and wellbeing outcomes;
- the integration delivery principles; or
- their duties in regard to carrying out any of their functions.

26. Scottish Ministers do not have a role in the approval of strategic plans, whichever model is used.

**Operational delivery of services**

**Body Corporate Model: role of the chief officer**

The Bill

27. Where partners agree locally to set up a body corporate arrangement, the Bill requires that:

- The integration joint board appoints a chief officer, who oversees development and implementation of the strategic plan, its maintenance and review over time, delivery, and performance reporting, on behalf of the integration joint board. The chief officer is accountable to the integration joint board in relation to the exercise of these duties.
- The chief officer is employed by either the Health Board or local authority, and is seconded to the integration joint board.
- The integration joint board is responsible for appointing the chief officer, and must consult the Health Board and local authority on the appointment.
- The integration joint board is not empowered by the Bill to employ staff or hold contracts, although the Bill makes provision to enable the Scottish Ministers to make an Order enabling the integration joint board to do in so far as that is considered desirable in future.
- The integration joint board secures delivery of the delegated functions by directing the Health Board and the local authority to deliver services in line with the strategic plan.

In practice

28. The role of the chief officer is central to ensuring that integration applies to planning and delivery of services. The practical effect of integration will be that the chief officer will oversee delivery of integrated services, as set out in the strategic plan, by teams whose members are employed by either the Health Board or the local authority.
29. Because the integration joint board is established as a legal entity in its own right, it must appoint the chief officer, who is its accountable officer for the functions and responsibilities that it holds.

30. Nevertheless, we recognise the importance of ensuring that the Health Board and local authority are also closely involved in the process of appointment. The Bill requires that the integration joint board consults with the Health Board and the local authority on the appointment. Local arrangements for the process of appointment will be left to local determination. However, the Scottish Ministers will set the expectation within statutory guidance that the appointment process will include input from senior officers and/or members of the Health Board and the local authority. The formal appointment will be made by the integration joint board.

31. The Bill focuses on the strategic planning and resourcing of adult health and social care services, but says little of how the services will be operationally delivered. Legislative detail on operational delivery would constrict local opportunities for innovation to suit local need.

32. Because the integration joint board holds both the functions and the resources it is responsible for ensuring effective operational delivery. The Scottish Ministers do not at this stage intend to empower the integration joint board to employ staff or hold delivery contracts and so it has to discharge its responsibilities for operational delivery through the Health Board and the local authority. This arrangement achieves the effect of integrating planning and service delivery without the need for large scale secondment or transfer.

33. To further bind planning and operational delivery activity together under the body corporate model, the Scottish Ministers will require that integration plans set out the operational role that the chief officer will hold. The integration joint board will put the chief officer at the disposal of the Health Board and local authority to carry out the operational role. This aspect of the chief officer’s role will also be reflected in the approved description of their responsibilities. As operational director of service delivery, this person reports to the Chief Executive of the Health Board and local authority on a day-to-day basis. On financial matters, the chief officer will be required to take account of the advice of the Directors of Finance of the Health Board and local authority.

34. Locally, it is intended that integration joint boards agree with the Health Board and local authority to put in place operational arrangements that assure the on-going day-to-day interaction between the Chief Executives and the chief officer. These arrangements should assure effective, integrated planning and delivery of services, including sharing of information and reporting on performance. Guidance will be provided on how the terms of appointment of the chief officer should make provision for operational arrangements to help integration joint boards to set out appropriate local descriptions of the responsibilities of the chief officer role.

35. It is important that the strategic and operational roles of the chief officer are secured via a single individual in order to fulfil the key policy objectives of joint working across the Health Board and local authority, and to ensure that strategic planning and delivery of services remain intrinsically linked.

36. This dual role for the chief officer highlights the importance of clear, agreed objective setting and appraisal processes between the Health Board, the local authority and the integration joint board as the chief officer will have responsibilities and a relationship with all three bodies. To avoid a disconnect, the expectation will be that the chief officer’s objectives,
across strategic and operational responsibilities, are agreed and set jointly by the two Chief Executives and the chair of the integration joint board.

**Lead Agency Model**

*The Bill*

37. Where partners agree locally to set up a lead agency arrangement, the Bill states that responsibility for operational delivery of services lies with the body to whom functions and resources are delegated.

*In practice*

38. In the lead agency model, there is no need for a chief officer role. Senior officer responsibility for the discharge of the integrated arrangements is held by the Chief Executive of the lead agency.

39. There is no legislative requirement to transfer staff under lead agency arrangements, although it seems likely that staff would transfer to the lead agency. If staff do not transfer from the delegating body to the lead agency, it will be necessary for the Health Board and local authority to put in place integrated management arrangements to assure integrated service delivery.

**Liability – if something goes wrong**

*The Bill*

40. Where partners agree locally to set up a body corporate arrangement, the Bill as introduced stated that:

- Any legal claim in respect of a delegated function must be raised against the integration joint board.

- Where the integration joint board directs a Health Board or local authority to carry out a function on its behalf, the person directed (i.e., the Health Board or local authority) stands in the place of the integration joint board (s22(4)). Liability then rests with the Health Board or local authority.

41. The Scottish Government intends to bring forward an amendment to the Bill that will have the effect of applying common law to the question of liability for integrated health and social care services. This will ensure that the body that is ‘in control’ of the actions that are taken will be liable for any claims made, rather than only the integration authority. This will apply in both models of integration.

42. Therefore a claim may be raised against any of: the integration joint board, the health board or local authority, which has been directed to carry out the function by the integration authority.

*In practice*

43. The Bill will set out that the integration joint board or a person directed may be held liable for a claim raised in respect of a delegated function. Liability for claims relating to strategic planning is likely to rest with the integration joint board, whereas liability for claims
arising from faults in the way services are delivered is more likely to rest with the body who has been directed to carry out the function.

44. The Scottish Government intend to establish a working group, including representatives from the Society of Local Authority Lawyers and Administrators in Scotland (SOLAR) and the NHS Central Legal Office (CLO) to develop guidance on managing questions of liability locally, through the provisions of the integration plan.

DG Health and Social Care
Integration and Reshaping Care Division
November 2013
Annex (i): Financial Accountability

45. The accountable officers of the Health Board (the Chief Executive) and local authority (Section 95 Officer) are responsible for the proper use of resources by the Health Board and local authority respectively.

46. Their duties are as follows:

   a) Sign the accounts;
   b) Ensure the propriety and regularity of the finances of the body for which they are the accountable officer for;
   c) Ensure that the resources of the body are used economically, efficiently and effectively.

47. They also have a duty to seek direction from the Health Board and the Council respectively, and to alert their auditor where they are instructed to do something which they consider contravenes their duty to ensure propriety and regularity or economy, efficiency and effectiveness.

Body Corporate Model

48. In the body corporate model, the accountable officers of the Health Board and local authority discharge their responsibility, as it relates to the resources that are to be delegated to the integration joint board, by setting out in the integration plan that the money is to be used by the integration joint board to deliver the delegated functions, along with the systems and monitoring arrangements that cover payments and financial performance management. It is the responsibility of the accountable officers of the Health Board and local authority to ensure that the provisions of the integration plan enable them to discharge their responsibilities in this respect.

49. The chief officer is the accountable officer of the integration joint board and discharges his or her duties in respect of the delegated resources by:

   - Establishing financial governance systems for the proper use of the delegated resources;
   - Ensuring that the strategic plan meets the requirement for economy, efficiency and effectiveness in the use of the integration joint board’s resources; and
   - By ensuring that the directions given to the Health Board and local authority for delivery of services are designed to ensure resources are spent according to the strategic plan. It is the responsibility of the chief officer to ensure that the provisions of the directions enable the chief officer to discharge his or her responsibilities.

50. It is intended that the chief officer will be advised by the Directors of Finance of the Health Board and local authority, who will co-sign the financial statements of the integration joint board with the chief officer.

51. In his or her capacity as operational director of service delivery within the Health Board and local authority, he or she has no “accountable officer” status but is:

   - accountable to the Chief Executive of the Health Board for financial management of the operational budget, and is advised by the Health Board Director of Finance; and
   - accountable to the Section 95 Officer of the local authority for financial management of the operational budget.
Lead Agency Model

52. The accountable officer of the lead agency is responsible for the resources delegated to it and discharges this responsibility through the lead agency’s existing financial governance systems.

53. The accountable officer of the delegating partner discharges their responsibilities in respect of the delegated resources through the provisions of the integration plan.
Background

1. The Committee reported on the delegated powers in the Public Bodies (Scotland) Bill\(^1\) on 1 October in its 48\(^{th}\) report of 2013.

2. The response from the Scottish Government to the report is reproduced at the annex.

Scottish Government response

Section 1(3)(e) – Integration plans: same local authority and Health Board area-prescribed information about other prescribed matters

3. Section 1 requires each local authority and Health Board which has the same area to jointly prepare an integration plan for that area. Section 1(3)(e) provides for the prescription, by regulations, of information about such other matters that may be included in an integration plan.

4. The Committee reported that, as the power can prescribe a broad range of significant matters for inclusion in an integration plan, the affirmative procedure may provide a more suitable level of Parliamentary scrutiny than the negative procedure which is currently proposed.

5. In response to the Committee, the Government explained that the prescribed matters are intended to supplement, rather than alter, the core elements of an integration plan. The Government therefore did not consider the use of the affirmative procedure to be necessary.

\(^1\) Public Bodies (Joint Working) (Scotland) Bill [as introduced] available here: [http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20Joint%20Working%20(Scotland)%20Bill/b32s4-introd.pdf](http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20Joint%20Working%20(Scotland)%20Bill/b32s4-introd.pdf)
Section 1(6) – Integration plans: same local authority and Health Board area-
prescription of functions

6. The regulations under section 1(6)(a) and (b) are intended to prescribe the
range of functions of local authorities and Health Boards which either must, may, or
may not be, delegated under an integration plan.

7. The Committee noted that the Bill makes no reference to sections 56(6), (6A)
and (7) of the Local Government (Scotland) Act 1973 (“the 1973 Act”) which provide
that a local authority’s functions with respect to matters such as setting amounts of
council tax and borrowing money, shall be discharged only by the authority.

8. Section 1 of the Bill therefore does not provide for any exclusion of those
significant functions in the 1973 Act from the powers to prescribe the functions which
may be delegated under an integration plan.

9. The Committee therefore asked the Government to consider whether
amendments should be made to the Bill at stage 2 in order to clarify the effect of the
powers in section 1 of the Bill on the operation of the 1973 Act.

10. In its response, the Government agreed to bring forward an amendment at
stage 2 which would make it clear that the provisions in section 1 would not affect
the operation of the aforementioned sections of the 1973 Act.

Section 12(1) and (2) – Integration joint boards: further provision

11. Section 12(1) provides that the Scottish Ministers may, by order, make
provision about various aspects of joint integration boards, including their
membership and proceedings.

12. The Committee drew the power to the attention of the lead committee, noting
that the prescription of the number of joint board members, or who the members may
be, is not subject to limitation.

13. In response to the report, the Government agreed that it would be necessary
to limit membership numbers in joint integration boards but stated its view that, in
order to allow for flexibility, this would be best achieved through subordinate
legislation rather than being provided for on the face of the Bill.

Section 15 – Transfer of staff where functions delegated to local authority or Health
Board

14. Section 15 provides for Scottish Ministers to make a scheme for the transfer
of staff from a body responsible for delegating the functions in the integration plan
(as set out in 1(4) of the Bill) to the body the functions are delegated to.

15. The Committee noted the Government’s intention that the scheme should not
be subject to any form of Parliamentary scrutiny. This is in contrast to the current
power to make provision for any transfer or secondment of staff contained in the
Community Care and Health (Scotland) Act 2002 which is to be repealed by the Bill.
The relevant powers in the 2002 Act are exercisable by regulations which are subject
to Parliamentary scrutiny by the negative procedure.
16. The Committee therefore drew the attention of the lead Committee to this apparent downgrading of Parliamentary scrutiny in relation to the transfer or secondment of staff.

17. In its response to the Committee’s report, the Government emphasised its view that matters relating to staff transfers are administrative in nature, and best dealt with by Health Boards and local authorities.

18. The Government also provided examples of other scheme provisions for transfer of staff, which allow for transfer without the requirement for Parliamentary scrutiny. The Government stated that it did not consider that the powers at section 15 should be subject to any form of Parliamentary scrutiny.

Section 16 – Integration joint monitoring committees: further provision

19. Section 16(1) provides that the Scottish Ministers may, by order, make provision about the establishment of, membership of, and the proceedings of, integration joint monitoring committees, and any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

20. As with the power at section 12(1) which relates the membership and proceedings of joint integration boards, the Committee drew the power to the attention of the lead committee, noting that the prescription of the number of integration joint monitoring committee members, or who the members may be, is not subject to limitation.

21. In response to the report, the Government stated its view that any limitation of the power would constrain the flexibility required in order to deal with the variation of circumstances across Scotland.

Section 36(3) – Power to make provision in consequence of new integration plan-scheme about transfer of staff, etc.

22. Section 36(3) provides that, in consequence of the replacement of an integration plan by a new plan, the Scottish Ministers may, by scheme, make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

23. As with section 15 which deals with schemes for the transfer of staff, section 36 is not subject to any form of Parliamentary scrutiny. Again, this is in contrast to the powers currently available to transfer staff between a local authority and a Health Board in the Community Care and Health (Scotland) Act 2002 which is to be repealed by the Bill. The relevant powers in the 2002 Act are exercisable by regulations which are subject to Parliamentary scrutiny by the negative procedure.

24. As with its response on section 15, the Government stated that it did not deem it necessary that the power at section 36(3) should be subject to Parliamentary scrutiny, as it considered matters in relation to staff transfers to be administrative in nature.
25. Section 19 of the Bill regulates the effect on contracts of employment, where there is a scheme for transfer under sections 12(3) or 15 of the Bill. In response to a suggestion in the Committee’s report, the Government acknowledged that section 19 should also apply to schemes made under section 36(3). The Government therefore intends to bring forward an amendment to provide for this.

Section 39(2) – Default power of Scottish Ministers

26. Section 39(2)(a) to (e) lists five default powers which the Scottish Ministers may exercise, where a local authority and a Health Board fail to submit an integration plan for approval before the day prescribed under section 7. Section 39(2)(a) enables the Ministers to specify functions of the local authority and Health Board which are to be delegated to a joint board.

27. The Committee considered that the functions of a local authority and a Health Board which may be specified under section 39(2)(a) are not limited by the prescription of functions by regulations under section 1(6). Section 1(6) relates to the prescription of functions which must, may, or may not be, delegated under an integration plan. Section 39(2) applies where such a plan has not been submitted for approval.

28. The Committee therefore asked the Government to consider whether it would be appropriate to bring forward an amendment which would clarify that the functions specified at section 39(2)(a) would not go beyond those prescribed by regulations under section 1(6).

29. In responding to the report, the Government considered that it would not be possible in practical terms, for section 39(2)(a) to specify any functions beyond those provided for in section 1(6). The Government therefore does not intend to bring forward the amendment suggested by the Committee at stage 2.

Conclusion

30. Unless amendments that will substantially affect the delegated powers provisions are made to the Bill at Stage 2, the Committee will not consider it again. Members are therefore invited to make any comments they wish on the Bill at this stage.

Recommendation

31. Members are invited to note the Scottish Government’s response on the Bill and to make any comments they wish at this stage.
Correspondence from the Scottish Government, dated 19 November 2013:

Section 1(3)(e) – Integration plans: same local authority and Health Board area-prescribed information about other prescribed matters

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

The Committee therefore asks the Scottish Government, in relation to the power in section 1(3)(e), to consider in advance of Stage 2 of the Bill whether the significance of the matters which could be prescribed in regulations under this power is such that the affirmative procedure could be a more suitable level of Parliamentary scrutiny of the exercise of this power, rather than the negative procedure.

The Committee asks for further comment on this in the Scottish Government’s response to this report.

1. The Scottish Government intends to use the power at section 1(3)(e) to prescribe matters supplementary to the core elements of an integration plan, as set out in section 1(3)(a) – (d). The Scottish Government, in its response to the Committee of 10 September, suggested that those supplementary matters may include; arrangements for Clinical and Care Governance; arrangements for financial management and arrangements under which staff may transfer between statutory partners. The Scottish Government also indicated that regulations under section 1(3)(e) may also set out the arrangements for Integration Joint Boards and Integration Joint Monitoring Committees which are to be included in the Integration Plan. The Scottish Government does not intend that matters relating to Integration Joint Boards or Integration Joint Monitoring Committees will go beyond those prescribed by section 12 and section 16 of the Bill, respectively.

2. Given that these prescribed matters will supplement rather than alter the core elements of the integration plan, in order to ensure effective integration arrangements are in place, the Scottish Ministers consider that a greater level of parliamentary scrutiny is not required.

Section 1(6) – Integration plans: same local authority and Health Board area-prescription of functions

Power conferred on: the Scottish Ministers
Power exercisable by: Regulations
Parliamentary procedure: Negative procedure

The Committee also notes that the Scottish Government has undertaken to consider whether any amendments at Stage 2 need to be made to address the operation of the provisions in section 56(6), (6A) and (7) of the Local
Government (Scotland) Act 1973, as they relate to the powers in section 1 of the Bill. The Committee asks for further comment on this in the Scottish Government's response to this report.

3. The Scottish Government, in its response to the Committee of 10 September, undertook to consider whether any amendments at stage 2 need to be made to address the effect of the powers in section 1 of the Bill on the operation of section 56(6), (6A) and (7) of the Local Government (Scotland) Act 1973. The Scottish Government proposes to bring forward an amendment at stage 2 to restrict the functions of local authorities that may be delegated under an integration plan prepared using the powers in section 1 of the Bill. This amendment will have the effect that the powers that cannot be delegated under sections 56(6)(6A) and (7) of the Local Government (Scotland) Act 1973 cannot be included in an integration plan prepared under section 1 of the Bill. The Scottish Government considers that this amendment will make clear that the provisions of the Bill do not affect the operation of sections 56(6)(6A) and (7) of the Local Government (Scotland) Act 1973.

Section 12(1) and (2) – Integration joint boards: further provision

Power conferred on: the Scottish Ministers
Power exercisable by: Order
Parliamentary procedure: Negative procedure

The Committee accordingly draws the attention of the lead committee to the power in section 12(1)(a). This power proposes to enable the Scottish Ministers by order to make provision about the membership of integration joint boards, without any limitations as to the number of members of a particular board that may be prescribed, or as to who may be prescribed as members.

4. The Scottish Government does not consider it appropriate to limit the power in section 12(1)(a) to specify the number of members of Integration Joint Boards. The Scottish Government intends to specify these matters in regulations and considers that limiting the power at section 12(1)(a) could result in constraining future flexibility. The Scottish Government, in consultation with stakeholders, has fully considered the need for membership of the Integration Joint Board to reflect not only the membership size of the relevant Health Board and local authority but also key professionals, practitioners and others, who have a key role in planning integrated health and social care. Whilst the Scottish Government recognises the need for limiting the number of members of the Integration Joint Board to ensure it is effective and not unwieldy, the Scottish Government considers that this is best achieved in regulations.
Section 15 – Transfer of staff where functions delegated to local authority or Health Board

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

However it draws to the attention of the lead committee that the exercise of this power would not be subject to Parliamentary scrutiny. The Committee understands that the current power to make provision for any transfer or secondment of staff contained in the Community Care and Health (Scotland) Act 2002, where arrangements may be entered between local authorities and NHS bodies for the delegation of functions, is exercisable by Regulations which are subject to Parliamentary scrutiny by the negative procedure (sections 15(4)(c) and 23 of that Act).

In contrast, the power in section 15 of the Bill to make provision about the transfer of staff, where functions are delegated to a local authority or Health Board, is proposed to be exercisable by a scheme which would not be published as a Scottish statutory instrument, nor subject to Parliamentary scrutiny.

The Committee understands therefore that section 15 proposes to remove scrutiny by the Parliament, in comparison with the similar power in the 2002 Act which would be repealed by the Bill.

5. The Scottish Government considers that matters relating to the transfer of staff are, in essence, administrative in nature, are designed to facilitate delivery of integration policy and are made available consequentially through the passing of section 19 of the Bill. The Bill does not require the transfer of staff; it will be a matter for Health Boards and local authorities and, where relevant, Integration Joint Boards, to determine whether effective integration of health and social care services is best facilitated by the transfer of staff.

6. Similar powers exist to provide for schemes in relation to the transfer of staff in the Police and Fire Reform (Scotland) Act 2012 schedule 5, paragraph 12. Similar examples are found in the National Health Service (Variation of the Areas of Greater Glasgow and Highland Health Boards) (Scotland) Order 2006 (SSI 2006/33) and the Local Government Area Changes (Scotland) Regulations 2007 (S.I. 1977/8). The Scottish Government recognises that these provisions each take different approaches. However, each of these provisions allowed schemes to be made for the transfer of staff without parliamentary scrutiny of the scheme. The Scottish Government considers that these provisions provide a clear precedent for such transfers to be made by scheme rather than by Statutory Instrument, and that the power in section 15 is in keeping with this. Therefore, the Scottish Government does not consider it necessary for the exercise of this power to be subject to parliamentary scrutiny.
Section 16 – Integration joint monitoring committees: further provision

Power conferred on: the Scottish Ministers
Power exercisable by: Order
Parliamentary procedure: Negative procedure

The Committee accordingly draws the attention of the lead committee to the power in section 16(1)(b). This power proposes to enable the Scottish Ministers by order to make provision about the membership of integration joint monitoring committees, without any limitations as to the number of members of a particular committee that may be prescribed, or as to who may be prescribed as members.

7. The Scottish Government considers that, as with the power at section 12(1(a), it is not appropriate to limit the power at section 16(1)(b), for the same reasons. The Scottish Government considers that the powers as set out in the Bill put in place a framework to allow Integration Authorities to develop integrated governance arrangements that suit local circumstances. This power provides flexibility which is appropriate for taking into account variation in circumstances across Scotland. The Scottish Government considers that a more narrow power would be limiting and would inhibit this flexibility.

Section 36(3) – Power to make provision in consequence of new integration plan-scheme about transfer of staff, etc.

Power conferred on: the Scottish Ministers
Power exercisable by: Scheme
Parliamentary procedure: None (and not in the form of an SSI)

However it also draws the attention of the lead committee to the same matter as for the powers to make a scheme in section 15, as regards the scrutiny of the exercise of this power. Section 36 similarly proposes to remove scrutiny by the Parliament, in comparison with the analogous power in the Community Care and Health (Scotland) Act 2002 to set out arrangements for the transfer of staff which would be repealed by the Bill.

The Committee notes that the Scottish Government will consider in advance of Stage 2 whether an amendment is required, to give effect to the intention that section 19 should apply, when the power in section 36(3) is exercised to make a scheme for the transfer of staff.

8. The Scottish Government considers that, as with section 15 of the Bill, it is not necessary for the exercise of the power at section 36 to make a scheme to be subject to further Parliamentary scrutiny. The Scottish Government considers the transfer of staff to be an administrative matter, as parties will have to agree to enter into such transfer arrangements, reflecting the administrative nature of the scheme.

9. The Scottish Government considers that an amendment is required to provide for section 19 to apply to schemes made in exercise of the power under section
36(3) and thank the Committee for drawing this to our attention. The Scottish Government undertakes to bring forward an amendment to this effect at stage 2.

Section 39(2) – Default power of Scottish Ministers

The Committee notes that the Scottish Government will consider in advance of Stage 2 whether an amendment is required, to give effect to the intention that the functions which may be specified under section 39(2)(a) on default to be delegated to an integration joint board would not go beyond those that would be prescribed by regulations under section 1(6).

10. On further consideration, the Scottish Government considers that an amendment is not required to give effect to the intention that the specification of functions to be delegated under section 39(2)(a), would not go beyond those to be prescribed under section 1(6). The Scottish Ministers intend to make regulations under section 1(6), which make broad provision in relation to the delegation of functions as a consequence of an integration plan under section 1. It is intended that the functions that must, or may, be delegated will cover all functions relating to adult health and adult social care exercised by Health Boards and local authorities. The Scottish Government consider that, in practical terms, section 39(2)(a) could not be used to specify any broader functions than those covered by regulations under section 1(6).
Public Bodies (Joint Working) (Scotland) Bill: The Cabinet Secretary for Health and Wellbeing (Alex Neil) moved S4M-08389—that the Parliament agrees to the general principles of the Public Bodies (Joint Working) (Scotland) Bill.

After debate, the motion was agreed to (DT).
Public Bodies (Joint Working) (Scotland) Bill: Stage 1

The Presiding Officer (Tricia Marwick): The next item of business is a debate on motion S4M-08389, in the name of Alex Neil, on the Public Bodies (Joint Working) (Scotland) Bill. I advise members that time for the debate is extremely tight. I ask members to keep to their time limits, which will allow us to call all the members who are to speak.

15:12

The Cabinet Secretary for Health and Wellbeing (Alex Neil): I am pleased to open the stage 1 debate on the Public Bodies (Joint Working) (Scotland) Bill. I thank Duncan McNeil and the Health and Sport Committee for their scrutiny of the bill and for preparing their stage 1 report, which contains interesting and welcome recommendations. I also thank the Local Government and Regeneration Committee, the Finance Committee and the Delegated Powers and Law Reform Committee for their consideration of the bill and for contributing to the Health and Sport Committee’s scrutiny of the bill.

I am grateful to partner organisations across the national health service, local government and the third and independent sectors and to the broad range of stakeholder working groups that have helped the Scottish Government to develop the policy that is reflected in the bill, and I thank the organisations and individuals who provided oral and written evidence at stage 1. I am sure that the Parliament will wish to join me in welcoming those contributions. By definition, integrating health and social care requires a good team effort, and that is exactly what the work by a wide range of people and organisations represents.

I am pleased that the Health and Sport Committee welcomed the bill in its stage 1 report and recommended that the Parliament should approve the bill’s general principles. The committee asked a number of questions on specific issues and asked for further clarification on a range of points. I am grateful for the committee’s careful scrutiny, to which I have responded in my reply to the stage 1 report.

I will begin this debate by capturing once again the essence of what this legislation is about, why it is needed as a matter of urgency and why the principles that underpin it command widespread support.

The 2011 census showed us that, for the first time, Scotland’s population included more people aged over 65 than people aged under 15. We all know that that statistic represents an extraordinary achievement on the part of our health and social care services, which have helped to enable so many people to live longer, healthier lives in Scotland.

However, I need remind no one of the challenges that an ageing population brings as we consider how best we should plan and deliver services in the future. In particular, as more people live longer with multiple conditions and complex needs, we must make sure that the health and social care support on which their wellbeing relies works seamlessly, effectively and efficiently.

That is why we are integrating health and social care: to improve outcomes for the growing numbers of people who need both health and social care support, most of whom have multiple complex needs, some of whom are older and all of whom should have access to the right care, at the right time and in the right place.

Too often, people are admitted to hospital or to a care home when care provision and support in the community would result in better outcomes for them. Too often, the system is not configured to provide the right care in the right place at the right time.

Maureen Watt (Aberdeen South and North Kincardine) (SNP): On that point, does the cabinet secretary agree that adaptations to housing provided by registered social landlords and community transport are just as important to the integration of health and social care?

Alex Neil: Absolutely. It is very important that vital services such as housing and transport are actively involved in partnerships and that they feed into the design and commissioning of the services that we are talking about.

Too often, people’s independence and wellbeing are diminished too early or to too great an extent by an overreliance on institutional care.

We all accept that it is our responsibility as a Parliament to tackle these challenges, not least because the costs and consequences are not limited to the individuals involved. The consequences of our failure in Scotland to use different types of care and support to best effect undermine our entire health and social care system and are shared by everyone as public sector resources are spent on activities that do not deliver maximum possible benefit.

The solution to many of these challenges is strong, effective leadership—from clinicians and care professionals, from people working in the national health service, local government and the third and independent sectors and, by no means least, from parties and Parliament itself, which is why this legislation is necessary and important.
This Government is committed to establishing a public service landscape in which different public bodies are required to work together and with their partners in the third and independent sectors to remove unhelpful barriers and use their pooled resources for the greater benefit of patients, service users, carers and families. That is fundamental to the ethos and ambition of this bill.

I will now spell out some context for the bill’s provisions. As I have stated—and as the stage 1 report by the Health and Sport Committee reiterates—there is a clear need for legislation to provide the framework for driving forward change, because not enough progress has been made under the current permissive legislation.

The purpose of this bill is exactly that: to establish that framework for integrating health and social care and to improve the quality and consistency of services by focusing on improving outcomes for service users, carers and their families.

The bill will foster an environment that encourages constructive culture change by requiring health boards and local authorities to establish integrated partnership arrangements and to work more closely together day to day and via medium and short-term joint strategic planning arrangements.

Evidence shows us that effective integration depends particularly on four key features. First, local systems must plan together for shared populations of need; in other words, health and social care with their third and independent sector partners must plan for people with complex needs together, not separately and in isolation from one another. Secondly, resources must be pooled to deliver population-based plans, which is why integrated budgets will be so important. Thirdly, clinicians and other professionals must be closely involved in and lead the design and planning of local services. Fourthly, both local and national leadership must be strong, effective and consistent. The bill is built directly on those four features of well-integrated systems.

With regard to overarching arrangements for integration, the bill provides for local flexibility and leadership to determine which approach to integration is most appropriate to local circumstances. Two models are provided: delegation between partners—or, in other words, lead agency arrangements—and delegation to a body corporate. It will be up to each area to decide which is appropriate for them.

Having set up the integrated partnership arrangement, health boards and local authorities will then be required to delegate adult health and social care functions and budgets to the integrated partnership. By bringing together integrated governance, integrated strategic planning and integrated budgets, we will create the environment not only for improving outcomes but for greater financial accountability by reducing the opportunities and indeed incentives for cost shunting between organisations. I intend to lodge at stage 2 an amendment that will set out on the face of the bill that only adult social care functions—and therefore budgets—must be included in the integrated arrangement. Regulations will set out the types of adult healthcare—and therefore budgets—for integration, including adult primary and community healthcare and, importantly, aspects of acute hospital care that offer the best opportunities for service redesign in favour of prevention and anticipatory care in the community.

The bill requires each integration authority to put in place a strategic commissioning plan for the integrated services. Strategic planning lies at the heart of this process of reform and the bill is clear on the broad extent of consultation required to ensure strategic planning is robust and effective. A key feature of strategic planning arrangements is the bill’s requirement on the integration authority to establish locality planning arrangements, which will provide a forum for local clinical and professional leadership of service planning. Where the body corporate model is used, a chief officer must be appointed by the integration authority to ensure integrated oversight of strategic planning, budget management and service delivery. To facilitate such changes, community health partnerships will be removed from statute and national outcomes for health and wellbeing will be established via secondary legislation after consultation. Integration authorities will be required to publish a performance report to provide accountability and transparency for delivery against the national outcomes and any further outcomes agreed upon locally.

The bill does not sit in isolation but fits within a wider agenda of public service reform that is currently taking place in Scotland. Reforms in other areas, including those in the Social Care (Self-directed Support) (Scotland) Act 2013 and the Children and Young People (Scotland) Bill and our planned changes to community planning, all serve to complement the work of this bill, which in turn will reinforce that wider programme of reform for the benefit of our population. Through the creation of an integrated health and social care budget and a single set of joint outcomes, integration creates a positive policy environment for health boards to play an integral part in self-directed support policy and practice, and it is vital that we take full advantage of this opportunity.

Should local authorities and health boards decide to include children’s health and social care in their integrated arrangement services, the
planning requirements of the bill will feed into the development of the plans that will be required under the Children and Young People (Scotland) Bill, which the Parliament is considering.

Like other public sector bodies, integration authorities will be expected to play a strong and effective role in supporting the work of community planning to achieve better outcomes for communities on shared priorities.

The bill deals with a number of important and complex issues, and this debate provides an important opportunity for the Parliament to consider, in some depth, the bill and the challenges to which it responds. I think that there is wide agreement in the Parliament and beyond on the aims of integration and the broad principles that underpin the approach. As Bob Doris, the deputy convener of the Health and Sport Committee, put it when the committee’s stage 1 report was published:

“whilst this legislation is not a panacea, it will provide a focus for cementing and reinforcing progress that has already been made”.

I agree with that, and I look forward to working with members of all parties as we take this bill through Parliament.

I move,

That the Parliament agrees to the general principles of the Public Bodies (Joint Working) (Scotland) Bill.

15:26

Duncan McNeil (Greenock and Inverclyde) (Lab): As convener of the Health and Sport Committee, I am grateful for the opportunity to speak in the debate.

I express my thanks and those of committee members to everyone who gave written evidence and who came along to our evidence sessions. I also thank the clerks and the team from the Scottish Parliament information centre for all their help during the process. Members of the committee undertook fact-finding visits to West Lothian and the Highlands, to see integration in action, and we appreciated the welcome that we received. I am also grateful to Lothian Centre for Inclusive Living, which hosted an event for service users and carers representing a wide range of disabled people’s organisations. Finally, I thank the cabinet secretary for his engagement with the committee and for his written responses to our report.

The bill will bring about big changes in how health and social care services are structured and managed. It will require a change in working practices among front-line staff, who must identify new ways of working across teams and departments. The committee has considered the area before. Two years ago, our inquiry into the regulation of care for older people highlighted the increasing shift to the provision of care in a person’s home rather than in a care home setting. In anticipation of the integration process, we called for a review of the national care standards, which would embed principles of independent living in the framework for the delivery of care services. We would welcome progress on that.

The bill reflects the shift in emphasis from acute care to community-based care. The Royal College of General Practitioners recognises the need for integration in responding to the growing older population. However, there remains a good deal of concern that general practitioners might not have adequate resources to enable them fully to participate in the design and planning of the new joint-working arrangements. The cabinet secretary is currently engaged in discussions on a renewed GP contract, and I ask him to report back to the committee in due course on the role that the contract will play in encouraging GPs to immerse themselves in the integration process.

I note the Scottish Government’s intention to introduce legislation to support carers through integration, but I would like more detail on that in the bill.

The bill has been drafted in the spirit of the Christie commission in that it seeks to tackle what Christie referred to as the

“unduly cluttered and fragmented ... public service landscape”.

All that comes against a backdrop of an older population and the increasing demand on our public services to deliver more with less. In a healthcare setting, that marries with the objective of reducing bed blocking.

Christie also suggested that

“changes need to be driven by how we can achieve more positive outcomes”.

That is a theme to which I shall return.

Our report highlighted a number of issues on which we seek clarification from the Government on the effect of the legislation. Andrew Eccles of the Glasgow school of social work suggested a need for

“More subtle and complex engagement with some of the issues”.—[Official Report, Health and Sport Committee, 10 September 2013; c 4193.]

The themes of strong leadership and cultural change came up repeatedly in evidence to the committee. There is a clear need for committed engagement among all involved in the processes. Health boards and local authorities are required to identify the structures that best suit their circumstances. Most areas have opted for the
body corporate; so far, only the Highland region has adopted the lead agency model.

The vast majority of evidence has been supportive of both approaches. However, further clarity is required on how the body corporate model will operate. How will the health boards, local authorities and the new joint boards work together in practice? In particular, there appear to be concerns about a transfer of funding from acute budgets to social services. Concern has also been recorded among recipients of social care services about charging for care services when national health services are free at the point of use.

The committee has heard that around half of the total health board budgets will be under the scope of integrated plans, but there is concern about the potential for cost creep in obtaining social care services. It is important that users of the services receive assurance that they are not going to be hit with additional charges.

The bill contains significant powers for Scottish ministers. In evidence to the committee, the cabinet secretary noted his intention to lodge amendments at stage 2 that would seek to mitigate the fear—held by the Convention of Scottish Local Authorities and others—that too much power was being given to ministers. That is a helpful and constructive offer, and I look forward to those amendments.

I will now move on to what I consider to be the most important aspect of the bill. The legislation seeks not only to encourage health and care providers to work together more closely, but to improve the outcomes available to patients and service users. It is those outcomes that are crucial.

The legislation is to be commended for closing the gap between the provision of health and social care. It is paramount that the bill makes it easier for patients and their carers to access the services that they need. For that reason, our report highlighted the need for a "continuous commitment to improving these individual outcomes."

I look forward to seeing more detail at stage 2 on how that important aim will be achieved.

Although the bill rightly focuses on the provision of services, we should never forget the important role played by the third sector and independent providers. We heard repeated pleas from providers and their service users for assurance that they would be represented in the new integrated board structures. We accept that that is by no means a straightforward issue and that the Government has set out good reasons why that might not be possible. However, I call on the cabinet secretary to give due consideration to how the involvement of the third and independent sectors can be strengthened in the bill.

The process of integration is already well under way, and the committee agrees that we are heading in the right direction. However, the Parliament has a duty to ensure that the bill delivers for all those individuals and organisations that contributed to our report, for all the staff who are affected by the changes and, most important, for the patients and carers whose quality of life depends on high-quality health and care services. We will ensure that its implementation receives appropriate scrutiny.

On that basis, the Health and Sport Committee recommends that the general principles of the Public Bodies (Joint Working) (Scotland) Bill be approved.

The Deputy Presiding Officer (John Scott): As we are tight for time, speeches in the open debate will be restricted to five minutes. I call Neil Findlay, who has up to nine minutes.

15:35

Neil Findlay (Lothian) (Lab): We will support the bill at decision time, as we agree with its broad principles.

As a West Lothian councillor for nine years from 2003, I saw how cultural change, co-operation and political vision from the Labour group on the council in 2003 advanced integration without any need for legislation. However, the issue of social care in Scotland is one of the scandals of our time, which has been swept under the carpet and kept as far away as possible from prying eyes.

We sit in Parliament today pretending that all is reasonably well and that, with the bill, everything will be okay. Well, it will not, and I think that we all know that. Since the summer, I have met dozens of pressure groups, health professionals, trade unions and local authorities who have all, when asked directly, said that the social care system is in crisis. Yesterday, The Herald invited 30 stakeholders to a round-table session to discuss that and other issues. Not one person at that event mentioned the bill or believed that it would make the changes that are needed, and all of them said that the system is in crisis. Let me explain why I agree with their analysis.

At present, councils are bearing the brunt of Government cuts, which is having a direct impact on the front-line services that they provide. That is nowhere more evident than in social care. Contracts that were awarded a few years ago at, say, £14 an hour are now being won at £12 an hour as contractors try to secure work in the face of council cuts that have been passed on from the Scottish Government. That may sound like a good
thing, but the consequence is that, the day after they win the contract, their staff are told that they might have to work two more hours a week for the same money—and they are now in the fifth or sixth year of a pay freeze. That results in a high turnover of staff as people leave to get a better-paid job, maybe in a supermarket, while those who are left behind are demoralised and de-skilled, as training is often cut back to save money.

Many staff members are on the minimum wage. Some have to pay for their own uniforms and use their own mobile phones, and do not get paid for travelling between clients. Those people often work for less than the minimum wage. The result of all of that is that, as one care worker told me, people now work in care only because they cannot find another job and many stay only until they find another job. We simply cannot continue like that.

How we treat staff has a direct impact on the quality of the care that is provided to our elderly, our disabled and our most vulnerable people. I ask the cabinet secretary to reflect on this. In the circumstances that I have described, what quality of service does he expect to be delivered? Does he really believe that, in the words of today’s white paper, Scotland has “world-leading ... social care”? If he does, he is the only person in Scotland who believes that.

At the moment, many providers operate in 15-minute time slots. When those were introduced, if a person needed an hour of care, four 15-minute time slots were provided for them. Now, it seems that one 15-minute slot has become the norm, irrespective of the care that is required. In The Times today, Age Scotland highlights the fact that care visits are now down to seven minutes. Is that a world-class social care service? I think not. What level or quality of care can be provided under such a system? I repeat: we cannot continue like that.

A few weeks ago at my surgery, I spoke to a young woman of 18 who had just left school. She wanted to work in the care sector, so she got a job with a private provider. After being given four days’ training in an office, she shadowed a fellow worker for one and a half days and was then sent out with her own client list. On day 1, she was given 30—I stress 30—visits to do. On her first visit, she was verbally abused by a client who suffered from a mental health disorder. She was quite scared. The second client whom she visited was a male in his 70s who had a catheter in and she did not have a clue what to do; and so things went on throughout her day.

Mary Scanlon (Highlands and Islands) (Con): I thank the member for the points that he raises—we have all heard about similar issues—but I cannot help thinking that the Care Inspectorate is responsible for standards of care and for inspecting care-at-home standards. Does he think that it is doing enough, because there is nothing in the bill that will change what it does? Is the Care Inspectorate doing what it was set up to do?

Neil Findlay: Mary Scanlon has hit on a very good point. I think that care at home is extremely difficult to assess. It is easier to assess care in a care home—the inspectors turn up at the home and they inspect the care that is provided there. Care at home is much more difficult to assess. The fact that the provider that I am talking about got a clean bill of health from the inspectorate did not prevent the person who spoke to me, who worked for that provider, from having the experience that I am describing.

That experience went on throughout the young woman’s day, which lasted from 7.30 in the morning until 10 at night. She was, of course, paid for only the eight hours that she was supposed to work. The princely sum that she was paid was £5.03 an hour. Is that the value that we place on the care of the elderly? I say to the minister that this is a scandal and that, no matter how deeply he puts his head in the sand, it will not be wished away.

The bill is very limited and it is woefully inadequate in addressing the care crisis—not the care crisis that is coming, but the one that is here now.

Bob Doris (Glasgow) (SNP): I am glad that Mr Findlay has started to talk about the bill that is before us. Does he not see that there are opportunities in the bill, such as the opportunity to disaggregate the acute budget for older people and to invest some of that in social care? Surely that is an opportunity. I understand some of the issues that he raises, but surely he should be engaging with the opportunities that exist to improve services rather than just lamenting the poorer practices.

Neil Findlay: I think that we should all be addressing such issues, because they are the fundamental problems with the care system as we know it. Let us not pretend that they are not there.

The bill is inadequate in addressing the care crisis that is here. We will support it, but we need to have a much bigger national debate about how we as a society value our elderly and most vulnerable people. We need to look at the support that is available for those who provide unpaid care and those who simply act as good friends and neighbours. We need cultural as well as legislative integration of health and social care that looks at pharmacies, general practitioners, families and communities, and we need to state clearly whether we are prepared to invest to create a service that is based on dignity, care and respect rather than one that is based on a race to the bottom,
because one thing is certain—we cannot allow the current situation to continue.

At stage 2, issues of governance, staffing, shared services, budgets, service user involvement, scrutiny and the powers of ministers will be considered, and I am sure that the bill will be amended. It needs to be improved and we will contribute to that process. However, the bill should have been about addressing some of the issues that I have raised. It should have been about putting people at the centre, pursuing a rights-based agenda that was focused on high-quality care, and having a skilled and motivated workforce.

Alex Neil rose—

The Deputy Presiding Officer: The member is in his final minute.

Neil Findlay: However, the bill is about none of that. Councils are heroically trying to deliver services in the face of unsustainable pressures and I salute them for their efforts, but a failure to address the real issues is—in my view—a dereliction of the cabinet secretary’s duty and of the Parliament’s.

The Deputy Presiding Officer: I call Nanette Milne, who has up to six minutes.

15:44

Nanette Milne (North East Scotland) (Con): I thank the cabinet secretary for giving us the Government’s response to the stage 1 report last Friday, in good time for today’s debate. However, I am disappointed that we are holding the stage 1 debate on this particular day, because although the bill will be hugely important to the delivery of health and social care to a large and growing number of people in Scotland, sadly it has been totally eclipsed by the launch of the referendum white paper.

I am also disappointed that the bill’s title does not include its main purpose, which is to integrate adult health and social care so as to improve the wellbeing of recipients of that care. The title focuses instead on the public bodies that organise the care, which I think gets things the wrong way round. I know that there were compelling reasons for having that title, but I do not think that it sends out the right message to patients, service users, their families or their carers. Those issues aside, I am happy with the bill’s general purport, and the Conservative group will support the motion on the bill’s general principles at decision time.

In recent years, there have been many initiatives intent on achieving greater integration of health and social care, and excellent results have been achieved in some parts of Scotland. However, concerns remain that joint work between partners to bridge the gap between primary and secondary healthcare, and between health and social care, has not been as effective as it could be and is, at best, patchy across the country. Because the integration agenda has not been compulsory and barriers still exist in terms of structures, professional territories, governance and financial management, the Scottish Government has concluded—rightly, I think—that legislation is required if the balance of care is to be pushed from institutional care to community provision of services, with resources following people’s needs.

The proposed legislation should set the framework for change, but it will be successful only if cultures and attitudes change as well, which will depend on strong leadership at the local level that is committed to improving outcomes for individuals and to true integration that is capable of not only delivering those outcomes, but doing so with more efficient use of the available resources.

As we know, the bill requires each health board and local authority to develop an integration plan setting out proposals for establishing an integration authority that can be set up under either the body corporate model, with a joint board and its own chief officer, or the lead agency model, in which local authority and health board partners can delegate to each other agreed functions, with a joint monitoring committee accountable to both bodies that will scrutinise the effectiveness of the integrated arrangements. Concerns were raised with the committee about governance arrangements, particularly under the body corporate model, so I hope that the on-going work of the Scottish Government and its partners in the national health service and local government will lead to greater clarity around that important issue.

I was fortunate enough to visit both NHS Highland and NHS West Lothian to hear about their experiences of working as integrated adult health and social care services under the different models. Although both would accept that there is still much work to be done on the road to full integration, I was really struck by the enthusiasm of the staff in both areas and their commitment to deliver person-centred care by developing a service with a clear focus on securing the best possible outcomes for people.

My party is generally not in favour of a centralising agenda, but I agree with Carers Scotland’s statement in its evidence that the provision that councils and health boards will be jointly accountable for the local delivery of national outcomes set by ministers after consultation has “the potential to achieve consistency across Scotland in the delivery of holistic health and social care services.”
The provision should also help to reinforce the message that health, wellbeing and care are not the sole responsibilities of any single agency.

The potential to extend integration beyond adult health and social care was raised as an issue, with COSLA wanting to restrict the proposed integration arrangements and others arguing that it was essential that they include housing services, for instance. I look forward to seeing the Government’s promised amendments at stage 2, but I welcome its clarification that the bill should permit local flexibility beyond adult health and social care.

Clearly, in a six-minute speech I cannot cover all aspects of the bill; I will just note that there are significant concerns over the fact that human rights, quality standards and the need to involve rather than just consult patients, users and carers are not expressed in the bill. I have no doubt that there will be some interesting discussions on those matters when amendments are lodged at stage 2. The lack of involvement of non-statutory partners—those in the third sector, for example— with the statutory local authority and NHS partners at the strategic planning stage is another controversial issue that was raised with the committee.

There are concerns about other issues, such as the potential for cost creep, which Duncan McNeil mentioned, the need for partners to be able to share information electronically, and the reallocation of budgets between acute and primary care. Those are all important issues on which there needs to be further discussion.

In the final moments of my speech, I will focus on locality planning and GP involvement. Both are essential elements if services are to be redesigned in a way that engages individuals and local communities in delivering the best possible outcomes for patients and other service users. I saw at first hand the success of local healthcare co-operatives, which were located in a few general practices, and the failure of community health partnerships, which were far too big and toothless as health board sub-committees.

Now we have the opportunity to truly engage again with GPs, who are pivotal in the delivery of care in the community. I welcome the cabinet secretary’s statement that GPs will be embedded in the process as key stakeholders in shaping the redesign of services. I appreciate that current discussions on GP engagement in the planning and development of integrated health and social care arrangements are confidential within contract negotiations, but I am pleased that they are happening and I look forward hopefully to a positive outcome in due course.

I have had time just to scratch the surface of the bill, but I am happy to support its general principles while accepting that a number of amendments will be lodged as it progresses through the next stages of the parliamentary process.

The Deputy Presiding Officer: We move on to the open debate. I call Bob Doris, to be followed by Malcolm Chisholm. Speeches should be of up to five minutes, please.

15:50

Bob Doris (Glasgow) (SNP): I note that Nanette Milne’s thoughtful speech did the job of stage 1 scrutiny very well. I associate myself with Duncan McNeil’s words and the thanks that he gave to everyone who has been involved in scrutinising the bill, those who gave evidence on it and the Government and its civil service team. A lot of positive work has been done on the bill.

I begin by making it clear that I wish that the Parliament did not need to pass the Public Bodies (Joint Working) (Scotland) Bill. The integration of health and social care has been an aspiration for many years, but a reality far too rarely. The bill will set up an overarching framework to deliver integration and, as a last resort, compel health boards and local authorities to get on with the job of integration where that is not happening.

I will go on to talk about structures shortly, but first I will say a bit more about what the bill hopes to achieve. We have already heard a great deal about the demographic challenges that Scotland will face with an ageing population. The objective is to have a unified health and social care strategy for our older population that suits the needs of older people and ensures that the person is put before the pound sign—in other words, that cost shunting between health boards and local authorities becomes a thing of the past. That means having a single budget for the health and social care of older people.

For too long, there has been a suspicion that there is a tension between speedy discharge and delayed discharge from our hospitals. The longer a patient is in hospital, the greater the cost to the NHS, and the earlier an older person is returned into the community, the greater the cost to local authorities. In what way is the patient, rather than the pound sign, at the centre of that? I do not think that the matter is necessarily a high enough priority at present. If we have a single budget, put people before pounds and have a truly integrated health and social care system, we can end that cost shunting once and for all.

We need a disaggregation of acute budgets. I am delighted that the Scottish Government shared with us some estimates of what proportion of
acute budgets may be disaggregated and put towards combined health and social care, but there are still no real projections of what sections of local authority budgets will be put towards that. Will it just be whatever budget lines local authorities identify from their own social care budgets, or do we need to be a bit more sophisticated about it?

I know that we are not going as far as housing at the moment, but an argument could be made that there is a direct link to housing adaptations and policy. If we can get older people in an ageing population back into their houses and they are happy and safe there, they will be content, and sometimes that will be cheaper than having them in hospitals or residential homes. We have to think in a more sophisticated way about joint budgets for health and social care, and we need more clarity about the expectations on local authorities.

As I said, this is not just about saving money. It is about getting older people out of hospital sooner, preventing them from going into hospital in the first place and having them live at home happily for longer. That is not just cheaper but better in relation to outcomes. We have to look at the outcomes that the bill seeks to deliver rather than just structures, but of course we have to look at structures, too.

Mary Scanlon: I have a question relating to my constant theme of care at home. Does the member recognise that, when we are looking at the quality of care, it would be helpful to ensure that all home carers are given the training and support that they need and that they are required to register with the Scottish Social Services Council much earlier than 2019?

Bob Doris: The 2019 target was jointly agreed by the Parliament and it makes us world leaders in the registration of care-at-home employees. However, it is a vexed issue and the Government has already said that if registration could be accelerated in a safe and structured way, there is no reason why we could not do that.

I have only 30 seconds left, and there is so much more that I wanted to say. On structures, if it ever comes down to a vote between health boards and local authorities, we will have lost the case for positive and constructive health and social care integration. Whether or not they have voting rights, we have to make sure that the third and independent sectors, allied health professionals, GPs and the like are involved in drawing up the strategic plans. Assurances need to be given that they will have proper and suitable engagement with any strategic board.

The exciting part for me is localised strategic planning, in which local communities and older people are not just told what the priorities are for their care in their local area, because they also get to decide those. Some information on how that would work would be welcome.

15:55

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I was lucky enough to be on the Health and Sport Committee temporarily and so was able to read much of the written evidence as well as hearing all the oral evidence. I was particularly struck during the first session of oral evidence when we heard from Professor Alison Petch, who is probably the leading Scottish academic on community care. She said:

“The bill per se will not make any of what is proposed happen”

and

“legislation is not really what drives day-to-day delivery.”

She was not the only person who gave evidence who said that the issues were culture change, leadership, bringing teams together on the ground, and so on. She also said:

“the most important aspect of the bill is that it states the integration principles”.—[Official Report, Health and Sport Committee, 10 September 2013; c 4193, 4204, 4196.]

She and several other witnesses said that they would like to see that section of the bill strengthened, so I hope that we will look at it at stage 2.

Many members will have received an interesting paper from the Royal College of Nursing and others yesterday about this important aspect of the bill. I was struck by the RCN’s wish to see two principles, among many others, in the bill. One was about protecting and enhancing the safety and welfare of service users, which is pretty crucial, and the other was about enabling service users to participate in decisions about their need for services and the provision of those services to them. That is also important and it connects with the recent debate that we had on person-centred care. My conclusion from the evidence of Alison Petch and others is that we need the bill, or some amended version of it, and that it is a necessary but not sufficient condition for the delivery of more integrated care.

That said, we have to make sure that the bill will help, that it is clear and that it does not get in the way. Clarity is an issue because, at several points in the committee’s report, we say that we want more information. One particular aspect that I want to mention is the surprise that I felt when we received some very late evidence from the Government—it came in after all the evidence sessions, including the Government’s—about the extent of health board budgets that were to be
Third sector. I would like to see a bit more in the bill bodies, as are, of course, service users and the happen. The role of GPs is crucial to the new engaged with each other but often that did not where primary and secondary care clinicians were involved. CHPs were meant to be fairly autonomous. All that wording needs to be looked at and if the Government intends something else, it or we will have to amend the bill stage 2. That uncertainty is connected to other uncertainty about the relationship of the integration body to the parent bodies. Peter Gabbitas of the City of Edinburgh Council and the health board—he already has a joint appointment—gave powerful evidence to the committee about that. At stage 2 we need to look in detail at the wording of the bill in that respect. For example, section 21 says that the chief officer “is in all respects as if the person who delegated the function”, which gives the impression that the chief officer is fairly autonomous. All that wording needs to be looked at and if the Government intends something else, it or we will have to amend the bill at stage 2.

The locality arrangements and clinical involvement are crucial. CHPs were meant to be local but often turned out to be otherwise, to my disappointment. They were meant to be the places where primary and secondary care clinicians engaged with each other but often that did not happen. The role of GPs is crucial to the new bodies, as are, of course, service users and the third sector. I would like to see a bit more in the bill on all that and I would like it to be included in negotiations on the GP contract.

I have 10 seconds left. Let us look at good practice, wherever it is to be found. I apologise to the cabinet secretary, as this is the second debate in a row in which I am referring him to a good example in England. “Integrating health and social care in Torbay: Improving care for Mrs Smith” is an excellent publication by the King’s Fund about how integration has worked successfully in Torbay in Devon and realised the objectives that we want: fewer emergency admissions and more care in the community.

16:01

Aileen McLeod (South Scotland) (SNP): I am delighted to be speaking in a debate on the general principles of a bill that will introduce a substantial and wide-ranging reform of the way in which we deliver adult health and social care. The cabinet secretary reminded us in his opening speech why the bill is so necessary. As a nation, we have larger numbers of people who are living longer than ever before. That is good news, but it means that we need to re-examine how we deliver and manage care in Scotland for our older people.

The integration of health and social care services is needed to improve outcomes for individuals, particularly adults with multiple long-term conditions and complex support needs, and to improve the experiences of both those who use such services and those who provide them. As we know, key to delivering that vision is the principle of person-centred healthcare, whereby services are integrated around the needs of the individual.

I want to highlight the representations that the committee received on the need to ensure that the housing sector’s contribution to improved health and social care outcomes is recognised in the bill, and that the new integration authorities involve their strategic housing partners in joint commissioning to achieve person-centred quality care at home.

Ultimately, our aim should be that everyone, no matter the complexity of their requirements, has an equal chance of a good life. We know that homes that are responsive to a patient’s needs—particularly if the patient has dementia, a learning difficulty or autism—are needed to achieve that aim, as they make a significant difference to how care and support are delivered and the outcomes that they have.

Another key issue that was raised with the committee was the need for the full involvement of the third sector. Issues were also raised at both the strategic partnership and local levels surrounding the involvement of a range of other key stakeholders, including our allied health
professionals, service users, carers and disabled people and their representative organisations, all of whom have a wealth of collective experience, expertise and professionalism. They are huge assets in helping to achieve a person-centred and needs-led approach to the delivery of locally based quality health and social care services.

Another key voice is that of our GPs. The evidence that the British Medical Association and the Royal College of General Practitioners submitted to the committee was helpful, as it allowed us to examine possible barriers to fully and successfully engaging GPs in the planning of local services. An excellent example of integration that is already working—and being driven by GPs—is Kirkcudbright community hospital and its adjoining GP practice, which has developed strong working relationships with local social services staff.

That is only one example. At the other end of the spectrum, the GPs at the deep end group’s case in favour of having GP surgeries in our most deprived areas functioning as natural hubs for integrated care to tackle deep-seated health inequalities requires us to recognise that, in many of those communities, services may be the least integrated.

That great variation in local experience reinforces the case for the bill and highlights how important integration at the locality level will be, how important the widest involvement of key stakeholders—including GPs and our local professionals—and partners at that level will be, and how important it is to scale up the capacity of the third sector to ensure that those who work closest to individuals and communities can participate and engage fully in service design and service delivery. Fully involving our GPs, the third sector, local professionals, carers groups and disabled people at the locality level will make a positive difference to the delivery of integration. The localities will be where many of the key decisions concerning service users will be made.

In Dumfries and Galloway, the local authority and the NHS board are already clear that the way to implement integration is to focus on building up the service model at locality level first. Our region has a natural advantage, in that it has four well-established areas corresponding to the old district councils—a natural pre-existing delivery model. The NHS and the council have capitalised on that by commencing integration from the point closest to the service user through planning local integration in those four areas, rather than starting at the furthest away point with the top-level governance model. Of course, both those structures need to be right, but in considering the top-level arrangements we must not lose sight of the fundamental importance of integration in the localities, where the services will actually be delivered and the real difference made.

I will close by saying that I fully support the general principles of the bill. I look forward to considering the amendments during stage 2, when I hope that we can work together to produce an act that will be regarded as a fundamental reform of the way in which we care for Scotland’s people.

16:06

Ken Macintosh (Eastwood) (Lab): I believe that all members in the chamber today will offer broad support for the general principles of the bill, and I certainly want to express my enthusiasm for its direction of travel towards greater integration between health and social care. However, like others, I must admit to feeling slightly worried about the bill’s ability to deliver on that agenda and to feeling downright anxious about whether some aspects of the legislation will work at all.

I recognise and acknowledge the good intentions behind the Public Bodies (Joint Working) (Scotland) Bill. In fact, some of the language in the proposals looked rather familiar to me from previous parliamentary sessions. I remember speaking about what was then called the joint futures agenda not long after being elected in 1999. For those who may not remember that, the joint futures group was set up by the first Scottish Executive—more than 14 years ago now—with the specific aim of trying to improve joint working between social care and healthcare and to secure better outcomes for patients and service users.

The various recommendations of that group read like the bill’s policy memorandum. They focused on joint working, the rebalancing of care between community care and acute care, how to improve the financial and management frameworks of the different agencies involved and how to establish best practice. They also examined some of the difficulties around charging. Here we are, more than 10 years on, still wrestling with precisely the same thorny issues.

The reason that I mention joint futures is not to sound jaundiced or cynical or to suggest that integrated working cannot be achieved, but quite the reverse. If this was important in 1999, it is even more important in 2013, with the rapid pace of demographic change, the ever-increasing pressures on our budgets and the need to move to a preventative care agenda. I mention the work that has gone on before simply to highlight what a difficult agenda this is to achieve.

As the Health and Sport Committee reveals in its report, the legislation itself is perhaps less important than achieving cultural change—getting health professionals, social workers, the voluntary
sector and the myriad of people who are involved in care to work in partnership, rather than just within their own professional disciplines, funding structures or special areas of interest.

There are practical difficulties with the bill, too. I was drawn almost immediately to the issue of governance. Having just read the Auditor General’s report on police reform, I suspect that no member can be unaware of how legislative confusion over roles and responsibilities can hamper the creation of a new organisation. It is strikingly obvious that, if there is not clarity about the relationship between the new joint boards proposed in the bill and their parent bodies—the relevant NHS board and local authorities—that is a recipe for conflict.

As for budgets, all of us will be familiar from casework, if not from our own experience, that services tend to follow the money. One difficulty here is that there are so many competing budgetary agendas. There is an expectation that the bill will save money or at least deliver efficiencies to meet rising demand. Alongside meeting rising demand, there is a clear drive to focus on community and social care rather than on acute care, but there is a rather less specific commitment to reallocate those acute budgets. In theory, yes, reducing unplanned admissions will free up resources, but we also know that in practice the demand on our hospitals is such that those resources will immediately become reallocated—any beds that become free are immediately filled by other patients. That is before we even get into the fact that, in social work, the health service, local authorities, NHS boards, housing or the voluntary sector, there will be competing budgetary needs and not simply collaborative or consensual agreement on spending priorities. I am afraid that there is no shortage of people or organisations that think that they can spend someone else’s budget better.

Most important of all, it is vital that the bill succeeds not because of organisational simplicity or budgetary accountability, but simply to make life better for patients. The committee’s report contains a particularly informative section about the difficulty of integrating the free healthcare that is available in the NHS with social care that is subject to charges and various eligibility criteria. We know from the on-going legal cases on NHS continuing care what a minefield that can be and how much anxiety it produces. Those with chronic neurological conditions such as Parkinson’s are particularly anxious about where we will head in the area. Before the bill has even cleared stage 1, we know that people the length and breadth of the country are struggling with 15-minute care visits. Our health and care services are under huge pressure to maintain quality and standards and they sometimes buckle under it.

As the RCN and others have made clear, quality and safety of care are unfortunately not at the heart of the bill—or not yet. The briefing for the debate from Macmillan Cancer Support contained an excellent line, which states:

“We believe that this debate must focus on how services will work for the cancer patient, not on how it will work for the service provider.”

That applies to patients in general and I entirely agree with it. The bill is well intentioned and I hope that it can deliver.

16:11

Gil Paterson (Clydebank and Milngavie) (SNP): I am pleased to speak in the debate as a member of the Health and Sport Committee. Scotland’s people are living longer and healthier lives, and all the evidence that has been gathered has brought about the realisation that it is better for people of all ages to recover and be treated in their home where appropriate. It is therefore imperative that all the relevant agencies are involved in the good work of ensuring that the recovery process works to a high degree and maintaining a high standard of health and social care for the individual. Those agencies should be not so much connected but intertwined to effect the best results.

Although we can point to some good examples of integration working and working well, for the best part, I do not think that it is an exaggeration to say that the norm in past attempts has been failure. In the evidence that was presented to the committee, we did not find a single authoritative voice suggesting that integration between the sectors would be a bad thing. On the contrary, the opposite is the case—all the evidence said that joint working would be to the benefit of everybody, both provider and receiver. It is hard to disagree that, as we have a universal goal with a high score value at the end, legislation needs to be introduced to bring about that goal.

Most of those who have questions on the lack of success so far have put that down to leadership. I must confess to a little scepticism about that view. To me, from the outside looking in, the issue is more about budget protection in each sector than anything else. If I am wrong, and the commentators who think that the lack of good leadership is the main reason are right, legislation clearly will not solve that, as it does not provide or manufacture such leadership. Having said that, I am confident that legislation will be the stimulus that will make the difference. I am more than confident that those who work in the health and social care professions and in the third sector
have the required leadership—that is apparent day in, day out—and are more than capable of making the bill a success.

In many debates in the Parliament, it has been acknowledged that the wellbeing of the patient is paramount and that the patient and their family are the first and most crucial aspect. From when someone is admitted to hospital with an illness to when they are released to recover fully at home, the patient's needs are our top priority. We know that most people desire to stay in their home, albeit with vital care support and assistance when they have conditions or are infirm. It is also crucial that we provide an integrated service that gets it right first time for the individual and that recovery takes place with fewer relapses. Relapses are costly in terms of money and the impact on someone’s already fragile health. They may also add to the cost of care.

Getting it right will allow the savings that are made to be deployed back into health and social care services to make the joint sectors even more beneficial, and so the progress will go on, moving forward at all times.

I must offer some caution to temper my optimism. With the UK Government’s cuts agenda continuing to have an acute impact on Scotland’s finances, we might be expected to do the same—or even more—with less money. I hope that I am wrong in that regard and that the hard work that is being carried out by all sides will be rewarded and recognised by any savings being reinvested back into the sector to ensure that our people are kept healthy.

Scotland has an ageing population, and the future challenges that we face will be huge and complex. I hope that the bill will go some way towards ensuring that we are ready to face those challenges and rise to meet them.

I am pleased to commend the bill to the Parliament and support its progression from stage 1.

16:16

Jim Hume (South Scotland) (LD): The bill has been a long time in the making. The integration of health and social care is overdue and it is an idea whose time has certainly come. It was a key component of the Scottish Liberal Democrat manifesto for the last election, and we have long called for the delivery of common sense by having health boards, local authorities and the third sector work more closely together to provide more joined-up care and better outcomes for patients.

The pressures and challenges that the NHS faces have undoubtedly made the proposals necessary. For example, the incidence of emergency admissions has increased significantly in the past few years alone, with the largest increase among the over-75 age group.

Although I am supportive of the integration of health and social care and support the bill in principle, I share some of the reservations of many people in the public and third sectors—I will touch on those shortly—and expect further engagement from the Government to enhance the bill as it progresses.

One of my concerns, which was well articulated by Glasgow City Council and others in their evidence to the committee, is about disconnects in care provision. The failure in patient outcomes occurs not only because health and social care are not integrated, but because of the disconnect between acute and primary care. Although that is noted in the bill’s policy memorandum, some people believe that the proposals will address only one of the disconnects and will leave the other unchecked. The submission from Glasgow City Council highlighted the point that “integration works best when GPs and other stakeholders are engaged effectively.”

The cabinet secretary was right to say in his response to the committee’s report that structural change will not in itself lead to greater partnership working, but that a cultural change is also required. I welcome his commitment that GP engagement will form part of the contract discussions, but he will have to provide more detail on the Government’s plans, irrespective of continuing negotiations.

The Scottish Government must be realistic. Demands on GPs may be about to increase significantly at a time when the proportion of the NHS budget that is given to general practice has fallen. The cabinet secretary must still explain how he plans to put a square peg in a round hole, regardless of integration joint boards agreeing integrated budgets, because the capacity and resources might simply not be available, although the desire exists.

I note COSLA’s understandable concerns regarding the degree of latitude that the bill appears to offer the cabinet secretary to widen its scope beyond adult social care and to bring any local government function within its parameters. I give him the benefit of the doubt and characterise that as an unintended erosion of local democracy and creep towards centralisation. To his credit, he appears to have realised that there is a real issue with the bill. I welcomed his commitment to the Health and Sport Committee that he would work with COSLA on amendments at stage 2 to rectify that.

That said, the air of centralised power cannot be overlooked. The electorate look to their health
boards to provide their health services, and they elect their local councillors to manage their social care services. They are the people whom the electorate will, rightly, hold accountable. However, the integration plan that is designed by the two bodies cannot simply be agreed between them; it must also be signed off by Scottish ministers. The cabinet secretary will be well aware that many people have described the plans as being too prescriptive and too detailed. I suppose that they have a point.

In addition to integration plans having to be signed off, the joint integration boards have been instructed by the Scottish Government to whom their joint accountable officer will report. The Government will also tell them what their responsibilities will be. Can we not at least trust the joint integration boards to determine what is most appropriate for them locally, because they are best placed to do that? It would be interesting to find out whether the cabinet secretary agrees that it is perhaps not entirely necessary that ministers personally determine the job criteria and the line managers of newly created positions. Perhaps Michael Matheson could reflect on that in his summing-up speech.

It is not a perfect bill—far from it. There are still issues to be ironed out regarding democratic accountability, the extent of the third sector's role and so on. However, the principle is sound, which is why the Liberal Democrats will support the bill at stage 1.

16:21

Richard Lyle (Central Scotland) (SNP): As a member of the Health and Sport Committee, I am pleased to speak in the debate because the committee has spent some time working on the bill and has considered a total of 81 submissions that were received after the call for evidence, and has considered oral evidence that was given by various sources during committee meetings. Further to that, the committee visited projects in Inverness and West Lothian to gain first-hand experience of joint working on the front line.

I was able to take part in the West Lothian visit, and I was impressed with how people there are taking the bill on board, and with what they are doing to implement changes that should improve the service for local users. I hope that others will follow West Lothian's example.

It is welcome news that the people of Scotland are living longer and healthier lives. Life expectancy in Scotland has increased and is expected to increase by two thirds in the next 20 years—I am sure that many of us are happy about that. Because of that, we need to change how care is delivered now rather than wait for that to become a problem further down the line. I am therefore happy with the Government's proposals as set out in the bill.

I am pleased to note that the Cabinet Secretary for Health and Wellbeing has welcomed the support of the committee for the principles of integrating health and social care with the aim of improving outcomes for service users, and I know that he is committed to doing that.

The committee notes that there is a need for legislation to provide change and to improve outcomes for people who use health and social care services because not enough progress has been made under the current system.

At the moment, Scotland is experiencing problems that integration could help to address. Those include unscheduled emergency admissions to acute care, delayed discharges from acute care to community settings, delays in accessing required support, and lack of communication between services. There are too many occasions in which the hospital and the local social work department are not on the same page; when I was a councillor in North Lanarkshire I had to intervene on a number of occasions to resolve situations in which a patient was ready to come out of hospital but could not go home because support had not yet been supplied. On those occasions, I had to contact the social work department and the hospital in order to ensure that the patient's needs were being met. If such problems could be solved, it would be good news for all patients, especially those who are in the last months of their lives, because delays in those patients' being discharged often results in their becoming too sick to move back to their homes and communities, where they would rather be.

Under the bill, health boards and local authorities will be required to create integrated plans for their areas. As has been said, two models will be available: the body corporate model, in which a health board and a local authority will delegate functions to a joint board that is headed by a chief officer; and the lead agency model, in which local authorities and health boards will delegate functions to each other under the oversight of a joint monitoring committee. Allowing each area to choose which of the two options best suits it would ensure that people in those areas' communities receive the best care, tailored to their needs. I suggest that all partners, plus GPs and local authorities, must work together to make local arrangements.

The point has been made that the Health and Sport Committee had representations from many organisations. However, as I have said, given the number of organisations, how many people will need to get round the table and will the table be big enough?
The bill will allow ministers to set out national health outcomes, and health boards and local authorities will be held accountable by the Scottish ministers and the public for delivering the targets. Councils and health boards should see that the bill is meant to solve and resolve the problems that are not being dealt with under present arrangements.

It has been said that the bill will not guarantee a successful outcome, but I fully support the bill’s intentions and its aim of providing better outcomes for patients and service users while delivering better value, in order to meet the challenges of the ageing population. I will support the bill.

16:26

Hanzala Malik (Glasgow) (Lab): I welcome the opportunity to speak about the bill. We can all agree that the bill’s aim is to create a system of high-quality care that is seamless and effective.

In my many years as a Labour Party councillor on Glasgow City Council, and now as a member of the Scottish Parliament, constituents have regularly come to me as they have slipped through the cracks in the system. Such cracks are caused by a lack of joined-up thinking and practice from social care providers and health boards up and down the country. That situation must end.

The bill does not go far enough to provide integrated health and social care. Many council departments up and down Scotland have merged and renamed themselves as health and social care, but apart from rebranding, little has been done to integrate the different cultures and decision-making structures.

A person who was cared for by a mental health team came to me for support when his case was closed by a doctor who said that his personality disorder was untreatable. That diagnosis completely ignored the possibilities that social workers in that person’s team could offer him. That complete lack of joined-up thinking led to a vulnerable person feeling as if he had been abandoned by the system.

Bob Doris: Mr Malik is making excellent points about cultural challenges. In Glasgow, our health and care partnerships did not work. Section 12(1) of the bill will give ministers the power to intervene to compel integration. Does he agree with my hope that that power will never have to be used, because local authorities and health boards will finally get on with it and do integration properly?

Hanzala Malik: My friend makes a fine point, which I will go on to address. I described a complete lack of joined-up thinking, which leads to vulnerable people feeling abandoned.

The bill does not properly deal with the major differences in eligibility between the health system and the social care system. Healthcare provision is a universal service that is free at the point of delivery, whereas social care provision is subject to eligibility criteria and charging. We need to ensure that the bill sets out clear and transparent decision-making criteria for eligibility in which service users and their carers are involved, so that services are provided effectively.

On joined-up thinking and working, Glasgow City Council had a structure; it had a committee, with area or regional committees that dealt with doctors, healthcare workers and others to provide services, but it was done away with. I am not sure whether the bill will redress that.

Quite frankly, I say that our doctors need all the support they can get, because they are working under a lot of pressure. I have gathered over the past two years that our doctors seem to be doing more and more in terms of service provision. They are also doing a lot of work in communities, which is welcome.

Clarity about services is the most important element of the bill. If people continually fall through the cracks, we are missing the point. There are far too many agencies trying to grapple with providing services to individuals. If one of those agencies lets down the client, patient or individual, the whole structure fails. We must try to ensure that that does not happen.

I call on the cabinet secretary to lodge an amendment to the bill that will secure the fundamental right to services, so that we force all the partners to work together to ensure that service provision is appropriate.

16:31

Roderick Campbell (North East Fife) (SNP): I welcome the opportunity to speak in this important debate, and I welcome the committee’s stage 1 report.

At roughly £4.5 billion per annum according to the 2010-11 figures, health and social care spending on people aged 65 and over constitutes nearly a third of the health and wellbeing portfolio budget. Investment in those areas is not only significant but absolutely essential. It is important to ensure that we fund and design an integrated service that will be sustainable.

The consensus surrounding the bill is positive. It should come as no surprise, given that the bill reflects the current international trend towards integration of health and social care.

I was delighted to learn that the group that is overseeing Fife’s adult health and social care integration—it is called communicating health and
social care integration in Fife—which comprises staff from NHS Fife and Fife Council, was last week shortlisted to be in the final three, out of 130, in the health and social care integration category of The Herald’s society awards 2013. That accolade was dedicated to the council and its NHS Fife colleagues, partners, service users and patients who have helped to support the group’s work. It demonstrates that successful progress is already being made on the ground.

It is fair to say that we need to fund healthcare and social care as efficiently as possible owing to the current pressure on public finances, but we need also to work towards having a care sector that offers a career option and which has motivated staff who are working towards providing a first-rate service. We need to strive to improve the standard of care that some patients are receiving as we plan for the inevitable demographic changes of the future.

Scotland is not alone in moving towards a joined-up approach to delivering those areas of care. For the past 40 years there has been a movement in that direction all around the world. There are no direct parallels with Scotland, but we can and should always learn from international examples.

Nearer to home, England has introduced the Health and Social Care Act 2012. Although the principle is the same, I understand that integration is proving to be difficult to implement, according to some professionals who cite the fragmenting effect of introducing private enterprise into the NHS as an obstacle to success.

In Wales in 2007, a primary, secondary and social care strategy, called chronic conditions management demonstrators, was introduced for people with multiple chronic illnesses, which has resulted in considerable reductions in bed days resulting from emergencies. Indeed, there were falls of 27 per cent, 26 per cent and 16.5 per cent in successive years.

To see the advantages of a local approach, which the bill provides for, we need look no further than Sweden.

In the committee report is a recommendation in paragraphs 43 to 45 regarding the justification for the bill. Some witnesses who gave evidence to the committee suggested that steps could have been taken towards more joined-up care service delivery using existing legislation and guidelines. Some pointed out—rightly, in my view—that legislation alone will not bring about the changes that we want to see. I listened to what Malcolm Chisholm said on that point earlier and agree with it.

I have spoken before about the transformational effect of legislation and said that the introduction of legislation can lead to attitudinal changes across the country. Individuals and organisations not only become obliged to observe a set of guidelines; many do so proactively before they are required to do so in order to remain ahead of the curve. I therefore believe that the committee was right to describe the bill as “the momentum needed to make the widely desired progress a reality”.

I note that, with regard to the provisions in the bill that relate to the two possible options for delivery of integrated services—the body corporate model and the lead agency model—the cabinet secretary has undertaken to provide more information on the roles and duties that will be involved in those arrangements. I welcome that, and the consensus among relevant organisations and the Government on the basic model behind the proposals, which is that local government and health boards should be jointly accountable. That is also very positive, but it is absolutely clear that we cannot have a system in which health boards and local government are locked in budgetary disputes with each other. Such disputes serve no one in the long term, and ultimately the biggest losers are the patients, who are liable to experience delays and confusing information about their care, as experience has shown.

The case for co-operation has been strongly made, and the bill’s provisions that allow a high degree of freedom in choosing the model that is best suited to an area will, I hope, mean that more health boards and local authorities will be able to take forward adapted plans of their own to meet national standards with tailored means to a unified end.

To conclude, I commend the committee on its thorough report and look forward to monitoring the bill’s progress as it passes through Parliament.

The Deputy Presiding Officer (Elaine Smith): We now turn to the closing speeches. I remind all members who have participated in the debate that they should be in the chamber for the closing speeches.

16:36

Mary Scanlon (Highlands and Islands) (Con): I, too, commend the Health and Sport Committee for its excellent work in scrutinising the bill and bringing forward its stage 1 report.

I am very pleased to be back to speak in this debate on health and the Public Bodies (Joint Working) (Scotland) Bill. I am even more pleased that I will speak in such a positive way. After hearing about all the problems, I can honestly talk about what is happening in Highland, which is an undoubted success, although I appreciate that there are still challenges.
In last week’s debate on the Children and Young People (Scotland) Bill, Highland Council was commended throughout the chamber for its work on getting it right for every child. I agree that that model is working in Highland and commend Highland Council for its plan to recruit five more health visitors.

There was a time not so long ago when health visiting seemed to be withering on the vine. Some health visitors expressed the view that they did not want to become social workers. The lead agency model in Highland allows Highland Council to focus on the needs of and priorities for children and young people, and to adopt not only an integrated model of delivery but, more important, an integrated model of care and support that covers all aspects of a child’s needs.

There is still a way to go—I would like to see more holistic support for troubled families—but I acknowledge that the care model that Highland Council has adopted is good and that tremendous progress has been made from what happened in the past, which in my opinion was a recipe for passing the buck.

The lead agency for adult care—NHS Highland—has also brought about significant improvements. Again, I accept that there are challenges ahead, but I acknowledge the many submissions on the bill that state that cultural change is difficult.

In the past, when local constituents came to my surgeries to ask whether I could help to get their elderly parent out of Raigmore hospital to be cared for at home or in a care home, I had to phone social workers. On many occasions, the social work ring-fenced budget had run out, and people had to wait until the end of the financial year, which could have been several months. As far as the council was concerned, the person was being cared for, albeit at a higher price to the public purse, in hospital. That led to high figures for delayed discharges—otherwise known as bedblocking—which of course impacted on hospital admissions.

Now I can email the chairman of NHS Highland—I did so twice last week—who can arrange for the appropriate care package to be delivered at home or in a care home, in a seamless manner. It is in NHS Highland’s interests to free up beds and ensure that every patient receives appropriate care.

In the past, Highland Council paid up to 80 per cent more per person per week if someone was cared for in a council-run residential care home rather than a home in the independent or voluntary sector. Now that NHS Highland is in charge of the budget, questions need to be asked about why council care homes receive so much more funding, given that all care homes must achieve the same quality standards, which are set out by the Care Inspectorate. I accept that there is a challenge in that regard.

Earlier this year, care-at-home services in Highland received a very poor inspection report—I was thinking about that when Neil Findlay was speaking. The report was not a disaster but presented an opportunity for NHS Highland to bring in more support and training for care workers, to enable them to provide the level and quality of care that we expect them to provide. The lead agency model brings carers into the whole healthcare system, where they can get the maximum support.

I spent many years as a member of the Parliament’s health committees. In particular, I was a member of the Health and Community Care Committee when it scrutinised the bill that became the Community Care and Health (Scotland) Act 2002. I can confirm that, even then, all but one witness said that a single agency should deliver care of the elderly, although there was no consensus about who should do that. We talked about the NHS, social work and GPs, and there was talk of pooled budgets and aligned budgets. At the time, the cultural differences between the NHS and social work were even more significant than they are now. I think that the situation has improved considerably in recent years.

I appreciate that there is no single definition of integrated care. However, I have talked about Highland because good practice should not be ignored. I agree with the Multiple Sclerosis Society, which said in its written submission to the Health and Sport Committee that the bill should not focus “too heavily on structural change ... at the expense of the primary focus on improving outcomes for people.”

That is my point. The Highland model focuses on the person and not on where they are, what the budget is or constant arguments between NHS Highland and the Highland Council. Highland’s focus is on the person, as is my focus and, I am sure, that of the Health and Sport Committee.

What has happened in Highland has not required legislation, but it is disappointing that progress has been so slow in other parts of Scotland. I welcome the bill; we will support it at stage 1.
not sure that the bill alone will achieve that—it needs to go further. Moreover, I am not convinced that it is possible to legislate for the type of leadership and cultural change that Duncan McNeil and Malcolm Chisholm talked about, which is crucial to making the step change on how we deliver care.

Mary Scanlon talked about Highland, which has adopted the lead agency model. No other area appears to be taking that model forward. It is clear that the model’s success—or partial success, because Highland admits that it is a work in progress, which has a long way to go—and indeed the fact that integration has happened at all, has been the result of strong leadership at NHS and council levels. People have been committed to change, and there has been cultural change in the staffing structure. Most of all, there has been trust. The people involved have said that it will be difficult to replicate the lead agency approach elsewhere unless there is trust.

It is not possible to legislate for trust and cultural change. The bill addresses the mechanisms and bureaucracy, but we must be clear that that alone will not work. We will need to consider how we nurture the culture and leadership in organisations.

**The Deputy Presiding Officer:** I ask that Ms Grant moves her microphone a wee bit closer because I can hear the private conversation taking place in front of me somewhat better than I can hear her.

**Rhoda Grant:** I hope this is better, Presiding Officer.

The bill deals mainly with the bureaucracy, but even that does not seem to be done very well. The legislation will allow a board to be set up with an accountable officer, but staffing and resources appear to remain with the parent bodies. What budget will be required by the new body if it does not have responsibility for paying staff or if capital resources remain in the ownership of the parent authority? How can that new body direct their use? That is not at all clear.

The cabinet secretary said in his opening speech that integrated budgets are essential to success, but in committee he said that—as the Government has said in previous budgets—healthcare money would remain ring fenced and protected and that local government money would remain part of the local government settlement. It is therefore difficult to see how the budgets can be integrated if organisations must account separately for the money and show that it is spent in their own organisation and under their existing responsibilities. We must look at how that will work.

Malcolm Chisholm mentioned health board budgets. Half of their budgets will go into the new body. That might work in some instances, but what about acute centres of excellence? They may take patients from all over the country, but what part of their budget is ring fenced for that national service and what part will go to local service delivery? Those matters are not at all clear.

Neither is it clear what thought has gone into the impact of people working together with different terms and conditions on salaries, pay bands, pensions and policies, including disciplinary and grievance policies. How will those work when people work together? Who would take out a grievance? What policy will they use if they are working with somebody employed by a different agency? That issue needs to be considered, including by the governing bodies and the trade unions.

We need to make progress on those issues because, as Ken Macintosh mentioned, if the budgets, the powers and governance are not sorted out, we will end up in lengthy wrangling. I can see that happening if the cabinet secretary does not consider those important issues.

Let me be clear that service users and their carers need to be at the centre of the legislation. They are concerned about where they fit in, how they will be involved, whether co-production is at the heart of the bill, whether services are provided for them rather than their being allowed to design their own services, and how they will be represented.

The point was made that the voluntary sector interface also represents service providers and that quite often service users feel drowned out by the providers’ voices. We need to make the distinction between service users and providers, and we must ensure that the individual is very much at the centre of what we provide in order to help them to live their lives and to enable them to live how we would wish to live.

For example, should an individual wish to move, their care package should be portable and move with them. They should also know what that care package would cost in other areas. That is important and as Ken Macintosh said—Macmillan Cancer Support research made the same point—the service user must be at the centre.

Putting the service user at the centre also means that we must look at quality and safety. The RCN, among many other organisations, asked for that issue to be covered in the bill. We need minimum standards of care—people need to access the same level of care, regardless of where they live, and they need to know what to expect.
It is not possible to have quality without reasonable conditions for staff. Neil Findlay mentioned working conditions. Many people who deliver front-line care do not even get the minimum wage, training or time to do their job. They are frustrated and distressed by the stress that the job causes if they cannot do it properly. We therefore need to ensure that quality is covered in the bill.

Furthermore, some of the principles on integration need to be moved up the bill and emphasised, so that everyone is clear about the culture change that is needed as well as the different structures that are to be put in place.

There are many more issues that we need to consider. For instance, we need joint inspection that is independent, rigorous and available to workers, staff and service users. Whistleblowers also need to be protected in those conditions.

I have come to the end of my time, but I very much hope that the Government will listen and will strengthen the bill. It could be a good bill if those concerns are listened to and taken into consideration.

16:50

The Minister for Public Health (Michael Matheson): This has been a good debate on the stage 1 report, with a number of important speeches.

What has struck me most in the debate is that the change that the bill will introduce through the integration of health and social care will be one of the largest changes to take place in the health and social care system in almost a generation. It is unusual that a piece of legislation that will result in such a significant change has such cross-party support. That is a reflection of the fact that, as the committee’s report recognises, there is a broad consensus around the issue and the need for it to be addressed.

In his opening speech, the cabinet secretary set out some of the key drivers behind the need to take integration forward, such as the demographic challenge that we face. In themselves, however, those are not the only reasons for integration.

Ken Macintosh highlighted the history of the debate. He talked about the joint futures agenda back in 1999 and the fact that the document for taking forward joint futures echoed many of the opportunities that the bill creates for partnership working, joint budgets and joint commissioning of services. However, the policy predates joint futures. The whole integration agenda started in the 1980s and continued into the 1990s. The debate has been around for some time and has presented some real challenges.

I have no doubt that, when Malcolm Chisholm was a health minister, he tried to pursue the agenda and was successful in some areas and unsuccessful in others. That demonstrates the challenge in ensuring that integration takes place on a systematic and consistent basis across the country, which is why the bill is extremely important.

The bill will not resolve all the difficult issues that we face in our health and social care system at present, but it will ensure that we focus on some of the challenges much more effectively so that, in health and social work, our local authorities and health boards will work much more closely in partnership.

Neil Findlay referred to the route that West Lothian Council pursued in 2003. That is an interesting illustration, as the joint futures agenda goes back to 1999. There was a four-year period before West Lothian Council was able to take forward the agenda, but it is now the most advanced area in the country in this matter, which we should recognise. When colleagues in other parts of the country ask me what integration is going to look like, I tell them to look at what is happening in West Lothian and the way in which the council has been able to lead the agenda.

Neil Findlay: Will the minister give way?

Michael Matheson: I will just finish this point.

The experience of the 1990s, joint futures and what has happened in West Lothian teaches us that, if we do not provide the legislative framework to drive integration forward, it will not happen on a consistent basis. The bill builds on the good practice in areas where joint working is taking place, ensuring that it happens consistently and right across the country.

Neil Findlay: I welcome the minister’s acknowledgement of the excellent work that is being done by that Labour council. I am sure that it will be a shining example for other councils to follow.

Michael Matheson: Sure, and I know that my SNP colleagues did exactly the same in driving forward that agenda when they were in charge of West Lothian Council. I could, of course, identify other councils that are not doing as well, but I will not get into that, because I think that it is a question of ensuring that we create the right legislative framework to drive forward the agenda in a much more effective way.

Bob Doris pointed out that the integration of health and social care has been an aspiration for several decades, and the bill will make that happen in a way that has never previously been done. In doing so, it will enable us to integrate the
services that people receive much more effectively.

What Mary Scanlon said about the experience in Highland was a good illustration of the benefits that come from the greater integration of services. Taking forward that agenda has put an end to the lack of planning and the cost shunting that can go on between different agencies. The experience of the approach that has been taken in Highland bodes well for the benefits that can be achieved through integration.

Some members raised concerns about the potential for services that have been provided by health moving into social care and being charged for. When we consider such issues, we should be careful to remember that the moving of more services into the community is not a new development. The late 1980s and the 1990s saw the closure of long-stay hospital beds for people with a mental illness and for those with learning disabilities. Most of those patients moved into the community and received social care packages to support them there. Many of them continue to live in the community with the help of such support. Therefore, the process that we are talking about is not new—it has taken place previously.

It is also worth bearing in mind that the bill is not about taking a service that is provided in hospital, such as physiotherapy, and giving responsibility for it to a social care partnership, which must then decide whether to charge for it. Instead, the bill is about ensuring that there is joint commissioning of health and social care services, that those services are jointly planned and integrated, and that people work together collectively to look at the best way of doing that.

We need to consider how we can best configure social care services at a local level to meet the demand on the healthcare system, and how we can better configure them to reduce the demand that exists in some areas. Rather than taking something that health does and putting it into the social care setting, we must ensure that services are configured and planned much more effectively.

A number of members, including Duncan McNeil and Hanzala Malik, highlighted the importance of general practitioners in taking forward the integration agenda. Primary care is key to the success of greater provision of healthcare in a community setting and to ensuring that social care provision is properly aligned with that.

The work that we are doing with the British Medical Association on issues such as the GP contract gives us an opportunity to do some of those things in a way that has never been done. Although those negotiations are confidential, I am strongly of the view that we are all singing from the same hymn sheet—GPs, social work, the Government, the independent sector and the third sector all want to see more effective integration. We need to find a way that allows us to deliver that for patients on a daily basis. We are taking forward our work with the BMA to assist us in achieving that.

Neil Findlay highlighted concerns about the quality of the inspection process for those people who receive care at home. I recognise some of the challenges of conducting inspection in a home setting. That is why the cabinet secretary has already commissioned the Care Inspectorate to do work on how we can improve the inspection process and ensure that it is much more rigorous when it comes to the quality of care that is provided at home.

I point out that inspections are not a bad thing. Inspection is a good part of the system that can help to drive up standards and lead to improvement. As Mary Scanlon said, care-at-home services in Highland did not receive a fantastic report, but that report has created a platform for improving those services. That is what we need to do much more systematically right across the country. The work that the cabinet secretary has asked the Care Inspectorate to undertake is exactly about doing that and ensuring that we have a more robust and clear inspection regime for care at home.

I believe that the bill has not only cross-party support in the Parliament but public support, because people want to see services working in co-ordination and planning their delivery much more effectively in their communities. The bill will help us to make significant changes in how we can deliver in our communities right across Scotland.

I call on members to support the cabinet secretary’s motion at decision time.
Public Bodies (Joint Working) (Scotland) Bill: Financial Resolution: The Cabinet Secretary for Finance, Employment and Sustainable Growth (John Swinney) moved S4M-08027—That the Parliament, for the purposes of any Act of the Scottish Parliament resulting from the Public Bodies (Joint Working) (Scotland) Bill, agrees to any expenditure of a kind referred to in paragraph 3(b) of Rule 9.12 of the Parliament’s Standing Orders arising in consequence of the Act.

The motion was agreed to (DT).
Public Bodies (Joint Working) (Scotland) Bill

1st Marshalled List of Amendments for Stage 2

The Bill will be considered in the following order—

Sections 1 to 53                  Long Title

Amendments marked * are new (including manuscript amendments) or have been altered.

Section 1

Alex Neil

1 In section 1, page 1, line 11, leave out <plan> and insert <scheme>

Alex Neil

2 In section 1, page 1, line 13, leave out <plan is a plan> and insert <scheme is a scheme>

Alex Neil

3 In section 1, page 1, line 19, at end insert—

<(ca) where subsection (5A) applies, a method of determining amounts to be made available by the Health Board in respect of functions that are to be delegated by the Health Board,>

Alex Neil

4 In section 1, page 1, line 20, leave out <a method of calculating> and insert <where subsection (5A) does not apply (or where it applies but the Health Board deems it not to apply), a method of determining>

Rhoda Grant

202 In section 1, page 1, line 22, at end insert—

<(da) arrangements for monitoring the use of resources in respect of delegated functions, including payments made in accordance with paragraph (d),

(db) arrangements for monitoring and improving the quality, safety and standards of services provided in pursuance of functions delegated under paragraph (b) or (c),

(dc) arrangements for the participation in the planning and delivery of services provided in pursuance of functions delegated under paragraph (b) or (c) of—

(i) service-users,

(ii) unpaid carers,

(iii) non-commercial organisations who appear to the local authority and the Health Board to represent the interests of service-users and unpaid carers,

(iv) relevant staff of the local authority,
(v) relevant staff of the Health Board,
(vi) such other persons as the local authority and the Health Board think fit,

(dd) arrangements for the development of a strategy to support and develop the ability of the persons mentioned at paragraph (de)(i) to (iii) to participate in such planning and delivery of services.

Nanette Milne

203 In section 1, page 1, line 22, at end insert—

<(  ) arrangements for a single point of entry to complaints systems for all services provided in pursuance of functions delegated under paragraph (b) or (c).>

Alex Neil

5 In section 1, page 2, line 3, at end insert—

<(4A) A local authority may delegate a function under an integration scheme only if the function is conferred by an enactment listed in schedule (Enactments conferring on local authorities functions which may be delegated).

(4B) A Health Board may delegate a function under an integration scheme only if the function is prescribed.

(4C) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (b) is to apply under the scheme.

(4D) The Scottish Ministers may by regulations prescribe functions of Health Boards which Health Boards must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (c) is to apply under the scheme.

(4E) If the integration model mentioned in subsection (4)(d) is to apply under an integration scheme either—

(a) the local authority must delegate the functions prescribed under subsection (4C) so far as the functions are exercisable in relation to persons of at least 18 years of age, or

(b) the Health Board must delegate the functions prescribed under subsection (4D) so far as the functions are exercisable in relation to persons of at least 18 years of age.

(4F) The Scottish Ministers may by regulations prescribe functions of Health Boards that a Health Board—

(a) must delegate under an integration scheme other than in prescribed circumstances,

(b) may not delegate under an integration scheme in prescribed circumstances.

(4G) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in schedule (Enactments conferring on local authorities functions which may be delegated) local authorities may not delegate in prescribed circumstances.

(4H) The Scottish Ministers may by regulations remove an enactment from schedule (Enactments conferring on local authorities functions which may be delegated).>
In section 1, page 2, line 4, leave out from <by> to <(b)> in line 5

In section 1, page 2, line 6, leave out <plan> and insert <scheme>

In section 1, page 2, line 6, at end insert—

<(5A) This subsection applies where functions that a Health Board proposes to delegate under an integration scheme—
(a) are carried out in a hospital in the area of the Health Board, and
(b) are provided for the areas of two or more local authorities.>

In section 1, page 2, line 7, leave out subsection (6)

In section 1, page 2, line 8, leave out <, may or may not>

In section 1, page 2, line 10, leave out <, may or may not>

In section 1, page 2, leave out lines 12 to 21

Schedule

After section 53, insert—

<SCHEDULE
(introduced by section 1(4A))

ENACTMENTS CONFERRING ON LOCAL AUTHORITIES FUNCTIONS WHICH MAY BE DELEGATED

Sections 22, 26, 45 and 48 of the National Assistance Act 1948.
Sections 1, 4, 5, 6B, 8, 10, 12, 12A, 12AZA, 12AA, 12AB, 13 to 14, 27, 27ZA, 28, 29, 59, 78A, 80, 81, 83, 86 and 87 of the Social Work (Scotland) Act 1968.
Sections 34, 39, 40 and 50 of the Children Act 1975.
Section 24 of the Local Government and Planning (Scotland) Act 1982.
Sections 21, 22 and 23 of the Health and Social Services and Social Security Adjudications Act 1983.
Sections 3, 5, 6, 8, 9 and 10 of the Foster Children (Scotland) Act 1984.
Sections 2, 3, 7 and 8 of the Disabled Persons (Services, Consultation and Representation) Act 1986.
Sections 4, 5 and 5A and Part II of the Housing (Scotland) Act 1987.
Sections 17, 19 to 27, 29 to 32, 36 and 38 of the Children (Scotland) Act 1995.
Sections 10, 12, 37 and 39 to 45 of the Adults with Incapacity (Scotland) Act 2000.
Sections 1, 2, 5, 6, 8 and 92 of the Housing (Scotland) Act 2001.
Sections 5, 6 and 14 of the Community Care and Health (Scotland) Act 2002.
Sections 17, 25 to 27, 33, 34, 228 and 259 of the Mental Health (Care and Treatment) (Scotland) Act 2003.
Sections 10 and 11 of the Management of Offenders etc. (Scotland) Act 2005.
Section 71 of the Housing (Scotland) Act 2006.
Sections 1, 4, 5, 6, 9, 10, 11, 12, 19, 26, 45, 47, 48, 49, 51, 80, 90, 99 and 105 of the Adoption and Children (Scotland) Act 2007.
Sections 4 to 11, 14, 16, 18, 22, 40, 42 and 43 of the Adult Support and Protection (Scotland) Act 2007.
Sections 35, 37, 42, 44, 48, 49, 60, 131, 145, 166 and 167 of the Children’s Hearings (Scotland) Act 2011.
Sections 3, 5 to 13, 16 and 19 of the Social Care (Self-directed Support) (Scotland) Act 2013.

Section 2

Alex Neil
11 In section 2, page 2, line 27, leave out <as respects each local authority area>

Alex Neil
12 In section 2, page 2, line 29, leave out <plan> and insert <scheme>

Alex Neil
13 In section 2, page 2, line 32, leave out <plan> and insert <scheme>

Alex Neil
14 In section 2, page 2, line 32, at end insert—

<( ) For the purposes of subsection (4), if the local authorities and the Health Board decide that the integration model mentioned in paragraph (c) or (d) of section 1(4) is to apply—

(a) functions are to be delegated under those models to only one of the local authorities,
(b) the authorities and the Health Board must set out in the integration scheme which local authority the functions are to be delegated to (the “lead authority”),

(c) paragraph (c) of section 1(4) applies as if for the words “to the local authority” there were substituted the words “and the local authority or authorities to the lead authority”, and

(d) paragraph (d) of section 1(4) applies as if for the words from “to”, where it first occurs, to “local” there were substituted “or authorities to the Health Board and delegation of functions by the Health Board and the local authority or authorities to the lead”.

Alex Neil
15 In section 2, page 2, line 33, leave out <plan> and insert <scheme>

Alex Neil
16 In section 2, page 2, line 35, leave out <plan> and insert <scheme>

Alex Neil
17 In section 2, page 2, line 37, leave out <plans> and insert <schemes>

Section 3

Alex Neil
18 In section 3, page 3, line 3, leave out <plan> and insert <scheme>

Rhoda Grant
204 In section 3, page 3, line 6, at end insert—

<( ) outcomes agreed for the area of the local authority through community planning.>

( ) In this section “community planning” means planning to which the provisions of section 15(1) of the Local Government in Scotland Act 2003 (community planning) apply.

Section 4

Alex Neil
19 In section 4, page 3, line 9, leave out from <must> to end of line 11 and insert <are provided in pursuance of functions which are delegated under an integration scheme is to improve the wellbeing of service-users>

Malcolm Chisholm

(a) if the order relates to integration joint boards generally, each—
(i) local authority,
(ii) Health Board, and
(iii) integration joint board then established,
(b) if the order relates to one integration joint board, or some integration joint boards—

(i) the constituent authorities in relation to that or those boards, and

(ii) that or those boards, to the extent then established.

Alex Neil

49 In section 12, page 6, line 19, leave out <a local authority or a Health Board> and insert <their constituent authorities>

Alex Neil

50 In section 12, page 6, line 20, at end insert—

<(  ) Before making a scheme under subsection (3), the Scottish Ministers must consult—

(a) the integration joint board to which the scheme relates, and

(b) the constituent authorities in relation to that board.>

Rhoda Grant

216 In section 12, page 6, line 20, at end insert—

<(4) Before making a scheme under subsection (3) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (5), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(5) The groups mentioned in subsection (4) are—

(a) health professionals,

(b) social care professionals,

(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.>

After section 12

Alex Neil

51 After section 12, insert—

<Integration joint boards: finance and audit>

(1) The chief officer of an integration joint board has responsibility for the administration of the financial affairs of the integration joint board.

(2) In section 106 of the Local Government (Scotland) Act 1973 (application of Part 7 of Act to bodies other than local authorities etc.)—

(a) in subsection (1), after paragraph (ba) insert—

“(bb) an integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014 (but subject to subsection (1A)),”’, and

(b) after that subsection, insert—

“(1A) Despite subsection (1), sections 95, 101A and 105A of this Act do not apply with respect to an integration joint board.”.>
After section 12, insert—

<Integration joint boards: complaints procedure>

1. The Scottish Ministers must establish a procedure by which a person, or someone acting on a person’s behalf, may make complaints (or other representations) in relation to services a person has received in pursuance of functions delegated to an integration joint board.

2. Before establishing a procedure under subsection (1), the Scottish Ministers must consult—
   (a) such persons or groups of persons appearing to them to have an interest as may be prescribed, and
   (b) such other persons as they think fit.

3. The Scottish Ministers must keep the procedure under review and must vary it whenever, after such consultation, they consider it appropriate to do so.

4. The Scottish Ministers must give such publicity to the procedure (including the procedure as varied under subsection (3)) as they consider appropriate and must give a copy of the procedure to any person who requests it.

5. In schedule 2 to the Scottish Public Services Ombudsman Act 2002, after paragraph 17A (relating to Prisons) insert—

   “Integration joint boards

   17B An integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014.”.

Section 13

In section 13, page 6, line 23, leave out <plan> and insert <scheme>

Malcolm Chisholm

In section 13, page 6, line 26, after <payment> insert <or notional payment>

In section 13, page 6, line 27, leave out from <calculated> to <calculation> and insert <determined in accordance with the method>

In section 13, page 6, line 28, at end insert—
Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the integration joint board an amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

Alex Neil
57 In section 13, page 6, line 29, at beginning insert "Where an integration scheme contains provision of the type mentioned in section 1(3)(d),"

Alex Neil
58 In section 13, page 6, line 30, leave out from "calculated" to "calculation" and insert "determined in accordance with the method"

Alex Neil

Alex Neil

73 In section 18, page 7, line 28, leave out <plan> and insert <scheme>

Alex Neil

74 In section 18, page 7, line 28, at end insert—

<(1A) Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the local authority an amount determined in accordance with the method set out in the scheme in relation to each function delegated to the local authority.>

Alex Neil

75 In section 18, page 7, line 29, at beginning insert <Where an integration scheme contains provision of the type mentioned in section 1(3)(d),>

Alex Neil

76 In section 18, page 7, line 29, leave out from <calculated> to <is> in line 30 and insert <determined in accordance with the method>  

Alex Neil

77 In section 18, page 7, line 30, leave out <plan> and insert <scheme>

Alex Neil

78 In section 18, page 7, line 31, at end insert—

<( ) Each local authority which delegates functions to another local authority (the “lead authority”) under the scheme must make a payment to the lead authority of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by the authority to the lead authority.>

After section 18

Alex Neil

79 After section 18, insert—

<Health funding: further provision

(1) This section applies where under section 13(2A) or 18(1A) a Health Board is required to set aside an amount in respect of certain functions delegated to an integration authority.
(2) The integration authority may by direction require a Health Board—
   (a) to carry out a function delegated to the integration authority by the Health Board
       and in relation to which amounts have been set aside, and
   (b) to use an amount of the set aside amount specified in the direction (the “specified
       amount”) for that purpose.

(3) If the integration authority gives a direction under subsection (2) and, despite the
    direction, the Health Board does not use all of the specified amount, the integration
    authority may require the Health Board to pay to it the unused amount of the specified
    amount.

(4) If the integration authority gives a direction under subsection (2) and, despite the
    direction, the Health Board requires to use more than the specified amount, the Health
    Board may require the integration authority to reimburse it for the additional amount
    used.

(5) The Health Board must give reports to the integration authority about such matters
    relating to the amounts set aside as the integration authority may specify.

(6) Reports under subsection (5) must be given at such times and in relation to such periods
    as the integration authority may specify.

Section 19

Alex Neil

80 In section 19, page 7, line 33, leave out <or 15(1)> and insert <, 15(1) or 36(3)>

Alex Neil

81 In section 19, page 8, line 13, at end insert—
   <( ) Nothing in subsection (3)—
   (a) imposes on the new employer any liability for a share in any deficit in a pension
       scheme of the original employer that—
       (i) is attributable to the person’s membership of the scheme, and
       (ii) accrued before the day of the transfer, or
   (b) confers any right on the new employer in respect of a share in any surplus in such
       a pension scheme that is so attributable and that so accrued.>

Section 20

Alex Neil

82 In section 20, page 8, line 23, leave out <plans> and insert <schemes>

Alex Neil

83 In section 20, page 8, line 25, leave out from <buildings> to end of line 26 and insert <their
   resources (including in particular buildings, staff and equipment) in pursuance of the scheme or
   schemes.>
After section 20

Alex Neil

84 After section 20, insert—

<Carrying out of functions conferred on officers of local authorities>

(1) This section applies where a function conferred by an enactment on an officer of a local authority relates to a function delegated to an integration authority under an integration scheme.

(2) Where the integration authority is an integration joint board, the function is deemed to have been conferred also on an officer of the Health Board and any other local authorities that are the constituent authorities of the integration joint board.

(3) Where the integration authority is a local authority or Health Board, the function is deemed to have been conferred also on an officer of the Health Board and any other local authority which prepared the integration scheme.>

Alex Neil

85 After section 20, insert—

<Carrying out of functions conferred on officers of Health Boards>

(1) This section applies where a function conferred by an enactment on an officer of a Health Board relates to a function delegated to an integration authority under an integration scheme.

(2) Where the integration authority is an integration joint board, the function is deemed to have been conferred also on an officer of the local authority or authorities that are the constituent authorities of the integration joint board.

(3) Where the integration authority is a local authority or Health Board, the function is deemed to have been conferred also on an officer of the local authority or authorities which prepared the integration scheme.>

Section 21

Alex Neil

86 In section 21, page 8, line 32, leave out <plan> and insert <scheme>

Alex Neil

87 In section 21, page 8, line 33, leave out subsections (2) to (5) and insert—

<(2) The integration authority to which the function is delegated is to carry out the function.

(3) The integration authority has all of the powers and duties from time to time applying in connection with the carrying out of the function.

(4) Despite subsection (2), the delegation of the function in pursuance of an integration scheme does not prevent the carrying out of the function by the person by whom the delegation is made.

(5) The Scottish Ministers may by order provide that an integration authority which is an integration joint board must or must not exercise a power of the type mentioned in subsection (3) in connection with the carrying out of a function specified in the order.>
Alex Neil

88 Leave out section 22 and insert—

Directions by integration authority

(1) Where the integration authority is an integration joint board, it must give a direction to a constituent authority to carry out on its behalf each function delegated to the integration authority.

(2) Where the integration authority is a local authority or a Health Board, it may give a direction to the Health Board or local authority which prepared the integration scheme by virtue of which it is the integration authority to carry out on its behalf any function delegated to the integration authority.

(3) A person to whom a direction under this section may be given must provide the integration authority with such information as the integration authority may reasonably require for the purpose of its deciding—

(a) whether to give the direction,

(b) the content of the direction.

(4) A direction under this section may be given to more than one person in relation to the same function.

(5) If a direction such as is mentioned in subsection (4) is given, the direction may—

(a) require the persons to carry out the function jointly or only in so far as is specified in the direction,

(b) require each person to carry out the function in relation to an area specified in the direction,

(c) require each person to do particular things in relation to the function.

After section 22

Alex Neil

89 After section 22, insert—

Section (Directions by integration authority): supplementary

(1) A direction under section (Directions by integration authority)—

(a) must set out, or set out a method of determining, payments that are to be made by the integration authority to the person who is to carry out the function on its behalf,

(b) may—

(i) regulate the manner in which the function is to be carried out,

(ii) make such supplementary, incidental or consequential provision as the integration authority considers appropriate.

(2) The provision referred to in subsection (1)(b)(ii) may include in particular the imposition on the person who is to carry out the function of requirements—

(a) to provide information to the integration authority,
(b) to take action to enable the integration authority to comply with any order of a court made against it in connection with the carrying out of the function,

(b) to reimburse the integration authority in relation to any liabilities incurred by the integration authority in connection with the carrying out of the function.

(3) The integration authority must make payments in accordance with the provision included in the direction by virtue of subsection (1)(a).

(4) A person to whom a direction under section (Directions by integration authority) is given must comply with the direction.

(5) A direction under section (Directions by integration authority)—

(a) may vary or revoke an earlier direction under that section given by the same integration authority,

(b) must be in writing.

(6) If the conditions in subsection (7) are met, the Scottish Ministers may by order provide that an integration authority which is an integration joint board—

(a) may decide not to give a direction under section (Directions by integration authority) in relation to the carrying out of a function specified in the order, or

(b) may give a direction under that section, despite the making of the order.

(7) The conditions are—

(a) that the Scottish Ministers receive a written application from the constituent authorities requesting that an order be made in relation to the functions specified in the application, and

(b) that the Scottish Ministers consider that the making of an order in relation to some or all of those functions would improve compliance with the national health and wellbeing outcomes.

(8) If the Scottish Ministers do not consider under subsection (7)(b) that the making of an order under subsection (6) would improve compliance with the national health and wellbeing outcomes in relation to any functions, they need not include those functions in the order.

Section 23

Malcolm Chisholm

147 In section 23, page 10, line 22, at end insert <in accordance with regulations under subsection (3ZA).

(3ZA) The Scottish Ministers must by regulations set out the key principles of locality planning for the purposes of subsection (3).

Alex Neil

90 In section 23, page 10, line 22, at end insert—

<(3A) If the functions of the integration authority are not to be delegated to the authority on the day prescribed under section 9(3) or, as the case may be, section 14(1A), the first strategic plan must specify the day on which functions are to be delegated to the authority.>
Alex Neil
91 In section 23, page 10, line 24, leave out <prescribed> and insert <integration start>

Alex Neil
92 In section 23, page 10, line 24, leave out from <and> to end of line 25

Alex Neil
93 In section 23, page 10, line 26, leave out subsection (5)

Alex Neil
94 In section 23, page 10, line 30, at end insert—
<(  ) In this section, “integration start day” means—
(a) in relation to an integration authority which is an integration joint board, the day
on which functions are delegated to the authority by virtue of subsection (3A) or,
as the case may be, section 9(3),
(b) in relation to any other integration authority, the day on which functions are
delegated by virtue of subsection (3A) or, as the case may be, section 14(2) to, or
to the constituent authorities of, the integration authority.>

Section 24

Alex Neil
95 In section 24, page 10, line 32, leave out from beginning to <local> and insert <This section
applies where an integration authority in relation to the area of a local authority is preparing a
strategic plan.
(  ) The integration>

Rhoda Grant
221 In section 24, page 10, line 35, at end insert—
<(  ) outcomes agreed for the area of the local authority through community planning.
(  ) In this section “community planning” means planning to which the provisions of section
15(1) of the Local Government in Scotland Act 2003 (community planning) apply.>

Alex Neil
96 In section 24, page 10, line 35, at end insert—
<(3) The integration authority must have regard to the effect which any arrangements which
it is considering setting out in the strategic plan in pursuance of section 23(2)(a) may
have on services, facilities or resources—
(a) utilised by arrangements set out in pursuance of that section in a strategic plan
prepared by another integration authority,
(b) which would be utilised by arrangements which another integration authority is
considering setting out in pursuance of that section in a strategic plan which it is
preparing.
The references in subsections (3)(a) and (b) to a strategic plan are to a strategic plan relating to the same period as, or relating to part of the same period as, the strategic plan which is being prepared by the integration authority.

**After section 24**

**Malcolm Chisholm**

222 After section 24, insert—

<24A **Duty to seek, record and have due regard to advice**

(1) In preparing a strategic plan, an integration authority for the area of a local authority must, where appropriate, seek, record and have due regard to the professional advice of the persons specified in subsection (3) in respect of issues relating to quality and safety.

(2) An integration authority for the area of a local authority must set out arrangements for how it will, where appropriate, seek, record and have due regard to the professional advice of the persons specified in subsection (3) in respect of issues relating to quality and safety in the carrying out of the integration functions for the area of the local authority.

(3) The persons are—

(a) the chief social work officer of the local authority,
(b) a registered medical practitioner nominated by the relevant Health Board,
(c) a registered nurse nominated by the relevant Health Board,
(d) a registered allied health professional nominated by the relevant Health Board,
(e) any other person prescribed by regulations made by the Scottish Ministers.>

(a) service-users,
(b) unpaid carers, and
(c) non-commercial organisations who represent the interests of service-users and unpaid carers.>

Alex Neil

112 In section 26, page 11, line 33, at end insert—

<(2A) The integration authority is to determine—
(a) the number of members of its strategic planning group,
(b) so far as not set out in this section, the processes for appointment, removal and replacement of members.

(2B) The integration authority may—
(a) appoint members of its strategic planning group from persons nominated under subsection (1),
(b) in such circumstances as the authority considers appropriate, remove persons appointed under paragraph (a) from membership of the group,
(c) appoint members in place of members who resign or are removed from membership of the group.

(2C) A constituent authority may—
(a) remove from its strategic planning group a member appointed to represent it,
(b) nominate under subsection (1) another person in place of a member of the group appointed to represent it.

(2D) A member of a strategic planning group may resign at any time.

(2E) During the period to which any strategic plan of an integration authority relates, its strategic planning group is also to comprise a person to represent the interests of each locality set out in the plan in pursuance of section 23(3)(a).

(2F) It is for the integration authority to—
(a) decide which persons are suitable to represent the interests of a locality, and
(b) select the representative.

(2G) An integration authority may under subsection (2F)(b) select a single person in respect of two or more localities.

(2H) The validity of anything done by an integration authority’s strategic planning group is not affected by any vacancy in its membership.>
In section 26, page 11, line 34, leave out second <the> and insert <an integration authority’s strategic planning>.

In section 26, page 11, line 35, leave out first <The> and insert <An>.

In section 26, page 11, line 35, leave out second <the> and insert <its strategic planning>.

In section 26, page 11, line 36, at end insert—

<(5) The integration authority must make such arrangements as it considers necessary to secure the effective involvement of persons representing the groups mentioned in subsection (2)(a), (b) and (c).>

<(6) Arrangements under subsection (5) may, in particular, include arrangements for—

(a) paying such expenses as appear to the authority to be necessary, including the cost of replacement care,

(b) providing information in a timely fashion and in a format that is accessible to members of the group,

(c) ensuring the accessibility of venues for any meetings of the group,

(d) ensuring access to appropriate training for members of the group.>

Section 30

Alex Neil

127 In section 30, page 13, line 19, leave out <in its next strategic plan> and insert <by virtue of revising its strategic plan under section (Review of strategic plan)>.

Alex Neil

128 In section 30, page 13, line 23, after <must> insert—

<(  ) seek and have regard to the views of its strategic planning group, and>

Rhoda Grant

237 In section 30, page 13, line 25, at end insert—

<(  ) non-commercial providers of health care or social care, and
(  ) other relevant bodies who may be affected by the decision.>

After section 30

Alex Neil

129 After section 30, insert—

<Review of strategic plan
(1) An integration authority—
(a) must before the expiry of the relevant period review the effectiveness of its strategic plan,
(b) may from time to time carry out such a review.
(2) In carrying out a review under subsection (1), the integration authority must—
(a) have regard to—
(i) the integration delivery principles, and
(ii) the national health and wellbeing outcomes, and
(b) seek and have regard to the views of its strategic planning group on—
(i) the effectiveness of the arrangements for the carrying out of the integration functions in the area of the local authority, and
(ii) whether the integration authority should prepare a replacement strategic plan.
(3) Following a review under subsection (1), an integration authority may prepare a replacement strategic plan.
(4) Subject to subsection (2), the process of such a review is to be such as the integration authority determines.
(5) A constituent authority must provide an integration authority which is an integration joint board with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).>
(6) The person mentioned in subsection (7) must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(7) That person is the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions.

(8) A strategic plan prepared in pursuance of this section must specify a day on which the period of the plan is to begin.

(9) In subsection (1), “relevant period”, in relation to an integration authority, means—
   (a) the period of 3 years beginning with the integration start day (as defined in section 23(4)), and
   (b) each subsequent period of 3 years beginning with—
      (i) where a replacement strategic plan is prepared following a review under subsection (1), the day specified under subsection (8),
      (ii) where no replacement strategic plan is prepared following such a review, the day on which the integration authority decides not to prepare a revised strategic plan.>

Alex Neil

130 After section 30, insert—

<Requirement to prepare replacement strategic plan

(1) This section applies where the integration authority in relation to the area of a local authority is an integration joint board.

(2) If it appears to a constituent authority that the strategic plan is preventing, or is likely to prevent, the constituent authority from carrying out any of its functions appropriately or in a way which is consistent with the integration delivery principles and the national health and wellbeing outcomes, the constituent authorities acting jointly may direct the integration authority to prepare a replacement strategic plan.

(3) A direction under subsection (2) must—
   (a) be in writing,
   (b) include a statement summarising the reasons for giving it.

(4) A direction under subsection (2) must specify—
   (a) a day by which the replacement strategic plan must be prepared, and
   (b) a day on which the period of the plan is to begin.

(5) The constituent authorities acting jointly may by direction substitute a different day for a day specified under subsection (4).

(6) An integration authority must comply with a direction given to it under subsection (2).>

Alex Neil

131 After section 30, insert—

<Strategic plan: annual financial statement

(1) Each integration authority must publish an annual financial statement—
(a) when it publishes its first strategic plan, and
(b) each year after that.

(2) An annual financial statement must set out in relation to the strategic plan to which it relates the amount that the integration authority intends to spend in implementation of the plan.

Section 32

Alex Neil

132 In section 32, page 13, line 33, after <where> insert—

<(  ) an integration authority carrying out an integration function for the area of a local authority proposes to take a decision which the authority considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function, or

(  )>

Alex Neil

133 In section 32, page 14, line 1, leave out <person must take such action as the> and insert <integration authority or, as the case may be, person must take such action as the authority or>

Alex Neil

Alex Neil

137 In section 33, page 14, leave out line 12 and insert—

<(3A) An integration authority must—

(a) publish each performance report before the expiry of the period of 4 months beginning with the end of the reporting year, and

(b) provide a copy of it to the persons mentioned in subsection (3B).

(3B) Those persons are—

(a) where the integration authority is an integration joint board, each constituent authority,

(b) where the integration authority is a local authority and a Health Board acting jointly, the integration joint monitoring committee,
(c) where the integration authority is a Health Board or a local authority—
   (i) the integration joint monitoring committee, and
   (ii) the other authority.

(3C) A constituent authority must provide an integration authority which is an integration joint board with such information as the authority may reasonably require for the purpose of preparing a performance report.

(3D) The other authority must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of preparing a performance report.

Alex Neil

138 In section 33, page 14, line 13, after <section> insert—

1st Groupings of Amendments for Stage 2

This document provides procedural information which will assist in preparing for and following proceedings on the above Bill. The information provided is as follows:

- the list of groupings (that is, the order in which amendments will be debated). Any procedural points relevant to each group are noted;
- the text of amendments to be debated on the first day of Stage 2 consideration, set out in the order in which they will be debated. THIS LIST DOES NOT REPLACE THE MARSHALLED LIST, WHICH SETS OUT THE AMENDMENTS IN THE ORDER IN WHICH THEY WILL BE DISPOSED OF.

Groupings of amendments

“Integration plan” to “integration scheme”
1, 2, 7, 12, 13, 15, 16, 17, 18, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 52, 53, 55, 59, 60, 64, 65, 67, 68, 70, 72, 73, 77, 82, 86, 109, 111, 121, 122, 148, 149, 150, 151, 152, 153, 154, 155, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 192, 193, 194, 196, 197, 198, 199

Budget for delegated functions
3, 4, 8, 146, 54, 56, 57, 58, 69, 71, 74, 75, 76, 78, 79, 156, 157

Integration plan: arrangements to be incorporated
202, 203

Functions which may, must, or may not be delegated
5, 6, 9, 140, 141, 142, 10, 200

Notes on amendments in this group
Amendment 9 pre-empts amendments 140, 141 and 142

Minor and technical
11, 39, 40, 44, 49, 83, 120, 191, 195

Integration scheme: two or more authorities
14

Considerations in preparing integration plan: community planning outcomes
204
Principles

Consultation and involvement of persons working as members of a “relevant profession”
210, 213, 215, 220, 232, 235, 238

National health and wellbeing outcomes: consultation
211

Integration plan: consultation
212

Integration plan: modified scheme
144, 145

Timing of delegation of functions
38, 61, 62, 63

Integration joint boards: operation
41, 42, 43, 45, 214, 46, 47, 48, 51, 217

Transfer of staff etc.
50, 216, 218, 66, 80, 81

Integration joint monitoring committees: membership
219

Carrying out of functions
84, 85, 87, 88, 89

Strategic plan: process
147, 90, 91, 92, 93, 94, 116, 118, 123, 236, 124, 125, 126, 131, 201

Strategic plan: preparation considerations
95, 221, 96, 222, 239

Strategic planning group

Strategic plan: review and replacement
127, 128, 237, 129, 130

Consultation regarding proposed decision which may significantly affect service provision
132, 133, 134

Integration authority: performance report
135, 136, 137, 138, 139
HEALTH AND SPORT COMMITTEE

EXTRACT FROM THE MINUTES

2nd Meeting, 2014 (Session 4)

Tuesday 21 January 2014

Present:
Malcolm Chisholm (Committee Substitute)  Bob Doris (Deputy Convener)
Rhoda Grant                        Colin Keir
Richard Lyle                        Aileen McLeod
Duncan McNeil (Convener)        Nanette Milne
Gil Paterson

Also present: Alex Neil (Cabinet Secretary for Health and Well-being)

Apologies were received from Dr Richard Simpson.

Public Bodies (Joint Working) (Scotland) Bill: The Committee considered the Bill at Stage 2 (Day 1).

The following amendments were agreed to (without division): 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 143, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 144, 35, 145, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 216, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 218, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93 and 94.

The following amendments were disagreed to (by division)—
   202 (For 4, Against 5, Abstentions 0)
   19A (For 4, Against 5, Abstentions 0)
   205 (For 4, Against 5, Abstentions 0)
   206 (For 4, Against 5, Abstentions 0)
   207 (For 4, Against 5, Abstentions 0)
   209 (For 4, Against 5, Abstentions 0)
   211 (For 4, Against 5, Abstentions 0)
   212 (For 4, Against 5, Abstentions 0).

The following amendments were moved and, no member having objected, withdrawn: 204, 210, 219 and 147

The following amendments were pre-empted: 140, 141 and 142.

The following amendments were not moved: 203, 208, 213, 214, 215, 217, 146 and 220.

Sections 5 and 16 were agreed to without amendment.
The following provisions were agreed to as amended: sections 1, 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 17, 18, 19, 20, 21, 22 and 23.

The Committee ended consideration of the Bill for the day, section 23 having been agreed to.
Scottish Parliament

Health and Sport Committee

Tuesday 21 January 2014

[The Convener opened the meeting at 09:45]

Public Bodies (Joint Working) (Scotland) Bill: Stage 2

The Convener (Duncan McNeil): Good morning and welcome to the second meeting in 2014 of the Health and Sport Committee. As usual at this point, I ask everyone in the room to switch off mobile phones and other wireless devices, as they can interfere with the meeting and the sound system. I should point out that some members and officials are using tablet devices instead of hard copies of their papers.

I have apologies from Dr Richard Simpson. Malcolm Chisholm has joined us once again as the Labour substitute.

There is only one item on the agenda. Today is the first day of stage 2 of the Public Bodies (Joint Working) (Scotland) Bill. Members should have a copy of the bill, the marshalled list of amendments and the groupings.

Today, we can go no further than the end of section 33. We have discussed with the committee that, depending on our progress, an appropriate time to end would be around 12.30—that would be a drop-dead time. We have some time next week to complete our business.

I welcome back to the committee the Cabinet Secretary for Health and Wellbeing, Alex Neil, and his officials.

Section 1—Integration plans: same local authority and Health Board area

The Convener: Amendment 1, in the name of the cabinet secretary, is grouped with amendments 2, 7, 12, 13, 15 to 18, 27 to 37, 52, 53, 55, 59, 60, 64 to 68, 70, 72, 73, 77, 82, 86, 109, 111, 121, 122, 148 to 155, 158 to 190, 192 to 194 and 196 to 199.

I call the cabinet secretary to move amendment 1 and to speak to all the amendments in the group.

The Cabinet Secretary for Health and Wellbeing (Alex Neil): The amendments in the group in my name make a drafting change to the term “integration plan”: they amend it to “integration scheme”. The change is presentational. The term “integration scheme” reflects the purpose of the document setting out the integration arrangements that must be prepared under section 1 or section 2 by the health board and local authority.

Furthermore, stakeholders raised concerns about the potential for confusion about which duty applied to whom and for what purpose in relation to the integration plan and the strategic plan. I am happy to respond to stakeholder concerns and make that presentational change.

I move amendment 1.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I can see why the cabinet secretary wants to make the change. Obviously, because of the bill’s structure, we start with the plans and go on to the delivery.

I do not know whether one of the Government amendments incorporates this point—I am sorry, but I have not checked every single one. The amendments refer to the “scheme”, but the title of section 4 is “Integration planning principles” and I did not notice an amendment that relates to it. It seems a bit awkward that we will change “plan” to “scheme” but that the bill will still refer to “planning principles”. Furthermore, when it comes to the strategic plan at section 24, there are “delivery principles”.

There is a certain awkwardness in that. I therefore wonder whether, if there is not such an amendment, you need to lodge a further amendment to align the references, so that all the references to “plan”, rather than “scheme”, are in the later part of the bill.

The Convener: As no other member wishes to speak, I call the cabinet secretary to respond and sum up.

Alex Neil: Mr Chisholm makes a very fair point, which we will look at, and we will consider whether we need to lodge an additional amendment at stage 3.

Amendment 1 agreed to.

Amendment 2 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 3, in the name of the cabinet secretary, is grouped with amendments 4, 8, 146, 54, 56 to 58, 69, 71, 74 to 79, 156 and 157.

I call the cabinet secretary to move amendment 1 and to speak to all the amendments in the group.

The Cabinet Secretary for Health and Wellbeing (Alex Neil): The amendments in the group in my name make a drafting change to the term “integration plan”: they amend it to “integration scheme”. The change is presentational. The term “integration scheme” reflects the purpose of the document setting out
large, such as Edinburgh royal infirmary or Glasgow Southern general hospital.

Flexible use of budgets is key to improving outcomes, and the principle of an integrated budget is key to successful integration. It is also of key importance to the policy intention of integration that the appropriate parts of acute hospital budgets and activity are included within integrated strategic planning. Discussions, particularly with national health service stakeholders, have nevertheless indicated that inclusion of some hospital budgets in the physical payments to the integration authority could be problematic.

Hospitals that provide a substantial part of their services to the populations of two or more local authority areas—that is, large hospitals—form an important common resource, and dividing up and paying out their budgets to numerous integration authorities could undermine their operational management. At the same time, in order to preserve the integrity of the policy and the intention of the bill, it is important that strategic planning includes the hospital capacity used by the population of the integration authority. All appropriate aspects of the health and social care resource spent on the integration authority’s population must be included within the scope of the strategic plan so that it can be used to total best effect.

The amendments provide that health boards are not required to physically disaggregate the budgets for large hospitals that serve several communities; instead, the health boards can set aside the appropriate portion of the large hospital budget, and its use is then directed by the integration authority via the strategic plan. Amendment 8 provides a definition for "large hospitals".

Amendment 146, from Malcolm Chisholm, appears to introduce a similar alternative mechanism for local authorities to make notional payments to integration joint boards for delegated functions, although I am advised that other changes to the bill would also be needed to achieve that effect. The amendment’s intended effect appears to be that local authorities could also set aside budgets whose use is to be directed by the integration authority.

I gather that Malcolm Chisholm’s intention was in fact to amend the provision about payments as it applies to health board budgets rather than local authority budgets. The effect of such an amendment would be that the health board could either make a payment to the integration authority for all of its delegated functions, not just large hospital budgets, or it could set aside the notional amount for the direction of the integration authority via the strategic plan.

The key point is that my amendments relate to one portion only of health board budgets: the budgets for large hospitals that provide services to more than two local authority areas. Health board budgets covering, for example, community hospitals will be paid to the integration authority and will not be set aside in the same way. I do not support extending the notional budget principle to other aspects of health board budgets, as Mr Chisholm has proposed, or indeed to local authority budgets. Such a change would send a very unwelcome signal to health boards and local authorities about the integration authority’s duties and responsibilities with regard to strategic planning.

It is vitally important to the success of our policy intention that the authority of the integration authority in relation to the strategic planning process and the funding that underpins it are both absolutely clear. The amendments in my name provide the right balance of requiring actual payment with practical flexibility in relation to managing large hospitals.

Amendments 3 and 4 deal with the content of integration schemes, which must include the method of determining resources to be paid to the integration authority and the method of determining any resources that are set aside by the health board for large hospital budgets.

The amendments will also improve the terminology used in the bill regarding budgets. The phrase “method of calculating” will be replaced by “method of determining”, which better reflects the policy intention for integrated budgets, which is that payments should be determined based on a regular process of local discussion and consideration rather than on a prescriptive formula carried forward from year to year.

That change in terminology is also seen in amendments 54, 58, 69 and 76, which relate to payments to the integration joint board, and in amendments 156 and 157, which cover revision of integration schemes.

Amendments 56 and 74 apply, respectively, to the integration joint board model and the lead agency with the local authority as lead agent model. They have the same effect as each other, providing that health boards must set aside an amount to be determined in accordance with the method set out in the integration scheme for large hospital functions.

Amendments 57 and 75 provide for the requirement on health boards to make payments either to an integration joint board or a local authority acting as the lead agency for delegated functions where no large hospital functions are delegated or, where they are delegated, when the
health board has decided to include them in the payments.

Amendment 79 provides for the integration authority to be able to direct the health board on the use of large hospital budgets in line with the strategic plan. We expect integration to achieve a shift in the balance of investment in institutional and non-institutional care, and strategic plans will set out changes in the use of resources of large hospitals. We expect strategic plans to set out how integration authorities will reduce the use of large hospital services for the population. At the same time, it is possible that in some circumstances strategic plans will set out an intention to use more of some services that are provided in large hospitals.

It is possible that, in either circumstance, a planned reduction or increase in the use of large hospital services will not be realised despite what is set out in the strategic plan. When that happens, an adjustment will be needed to the payments between the health board and the integration authority to reflect the change in resources. If a planned reduction in the use of large hospital services is realised by the integration authority, amendment 79 will enable an integration authority to require a health board to pay to it any savings that are realised by the health board in relation to services delivered in a large hospital so that the integration joint board may reallocate that money to interventions to reduce hospitalisation.

If a planned increase in the use of large hospital services is not realised, amendment 79 will enable an integration authority to require a health board to pay back to it money for services that were not used. Likewise, if the integration authority uses more of the large hospital services than was planned for, amendment 79 will require the integration authority to pay money to the health board as it would normally have to when directing under section 22.

Amendments 71 and 78 are concerned with payments to local authorities in respect of delegated functions. The bill provides for different models of integration including circumstances in which more than one local authority is covered by an integration scheme with one health board. Amendments 71 and 78 provide for a situation in which more than one local authority is covered by the same integration scheme as a health board and a lead agency arrangement is put in place whereby one of the local authorities is the lead agency. In such a circumstance, the amendments provide that the delegating local authority must make a payment to the local authority that is acting as the lead agency in relation to each delegated local authority function.

I am particularly grateful to all the participants in our integrated resources advisory group and our national steering group on joint strategic commissioning for their contribution to this work.

I move amendment 3, and I invite Malcolm Chisholm not to move amendment 146.

Malcolm Chisholm: I always intended amendment 146 to be a probing amendment. As you have indicated, minister, I made a mistake in putting it against line 26 rather than line 29, as my concern was section 13(3). However, as it is only a probing amendment I am sure that it is not a cardinal offence to have put it in the wrong place. I still have points to make in relation to it.

This is an important group of amendments, as it takes us to two of the central issues of the bill that featured prominently during our stage 1 consideration. The first is the funding arrangement and the second is the balance of power, if I can put it that way, between the integration authority and the local authority and health board that form the strategic plan.

10:00

A problem with the bill as formulated is that it could return us to bureaucratic commissioning arrangements. The bill says:

“The Health Board must make a payment to the integration joint board”.

Presumably the integration joint board would then have to make a payment back for services that it commissions. That would be a problem.

The complex amendments lodged by the cabinet secretary try to deal with that. It is a bit unsatisfactory that the funding detail came out only after the stage 1 consideration. We had no chance to question officials about the funding detail at that stage, and we were all very surprised when we received a note that said that, I think, at least half the health board budget and three quarters of the over-75s emergency care budget would be handed over, if that was the language that was used. I am not saying whether that is right or wrong; I am just saying that we were surprised that the extent of financial delegation was that great. That is my little moan out the road.

We now have detailed Government amendments. My colleagues and I would not be minded to oppose them, but we might want to reserve the right to examine them further before stage 3 to see whether they meet all the concerns. They seem to avoid the pitfalls of reintroducing the old-style commissioning arrangements.

The Government amendments refer to the amounts “set aside”, which is very similar language to that used in my proposals on notional payment. My amendment 146 would make the reference to “payment or notional payment”, so I do not accept the cabinet secretary’s criticism that
that implies that the notional payments would be for everything; rather, I meant that notional payment as well as genuine payment would be an option.

The balance of power issue is also illuminated by the amendments, and amendment 79 is significant in that regard. I do not have a particularly strong view on the matter, but I draw the conclusion from amendment 79 that it will very much be the integration authority that calls the shots in directing health boards on what they should do with their acute hospitals. I think that that is the intention, and again I will want to reflect further and perhaps listen to what health boards have to say on the matter.

An issue that came up at stage 1 was exactly how much power is to be invested in the integration authority. Amendment 79 makes it clear that the key decisions will be made by the integration authority and that it will have the power to direct health boards.

My colleagues and I are not minded to vote against the cabinet secretary’s amendments. Since my amendment 146 was always a probing amendment, I am very happy not to move it. However, we reserve the right to scrutinise what is a central part of the bill further at stage 3.

Alex Neil: I thank Malcolm Chisholm for his contribution, which was very helpful. I am happy to meet Malcolm and any other committee member before stage 3 if they require further clarification of our intentions on the detail.

I realise that this is a very complex area and I want to be happy that members are satisfied, before we get to stage 3, that what we are proposing is the right thing to do. I think that is—and I very much welcome Malcolm Chisholm’s offer to not move his amendment. It is not very often that he makes a mistake.

The Convener: Charm will get you everywhere, cabinet secretary. [Laughter.]

Amendment 3 agreed to.

Amendment 4 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 202, in the name of Rhoda Grant, is grouped with amendment 203.

Rhoda Grant (Highlands and Islands) (Lab): I have lodged a number of amendments that seek to embed co-production into the bill. The reason for the bill is to improve services to service users and their carers. Integration means that they should receive a seamless service. However, we should all strive to involve service users in devising the services that they receive in order to enable them to live fulfilling lives.

Amendment 202 seeks to embed co-production into the plan for integration. The integration plan sets out how the authority will work and what actions will flow therefrom. Asking the authority, as part of the plan, to make arrangements for the participation of service users, carers and their representatives would ensure that co-production is required. Those principles will flow forward into front-line service delivery. The amendment would also ensure that any service users will be supported in their involvement.

Proposed new subparagraphs (dc)(iv), (dc)(v) and (dc)(vi) would ensure that staff are embedded to participate, and allow the authority to use expertise from other organisations in the third sector within the community as it sees fit.

Amendment 202 highlights the need for accountability for the use of resources. It would ensure that services are monitored and arrangements made to improve quality, safety and standards of service. That issue runs through other amendments and was sought by a number of consultees to the bill, including the Royal College of Nursing. Those principles need to be made clear as part of the integration plan.

I also speak in support of amendment 203, in the name of Nanette Milne, which seeks to ensure that an integrated plan makes arrangements for a single complaints system. I have also lodged amendment 217, which asks Scottish ministers to set up an integrated complaints system. My amendment would ensure that the integrated authority is subject to the public service ombudsman keeping it in line with its constituent authorities. The amendments together would ensure the provision of Scotland-wide guidelines on how complaints should be handled and ensure that joint boards implement that as part of their integration plan.

I move amendment 202.

Nanette Milne (North East Scotland) (Con): My amendments focus on ensuring that service users and unpaid carers are central to planning and shaping integrated services, that there is a strong voice for the third sector in joint strategic commissioning and locality planning and that there is a focus on personal outcomes for service users.

If integration is to produce seamless services for the people who use them, health and social care partnerships should be obliged to provide a clear, simple route into a complaints process to ensure that the needs and experience of service users are listened to and learned from, which should help to drive improvement.

Complaints processes are a key accountability mechanism, helping people to access their rights in relation to health and social care. Amendment 203 would amend the bill to include reference to
ensuring effective access to a complaints system. I also support amendment 202, in the name of Rhoda Grant.

**Alex Neil:** Amendments 202 and 203 seek to place requirements on health boards and local authorities to include additional items within their integration scheme. I begin with the items that are listed in amendment 202. I draw the committee’s attention to the policy statement that outlines the regulations that I intend to make under the power contained in section 1(3)(e). Within those regulations, I will set out in more detail than is appropriate on the face of the bill the arrangements that must be put in place to ensure, first, that there is effective monitoring of integrated resources and payments and, secondly, how clinical and care governance will assure the quality, safety and standards of the services developed. The regulations will therefore cover the matters that are addressed in proposed new subsections (da) and (db) of amendment 202.

The strategic planning and locality planning processes that integration authorities must put in place will determine how integrated services must be planned and delivered. Scottish ministers have included within sections 26, 27 and 32 of the bill a requirement to consult and take account of the views expressed by a wider range of stakeholders than amendment 202 would require. The bill therefore already makes provision for the consultation of stakeholders that goes beyond that which is proposed in subsection (dc) of amendment 202.

It is not proportionate to require in primary legislation the participation of those listed in amendment 202 over other key parties and stakeholders, and I do not consider that a requirement in the integration scheme to develop a strategy to support stakeholders in the planning and delivery of services is the best approach.

I am also concerned that amendment 202 limits that strategy to a small number of stakeholders. For example, it does not include general practitioners, who equally might need support in developing their skills to strategically plan services across the area of an integration authority. Instead, I intend to set out in statutory guidance that such support should be provided to all participants in the various activities required in the bill. That will ensure that all participants are offered support to fully engage in the planning and delivery of services and that such support can be tailored to each activity instead of simply being provided for in a high-level strategy.

Amendment 203 seeks to require integration schemes to provide a single point of entry for complaints that fall within the scope of integration. I fully recognise that the current system for social work complaints is no longer up to date or fit for purpose and we have been working to produce a new system that will be more accessible, allow complaints to be completed far faster and produce a co-ordinated response for the complainant. In due course we will bring forward under Scottish ministers’ existing powers changes to secondary legislation that I expect will satisfy what Nanette Milne quite rightly intended by lodging amendment 203. However, the Public Bodies (Joint Working) (Scotland) Bill is not the appropriate legislative vehicle for making changes to the complaints system, especially when we have not consulted on them as part of the bill.

I therefore urge Rhoda Grant not to press amendment 202 and Nanette Milne not to move amendment 203.

**Rhoda Grant:** I will press amendment 202 because I truly believe that adopting the principles of co-production means not just consulting people but involving service users in such decisions. If they are involved in the integration scheme, they will be able to influence the various stages of the work of this legislation.

In response to the cabinet secretary’s point about GPs, I should point out that they would be included under proposed subsection (dc)(vi), where local authorities and health boards can involve any other person they think fit. I know that, much to my regret, GPs are not employees of the health board, but they could be involved.

As I have said, I will press amendment 202 because I think that it is important to how the bill works and in involving service users and carers in designing services and their own care.

**The Convener:** The question is, that amendment 202 be agreed to. Are we agreed?

**Members:** No.

**The Convener:** There will be a division.

**For**
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeill, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

**Against**
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
McLeod, Aileen (South Scotland) (SNP)
Paterson, Gil (Clydebank and Milngavie) (SNP)

**The Convener:** The result of the division is: For 4, Against 5, Abstentions 0.

**Amendment 202 disagreed to.**

**The Convener:** I call Nanette Milne to indicate whether she wishes to move amendment 203, which has been debated with amendment 202.
Nanette Milne: Thank you, convener. I appreciate the cabinet secretary’s understanding of my reasons for lodging these amendments—

The Convener: Nanette, at this point, you can only indicate whether you are moving the amendment.

Nanette Milne: I will not move my amendment, and I will reserve my position for stage 3.

Amendment 203 not moved.

The Convener: Amendment 5, in the name of the cabinet secretary, is grouped with amendments 6, 9, 140 to 142, 10 and 200. Under the pre-emption rule, if amendment 9 is agreed to I cannot call amendments 140 to 142.

Alex Neil: The Scottish Government has made it clear from the outset that the policy of integration applies to health and social care functions. At its introduction, the bill permitted any local authority function to be included in the integrated arrangement with health functions, subject to provision made by regulations restricting the range of local authority functions that could be delegated. This group of amendments changes the approach so that the range of local authority functions that can be delegated will be set out in the bill itself in the proposed new schedule.

10:15

On amendment 5, proposed new subsection (4A) provides for local authorities to delegate functions that are conferred on them by the acts listed in the schedule proposed in amendment 10. In policy terms, those can be considered as, in effect, social care functions. Proposed new subsection (4C) provides for the Scottish ministers to prescribe from that list of functions those that must be delegated by a local authority but only in so far as they relate to adults. The Scottish ministers will be able to require the delegation of adult social care functions only, leaving the delegation of other functions in the schedule to local determination.

Proposed new subsection (4B) provides for health boards to delegate functions prescribed by the Scottish ministers. Proposed new subsection (4D) provides for the Scottish ministers to prescribe the functions of a health board that must be delegated where an integration joint board is established or where the local authority is the lead agency. Again, the Scottish ministers can prescribe functions only in so far as they relate to adults. Therefore, again, the Scottish ministers can require the delegation of adult health care only, leaving the delegation of other health functions to local determination.

Proposed new subsection (4E) sets out the requirements on which an integration model that is provided for in proposed new subsection (4D), in which the health boards and local authorities are both lead agencies, is agreed. The local authority must delegate social care functions in relation to adults or the health board must delegate health functions in relation to adults. That ensures that the integration of adult health and social care functions is achieved.

Proposed new subsections (4F) and (4G) make provisions similar to those that are contained in sections 1(6)(c) and 1(6)(d). The Scottish ministers may set out the functions of health boards and local authorities that must or may not be delegated under certain circumstances. Subsections (4F) and (4G) provide some flexibility for the Scottish ministers to set out functions that go together and those that do not go together.

Proposed new subsection (4H) enables the Scottish ministers to remove enactments from the schedule, should that be considered appropriate in future. The exercise of that power is subject to affirmative procedure.

Amendments 6 and 9 are consequential on amendment 5. Amendment 10 provides for the schedule that creates a list of functions conferred on local authorities that constitute social care under the bill. Amendment 200 sets out that regulations made under proposed new subsection (4H) of section 1 will be subject to the affirmative procedure.

I turn to amendments 140 to 142 from Mr Chisholm, which are pre-empted by amendment 9 in my name. Amendment 9 removes the requirement for the Scottish ministers to prescribe the functions that may not be delegated. However, it is important that the Scottish ministers have the flexibility to prescribe when functions may not be delegated in certain circumstances, not least because I wish to ensure that the bill is future-proof—that is, that it is able to keep pace with changes in technology, practice and service design and redesign.

Providing a certain service in a hospital will be entirely right for some individuals. However, for others, the most appropriate place may be in their own home or a community setting. The bill and amendment 5 provide for that legitimate flexibility, but amendment 142 would remove it. Therefore, I cannot support amendments 140 to 142.

I move amendment 5 and ask Mr Chisholm not to move amendments 140 to 142.

Malcolm Chisholm: I struggle to follow the cabinet secretary’s line of argument, because I would have thought that my amendments would give him the maximum amount of flexibility.

When I read section 1 of the bill, I thought that it was rather overdone and rather complex but,
when I saw the amendments that the cabinet secretary had lodged, I realised that it was simplicity itself compared to them. I cannot see how he can possibly argue in favour of flexibility when he is adding a schedule to the bill that lists in fine detail those parts of local government legislation that may be subject to delegation.

That, in itself, removes all flexibility. I would have thought that the minimum change that the cabinet secretary could make would be to ensure that the content of that schedule was in regulations rather than being on the face of the bill. I have still to be persuaded that all this level of detail is necessary in the first place. I thought that the conclusion that we had derived from our stage 1 discussions was that certain functions had to be delegated and therefore it seems to me that it would be adequate for the bill to say, “These are the functions that must be delegated” and leave it to the good sense and local determination of health boards and local authorities to decide whether they want to add to that list. That would be the principled argument for my position.

There is also a practical argument. Health boards and local authorities are concerned that they might be delayed in their wish to hand over powers to the integration authority while they wait for regulations. All that they need to know is what must be delegated; the rest could surely be left to local determination. If I am missing something to do with the requirements of legislation, and if that is impossible, I will accept the cabinet secretary’s argument, but I cannot say that I am persuaded by any of the arguments that he has made hitherto. I will just have to listen to his winding-up remarks and make a snap decision on whether to move my amendments.

As this is the only time that I will be allowed to speak, I should say that if I decide not to move my amendments, the decision will be subject to the same caveat that I intimated earlier and that, on further consideration, we might wish to revisit the issue at stage 3.

Rhoda Grant: I have some concerns about the amendments. They are hugely technical and quite difficult to scrutinise.

An issue that has been raised with me is the transition between child and adult services. It is a big issue but it was not really covered when we talked about the bill. Will the Government’s amendments prohibit an integrated transition between child and adult services?

In my region, Highland Council and NHS Highland have a different integration model in which children’s services have been transferred to the local authority. Is there anything in the amendments that will prohibit other authorities from taking that same line?

I seek reassurance for those who have issues about the transition between child and adult services. Such transitions are fraught with difficulty at the moment and if the amendments make that worse, that would be a retrograde step.

Alex Neil: I think that Mr Chisholm and I are trying to get to exactly the same place but we are doing it in a slightly different way. I will clarify a number of things.

First, we will state clearly in the bill what must be the responsibility of the integration authority. Also, by agreement with the health board and the local authority, the integration authority can take on any of the relevant additional functions that it might wish to do. In fact, in a number of the partnerships that are already operating, such as that in West Lothian, they are already doing so, and children’s services is a very good example of that.

Secondly, I want to clarify for Rhoda Grant that the bill does not restrict any partnership from taking on the additional responsibility of children’s services. Again, the informal, non-statutory partnerships are up and running and that is already happening in a number of them. There is no restriction on that and my personal view is that it would make sense for partnerships to do so in a number of circumstances.

Malcolm Chisholm: May I come in on that?

The Convener: I am sorry; the cabinet secretary is winding up and there is no opportunity for debate at this stage.

Alex Neil: We had representations from local government that the wording in the bill was too wide and that it did not clarify the definition of social care services and social care functions. Local government was concerned that the definitions were so wide that they could take in any range of responsibilities that go above and beyond what is intended in the bill. I therefore agreed that more definition in the bill was required to allay those concerns.

That is the reasoning behind the amendments. We are trying to get to the same place: a clear definition of what must be done by the integrated authorities and what they may do in addition to that, depending on local decision making. As I said, there is total flexibility there. If the health board and the local authority agree to place any additional non-statutory requirement on integrated bodies to provide such services, they are entirely free to do so.

I have offered to meet Mr Chisholm and anyone else on the committee for further discussions before we get to stage 3. I would be happy to discuss this particular area of policy, because we are absolutely sure that we are doing the right
thing. In addition, we are taking local authority colleagues with us on this, which is extremely important for the success of the entire project.

Amendment 5 agreed to.

Amendments 6 to 8 moved—[Alex Neil]—and agreed to.

The Convener: I remind members that if amendment 9 is agreed to, amendments 140 to 142 will be pre-empted.

Amendment 9 moved—[Alex Neil]—and agreed to.

Section 1, as amended, agreed to.

Schedule

Amendment 10 moved—[Alex Neil]—and agreed to.

Section 2—Integration plans: two or more local authorities in Health Board area

The Convener: Amendment 11, in the name of the cabinet secretary, is grouped with amendments 39, 40, 44, 49, 83, 120, 191 and 195.

Alex Neil: This group contains minor and technical amendments in my name. Section 2 addresses requirements to put in place integration arrangements in health board areas that cover more than one local authority area.

Amendment 11 will remove some text that is now considered to be redundant; the effect of the bill will be unchanged. Amendment 39 is a drafting amendment to ensure that the requirement to consult the constituent authorities on the appointment of the chief officer is specific to the appropriate constituent authorities of the integration joint board.

Amendment 40 will remove the definition of a constituent authority from section 10. A separate definition of that will be inserted by amendment under section 43. Amendments 44, 49 and 120 are drafting amendments to provide consistency in the use of the term “constituent authorities” in relation to an integration joint board. The amendments will achieve more consistent use of terminology in the drafting of the bill.

Amendments 191 and 195 provide a definition for the use of the terms “constituent authority” and “constituent authorities”. The term refers to the local authority or local authorities and health board as parties to an integration scheme in pursuance of which an integration joint board has been established. Amendment 195 provides for where “constituent authority” is to be used.

Amendment 83 seeks to broaden the duty of co-operation in relation to integration schemes. The current drafting of the duty is narrow and refers to what could be interpreted as an exhaustive list of resources. I believe that the duty of co-operation would be clearer and more effective if it was expanded to cover all shared resources. That will better ensure effective and efficient use of all resources and reduce conflicting demand in the delivery of services.

I move amendment 11.

Amendment 11 agreed to.

Amendments 12 and 13 moved—[Alex Neil]—and agreed to.

10:30

The Convener: Amendment 14, in the name of the cabinet secretary, is in a group on its own.

Alex Neil: Section 2 addresses requirements to put in place integration arrangements in health board areas that cover more than one local authority area. Amendment 14 ensures that all adult health and social care functions that are prescribed as being required to be included in an integrated arrangement are held by a single body. Integration must result in service planning and provision that is integrated from the perspective of the service user. We will not achieve that position if adult health and social care functions are planned for and delivered by different bodies. It is therefore vital that the bill ensures that all integrated functions are held by one body.

As originally published, that was not a requirement of the bill. That meant that it would have been possible for a health board and two or more local authorities to split up adult health and social care functions by delegating them to more than one local authority in a multicouncil health board area. Amendment 14 ensures that that course of action, which would have seriously undermined the policy intention of integration, is not possible.

I move amendment 14.

Amendment 14 agreed to.

Amendments 15 to 17 moved—[Alex Neil]—and agreed to.

Section 2, as amended, agreed to.

Section 3—Considerations in preparing integration plan

Amendment 18 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 204, in the name of Rhoda Grant, is in a group on its own.

Rhoda Grant: The purpose of amendment 204 is to ensure that the integrated authority also has regard to the community planning process. If we
genuinely want to integrate services that are responsive to local communities’ needs, we must also integrate them with other local planning processes. Doing so would acknowledge that health and care services operate in the wider sphere of public services and would mean that they must contribute to the fulfilment of single outcome agreements. Although integrating services is about improving service users’ experience and creating efficiencies, those services also need to play their part in meeting their partner authorities’ obligations with regard to existing legislation. Amendment 204 would mean that stronger connections would be made with the community planning agenda, which is important to the integration of all services.

I move amendment 204.

Alex Neil: The bill requires health boards and local authorities to take account of the integration planning principles and the national health and wellbeing outcomes when preparing an integration scheme. Amendment 204 seeks to add community planning outcomes to that list.

The Government is bringing forward a community empowerment bill that will include integration authorities as bodies that must participate in community planning along with health boards, local authorities and others. A requirement to include integration authorities in community planning itself is much the stronger way to ensure the proper place of integrated health and social care in community planning, rather than referring to community planning outcomes that do not at present exist in law.

I invite Rhoda Grant to agree that the Scottish Government’s position in relation to community planning and integration is stronger than her proposal, and to withdraw amendment 204.

Rhoda Grant: I will seek further information from the cabinet secretary, possibly in the interlude between stages 2 and 3, on whether the community empowerment bill will come into force before the Public Bodies (Joint Working) (Scotland) Bill comes into force, because I think there might be an overlap there. I will withdraw amendment 204 and await that clarification.

Amendment 204, by agreement, withdrawn.

Section 3, as amended, agreed to.

Section 4—Integration planning principles

The Convener: Amendment 19, in the name of the cabinet secretary, is grouped with amendments 19A, 20, 21, 205, 206, 22, 207, 23, 24, 143, 208, 209, 25, 26, 97, 97A, 223, 98, 99, 224, 225, 100, 226, 101, 102, 227 to 230, 103, 231 and 104.

Alex Neil: This will be another long contribution, but I am afraid that it has to be done.

The Convener: There’s a surprise.

Alex Neil: I put on record my appreciation of all the stakeholders involved in the development of the integration principles. The principles underpin the bill; they provide for a person-centred focus; and they reflect the key cornerstones of effective integration.

The integration planning principles provide for matters that health boards and local authorities must take into account when preparing an integration scheme. Their purpose is to ensure that, when planning for their integrated arrangements, health boards and local authorities do so from the perspective of, and for the benefit of, the service user, rather than for organisational or administrative convenience.

The integration delivery principles provide for matters that integration authorities must take into account when preparing a strategic plan. Their purpose is to ensure that, when integration authorities plan services using the totality of health and social care spend, they do so from the perspective of, and for the benefit of, the service user, rather than on the basis of historical service provision.

Amendments 19, 21 to 23, 26, 97, 99 to 101 and 104, in my name, are drafting amendments to sections 4 and 25 and change the term “recipients” to “service users”. I believe that the term “service users” is more appropriate as it more accurately provides for more active engagement and choice by persons who use health and social care services, rather than providing for them as passive recipients of services.

Amendments 20 and 98, in my name, are further technical amendments that will ensure that the language in the bill does not imply that there is a single way that integrated services can be planned.

I turn to amendments 19A, 205, 207, 97A, 224 and 226, in Malcolm Chisholm’s name. I acknowledge the concern raised by stakeholders that the bill should take a human rights-based approach and reflect the principles of independent living. Although I recognise that aim, the committee will already be aware of the requirement for all acts of the Scottish Parliament to comply with human rights as enshrined in the European convention on human rights. It is therefore not necessary for that to be repeated in the bill.

I have considered the use of the term “independent living”. Although I accept and agree that it is important to ensure that these principles and ideals are reflected in standards of planning,
delivery and design of services, terms such as "independent living" are, by their very nature, potentially subject to change or differing interpretation.

The integration principles must apply equally to all users of the health and social care services that are covered by the bill, not only vulnerable or disabled people. I believe that amendments 24 and 102, in my name, reflect stakeholders' concerns in that regard. They require the health board and the local authority, in taking account of the integration planning principles, to reflect the fundamentals of service users’ rights and independent living principles. They will ensure a high standard of service quality and will protect and improve the safety of users of health and social care services.

Amendment 143, in the name of Aileen McLeod, would add the requirements of safety and quality to the list of matters that health boards and local authorities must take into account when preparing their integration scheme. Aileen McLeod's amendment 143 copies across the effect in part of my amendment 102 to the integration delivery principles, so that the same point is made in both sets of principles. I am very sympathetic to Ms McLeod's amendment on that point and am therefore happy to accept it.

Amendments 102 and 143 together require improvement in the quality of services and forgo the need for amendment 228, in the name of Rhoda Grant. Furthermore, a quality service is based not only on the amount of time given to service users. Best practice guidance is the place for such matters, not principles in primary legislation.

I turn to amendments 206 and 225, in the name of Nanette Milne. I believe that the requirement outlined in the amendments is properly addressed by the requirement for health boards and local authorities to take account of the particular needs of service users, which can be fairly regularly quantified by health boards and local authorities. Health boards and local authorities, in their consideration of individuals' needs, must already take into account specific circumstances as part of a holistic, personalised approach to care, and are already subject to statutory requirements and guidance in relation to assessment. However, given the importance of considering individuals' needs within an integrated approach to care, I intend to provide statutory guidance on the matter, which will provide further support to health boards and local authorities to ensure that their understanding of need is appropriate.

In terms of individual choice, it is important to distinguish between the requirements placed on local authorities by the Social Care (Self-directed Support) (Scotland) Act 2013 to provide choice and control over social care services, and the purpose of the bill, which is to bring together responsibility, accountability, delivery and planning for health and social care services. Choice and control cannot equally apply to all service users in all circumstances and to all health and social care services under the bill. The integration planning and delivery principles importantly require the health board, local authority and integration authority to consider service users’ needs and to plan for integration and deliver services from the service user's perspective. I therefore cannot support amendments 209 and 230, in the name of Malcolm Chisholm.

I am, however, sympathetic to Rhoda Grant's amendment 223, which seeks to amend section 25. I believe that the intention in amendment 223 is to broaden the circumstances in which the integration delivery principles will apply. However, I believe that there is a conflict with the purpose of section 25(1)(a), which is to ensure that services are provided in a way that improves service users' wellbeing. Applying the principles to how services are commissioned conflicts with ensuring that the services are provided for the service user's benefit—in other words, with ensuring that services are planned and delivered in a person-centred way. Furthermore, the Scottish Government has already issued to partners guidance on strategic commissioning for the integration of health and social care, and that guidance will be revised as part of the process of implementing the bill. I therefore ask Rhoda Grant not to move amendment 223.

Rhoda Grant's amendment 227 requires services to be provided in a way that takes account of the needs of a service user who moves between two local authority areas. The basis on which a local authority provides a service to a service user is their physical presence in that local authority's area, so a local authority cannot begin to provide services until the service user is physically present in that area. We are aware that it can be difficult for people to move if they are unsure about whether the care services that they will need will be in place by the time that they move. We have therefore developed and have in place protocols to encourage local authorities to enter into transitional arrangements to help to facilitate moves.

We will continue to work with the Convention of Scottish Local Authorities and key stakeholders to ensure that local authorities are encouraged to set up voluntary schemes to work together in carrying out assessments in advance of the person being physically present. I appreciate the need for service users to make sure that when they move into a new local authority area they can access the services they need and that those are provided.
However, I do not believe that amendment 227 achieves that aim, so I cannot support it.

10:45

Turning to Mr Chisholm’s amendments 208 and 229, it is right that issues of quality and continuing improvement are raised. Indeed, as the policy memorandum states, that is one of the areas that the bill aims to address. However, I have a number of points to make on the amendments.

First, section 41 already gives the Scottish ministers a power regarding statutory guidance. An amendment to section 41 that will be considered on day 2 of stage 2 will require that that power applies to integration authorities. Secondly, integration authorities will not directly deliver services. Health boards and local authorities will continue to deliver health and social care—albeit integrated health and social care—and will continue to be subject to existing guidance and quality standards that apply across health and social care, as set out in the Scottish Government’s 2020 vision for health and social care. My amendment 102 will provide for continuous improvement. I therefore ask Mr Chisholm not to move amendments 208 and 229.

Amendments 25 and 103, in my name, reflect the concerns that were raised by stakeholders about the potential meaning and interpretation of the term “local professionals”. There are many people who deliver a range of services, advice and support, and they all contribute to the health and wellbeing of individuals, but they might not regularly see themselves as professionals or be recognised as such by statutory bodies. Amendments 25 and 103 provide the right balance and will reflect those concerns and the ethos of integration as a whole.

On amendment 231, in Rhoda Grant’s name, I have expressed my admiration, and will continue to do so, for the dedication, professionalism and enthusiasm that are demonstrated by those who deliver health and social care services across Scotland, many of whom are carers for family members or friends. However, placing the integration authorities under a requirement—in taking account of the integration delivery principles—to reward people who deliver services is not appropriate. I am not sure what rewards Ms Grant envisages, but I think that it is for all of us who are involved in the policy, planning and delivery of health and social care services, as well as users of those services, to ensure that people are supported and feel appreciated for the quality services that they provide. I therefore ask Rhoda Grant not to move amendment 231.

I support amendment 143 in Aileen McLeod’s name. I do not support amendments 19A, 205 to 209, 97A and 223 to 231.

I move amendment 19.

Malcolm Chisholm: There are quite a lot of issues to deal with, but I will mainly speak to the amendments that I lodged.

At the beginning of the cabinet secretary’s comments, he referred to the integration principles. It would have been my preference to have those integration principles right up at the front of the bill in section 1, but of course he has split them into planning and delivery principles. I do not think that it is worth falling out over that but I, like many stakeholders, would have preferred some general overarching principles that applied to planning and delivery, and to have those at the beginning of the bill.

On my amendment 19A, the cabinet secretary said that there is no recognised definition of the term “independent living”. I suppose that I could say, “Well, what’s new?” I remember making a speech last week about sustainable economic growth. Many people who gave evidence on that issue said that there was no recognised definition of the term, but there it is in a piece of Scottish Government legislation that was passed last week. Therefore, the cabinet secretary’s argument does not stand up, particularly given that he has accepted a definition of independent living in the document “Our Shared Vision for Independent Living in Scotland”, which states:

“Independent living means ‘disabled people of all ages having the same freedom, choice, dignity and control as other citizens at home, at work, and in the community. It does not mean living by yourself, or fending for yourself. It means rights to practical assistance and support to participate in society and live an ordinary life.’”

Therefore, there is an accepted definition.

The cabinet secretary says that that does not apply to everyone, but it mentions disabled people having

“the same freedom, choice, dignity and control as other citizens”.

Implicit in that is, of course, that we all have those things. Most of us have them without having to argue for them, but disabled people have had to argue to get on to the same footing as we are on. I therefore do not accept the cabinet secretary’s arguments about independent living.

Nor do I accept the cabinet secretary’s argument about rights. We want a rights-based approach to integrated health and social care planning and delivery. The cabinet secretary said that it is not necessary to use the word “rights” because we already follow the Human Rights Act 1998. I think that the use of that word is important
because there is a particular rights-based approach to health and social care, which of course he accepted in the Social Care (Self-directed Support) (Scotland) Act 2013. Section 2 of the 2013 act states that

"the right to dignity of the person is to be respected ... the person's right to participate in the life of the community in which the person lives is to be respected."

Clearly, the cabinet secretary did not follow his own principles in that legislation.

With reference to the cabinet secretary’s amendment 24, it would be preferable to lift the language from section 2 of the 2013 act. I have not proposed an amendment to that effect but may do so at stage 3. What I have proposed is to put a reference to rights in a general sense in two places in the bill. I think that that is important in order to emphasise the importance of the rights-based approach to integration.

Amendment 208 is about quality and proposes adding to the bill the wording

"recognised guidance and adherence to established quality standards and promotes continuous improvement in the standard and quality of care".

I believe that that is more comprehensive than a shorter reference to improving the quality of the service.

Again, I may not press amendment 208 today, but I may return to the matter at stage 3. What I have proposed is to put a reference to rights in a general sense in two places in the bill. I think that that is important in order to emphasise the importance of the rights-based approach to integration.

Nanette Milne has seconded amendment 209 and, without trying to pressurise her, I hope that she will speak about it. The amendment would add to section 4 the wording

"enables service-users to exercise choice and control and to participate——"

that is the key word——

"in decisions regarding their need for services and the provision of those services".

I think that every user of health and social care services should have the right to participate. I am not really sure why the cabinet secretary has a problem with that.

I will press most of my amendments, but I will not move amendment 208.

I move amendment 19A.

Nanette Milne: It is very welcome that the bill is person centred. However, a number of stakeholders feel strongly that amendment 206, in my name, emphasises that the bill should go beyond just people’s needs to their aspirations and abilities. I appreciate what the cabinet secretary said about guidance coming forward to health boards on the definition of needs, but I would like to see it made a bit more explicit in the bill. By explicitly referring to “aspirations” and “abilities” as well as needs, amendment 206 reflects the human rights approach of the bill. I will therefore move amendment 206.

I support amendment 209, in the name of Malcolm Chisholm, because I think that what it proposes would enable service users to “participate in decisions” regarding their need for services and give them “choice and control” in decision making, which I think we all feel is very important. I am happy to support that principle by supporting amendment 209.

Aileen McLeod (South Scotland) (SNP): I thank the cabinet secretary for his support for my amendment 143. During the committee’s consideration of the bill at stage 1, we received evidence from various stakeholders about their concerns around the need for principles on the quality and safety of care to be embedded in the core principles of both the planning and delivery of the integrated services that are set out in the bill. In the committee’s stage 1 report, we were sympathetic to those concerns and asked the Government to reconsider its approach to quality and safety in the bill.

I note that many of those concerns have been addressed in the amendments lodged by the cabinet secretary. In particular, new wording has been proposed in amendment 102, which will amend section 25 with respect to the integration delivery principles, at line 9 on page 11. That amendment will introduce the wording:

“protects and improves the safety of service-users” and

“improves the quality of the service”.

Amendment 143 seeks to replicate that wording in section 4, on the integration planning principles, so that there is consistency in both sets of principles. I believe that the quality and safety of care are fundamental, and I am keen for that to be emphasised in the planning principles, so that the requirements for the quality and safety of care must be taken into account by health boards and local authorities when they are preparing their integration schemes. I ask colleagues to support amendment 143.
Rhoda Grant: I will speak to amendments 223, 227, 228 and 231, which are in my name.

Amendment 223 ensures that the provisions in section 25(1)(b) apply to those services that are commissioned or contracted as they do to services from statutory providers. The cabinet secretary said that he has sympathy for amendment 223 but that it would perhaps have some unintended consequences. I will take the amendment away and possibly bring it back at stage 3 when I have considered what he has said about those unintended consequences.

Amendment 227 provides a new duty on the integrated authorities to enable service users to move between different board areas. Currently, service users moving to another authority area need to be assessed when they move, before their support package can be put in place. That is a major barrier to movement, especially for career and family reasons. If we believe in providing people with basic human rights, we need to ensure that they have confidence that there will be no gap in service provision and that they will not be detrimentally affected by their decision to move house. Amendment 227 places a duty on the integrated authorities to take that into account.

I have heard what the cabinet secretary has said on the matter, and he has pointed out that people need to be physically present in an area before transitional arrangements can be put in place. I intend to move amendment 227, because I think it is important to include that in the bill. It puts an onus on the integrated authorities to take that into account and to ensure that people have confidence that services will be available, which will allow them to move. Otherwise, people face a huge barrier to moving.

Amendment 228 addresses the 15-minute or seven-minute care visit. It places a duty on service providers to spend an adequate length of time for the delivery of the service that they have been commissioned to provide. It provides for service users’ wellbeing and dignity and, hopefully, it will ensure that service users receive adequate care and will put an end to care visits of 15 minutes or less.

Amendment 231 recognises that people working to provide care services are often low paid, and that they lack training or support to provide those services. We must all recognise the dedication and professionalism of staff who provide care, which often goes unrecognised. Staff are often paid the minimum wage and receive little or no training in order to fulfil their duties. That is especially the case regarding services that are contracted out. As we know, local government and NHS boards are signed up to paying a living wage, but that is not true in other sectors. Amendment 231 would hopefully call a halt to those practices and would ensure that front-line care providers are properly trained and remunerated, so that they can provide safe, high-quality care.

However, amendment 231 is dependent on amendment 223 to put the onus on those people who are commissioned to provide services, so I intend not to move amendment 231 and to bring it back at stage 3 once I find an appropriate place to put it, where it would not have any unintended consequences.

We should all aspire to people being paid the living wage, and we should ensure that that applies to all those who are paid from the public purse.

I support the other amendments in the group that seek to improve the principles of the bill by placing greater emphasis on the needs and aspirations of service users. It is important to include rights in the bill. As Malcolm Chisholm said, other legislation has already done that. I very much hope that the cabinet secretary might see his way to supporting the proposals in that regard.

11:00

Bob Doris (Glasgow) (SNP): I will make a couple of brief comments. I was not going to speak about amendment 228, but I will refer to it briefly. The first part of amendment 228 mentions improving

"the quality of the service to service-users".

I think that amendment 143 takes that into account. The second part of amendment 228 states that that is

"particularly in relation to the amount of time afforded to ... service-users".

We all have concerns, on occasion, about the practices of certain local authorities, but I am not sure whether the bill is the place to make provision in relation to that. I merely wanted to put that on the record. It is not a way of dismissing some of the concerns that are out there. I just do not think that the bill is the appropriate place to make such provision.

My more substantive comment is on amendment 209, on extending choice for service users, which was lodged by Malcolm Chisholm, supported by Nanette Milne. I would be interested to hear from the cabinet secretary when he sums up whether he agrees that the self-directed support rights that individuals have in relation to social care services, if they are properly applied, already give them much of that choice and control, and that service users could use them rather than our including something on that in the bill. Integration, under community planning and the forthcoming community empowerment and
renewal bill, is a way to extend the influence, choice and control of service users.

The Convener: I call on the cabinet secretary to wind up.

Alex Neil: I will try to deal with the main points that members have raised. We are all trying to end up in the same place. The issue is largely how we get there, and different routes have been suggested.

First, picking up on Bob Doris’s latter point, I note that I oppose a number of the amendments not because I disagree with their intention but because I believe that it is more appropriate for the issues to be addressed in full in secondary legislation and in guidance. The danger is that, if we tie ourselves down in language in the bill, we may at a later stage find ourselves restricted in our flexibility, particularly where there are changing circumstances. Secondary legislation and guidance can be changed and updated much more regularly to reflect changing circumstances than can primary legislation. Again, I am happy not just to discuss these matters with committee members but to have further discussions with stakeholders about what should be in the bill and what is better done in secondary legislation or in guidance.

Secondly, in response to a point that Malcolm Chisholm made, I point out that we did not incorporate the human rights legislation into the Social Care (Self-directed Support) (Scotland) Act 2013. What we did was to define independent living and the criteria for that. I am keen that we do everything that we can to encourage people with independent living, but it is not always appropriate in every circumstance. For example, if there is an extremely frail older person who is not capable of independent living, that is clearly something that we have to address in other ways. The amendments do not contain enough flexibility in relation to the different circumstances of the multitude of service users that we deal with in health and social care.

A good example of that arose yesterday—although the reporting was somewhat inaccurate in places—when BBC Scotland referred to people with long-term conditions, some of whom may be close to being in a vegetative state. Clearly, for them, independent living is not the appropriate package of care. We need to be able to deal with every eventuality and not constrain ourselves and have unintended consequences because of wording in the bill. I am anxious to ensure that we do not do that, particularly in relation to independent living, which is a core part of the philosophy and the delivery of services right across everything that we are doing in health and social care.

Finally, I come to the human rights issue. I stand by what I said—unlike Westminster, we are governed by the convention in absolutely everything that we do. However, I recognise that there is another body of opinion and people still feel strongly that there is a need to reflect rights more in the bill.

I am happy—indeed, I will undertake—to have further discussions with the key stakeholders who have made this point to find out whether I can do a bit more to accommodate their position at stage 3. There is no point in repeating in this bill something that is already in law, but I am happy to consider any area where those people feel that a shortfall still has to be addressed and to look again at the matter before we finalise stage 3.

The Convener: The question is, that amendment 19A be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

On resuming—

Section 5—Power to prescribe national outcomes

The Convener: Amendment 210, in the name of Bob Doris, is grouped with amendments 213, 215, 220, 232, 235 and 238.

Bob Doris: Section 1 of the bill provides that a local authority and health board must prepare an integration plan with regard to the delegation of functions and resources for the area of the local authority. The plan must set out which integration model will apply, the functions to be delegated, and the resources that will be available to support the effective delivery of those functions.

The integration plan will also have a key part to play in delivering the new framework being introduced by the legislation. Significantly, before submitting the integration plan to the Scottish ministers for approval, a local authority and health board must jointly consult various persons or groups of persons under section 6(2) of the bill.

Allied health professionals deliver a wide range of significant health and social care outcomes. They are experts in rehabilitation, re-ablement, preventative care, health promotion and self-
management. Indeed, allied health professionals are often the link that holds complex health and social care pathways together, especially for older people and those with long-term conditions. Many individuals value highly the person-centred therapeutic approach applied by allied health professionals. Significantly, the desired outcomes of the bill, particularly in relation to positive patient experience, are aligned with the approach and practice of the allied health professionals. Amendment 213 would ensure that allied health professionals are consulted in the preparation of integration plans.

Amendment 210 refers to section 3 of the bill. It provides that, when a local authority and a health board are preparing an integration plan, they must have regard to the integration planning principles and to the national health and wellbeing outcomes. Under section 5, the Scottish ministers may, by regulation, prescribe national outcomes in relation to health and wellbeing. Before making such regulations, however, the Scottish ministers are required, under section 5(3), to consult representatives of various bodies and groups and to involve them in the development of these outcomes. Amendment 213 would ensure that allied health professionals are consulted at that point.

Amendments 215 and 220 refer to integration joint boards and integration joint monitoring committees respectively. If passed, the amendments would give a statutory right to a place for allied health professionals on such boards and committees. If it is not desirable to put such a right on a statutory footing, I ask the cabinet secretary for reassurance that allied health professionals will be suitably consulted and have their expert views made known.

I turn to amendments 235 and 232. For the purposes of preparing a strategic plan, integration authorities must establish and consult groups. The term used is “such other persons as it considers appropriate”. If passed, amendments 235 and 232 would ensure that allied health professionals would be specified as such appropriate groups or persons to be consulted.

The final amendment in the group, amendment 238, gives a definition to a term that is used throughout the amendments: relevant profession. For the purposes of the amendments, it has the same meaning as in the Health Professions Order 2001.

One of the difficulties in preparing the amendments was that there seems to be no legal definition of allied health professionals. That is why the amendments would place the phrase “relevant profession” in the bill. Some other stakeholder groups suggested to me—correctly, in my view—that to define a relevant profession as an allied health profession is to apply a rather narrow definition. That shows the difficulties that arise when we try to specify in the bill different groups to have statutory rights as consultees or to be on boards.

I am convinced that allied health professionals have a vital role to play in health and social care integration and in other matters, such as seven-day healthcare provision, which the Parliament has considered in the recent past and will continue to consider as part of the 2020 vision. Therefore, the amendments are intended as probing amendments to get some assurances from the cabinet secretary that allied health professionals are a key stakeholder group. Depending on his response to the points that I have made, I would be content to withdraw amendment 210 and not to move the others at the appropriate stage.

I move amendment 210.

Malcolm Chisholm: I certainly support the thrust of what Bob Doris is saying. Often in the past, the vital contribution and role of allied health professionals have been overlooked. I do not know whether the amendments in this group are the right way to address that issue; I am open minded about that. I have an amendment coming later that, in a different context, recognises the importance of allied health professionals so, in general, I am anxious that that be recognised in the bill and accompanying guidance.

I support the spirit of what Bob Doris says, but we might need to revisit the wording subject to what the cabinet secretary says.

Rhoda Grant: I have sympathy with Bob Doris’s amendments as well. I very much hope that all health professionals who are involved in the delivery of front-line services will be involved in all the processes in the bill. When we visited Highland, one of the things that struck us most was that nursing staff, allied health professionals and everybody else involved in somebody’s care were speaking together—there were no barriers to that—and delivering good-quality care.

There is concern that allied health professionals have perhaps not been as fully involved in the past as they should have been. I hope that not only they but all health professionals will be involved.

Nanette Milne: I agree with that. Rhoda Grant spoke about our visit to Highland. We saw the same in West Lothian, where integration was working because all professionals were involved and focusing on the needs of the patients who were being looked after. It is crucial to involve them all, and it would be important to provide for that in the bill.

Alex Neil: Section 48 of the bill allows the Scottish ministers to prescribe via regulations a list
of health professionals. It is not clear whether amendment 210 is intended to define “health professionals” fully or expand the types of professional who must be consulted to cover a broader range of health professionals.

Given that the Scottish ministers have the power to prescribe via regulations what is meant by health professionals, it is not at all clear what added value amendment 210 would bring. The effect would be to remove some of the flexibility for the Scottish ministers to define health professionals.

The intended effect may be to provide clarity in the bill about which professionals working in health services must be consulted under sections 5, 6 and 7 and included under sections 12, 16 and 26, but the definition provided for in the amendments does not appear to achieve that outcome. It covers various professions but not, for example, doctors and nurses. Therefore, the effect is confusing and appears to add unnecessary complexity to the provision already made for the inclusion of health professionals in the consultation process.

11:30

Amendment 238 provides a definition of “relevant profession”, although it is not a comprehensive definition. I fully understand that the intention is to ensure that all health professionals, including allied health professionals, are properly consulted, particularly on regulations, guidance and secondary legislation, but I believe that the existing provisions already do that. I will undertake to ensure that that consultation happens because we are very keen that it should.

As Nanette Milne and Bob Doris rightly said, the success of integration projects that are already up and running, such as that in West Lothian, proves their benefits and the necessity to involve all professionals in every stage of the design and delivery of health and social care services. Unfortunately, the amendments in this group would not do the job. The job is better done elsewhere in the bill and regulations.

The Convener: I call on Bob Doris to wind up and press or withdraw amendment 210.

Bob Doris: I thank the cabinet secretary for his reassurances. He has put on public record the central role that allied health professionals and others will have in making a success of not just health and social care integration but other challenges that will be faced by social care and public health in the years ahead. Given those reassurances, I would like to withdraw amendment 210.

Amendment 210, by agreement, withdrawn.
The Convener: The question is, that amendment 211 be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

For
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeil, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

Against
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
McLeod, Aileen (South Scotland) (SNP)
Paterson, Gil (Clydebank and Milngavie) (SNP)

The Convener: The result of the division is: For 4, Against 5, Abstentions 0.

Amendment 211 disagreed to.

Section 5 agreed to.

Section 6—Consultation

Amendments 27 and 28 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 212, in the name of Rhoda Grant, is in a group on its own.

Rhoda Grant: Amendment 212 is part of a suite of amendments that seek to ensure co-production with service users and their carers. It ensures the involvement of service users and their carers in the preparation of integration plans and that they, along with their representative groups, will be involved in the process. It ensures co-production in proposing the integration plans, which is important in involving people in the services that are provided for them.

I move amendment 212.

Alex Neil: Amendment 212 adds the requirement for health boards and local authorities to involve service users, unpaid carers, third sector organisations and others in the process of developing and agreeing their integration plans.

The committee will wish to note the list of stakeholders that is within the policy statement on section 6 and that the Scottish ministers intend to require them to be consulted on integration schemes. The list of stakeholders includes all those who are noted within amendment 212 as well as a number of other groups of people who I believe should also be consulted, such as health and social care professionals. I draw the committee’s attention to section 6(3), which requires that

"the local authority and the Health Board must take account of any views expressed"

by those who they must consult as noted in the policy statement.

The requirement to consult and take account of views goes beyond a duty to involve, as amendment 212 would provide. Therefore, the existing provisions in section 6 and the regulations that I intend to make under that section already go further than would the effect of amendment 212. I therefore ask Rhoda Grant to withdraw the amendment.

Rhoda Grant: I believe that the amendment would go further than consultation. It seeks to involve people in genuine co-production and planning of services that they will be using. I therefore press amendment 212.

The Convener: The question is, that amendment 212 be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

For
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeil, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

Against
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
McLeod, Aileen (South Scotland) (SNP)
Paterson, Gil (Clydebank and Milngavie) (SNP)

The Convener: The result of the division is: For 4, Against 5, Abstentions 0.

Amendment 212 disagreed to.

Amendment 213 not moved.

Amendment 29 moved—[Alex Neil]—and agreed to.

Section 6, as amended, agreed to.

Section 7—Approval of integration plan

Amendments 30 to 34 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 144, in the name of the cabinet secretary, is grouped with amendment 145.

Alex Neil: The bill, as introduced, does not clearly establish the process for approval, modification and resubmission of integration schemes. The amendments will ensure that that process is made explicit and is conducted within a set timeframe.

The amendments will require that, when the Scottish ministers refuse to approve an integration scheme, the health board and the local authority will be given one opportunity to provide a modified
integration scheme. The amendments require the Scottish ministers to provide detailed information on why the scheme was not approved and advice on how it can be amended to meet approval.

The Scottish ministers will set a timescale in which the resultant modified scheme must be submitted for consideration. The amendments make it clear that, if ministers find cause to reject a modified integration scheme—if, for example, the detailed information and advice that they have provided has not been taken into account—they will use their default powers, which are outlined in section 39, to ensure that integration occurs.

The amendments will ensure that fit-for-purpose integration schemes are established across Scotland in good time to progress integration.

I move amendment 144.
Amendment 144 agreed to.
Amendments 35 and 145 moved—[Alex Neil]—and agreed to.
Section 7, as amended, agreed to.

Section 8—Publication of integration plan
Amendment 36 moved—[Alex Neil]—and agreed to.
Section 8, as amended, agreed to.

Section 9—Functions delegated to integration joint board
Amendment 37 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 38, in the name of the cabinet secretary, is grouped with amendments 61 to 63.

Alex Neil: Section 9, as introduced, covers the delegation of functions where the integration joint board model is used. Section 9(3) establishes that functions for integration must "be delegated before the prescribed day."

Amendment 38 enables the delegation of functions to take place at any date after the integration scheme has been approved by the Scottish ministers, provided that the formal requirements of the bill in relation to the strategic plan are complied with. The Scottish ministers may also prescribe a day by which all functions must be delegated and strategic plans must commence. That enables integration authorities to put integrated arrangements in place as soon as they are ready and makes provision for a date by which integrated arrangements must be in place.

Amendment 38 responds to feedback from stakeholders that indicates that different areas are at different stages of development in relation to integration and that those that are further ahead do not want to be artificially held back by a single go-live date that applies to all areas.

Amendments 61 and 62 provide clarification on the date on which a lead agency arrangement will go live. They also provide for certainty in start dates for lead agency arrangements, which enables the Scottish ministers to prescribe a day by which functions must be delegated. The result is that all integrated health and social care arrangements in Scotland will be in place by that date at the latest. Locally, partners will also have flexibility to delegate functions earlier than that.

Amendment 63 is consequential to amendment 62.
I move amendment 38.
Amendment 38 agreed to.
Section 9, as amended, agreed to.

Section 10—Chief officer of integration joint board
Amendments 39 and 40 moved—[Alex Neil]—and agreed to.
Section 10, as amended, agreed to.

Section 11—Other staff of integration joint board

11:45
The Convener: Amendment 41, in the name of the cabinet secretary, is grouped with amendments 42, 43, 45, 214, 46 to 48, 51 and 217.

Alex Neil: Amendments 41 and 42 seek to provide further clarity on the ability of the Scottish ministers to make an order under section 11 that would allow integration joint boards to recruit staff other than the chief officer. Amendment 41 provides for flexibility in the use of the powers, so an order made under section 11 can apply to a single integration joint board or to some integration joint boards.

Amendment 42 places a requirement on the Scottish ministers to consult with health boards, local authorities and integration joint boards, where established, before exercising the power to make an order under section 11 to enable integration joint boards to employ staff directly. Enabling integration joint boards to employ staff provides for a significant change in the delivery of health and social care, so I recognise the wide-ranging nature of those powers.

Amendments 41 and 42 will establish a flexible and collaborative approach to the further
empowerment of integration joint boards, which I believe is more appropriate.

Amendments 43, 45, 46, 47, 48 and 52 all relate to section 12, which sets out further provisions that relate to integration joint boards. Amendment 43 aims to clarify that “their functions” means both functions conferred directly on the integration joint board by virtue of the bill, such as a duty to prepare a strategic plan, and delegated functions by virtue of an integration scheme, and that in either case those powers can be conferred on the integration joint board only by an order made by the Scottish ministers.

Amendment 45 enables the Scottish ministers to make an order allowing integration joint boards to establish committees or to delegate functions conferred upon them by an integration scheme. That will be necessary for the effective delivery of functions should direct delivery of delegated functions by the integration joint board be permitted in future. It is important that the responsibility for the effective carrying out of both the delegated functions and the functions conferred on the integration joint board by virtue of the bill, such as preparing the strategic plan, continues to rest with the integration joint board. Therefore, it is only the delegated functions that may be sub-delegated to committees of the integration joint board, the chief officer of the integration joint board or employees of the integration joint board.

Amendment 214, in the name of Rhoda Grant, would add a requirement that, when the Scottish ministers prescribe the membership of the integration joint board, they must include service users, unpaid carers and non-commercial organisations. The committee will wish to note the policy statement provided for section 12, which provides detailed information on the requirements that the Scottish ministers intend to set out in regulations in relation to the membership and proceedings of the integration joint board. The list of members of the integration joint board includes all those noted in amendment 214 and a number of other groups of people that I believe should be involved, such as health and social care professionals.

I believe that it is disproportionate to set out in the bill the groups noted in amendment 214, thus treating the representation of those groups in a different way from the representation of, for example, local authorities and health boards. I believe that the proper place to list the membership of the integration joint board is in regulations and I intend to include all those noted in amendment 214. I therefore cannot support amendment 214.

Amendment 46 seeks to ensure that the Scottish ministers’ powers in section 12 are subject to appropriate restrictions. It will allow the Scottish ministers to set out a standard set of arrangements for integration joint boards, covering membership and general proceedings to be introduced, and prevent those arrangements from being varied when it is not appropriate.

Amendment 47 seeks to specify that an order made under section 12 does not require to make general provision for all integration joint boards, except for general orders noted in amendment 46, but can also be for either one or some integrated joint boards. This drafting amendment clarifies the use of the power in section 12.

With regard to amendment 48, stakeholders have raised concerns that the powers in section 12 are far-reaching and, should they be exercised, could significantly change the delivery of health and social care. In recognition of the concerns that have been expressed, especially by local government, I have lodged amendment 48, which seeks to require the Scottish ministers to consult the health board, the local authority and the integration joint board, where it has been established, to ensure that empowerment of integration health boards, where appropriate, is taken forward in a collaborative way.

Amendment 51 seeks to require integration joint boards to have an officer responsible for their financial affairs; to keep accounts; and to have their accounts audited and to provide for the audit to be carried out by the Accounts Commission for Scotland. That will ensure that the bill provides for the proper stewardship, accounting and audit of the money that is received and paid by integration joint boards and for a duty upon integration joint boards to achieve value for money.

Amendment 217, in the name of Rhoda Grant, which seeks to create a new complaints and appeals system for integration joint boards, is, I believe, unnecessary. Health boards and local authorities already have complaints systems. We fully recognise that the current system for social work complaints is no longer up to date or fit for purpose and have been working to produce a new system that will be more accessible, allow complaints to be completed far faster and provide the user with greater transparency. We expect that complaints about services provided by local authorities or health boards will be handled in accordance with new regulations that we expect to introduce shortly and which will produce a joined-up, seamless complaints service and a coordinated response for the complainant. In any case, the Public Bodies (Joint Working) (Scotland) Bill is not the appropriate legislative vehicle for making changes to the complaints system, especially when we have not consulted on them as part of this bill.
I move amendment 41 and invite Rhoda Grant not to move amendments 214 and 217.

Rhoda Grant: Amendment 214 seeks to ensure that all service users, carers and their representatives have a representative member on integration boards. Although by necessity that board member will have to represent a very wide group, it is nevertheless important that they are at the very heart of the board and I welcome the cabinet secretary’s comments about setting that out in regulations.

The cabinet secretary also said that he did not want to treat those people differently from other groups involved in the board but I suggest that they are different. After all, those are the people for whom the services will be devised and, coming back to the issue of co-production in the bill, I hope that they will be involved in the decisions that are made for them.

As the cabinet secretary will introduce regulations to put what I have suggested into practice, this amendment might have no meaning, so I will not move it. However, I hope that the cabinet secretary will consider whether there is some way of putting users and carers at the heart of the bill to make it very clear that this legislation is for them, and of ensuring that co-production is employed in creating the services that they use and which support them.

Amendment 217 seeks to ensure the introduction of an integrated complaints procedure that will be devised by the Government and which will provide some uniformity with regard to the integration boards. I note the cabinet secretary’s comments about introducing a joined-up complaints procedure. It is really important that service users do not have to try to find out which authority, health board or integration board the person in question works for before they can instigate a complaint and, as a result, we need a joined-up scheme. I will wait and see what the cabinet secretary proposes and, for the moment, will not move amendment 217.

The Convener: As no other members wish to speak, I call the cabinet secretary to wind up.

Alex Neil: I thank Rhoda Grant for agreeing not to move her amendment. I will stick to the commitments that I have given and take on board her comments.

Amendment 41 agreed to.

Amendment 42 moved—[Alex Neil]—and agreed to.

Section 11, as amended, agreed to.

Section 12—Integration joint boards: further provision

Amendments 43 to 45 moved—[Alex Neil]—and agreed to.

Amendments 214 and 215 not moved.

Amendments 46 to 49 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 50, in the name of the cabinet secretary, is grouped with amendments 216, 218, 66, 80 and 81.

Alex Neil: The order-making power in section 12 provides for the Scottish ministers by scheme to enable the staff, property, rights and so on of a local authority or a health board to be transferred to an integration joint board. Integration joint boards will not be initially established with employees of their own, but will instead discharge their duties via directions to the health boards and local authorities.

Section 12(3) allows for a possible future decision by the Scottish ministers that integration joint boards should be able to employ staff directly. I fully realise that that has wide-ranging implications for the delivery of health and social care. I therefore lodged amendment 50, which requires the Scottish ministers to consult the relevant integration joint board, health board and local authority before making such a scheme as an appropriate and proportionate mechanism to ensure a collaborative approach for the transfer of staff, property, rights and liabilities to integration joint boards.

Similarly, amendment 66 places a requirement on the Scottish ministers to consult the health board and local authority before making any such scheme under section 15 on the transfer of staff between health board and local authority employment in either direction under lead agency arrangements in order to ensure that their views are taken into account.

Amendments 216 and 218, in the name of Rhoda Grant, would require the Scottish ministers, before making such a scheme under section 12 or section 15 with regard to staff, to consult health and social care professionals and other groups of persons whom the Scottish ministers consider to have an interest. I recognise the concerns expressed during stage 1 that staff should be given a voice in any decision to transfer their employment from a health board or a local authority to an integration joint board. I welcome Rhoda Grant’s amendments in that regard and I accept amendments 216 and 218.

Furthermore, section 36(3) makes similar provision for the Scottish ministers, by scheme, to make provision about the transfer of staff in consequence of a new integration scheme. For
consistency, I therefore intend to lodge an amendment at stage 3 that will replicate the effect of amendments 216 and 218 in relation to section 36(3).

12:00

Amendment 80 seeks to clarify the circumstances in which section 19 applies. Section 19 already makes it clear that it applies to transfers of employment under the circumstances that are set out in sections 12 and 15. The amendment proves beyond doubt that section 19 also applies to transfers of employment that take place when a scheme is made as a result of a new integration scheme under section 35.

Amendment 81 clarifies the intention of section 19(3)(b) in relation to pension obligations in circumstances in which staff transfer between employers, such as between a local authority and a health board or to an integration joint board. When such a transfer takes place, there will be no transfer of any liability for any deficit or right to a share in any surplus in respect of the transferred employee’s membership of a pension scheme for their employment prior to the transfer. The amendment ensures that such transfers correspond to the requirements of international accounting standards and avoids the risk of a potential misinterpretation resulting in a material additional expense to the original employer.

I move amendment 50 and support Rhoda Grant’s amendments 216 and 218.

Rhoda Grant: Amendments 216 and 218 recognise the impact on staff of the changes to integration boards. In the public sector, there are already efficient and well-established procedures for consulting, negotiating and involving staff in changes to their working conditions and arrangements. I hope that those good practices will continue into the partnership authorities, especially during the time of transition, and it is important that we put that in the bill to ensure that it happens. I am grateful to the cabinet secretary for his support for those amendments.

On amendment 81, which relates to pensions, I understand what the cabinet secretary says but I seek assurance that the amendment will not interfere with a person’s right to transfer their pension if they see fit and if that gives them the best deal when they move employer. I seek some reassurance on that.

Alex Neil: I reassure Rhoda Grant that amendment 81 does not affect an employee’s right to transfer their pension.

Amendment 50 agreed to.

Amendment 216 moved—[Rhoda Grant]—and agreed to.

Section 12, as amended, agreed to.

After section 12

Amendment 51 moved—[Alex Neil]—and agreed to.

Amendment 217 not moved.

Section 13—Payments to integration joint boards in respect of delegated functions

Amendment 146 not moved.

Amendments 54 to 59 moved—[Alex Neil]—and agreed to.

Section 13, as amended, agreed to.

Section 14—Functions delegated to local authority or Health Board

Amendments 60 to 63 moved—[Alex Neil]—and agreed to.

Section 14, as amended, agreed to.

Section 15—Transfer of staff where functions delegated to local authority or Health Board

Amendment 64 moved—[Alex Neil]—and agreed to.

Amendment 218 moved—[Rhoda Grant]—and agreed to.

Amendments 65 and 66 moved—[Alex Neil]—and agreed to.

Section 15, as amended, agreed to.

Section 16—Integration joint monitoring committees: further provision

The Convener: Amendment 219, in the name of Rhoda Grant, is in a group on its own.

Rhoda Grant: Amendment 219 deals with the principles of co-production by ensuring that service users and carers or their representative groups are included in the membership of monitoring committees, which would ensure their involvement at every stage in the process. I very much hope that members will support the amendment, which would ensure that service users and carers are involved in monitoring the care that is provided for them.

I move amendment 219.

Alex Neil: I believe that amendment 219 should refer to section 16(1)(b), which is the power to make regulations regarding membership of a committee, rather than section 16(1)(a), which is
the power to make an order regarding its establishment. I will proceed on that basis.

Amendment 219 would add a requirement that when Scottish ministers prescribe the membership of the integration joint monitoring committee, they must include service users, unpaid carers and non-commercial organisations. The committee will wish to note the policy statement provided for in section 16, which provides detailed information on Scottish ministers’ intentions in relation to the provision that will be made for the membership and proceedings of the integration joint monitoring committee.

The list of members of the integration joint monitoring committee that I intend to prescribe includes all those noted in amendment 219 and a number of other very important groups of people, such as health and social care professionals and a staff representative. I believe that it is disproportionate to set out in the bill that we should include the groups noted in amendment 219 but not provide in that way for, for example, the representation of local authorities and health boards, health and social care professionals or service users themselves.

I believe that the proper place to list the membership of the integration joint monitoring committee is in secondary legislation. I intend to include all those noted in amendment 219 in such secondary legislation. On that basis, I ask Rhoda Grant to withdraw amendment 219.

Rhoda Grant: Given the cabinet secretary’s reassurance, I seek to withdraw amendment 219.

Amendment 219, by agreement, withdrawn.

Amendment 220 not moved.

Amendments 82 and 83 moved—[Alex Neil]—and agreed to.

Section 20, as amended, agreed to.

After section 20

The Convener: Amendment 84, in the name of the cabinet secretary, is grouped with amendments 85 and 87 to 89.

Alex Neil: Amendments 84 and 85 will allow functions that are conferred by statute directly on an officer of a health board or a local authority, when those functions relate to a function that is delegated as part of an integration scheme, to be treated as being conferred on officers of the other bodies that prepared the integration scheme. That will ensure that no barriers to fully integrating health and social care arise from the fact that certain statutes confer functions directly on officers of local authorities or health boards. The amendments will allow flexibility in the exercise of such functions, which is consistent with the aim of integration.

As for amendment 87, section 21 covers the effect of the delegation of functions on the rights, duties and powers of health boards, local authorities and integration authorities. The provisions are particularly important to establishing liability in the event of any failure of integrated services. In the bill as introduced, liability for failure rests entirely with the authority to which functions were delegated. I now consider that to be an impractical approach to liability, which will as time goes on be complex by definition, given the complexity of people’s needs and the resulting health and social care provision to support them.

12:15

Amendment 87 follows the principle that responsibility should rest with control and makes clear that the integration authority or either of the delegating bodies may be liable for any claims arising from the exercise of delegated functions. In particular, the integration authority might be liable for claims that can be attributed to failures in relation to its role, such as failures of strategic planning. However, that does not preclude the possibility that a health board or local authority should be liable for acts that have been carried out in the exercise of a direction of the integrated
authority through the strategic plan and that were factually within that board’s or authority’s control.

Since the bill was introduced, a great deal of work has been undertaken with stakeholders to clarify questions relating to governance and, as part of that, liability in the event of things going wrong under integration. Amendment 87 sets out a practical approach to the potential complexities of liability under integrated arrangements. It allows responsibility for the exercise of the functions to be determined on a case-by-case basis. Given the complexities of health and social care planning and provision for an ageing population, I judge that to be an appropriate and proportionate solution. Work is on-going with stakeholders to plan for any liabilities that may arise under the exercise of integrated health and social care provision. A working group is planned that will comprise all members of the Society of Local Authority Lawyers and Administrators in Scotland, NHS Scotland’s central legal office and the Scottish Government legal directorate to develop guidance for integration authorities that will enable them to set out provisions regarding liability in their integration schemes.

With regard to amendment 88, section 22 provides for integration authorities to give directions to health boards and local authorities with respect to carrying out functions. The section enables integration authorities to ensure that health boards or local authorities provide the services that are set out under the strategic plan. The purpose of amendment 88 is to close the loop that enables the integration joint board to oversee the strategic planning process by giving directions to health boards and local authorities for the delivery of services.

The amendment will change section 22 to reflect the different integration models. It provides that, where an integration authority is an integration joint board—that is, where the corporate body model is used—that integration joint board must provide direction to the health board and local authority on the provision of services. Integration joint boards will not—initially at least—employ their own staff and directly deliver services. Therefore, for services to be delivered, it will be necessary for directions always to be given to either the health board or the local authority. On the other hand, where the lead agency model is used, the bill enables but does not require the lead agency—whether it is a health board or local authority—to give direction to the delegating agency for the delivery of services where necessary. The lead agency will also deliver services, and so a requirement to give directions is not mandatory in this instance.

Amendment 88 supports the circumstances in which more than one local authority agrees a lead agency arrangement with a health board. In that situation, the local authority that is the lead agency can choose to direct only one of the local authorities to carry out a function for the entire area that is covered by the integration scheme.

In proposed new section 22(3), amendment 88 provides that the person to whom the direction is given must provide such information as is necessary to enable the integration authority to judge whether a direction is necessary. That will ensure that such information as is necessary for effective strategic planning is shared between the integration authority, the health board and the local authority.

In proposed new sections 22(4) and 22(5), amendment 88 provides that a direction can be given to more than one person. That means that an integration joint board will be able to give a direction to both the health board and the local authority, and that such a direction can require each party to carry out parts or all of the direction, depending on the circumstances. That will enable an integration authority to give directions in such a way as to support integrated service delivery by bringing together the activities of delivery teams in the health board and local authority.

Section 22 provides for integration authorities to give directions to health boards and local authorities with respect to carrying out functions. The new section that will be inserted by amendment 89 will enable integration authorities to ensure that health boards and local authorities provide the services that are set out under the strategic plan.

Subsection (1) of the new section ensures that directions issued under section 22 make adequate provision for the carrying out of functions, particularly in relation to the making of payments and the manner of carrying out the function. The effect of subsection (1) is that it will be clear to the person to whom a direction is issued how the integration authority expects the function to be provided, and the integration authority will be better placed to ensure delivery of integrated functions in accordance with the strategic plan.

Subsection (2) of the new section ensures that integration authorities are able to use directions to manage any difficult relationships with the health board and/or local authority. The effect is that where an integration authority needs to take action to protect its interests—for example, to obtain information, enforce any court order or pursue any claim against the health board or local authority—it can do that by way of a direction. Subsection (2) also provides for the situation in which any liability that is incurred by the integration authority necessitates a payment to be made by the health board or the local authority.
Subsection (3) of the new section clarifies that it is the integration authority that must make payments to the health board and local authority in support of the directions given. Subsections (6) and (7) provide for the situation in which a health board and local authority agree that an integration joint board should be enabled to deliver some functions directly by itself. Those provisions apply for the possible future position in which an integrated board is to employ such staff and manage such contractual arrangements as are necessary to deliver services directly.

Amendment 89 enables Scottish ministers to make an order preventing the joint board from giving direction to the health board and local authority, thus enabling it to carry out the function directly itself. Such an application must be made to Scottish ministers in writing by the health board and local authority. Scottish ministers may in response make an order relating to the relevant functions and the integration joint board may decline the request entirely or may make the order in relation to only some of the functions concerned, depending on whether they are of the view that doing so would improve performance in terms of the national health and wellbeing outcomes.

Subsection (8) of the new section provides for circumstances in which ministers do not believe that quality of outcomes would be improved by enabling an integration joint board to deliver some functions directly by itself and allows ministers to exclude such functions from the order.

I move amendment 84.

Amendment 84 agreed to.

Amendment 85 moved—[Alex Neil]—and agreed to.

Section 21—Effect of delegation of functions

Amendments 86 and 87 moved—[Alex Neil]—and agreed to.

Section 21, as amended, agreed to.

Amendment 88 moved—[Alex Neil]—and agreed to.

Section 22, as amended, agreed to.

After section 22

Amendment 89 moved—[Alex Neil]—and agreed to.
**The Convener:** I now call Nanette Milne to speak to amendments 236 and other amendments in the group. [Interruption.] No, I have jumped the gun again. I call on the cabinet secretary to speak to amendment 90 and other amendments in the group.

**Alex Neil:** The amendments in this group deal with the process of strategic planning.

Malcolm Chisholm’s amendments 147 and 201 highlight in particular the role of locality planning within strategic planning. They would give the Scottish ministers, subject to affirmative procedure, the power to set out the key principles of locality planning in regulation.

I am sure that the committee will agree that locality arrangements will be fundamental to the success of the agenda as they are at the sharp end of where health and social care services will be drawn together and delivered. Getting that right within and outwith the legislation is absolutely key.

During the past two years, the Scottish Government has had extensive discussions with stakeholders about how best to reflect locality arrangements in the legislation. The overwhelming response has been that we should require that they are established in every area of Scotland, that they are embedded within the strategic planning process, and that they involve the full range of local stakeholders in their establishment and operation.

Other than those three key areas, the response has been that the rest of the arrangements should be left to guidance to allow local flexibility on how the localities should operate. To prescribe the arrangements runs the risk of hampering local innovation, disengaging stakeholders from the start, creating unnecessary bureaucracy, and creating arrangements that are unsuitable for the majority of localities in Scotland.

12:30

I have considerable sympathy for the intention behind Mr Chisholm’s amendments 147 and 201, but I do not believe that they are the best way to achieve the aim of strengthening the basis of locality planning.

First, the bill already contains principles that integration authorities must have regard to in the development of locality arrangements. Adding a second set of principles via regulation will not add much to those arrangements.

Secondly, regulations are used to set out the detail of arrangements that must be put in place rather than principles that organisations must have regard to. That is why we have already established principles on the face of the bill that define how integration must be taken forward.

Thirdly, stakeholders have been clear that they believe that the most effective way of developing locality arrangements is to provide flexibility, underpinned with statutory guidance. The bill makes provision in section 41 to ensure that all statutory partners must have regard to the statutory guidance that we produce. I intend to provide statutory guidance on locality planning that goes beyond just the setting of principles to consider far more of the detail of how localities can be made to be successful.

Finally, the message has been clear from stakeholders that they should be left to make successful locality arrangements in the way that suits them locally. I believe that that is the right thing to do. The bill sets out clear arrangements for annual reporting and, as noted in the policy statement for the regulation, that will include a duty to report on the success of the locality arrangements. I intend to hold integration authorities to account for that. I therefore invite Malcolm Chisholm to withdraw amendment 147 and not to move amendment 201.

My amendments in this group focus on ensuring appropriately robust and flexible arrangements for strategic planning. Amendment 90 allows the health board and local authority to choose to delegate functions on a day that is earlier than the day that is prescribed by the Scottish ministers. When that is done, the integration authority must make clear in the strategic plan the date when functions are to be delegated. That will ensure transparency and clarity as to when delegation will take place. It also allows for local flexibility where good progress in integration is being made.

Amendment 91 requires the integration authority to have prepared a strategic plan before the functions can be delegated by the health board and local authority. That is important in order to ensure that services are planned for and delivered in an integrated way.

Amendment 92 removes the requirement to restrict the first strategic plan to a period of three years. As introduced, the bill requires the first strategic plan prepared by an integration authority to relate to the period of three years beginning with the prescribed day on which integration begins. While the integration authority can plan for a longer period, the plan must be reviewed and revised at least every three years. For example, if an integration authority wishes to produce strategic plans covering a five-year period, it can do so, but it will need to develop a new five-year plan at least every three years. The strategic plan can and should be reviewed at any other time within that three-year period and, if revised earlier than the end of the three-year period, a new three-year period will commence from the new start date.
Amendment 92 responds to discussion with stakeholders that has led to the conclusion that restricting the strategic planning period to a maximum of three years is unnecessary and inconsistent with good practice in relation to commissioning and planning services.

Amendment 93 removes a requirement for strategic plans following the first strategic plan to be prepared every three years, before the anniversary of the day on which the integration began. Instead, amendments 127 and 129, to be debated in group 20, require the integration authority to keep the strategic plan under continual review and to establish a new strategic plan for a period of three years.

Amendment 94 is a drafting amendment that provides for a definition of “integration start day”. The amendment provides the start of integration to be the date set out in the strategic plan or the prescribed date for integration authorities that are integration joint boards and lead agency.

Amendment 116 makes it clear that section 27 refers to the development of the strategic plan, and the strategic planning group is formed for that purpose. Amendment 118 is a technical change that updates the numbering of the section. Amendment 123 will enable the integration joint board to obtain relevant information from the health board and local authority for the purposes of preparing the strategic plan.

Amendment 124 will remove section 28, which relates to the lead agency model. In the bill as introduced, a lack of approval for the strategic plan under section 28 requires a lead agency to modify the strategic plan but does not prevent the lead agency from implementing a plan that has not been approved. To give the delegating agency a greater power over the strategic plan than that held by the lead agency would undermine the principle of delegation. The provision as it stands would therefore be an unnecessary complication to the strategic planning process, without benefit for patients or service users.

Amendment 125 will require the integration authority in a lead agency arrangement to publish the strategic plan as soon as practicable after it has been finalised. That is the same requirement that applies to an integration authority in a body corporate arrangement.

Amendment 126 will simplify section 29. As a result of removing section 28 via amendment 124, it will no longer be necessary to make different provision for different models of integration in relation to publication of strategic plans.

Amendment 131 will require the integration authority to publish an annual financial statement on commencement of its first strategic plan and every year after that. In order to support transparency regarding use of the integrated budget, the financial statement must set out the total resources that the integration authority intends to allocate under the provisions of the strategic plan.

In conclusion, I urge Malcolm Chisholm to withdraw amendment 147 and not to move amendment 201, and I urge Nanette Milne not to move amendment 236.

The Convener: I now call Nanette Milne to speak to amendment 236 and the other amendments in the group.

Nanette Milne: Amendment 236 is suggested as an approach to get third sector sign-off of strategic plans in the bill. As we know, the third sector is a key partner, alongside health boards and local authorities, and many stakeholders want to see its role clearly articulated in statutory guidance, as the cabinet secretary said, and secondary legislation.

I am seeking third sector sign-off of strategic plans prepared by the health and social care partnerships because the joint sign-off under reshaping care for older people has enabled many areas to overcome barriers to partnership and has been a key driver for the cultural change that is widely acknowledged as the essential foundation for successful integration. That is why I lodged amendment 236.

Alex Neil: I assure Nanette Milne that I totally agree with her on the need for the proper representation of the third sector, which we will provide in the secondary legislation and guidance.

The Convener: I ask Malcolm Chisholm to wind up and press or withdraw amendment 147.

Malcolm Chisholm: I listened with interest to what the cabinet secretary said. There could have been a contradiction between his strong words about statutory guidance and his previous words about leaving everything to localities so that innovation is not curtailed.

I want to look further at the issue. I may well want to lodge amendments with different wording at stage 3, but I am prepared to withdraw amendment 147 at present.

Amendment 147, by agreement, withdrawn.
Amendments 90 to 94 moved—[Alex Neil]—and agreed to.
Section 23, as amended, agreed to.

The Convener: That ends today’s consideration of the bill at stage 2. I thank everyone for their patience and co-operation.

Meeting closed at 12:39.
Public Bodies (Joint Working) (Scotland) Bill

2nd Marshalled List of Amendments for Stage 2

The Bill will be considered in the following order—

Sections 1 to 53 Long Title

Amendments marked * are new (including manuscript amendments) or have been altered.

Section 24

Alex Neil

95 In section 24, page 10, line 32, leave out from beginning to <local> and insert <This section applies where an integration authority in relation to the area of a local authority is preparing a strategic plan.

( ) The integration>

Rhoda Grant

221 In section 24, page 10, line 35, at end insert—

<( ) outcomes agreed for the area of the local authority through community planning.

( ) In this section “community planning” means planning to which the provisions of section 15(1) of the Local Government in Scotland Act 2003 (community planning) apply.>

Alex Neil

96 In section 24, page 10, line 35, at end insert—

<(3) The integration authority must have regard to the effect which any arrangements which it is considering setting out in the strategic plan in pursuance of section 23(2)(a) may have on services, facilities or resources—

(a) utilised by arrangements set out in pursuance of that section in a strategic plan prepared by another integration authority,

(b) which would be utilised by arrangements which another integration authority is considering setting out in pursuance of that section in a strategic plan which it is preparing.

(4) The references in subsections (3)(a) and (b) to a strategic plan are to a strategic plan relating to the same period as, or relating to part of the same period as, the strategic plan which is being prepared by the integration authority.>
After section 24

Malcolm Chisholm

222 After section 24, insert—

<24A Duty to seek, record and have due regard to advice

(1) In preparing a strategic plan, an integration authority for the area of a local authority must, where appropriate, seek, record and have due regard to the professional advice of the persons specified in subsection (3) in respect of issues relating to quality and safety.

(2) An integration authority for the area of a local authority must set out arrangements for how it will, where appropriate, seek, record and have due regard to the professional advice of the persons specified in subsection (3) in respect of issues relating to quality and safety in the carrying out of the integration functions for the area of the local authority.

(3) The persons are—

(a) the chief social work officer of the local authority,
(b) a registered medical practitioner nominated by the relevant Health Board,
(c) a registered nurse nominated by the relevant Health Board,
(d) a registered allied health professional nominated by the relevant Health Board,
(e) any other person prescribed by regulations made by the Scottish Ministers.>

Section 25

Alex Neil

97 In section 25, page 11, line 1, leave out from <must> to end of line 3 and insert <are provided in pursuance of functions which are delegated under an integration scheme is to improve the wellbeing of service-users,>

Malcolm Chisholm

97A As an amendment to amendment 97, line 3, after <wellbeing> insert <and independent living>

Rhoda Grant

223 In section 25, page 11, line 5, after <provided> insert <or commissioned>

Alex Neil

98 In section 25, page 11, line 5, leave out <the> and insert <a>

Alex Neil

99 In section 25, page 11, line 6, leave out <recipients> and insert <service-users>

Malcolm Chisholm

224 In section 25, page 11, line 7, after <the> insert <rights and>

Nanette Milne

225 In section 25, page 11, line 7, after <needs> insert <, aspirations, abilities, characteristics and circumstances>
Alex Neil
100 In section 25, page 11, line 7, leave out <recipients> and insert <service-users>

Malcolm Chisholm
226 In section 25, page 11, line 8, after first <the> insert <rights and>

Alex Neil
101 In section 25, page 11, line 8, leave out <recipients> and insert <service-users>

Alex Neil
102 In section 25, page 11, line 9, at end insert—
   <(  ) takes account of the dignity of service-users,
   (  ) takes account of the participation by service-users in the community in which service-users live,
   (  ) protects and improves the safety of service-users,
   (  ) improves the quality of the service,>

Rhoda Grant
227 In section 25, page 11, line 9, at end insert—
   <(  ) takes account of the particular needs of service-users moving into the area of the local authority from the area of another local authority,>

Rhoda Grant
228 In section 25, page 11, line 9, at end insert—
   <(  ) improves the quality of the service to service-users in the community, particularly in relation to the amount of time afforded to those service-users,>

Malcolm Chisholm
229 In section 25, page 11, line 9, at end insert—
   <(  ) is based on recognised guidance and adherence to established quality standards and promotes continuous improvement in the standard and quality of care,>

Malcolm Chisholm
Supported by: Nanette Milne
230 In section 25, page 11, line 9, at end insert—
   <(  ) enables service-users to exercise choice and control and to participate in decisions regarding their need for services and the provision of those services to them,>

Alex Neil
103 In section 25, page 11, line 11, leave out <and local professionals> and insert <(including in particular service-users, those who look after service-users and those who are involved in the provision of health or social care)>
Rhoda Grant

231 In section 25, page 11, line 12, at end insert—

<( ) supports and rewards people who deliver those services in the provision of high quality care to service-users, and>

Alex Neil

104 In section 25, page 11, line 14, leave out <“recipients”> and insert <“service-users”>

Section 26

Alex Neil

105 In section 26, page 11, line 17, leave out <For the purpose of preparing a> and insert <Before preparing its first>

Alex Neil

106 In section 26, page 11, line 18, after <group> insert <(its “strategic planning group”)>.

Alex Neil

107 In section 26, page 11, line 19, leave out from <one> to end of line 21 and insert—

<(i) at least one person nominated by the Health Board which is a constituent authority in relation to the integration joint board,>

(ii) where one local authority is a constituent authority in relation to the integration joint board, at least one person nominated by it,

(iii) where two or more local authorities are constituent authorities in relation to the integration joint board, at least one person nominated by the authorities,>

Alex Neil

108 In section 26, page 11, line 22, leave out <one person nominated by the local authority> and insert <at least one person nominated by the local authority or authorities>

Alex Neil

109 In section 26, page 11, line 23, leave out <plan> and insert <scheme>

Alex Neil

110 In section 26, page 11, line 25, after <authority,> insert <at least>

Alex Neil

111 In section 26, page 11, line 26, leave out <plan> and insert <scheme>

Bob Doris

232 In section 26, page 11, line 32, after <are> insert—

<( ) persons working as a member of a relevant profession,>

( )>
Rhoda Grant

233 In section 26, page 11, line 33, at end insert <and must include—

(a) service-users,
(b) unpaid carers, and
(c) non-commercial organisations who represent the interests of service-users and unpaid carers.>

Alex Neil

112 In section 26, page 11, line 33, at end insert—

<(2A) The integration authority is to determine—

(a) the number of members of its strategic planning group,
(b) so far as not set out in this section, the processes for appointment, removal and replacement of members.

(2B) The integration authority may—

(a) appoint members of its strategic planning group from persons nominated under subsection (1),
(b) in such circumstances as the authority considers appropriate, remove persons appointed under paragraph (a) from membership of the group,
(c) appoint members in place of members who resign or are removed from membership of the group.

(2C) A constituent authority may—

(a) remove from its strategic planning group a member appointed to represent it,
(b) nominate under subsection (1) another person in place of a member of the group appointed to represent it.

(2D) A member of a strategic planning group may resign at any time.

(2E) During the period to which any strategic plan of an integration authority relates, its strategic planning group is also to comprise a person to represent the interests of each locality set out in the plan in pursuance of section 23(3)(a).

(2F) It is for the integration authority to—

(a) decide which persons are suitable to represent the interests of a locality, and
(b) select the representative.

(2G) An integration authority may under subsection (2F)(b) select a single person in respect of two or more localities.

(2H) The validity of anything done by an integration authority’s strategic planning group is not affected by any vacancy in its membership.>

Alex Neil

113 In section 26, page 11, line 34, leave out second <the> and insert <an integration authority’s strategic planning>

<( ) non-commercial providers of health care or social care, and
( ) other relevant bodies who may be affected by the decision.>

After section 30

After section 30, insert—

<Review of strategic plan

(1) An integration authority—

(a) must before the expiry of the relevant period review the effectiveness of its strategic plan,

(b) may from time to time carry out such a review.

(2) In carrying out a review under subsection (1), the integration authority must—

(a) have regard to—

(i) the integration delivery principles, and

(ii) the national health and wellbeing outcomes, and

(b) seek and have regard to the views of its strategic planning group on—

(i) the effectiveness of the arrangements for the carrying out of the integration functions in the area of the local authority, and

(ii) whether the integration authority should prepare a replacement strategic plan.

(3) Following a review under subsection (1), an integration authority may prepare a replacement strategic plan.

(4) Subject to subsection (2), the process of such a review is to be such as the integration authority determines.

(5) A constituent authority must provide an integration authority which is an integration joint board with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(6) The person mentioned in subsection (7) must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(7) That person is the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions.

(8) A strategic plan prepared in pursuance of this section must specify a day on which the period of the plan is to begin.
In subsection (1), “relevant period”, in relation to an integration authority, means—
(a) the period of 3 years beginning with the integration start day (as defined in section 23(4)), and
(b) each subsequent period of 3 years beginning with—
(i) where a replacement strategic plan is prepared following a review under subsection (1), the day specified under subsection (8),
(ii) where no replacement strategic plan is prepared following such a review, the day on which the integration authority decides not to prepare a revised strategic plan.

Alex Neil

130 After section 30, insert—

<Requirement to prepare replacement strategic plan

(1) This section applies where the integration authority in relation to the area of a local authority is an integration joint board.

(2) If it appears to a constituent authority that the strategic plan is preventing, or is likely to prevent, the constituent authority from carrying out any of its functions appropriately or in a way which is consistent with the integration delivery principles and the national health and wellbeing outcomes, the constituent authorities acting jointly may direct the integration authority to prepare a replacement strategic plan.

(3) A direction under subsection (2) must—
(a) be in writing,
(b) include a statement summarising the reasons for giving it.

(4) A direction under subsection (2) must specify—
(a) a day by which the replacement strategic plan must be prepared, and
(b) a day on which the period of the plan is to begin.

(5) The constituent authorities acting jointly may by direction substitute a different day for a day specified under subsection (4).

(6) An integration authority must comply with a direction given to it under subsection (2).

Alex Neil

131 After section 30, insert—

<Strategic plan: annual financial statement

(1) Each integration authority must publish an annual financial statement—
(a) when it publishes its first strategic plan, and
(b) each year after that.

(2) An annual financial statement must set out in relation to the strategic plan to which it relates the amount that the integration authority intends to spend in implementation of the plan.
Section 32

Alex Neil

132 In section 32, page 13, line 33, after <where> insert—

<( ) an integration authority carrying out an integration function for the area of a local authority proposes to take a decision which the authority considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function, or

( )>

Alex Neil

134 In section 32, page 14, line 4, at end insert—

<( ) The integration authority may pay to members of groups consulted under subsection (3) such expenses and allowances as the authority determines.>

Section 33

Alex Neil

135 In section 33, page 14, line 6, leave out <and publish>

Alex Neil

136 In section 33, page 14, line 9, after <year> insert <to which it relates>

Alex Neil

137 In section 33, page 14, leave out line 12 and insert—

<(3A) An integration authority must—

(a) publish each performance report before the expiry of the period of 4 months beginning with the end of the reporting year, and

(b) provide a copy of it to the persons mentioned in subsection (3B).

(3B) Those persons are—

(a) where the integration authority is an integration joint board, each constituent authority,

(b) where the integration authority is a local authority and a Health Board acting jointly, the integration joint monitoring committee,

(c) where the integration authority is a Health Board or a local authority—

(i) the integration joint monitoring committee, and

(ii) the other authority.

(3C) A constituent authority must provide an integration authority which is an integration joint board with such information as the authority may reasonably require for the purpose of preparing a performance report.
(3D) The other authority must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of preparing a performance report.

Alex Neil

138 In section 33, page 14, line 13, after <section> insert—

<“other authority” means the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions.>

Alex Neil

139 In section 33, page 14, line 14, leave out <23(4)(b)> and insert <9(3) or, as the case may be, 14(1A)>

After section 33

Alex Neil

240 After section 33, insert—

<Reports by integration joint monitoring committee

Reports

(1) An integration joint monitoring committee may give reports to the integration authority on any aspect of the carrying out of the integration functions for the area of the local authority for which the integration joint monitoring committee is established.

(2) A report may include recommendations as to how those integration functions should be carried out in future.

(3) Where a report is given to an integration authority under subsection (1), the integration authority must—

(a) have regard to the report and any recommendations included in it,

(b) take such action as the authority considers necessary, and

(c) if the report includes recommendations, give the integration joint monitoring committee a response to them in writing as soon as is reasonably practicable after the authority is given the report.

(4) An integration joint monitoring committee may publish—

(a) reports given under subsection (1),

(b) responses given under subsection (3)(c).

(5) The local authority and the Health Board which prepared the integration scheme by virtue of which the integration joint monitoring committee is established must provide the committee with such reports, information or other assistance as the committee may reasonably require for the purpose of preparing a report under subsection (1).>
Before section 34

Alex Neil

241 Before section 34, insert—

<Review of integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) The local authority and the Health Board must carry out a review of the scheme before the expiry of the relevant period for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).

(4) After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.

(5) In subsection (2), the “relevant period” means—

(a) the period of 5 years beginning with the day on which the scheme was approved under section 7, and

(b) each subsequent period of 5 years beginning with—

(i) where the local authority and the Health Board vary the scheme under section 34, the day specified under subsection (5) of that section,

(ii) where the local authority and the Health Board decide no changes to the scheme are necessary or desirable, the day on which that decision is made.>

Alex Neil

242 Before section 34, insert—

<Requirement to review integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) On the request of the local authority or the Health Board, the local authority and the Health Board must jointly carry out a review of the scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) Where matters are prescribed under section 1(3)(e), the Scottish Ministers may require the local authority and the Health Board jointly to carry out a review of the integration scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(4) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) or (3) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).
(5) After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.

Section 34

Alex Neil

243 In section 34, page 14, line 19, leave out from <an> to end of line 20 and insert <a local authority and a Health Board decide under section (Review of integration scheme) or (Requirement to review integration scheme) that changes to an integration scheme are necessary or desirable.>

After section 41

Alex Neil

258 After section 41, insert—

<Social Care and Social Work Improvement Scotland

In section 53 of the Public Services Reform (Scotland) Act 2010 (inspections by Social Care and Social Work Improvement Scotland)—

(a) in subsection (1), after paragraph (b), add—

“(c) where social services, services provided under the health service or services provided by an independent health care service are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), the co-ordination of those services.”,

(b) in subsection (2), after paragraph (e), add—

“(f) where the inspection is carried out under subsection (1)(c)—

(i) reviewing and evaluating the extent to which the social service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(ii) reviewing and evaluating the extent to which the co-ordination of social services, services provided under the health service and services provided by an independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iii) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iv) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(v) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 57.”, and

(c) after subsection (6), add—
“(7) In this section—

“independent health care service” has the meaning given by section 10F(1) of the National Health Service (Scotland) Act 1978;

“integration delivery principles” has the meaning given by section 25 of the 2014 Act.”.

Alex Neil

259* After section 41, insert—

<Healthcare Improvement Scotland

(1) The National Health Service (Scotland) Act 1978 is amended as follows.

(2) In section 10I (Healthcare Improvement Scotland: inspection of services provided under the health service)—

(a) after subsection (1), insert—

“(1A) Where a service provided under the health service is provided by virtue of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), HIS may inspect the service for any of the purposes mentioned in subsection (1B).

(1B) The purposes are—

(a) reviewing and evaluating the extent to which the service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(b) reviewing and evaluating the extent to which the co-ordination of services provided under the health service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(c) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(d) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(e) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”, and

(b) after subsection (2), insert—

“(3) In this section—

“integration delivery principles” has the meaning given by section 25 of the 2014 Act;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.

(3) In section 10J (inspections of independent health care services)—
(a) in subsection (1), after paragraph (b), add—

“(c) where services provided by an independent health care service and social services are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), the co-ordination of those services.”;

(b) in subsection (2), after paragraph (e), add—

“(f) where the inspection is carried out under subsection (1)(c)—

(i) reviewing and evaluating the extent to which the independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(ii) reviewing and evaluating the extent to which the co-ordination of services provided by an independent health care service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iii) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iv) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(v) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”;

(c) after subsection (7), add—

“(8) In this section—

“integration delivery principles” has the meaning given by section 25 of the Public Bodies (Joint Working) (Scotland) Act 2014;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.

Alex Neil

260* After section 41, insert—

<Joint inspections of health services and social services

(1) The Public Services Reform (Scotland) Act 2010 is amended as follows.

(2) In section 115(11) (meaning of “confidential information”), for “section”, where it second occurs, substitute “sections 116A(4) and”.

(3) After section 116, insert—
“116A Joint inspections of social services and health services

(1) Social Care and Social Work Improvement Scotland (“SCSWIS”) and Healthcare Improvement Scotland (“HIS”) may jointly conduct an inspection in relation to—

(a) any social services, services provided under the health service or services provided by an independent health care service which are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), or

(b) a local authority, Health Board or integration joint board (as defined in section 1(4)(a) of the 2014 Act) which is required by section 23 of the 2014 Act to prepare a strategic plan.

(2) The purposes of an inspection under this section may be any of those mentioned in section 10I(1) or (1B) or 10J(2) of the National Health Service (Scotland) Act 1978 or section 53(2) of this Act.

(3) In conducting an inspection under this section, SCSWIS and HIS must have regard to any code of practice or practice note issued by the Scottish Ministers for the purpose of—

(a) giving practical and general guidance on matters relating to such an inspection (including, without prejudice to that generality, such matters as access to confidential information and the holding, sharing and destruction of such information),

(b) promoting what appear to them to be desirable practices with regard to such matters.

(4) After conducting an inspection under this section, SCSWIS and HIS must—

(a) prepare a report, and

(b) give any person to whom the report relates an opportunity to comment on the report.

(5) SCSWIS and HIS must—

(a) give the report to the Scottish Ministers,

(b) give copies of the report to any person to whom the report relates, and

(c) make copies of the report available at their offices for inspection by any person at any reasonable time.

(6) In this section—

“independent health care service” has the meaning given by section 10F of the National Health Service (Scotland) Act 1978;

“social services” has the meaning given by section 46.”.

(4) In section 117 (regulations relating to joint inspections), after subsection 5, add—

“(6) In this section, “joint inspection” means an inspection conducted under section 115 or 116A.”.
<Amendments of section 56 of Local Government (Scotland) Act 1973>

In section 56 of the Local Government (Scotland) Act 1973 (arrangements for discharge of functions by local authorities)—

(a) after subsection (7), insert—

“(7A) A local authority is not to make arrangements under this section for the discharge of any of its functions under the Public Bodies (Joint Working) (Scotland) Act 2014 by any other local authority.”, and

(b) after subsection (15), add—

“(16) In this section, “Act” includes an Act of the Scottish Parliament.”.

2nd Groupings of Amendments for Stage 2

This document provides procedural information which will assist in preparing for and following proceedings on the above Bill. The information provided is as follows:

- the list of groupings (that is, the order in which amendments will be debated). Any procedural points relevant to each group are noted;
- a list of any amendments already debated;
- the text of amendments to be debated on the second day of Stage 2 consideration, set out in the order in which they will be debated. THIS LIST DOES NOT REPLACE THE MARSHALLED LIST, WHICH SETS OUT THE AMENDMENTS IN THE ORDER IN WHICH THEY WILL BE DISPOSED OF.

Groupings of amendments

**Strategic plan: preparation considerations**
95, 221, 96, 222, 239

**Strategic planning group**

**Strategic plan: review and replacement**
127, 128, 237, 129, 130

**Consultation regarding proposed decision which may significantly affect service provision**
132, 133, 134

**Integration authority: performance report**
135, 136, 137, 138, 139

**Reports by integration joint monitoring committee**
240

**Review and revisal of integration scheme**
241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252

*Notes on amendments in this group*
Amendment 243 pre-empts amendment 148
Amendment 249 pre-empts amendment 160

**Default power of Scottish Ministers**
253
Directions by the Scottish Ministers

HEALTH AND SPORT COMMITTEE

EXTRACT FROM THE MINUTES

3rd Meeting, 2014 (Session 4)

Tuesday 28 January 2014

Present:
Malcolm Chisholm (Committee Substitute) Bob Doris (Deputy Convener)
Rhoda Grant Colin Keir
Richard Lyle Aileen McLeod
Duncan McNeil (Convener) Nanette Milne
Dennis Robertson (Committee Substitute)

Also present: Alex Neil (Cabinet Secretary for Health and Well-being)

Apologies were received from Gil Paterson, Dr Richard Simpson.

Public Bodies (Joint Working) (Scotland) Bill: The Committee considered the Bill at Stage 2 (Day 2).

The following amendments were disagreed to (by division)—
   222 (For 4, Against 5, Abstentions 0)
   225 (For 4, Against 5, Abstentions 0)
   227 (For 4, Against 5, Abstentions 0)
   228 (For 4, Against 5, Abstentions 0)
   233 (For 4, Against 5, Abstentions 0)
   236 (For 4, Against 5, Abstentions 0).

The following amendments were pre-empted: 148 and 160.

The following amendments were not moved: 221, 97A, 223, 224, 226, 229, 230, 231, 232, 234, 235, 237, 238, 201 and 239

The following provisions were agreed to without amendment: sections 38, 46, 47, 50 and 53 and the long title.
The following provisions were agreed to as amended: sections 24, 25, 26, 27, 29, 30, 31, 32, 33, 34, 35, 36, 37, 39, 40, 41, 42, 43, 44, 45, 48, 49, 51 and 52.

The Committee completed Stage 2 consideration of the Bill.
Scottish Parliament

Health and Sport Committee

Tuesday 28 January 2014

[The Convener opened the meeting at 09:45]

Public Bodies (Joint Working) (Scotland) Bill: Stage 2

The Convener (Duncan McNeil): Good morning and welcome to the third meeting in 2014 of the Health and Sport Committee. As usual, I ask everyone in the room to switch off mobile phones, BlackBerrys and other wireless devices, although I ask you to note that some members and officials are using tablet devices instead of hard copies of their papers.

I have apologies from Richard Simpson and Gil Paterson. Malcolm Chisholm joins us once again as the Labour substitute, and I also welcome Dennis Robertson as the Scottish National Party’s substitute.

The first item on the agenda is the second day of stage 2 of the Public Bodies (Joint Working) (Scotland) Bill. Members should have copies of the bill, the marshalled list of amendments and the groupings. We will pick up where we left off last week, which was at the end of section 23. I am confident that we can get to the end of stage 2 today. I welcome back to the committee the Cabinet Secretary for Health and Wellbeing, Alex Neil, and his officials.

Section 24—Considerations in preparing strategic plan

The Convener: Amendment 95, in the name of the cabinet secretary, is grouped with amendments 221, 96, 222 and 239.

The Cabinet Secretary for Health and Wellbeing (Alex Neil): Good morning.

Section 24 of the bill requires the integration authorities to take account of the integration delivery principles and the national health and wellbeing outcomes in preparing a strategic plan. Rhoda Grant’s amendment 221 seeks to add community planning outcomes to that list.

As I stated to the committee on day 1 of stage 2, the Government intends to introduce a community empowerment and renewal bill that will include integration authorities, along with health boards, local authorities and others, as bodies that must participate in community planning. A requirement to include integration authorities in community planning itself is a much stronger way to ensure the proper place of integrated health and social care in community planning than referring to community planning outcomes, which do not at present exist in law.

Rhoda Grant inquired on day 1 about the timing of the proposed community empowerment and renewal bill with regard to the bill that is before us today. The Government intends to introduce the community empowerment bill in the current parliamentary year. The exact timetable for the bill’s progress after its introduction will of course be a matter for the parliamentary authorities, but the Government intends that the requirements should apply to community planning partners from approximately April 2015.

That timescale fits well with our timescale for integration, as health boards and local authorities are expected to establish their integration arrangements from April 2015. I therefore invite Rhoda Grant—as I did previously—to agree that the Scottish Government’s position with regard to community planning and integration is stronger than her proposal, and I invite her not to move amendment 221.

I turn to amendments 95 and 96, which are in my name. The bill as introduced does not place any requirement on the integration authorities to take account of other strategic plans. That could allow issues to arise in relation to the cumulative effect of the use of services, facilities and resources that are used in common by more than one integration authority. Amendment 96 ensures that each integration authority, in preparing a strategic plan, takes account of any other strategic plan that has been or is being prepared where that plan sets out or proposes to set out arrangements for the use of services, facilities or resources that are used by another integration authority. Amendment 95 makes a drafting change to clarify that section 24 applies to the initial strategic plan and to subsequent strategic plans.

On amendments 222 and 239, in the name of Malcolm Chisholm, sections 24, 26 and 27 together provide robust mechanisms for the preparation of a strategic plan and for involving and consulting people in that. The persons who are to be involved will be set out in regulations and their views must be taken into account. There is therefore no need for additional provisions that would require the integration authority to take account of the views of specific individuals.

I, too, consider that professional oversight of the planning and delivery of integrated services is essential. The bill, regulations and guidance provide for that. Integration authorities will be required to put in place clinical and care governance arrangements via the integration scheme to monitor and improve the quality of care that is provided to service users. I intend to require the involvement of health and social care...
professionals in integration joint boards, strategic planning groups, localities and integration joint monitoring committees, ensuring a strong voice for health and social care professionals at all stages of integration. I believe that that goes beyond the effect of Mr Chisholm’s amendment.

I move amendment 95, and ask Rhoda Grant not to move amendment 221 and Malcolm Chisholm not to move amendments 222 and 239.

Rhoda Grant (Highlands and Islands) (Lab): I am grateful to the cabinet secretary for giving us that information and ensuring that there is no gap between the integration boards being set up and their involvement in community planning. Because of that, I will not move amendment 221.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I listened carefully to what the cabinet secretary said, but it does not seem to me that the proposed regulations that he referred to, or, indeed, the policy statements that he has issued, cover what has been included in the bill. For example, in the policy statement about the integration joint board, the Scottish Government proposed only that the clinical director of the national health service board would be afforded a non-voting seat on the integration joint board. Similarly, the associate medical director/clinical director is to be on the joint monitoring committee, and consultations on strategic planning, the integration plan and membership of the strategic planning group will include, vaguely, health and social care professionals “who operate within the boundaries of the proposed integration authority”.

As members will understand, most clinical directors with NHS boards are doctors, but the largest group of NHS clinicians who will be delivering care within the integrated arrangements will be nurses. Nurses and allied health professionals are mentioned explicitly just once in the Scottish Government’s set of proposed regulations in the policy statement on localities. Once again, it seems that the significant strategic expertise and experience of senior clinical leads outwith the medical profession has been ignored. Each of the professions has expertise to share with those making difficult decisions. Each lead officer remains accountable for care that is delivered by their profession.

It seems to me that the bill does not say nearly enough about care quality governance, and focuses more on the pillars of general corporate governance in the new structures. Amendment 222 is intended to ensure that integration authorities are under a duty to seek, record and have due regard to the advice of professional leads from the parent bodies, who are experts at the issue that is at the heart of the reform agenda, which is the delivery of quality care services. It does not, of course, bind the integration authority to act on any professional advice that is given.

Although we appreciate that many partnerships will want to make such arrangements, even if such a duty is not included in the bill, primary legislation should set out the minimum expectations of any partnership, whether that partnership is functioning well or otherwise. The amendment will provide a minimum guarantee that those who are able to make professional judgments on the quality of care can support innovation and development, improve decision making and raise concerns where appropriate.

As recent cases have highlighted, when things go wrong in health or social care services, the consequences for individuals and families can be catastrophic. Regulated professionals such as nurses are, rightly, accountable for the care that they deliver to their clients and patients, as well as to their regulatory bodies, which can strip them of their career if they are found to fall short. That accountability holds from front-line practitioners to professional leads with strategic and governance responsibilities. Professionals take that accountability seriously, but structures must support them to discharge their responsibilities meaningfully. I do not, therefore, accept the cabinet secretary’s view that his proposals go beyond what the amendment proposes—I would just say gently that saying that his amendment is better than someone else’s amendment seems to be a recurring technique of the cabinet secretary in our discussions in committee. In my view, his proposals do not go nearly far enough in recognising the important place and contribution of all healthcare professionals, not just doctors.

It is important to mention specifically nurses and allied health professionals, as well as doctors and the chief social work officer. It is very important to name those key individuals in the bill. I shall certainly move amendment 222.

Alex Neil: I thank Rhoda Grant for saying that she will not move amendment 221. I reiterate the absolute undertaking on the Government’s behalf that we will ensure that the community empowerment and renewal bill is synchronised with the Public Bodies (Joint Working) (Scotland) Bill.

As for Malcolm Chisholm’s points, I say at the risk of being accused of using a repetitive technique in the committee that we are all trying to get to the same place, albeit by slightly different routes. As I made clear to the committee on day 1 of stage 2, all of what Mr Chisholm proposes will be provided for in secondary legislation and guidance. There is no dispute in principle about the need to have such professionals round the table and heavily involved at every level—board,
locality and strategic commissioning levels and so on. The only issue is about whether to put an exhaustive list in the bill.

I will give some perspective. In the medical world, the composition of any area clinical forum for any health board involves four broad categories of representation of clinicians. They are the acute sector—doctors, consultants, junior doctors and so on; general practitioners; the nursing profession; and the 11 allied health professions. It could be argued that, in theory, all 11 of those professions should be represented on a board. They should be included as is appropriate to the board level and the locality, but not all of them would necessarily be included in all structures at all times, as that would be a gross waste of manpower, of the professionals' time and of resources.

Our approach is to state a minimum representation at the board, so the clinical director must attend the board, as must the chief social work officer. However, that is not exclusive. If the partnership requires other people to attend, the partnership will have the power to force them to attend on a one-off basis or permanently. Similarly, the partnership will have a duty to involve all the relevant professionals at every level of decision making.

Mr Chisholm’s one point that is worthy of further consideration is about whether the chief nursing officer in each board area should be included in the list that is in the bill. I am prepared to consider a stage 3 amendment to that effect. I accept his point, as 43 per cent of health service employees in Scotland are nurses and midwives.

On the other points, we are going much further than Mr Chisholm proposes, but we will do so through secondary legislation and guidance rather than through providing an exhaustive list in the bill, which would also carry the danger that primary legislation would be required to add anyone who was missed out or to change the provisions if professional structures changed, and primary legislation might be difficult to achieve. It is much more appropriate, flexible and comprehensive to proceed in the way that we propose.

Amendment 95 agreed to.
Amendment 221 not moved.
Amendment 96 moved—[Alex Neil]—and agreed to.

Section 24, as amended, agreed to.

After section 24
Amendment 222 moved—[Malcolm Chisholm].
Amendments 101 and 102 moved—[Alex Neil]—and agreed to.

Amendment 227 moved—[Rhoda Grant].

The Convener: The question is, that amendment 227 be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

For
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeil, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

Against
Campbell, Aileen (Clydesdale) (SNP)
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
Robertson, Dennis (Aberdeen West) (SNP)

The Convener: The result of the division is: For 4, Against 5, Abstentions 0.

Amendment 227 disagreed to.

Amendment 228 moved—[Rhoda Grant].

The Convener: The question is, that amendment 228 be agreed to. Are we agreed?

Members: No.

For
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeil, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

Against
Campbell, Aileen (Clydesdale) (SNP)
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
Robertson, Dennis (Aberdeen West) (SNP)

The Convener: The result of the division is: For 4, Against 5, Abstentions 0.

Amendment 228 disagreed to.

Amendments 229 and 230 not moved.

Amendment 103 moved—[Alex Neil]—and agreed to.

Amendment 231 not moved.

Amendment 104 moved—[Alex Neil]—and agreed to.

Section 25, as amended, agreed to.

Section 26—Establishment of consultation group

The Convener: Amendment 105, in the name of the cabinet secretary, is grouped with amendments 106 to 108, 110, 233, 112 to 115, 234, 117 and 119.

Alex Neil: It is important that strategic planning supports the principles of co-production and joint working. The amendments in the group focus on the operation of the strategic planning group, which has a key role to play in improving outcomes.

Amendment 105 will allow the integration authority to establish a single strategic planning group from the outset of the strategic planning process. The group will continue to play a part in the on-going review and amendment of subsequent strategic plans. That reflects the continual strategic commissioning cycle.

Amendment 106 will change the name of the consultation group so that it will be known instead as the strategic planning group, which more accurately reflects its function.

The integration authority has full responsibility for the strategic planning group and strategic planning process, for which it is accountable. However, it is important that the bill does not unduly restrict the representation of constituent authorities in the membership of the group. Amendments 107, 108 and 110 will allow greater flexibility to the local authority and health board with respect to the number and combination of representatives that they can nominate to represent their interests in the process.

Amendment 233, in the name of Rhoda Grant, seeks to add a requirement that would establish in primary legislation that membership of the strategic planning group must include service users, unpaid carers and non-commercial organisations. I recognise that the aim of the amendment is to provide for a co-production approach. I reassure Rhoda Grant that the bill provides a robust involvement process for strategic planning, and I have set out in the policy statement, in relation to section 26, the Scottish ministers’ intentions to include all those that are noted within amendment 233, and a number of other groups that I believe should be involved—including health and social care professionals—in the membership of the strategic planning group.

I believe that it would be disproportionate to set out in the bill that we should include the groups that are noted in amendment 233, but not to make similar provision for the numerous other people who should, equally, be involved in the strategic planning group. I believe that the proper place to set out the detail of the membership of the strategic planning group is in regulations. I therefore urge Rhoda Grant not to move amendment 233.

Amendment 112 will ensure that the integration authority will oversee the appointment, removal
and replacement of members of the strategic planning group. The constituent authorities will be responsible for nominating members as well as for replacing or removing their nominees if required. The amendment will also ensure that the views of localities are taken into account by requiring the integration authority to identify the most appropriate person to represent each locality on the strategic planning group. Amendment 112 also provides for local flexibility, so that an individual can represent more than one locality, which will ensure that the integration authority’s ability to make decisions is not undermined by any vacancy in representation of localities.

Amendments 113, 114 and 115 are drafting amendments that will make it clear that section 26(4) applies to all integration authorities and reflect the amendment that provides that the consultation group is to be known as the strategic planning group.

Amendment 234, in Rhoda Grant’s name, seeks to introduce an additional requirement on the integration authority in its dealings with the strategic planning group and gives examples of the types of arrangement that the integration authority may decide to make. The level of detail that is proposed is not appropriate for primary legislation, but I sympathise with the desire to ensure that the strategic planning process is truly inclusive and effective. Section 26 already provides for payment of expenses to members of the group, through subsection (4). I assure Rhoda Grant that I will produce extensive guidance on all relevant matters relating to the strategic planning group. I therefore urge her not to move amendment 234.

Amendments 117 and 119 make it clear that it is the strategic planning group’s views on the strategic planning proposals and the draft strategic plan that are sought.

I invite Rhoda Grant not to move amendments 233 and 234.

I move amendment 105.

Rhoda Grant: Amendment 233 would ensure that carers and their representatives would be included in the strategic planning group. That follows the principles of co-production at every level. What is missing from the bill is the involvement of users and carers, which should run through the bill like letters in a stick of rock. That is the only way we can genuinely ensure that people are involved in designing and organising their care. People need to participate, and care should be designed on their behalf to allow them to go about their business in a normal way.

There is something missing from the bill. I welcome the involvement of staff and the people who deliver care, but the recipients of care are much more important. The bill’s having something at its core to ensure that users and carers are involved in the design of services, rather than services being things that are done to them, would be worthwhile. I look forward to some commitments on that from the cabinet secretary when he winds up.

On amendment 234, I welcome what the cabinet secretary said about considering guidance to take away the barriers. However, cost is not the only barrier. Obviously, expenses need to be paid, but there are many other barriers, especially to people with disabilities. For example, is the venue where meetings are held accessible? If someone has a sight problem, will they have delivered to them papers that will allow them to participate? Will carers get assistance with the person that they are caring for to enable the carer to attend meetings? The bill may not be the place to address those barriers, but I hope that, in writing guidance, the cabinet secretary will be clear that the person who is participating needs to be consulted about the barriers that they face, and that steps must be taken to ensure their full participation. Only then will we see real participation.

10:15

The Convener: As no other members wish to comment, I ask the cabinet secretary to wind up.

Alex Neil: We are absolutely on the same page about what we are trying to achieve. Our only difference is on what should be in the bill and what should be in secondary legislation, guidance and regulations. I agree 110 per cent with Rhoda Grant that the whole philosophy underlying the bill must be co-production and that service users are people who we work with and not people who we deliver to. They should not be seen as recipients in the sense that they will do what they are told. The whole point is co-production and to have a completely different philosophy from what has gone before. We are absolutely as one on that.

I agree with Rhoda Grant that concept of the role of service users should permeate the bill like letters in a stick of rock. I argue that the bill does that. For example, it repeatedly lists, at each stage of engagement and planning, the role of service users and the need to take them with us and for them to be involved in design of services. I give her a total commitment that the regulations or the secondary legislation will reflect absolutely that philosophy. Similarly, on barriers, whether they are faced by disabled people, by people who have learning disabilities or by ethnic minority or other minority groups, the whole point of the bill is to make it as user-friendly as possible and geared to users’ needs—not as defined by the service providers, but as agreed between the service providers and users. I give Rhoda Grant a total
commitment that we will not only reflect in the bill the importance of removing those barriers, but will take action to remove those barriers or to prevent their being erected in the first place, where appropriate, in all the secondary legislation, regulations and guidance.

Amendment 105 agreed to.

Amendments 106 to 111 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 232, in the name of Bob Doris, was debated with amendment 210 on day 1 of our stage 2 deliberations. Does Bob Doris wish to move or not move amendment 232?

Bob Doris (Glasgow) (SNP): Given the reassurances that were given on day 1, I will not move amendment 232.

Amendment 232 not moved.

Amendment 233 moved—[Rhoda Grant].

The Convener: The question is, that amendment 233 be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

For
Chisholm, Malcolm (Edinburgh Northern and Leith) (Lab)
Grant, Rhoda (Highlands and Islands) (Lab)
McNeil, Duncan (Greenock and Inverclyde) (Lab)
Milne, Nanette (North East Scotland) (Con)

Against
Campbell, Aileen (Clydesdale) (SNP)
Doris, Bob (Glasgow) (SNP)
Keir, Colin (Edinburgh Western) (SNP)
Lyle, Richard (Central Scotland) (SNP)
Robertson, Dennis (Aberdeen West) (SNP)

The Convener: The result of the division is: For 4, Against 5, Abstentions, 0.

Amendment 236 disagreed to.

Amendment 124 moved—[Alex Neil]—and agreed to.

Section 28—Requirement for agreement to certain strategic plans
Amendment 236 moved—[Nanette Milne].

The Convener: The question is, that amendment 236 be agreed to. Are we agreed?

Members: No.

The Convener: There will be a division.

The Convener: The result of the division is: For 4, Against 5, Abstentions, 0.

Amendment 236 disagreed to.

Amendment 124 moved—[Alex Neil]—and agreed to.

Section 29—Publication of strategic plans
Amendments 125 and 126 moved—[Alex Neil]—and agreed to.

Section 29, as amended, agreed to.

Section 30—Significant decisions outside strategic plan: public involvement

The Convener: Amendment 127, in the name of the cabinet secretary, is grouped with amendments 128, 237, 129 and 130.

Alex Neil: It is my intention that a strategic plan should not necessarily last for a fixed period of three years but will, rather, be subject to continual review and possible amendment. Ensuring that the planning process is a continual cycle should mean that few significant decisions will be made that are not part of that process. However, should such decisions be necessary—such circumstances should be very rare—they may take effect outwith any revision of a plan.

Section 30, as introduced, requires consultation only with service users, and amendment 128 seeks to make it clear that the strategic planning group should also be consulted when a decision is taken under the procedure in section 30, to ensure that the process cannot be used to circumvent the consultative procedure for reviewing strategic plans and to reflect the strategic planning group’s importance.
Amendment 237 in the name of Rhoda Grant would require the integration authority to involve and consult

“non-commercial providers of health care or social care, and ... other relevant bodies who may be affected”

by a significant decision taken outside the strategic plan. Section 32, together with the regulations that I intend to make under section 32(4), will already achieve that purpose for non-commercial providers of health or social care by involving them in locality planning and as members of the strategic planning group. Given that I intend that the regulations under section 32(4) will include third sector providers of health and social care among those who must be involved and consulted in significant decisions about services in a locality, I believe that Rhoda Grant’s amendment 237 is unnecessary so, on that basis, I ask her not to move it.

Strategic plans must be subject to a continuous cycle of analysis, planning, delivering and reviewing. Amendment 129 will introduce a new section that makes it clear that integration authorities must review their strategic plans as often as necessary, or at least every three years and must, if required, prepare a replacement strategy plan. In carrying out such a review, integration authorities must take into account the national health and wellbeing outcomes, the integration delivery principles, and reviews of the strategic planning group that they will be required to establish. Amendment 129 will also require the health board and local authority to provide the integration authority with the necessary information to carry out the review properly.

It is important that amendment 130 will allow for the local authority and the health board—acting jointly—to require a replacement plan where they jointly feel that the strategic plan prohibits their carrying out any of their functions. I do not envisage that such circumstances will arise frequently, given that the health board and local authority will, as members of the strategic planning group, be part of any review and revision of the strategic plan. However, amendment 130 is needed to provide an additional safeguard for circumstances that may arise outwith the strategic planning process in order that local authorities and health boards may effectively deliver their responsibilities.

I ask Rhoda Grant not to move amendment 237.

I move amendment 127.

Rhoda Grant: Amendment 237 would ensure that third sector providers are consulted on significant decisions outside the strategic plan. In many localities, third sector organisations identify need often, and more often than not actually go and meet that need by finding solutions within their communities. They therefore provide a joined-up approach and should be consulted. I mean by third sector organisations a wider selection than just those that are involved in health and social care. I know what the cabinet secretary said about that group, which is why I have included in amendment 237 the reference to “other relevant bodies” that may be affected by a decision.

For example, in my area we have the Badenoch & Strathspey Community Transport Company’s car scheme, which is paid for through community transport scheme funding and which promotes people’s social life by helping them to go shopping, and by providing them with softer social options to promote their independence and wellbeing by getting them to doctors’ appointments and the like. That scheme would not be considered to be involved in health and social care, because it is a transport organisation, but it has identified and meets need within its local community, which could be seen as preventative spending that promotes the wellbeing of the people who live in the area.

There are in our communities huge numbers of such small organisations meeting various needs that are not always under health and social care, but which approach the promotion of people’s wellbeing and independence from a slightly different angle. For that reason, I will press amendment 237, unless the cabinet secretary intends to lodge amendments at stage 3 that will ensure that those groups are involved in locality planning, as I believe they should be. I will wait to hear what the cabinet secretary says in winding up.

Bob Doris: I am supportive of what Rhoda Grant is trying to achieve, but the more I hear about various stakeholder groups wanting to be involved in locality planning, monitoring and other devices, the more minded I am that the right place for what she proposes is secondary legislation or guidance. I wanted to put that on the record. However, I have listened very carefully and am supportive of and sympathetic to Rhoda Grant’s points.

Alex Neil: At the risk of repeating my technique, I would say that we are all on the same page and trying to achieve exactly the same thing. I think that the premise of Rhoda Grant’s amendment 237 is that there is a narrow interpretation of the third sector, whereas we have a wide interpretation that incorporates the kind of organisation to which Rhoda Grant referred and of which I am sure we have many examples in all our constituencies.
I am happy to consider the issue to see whether—either in the bill or in subsequent regulations and other secondary legislation—we need to be clearer about the definition, so that there is no dubiety about the fact that it can incorporate groups such as those to which Rhoda Grant has referred. I am happy to consider that as a possible stage 3 amendment, and to add it to the agenda for discussion at the meeting that we have arranged with members of the committee. The meeting is next week and is open to all members of the committee. I am happy to consider the matter for stage 3, so that there is no dubiety in the bill, or in any subsequent regulations or other secondary legislation.

Amendment 127 agreed to.

Amendment 128 moved—[Alex Neil]—and agreed to.

Amendment 237 not moved.

Section 30, as amended, agreed to.

After section 30

Amendments 129 to 131 moved—[Alex Neil]—and agreed to.

Section 31 agreed to.

Section 32—Carrying out of integration functions: localities

**The Convener:** Amendment 132, in the name of the cabinet secretary, is grouped with amendments 133 and 134.

**Alex Neil:** Section 32 requires that bodies that deliver integrated services involve and consult localities in any decisions that will have a significant impact on their locality. Amendments 132 and 133 extend that duty to the decision-making processes of the integration authority that fall outside the strategic planning cycle. That will ensure the full involvement in all decision-making processes of all those who deliver, support or receive health and social services in a locality.

In its stage 1 report, the committee recommended that we include a provision in section 32 to allow the integration authority to reimburse any necessary expenses and allowances to the participants in locality planning arrangements. I agree with the committee’s recommendation, and amendment 134 gives the integration authority that ability.

I move amendment 132.

**The Convener:** No members wish to speak. I do not expect that the cabinet secretary wishes to say any more.

**Alex Neil:** No—I waive my right, convener.

**The Convener:** I am on page 19 of 48—that is the page that I am on today, cabinet secretary.

Amendment 132 agreed to.

Amendments 133 and 134 moved—[Alex Neil]—and agreed to.

Section 32, as amended, agreed to.

Section 33—Integration authority: performance report

**The Convener:** Amendment 135, in the name of the cabinet secretary, is grouped with amendments 136 to 139.

**Alex Neil:** Amendments 135 and 136 are technical. They ensure that the provisions as originally drafted now relate properly to the amended section 33.

Amendments 137 and 138 strengthen the duties that the bill places on the integration authority, the health board and the local authority with regard to publication of the integration authority’s annual performance report. The amendments introduce a statutory timescale within which the report must be published, ensure that the integration authority has access to the data that it requires and oblige the integration authority to send the performance report to the health board and/or the local authority, as appropriate to the model of integration that is used. That will be essential for the integration authorities to prepare their performance reports effectively and provide a coherent picture of how care and support has been delivered for their communities.

Amendment 139 ensures that the reporting year will be the same for all integration authorities. Performance reports will therefore cover the same time period and be published broadly at the same time to aid comparison and benchmarking.

I move amendment 135.

Amendment 135 agreed to.

Amendments 136 to 139 moved—[Alex Neil]—and agreed to.

Section 33, as amended, agreed to.

After section 33

**The Convener:** Amendment 240, in the name of the cabinet secretary, is in a group on its own.

**Alex Neil:** Amendment 240 strengthens the role of the integration joint monitoring committee by giving it the ability to require information from the statutory partners and write reports on how integrated services are being planned and delivered. The amendment gives the integration joint monitoring committee the ability to make recommendations on how service planning and
delivery should be changed to better deliver the national outcomes. It places the lead agency under a duty to have regard to any reports that the committee publishes and to respond to any recommendation that it makes. The amendment provides appropriate accountability in the lead agency model and gives the integration joint monitoring committee the necessary teeth to do its job of holding the lead agency to account.

I move amendment 240.

Amendment 240 agreed to.

Before section 34

The Convener: Amendment 241, in the name of the cabinet secretary, is grouped with amendments 242 to 252. I point out that, if amendments 243 and 249 are agreed to, I will be unable to call amendments 148 and 160, which are in the group entitled "Integration plan to integration scheme", which we debated on day 1, due to pre-emption.

Alex Neil: The bill as introduced contains no requirement for health boards and local authorities, with stakeholders, to review the integration scheme. We believe that the scheme should be reviewed periodically to ensure that it remains fit for purpose. Amendment 241 requires that integration schemes are reviewed at least every five years and that health boards and local authorities are required to include and consult their stakeholders in the same way as when the scheme was originally developed. Amendment 242 establishes that either the health board or the local authority can trigger a review of the integration scheme, which both parties must then jointly take forward.

Our concern is that, particularly in a lead agency arrangement, if a delegating authority was not content that the lead agency was carrying out its functions to the delegating authority's satisfaction, it could not review the basis of that delegation—the integration scheme—without the lead agency's agreement. That could result in a conflict of interest for the lead agency and an inability for the delegator to properly exercise its statutory accountability over its functions.

Amendment 242 establishes that, should the Scottish ministers amend the regulations that specify other matters that must be included within integration schemes, they can require all integration schemes to be reviewed. For example, if professional advice on clinical and care governance was to change, we would want to ensure that all integration schemes were reviewed and considered by stakeholders locally.

Amendments 243 and 249 are technical amendments that ensure that other relevant provisions in the bill are updated to account for the changes to the review process. In particular, the amendments ensure that the power to vary a scheme under section 34 and the duty to vary a scheme under section 35 may only follow a review of a scheme, which will become a requirement.

Amendments 244 and 247 ensure that constituent authorities are required to notify the Scottish ministers if the detail of certain parts of the integration scheme, as prescribed in regulation under the power noted in section 1(3)(e), are changed. The amendments ensure continued oversight of important areas of agreement between the constituent authorities, such as clinical and care governance arrangements.

Amendment 245 requires that, when constituent authorities wish to make changes to the parts of their integration scheme that they have a statutory obligation to include, they must consult a list of stakeholders as prescribed by the Scottish ministers. The amendment ensures that appropriate stakeholders will be involved in any significant changes to the terms of integration in their area.

Amendment 246 is a technical amendment that ensures that the requirement to seek the Scottish ministers' approval of revised integration schemes properly relates to the provisions in section 34(3).

Amendment 248 requires the constituent authorities to publish a revised integration scheme once it takes effect, which will ensure that the most up-to-date integration schemes are always publicly available.

Amendment 250 is a technical amendment that ensures that provisions relating to new integration schemes as set out in section 35 are applicable to multicouncil integrated arrangements.

Amendment 251 puts it beyond doubt that the bill applies to a new integration scheme that is created under section 35 as it applies to a scheme that is prepared under sections 1 or 2.

Amendment 252 places a requirement on the Scottish ministers to consult the local authority and the health board before putting in place a scheme for the transfer of staff as a consequence of a new integration scheme. The amendment reflects other amendments that were previously discussed by the committee, and responds to requests from health boards and local authorities to ensure that their views are heard in any matter relating to staffing under integration.

I move amendment 241.

Rhoda Grant: With regard to amendment 252, I understand why people are being consulted, but it makes no mention of the staff who are to be transferred or their trade unions. One would assume that transferring staff would require a consultation that involves the staff and their trade
unions as well as the receiving authority and the authority that is losing the staff.

Alex Neil: Rhoda Grant is absolutely right, but those points are already covered in employment law and the national and local negotiating machinery. It would not be appropriate for us to cut across that in this bill—that would require another bill.

Amendment 241 agreed to.

Amendment 242 moved—[Alex Neil]—and agreed to.

Section 34—Revised integration plan

The Convener: Amendment 243, in the name of the cabinet secretary, has already been debated with amendment 241. I remind members that, if amendment 243 is agreed to, I cannot call amendment 148, as a consequence of the pre-emption rule.

Amendment 243 moved—[Alex Neil]—and agreed to.

Amendments 149 to 157, 244 to 246, 158, 247, 159 and 248 moved—[Alex Neil]—and agreed to.

Section 34, as amended, agreed to.

Section 35—New integration plan

10:45

The Convener: Amendment 249, in the name of the cabinet secretary, has already been debated with amendment 241. I remind members that, under the pre-emption rule, if amendment 249 is agreed to, I cannot call amendment 160.

Amendment 249 moved—[Alex Neil]—and agreed to.

Amendments 161, 250, 162 and 251 moved—[Alex Neil]—and agreed to.

Section 35, as amended, agreed to.

Section 36—Power to make provision in consequence of new integration plan

Amendments 163 to 165 and 252 moved—[Alex Neil]—and agreed to.

Section 36, as amended, agreed to.

Section 37—Information-sharing

Amendments 166 to 170 moved—[Alex Neil]—and agreed to.

Section 37, as amended, agreed to.

Section 38 agreed to.

Section 39—Default power of Scottish Ministers

The Convener: Amendment 253, in the name of the cabinet secretary, is in a group on its own.

Alex Neil: This technical amendment seeks to ensure that section 39 properly relates to the now amended section 7 by enabling the Scottish ministers, where a modified scheme is to be submitted, to use their default powers if the modified scheme is not submitted by the date specified under section 7(4)(c).

I move amendment 253.

Amendment 253 agreed to.

Amendment 171 moved—[Alex Neil]—and agreed to.

Section 39, as amended, agreed to.

Section 40—Directions

Amendments 172 to 176 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 254, in the name of the cabinet secretary, is in a group on its own.

Alex Neil: Section 40 enables the Scottish ministers to give directions to a health board, local authority or integration joint board on the carrying out of functions under integration. The new section that has been inserted after section 22 provides that the Scottish ministers can make an order only to enable the integration joint board to carry out functions directly rather than arranging for service delivery via direction to the health board and local authority on receipt of a written application from the health board and local authority. The Scottish ministers cannot make such an order without the prior written application of the health board and local authority, and the amendment also ensures that ministers cannot direct the health board and local authority to make such a written application.

I move amendment 254.

Amendment 254 agreed to.

Section 40, as amended, agreed to.

Section 41—Guidance

The Convener: Amendment 255, in the name of the cabinet secretary, is grouped with amendments 256 and 257.

Alex Neil: Section 41 requires each local authority, health board and integration joint board to have regard to any guidance that is issued by the Scottish ministers on their functions under or in relation to this legislation. As it stands, the bill does not require the integration joint monitoring committees to have regard to such guidance. Amendment 257 seeks to require integration joint
monitoring committees to have regard to any guidance that is issued by the Scottish ministers on their functions under or in relation to this legislation and, in doing so, brings those committees into line with the requirements for health boards, local authorities and integration joint boards. That will provide for a more robust framework that will apply equally in a lead agency arrangement.

Amendments 255 and 256 are technical amendments that are linked to amendment 257 and simply pave the way for the list in new section 41(2) as inserted by amendment 257.

I move amendment 255.

Amendment 255 agreed to.

Amendments 256 and 257 moved—[Alex Neil]—and agreed to.

Section 41, as amended, agreed to.

After section 41

The Convener: Amendment 258, in the name of the cabinet secretary, is grouped with amendments 259 and 260.

Alex Neil: In the policy memorandum accompanying the bill, the Scottish ministers committed to ensuring that the inspection and scrutiny of integrated health and social care services were provided for. Social Care and Social Work Improvement Scotland was established to inspect social care and social work services, while Healthcare Improvement Scotland was established to inspect healthcare services. Amendments 258 and 259 seek to provide for both organisations respectively to inspect services provided to? in pursuance of an integration scheme, regardless of the delivery body.

Furthermore, the amendments seek to expand the purpose and the matters to be considered when inspecting such services. It is important that inspections can account for and reflect the aims of integration and provide appropriate improvement advice, reports and recommendations in that respect. The amendments seek to ensure that SCSWIS and HIS have that ability.

Amendment 260 provides for HIS and SCSWIS to jointly inspect health and social care services delivered by health boards, local authorities and integration joint boards in pursuance of an integration scheme.

Importantly, in carrying out joint inspections, SCSWIS and HIS are to adhere to current codes of practice that are issued by the Scottish ministers, and may carry out joint inspections for any of the purposes that are provided for by section 10(1B) or 10J of the National Health Service (Scotland) Act 1978, or section 53(2) of the Public Services Reform (Scotland) Act 2010. High standards and levels of scrutiny are thereby applicable to joint inspections of integrated services.

Scrutiny of integrated services is key to achieving the aim of improving the quality, consistency and safety of services for service users. Enabling joint inspections without recourse to the Scottish ministers reflects the need for a new approach to inspection and scrutiny to support, develop and redesign services to deliver the aim of integration of improving outcomes for users of health and social care services.

I move amendment 258.

Rhoda Grant: I have concerns about the practicality of the proposal. It seems quite messy, with two organisations that could come in. Will they have to work together, especially with regard to services that are jointly delivered by health and social care? It seems to me that the people who provide inspections could conduct different visits if they were not obligated to work together and carry out joint inspections.

Alex Neil: Actually, they already engage in joint working very effectively, for obvious reasons. However, at the moment, they need my explicit permission if they are to carry out a joint inspection. I do not believe that that is appropriate, particularly when we are talking about an integrated agenda. I foresee a much closer working relationship in future between HIS and SCSWIS—the Care Inspectorate—with regard to inspection.

The arrangement pretty much reflects what happens at the moment, but the degree of approval at ministerial level is no longer appropriate, given that we are to move forward with the integration of service provision.

The Convener: Who would the reports be provided to? If there were joint inspection reports, what would the formal structure be? How independent would the reports be?

Alex Neil: The bodies are entirely independent, in the sense that, for example, they decide, within their statutory duties, which organisations to inspect, what the remit of the inspection is, what the timing of the inspection is and whether it is an announced or an unannounced inspection. They report to the body and, simultaneously, to the Scottish ministers because if the conclusions and recommendations in any inspection report require action on the part of the Scottish ministers, we have to take that on board.

All the reports are published—they are perfectly open and transparent—and they can be commissioned. For example, an NHS employee who is whistleblowing about alleged malpractice in
the health board can write to HIS and ask it to undertake an investigation and an inspection of the point that they are making. Anyone can ask for that, and I can mandate it.

The Convener: I am taking advantage of my position as convener, as I should not be continuing to ask questions, but is that matter something that can be included in our informal discussion? I am not sure how it plays into the situation with regard to HIS, SCSWIS or, indeed, local government. There seems to be a lot going on there.

11:00

Alex Neil: If we have time, prior to the discussion, we will try to provide a briefing about the existing arrangements, because this largely reflects—

The Convener: I appreciate that. I am not supposed to be asking questions at this point, of course.

Alex Neil: I am here to serve and please.

The Convener: You are here to put a smile on my face.

Bob Doris: Let us move on quickly, convener.

The Convener: Yes—quickly.

Amendment 258 agreed to.

Amendments 259 and 260 moved—[Alex Neil]—and agreed to.

The Convener: Amendment 261, in the name of the cabinet secretary, is in a group on its own.

Alex Neil: The amendments in the group relate to the Common Services Agency for the Scottish health service. Section 44 sets out the ability of the CSA—or NHS National Services Scotland as it is now more commonly known—to provide goods and services to Scottish public bodies. Amendment 262 allows for the CSA to provide services to publicly owned companies or bodies and in particular any corporations that health boards or local authorities own or which are a joint venture between them.

Section 44(3) provides a list of examples of the types of services that the CSA may provide to other bodies. Amendment 263 extends the list in section 44(3) to make clearer and put beyond doubt the types of services that the CSA may provide.

Amendment 264 allows for the Scottish ministers, by order, to amend the list in section 44(3) to make clearer and put beyond doubt the types of services that the CSA may provide.

Amendment 265 allows for the Scottish ministers, by order, to amend the list in section 44(3) to make clearer and put beyond doubt the types of services that the CSA may provide.

Section 44(3) provides a list of examples of the types of services that the CSA may provide to other bodies. Amendment 263 extends the list in section 44(3) to make clearer and put beyond doubt the types of services that the CSA may provide.

Amendment 264 allows for the Scottish ministers, by order, to amend the list in section 44(4A) to make clearer and put beyond doubt the types of services that the CSA may provide.

Amendment 271 provides that an order made under new section 44(4A) is subject to the affirmative procedure. Given the nature of the order-making power, the affirmative procedure is considered appropriate.
Amendments 265 and 266 seek to clarify and remove any potentially confusing duplication between section 44 of the bill and existing provisions in the National Health Service (Scotland) Act 1978 as to the bodies with which the CSA may enter into arrangements for the provision of services. The amendments provide for a clearer definition of “Scottish public authority”, making clear that section 44 does not apply to health bodies with which the CSA is already able to enter into arrangements.

Amendment 267 inserts an updated definition of one of the groups of Scottish public authorities with which the CSA can enter into arrangements. The amendment provides for the definition to be linked to that in schedule 5 to the Public Services Reform (Scotland) Act 2010. That will allow the CSA to provide services to a wider group of public authorities, including certain publicly owned companies. Should the Scottish ministers amend schedule 5, that would also alter the bodies to which the CSA could provide services.

Amendments 268 and 273 make amendments to the National Health Service (Scotland) Act 1978 and the Patient Rights (Scotland) Act 2011 in consequence of section 44.

Amendment 269 seeks to address an anomaly in the National Health Service (Residual Liabilities) Act 1996 concerning the transfer of liabilities if the CSA is dissolved. Before 2010, the CSA could be dissolved only by primary legislation. That would have addressed the need to transfer existing liabilities at the point of dissolution. Since 2010, it has been possible to dissolve the CSA using a public services reform order and, therefore, bodies entering into long-term contractual arrangements with the CSA have less protection regarding debts and obligations owed by the CSA than other NHS Scotland bodies have. The amendment addresses that anomaly and means that bodies entering into contracts with the CSA are offered the same protection as is given when contracting with other NHS bodies.

Amendment 274 revokes the Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) Order 2013 as a consequence of section 44.

I move amendment 262.

Amendment 262 agreed to.

Amendments 263 to 267 moved—[Alex Neil]—and agreed to.

Section 44, as amended, agreed to.

After section 44

Amendments 268 and 269 moved—[Alex Neil]—and agreed to.
amendment 147 on day 1. Is the amendment moved or not moved?

Malcolm Chisholm: I think that my amendment falls because the previous amendment was withdrawn.

The Convener: Not according to my script. Are you moving or not moving?

Malcolm Chisholm: It does not make sense to move the amendment.

The Convener: Okay.

Amendment 201 not moved.

Amendment 239 not moved.

Amendment 271 moved—[Alex Neil]—and agreed to.

Section 49, as amended, agreed to.

Section 50 agreed to.

Section 51—Repeals

The Convener: Amendment 272, in the name of the cabinet secretary, is in a group on its own.

Alex Neil: Section 5A of the Social Work (Scotland) Act 1968 makes provision for the preparation by local authorities of community care plans that cover adult community services. I understand that the requirement has not been fully implemented, and has largely fallen out of use. Community care plans are, in any case, inconsistent with the requirements of the bill for integrated planning of adult health and social services.

Amendment 272 repeals section 5A of the 1968 act and puts beyond doubt that community care plans should no longer be prepared. Indeed, the requirement in the bill for integration authorities to prepare a strategic plan for the area of the local authority will provide for a plan for adult community services—health services and social care services—rendering section 5A redundant.

I move amendment 272.

Amendment 272 agreed to.

Amendments 273 and 274 moved—[Alex Neil]—and agreed to.

Section 51, as amended, agreed to.

Section 52—Commencement

The Convener: Amendment 275, in the name of the cabinet secretary, is in a group on its own.

11:15

Alex Neil: Section 52 is concerned with the commencement of provisions in the bill. Amendment 275 will enable early commencement of sections 1(3) to 1(7), 5, 37 and 41. The Scottish ministers have expressed their wish to enable and support effective progress of integration of health and social care.

Before local authorities and health boards can begin to act in accordance with the requirements of the bill, the Scottish ministers require to make subordinate legislation, which will operate alongside the provisions of the bill to establish the framework for integration.

Amendment 275 will bring into force certain additional provisions on the day following royal assent. Those provisions relate to the requirements of an integration scheme, functions of health boards and local authorities that must be delegated, and the establishment of the national health and wellbeing outcomes that underpin the framework for integration and must be taken into account when preparing an integration scheme.

I move amendment 275.

Malcolm Chisholm: When I moved one of my amendments earlier, I raised the issue that health boards and local authorities might not be able to get on with their integration schemes because they were waiting for regulations about what they were allowed to include in them. What are the cabinet secretary’s intentions in respect of introducing regulations, so that health boards and local authorities know what they are able to include in their integration schemes?

Alex Neil: That is a fair question. First, we are not waiting for the passage of the bill before we start any work on the subsequent secondary legislation or on regulation and guidance. Pretty well all local authority areas, with one or two exceptions, have already established partnership arrangements and, in most cases, joint shadow boards for integration. West Lothian has been doing that for quite a few years and Highland, which has been doing it for less time, uses an integrated model. My message to local authorities is that there is no reason why they cannot proceed as quickly as possible, operating under existing legislation, until we finally pass all the secondary legislation and issue all the relevant guidance and regulation.

Having said that, we are conscious of the need for there to be clarity on a range of issues as soon as possible. We are also conscious of the need to have appropriate consultation before introducing secondary legislation, regulation and guidance. Amendment 275 will allow us, from the day after royal assent, not only to make a start on the statutory implementation of the bill but to get moving on the necessary consultation on secondary legislation and everything that flows from that.
We have well-established groups, including a ministerial strategy group, which will continue to work with all the key stakeholders at national level. I chair that group and Michael Matheson is the deputy chair. That group will continue. Although our discussions are at a strategic level, we very much look at implementation and the group will move from working on what we want to do with the bill to the implementation of the bill.

A series of other joint groups involving all the stakeholders is looking at specific areas of activity such as funding, accountability, governance and so on. A lot of work is already going on. We have the infrastructure to move that along very quickly in terms of the consultative bodies and the strategy group. I believe that we will be able to bring forward the secondary legislation, albeit that it will be a substantial piece of work, very timeously indeed.

Amendment 275 agreed to.

Section 52, as amended, agreed to.

Section 53 agreed to.

Long title agreed to.

The Convener: That ends stage 2 consideration of the bill.

Alex Neil: I want to record my gratitude to the committee for getting through so much work in two sessions. I thank you, convener, and the committee members. Your co-operation is much appreciated.

The Convener: Thank you, cabinet secretary.

Members should note that the bill will now be reprinted as amended. The Parliament has not yet decided when stage 3 will take place, but members can lodge stage 3 amendments at any time with the legislation team. Members will be informed of the deadline for amendments once it has been determined.

Schedule—Enactments conferring on local authorities functions which may be delegated
Public Bodies (Joint Working) (Scotland) Bill  
[AS AMENDED AT STAGE 2]

An Act of the Scottish Parliament to make provision in relation to the carrying out of functions of local authorities and Health Boards; to make further provision about certain functions of public bodies; to make further provision in relation to certain functions under the National Health Service (Scotland) Act 1978; and for connected purposes.

PART 1

FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration schemes

1 Integration schemes: same local authority and Health Board area

(1) Subsection (2) applies where the area of a local authority is the same as the area of a Health Board.

(2) The local authority and the Health Board must jointly prepare an integration scheme for the area of the local authority.

(3) An integration scheme is a scheme setting out—

(a) which integration model mentioned in subsection (4) is to apply,

(b) the functions that are to be delegated in accordance with that model,

(c) where functions are to be delegated in accordance with the model mentioned in subsection (4)(b), (c) or (d), the functions of the person to whom functions are to be delegated which are to be carried out in conjunction with the delegated functions,

(ca) where subsection (5A) applies, a method of determining amounts to be made available by the Health Board in respect of functions that are to be delegated by the Health Board,

(d) where subsection (5A) does not apply (or where it applies but the Health Board deems it not to apply), a method of determining payments that are to be made in respect of a delegated function by the person delegating the function to the person to whom the function is delegated,

(e) prescribed information about such other matters as may be prescribed.

(4) The integration models are—
Public Bodies (Joint Working) (Scotland) Bill
Part 1—Functions of local authorities and Health Boards

(a) delegation of functions by the local authority to a body corporate that is to be established by order under section 9 (an “integration joint board”) and delegation of functions by the Health Board to the integration joint board,

(b) delegation of functions by the local authority to the Health Board,

(c) delegation of functions by the Health Board to the local authority,

(d) delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

(4A) A local authority may delegate a function under an integration scheme only if the function is conferred by an enactment listed in the schedule.

(4B) A Health Board may delegate a function under an integration scheme only if the function is prescribed.

(4C) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in the schedule local authorities must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (b) is to apply under the scheme.

(4D) The Scottish Ministers may by regulations prescribe functions of Health Boards which Health Boards must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (c) is to apply under the scheme.

(4E) If the integration model mentioned in subsection (4)(d) is to apply under an integration scheme either—

(a) the local authority must delegate the functions prescribed under subsection (4C) so far as the functions are exercisable in relation to persons of at least 18 years of age, or

(b) the Health Board must delegate the functions prescribed under subsection (4D) so far as the functions are exercisable in relation to persons of at least 18 years of age.

(4F) The Scottish Ministers may by regulations prescribe functions of Health Boards that a Health Board—

(a) must delegate under an integration scheme other than in prescribed circumstances,

(b) may not delegate under an integration scheme in prescribed circumstances.

(4G) The Scottish Ministers may by regulations prescribe which of the functions conferred by enactments listed in the schedule local authorities may not delegate in prescribed circumstances.

(4H) The Scottish Ministers may by regulations remove an enactment from the schedule.

(5) A function may not be set out under subsection (3)(c) if it is a function which may not be delegated under an integration scheme.

(5A) This subsection applies where functions that a Health Board proposes to delegate under an integration scheme—

(a) are carried out in a hospital in the area of the Health Board, and

(b) are provided for the areas of two or more local authorities.
(7) In this section, “Health Board” means a Health Board constituted under section 2(1)(a) of the National Health Service (Scotland) Act 1978 (c.29).

2 Integration schemes: two or more local authorities in Health Board area

(1) This section applies where the areas of two or more local authorities fall within the area of a Health Board.

(2) Each local authority and the Health Board must comply with subsection (3) or (4).

(3) Each local authority and the Health Board must jointly prepare an integration scheme for the area of the local authority.

(4) Two or more local authorities and the Health Board must jointly prepare an integration scheme for the areas of those local authorities.

(4A) For the purposes of subsection (4), if the local authorities and the Health Board decide that the integration model mentioned in paragraph (c) or (d) of section 1(4) is to apply—

(a) functions are to be delegated under those models to only one of the local authorities,

(b) the authorities and the Health Board must set out in the integration scheme which local authority the functions are to be delegated to (the “lead authority”),

(c) paragraph (c) of section 1(4) applies as if for the words “to the local authority” there were substituted the words “and the local authority or authorities to the lead authority”, and

(d) paragraph (d) of section 1(4) applies as if for the words from “to”, where it first occurs, to “local” there were substituted “or authorities to the Health Board and delegation of functions by the Health Board and the local authority or authorities to the lead”.

(5) In preparing an integration scheme under subsection (3) or (4), a local authority must take into account—

(a) any other integration scheme that has been, or is being, prepared in relation to the area of the same Health Board, and

(b) the likely effect on the Health Board of both or all the schemes prepared under this section.

3 Considerations in preparing integration scheme

(1) This section applies where a local authority and a Health Board are preparing an integration scheme.

(2) The local authority and the Health Board must have regard to—

(a) the integration planning principles (see section 4), and

(b) the national health and wellbeing outcomes (see section 5).

4 Integration planning principles

(1) The integration planning principles are—
Part 1—Functions of local authorities and Health Boards

(a) that the main purpose of services which are provided in pursuance of functions which are delegated under an integration scheme is to improve the wellbeing of service-users,

(b) that, in so far as consistent with the main purpose, those services should be provided in a way which, so far as possible—
   (i) is integrated from the point of view of service-users,
   (ii) takes account of the particular needs of different service-users,
   (iii) takes account of the particular needs of service-users in different parts of the area in which the service is being provided,
   (iiia) takes account of the dignity of service-users,
   (iiib) takes account of the participation by service-users in the community in which service-users live,
   (iiic) protects and improves the safety of service-users,
   (iid) improves the quality of the service,
   (iv) is planned and led locally in a way which is engaged with the community (including in particular service-users, those who look after service-users and those who are involved in the provision of health or social care),
   (v) best anticipates needs and prevents them arising, and
   (vi) makes the best use of the available facilities, people and other resources.

(2) In subsection (1), “service-users” means persons to whom or in relation to whom the services are provided.

5 Power to prescribe national outcomes

(1) The Scottish Ministers may by regulations prescribe outcomes in relation to health and wellbeing.

(2) Such outcomes are to be known as “the national health and wellbeing outcomes”.

(3) Before making regulations under subsection (1), the Scottish Ministers must consult—
   (a) each local authority,
   (b) each Health Board,
   (c) each integration joint board at the time established,
   (d) in respect of each group mentioned in subsection (4), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(4) The groups mentioned in subsection (3)(d) are—
   (a) health professionals,
   (b) users of health care,
   (c) carers of users of health care,
   (d) commercial providers of health care,
   (e) non-commercial providers of health care,
   (f) social care professionals,
(g) users of social care,
(h) carers of users of social care,
(i) commercial providers of social care,
(j) non-commercial providers of social care.

6 Consultation

(1) This section applies where a local authority and a Health Board are required by section 1(2) or 2(2) to prepare an integration scheme.

(2) Before submitting the integration scheme for approval under section 7, the local authority and the Health Board must jointly consult—

(a) such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed, and

(b) such other persons as the local authority and the Health Board think fit.

(3) In finalising the integration scheme, the local authority and the Health Board must take account of any views expressed by virtue of subsection (2).

7 Approval of integration scheme

(1) After complying with section 6 and before the prescribed day, a local authority and a Health Board must jointly submit an integration scheme to the Scottish Ministers for approval.

(2) Any information included in an integration scheme by virtue of section 1(3)(e) need not be approved by the Scottish Ministers but may be taken into account by them in deciding whether to approve the scheme.

(3) The Scottish Ministers may—

(a) approve the scheme submitted under subsection (1),

(b) refuse to approve it.

(4) If the Scottish Ministers refuse to approve the scheme they must—

(a) give the local authority and the Health Board reasons for the refusal (including identifying which particular parts of the scheme caused them to decide to refuse approval),

(b) explain how the scheme should be modified, and

(c) specify a day by which the local authority and the Health Board must jointly modify the scheme and submit it for approval.

(4A) Following submission of a modified scheme under subsection (4), the Scottish Ministers may—

(a) approve the modified scheme, or

(b) refuse to approve it.

(4B) Where the Scottish Ministers refuse to approve a modified scheme, the local authority and the Health Board are to be treated as if they failed before the prescribed day to submit an integration scheme under this section; and section 39 applies accordingly.
(5) The Scottish Ministers may, on their own account or on the request of the local authority and the Health Board, specify that subsection (1) applies as if the prescribed day were such later day as the Scottish Ministers may specify.

(6) A request under subsection (5) must be made in writing and must include the reasons for the request.

(7) A day specified under subsection (5) is to be treated as if it were the prescribed day for the purposes of the other provisions of this Act.

8 **Publication of integration scheme**

As soon as practicable after an integration scheme is approved under section 7, the local authority and the Health Board must publish it.

**Implementation of integration scheme**

9 **Functions delegated to integration joint board**

(1) This section applies where the Scottish Ministers approve under section 7 an integration scheme setting out that the integration model in section 1(4)(a) is to apply.

(2) The Scottish Ministers may by order establish the integration joint board to which the functions are to be delegated.

(3) If the functions are not delegated on the day specified by virtue of section 23(3A), they are delegated on the prescribed day.

10 **Chief officer of integration joint board**

(1) An integration joint board is to appoint, as a member of staff, a chief officer.

(2) Subsection (3) applies where the person to be appointed is an existing member of staff of a constituent authority.

(3) The person is to be seconded to the board by that authority.

(4) Where subsection (3) does not apply, the person to be appointed—

   (a) is to be appointed as a member of staff of a constituent authority, and

   (b) is then to be seconded to the board by that authority.

(5) The Scottish Ministers may in relation to any integration joint board by order—

   (a) disapply the requirements of subsections (2) to (4), and

   (b) make provision enabling the board to employ a chief officer on such terms and conditions as the board determines.

(6) Before appointing a person as chief officer an integration joint board is to consult each constituent authority.

(7) The responsibilities of a chief officer are subject to the agreement of the Scottish Ministers.

11 **Other staff of integration joint board**

(1) The Scottish Ministers may by order make provision enabling integration joint boards to appoint staff other than a chief officer.
(2) Such an order may include such further provision as regards such staff as the Scottish Ministers think fit, including in particular provision as to—
   (a) the appointment of staff,
   (b) the numbers of staff,
   (c) the terms and conditions of staff.

(3) Provision as to a matter mentioned in subsection (2)(a), (b) or (c) may include provision making the matter subject to the determination, direction or agreement of any person.

(4) Without prejudice to section 49(1)(a), an order under this section may—
   (a) make provision in relation to only one integration joint board, or some integration joint boards,
   (b) make different provision in relation to different integration joint boards.

(5) Before making an order under this section, the Scottish Ministers must consult—
   (a) if the order relates to integration joint boards generally, each—
      (i) local authority,
      (ii) Health Board, and
      (iii) integration joint board then established,
   (b) if the order relates to one integration joint board, or some integration joint boards—
      (i) the constituent authorities in relation to that or those boards, and
      (ii) that or those boards, to the extent then established.

12 Integration joint boards: further provision

(1) The Scottish Ministers may by order make provision—
   (a) about the membership of integration joint boards,
   (b) about the proceedings of integration joint boards,
   (c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of functions conferred on them by or by virtue of this Act,
   (d) about the supply of services or facilities to integration joint boards by a constituent authority,
   (da) enabling integration joint boards to establish committees for any purpose,
   (db) about such other matters relating to any such committee as the Scottish Ministers think fit,
   (dc) enabling an integration joint board to delegate to its chief officer, any other member of its staff or any such committee functions delegated to the integration joint board in pursuance of an integration scheme,
   (e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.
(2) Without prejudice to section 49(1)(a), an order under subsection (1) (other than an order containing provision of the type mentioned in paragraph (a) or (b) of that subsection) may—

(a) make provision in relation to only one integration joint board, or some integration joint boards,

(b) make different provision in relation to different integration joint boards.

(2A) Before making an order under this section, the Scottish Ministers must consult—

(a) if the order relates to integration joint boards generally, each—

(i) local authority,

(ii) Health Board, and

(iii) integration joint board then established,

(b) if the order relates to one integration joint board, or some integration joint boards—

(i) the constituent authorities in relation to that or those boards, and

(ii) that or those boards, to the extent then established.

(3) The Scottish Ministers may by scheme make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of their constituent authorities.

(3A) Before making a scheme under subsection (3), the Scottish Ministers must consult—

(a) the integration joint board to which the scheme relates, and

(b) the constituent authorities in relation to that board.

(4) Before making a scheme under subsection (3) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (5), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(5) The groups mentioned in subsection (4) are—

(a) health professionals,

(b) social care professionals,

(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

12A Integration joint boards: finance and audit

(1) The chief officer of an integration joint board has responsibility for the administration of the financial affairs of the integration joint board.

(2) In section 106 of the Local Government (Scotland) Act 1973 (application of Part 7 of Act to bodies other than local authorities etc.)—

(a) in subsection (1), after paragraph (ba) insert—

“(bb) an integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014 (but subject to subsection (1A)),”, and

(b) after that subsection, insert—
“(1A) Despite subsection (1), sections 95, 101A and 105A of this Act do not apply with respect to an integration joint board.”.

13 Payments to integration joint boards in respect of delegated functions

(1) Subsections (2) and (3) apply where—

(a) an integration scheme sets out that the integration model in section 1(4)(a) is to apply, and

(b) the scheme is approved by the Scottish Ministers under section 7.

(2) The local authority must make a payment to the integration joint board of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

(2A) Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the integration joint board an amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

(3) Where an integration scheme contains provision of the type mentioned in section 1(3)(d), the Health Board must make a payment to the integration joint board of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

14 Functions delegated to local authority or Health Board

(1) This section applies where the Scottish Ministers approve under section 7 an integration scheme setting out that the integration model in section 1(4)(b), (c) or (d) is to apply.

(1A) If the functions are not delegated on the day specified by virtue of section 23(3A), they are delegated on the prescribed day.

(2) Before the functions are delegated, the local authority and the Health Board must jointly establish a committee (an “integration joint monitoring committee”) for the purpose of monitoring the carrying out of the integration functions for the area of the local authority.

15 Transfer of staff where functions delegated to local authority or Health Board

(1) The Scottish Ministers may by scheme make provision about the transfer of staff from a person who is to delegate functions under an integration scheme falling within subsection (2) to the person to whom the functions are to be delegated.

(1A) Before making a scheme under subsection (1) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (1B), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(1B) The groups mentioned in subsection (1A) are—

(a) health professionals,

(b) social care professionals,

(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.
(2) An integration scheme falls within this subsection if it sets out that the integration model in section 1(4)(b), (c) or (d) is to apply.

(3) Before making a scheme under subsection (1), the Scottish Ministers must consult—
   (a) the person who is to delegate functions under an integration scheme falling within subsection (2), and
   (b) the person to whom the functions are to be delegated.

16 **Integration joint monitoring committees: further provision**

(1) The Scottish Ministers may by order make provision about—
   (a) the establishment of integration joint monitoring committees,
   (b) the membership of integration joint monitoring committees,
   (c) the proceedings of integration joint monitoring committees,
   (d) any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

(2) Without prejudice to section 49(1)(a), an order under subsection (1) may make different provision in relation to different integration joint monitoring committees.

17 **Payments to Health Boards in respect of delegated functions**

(1) Subsection (2) applies where—
   (a) an integration scheme sets out that the integration model in section 1(4)(b) or (d) is to apply, and
   (b) the scheme is approved by the Scottish Ministers under section 7.

(2) The local authority must make a payment to the Health Board of the amount determined in accordance with the method that is set out in the scheme in relation to each function delegated to the Health Board.

18 **Payments to local authorities in respect of delegated functions**

(1) This section applies where—
   (a) an integration scheme sets out that the integration model in section 1(4)(c) or (d) is to apply, and
   (b) the scheme is approved by the Scottish Ministers under section 7.

(1A) Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the local authority an amount determined in accordance with the method set out in the scheme in relation to each function delegated to the local authority.

(2) Where an integration scheme contains provision of the type mentioned in section 1(3)(d), the Health Board must make a payment to the local authority of the amount determined in accordance with the method set out in the scheme in relation to each function delegated to the local authority.
(3) Each local authority which delegates functions to another local authority (the “lead authority”) under the scheme must make a payment to the lead authority of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by the authority to the lead authority.

18A Health funding: further provision

(1) This section applies where under section 13(2A) or 18(1A) a Health Board is required to set aside an amount in respect of certain functions delegated to an integration authority.

(2) The integration authority may by direction require a Health Board—
   (a) to carry out a function delegated to the integration authority by the Health Board and in relation to which amounts have been set aside, and
   (b) to use an amount of the set aside amount specified in the direction (the “specified amount”) for that purpose.

(3) If the integration authority gives a direction under subsection (2) and, despite the direction, the Health Board does not use all of the specified amount, the integration authority may require the Health Board to pay to it the unused amount of the specified amount.

(4) If the integration authority gives a direction under subsection (2) and, despite the direction, the Health Board requires to use more than the specified amount, the Health Board may require the integration authority to reimburse it for the additional amount used.

(5) The Health Board must give reports to the integration authority about such matters relating to the amounts set aside as the integration authority may specify.

(6) Reports under subsection (5) must be given at such times and in relation to such periods as the integration authority may specify.

19 Transfer of staff: effect on contract of employment

(1) This section applies where by virtue of section 12(3), 15(1) or 36(3) a person is to be transferred from the employment of one person (“the original employer”) to another (“the new employer”).

(2) If, before the day of the transfer, the person informs the original employer that the person does not wish to become an employee of the new employer, the person’s contract of employment is terminated on the day before the day of the transfer.

(3) Otherwise—
   (a) the contract of employment between the person and the original employer has effect on and after the day of the transfer as if originally made between the person and the new employer,
   (b) the rights, powers, duties and liabilities of the original employer under or in connection with the contract of employment are by virtue of this section transferred to the new employer on the day of the transfer, and
   (c) anything done before the day of the transfer by or in relation to the original employer in respect of the contract of employment or the person is to be treated on and after that day as having been done by or in relation to the new employer.

(3A) Nothing in subsection (3)—

(a) imposes on the new employer any liability for a share in any deficit in a pension scheme of the original employer that—

(i) is attributable to the person’s membership of the scheme, and

(ii) accrued before the day of the transfer, or

(b) confers any right on the new employer in respect of a share in any surplus in such a pension scheme that is so attributable and that so accrued.

(4) A person is not to be treated for any purpose as being dismissed by reason of the operation of any provision of this section in relation to the person.

(5) Nothing in this section affects any right of a person to terminate the person’s contract of employment if a substantial detrimental change in the person’s working conditions is made.

(6) No such right arises by reason only that, by virtue of this section, the identity of the person’s employer changes.

20 Co-operation

(1) This section applies where the Scottish Ministers approve under section 7 one or more schemes prepared by virtue of section 2(3) or (4) in relation to the same Health Board.

(2) The persons mentioned in subsection (3) must co-operate with each other in relation to the efficient and effective use of their resources (including in particular buildings, staff and equipment) in pursuance of the scheme or schemes.

(3) The persons are—

(a) each local authority,

(b) the Health Board.

20A Carrying out of functions conferred on officers of local authorities

(1) This section applies where a function conferred by an enactment on an officer of a local authority relates to a function delegated to an integration authority under an integration scheme.

(2) Where the integration authority is an integration joint board, the function is deemed to have been conferred also on an officer of the Health Board and any other local authorities that are the constituent authorities of the integration joint board.

(3) Where the integration authority is a local authority or Health Board, the function is deemed to have been conferred also on an officer of the Health Board and any other local authority which prepared the integration scheme.

20B Carrying out of functions conferred on officers of Health Boards

(1) This section applies where a function conferred by an enactment on an officer of a Health Board relates to a function delegated to an integration authority under an integration scheme.

(2) Where the integration authority is an integration joint board, the function is deemed to have been conferred also on an officer of the local authority or authorities that are the constituent authorities of the integration joint board.
(3) Where the integration authority is a local authority or Health Board, the function is deemed to have been conferred also on an officer of the local authority or authorities which prepared the integration scheme.

Carrying out of delegated functions

Effect of delegation of functions

(1) This section applies where a function is delegated in pursuance of an integration scheme.

(2) The integration authority to which the function is delegated is to carry out the function.

(3) The integration authority has all of the powers and duties from time to time applying in connection with the carrying out of the function.

(4) Despite subsection (2), the delegation of the function in pursuance of an integration scheme does not prevent the carrying out of the function by the person by whom the delegation is made.

(5) The Scottish Ministers may by order provide that an integration authority which is an integration joint board must or must not exercise a power of the type mentioned in subsection (3) in connection with the carrying out of a function specified in the order.

Directions by integration authority

(1) Where the integration authority is an integration joint board, it must give a direction to a constituent authority to carry out on its behalf each function delegated to the integration authority.

(2) Where the integration authority is a local authority or a Health Board, it may give a direction to the Health Board or local authority which prepared the integration scheme by virtue of which it is the integration authority to carry out on its behalf any function delegated to the integration authority.

(3) A person to whom a direction under this section may be given must provide the integration authority with such information as the integration authority may reasonably require for the purpose of its deciding—

(a) whether to give the direction,

(b) the content of the direction.

(4) A direction under this section may be given to more than one person in relation to the same function.

(5) If a direction such as is mentioned in subsection (4) is given, the direction may—

(a) require the persons to carry out the function jointly or only in so far as is specified in the direction,

(b) require each person to carry out the function in relation to an area specified in the direction,

(c) require each person to do particular things in relation to the function.

Section 22: supplementary

(1) A direction under section 22—
(a) must set out, or set out a method of determining, payments that are to be made by
the integration authority to the person who is to carry out the function on its
behalf,
(b) may—

5  (i) regulate the manner in which the function is to be carried out,
(ii) make such supplementary, incidental or consequential provision as the
integration authority considers appropriate.

(2) The provision referred to in subsection (1)(b)(ii) may include in particular the
imposition on the person who is to carry out the function of requirements—

(a) to provide information to the integration authority,
(b) to take action to enable the integration authority to comply with any order of a
court made against it in connection with the carrying out of the function,
(b) to reimburse the integration authority in relation to any liabilities incurred by the
integration authority in connection with the carrying out of the function.

(3) The integration authority must make payments in accordance with the provision
included in the direction by virtue of subsection (1)(a).

(4) A person to whom a direction under section 22 is given must comply with the direction.

(5) A direction under section 22—

(a) may vary or revoke an earlier direction under that section given by the same
integration authority,
(b) must be in writing.

(6) If the conditions in subsection (7) are met, the Scottish Ministers may by order provide
that an integration authority which is an integration joint board—

(a) may decide not to give a direction under section 22 in relation to the carrying out
of a function specified in the order, or
(b) may give a direction under that section, despite the making of the order.

(7) The conditions are—

(a) that the Scottish Ministers receive a written application from the constituent
authorities requesting that an order be made in relation to the functions specified
in the application, and
(b) that the Scottish Ministers consider that the making of an order in relation to some
or all of those functions would improve compliance with the national health and
wellbeing outcomes.

(8) If the Scottish Ministers do not consider under subsection (7)(b) that the making of an
order under subsection (6) would improve compliance with the national health and
wellbeing outcomes in relation to any functions, they need not include those functions in
the order.

Strategic planning etc.

23  Requirement to prepare strategic plans

(1) The integration authority for the area of a local authority must prepare strategic plans in
accordance with this section.
(2) A strategic plan is a document—
   (a) setting out the arrangements for the carrying out of the integration functions for the area of the local authority over the period of the plan,
   (b) setting out how those arrangements are intended to achieve, or contribute to achieving, the national health and wellbeing outcomes, and
   (c) including such other material as the integration authority thinks fit.

(3) The provision required to be included in a strategic plan by virtue of subsection (2)(a) is to include provision—
   (a) dividing the area of the local authority into two or more localities, and
   (b) setting out separately arrangements for the carrying out of the integration functions in relation to each such locality.

(3A) If the functions of the integration authority are not to be delegated to the authority on the day prescribed under section 9(3) or, as the case may be, section 14(1A), the first strategic plan must specify the day on which functions are to be delegated to the authority.

(4) The first strategic plan of an integration authority is to be prepared before the integration start day.

(6) In this section, “integration start day” means—
   (a) in relation to an integration authority which is an integration joint board, the day on which functions are delegated to the authority by virtue of subsection (3A) or, as the case may be, section 9(3),
   (b) in relation to any other integration authority, the day on which functions are delegated by virtue of subsection (3A) or, as the case may be, section 14(2) to, or to the constituent authorities of, the integration authority.

24 Considerations in preparing strategic plan

(1) This section applies where an integration authority in relation to the area of a local authority is preparing a strategic plan.

(2) The integration authority must have regard to—
   (a) the integration delivery principles (see section 25), and
   (b) the national health and wellbeing outcomes (see section 5).

(3) The integration authority must have regard to the effect which any arrangements which it is considering setting out in the strategic plan in pursuance of section 23(2)(a) may have on services, facilities or resources—
   (a) utilised by arrangements set out in pursuance of that section in a strategic plan prepared by another integration authority,
   (b) which would be utilised by arrangements which another integration authority is considering setting out in pursuance of that section in a strategic plan which it is preparing.

(4) The references in subsections (3)(a) and (b) to a strategic plan are to a strategic plan relating to the same period as, or relating to part of the same period as, the strategic plan which is being prepared by the integration authority.
25 **Integration delivery principles**

(1) The integration delivery principles are—

(a) that the main purpose of services which are provided in pursuance of functions which are delegated under an integration scheme is to improve the wellbeing of service-users,

(b) that, in so far as consistent with the main purpose, those services should be provided in a way which, so far as possible—

(i) is integrated from the point of view of service-users,

(ii) takes account of the particular needs of different service-users,

(iii) takes account of the particular needs of service-users in different parts of the area in which the service is being provided,

(iii) a) takes account of the dignity of service-users,

(iii) b) takes account of the participation by service-users in the community in which service-users live,

(iii) c) protects and improves the safety of service-users,

(iii) d) improves the quality of the service,

(iv) is planned and led locally in a way which is engaged with the community (including in particular service-users, those who look after service-users and those who are involved in the provision of health or social care),

(v) best anticipates needs and prevents them arising, and

(vi) makes the best use of the available facilities, people and other resources.

(2) In subsection (1), “service-users” means persons to whom or in relation to whom the services are provided.

26 **Establishment of strategic planning group**

(1) Before preparing its first strategic plan, an integration authority in relation to the area of a local authority is to establish a group (its “strategic planning group”) comprising—

(a) where the integration authority is an integration joint board—

(i) at least one person nominated by the Health Board which is a constituent authority in relation to the integration joint board,

(ii) where one local authority is a constituent authority in relation to the integration joint board, at least one person nominated by it,

(iii) where two or more local authorities are constituent authorities in relation to the integration joint board, at least one person nominated by the authorities,

(b) where the integration authority is a Health Board, at least one person nominated by the local authority or authorities with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its functions,

(c) where the integration authority is a local authority, at least one person nominated by the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its functions,
(d) one person in respect of each of the groups mentioned in subsection (2), being a person who the integration authority considers to be representative of that group, and

(e) such other persons as the integration authority considers appropriate.

(2) The groups referred to in subsection (1)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(2A) The integration authority is to determine—

(a) the number of members of its strategic planning group,

(b) so far as not set out in this section, the processes for appointment, removal and replacement of members.

(2B) The integration authority may—

(a) appoint members of its strategic planning group from persons nominated under subsection (1),

(b) in such circumstances as the authority considers appropriate, remove persons appointed under paragraph (a) from membership of the group,

(c) appoint members in place of members who resign or are removed from membership of the group.

(2C) A constituent authority may—

(a) remove from its strategic planning group a member appointed to represent it,

(b) nominate under subsection (1) another person in place of a member of the group appointed to represent it.

(2D) A member of a strategic planning group may resign at any time.

(2E) During the period to which any strategic plan of an integration authority relates, its strategic planning group is also to comprise a person to represent the interests of each locality set out in the plan in pursuance of section 23(3)(a).

(2F) It is for the integration authority to—

(a) decide which persons are suitable to represent the interests of a locality, and

(b) select the representative.

(2G) An integration authority may under subsection (2F)(b) select a single person in respect of two or more localities.

(2H) The validity of anything done by an integration authority’s strategic planning group is not affected by any vacancy in its membership.

(3) The procedure of an integration authority’s strategic planning group is to be such as the authority determines.

(4) An integration authority may pay to members of its strategic planning group such expenses and allowances as the authority determines.

27 Preparation of strategic plan

(1) This section applies where an integration authority in relation to the area of a local authority is preparing a strategic plan.

(1A) The integration authority is to—
(a) prepare proposals for what the strategic plan should contain, and
(b) seek the views of its strategic planning group on the proposals.

(2) Taking account of any views expressed by virtue of subsection (1A)(b), the integration
authority is then to—

(a) prepare a first draft of the strategic plan, and
(b) seek the views of its strategic planning group on the draft.

(3) Taking account of any views expressed by virtue of subsection (2)(b), the integration
authority is then to—

(a) prepare a second draft of the strategic plan,
(b) send a copy to—
   (i) the persons mentioned in subsection (4), and
   (ii) such other persons as it considers appropriate, and
(c) invite the recipients to express views (within such period as the integration
   authority considers appropriate) on the draft.

(4) The persons referred to in subsection (3)(b)(i) are—

(a) where the integration authority is an integration joint board, each constituent
   authority,
(b) where the integration authority is a local authority, the Health Board with which
   the local authority prepared the integration scheme in pursuance of which the
   integration authority acquired its delegated functions,
(c) where the integration authority is a Health Board, the local authority with which
   the Health Board prepared the integration scheme in pursuance of which the
   integration authority acquired its delegated functions, and
(d) persons who the integration authority considers to be representative of each of the
   groups mentioned in subsection (5).

(5) The groups referred to in subsection (4)(d) are such groups of persons appearing to the
Scottish Ministers to have an interest as may be prescribed.

(6) In finalising the strategic plan, the integration authority must take account of any views
expressed by virtue of subsection (3)(c).

27A Provision of information for purpose of preparing strategic plan

(1) A constituent authority must provide an integration authority which is an integration
joint board with such information as the authority may reasonably require for the
purpose of preparing a strategic plan.

(2) The person mentioned in subsection (3) must provide an integration authority which is a
Health Board or a local authority with such information as the integration authority may
reasonably require for the purpose of preparing a strategic plan.

(3) That person is the local authority or the Health Board with which the integration
authority prepared the integration scheme in pursuance of which the integration
authority acquired its delegated functions.
29 **Publication of strategic plans**

(1) As soon as practicable after the finalisation of the plan under section 27, an integration authority must publish its strategic plan.

(3) At the same time as publishing a strategic plan, an integration authority must also publish a statement of the action which it took in pursuance of section 27.

30 **Significant decisions outside strategic plan: public involvement**

(1) This section applies where the integration authority for the area of a local authority—

   (a) proposes to take a significant decision about the arrangements for the carrying out of the integration functions for the area of the authority, and

   (b) intends the decision to take effect other than by virtue of revising its strategic plan under section 30A.

(2) In subsection (1)(a), “significant decision” means a decision which the integration authority considers might significantly affect the provision of a service provided in pursuance of the integration functions in the area of the local authority.

(3) The integration authority must—

   (a) seek and have regard to the views of its strategic planning group, and

   (b) take such action as it thinks fit with a view to securing that persons mentioned in subsection (4) are involved in and consulted on the decision.

(4) Those persons are users of the service which is being or may be provided.

30A **Review of strategic plan**

(1) An integration authority—

   (a) must before the expiry of the relevant period review the effectiveness of its strategic plan,

   (b) may from time to time carry out such a review.

(2) In carrying out a review under subsection (1), the integration authority must—

   (a) have regard to—

      (i) the integration delivery principles, and

      (ii) the national health and wellbeing outcomes, and

   (b) seek and have regard to the views of its strategic planning group on—

      (i) the effectiveness of the arrangements for the carrying out of the integration functions in the area of the local authority, and

      (ii) whether the integration authority should prepare a replacement strategic plan.

(3) Following a review under subsection (1), an integration authority may prepare a replacement strategic plan.

(4) Subject to subsection (2), the process of such a review is to be such as the integration authority determines.
(5) A constituent authority must provide an integration authority which is an integration joint board with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(6) The person mentioned in subsection (7) must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(7) That person is the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions.

(8) A strategic plan prepared in pursuance of this section must specify a day on which the period of the plan is to begin.

(9) In subsection (1), “relevant period”, in relation to an integration authority, means—

(a) the period of 3 years beginning with the integration start day (as defined in section 23(4)), and

(b) each subsequent period of 3 years beginning with—

(i) where a replacement strategic plan is prepared following a review under subsection (1), the day specified under subsection (8),

(ii) where no replacement strategic plan is prepared following such a review, the day on which the integration authority decides not to prepare a revised strategic plan.

30B Requirement to prepare replacement strategic plan

(1) This section applies where the integration authority in relation to the area of a local authority is an integration joint board.

(2) If it appears to a constituent authority that the strategic plan is preventing, or is likely to prevent, the constituent authority from carrying out any of its functions appropriately or in a way which is consistent with the integration delivery principles and the national health and wellbeing outcomes, the constituent authorities acting jointly may direct the integration authority to prepare a replacement strategic plan.

(3) A direction under subsection (2) must—

(a) be in writing,

(b) include a statement summarising the reasons for giving it.

(4) A direction under subsection (2) must specify—

(a) a day by which the replacement strategic plan must be prepared, and

(b) a day on which the period of the plan is to begin.

(5) The constituent authorities acting jointly may by direction substitute a different day for a day specified under subsection (4).

(6) An integration authority must comply with a direction given to it under subsection (2).

30C Strategic plan: annual financial statement

(1) Each integration authority must publish an annual financial statement—

(a) when it publishes its first strategic plan, and
(b) each year after that.

(2) An annual financial statement must set out in relation to the strategic plan to which it relates the amount that the integration authority intends to spend in implementation of the plan.

### Carrying out of integration functions

#### 31 Carrying out of integration functions: general

In carrying out an integration function for the area of a local authority, a person must have regard to—

(a) the integration delivery principles (see section 25), and

(b) the national health and wellbeing outcomes (see section 5).

#### 32 Carrying out of integration functions: localities

(1) This section applies where—

(a) an integration authority carrying out an integration function for the area of a local authority proposes to take a decision which the authority considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function, or

(b) a person carrying out an integration function for the area of a local authority proposes to take a decision which the person considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function.

(2) In subsection (1), “locality” means a locality of an area as set out in the strategic plan in pursuance of section 23(3)(a).

(3) The integration authority or, as the case may be, person must take such action as the authority or person thinks fit with a view to securing that the groups mentioned in subsection (4) are involved in and consulted on the decision.

(4) The groups referred to in subsection (3) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(5) The integration authority may pay to members of groups consulted under subsection (3) such expenses and allowances as the authority determines.

#### 33 Integration authority: performance report

(1) Each integration authority must prepare a performance report for the reporting year.

(2) A performance report is a report setting out an assessment of performance during the reporting year to which it relates in carrying out the integration functions for the area of the local authority.

(3) The Scottish Ministers may by regulations prescribe the form and content of performance reports.

(3A) An integration authority must—

(a) publish each performance report before the expiry of the period of 4 months beginning with the end of the reporting year, and
(b) provide a copy of it to the persons mentioned in subsection (3B).

(3B) Those persons are—

(a) where the integration authority is an integration joint board, each constituent authority,
(b) where the integration authority is a local authority and a Health Board acting jointly, the integration joint monitoring committee,
(c) where the integration authority is a Health Board or a local authority—
   (i) the integration joint monitoring committee, and
   (ii) the other authority.

(3C) A constituent authority must provide an integration authority which is an integration joint board with such information as the authority may reasonably require for the purpose of preparing a performance report.

(3D) The other authority must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of preparing a performance report.

(4) In this section—

“other authority” means the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions,

“reporting year”, in relation to an integration authority, means—

(a) the period beginning with the date prescribed under section 9(3) or, as the case may be, 14(1A) and ending on the first anniversary of that date, and
(b) each subsequent period of a year.

Reports by integration joint monitoring committee

(33A) Reports

(1) An integration joint monitoring committee may give reports to the integration authority on any aspect of the carrying out of the integration functions for the area of the local authority for which the integration joint monitoring committee is established.

(2) A report may include recommendations as to how those integration functions should be carried out in future.

(3) Where a report is given to an integration authority under subsection (1), the integration authority must—

(a) have regard to the report and any recommendations included in it,
(b) take such action as the authority considers necessary, and
(c) if the report includes recommendations, give the integration joint monitoring committee a response to them in writing as soon as is reasonably practicable after the authority is given the report.

(4) An integration joint monitoring committee may publish—

(a) reports given under subsection (1),
(b) responses given under subsection (3)(c).
(5) The local authority and the Health Board which prepared the integration scheme by virtue of which the integration joint monitoring committee is established must provide the committee with such reports, information or other assistance as the committee may reasonably require for the purpose of preparing a report under subsection (1).

### Review of integration scheme

#### 33B Review of integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) The local authority and the Health Board must carry out a review of the scheme before the expiry of the relevant period for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).

(4) After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.

(5) In subsection (2), the “relevant period” means—

(a) the period of 5 years beginning with the day on which the scheme was approved under section 7, and

(b) each subsequent period of 5 years beginning with—

(i) where the local authority and the Health Board vary the scheme under section 34, the day specified under subsection (5) of that section,

(ii) where the local authority and the Health Board decide no changes to the scheme are necessary or desirable, the day on which that decision is made.

#### 33C Requirement to review integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) On the request of the local authority or the Health Board, the local authority and the Health Board must jointly carry out a review of the scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) Where matters are prescribed under section 1(3)(e), the Scottish Ministers may require the local authority and the Health Board jointly to carry out a review of the integration scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(4) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) or (3) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).

(5) After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.
34 Revised integration scheme

(1) This section applies where a local authority and a Health Board decide under section 33B or 33C that changes to an integration scheme are necessary or desirable.

(2) The local authority and the Health Board may vary the scheme by jointly preparing a revised integration scheme.

(3) A revised integration scheme may—
   (a) set out additional functions that are to be delegated under the scheme as mentioned in section 1(3)(b),
   (b) set out functions that are delegated by virtue of the integration scheme approved under section 7 that are no longer to be delegated,
   (c) if the integration scheme delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are to be carried out in conjunction with the delegated functions,
   (d) if the integration scheme delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are no longer to be carried out in conjunction with the delegated functions,
   (da) change the method of determining amounts to be made available as mentioned in section 1(3)(ca),
   (e) change the method of determining payments as mentioned in section 1(3)(d),
   (f) change or remove any information included in the plan by virtue of section 1(3)(e).

(3A) Before complying with subsection (4) or (as the case may be) (4A), the local authority and the Health Board must jointly consult—
   (a) such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed, and
   (b) such other persons as the local authority and the Health Board think fit.

(3B) In finalising the revised integration scheme, the local authority and the Health Board must take account of any views expressed by virtue of subsection (3A).

(4) If a revised integration scheme includes provision of the type mentioned in any of paragraphs (a) to (e) of subsection (3), the local authority and the Health Board must jointly submit the revised scheme to the Scottish Ministers for approval under section 7.

(4A) If a revised integration scheme includes provision of the type mentioned in paragraph (f) of subsection (3), the local authority and the Health Board must jointly give notice of the change to the Scottish Ministers.

(5) A revised integration scheme takes effect on such day as may be specified by the Scottish Ministers.

(6) As soon as practicable after a revised integration scheme takes effect, the local authority and the Health Board must publish it.

35 New integration scheme

(1) This section applies where a local authority and a Health Board decide under section 33B or 33C that changes to an integration scheme are necessary or desirable.
(2) If the local authority and the Health Board wish to change any of the matters mentioned in subsection (3) they must prepare a new integration scheme under section 1 or (as the case may be) 2(2).

(3) The matters are—

(a) the local authority which prepared the integration scheme,

(b) the integration model.

(4) This Act applies in relation to a new integration scheme prepared by virtue of subsection (2) as it applies in relation to an integration scheme which requires to be prepared by section 1 or (as the case may be) 2(2).

### 36 Power to make provision in consequence of new integration scheme

(1) This section applies where the Scottish Ministers approve an integration scheme which has been prepared by virtue of section 35.

(2) In consequence of the replacement of an integration scheme by a new integration scheme, the Scottish Ministers may by order provide for the winding-up of an integration joint board.

(3) In consequence of the replacement of an integration scheme by a new integration scheme, the Scottish Ministers may by scheme make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

(4) Before making a scheme under subsection (3), the Scottish Ministers must consult—

(a) the person from whom it is proposed to transfer staff, and

(b) the person to whom it is proposed that the staff be transferred.

### Supplementary

### 37 Information-sharing

(1) Where a local authority and a Health Board are jointly preparing an integration scheme, each of them may disclose information to the other for or in relation to the purpose of preparing the scheme.

(2) Where two or more local authorities and a Health Board are jointly preparing an integration scheme, each of them may disclose information to any of the others for or in relation to the purpose of preparing the scheme.

(3) A person mentioned in subsection (4) may disclose information to any other person mentioned in that subsection for or in relation to any of the purposes mentioned in subsection (5).

(4) The persons are—

(a) a local authority,

(b) a Health Board,

(c) an integration joint board.

(5) The purposes are—

(a) functions that are delegated by virtue of an integration scheme approved under section 7,
functions that are to be carried out in conjunction with delegated functions,
(c) the preparation of a strategic plan.

(6) Subsections (1) to (3) apply despite any duty of confidentiality owed to any person in respect of the information by the person disclosing the information.

38 Grants to local authorities

(1) The Scottish Ministers may make a grant to a local authority in respect of costs incurred by the authority by virtue of this Part.

(2) The payment of a grant under subsection (1) may be made subject to such conditions (including conditions as to repayment) as the Scottish Ministers may determine.

39 Default power of Scottish Ministers

(1) Subsection (2) applies where a local authority and a Health Board fail before the day prescribed for the purposes of section 7, or the day specified under subsection (4)(c) of that section, to submit an integration scheme for the approval of the Scottish Ministers under that section.

(2) The Scottish Ministers may—
(a) specify functions of the local authority and the Health Board which are to be delegated to an integration joint board,
(b) by order establish the integration joint board to which the functions are to be delegated,
(c) require the local authority and the Health Board to delegate the specified functions to the integration joint board before the prescribed day,
(d) require the local authority and the Health Board to make such payments to the integration joint board as the Scottish Ministers may specify, and
(e) require the local authority and the Health Board to comply with such other requirements in relation to the functions as the Scottish Ministers may specify.

40 Directions

(1) The Scottish Ministers may give directions to a local authority in relation to the carrying out of—
(a) functions conferred on it by this Act,
(b) functions delegated to it in pursuance of an integration scheme,
(c) functions specified in the scheme that are to be carried out in conjunction with those functions.

(2) The Scottish Ministers may give directions to a Health Board in relation to the carrying out of—
(a) functions conferred on it by this Act,
(b) functions delegated to it in pursuance of an integration scheme,
(c) functions specified in the scheme that are to be carried out in conjunction with those functions.
(3) The Scottish Ministers may give directions to an integration joint board in relation to the carrying out of—
   (a) functions conferred on it by this Act,
   (b) functions delegated to it in pursuance of an integration scheme.

(4) A local authority, a Health Board or an integration joint board must comply with a direction given to it under this section.

(5) Directions under this section—
   (a) may vary or revoke earlier directions under this section,
   (b) must be in writing.

(6) The Scottish Ministers may not under subsection (1) or (2) give a direction requiring a local authority or Health Board to make a written application of the type mentioned in section 22A.

41 Guidance

(1) A person mentioned in subsection (2) must have regard to any guidance issued by the Scottish Ministers about its functions under or in relation to this Act.

(2) Those persons are—
   (a) a local authority,
   (b) a Health Board,
   (c) an integration joint board,
   (d) an integration joint monitoring committee.

41A Social Care and Social Work Improvement Scotland

In section 53 of the Public Services Reform (Scotland) Act 2010 (inspections by Social Care and Social Work Improvement Scotland)—

(a) in subsection (1), after paragraph (b), add—
   “(c) where social services, services provided under the health service or services provided by an independent health care service are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), the co-ordination of those services.”,

(b) in subsection (2), after paragraph (e), add—
   “(f) where the inspection is carried out under subsection (1)(c)—
      (i) reviewing and evaluating the extent to which the social service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,
      (ii) reviewing and evaluating the extent to which the co-ordination of social services, services provided under the health service and services provided by an independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,
(iii) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iv) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(v) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 57.”, and

(c) after subsection (6), add—

“(7) In this section—

“independent health care service” has the meaning given by section 10F(1) of the National Health Service (Scotland) Act 1978;

“integration delivery principles” has the meaning given by section 25 of the 2014 Act.”.

41B Healthcare Improvement Scotland

(1) The National Health Service (Scotland) Act 1978 is amended as follows.

(2) In section 10I (Healthcare Improvement Scotland: inspection of services provided under the health service)—

(a) after subsection (1), insert—

“(1A) Where a service provided under the health service is provided by virtue of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 ("the 2014 Act"), HIS may inspect the service for any of the purposes mentioned in subsection (1B).

(1B) The purposes are—

(a) reviewing and evaluating the extent to which the service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(b) reviewing and evaluating the extent to which the co-ordination of services provided under the health service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(c) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(d) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and
(e) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”.

(b) after subsection (2), insert—

“(3) In this section—

“integration delivery principles” has the meaning given by section 25 of the 2014 Act;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.

(3) In section 10J (inspections of independent health care services)—

(a) in subsection (1), after paragraph (b), add—

“(c) where services provided by an independent health care service and social services are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), the co-ordination of those services.”,

(b) in subsection (2), after paragraph (e), add—

“(f) where the inspection is carried out under subsection (1)(c)—

(i) reviewing and evaluating the extent to which the independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(ii) reviewing and evaluating the extent to which the co-ordination of services provided by an independent health care service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iii) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(iv) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(v) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”.

(c) after subsection (7), add—

“(8) In this section—

“integration delivery principles” has the meaning given by section 25 of the Public Bodies (Joint Working) (Scotland) Act 2014;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.
41C Joint inspections of health services and social services

(1) The Public Services Reform (Scotland) Act 2010 is amended as follows.

(2) In section 115(11) (meaning of “confidential information”), for “section”, where it second occurs, substitute “sections 116A(4) and”.

(3) After section 116, insert—

“116A Joint inspections of social services and health services

(1) Social Care and Social Work Improvement Scotland (“SCSWIS”) and Healthcare Improvement Scotland (“HIS”) may jointly conduct an inspection in relation to—

(a) any social services, services provided under the health service or services provided by an independent health care service which are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), or

(b) a local authority, Health Board or integration joint board (as defined in section 1(4)(a) of the 2014 Act) which is required by section 23 of the 2014 Act to prepare a strategic plan.

(2) The purposes of an inspection under this section may be any of those mentioned in section 10I(1) or (1B) or 10J(2) of the National Health Service (Scotland) Act 1978 or section 53(2) of this Act.

(3) In conducting an inspection under this section, SCSWIS and HIS must have regard to any code of practice or practice note issued by the Scottish Ministers for the purpose of—

(a) giving practical and general guidance on matters relating to such an inspection (including, without prejudice to that generality, such matters as access to confidential information and the holding, sharing and destruction of such information),

(b) promoting what appear to them to be desirable practices with regard to such matters.

(4) After conducting an inspection under this section, SCSWIS and HIS must—

(a) prepare a report, and

(b) give any person to whom the report relates an opportunity to comment on the report.

(5) SCSWIS and HIS must—

(a) give the report to the Scottish Ministers,

(b) give copies of the report to any person to whom the report relates, and

(c) make copies of the report available at their offices for inspection by any person at any reasonable time.

(6) In this section—

“independent health care service” has the meaning given by section 10F of the National Health Service (Scotland) Act 1978;

“social services” has the meaning given by section 46.”.
(4) In section 117 (regulations relating to joint inspections), after subsection 5, add—

“(6) In this section, “joint inspection” means an inspection conducted under section 115 or 116A.”.

41D Amendments of section 56 of Local Government (Scotland) Act 1973

In section 56 of the Local Government (Scotland) Act 1973 (arrangements for discharge of functions by local authorities)—

(a) after subsection (7), insert—

“(7A) A local authority is not to make arrangements under this section for the discharge of any of its functions under the Public Bodies (Joint Working) (Scotland) Act 2014 by any other local authority.”, and

(b) after subsection (15), add—

“(16) In this section, “Act” includes an Act of the Scottish Parliament.”.

42 Meaning of “integration authority”

For the purposes of this Part, the “integration authority” for the area of a local authority is—

(a) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the integration joint board established in pursuance of the scheme,

(b) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b), the Health Board to which the functions are delegated,

(c) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c), the local authority to which the functions are delegated,

(d) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d), the local authority and the Health Board to which the functions are delegated, acting jointly.

43 Meaning of “integration functions”

(1) For the purposes of this Part, the “integration functions” for the area of a local authority are—

(a) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the functions delegated to the integration joint board in pursuance of the scheme,

(b) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b)—

(i) the functions delegated to the Health Board in pursuance of the scheme, and

(ii) the functions to be carried out in conjunction with those functions,
(c) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c)—

(i) the functions delegated to the local authority in pursuance of the scheme,

(ii) the functions to be carried out in conjunction with those functions,

(d) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d)—

(i) the functions delegated to each of the Health Board and the local authority in pursuance of the scheme, and

(ii) the functions to be carried out in conjunction with those functions.

(2) In subsection (1), the references to the functions which are to be carried out in conjunction with delegated functions are to the functions set out in the integration scheme in pursuance of section 1(3)(c).

43A Meaning of “constituent authority”

For the purposes of this Part, each local authority and the Health Board which prepared the integration scheme in pursuance of which an integration joint board was, or is to be, established is a “constituent authority” in relation to that board.

PART 2

SHARED SERVICES

44 Shared services

(1) The Common Services Agency for the Scottish Health Service (the “Agency”) may, with the consent of the Scottish Ministers, enter into arrangements with a person mentioned in subsection (2) under which the Agency provides, or secures the provision of, any goods or services for the person.

(2) The persons are—

(a) the Scottish Ministers,

(b) any other office-holder in the Scottish Administration,

(c) any Scottish public authority,

(d) any Scottish public authority with mixed functions or no reserved functions,

(e) any government department,

(f) any cross-border public authority,

(g) any body corporate formed by a Health Board or by the Agency, or in the formation of which a Health Board or the Agency participated, by virtue of a delegation of the power in section 84B(1) of the National Health Service (Scotland) Act 1978 (joint ventures).

(3) Services which may be provided under subsection (1) include in particular—

(a) administrative services,

(b) technical services,
(c) legal services,
(d) other professional services,
(e) accommodation services.

(4) The power to make arrangements under subsection (1) is without prejudice to any other power of the Agency to provide goods or services to other persons.

(4A) The Scottish Ministers may by order amend subsection (2) so as to add or remove a person, or a description of a person, for the time being mentioned in or falling within that subsection.

(5) In this section—

“cross-border public authority” has the meaning given by section 88(5) of the Scotland Act 1998 (c.46),
“government department” has the meaning given by section 126(1) of that Act,
“office-holder in the Scottish Administration” is to be construed in accordance with section 126(7) of that Act,
“Scottish public authority” has the meaning given by section 126(1) of that Act except that it does not include—
(a) a Health Board,
(b) a Special Health Board (constituted under section 2(1)(b) of the National Health Service (Scotland) Act 1978), or
(c) Healthcare Improvement Scotland,
“Scottish public authority with mixed functions or no reserved functions” means persons, bodies and office-holders (other than the Agency) listed in schedule 5 to the Public Services Reform (Scotland) Act 2010 (improvement of public functions: listed bodies) under the heading “Scottish public authorities with mixed functions or no reserved functions”.

44A Section 44: consequential provision

(1) The National Health Service (Scotland) Act 1978 is amended in accordance with subsections (2) and (3).

(2) In section 10 (Common Services Agency)—

(a) in subsection (1), the words from “which” to the end are repealed, and

(b) after that subsection, insert—

“(1A) The Agency has the functions conferred on it by—

(a) this Act, and

(b) section 44 of the Public Bodies (Joint Working) (Scotland) Act 2014.”

(3) In section 15 (supply of goods and services to local authorities etc.)—

(a) in subsection (1)—

(i) for “, a Health Board or the Agency”, in the first two places where it occurs, substitute “or a Health Board”, and

(ii) in paragraph (e), the words “or the Agency” are repealed,
(b) after that subsection, insert—

“(1ZA) Paragraph (a) of subsection (1) applies to the Agency as it applies to a Health Board.”,

(c) in subsection (2), after “including” insert “paragraph (a) as applied by subsection (1ZA) and”, and

(d) subsections (2A) to (2D) are repealed.

(4) In section 17(2) of the Patient Rights (Scotland) Act 2011, for “that Act” substitute “the 1978 Act”.

**44B Common Services Agency for the Scottish Health Service: residual liabilities**

In section 2(1) of the National Health Service (Residual Liabilities) Act 1996 (certain Scottish health bodies: duty to transfer residual liabilities on ceasing to exist), for “or a Special Health Board” substitute “, a Special Health Board or the Common Services Agency for the Scottish Health Service”.

**45 Extension of schemes for meeting losses and liabilities of health service bodies**

(1) Section 85B of the National Health Service (Scotland) Act 1978 (schemes for meeting losses and liabilities of health service bodies) is amended as follows.

(2) In subsection (2)—

(a) the word “and” immediately after paragraph (ea) is repealed,

(b) after paragraph (f) add—

“(g) local authorities; and

(h) integration joint boards established by order under section 9(2) of the 2014 Act,”.

(3) After subsection (2A) insert—

“(2B) The reference—

(a) in paragraph (a) of subsection (1) to property of a local authority is to be construed as a reference to property held by a local authority in connection with the exercise of its relevant functions;

(b) in paragraph (b) of that subsection to the functions of a local authority is to be construed as a reference to the relevant functions of a local authority.

(2C) In subsection (2B), “relevant functions” means—

(a) integration functions; and

(b) such other functions as the Scottish Ministers may by order specify.

(2D) In subsection (2C)(a), “integration functions” means functions which in pursuance of an integration scheme under the 2014 Act are—

(a) delegated to the authority;

(b) to be carried out in conjunction with functions delegated to the authority (that is, functions set out in the integration scheme in pursuance of section 1(3)(c) of that Act); or
(c) to be carried out by the authority by virtue of a direction under section 22 of the 2014 Act.”.

(4) After subsection (4) insert—

“(4A) Subsection (4)(a) does not apply in relation to a local authority.”.

(5) After subsection (5) insert—

“(6) In this section, “the 2014 Act” means the Public Bodies (Joint Working) (Scotland) Act 2014.”.

PART 3

HEALTH SERVICE: FUNCTIONS

46 Scottish Ministers: power to form companies etc.

In section 84B of the National Health Service (Scotland) Act 1978 (joint ventures)—

(a) in subsection (1), for “companies”, wherever it occurs, substitute “bodies corporate”;

(b) in subsection (2), for “company” substitute “body corporate”, and

(c) in subsection (3), the definition of “companies” is repealed.

47 Health Boards: carrying out of functions

After section 12J of the National Health Service (Scotland) Act 1978, insert—

“12K Power of Health Board to carry out other Health Board’s functions

A Health Board may, with the agreement of another Health Board and the Scottish Ministers, carry out on behalf of that other Health Board any function of that other Health Board.”.

PART 4

GENERAL

48 Interpretation

(1) In this Act—

“Health Board” has the meaning given by section 1(7),

“health care” has the same meaning as in section 10A(1)(b) of the National Health Service (Scotland) Act 1978,

“health professionals” means persons of such description engaged in the provision of health care as may be prescribed,

“integration joint board” has the meaning given by section 1(4)(a),

“integration joint monitoring committee” has the meaning given by section 14(2)(a),

“integration scheme” has the meaning given by section 1(3),

“prescribed” means prescribed by the Scottish Ministers by regulations,
“social care” means—

(a) social services (having the same meaning as in Part 5 of the Public Services Reform (Scotland) Act 2010), and

(b) such functions of local authorities relating to the provision of accommodation for persons who are homeless as may be prescribed,

“social care professionals” means persons of such description engaged in the provision of social care as may be prescribed,

“strategic plan” has the meaning given by section 23(2).

(2) For the purposes of this Act, a provider of a service is a “commercial” provider if the aim of the person in providing the service is or includes making a profit.

(3) References in this Act (other than sections 2(3), 37(1) and 43A)—

(a) to a local authority include, in the case where the integration scheme is being or has been jointly prepared under section 2(4), references to both or all the authorities which are preparing or have prepared the scheme, acting jointly,

(b) to the area of a local authority mean, in a case where the integration scheme is being or has been jointly prepared under section 2(4), the combined area of the local authorities which are preparing or have prepared the scheme.

(4) References in this Act to a function include references to a function so far as exercisable in relation to persons or matters of a particular class or description.

49 Subordinate legislation

(1) Regulations and orders under this Act may—

(a) make different provision for different purposes,

(aa) make different provision for different cases or classes of case,

(b) include such supplementary, incidental, consequential, transitional or transitory provision, or savings, as the Scottish Ministers consider appropriate.

(2) Regulations under sections 1(4H) and 5(1) are subject to the affirmative procedure.

(2A) An order under section 44(4A) is subject to the affirmative procedure.

(3) An order under section 50 containing provision which adds to, replaces or omits any part of the text of an Act is subject to the affirmative procedure.

(4) Otherwise, regulations and orders under this Act are subject to the negative procedure.

(5) This section does not apply to an order under section 52(2).

50 Ancillary provision

(1) The Scottish Ministers may by order—

(a) make such supplementary, incidental or consequential provision as they consider appropriate for the purposes of, in consequence of, or for giving full effect to, any provision of this Act,

(b) make such transitional or transitory provision or savings as they consider appropriate for the purposes of, or in connection with, the coming into force of any provision of this Act.
(2) An order under this section may modify any enactment (including this Act).

51 Repeals and revocation

(A1) Section 5A of the Social Work (Scotland) Act 1968 (which makes provision about local authority plans for community care services) is repealed.

(1) Sections 4A and 4B of the National Health Service (Scotland) Act 1978 (c.29) (which make provision about community health partnerships) are repealed.

(2) Sections 15 to 17 of the Community Care and Health (Scotland) Act 2002 (asp 5) (which make provision about joint working among local authorities and certain health bodies) are repealed.

(3) Section 2 of the National Health Service Reform (Scotland) Act 2004 (asp 7) (which inserts sections 4A and 4B into the National Health Service (Scotland) Act 1978) is repealed.

(3A) Section 17(1) of the Patient Rights (Scotland) Act 2011 is repealed.

(4) Section 20 of the Social Care (Self-directed Support) (Scotland) Act 2013 (asp 1) (which amends section 15(4) of the Community Care and Health (Scotland) Act 2002) is repealed.

(5) The Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) (Scotland) Order 2013 (S.S.I. 2013/220) is revoked.

52 Commencement

(1) Sections 1(3) to (7), 5, 37 and 41 and this Part (other than section 51) come into force on the day after Royal Assent.

(2) The other provisions of this Act come into force on such day as the Scottish Ministers may by order appoint.

(3) An order under subsection (2) may contain transitory or transitional provision or savings.

53 Short title

The short title of this Act is the Public Bodies (Joint Working) (Scotland) Act 2014.
SCHEDULE
(introduced by section 1(4A))

Enactments conferring on local authorities functions which may be delegated

Sections 22, 26, 45 and 48 of the National Assistance Act 1948.

Sections 1, 4, 5, 6B, 8, 10, 12, 12A, 12AZA, 12AA, 12AB, 13 to 14, 27, 27ZA, 28, 29, 59, 78A, 80, 81, 83, 86 and 87 of the Social Work (Scotland) Act 1968.

Sections 34, 39, 40 and 50 of the Children Act 1975.

Section 24 of the Local Government and Planning (Scotland) Act 1982.

Sections 21, 22 and 23 of the Health and Social Services and Social Security Adjudications Act 1983.

Sections 3, 5, 6, 8, 9 and 10 of the Foster Children (Scotland) Act 1984.

Sections 2, 3, 7 and 8 of the Disabled Persons (Services, Consultation and Representation) Act 1986.

Sections 4, 5 and 5A and Part II of the Housing (Scotland) Act 1987.

Sections 17, 19 to 27, 29 to 32, 36 and 38 of the Children (Scotland) Act 1995.

Sections 10, 12, 37 and 39 to 45 of the Adults with Incapacity (Scotland) Act 2000.

Sections 1, 2, 5, 6, 8 and 92 of the Housing (Scotland) Act 2001.

Sections 5, 6 and 14 of the Community Care and Health (Scotland) Act 2002.

Sections 17, 25 to 27, 33, 34, 228 and 259 of the Mental Health (Care and Treatment) (Scotland) Act 2003.

Sections 10 and 11 of the Management of Offenders etc. (Scotland) Act 2005.

Section 71 of the Housing (Scotland) Act 2006.

Sections 1, 4, 5, 6, 9, 10, 11, 12, 19, 26, 45, 47, 48, 49, 51, 80, 90, 99 and 105 of the Adoption and Children (Scotland) Act 2007.

Sections 4 to 11, 14, 16, 18, 22, 40, 42 and 43 of the Adult Support and Protection (Scotland) Act 2007.

Sections 35, 37, 42, 44, 48, 49, 60, 131, 145, 166 and 167 of the Children’s Hearings (Scotland) Act 2011.

Sections 3, 5 to 13, 16 and 19 of the Social Care (Self-directed Support) (Scotland) Act 2013.
Public Bodies (Joint Working) (Scotland) Bill
[AS AMENDED AT STAGE 2]

An Act of the Scottish Parliament to make provision in relation to the carrying out of functions of local authorities and Health Boards; to make further provision about certain functions of public bodies; to make further provision in relation to certain functions under the National Health Service (Scotland) Act 1978; and for connected purposes.

Introduced by: Alex Neil
Supported by: Derek Mackay
On: 28 May 2013
Bill type: Government Bill
INTRODUCTION

1. As required under Rule 9.7.8A of the Parliament’s Standing Orders, these Revised Explanatory Notes are published to accompany the Public Bodies (Joint Working) (Scotland) Bill (introduced in the Scottish Parliament on 28 May 2013) as amended at Stage 2. Text has been added or deleted as necessary to reflect the amendments made to the Bill at Stage 2 and these changes are indicated by sidelining in the right margin.

2. These Explanatory Notes have been prepared by the Scottish Government in order to assist the reader of the Bill and to help inform debate on it. They do not form part of the Bill and have not been endorsed by the Parliament.

3. The Notes should be read in conjunction with the Bill. They are not, and are not meant to be, a comprehensive description of the Bill. So where a section or schedule, or a part of a section or schedule, does not seem to require any explanation or comment, none is given.

THE BILL

4. The Bill provides the framework which will support the improvement of the quality and consistency of health and social care services in Scotland. This framework permits the integration of local authority services with health services. In addition, the Bill provides for the Common Services Agency commonly known as NHS National Services Scotland to provide goods and services to public bodies including local authorities; for the Scottish Ministers to form a wider range of joint venture structures than at present in order to make the most effective use of resources; and to extend the Clinical Negligence and Other Risks Scheme (CNORIS) indemnity scheme run by the Scottish Ministers.

Outline of the Bill

5. In summary the Bill:
   • Provides for national outcomes for health and wellbeing, and for delivery of which Health Boards and local authorities will be accountable to the Scottish Ministers and the public (note that the provisions of the Bill apply to area Health Boards and not Special Health Boards).
• Sets out principles for planning and delivery of integrated functions, which local authorities, Health Boards and joint integration boards will be required to have regard to. They set out that the main purpose of integrated services is to improve the wellbeing of recipients, as well as an expectation that planning and delivery will take account of key principles relating to integrated delivery; the requirement to balance the needs of individuals with the overall needs of the population; anticipation and prevention of need; and effective use of resources.

• Establishes integration joint boards and integration joint monitoring committees as the partnership arrangements for the governance and oversight of health and social care services. The Bill will remove Community Health Partnerships from statute.

• Requires Health Board and local authority partners to enter into arrangements (the integration scheme) to delegate functions and appropriate resources to ensure the effective delivery of those functions. The Bill provides two options for integrating budgets and functions. First, delegation to an integration joint board established as a body corporate - in this case the Health Board and the local authority agree the amount of resources to be committed by each partner for the delivery of services to support the functions delegated. Second, delegation between partners. In this case the Health Board and/or local authority delegates functions and the corresponding amount of resource, to the other partner.

• Requires integration joint boards to appoint a chief officer, who will through the board be jointly accountable to the constituent Health Board and local authorities, responsible for the management of the integrated budget and the delivery of services for the area of the integration scheme. The chief officer will also lead the development and delivery of the strategic plan for the joint board.

• Requires integration joint boards, and Health Boards or local authorities to whom functions are delegated acting in the capacity of “integration authority” to prepare a strategic plan for the area, which sets out arrangements for delivery of integration functions and how it will meet the national health and wellbeing outcomes. The integration authority will be required to involve a range of partners in the development of the plan and consult widely. In addition, locality planning duties will require the integration authority to make suitable arrangements to consult and plan locally for the needs of its population.

• Delivers opportunities for more effective use of public services and resources by allowing for Health Boards to be able to contract on behalf of other Health Boards for contracts which involve providing facilities, and by allowing the Scottish Ministers to form a wider range joint ventures structures to collaborate effectively with local authorities and enable a joint approach to asset management and disposal.

• Provides for the extension of the Common Services Agency’s ability to deliver shared services to public bodies including local authorities.

• Enables the Scottish Ministers to extend the range of bodies able to participate in the CNORIS scheme for meeting losses and liabilities of certain health service bodies. The scheme is established for relevant bodies to meet expenses arising from any loss or damage to their property; and liabilities to third parties for loss, damage or injury arising from the carrying out of the functions of the scheme members. The Bill amends the bodies able to participate in the scheme to include local authorities and integration joint boards.
COMMENTARY ON SECTIONS

PART 1

FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration schemes

Section 1 – Integration schemes: same local authority and Health Board area

6. Section 1 makes provision about integration schemes and sets out the four models of integration from which local authorities and Health Boards are to choose for the purposes of integration planning and integrated delivery of services in accordance with the Bill.

7. Integration planning is predicated on the delegation of local authority and/or Health Board functions using one of the four models of delegation set out in subsection (4): (a) the local authority and the Health Board delegate functions to an integration joint board established as a body corporate by order by the Scottish Ministers; (b) the local authority delegates functions to the Health Board; (c) the Health Board delegates functions to a local authority, and (d) the local authority delegates functions to the Health Board and the Health Board delegates functions to the local authority.

8. By virtue of subsections (1) and (2), where the area of a local authority is the same as the area of a Health Board i.e. there is a single local authority within the Health Board area, the local authority and the Health Board are required to jointly prepare an integration scheme for the area of the local authority.

9. Subsection (3) sets out what the integration scheme must include. The required information is: (a) which model of integration is to be used, (b) the functions which are to be delegated in the way identified, (c) where functions are delegated to a Health Board, local authority or both, the functions of that body which are to be carried out in conjunction with the delegated functions, (the functions which may be set out in this part of the scheme are described in subsection (5)), (ca) (where subsection (5A) applies) a method of determining amounts to be made available by the Health Board with respect to the delegated functions, (d) (where subsection (5A) does not apply, or where it applies but the Health Board deems it not to apply) a method of determining payments which are to be made with respect to the delegated functions, and (e) any additional information that may be required by the Scottish Ministers by regulations.

10. Subsection (4A) provides for local authorities to delegate only those of their functions that are conferred by the enactments listed in the schedule. Subsection (4B) provides for Health Boards to delegate such of their functions as are prescribed by the Scottish Ministers. Subsection (4C) provides that the Scottish Ministers may by regulations prescribe functions conferred by the enactments listed in the schedule that local authorities must delegate (where the integration model mentioned in subsection (4)(a) or (b) applies) in so far as those functions relate to persons aged 18 years or over. Subsection (4D) provides for the Scottish Ministers to prescribe certain functions of a Health Board that must be delegated where the integration model mentioned in subsection (4)(a) or (c) applies and the functions relate to persons aged 18 years or over. Subsection (4E) sets out the requirements which apply where the integration model provided for in subsection (4)(d), in which functions may be delegated to both the Health Board and local authority, is chosen. The provision sets out that local authorities and Health Boards must delegate functions prescribed under
subsections (4C) and (4D) respectively so far as the functions relate to persons aged 18 years or over. By virtue of subsections (4F) and (4G), the Scottish Ministers may prescribe functions of Health Boards that must be delegated other than in prescribed circumstances or and prescribe functions of Health Boards and local authorities that may not be delegated in prescribed circumstances. By virtue of subsection (4H) the Scottish Ministers may remove enactments from the schedule.

11. Subsection (5A) applies where Health Board functions which are to be delegated are carried out in a hospital which serves two or more local authority areas. Subsection (7), read with section 48(1)(Interpretation) defines what is meant by “Health Board” for the purposes of the Bill. Its effect is that the provisions of the Bill do not apply to Special Health Boards.

Section 2 - Integration schemes: two or more local authorities in Health Board area

12. Section 2 sets out integration planning requirements where more than one local authority sits within the boundary of a single Health Board area (in contrast to the requirements in section 1(2) which apply where there is a single local authority in a Health Board area).

13. By virtue of subsection (2), each local authority and the Health Board are to agree which of the alternative duties in subsections (3) and (4) they will comply with in respect of the local authority area (compliance with one or the other is mandatory). The options are for a local authority to jointly prepare an integration scheme with that Health Board, for its own area only (subsection (3)), or for the local authority to join together with one or more other local authorities to, with the Health Board, jointly prepare an integration scheme for the areas of those local authorities (subsection (4)). The result is that within a single Health Board area, which houses more than one local authority, there may be any number of single local authority plans and/or multiple local authority plans. For example, in an area with 3 local authorities there may be a plan for a single area plus a plan covering the other two areas; or in an area with 6 local authorities there could be a plan covering three areas, plus a plan covering two areas, plus a plan for a single area. The effect is to provide flexibility so that planning decisions can be taken on the basis of what is appropriate for the areas in question i.e. multiple local authorities, within the area of the same Health Board, can plan together where appropriate, or they may choose to plan separately.

14. Subsection (4A) sets out that where the two or more local authorities and a Health Board decide that the integration model mentioned in section 1(4)(c) or (d) is to apply, (a) functions can be delegated to only one of the local authorities, (b) the integration scheme must set out which local authority the functions are to be delegated to, known as the “lead authority”, (c) functions may also be delegated by the Health Board to the lead authority and (d) functions may be delegated by local authorities to the Health Board and by the Health Board and other local authorities to the lead authority.

15. Subsection (5) sets out that when preparing an integration scheme, whether between an individual local authority and Health Board, or multiple local authorities and a Health Board, a local authority must (a) take into account any other integration scheme that is currently or has been prepared for the same Health Board area, and (b) the potential impact on the Health Board of any plans prepared in relation to that Health Board. This provision establishes the importance of different integration schemes within a single Health Board area having regard to their combined effect, and inter-operability, in relation, in particular, to the effective running of the Health Board.
Section 3 – Considerations in preparing integration scheme

16. Section 3 requires the local authority and Health Board to consider the integration principles and the national health and wellbeing outcomes when preparing their integration scheme. This provides the link with the national outcomes for health and wellbeing from the outset and underpins the purpose of integrating services, to ensure integration arrangements which embed a preventative, anticipatory and person-centred approach to the planning and delivery of services. Section 4 provides further information on integration principles and section 5 provides further information on national health and wellbeing outcomes.

Section 4 – Integration planning principles

17. Section 4 establishes the integration planning principles that must be taken into account when preparing an integration scheme.

18. The effect of subsection (1)(a) is to ensure that decisions about integration of functions take account of the principle that services, for the purposes of carrying out functions that must or may be delegated, are to improve the wellbeing of users of that service.

19. Subsection (1)(b) supplements this by setting out principles for delivery which must also be taken into account in taking decisions about how functions will be integrated. The effect is to ensure a focus on integrated delivery including consideration of the needs of different service users and different areas, the dignity of service users, the participation by service users in the community in which they live, protecting and improving the safety of service users, improving the quality of services, local planning and leadership, the anticipation of needs and prevention of needs arising, and the effective use of resources.

Section 5 – Power to prescribe national outcomes

20. This section provides for the Scottish Ministers to set out in regulations, national outcomes that relate to health and wellbeing. The national outcomes will provide for improved experience of services and outcomes that services achieve. The intention is for the national outcomes on health and wellbeing to be reflected in the Single Outcome Agreements, which the national outcomes expressed within the National Performance Framework.

21. Before doing so, the Scottish Ministers are required to consult persons set out in subsections (3) and (4). The effect of the provision is to involve the groups identified in the development of the national outcomes on health and wellbeing.

Section 6 – Consultation

22. Section 6 sets out consultation requirements in relation to the preparation of integration schemes.

23. The local authority and Health Board, before submitting the integration scheme for approval, are required to consult (a) those persons or groups of person, set out by the Scottish Ministers, by regulations, and (b) any other persons as the local authority and Health Board think fit. The consultation must be carried out jointly by the local authority and the Health Board. The
local authority and Health Board are required to take account of views expressed as part of the consultation, when finalising the integration scheme.

Section 7 - Approval of integration scheme

24. This section requires a local authority and Health Board to jointly submit the integration scheme to the Scottish Ministers for approval, before a date that will be set by the Scottish Ministers by regulations.

25. Subsection (4) requires the Scottish Ministers to, (a) provide the Health Board and the local authority with the reasons for refusing to approve an integration scheme, (b) explain how the scheme should be modified and (c) set a date by which the modified scheme must be submitted for approval.

26. Following submission of a modified integration scheme under subsection (4), the Scottish Ministers can, (a) approve the modified integration scheme or (b) refuse to approve the modified scheme. Where the Scottish Ministers refuse to approve a modified scheme, the local authority and the Health Board will be treated as if they have failed to submit an integration scheme and the default powers of the Scottish Ministers in section 39 will then apply.

27. Subsection (5) gives Ministers a discretionary power to grant an extension for submission of a plan for approval. The Scottish Ministers may grant an extension on their own initiative or on the request of the local authority and the Health Board. Where the request comes from the local authority and the Health Board it must be made jointly and reasons must be given. The effect is to enable a plan to be accepted after the statutory deadline for submission, where there is good reason.

28. The Scottish Ministers may decide either to approve an integration scheme submitted to them, or to refuse to approve it. Although any information that may be included by virtue of section 1(3)(e) does not form part of the information to be approved, it may be taken into account by Ministers in coming to their decision.

Section 8 – Publication of integration scheme

29. Section 8 requires the local authority and Health Board to publish the approved integration scheme, as soon as practicable after it has been approved.

Implementation of integration scheme

Section 9 – Functions delegated to integration joint board

30. This section provides that, where the Scottish Ministers approve an integration scheme which sets out that functions will be delegated to an integration joint board under section 1(4)(a), Ministers may by order establish the integration joint boards, which will have the functions specified in the integration scheme delegated to it.

31. Subsection (3) provides for the functions in the integration scheme to be delegated on a day set by the Scottish Ministers, unless the functions have been delegated on an earlier date under section 23(3A).
Section 10 – Chief officer of integration joint board

32. Section 10 requires the integration joint board to appoint a member of staff to be its chief officer. The integration joint board will not necessarily be given powers to employ its own staff. Subsections (2), (3) and (4) provide that the chief officer is to be seconded to it from one of its constituent local authorities or Health Board. In the event that there is a wish in future for the chief officer to be employed directly by the joint integration board, the Scottish Ministers have powers to make an order under subsection (5) to enable this.

33. Subsection (4) provides that where the person to be appointed is not an existing member of staff of a local authority or Health Board by which the integration joint board was established, the person is first to be appointed to the local authority or the Health Board and then seconded to the integration joint board.

34. Subsection (6) requires the integration joint board to consult the Health Board and each local authority, before appointing the chief officer of the integration joint board.

35. Subsection (7) provides for the Scottish Ministers to approve the responsibilities of the chief officer.

Section 11 – Other staff of integration joint board

36. This section provides for the Scottish Ministers, by order, to give integration joint boards the ability to appoint staff other than a chief officer and to make further provision in relation to the staffing of integration joint boards (generally or making different provision in relation to different joint boards) as the Scottish Ministers think fit, including: (a) the appointment of staff; (b) the numbers of staff; and (c) the terms and conditions of staff. The Scottish Ministers may make provision for these matters to be subject to the determination, direction or agreement of any person. This allows the Scottish Ministers to permit other persons, such as integration joint boards, to decide these matters.

37. Subsection (4)(a) provides for flexibility in the use of the power in subsection (1), so an order made under section 11 can be made which can apply only to a single, or some, integration joint boards as well as to all integration joint boards. Subsection (4)(b) provides for further flexibility for the Scottish Ministers to make different provision in relation to different integration joint boards.

38. Subsection (5) places a requirement on the Scottish Ministers to consult with Health Boards, local authorities and integration joint boards before exercising the power to make an order under subsection (1).

Section 12 – Integration joint boards: further provision

39. This section enables the Scottish Ministers to make further provision about integration joint boards.

40. Subsection (1) gives the Scottish Ministers powers to make provision by order (either generally or making different provision about different joint boards) about the membership,
proceedings and general powers of integration joint boards; the supply of services or facilities to integration joint boards by a local authority or Health Board; the establishment of committees by integration joint boards; the operation of committees of integration joint boards, the delegation of functions conferred upon integration joint boards by an integration scheme to the chief officer, any member of its staff or any committee member; and any other matter as the Scottish Ministers think fit in relation to the establishment or operation of integration joint boards.

41. Subsection (2) provides for flexibility in the use of the power in subsection (1). By virtue of subsection (2)(a) an order may be made under section 12 which applies only to a single, or some, integration joint boards as well as to all integration joint boards. By virtue of (2)(b) an order made under section 12 may make different provision in relation to different integration joint boards.

42. Subsection (2A) requires the Scottish Ministers to consult with the Health Board, local authority and integration joint board, before making an order under subsection (1).

43. Subsection (3) provides for the Scottish Ministers to make schemes for the transfer to an integration joint board of staff, property, rights, liabilities, or obligations of their constituent authorities. This power may be exercised to support the delivery of delegated functions by the integration joint board, where that is considered appropriate. Subsection (3A) requires the Scottish Ministers to consult with the relevant integration joint board, relevant Health Board and local authority before making a scheme under subsection (3).

44. Subsections (4) and (5) require the Scottish Ministers, before making such a scheme under subsection (3), to consult with health professionals, social care professionals and other groups of persons prescribed by regulations whom the Scottish Ministers consider to have an interest.

Section 12A – Integration joint boards: finance and audit

45. Section 12A(1) provides that the chief officer of an integration joint board is responsible for the financial affairs of the integration joint board.

46. Subsection (2)(a) amends section 106 of the Local Government (Scotland) Act 1973 so that the provisions of Part 7 of that Act will apply to integration joint boards, requiring them to appoint a proper officer for the financial administration of the financial affairs of the integration joint board, keep accounts and have these accounts audited by the Accounts Commission for Scotland. The proper officer may be the Chief Officer if the integration joint board deems that to be appropriate. The Chief Officer is the accountable officer for all matters, but the integration joint board is able to appoint another officer to be the proper officer for matters of financial administration. Such an arrangement is not obligatory, but will allow for the integration joint board to place financial accountability in the hands of a finance professional, if it is agreed locally that that is appropriate.

47. Subsection (2)(b) provides that certain sections of the Local Government (Scotland) Act 1973, in respect of social security and benefit administration, will not apply to integration joint boards as they are outside of the scope of their functions.
Section 13 - Payments to integration joint boards in respect of delegated functions

48. Section 13 provides for the allocation of resources by the local authority and Health Board in relation to functions delegated by them to an integration joint board, to support the effective carrying out of the functions.

49. Subsection (2) requires payments to be made by the local authority, in respect of such of their functions as are delegated under the integration scheme, of the amount determined in accordance with the method set out in the integration scheme.

50. Subsection (2A) places a requirement on Health Boards to set aside an amount, to be determined in accordance with the method set out in the integration scheme, for functions which are delegated that relate to services provided in large hospitals, namely a hospital that carries out functions in relation to two or more local authority areas. Subsection (3) places a requirement on Health Boards to make payments, either to an integration joint board or a local authority acting as the integration authority, for delegated functions where no “large hospital” functions are delegated (or where they are and the Health Board has deemed them not to apply). It has the effect that the amount to be paid by a Health Board will not include an amount set aside under subsection (2A).

Section 14 – Functions delegated to local authority or Health Board

51. Section 14 applies where the Scottish Ministers approve an integration scheme under section 7 and that plan contains provision about the delegation of functions by a local authority to a Health Board or functions delegated by a Health Board to a local authority, or both, as the case may be, under section 1(4)(b), (c) or (d).

52. Subsection (1A) enables the Scottish Ministers to prescribe a day by which functions must be delegated, if they are not delegated on an earlier date specified under section 23(3A).

53. Subsection (2) requires, before the functions are delegated, that the local authority and Health Board set up an integration joint monitoring committee to monitor the operational delivery of the functions set out in the integration scheme.

Section 15 – Transfer of staff where functions delegated to a local authority or Health Board

54. Section 15 provides that the Scottish Ministers may make provision by scheme about the transfer or secondment of staff from the body responsible for delegating the functions in the integration scheme as set out in section 1(4)(b), (c) or (d), to the body the functions are delegated to. This provision therefore relates to transfers to local authorities or Health Boards, as opposed to transfers to integration joint boards, which are dealt with by section 12(3).

55. Before making such a scheme under section 15, subsections (1A) and (1B) require the Scottish Ministers to consult with health professionals, social care professionals and other groups of persons who are prescribed in regulations whom the Scottish Ministers consider to have an interest, and subsection (3) requires the Scottish Ministers to consult the Health Board and local authority.
Section 16 – Integration joint monitoring committees: further provision

56. Section 16 confers a power on the Scottish Ministers to make provision by order about the establishment, membership and proceedings of integration joint monitoring committees (either generally or making different provision about different committees), as well as any other matter relating to their operation as the Scottish Ministers think fit.

Section 17 – Payments to Health Boards in respect of delegated functions

57. Section 17 requires that where a local authority delegates a function to the Health Board, in accordance with an approved integration scheme, the local authority must make payment to the Health Board of an amount determined in accordance with the method set out in the integration scheme.

Section 18 – Payments to local authorities in respect of delegated functions

58. Subsection (1A) requires that, where a Health Board delegates a function to a local authority, the Health Board is under a duty in subsection (1) to set aside an amount for use by the local authority which has been determined according to the method set out in the integration scheme in respect of services provided in large hospitals. Subsection (2) provides that where no delegated functions relate to services delivered in large hospitals, or where the Health Board chooses to make payments to the local authority in respect of those functions, the Health Board must make payments of amounts to the local authority for all of the delegated functions including those which relate to services delivered in large hospitals in accordance with the method set out in the integration scheme.

59. Subsection (3) requires that, in arrangements in which a local authority is the integration authority and where more than one local authority is covered by the same integration scheme, each delegating local authority is under a duty to make a payment to the local authority which is the lead authority for each delegated function.

Section 18A – Health funding: further provision

60. Section 18A deals with how budgets for services provided in large hospitals are to be used in planning for the delivery of services using the totality of health and social care resources to best meet the needs of the population. Health Boards are required to identify and make available to the integration authority an amount which relates to services provided in large hospitals which are included in the delegated functions, where such amounts are not included in the payments to the integration authority. Subsection (2) gives the integration authority the power to direct the use of this amount by the Health Board in line with the strategic plan.

61. Subsections (3) and (4) deal with situations where there is a variance between actual costs and those set out in the strategic plan.

62. Where the amount spent in relation to services delivered in a large hospital is less than the amount set out in the strategic plan, subsection (3) allows the integration authority to require that the Health Board make payment to it for the difference.
63. Where the amount spent in relation to services delivered in a large hospital is greater than had been determined in the strategic plan, subsection (4) allows the Health Board to require that the integration authority make payment to it for the difference.

64. Subsections (5) and (6) require that the Health Board provides the integration authority with information relating to the amounts set aside.

Section 19 – Transfer of staff: effect on contract of employment

65. Section 19 makes provision about the effect on an individual’s contract of employment on the transfer (or proposed transfer in the case of subsection (2)) of that individual’s employment by scheme under section 12 or 15.

66. Subsection (2) provides that where, before the day of transfer, a person who is to be transferred informs their original employer that they do not wish to transfer employment, the person’s contract of employment is terminated on the day before the day of transfer. The effect of this is that a person who does not wish to transfer does not have to do so but instead his or her contract will end immediately before the transfer would have taken place.

67. Subsection (3) sets out the effects of a transfer on an employee’s contract. In effect, the contract continues as it was before the transfer, except that the new employer takes the place of the previous employer. This means that the rights, powers, duties and liabilities of the original employer under or in connection with the contract of employment are transferred to the new employer and anything done by or in relation to the original employer in respect of the contract of employment is treated as having been done by or in relation to the new employer.

68. Subsection (3A) clarifies that, in relation to pension obligations, in circumstances where staff transfer between employer, whether between a local authority and Health Board or to an integration joint board, there will be no transfer of any liability for any deficit, or right to a share in any surplus, in respect of the transferred employee’s membership of a pension scheme relating to their employment prior to the transfer.

69. Subsection (4) makes provision to put beyond doubt that a person is not to be treated as being dismissed as a result of any provision of this section.

70. Subsection (5) protects any right that a person may have under general employment law to terminate their contract where there is a substantial detrimental change to his or her working conditions.

71. Subsection (6) makes clear that the change in employer as a result of the transfer of a person under this section does not constitute a substantial detrimental change to a person’s working conditions. This has the effect that the transfer of a person by scheme under section 12 or 15 cannot be considered a substantial detrimental change such as to give rise to any right protected by subsection (5).
Section 20 - Co-operation

72. Section 20 operates where two or more local authorities have joined together to prepare an integration scheme under section 2(4), or there is otherwise more than one integration scheme in relation to the same Health Board area. It puts a duty on the local authorities involved and the Health Board to cooperate with each other in relation to the efficient and effective use of their resources (including in particular buildings, staff and equipment) relevant to the scheme or schemes.

Section 20A - Carrying out of functions conferred on officers of local authorities

73. Section 20A provides that functions that are conferred by enactment on an officer of a local authority, which relate to a function delegated as part of the integration scheme, are deemed to be conferred on officers of the other bodies (a Health Board and any other local authorities) which prepared the same integration scheme.

Section 20B - Carrying out of functions conferred on officers of Health Boards

74. Section 20B provides that functions that are conferred by enactment on an officer of a Health Board, which relate to a function delegated as part of the integration scheme, are deemed to be conferred on officers of the local authority or local authorities which prepared the same integration scheme.

Carrying out of delegated functions

Section 21 – Effect of delegation of functions

75. Section 21 sets out the effect of the delegation of functions in pursuance of an integration scheme.

76. Subsection (2) requires that the integration authority to which a function is delegated is to carry out that function. Subsection (3) provides that the integration authority has all of the powers and duties that apply in connection with carrying out the function. Subsection (4) provides that the delegation of the function does not prevent the function being carried out by the person who delegated it. Subsection (5) confers a power on the Scottish Ministers, by order, to require that an integration authority which is an integration joint board must or must not exercise a power which otherwise applies in connection with the carrying out of the function specified in the order.

Section 22 – Directions by integration authority

77. Subsection (1) provides that, where the integration authority is an integration joint board, it must provide directions to the Health Board and local authority for the carrying out of the delegated functions.

78. Subsection (2) applies where the integration authority is not an integration joint board, i.e. it is a local authority or a Health Board. This enables the integration authority to give directions to the other bodies who prepared the integration scheme for the carrying out of any delegated functions. The giving of directions is not mandatory under this subsection. This enables an integration authority to choose to carry out functions itself, or to issue a direction in respect of the carrying out
of the function. Where an integration plan was prepared by more than one local authority, this subsection allows the integration authority to direct one of the local authorities to carry out a function for the entire area covered by the integration scheme.

79. Subsection (3) provides that the person to whom a direction may be given under subsection (1) or (2) must provide such information to the integration authority as is necessary to enable the integration authority to decide whether or not to give a direction and the content of any direction. This seeks to ensure that such information as is necessary for effective strategic planning is shared between the integration authority, the Health Board and the local authority.

80. Subsections (4) and (5) provide that a direction can be given to more than one person, i.e. an integration joint board can give a direction to both the Health Board and the local authority, and that such a direction can require each party to carry out the functions jointly or in part or in relation to a specified area or to do particular things in relation to the function.

Section 22A - Section 22: supplementary

81. This section makes supplementary provision in relation to the issuing of directions under section 22.

82. Subsection (1) provides that directions issued under section 22 must set out payments (or the method of determining payments) to be made by the integration authority to the person to whom the function is delegated. Directions may regulate the way in which the function is to be carried out and may make ancillary provision.

83. Subsection (2) sets out particular matters which may be provided for in directions issued under section 22. This provides that integration authorities may use directions to require the provision of information to the integration authority, to take action to enable the integration authority to comply with any court order made against it in connection with a delegated function or reimburse the integration authority in relation to any liabilities incurred in connection with a delegated function.

84. Subsection (3) requires that the integration authority make such payments to the Health Board and local authority as are set out in directions given by it.

85. Subsection (4) provides that a person to whom a direction under section 22 is given must comply with the direction.

86. Subsection (5) clarifies that a direction may vary or revoke an earlier direction and that the direction must be given in writing.

87. Subsections (6), (7) and (8) provide for the situation in which a Health Board and local authority agree that an integration joint board should be enabled to deliver functions directly by itself. Subsection (6) provides that the Scottish Ministers may make an order to allow an integration joint board to decide not to give directions in respect of a specified delegated function. Subsection (7) sets out the conditions that apply to the exercise of this power. An order under (6) may be made only if an application is received from the Health Board and local authority, and if the Scottish
Ministers consider that the order should be made to improve compliance with the national health and wellbeing outcomes. Subsection (8) allows the Scottish Ministers to exclude a particular function (or functions) from an order made under subsection (6) if they do not consider that the making of an order in respect of that function would improve compliance with the national health and wellbeing outcomes.

**Strategic planning etc.**

**Section 23 – Requirement to prepare strategic plans**

88. Section 23 requires the integration authority for the area of each local authority to prepare a strategic plan. This section sets out what a strategic plan is and the period the plan relates to. Section 39 sets out who is the integration authority for a local authority area, depending on the integration model adopted in the integration scheme.

89. The integration authority can include such material as it thinks fit in the strategic plan, however there are two mandatory elements:

- A strategic plan must set out the arrangements for carrying out the integration functions (defined in section 40) in the local authority area over the period of the plan (subsection (2)(a)). The area must be divided into localities for this purpose, and the arrangements for each locality must be set out separately (subsection (3)).

- A strategic plan must also set out the way in which the arrangements for carrying out the functions are intended to achieve or contribute towards achieving the national health and wellbeing outcomes.

90. Subsection (3A) provides that the Health Board and local authority may choose to delegate the functions on a day that is earlier than the day prescribed by the Scottish Ministers under sections 9(3) or 14(1A). Where this occurs, the integration authority must make clear in its first strategic plan the date when functions are to be delegated.

91. The first strategic plan of an integration authority must be prepared before the integration start date (subsection (4)), which is defined in subsection (6) as meaning either the date of delegation of functions set out in the strategic plan or the day prescribed by the Scottish Ministers under section 9(3) or 14(2).

**Section 24 – Considerations in preparing strategic plan**

92. Section 24(2) requires the integration authority to take into account the integration delivery principles (set out in section 25) and the national health and wellbeing outcomes (prescribed under section 5) in preparing a strategic plan. Section 24(2) seeks to ensure the principles and national outcomes are at the heart of planning for the population and embeds a person centred approach, alongside anticipatory and preventative care planning.

93. Subsections (3) and (4) provide that each integration authority, when preparing a strategic plan, must take account of any other strategic plan that has been, or is being, prepared where that plan sets out, or proposes to set out, arrangements for the use of services, facilities or resources used by another integration authority.
Section 25 – Integration delivery principles

94. Section 25 sets out the integration delivery principles that must be taken into account in preparation of the strategic plan and in the actual carrying out of functions delegated under an integration scheme (as required by section 31).

95. The effect of subsection (1)(a) is to ensure that in making arrangements for the carrying out of integration functions, the integration authority takes account of the main purpose of the services provided in pursuance of those functions is to improve the wellbeing of users of the service.

96. Subsection (1)(b) supplements this by setting out principles for delivery which must also be taken into account in making arrangements for delivery of integration functions. The effect is to ensure a focus on integrated delivery - including consideration of the needs of different service users and different areas, the dignity of service users, the participation by service users in the community in which they live, protecting and improving the safety of service users, improving the quality of services, local planning and leadership, the anticipation and prevention of need, and the effective use of resources.

Section 26 – Establishment of strategic planning group

97. Section 26 puts an obligation on integration authorities to establish a strategic planning group for each local authority area, for the purposes of preparing the strategic plan for that area.

98. Depending on the model of integration chosen, the group must involve members nominated by the local authority or the Health Board, or both, as set out in subsection (1)(a), (b) and (c). In effect, this provides for the partners who prepared the integration scheme and are party to the integrated arrangements to be involved in the development of the strategic plan. In addition, the integration authority will be required by subsection (1)(d) and (e) to involve a range of relevant stakeholders.

99. The group must also include representatives of groups prescribed by the Scottish Ministers by regulations under subsection (2) as having an interest, and other persons as the integration authority considers appropriate.

100. Subsection (2A) provides for the integration authority to determine the number of members in its strategic planning group and the process for the appointment, replacement and removal of members. Subsection (2B) provides for the integration authority to appoint members of the strategic planning group from persons nominated under subsection (1), to remove persons from membership of the group and to appoint members in place of members who resign or are removed from membership of the group. Subsection (2C) provides for a constituent authority to remove from its strategic planning group a member appointed to represent it and to nominate (under subsection (1)) another person in place of a member of the group appointed to represent it. Subsection (2D) provides for a member of the strategic planning group to resign at any time. Subsections (2E) to (2G) provide for the views of localities to be taken into account by requiring the integration authority to identify the most appropriate person to represent each locality on the strategic planning group. This also provides for local flexibility, so that an individual can represent more than one locality. Subsection (2H) provides that the integration authority’s ability to make decisions is not undermined by any vacancy in its membership.
101. The integration authority is to determine the procedure of the group, and may pay members of the group expenses and allowances.

**Section 27 – Preparation of strategic plan**

102. Section 27 applies where an integration authority in relation to the area of a local authority is preparing a strategic plan. The section sets out the process for the involvement of the strategic planning group in the development of the strategic plan, ensuring the group’s engagement in the process from the start.

103. The integration authority is required to prepare proposals about matters the strategic plan should contain, and consult the strategic planning group on the proposals (subsection (1A)) and then to prepare a first draft of the strategic plan, taking into account the views of the group expressed during the consultation. The integration authority must then consult the group on the draft (subsection (2)).

104. Taking account of the views in response to the consultation on the first draft, the integration authority is required to prepare a second draft of the strategic plan and send a copy of it for comment to persons mentioned in subsection (4), and any other persons the integration authority considers appropriate (subsection (3)).

105. The persons mentioned in subsection (4) include the local authority and the Health Board or both (depending on the model of integration chosen) as well as representatives of any groups prescribed by the Scottish Ministers under subsection (5). The effect of this is to ensure that any others with an interest will have an opportunity to comment on the draft plan.

106. Subsection (6) requires the integration authority to take into account the views obtained through consultation on the second draft of the strategic plan when finalising the strategic plan.

**Section 27A – Provision of information for purpose of preparing strategic plan**

107. Section 27A places a duty on Health Boards and local authorities to share information for the purpose of preparing the strategic plan. Subsection (1) requires the provision of information by constituent authorities to an integration joint board. Subsections (2) and (3) apply to the provision of information to an integration authority which is a local authority or a Health Board. In both cases, information must be shared if it is information which may be reasonably required for the purpose of preparing a strategic plan.

**Section 29 – Publication of strategic plans**

108. Section 29 places a duty on integration authorities to publish strategic plans.

109. Subsection (1) requires integration authorities to publish their strategic plans as soon as practicable after the plan has been finalised under section 27.

110. Subsection (3) requires an integration authority to publish a statement at the same time it publishes its strategic plan, which describes the consultation it undertook under section 27.
Section 30 – Significant decisions outside strategic plan: public involvement

111. Section 30 makes provision for where an integration authority plans on making a decision that would have a significant effect on the arrangements for provision of a service in pursuance of integrated functions outwith the context of the strategic planning cycle.

112. The integration authority is required to take appropriate action in order to involve and consult its strategic planning group, along with users or potential users of the service which is being or may be provided in relation to the decision.

Section 30A – Review of strategic plan

113. Section 30A sets out the review process that applies to a strategic plan. Subsections (1) and (9) require that an integration authority review its strategic plan at least every three years, and may carry out additional reviews from time to time. Subsection (2) provides that in carrying out a review of the strategic plan, integration authorities must have regard to the national health and wellbeing outcomes, the integration delivery principles and the views of the strategic planning group. Subsection (3) provides that the carrying out of a review under subsection (1) may result in the integration authority making any necessary changes by replacing its strategic plan. Subsection (4) provides flexibility for integration authorities to determine the details of the review process they use, subject to subsection (2).

114. Under subsections (5) to (7), the Health Board and local authority are required to provide the integration authority with the information that is reasonably required to carry out the review of the strategic plan. Subsection (8) provides that a strategic plan which is prepared following a review must specify the date on which it takes effect.

Section 30B – Requirement to prepare replacement strategic plan

115. Section 30B applies only in relation to integration joint boards. It provides for the local authority and the Health Board, acting jointly, to direct the integration joint board to prepare a replacement strategic plan where they, jointly, feel the strategic plan prohibits them from carrying out any of their functions. Subsections (3) and (4) set out specific requirements for a direction to prepare a replacement strategic plan. Under subsection (6), a direction requiring the replacement of the strategic plan is binding on the integration authority.

Section 30C – Strategic plan: annual financial statement

116. Section 30C requires the integration authority to publish an annual financial statement upon publication of its first strategic plan, and every year after that (subsection (1)). The financial statement must set out the total resources that the integration authority intends to allocate under the provisions of the strategic plan (subsection (2)).

Carrying out of integration functions

Section 31 – Carrying out of integration functions: general

117. Section 31 obliges integration joint boards, local authorities and Health Boards to have regard to the national health and wellbeing outcomes and the integration delivery principles set out
in section 25, when carrying out an integration function. The effect is to embed the principles in delivery as well as in planning to ensure a shift towards preventative and anticipatory care and that the services delivered meet the different needs of different individuals and are ‘person centred’.

**Section 32 – Carrying out of integration functions: localities**

118. Section 32 requires person carrying out an integration function for the area of a local authority (which may be the local authority, the Health Board or the integration joint board depending on the integration model adopted and any directions made under section 22) to involve and consult interested persons prescribed by the Scottish Ministers by regulations where it proposes to take a decision that it considers might significantly affect the service provision in a locality of the area of the local authority.

119. Subsection (5) gives the integration authority the ability to pay the members of the groups consulted such expenses and allowances as the integration authority determines.

**Section 33 - Integration authority: performance report**

120. This section requires each integration authority to prepare a performance report for each reporting year.

121. The report must set out an assessment of performance in carrying out the integrated functions during the reporting year.

122. Subsection (3) enables the Scottish Ministers to make regulations that set out the form and content of performance reports. Subsections (3A) and (3B) require the integration authority to publish the performance report within four months of the end of the reporting year and to provide a copy to the Health Board, the local authority and/or the integration joint monitoring committee, as appropriate to the model of integration chosen.

123. Subsections (3C) and (3D) require that the Health Board and the local authority must provide such information as the integration authority might reasonably require for the purposes of preparing a performance report to the integration joint board or the authority (being a local authority or Health Board), as appropriate to the model of integration chosen.

124. Subsection (4) provides that the “reporting year” is a period of one year starting on the date that the integration functions were delegated or the prescribed date set by the Scottish Ministers that delegation of functions must occur, and each subsequent period of a year.

*Reports by integration joint monitoring committee*

**Section 33A - Reports**

125. Section 33A sets out that an integration joint monitoring committee may give reports to the integration authority on the carrying out of any aspect of the integration functions.

126. Under subsection (2), reports under this section may include recommendations as to how the integration functions should be carried out in future.
127. Subsection (3) obliges the integration authority to have regard to the report and any recommendations contained within it. It requires the integration authority to take such action as it considers necessary and, where a report contains recommendations, respond to the integration joint monitoring committee. Subsection (4) makes provision for the publication of reports under this section.

128. Subsection (5) obliges the local authority and the Health Board to provide the integration joint monitoring committee with such reports, information and other assistance that it may reasonably require for the purpose of preparing a report under (1).

Section 33B - Review of integration scheme

129. Section 33B obliges the local authority and the Health Board to carry out a review of their integration scheme at least every five years. Subsection (3) requires that the Health Board and the local authority have regard to the integration planning principles and the national health and wellbeing outcomes, as set out in section 3, and that they undertake the consultation process as set out in section 6.

130. Subsection (4) requires the local authority and the Health Board to take account of the persons consulted and to decide whether changes to the integration scheme are necessary or desirable.

Section 33C - Requirement to review integration scheme

131. Section 33C gives the Health Board or the local authority the power to require that a joint review of the integration scheme is undertaken to identify if any changes to the integration scheme are necessary or desirable. Subsection (3) gives the Scottish Ministers the ability to require that the local authority and the Health Board undertake a review of the integration scheme where matters are prescribed under section 1(3)(e).

132. Subsections (4) and (5) require that the Health Board and the local authority undertake this review having regard to the integration planning principles and the national health and wellbeing outcomes, as set out in section 3, and that they undertake the consultation process as set out in section 6. Subsection (5) requires the local authority and the Health Board to take account of those persons consulted and decide whether changes to the integration scheme are necessary or desirable.

Section 34 – Revised integration scheme

133. This section sets out the process for varying the integration scheme after the local authority and Health Board decide, following a review, that changes to the scheme are desirable.

134. Any variation must be made jointly by the local authority and the Health Board and is to be achieved by the preparation of a revised integration scheme.

135. Subsection (3) establishes the scope of variation that may apply to the integration scheme. A revised integration scheme may include further functions that are to be delegated, set out functions that are no longer to be delegated, amend the functions that are to be carried out in conjunction with the delegated functions when delegating to a Health Board only or a local authority only or to both,
make adjustments to the method of determining payments as mentioned in section 1(3)(ca) and/or 1(3)(d) and change or remove any information included within the integration scheme by virtue of section 1(3)(e).

136. Subsections (3A) and (3B) oblige the Health Board and the local authority to consult with persons or groups of persons the Scottish Ministers may prescribe and other persons as they think fit, and take account of their views.

137. If the revised integration scheme includes changes of the type mentioned in subsection (3)(a) to (e) then it must be submitted for approval by the Scottish Ministers.

138. If the revised integration scheme includes changes of the type mentioned in subsection (3)(f), the Scottish Ministers must be notified of the change.

139. Subsection (5) obliges the Scottish Ministers to set a date that a revised integration scheme takes effect. Subsection (6) requires the Health Board and the local authority to publish a revised scheme as soon as is practicable after the date on which it takes effect.

Section 35 – New integration scheme

140. Section 35 applies where a local authority and Health Board decide under section 33B or 33C that changes to an integration scheme are necessary or desirable. Section 35 sets out that a local authority and Health Board must prepare a new integration scheme under section 1 where they wish to change the local authorities that are party to the scheme or the integration model. The new scheme is subject to all the same requirements, including consultation and the requirement for Ministerial approval, as the original integration scheme. Subsection (4) clarifies that the Bill applies to a new integration scheme created under section 35 as it applies to a scheme prepared under section 1 or section 2(2).

Section 36 – Power to make provision in consequence of new integration scheme

141. This section confers powers on the Scottish Ministers to take steps in consequence of a new integration scheme approved under section 35. They are empowered to provide by order for the winding-up of any integration joint board that was established in pursuance of the original plan. They can also provide by scheme for the transfer of staff, property, rights, liabilities or obligations of an integration joint board, local authority or Health Board as may be necessary in light of the new scheme.

142. Subsection (4) requires the Scottish Ministers to consult the local authority and the Health Board before putting in place a scheme for the transfer of staff as a consequence of a new integration scheme.

Supplementary

Section 37 – Information-sharing

143. Section 37 allows for the disclosure of information between local authorities, Health Boards and integration joint boards for the purpose of preparing an integration scheme, carrying out the
functions that are delegated, the functions that are to be carried out in conjunction with delegated functions and the preparation of a strategic plan. The sharing of information for these purposes can take place without breaching any duty of confidentiality that may be owed by a Health Board or local authority to any person.

Section 38 – Grants to local authorities

144. Section 38 provides for the Scottish Ministers to make grant payments to local authorities in respect of costs incurred by virtue of Part 1 of the Bill, and to set conditions in relation to grants made.

Section 39 – Default power of Scottish Ministers

145. Section 39 provides for the Scottish Ministers to take action where a local authority and Health Board have failed to submit an integration scheme to them for approval by the deadline set under section 7, or the day specified under section 7(4)(c).

146. In such circumstances the Scottish Ministers may require the local authority and Health Board to adopt the integration joint board model of integration and may decide the functions to be delegated to it. They may also establish the integration joint board by order, set a deadline by which the local authority and Health Board must delegate the specified functions to the integration joint board, specify payments to be made by the local authority and Health Board to the integration joint board and impose other requirements in relation to the delegated functions.

Section 40 – Directions

147. Section 40 confers a power on the Scottish Ministers to give directions to integration joint boards, Health Boards and local authorities.

148. Directions given to a local authority or Health Board under this section may relate to the functions conferred on them by this Bill, the carrying out of functions delegated to them in pursuance of an integration scheme, and the functions to be carried out in conjunction with the delegated functions (subsections (1) and (2)).

149. Directions to an integration joint board may relate to the functions conferred on it by this Bill and the carrying out of functions delegated to it in pursuance of an integration scheme (subsection (3)).

150. Integration joint boards, Health Boards and local authorities are required to comply with a direction given to them by the Scottish Ministers under this section.

151. Subsection (5) provides that directions made under this section may vary or revoke earlier directions made under this section and are to be made in writing.

152. Subsection (6) places a limit on the use of the power in this section to prevent the Scottish Ministers from issuing a direction to require a local authority and Health Board to submit an application under section 22A(7). The Scottish Ministers cannot make an order under section
22A(6) without the prior written application of the Health Board and local authority. Section 40(6) ensures that the Scottish Ministers cannot direct the Health Board and local authority to make such a written application.

Section 41 – Guidance

153. Section 41 requires persons mentioned in subsection (2) to take account of any guidance issued by the Scottish Ministers about their functions, under or in relation to the Bill. The persons are a local authority, a Health Board, an integration joint board and an integration joint monitoring committee.

Section 41A – Social Care and Social Work Improvement Scotland

154. Section 41A makes amendments to the Public Services Reform (Scotland) Act 2010 to provide for Social Care and Social Work Improvement Scotland (SCSWIS) to inspect services which are delivered under integration functions in pursuance of an integration scheme, regardless of the person carrying out the function.

Section 41B – Healthcare Improvement Scotland

155. Section 41B makes amendments to the National Health Service (Scotland) Act 1978 to provide for Healthcare Improvement Scotland (HIS) to inspect services which are delivered under integration functions in pursuance of an integration scheme, regardless of the person carrying out the function.

Section 41C – Joint inspections of health and social services

156. Section 41C makes amendments to the Public Services Reform (Scotland) Act 2010 to provide for SCSWIS and HIS to jointly inspect health and social care services provided under integration functions in pursuance of an integration scheme.

157. In carrying out joint inspections, SCSWIS and HIS are to adhere to current codes of practice issued by the Scottish Ministers and may carry out joint inspections for any of the purposes provided for by section 10I(1) or (1B) or 10J(2) of the National Health Service (Scotland) Act 1978, or section 53(2) of the Public Services Reform (Scotland) Act 2010.

Section 41D – Amendments of section 56 of Local Government (Scotland) Act 1973

158. Section 41D amends the Local Government (Scotland) Act 1973 to ensure that the functions which are conferred on local authorities by the Bill must be carried out by that local authority, and may not be delegated to another local authority. For example, a local authority could not delegate the function of preparing a strategic plan under section 1 or 2 to another local authority.

Section 42 –Meaning of “integration authority”

159. Section 42 sets out who is the integration authority for a local authority area for the purposes of Part 1 of the Bill. This depends on the model of integration adopted, so that the integration authority is: the integration joint board, where the integration scheme provides for functions to be
delegated to an integration joint board; the Health Board, where in accordance with the integration scheme functions are delegated to the Health Board only; the local authority where, in accordance with the integration scheme, functions are delegated to the local authority only; or both the local authority and the Health Board acting jointly where, in accordance with the integration scheme, functions are delegated to both the local authority and the Health Board.

Section 43 – Meaning of “integration functions”

160. Section 43 sets out what the integration functions for the area of a local authority are for the purposes of Part 1 of the Bill. Where the integration scheme provides for functions to be delegated to an integration joint board, the integration functions are those delegated to the board in pursuance of the scheme. Where the integration scheme provides for functions to be delegated to either a local authority or to a Health Board or to both a local authority and a Health Board, the integration functions are those delegated in pursuance of the scheme, as well as the functions specified in the scheme as ones which are to be exercised in conjunction with the delegated functions.

Section 43A – Meaning of “constituent authority”

161. Section 43A provides a definition of the term “constituent authority” for the purposes of Part 1 of the Bill. This term refers to the local authority, or local authorities, and the Health Board which prepared an integration scheme in pursuance of which an integration joint board has been established.

PART 2

SHARED SERVICES

Section 44 - Shared services

162. Section 44(1) provides for the Common Services Agency for the Scottish Health Service to provide, or arrange the provision of, goods and services to the bodies listed in subsection (2). The Common Services Agency may only provide, or arrange the provision of, goods and services to those bodies with the consent of the Scottish Ministers.

163. Subsection (3) provides an illustrative list of the services which may be provided. The list comprises administrative, technical, legal, other professional and accommodation services.

164. The Common Services Agency also has powers under the National Health Service (Scotland) Act 1978 (“the 1978 Act”) to provide goods and services to certain persons. For example, under section 15 of the 1978 Act, the Common Services Agency may provide goods to doctors, dentists and ophthalmologists who are providing primary medical services under a contract with a Health Board. Subsection (4) sets out that the power of the Common Services Agency to provide goods and services under subsection (1) of this section sits alongside and does not prejudice any other power of the Common Services Agency to provide goods or services to other persons.

165. Subsection (4A) provides for the Scottish Ministers by order to amend the list of persons, or description of person, to whom the Common Services Agency may provide goods or services.
Section 44A – Section 44: consequential provision

166. Section 44A amends sections 10 and 15 of the 1978 Act and section 17(2) of the Patient Rights (Scotland) Act 2011 to make changes which are necessary in consequence of section 44 and 51. Subsection (2) adjusts section 10 of the 1978 Act to reflect that the functions of the Common Services Agency are conferred on it by Section 44 of the Bill as well as by the 1978 Act. Subsection (3)(a) removes references to the Common Services Agency from section 15 of the 1978 Act. The functions formerly conferred on the Agency by that section are replaced by functions conferred on the Agency by section 44 of the Bill. Subsection (3)(b) and (c) have the effect that section 15(1)(a) of the 1978 Act continues to apply to the Common Services Agency despite the change made by subsection (2). Subsection (3)(d) repeals sections 15(2A)-(2D) of the 1978 Act. Subsection (4) makes a change to section 17(2) of the Patient Rights (Scotland) Act 2011 to insert a reference to “the 1978 Act”. Section 17(1) of the 2011 Act, which includes a similar reference to the 1978 Act, is repealed by 51(3A) of the Bill.

Section 44B – Common Services Agency for the Scottish Health Service: residual liabilities

167. Section 44B amends section 2(1) of the National Health Service (Residual Liabilities) Act 1996 to ensure that those bodies entering into contracts with the Common Services Agency are offered the same protection which is provided when contracting with other NHS bodies. This change is made to take account of the fact that the Common Services Agency may, since the enactment of section 14 of the Public Services Reform (Scotland) Act 2010, be dissolved by order under that Act. In the event that such an order is made, any residual liabilities of the Common Services Agency will transfer to the Scottish Ministers or another health body.

Section 45 – Extension of schemes for meeting losses and liabilities of health service bodies

168. Section 45 amends section 85B of the National Health Service (Scotland) Act 1978 (the “1978 Act”) to permit local authorities and integration joint boards to participate in the scheme established under that section for the purposes of meeting losses and liabilities incurred in the exercise of relevant functions.

169. Subsection (3) inserts references into the 1978 Act, which have the effect of restricting the functions of local authorities that can be covered by a scheme made under section 85B of the 1978 Act. It restricts the functions to integration functions and to functions that a local authority carries out in accordance with a direction from a integration joint board. The Scottish Ministers are given the power to specify by order other functions of local authorities that can be covered by a scheme under section 85B of the 1978 Act. “Integration functions” are defined for the purposes of this section in relation to local authorities as functions which are: delegated to the authority under an integration scheme; to be carried out in conjunction with delegated functions; or to be carried out by the local authority in pursuance of a direction by a Health Board or integration joint board under section 22.

170. Subsection (4) amends the existing power in the 1978 Act so that the Scottish Ministers are not able to direct local authorities to participate in a scheme made under section 85B of the 1978 Act.
PART 3

HEALTH SERVICE: FUNCTIONS

Section 46 – Scottish Ministers: power to form companies etc.

171. Section 46 provides for amendments to section 84B (Joint ventures) of the 1978 Act. Currently, the Scottish Ministers may only form or participate in companies as defined by section 1(1) of the Companies Act 2006. The amendment permits the Scottish Ministers to form and participate in any type of body corporate. This includes limited liability partnerships and Scottish Charitable Incorporated Organisations.

Section 47 – Health Boards: carrying out of functions

172. Section 47 amends the 1978 Act to permit Health Boards to exercise any function of another Health Board where the other Health Board and the Scottish Ministers give their consent.

PART 4

GENERAL

Section 48 – Interpretation

173. Section 48 provides various definitions that apply to this Act.

Section 49 - Subordinate legislation

174. The Bill contains various powers for the Scottish Ministers to make regulations and orders. This section makes further provision about regulations and orders under the Bill in particular enabling them to make different provision for different purposes, make different provisions for different classes of cases, and to include supplementary, incidental, consequential, transitional or transitory provision. It also provides that regulations under sections 1(4H) and 5(1) and any order under section 44(4A), along with any order under section 50 which amends the text of another Act, is subject to the affirmative procedure. Other regulations and orders under the Bill are subject to the negative procedure.

Section 50 - Ancillary provision

175. This section provides powers for the Scottish Ministers to make supplementary, incidental or consequential provision by order, as they consider appropriate for the purposes of, or in connection with, or for the purposes of giving full effect to, any provision made by, or by virtue of, this Act. Such an order may also make such transitional, transitory or savings provision as the Scottish Ministers consider appropriate for the purposes of, or in connection with, the coming into force of any provision.

Section 51 – Repeals and revocation

176. Subsection (A1) repeals section 5A of the Social Work (Scotland) Act 1968, which makes provisions about local authority plans for community care services.
177. Subsection (1) and (3) repeal sections 4A and 4B of the National Health Service (Scotland) Act 1978 and section 2 of the National Health Service Reform (Scotland) Act 2004, thereby removing Community Health Partnerships from statute.

178. Subsection (2) repeals sections 15 to 17 of the Community Care and Health (Scotland) Act 2002 which provide the current mechanism for Health Boards and local authorities to delegate functions and make payments in relation to those functions, and for the transfer of staff in relation to the delegated functions.

179. Subsection (3A) repeals section 17(1) of the Patient Rights (Scotland) Act 2011 which makes an amendment to the National Health Service (Scotland) Act 1978 which is superseded by section 44(1) of the Bill.

180. Subsection (4) repeals section 20 of the Social Care (Self-directed Support) (Scotland) Act 2013 which amends section 15 of the Community Care and Health (Scotland) Act 2002 (which is itself repealed by subsection (2)).

181. Subsection (5) revokes the Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) (Scotland) Order 2013. The provisions of that Order are substantially replicated in sections 44 and 44A of the Bill.

Section 52 – Commencement

182. Section 52 establishes that sections 1(3) to (7), 5, 37, 41 and Part 4 (other than section 51) of the Bill come into force on the day after Royal Assent. Powers are conferred on the Scottish Ministers to commence the other provisions of the Act on dates appointed by order and to make transitory, transitional or savings provisions in connection with commencement.

Section 53 – Short title

183. Section 53 states that the short title of this Act is the Public Bodies (Joint Working) (Scotland) Act 2014.

Schedule

184. The schedule to the Bill is introduced by section 1(4A). The schedule sets out a list of functions conferred on local authorities that, by virtue of section 1(4A), may be delegated under an integration scheme prepared under section 1 or 2 of the Bill. Broadly, the listed enactments confer functions on local authorities which relate to the provision of social care services.
SUPPLEMENTARY DELEGATED POWERS MEMORANDUM

Purpose

1. This Memorandum has been prepared by the Scottish Government to assist the Delegated Powers and Law Reform Committee in its consideration of the Public Bodies (Joint Working) (Scotland) Bill. This Memorandum describes the provisions in the Bill conferring power to make subordinate legislation which are either introduced or amended at Stage 2. This Memorandum supplements the Delegated Powers Memorandum on the Bill as introduced.

PROVISIONS CONFERRING POWER TO MAKE SUBORDINATE LEGISLATION INTRODUCED OR AMENDED AT STAGE 2

PART 1 – FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration schemes

Section 1(4B)-(4D), (4F) and (4G) – Integration schemes: same local authority and Health Board area

Provision

2. Subsection (3) provides that an integration scheme is a scheme setting out certain matters including, in accordance with subsection (3)(b), the functions that are to be delegated in accordance with a model provided for in subsection (4).

3. Subsection (4B) provides for the Scottish Ministers to prescribe by regulations the functions that a Health Board may delegate by virtue of an integration scheme. Subsection (4C) provides for the Scottish Ministers to prescribe by regulations the functions conferred by enactments listed in the schedule to the Bill that local authorities must delegate but only in so far as they are exercised in relation to persons aged at least 18 years where the local authority (and Health Board) are delegating functions to an integration joint board or the local authority is delegating functions to a Health Board. Subsection (4D) provides for the Scottish Ministers to
prescribe the functions of a Health Board that must be delegated but only in so far as they are exercisable in relation to persons aged at least 18 years where the Health Board (and local authority) are delegating functions to an integration joint board or the Health Board is delegating functions to a local authority. Subsection (4F) provides for the Scottish Ministers to prescribe the functions of a Health Board that: (a) must be delegated other than in prescribed circumstances or (b) may not be delegated in certain prescribed circumstances. Subsection (4G) provides for the Scottish Ministers to prescribe the functions of a local authority, being functions conferred by an enactment listed in the schedule, which may not be delegated in certain prescribed circumstances.

4. By virtue of section 48(1), “prescribed” means prescribed by the Scottish Ministers by regulations.

Reason for taking the power

5. The powers provide appropriate flexibility for the Scottish Ministers in setting out the functions of a local authority and a Health Board that may, must and may not be delegated under an integration scheme. It also allows the Scottish Ministers to make provision as to the delegation of functions in certain circumstances.

Stage 2 amendment

6. The Bill as introduced contained no limits on the functions that were to be available for delegation, but permitted the Scottish Ministers to make regulations under section 1(6) setting out the functions of health boards or local authorities that must, may or may not be delegated.

7. It was noted in evidence to the Health and Sport Committee by Local Government stakeholders and the Convention of Scottish Local Authorities (COSLA) that the Bill provided for a broader range of local authority functions to be available for delegation than the policy intention set out in the Policy Memorandum.

8. The Bill has been amended at Stage 2 to restrict the range of functions available for delegation to meet the policy intention of integrating adult health and social care services. Section 1(6) as introduced has been replaced with new, more restricted powers. Under section 1(4B), the Scottish Ministers may, by regulations, prescribe functions of Health Boards which are to be delegated. No functions of Health Boards which are not so prescribed will be able to be delegated under an integration scheme. Under section 1(4C), regulations may be made to require the delegation of local authority functions only if the function is conferred by an enactment listed in the schedule to the Bill and only in so far as the function is exercisable in relation to persons at least 18 years of age. Under section 1(4D), regulations may be made to require the delegation of functions of Health Boards only in so far as the functions are exercisable in relation to persons at least 18 years of age.

9. These amendments, along with the schedule, therefore provide for the functions conferred on Health Boards and local authorities that may be delegated under integration schemes and provide appropriate Ministerial control on the delegation of functions. The powers allow the Scottish Ministers to set the framework within which Health Boards and local authorities will determine the functions to be delegated when implementing an integration scheme.
Choice of procedure

10. Regulations made under these provisions are subject to the negative procedure. This is considered appropriate given the restrictions on the exercise of these powers by the Scottish Ministers that are contained within the provisions themselves. Subsection (4B) and (4C) only allow functions to be prescribed in so far as they relate to adults. Subsection (4C) is further limited as it only permits functions to be prescribed which are included in the schedule to the Act. The effect of these restrictions is that these powers cannot be used to permit or require the delegation of functions other than those which relate to adult health and social care services.

Section 1(4H) – Integration schemes: same local authority and Health Board area

Power conferred on: the Scottish Ministers
Power exercisable by: regulations made by statutory instrument
Parliamentary procedure: affirmative
Amended or new power: new power

Provision

11. Section 1(4H) provides for the Scottish Ministers to, by regulations, remove an enactment from the schedule to the Bill. The Schedule provides the list of enactments that confer functions on a local authority that may be delegated. The schedule was added by amendment at stage 2 and sets out the enactments which confer functions which a local authority may delegate under an integration scheme.

Reason for taking the power

12. The power ensures that the Scottish Ministers are able to update the list of enactments in the schedule to remove any function which, in future, may become unsuitable for delegation without requiring primary legislation. Primary legislation would, however, be required to broaden the scope of local authority functions that may be delegated under an integration scheme by adding additional enactments to the list in the schedule. Where a new function is conferred on a local authority by primary legislation, it would be possible for the schedule to be amended by the enactment creating or conferring the new function, to enable the delegation of that function by the local authority.

Choice of procedure

13. Regulations made under this provision are subject to the affirmative procedure. Notwithstanding that the use of the power is limited to the removal of enactments from the schedule, given that this power enables the Scottish Ministers to amend primary legislation by way of regulations it is considered appropriate that the exercise of the power is subject to a higher degree of Parliamentary scrutiny.
Section 9(3) – Functions delegated to an integration joint board

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure
Amended or new power: new power

Provision

14. Subsection (3) provides that the Scottish Ministers may prescribe the day on which functions are to be delegated if they are not delegated by virtue of section 23(3A).

15. By virtue of section 48(1), “prescribe” means prescribed by the Scottish Ministers by regulations.

Reason for taking this power

16. This provision is required to provide for the Scottish Ministers to set an appropriate date by functions must be delegated. This is to ensure that the policy of integration of adult health and social care functions is achieved within a consistent and clear timescale across Scotland.

Stage 2 amendment

17. As introduced, section 9 provided that, where the integration model in 1(4)(a) was to apply, the Scottish Ministers were to prescribe a single day on which functions were to be delegated. An amendment has been made to section 23(3A) to allow integration authorities to choose to delegate functions on an earlier day, where that day is specified in their strategic plan. The amendment to section 9(3) ensures that where no such date is specified, functions will be delegated, at the latest, on the day prescribed by Ministers. This will provide for clarity as to the final date by which integration of adult health and social care functions must be implemented.

Choice of procedure

18. Regulations under section 9 remain subject to negative procedure for the reasons set out in paragraph 28 of the Delegated Powers Memorandum. The amendments make no change to the choice of procedure in relation to this power.

Section 11 – Other staff of integration joint board

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish Statutory Instrument
Parliamentary procedure: negative procedure
Amended or new power: amended power

Provision

19. Subsection (1) provides that the Scottish Ministers may by order make provision enabling integration joint boards to appoint staff other than a chief officer.
**Reason for taking this power**

20. The reasons for taking this power are set out in paragraph 33 of the Delegated Powers Memorandum.

**Stage 2 amendment**

21. The Bill was amended at Stage 2 to clarify that the power in 11(1) allows the Scottish Ministers to make provision in relation to only one integration joint board or some integration joint boards. Subsection (4)(a) now provides for flexibility so that an order under 11(1) will be able to take account of local circumstances.

22. Also, stakeholders raised concerns at Stage 1 that the power of the Scottish Ministers to enable, by order, integration joint boards to appoint staff other than a chief officer was broad and far reaching with the potential to significantly change the delivery of health and social functions. Section 11(5) was inserted at Stage 2 and requires that before making an order, the Scottish Ministers must consult with local authorities, Health Boards and integration joint boards where the order relates to integration joint boards generally, or relevant constituent authorities and the relevant integration joint board(s) where the order relates to one or some integration joint boards.

**Choice of procedure**

23. An order made under section 11 remains subject to negative procedure which is considered appropriate for the reasons set out in paragraph 34 of the Delegated Powers Memorandum. The amendments do not alter the choice of procedure.

**Section 12 – Integration joint boards: further provision**

<table>
<thead>
<tr>

<th>Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>order/regulations made by Scottish statutory instrument</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>negative procedure</td>
</tr>
<tr>
<td>Amended or new power:</td>
<td>new and amended power</td>
</tr>
</tbody>
</table>

**Provision**

24. On introduction, subsection (1) provided that the Scottish Ministers may by order make provision about: (a) the membership of integration joint boards; (b) their proceedings; (c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions; (d) the supply of services or facilities to integration joint boards by a local authority or Health Board; and (e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.

**Reason for taking this power**

25. The reasons for taking this power are set out in paragraph 36 of the Delegated Powers Memorandum.
Stage 2 amendment

26. On reflection, the Scottish Ministers consider that integration joint boards should have the ability to establish committees should this be required to ensure the effective carrying out of its functions. In particular, integration joint boards may consider this appropriate where a greater number of functions were delegated that relate to different population groups. Given that this would be a significant change to the operation of integration joint boards and the carrying out of their functions, it is considered appropriate that integration joint boards should not be permitted to establish committees or delegate functions to those committees without the Scottish Ministers making an Order to permit this.

27. The Bill was amended at Stage 2 to provide a power for the Scottish Ministers to make an Order enabling an integration joint board to establish committees for any purpose and to permit an integration joint board to delegate any functions delegated to it in pursuance of an integration scheme to its chief officer, any other member of staff or to any such committee.

28. To ensure that there is appropriate flexibility available in the exercise of these powers, the Bill was amended at Stage 2 to insert section 12(2), which provides that the Scottish Ministers may make provision in an Order under 12(1) in relation to only one integration joint board, or some integration joint boards. This will allow the use of these powers to take into account different local circumstance.

29. COSLA raised concerns regarding the breadth of the power of the Scottish Ministers to make an order in relation to integration joint boards, in particular conferring powers to contract, borrow money and supply services. Given that the exercise of this power may result in significant change to the delivery of health and social care services the Scottish Ministers consider it appropriate to amend the Bill to provide for consultation before the exercise of the powers in section 12(1). By virtue of section 12(2A), before making such an Order the Scottish Ministers are required to consult integration joint boards, local authorities and Health Boards where the order relation integration joint boards generally or the relevant constituent authorities where the Order relates to one or some integration joint boards.

30. An amendment at stage 2 inserted a power at 12(5) to provide for the Scottish Ministers to prescribe other groups of persons, in addition to health and social care professionals, who must be consulted before making a scheme in relation to the transfer of staff under 12(4). This amendment was proposed by Rhoda Grant MSP and supported by the Royal College of Nursing. The Scottish Government considered it appropriate that before Ministers make any scheme under 12(4) relevant parties must be consulted. Where a new function is conferred on a local authority by primary legislation, it would be possible for the schedule to be amended by the enactment creating or conferring the new function, to enable the delegation of that function by the local authority.

Choice of procedure

31. An order under section 12(1) remains subject to negative procedure for the reasons set out in paragraph 37 of the Delegated Powers Memorandum. The amendments make no change to the choice of procedure in relation to these powers.
32. Regulations under section 12(5) are subject to negative procedure. This is considered appropriate given the regulations will deal with matters of detail in relation to the persons to be consulted before making any transfer scheme rather than any broad principle.

Section 14 – Functions delegated to local authority or Health Board

**Power conferred on:** Scottish Ministers  
**Power exercisable by:** regulations made by Scottish statutory instrument  
**Parliamentary procedure:** negative procedure  
**Amended or new power:** amended power

**Provision**

33. Subsection (1A) provides that the Scottish Ministers may prescribe the day on which functions are to be delegated if they are not delegated by virtue of section 23(3A).

By virtue of section 48(1), “prescribed” means prescribed by the Scottish Ministers by regulations.

**Reason for taking this power**

34. This provision is required to provide for the Scottish Ministers to set an appropriate date by which functions must be delegated. This is to ensure that the policy of integration of adult health and social care functions is achieved within a consistent and clear timescale across Scotland.

**Stage 2 amendment**

35. As introduced, section 14 provided that, where the integration model in 1(4)(b)-(d) was chosen, the Scottish Ministers were to prescribe a single day on which functions were to be delegated. An amendment has been made to section 23(3A) to allow integration authorities to choose to delegate functions on an earlier day, where that day is specified in their strategic plan. The amendment inserting section 14(1A) ensures that where no such date is specified, functions will be delegated, at the latest, on the day prescribed by Ministers. This will provide for clarity as to the final date by which integration of adult health and social care functions must be implemented.

**Choice of procedure**

36. Regulations under section 14 remain subject to negative procedure for the reasons set out in paragraph 40 of the Delegated Powers Memorandum. The amendments make no change to the choice of procedure in relation to this power.
Section 15 – Transfer of staff where functions delegated to local authority or Health Board

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure
Amended or new power: new power

Provision

37. On introduction subsection (1) provided for the Scottish Ministers to make, by scheme, provision about the transfer of staff. Subsection (1B)(c) provides for the Scottish Ministers to prescribe other groups of persons, in addition to health and social care professionals, who must be consulted before making a scheme in relation to the transfer of staff under subsection (1).

38. By virtue of section 48(1), “prescribed” means prescribed by the Scottish Ministers by regulations.

Reason for taking this power

39. This power is required to ensure that relevant parties, as well as health and social care professionals, are consulted on any scheme the Scottish Ministers may make in relation to the transfer of staff from a local authority to a Health Board.

Stage 2 Amendment

40. This power was inserted at stage 2 and proposed by Rhoda Grant MSP and supported by the Royal College of Nursing. The Scottish Government considered it appropriate that before Ministers make any scheme under 15(1) relevant parties must be consulted.

Choice of procedure

41. Regulations under section 12(5) is subject to negative procedure. This is considered appropriate given the regulations will deal with matters of detail in relation to the persons to be consulted before making any transfer scheme rather than any broad principle.

Section 22A – Section 22: supplementary

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure
Amended or new power: amended power

Provision

42. Subsection (6) allows the Scottish Ministers to provide by order, where the conditions in subsection (7) are met, that an integration authority which is an integration joint board (a) may decide not to give a direction under section 22 in relation to carrying out a function specified in the order or, (b) may give a direction despite the making of that order.
Reason for taking this power

43. The Bill as introduced provided in section 22(8) that the Scottish Ministers could make an order to provide that an integration joint board must or must not make a direction under section 22. The reasons for taking this power are set out at paragraph 48 of the Delegated Powers Memorandum.

Stage 2 amendment

44. The Bill has been amended at Stage 2 so that section 22(1) now provides that an integration joint board must give a direction to one of its constituent authorities in relation to the carrying out of its functions. This reflects the intention that integration joint boards will primarily be responsible for the strategic planning and direction of integration functions, rather than for service delivery. However, the Scottish Government has been clear that, in time, it may be possible for integration joint boards to take on responsibility for delivery of integrated services. The power in subsection 22A(6) allows the Scottish Ministers, on receipt of a written application from the constituent authorities and provided that the Scottish Ministers consider that making an order in relation to some or all of the functions would improve compliance with the national health and wellbeing outcomes, to remove the requirement for an integration joint board to issue directions under section 22(1) and so provide for an integration joint board to deliver the functions delegated by virtue of an integration scheme. This provides for flexibility in the future.

45. The Bill was amended to provide for the policy intention that integration joint boards would not directly deliver integrated functions as the default position, and to require an order under 22A(6) for any integration joint board to be excepted from this default position. Further, COSLA raised concerns regarding the powers of the Scottish Ministers to permit an integration joint board to directly deliver integrated functions and the wide ranging implications for delivery of health and social care services. The provision has therefore been adjusted so that an application from the relevant constituent authorities is a precondition on the exercise of this power by the Scottish Ministers.

Choice of procedure

46. An order made under these provisions is subject to negative procedure, as was the previous version of the power provided in section 22(8) of the Bill as introduced. This remains appropriate given it merely allows the Scottish Ministers to enable a particular delivery mechanism and taking into account the requirements placed on the Scottish Ministers before being able to exercise the power.
Section 34 – Revised integration scheme

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure
Amended or new power: new power

Provision

47. Subsection (3A) provides that, where a local authority and a Health Board are preparing a revised integration scheme, they must jointly consult certain persons before the revised integration scheme is submitted to the Scottish Ministers for approval. Subsection (3A)(a) provides that the persons to be consulted include such persons appearing to the Scottish Ministers to have an interest as may be prescribed.

48. By virtue of section 48(1), “prescribed” means prescribed by the Scottish Ministers by regulations.

Reason for taking this power

49. This power enable the Scottish Ministers to prescribe the relevant parties that must be included in any consultation on a revised integration scheme. It will enable the Scottish Ministers to ensure that the consultation on such a scheme is carried out uniformly between different areas and to a suitable standard given the significant effect on the provision of health and social care services that may result from changes to an integration scheme.

Stage 2 amendment

50. This power was inserted by amendment at stage 2 to provide for the Scottish Ministers to ensure that the relevant parties are consulted where a revised integration scheme is prepared. It ensures that a revised integration scheme will be subject to the same degree of consultation as the initial integration scheme that is prepared under section 1.

Choice of procedure

51. Regulations under section 34(3A)(a) are subject to negative procedure. This is considered appropriate given the regulations will deal with matters of detail relation to consultation requirement rather than broad principle.
PART 2 –SHARED SERVICES

Section 44(4A) – Shared services

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: affirmative procedure
Amended or new power: new power

Provision

52. Subsection (4A) provides a power for the Scottish Ministers to amend by order subsection (2) to add or remove a person or a description of a person, for the time being mentioned in or falling within that subsection.

Reason for taking this power

53. Section 44 of the Bill expands certain powers of the Common Services Agency, which are at present set out in section 15(2A) of the National Health Service (Scotland) Act 1978 (as that Act was amended by SSI 2013/220). At present section 15(2A) of that Act provides that the Common Services Agency may carry out certain activities or services for, or on behalf of certain persons. Those persons include the Scottish Ministers, government departments, local authorities and such public bodies or classes of public body as may be determined by the Scottish Ministers. As introduced, section 44(2) contained a list of Scottish public bodies that the Common Services Agency may, with the consent of the Scottish Ministers, enter into arrangements with for the provision of good or services. Those persons are: the Scottish Ministers; any other officer-holder in the Scottish Administration; any Scottish public authority; any Scottish public authority with mixed functions or no reserved functions; any government department; and any cross-border public authority. The new power inserted at stage two allows this list to be amended by the Scottish Ministers by Order. This power is taken to reflect the current provision in section 15(2A) that the Scottish Ministers may determine additional persons to or for whom the Common Services Agency may provide services.

Stage 2 amendment

54. It was considered appropriate to amend section 44 at Stage 2 to enable and provide for future flexibility and changing circumstance should the Scottish Ministers consider it appropriate to amend the list of persons or groups of persons in subsection (2), for example in the event that a new statutory body is created and it is appropriate to include it in section 44(2). The new power in subsection (4A) enables the Scottish Ministers to add or remove persons or groups from that list. This will allow section 44(2) to be kept up to date without requiring further primary legislation, as it can be amended by Order to take into account any changes to the public sector landscape or the powers of the Common Services Agency which may occur in future. It affords a similar level of flexibility as currently provided for in the powers of the Common Services Agency under, for example section 15(2A)(b)-(f).

Choice of procedure
55. An order under this provision is subject to affirmative procedure. Although the exercise of the power is restricted to the addition or removal of persons listed in 44(2), it allows the Scottish Ministers to amend primary legislation by Order. It is therefore appropriate that the use of this power should be subject to the higher degree of Parliamentary scrutiny that affirmative procedure allows.
Delegated Powers and Law Reform Committee

16th Report, 2014 (Session 4)

Public Bodies (Joint Working) (Scotland) Bill as amended at stage 2

Published by the Scottish Parliament on 19 February 2014
Delegated Powers and Law Reform Committee

Remit and membership

Remit:

1. The remit of the Delegated Powers and Law Reform Committee is to consider and report on—
   (a) any—
   (i) subordinate legislation laid before the Parliament or requiring the consent of the Parliament under section 9 of the Public Bodies Act 2011;
   (ii) [deleted]
   (iii) pension or grants motion as described in Rule 8.11A.1; and, in particular, to determine whether the attention of the Parliament should be drawn to any of the matters mentioned in Rule 10.3.1;
   (b) proposed powers to make subordinate legislation in particular Bills or other proposed legislation;
   (c) general questions relating to powers to make subordinate legislation;
   (d) whether any proposed delegated powers in particular Bills or other legislation should be expressed as a power to make subordinate legislation;
   (e) any failure to lay an instrument in accordance with section 28(2), 30(2) or 31 of the 2010 Act; and
   (f) proposed changes to the procedure to which subordinate legislation laid before the Parliament is subject.
   (g) any Scottish Law Commission Bill as defined in Rule 9.17A.1; and
   (h) any draft proposal for a Scottish Law Commission Bill as defined in that Rule.

The Committee reports to the Parliament as follows—

**INTRODUCTION**

1. At its meeting on 18 February 2014, the Delegated Powers and Law Reform Committee considered the delegated powers provisions in the Public Bodies (Joint Working) (Scotland) Bill as amended at Stage 2 ("the Bill")\(^1\). The Committee submits this report to the Parliament under Rule 9.7.9 of Standing Orders.

2. In broad outline, the Bill provides a framework with a view to the improvement of the quality and consistency of health and social care services, through the integration of health and social care services in Scotland. Four “models of integration” between local authority and Health Board functions may be used, by agreement subject to the approval of the Scottish Ministers. On default if an integration scheme is not submitted to Ministers, they may specify functions to be delegated to an integration joint board (Part 1).

3. The Bill also provides for the Common Services Agency (also known as NHS National Services Scotland) to provide goods and services to public bodies including local authorities (Part 2, section 44). It also provides for the Scottish Ministers to form a wider range of joint venture structures in relation to persons providing functions and services under the National Health Service (Scotland) Act 1978, to seek to make the most effective use of resources (Part 3, section 46). There is new provision that a Health Board may, with the agreement of another Health Board and the Scottish Ministers, carry out on behalf of that other Board any function of the other Board (Part 3, section 47).

4. The Bill also extends the scheme for meeting losses and liabilities of health service bodies which is run by NHS Scotland on behalf of the Scottish Ministers, to

---

\(^1\) Public Bodies (Joint Working) (Scotland) Bill as amended at Stage 2 available at: [http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32as4-stage2-amend.pdf](http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32as4-stage2-amend.pdf)
local authorities and “integration joint boards” established under Part 1 (Part 2, section 45).

5. The Scottish Government has provided the Parliament with a supplementary memorandum on the delegated powers provisions in the Bill, in advance of Stage 3 of the Bill (the SDPM\(^2\)).

6. The Committee reported on certain matters in relation to the delegated powers provisions in the Bill at Stage 1 in its 48th report of 2013.

**DELEGATED POWERS PROVISIONS**

7. The Committee considered each of the new or substantially amended delegated powers provisions in the Bill after Stage 2.

8. **After Stage 2, the Committee reports that it does not need to draw the attention of the Parliament to the new or substantially amended delegated powers provisions listed below and that it is content with the Parliamentary procedure to which they are subject:**

   - Section 1(4H) – Integration schemes: same local authority and Health Board area
   - Section 9(3) – Functions delegated to an integration joint board
   - Section 11(4) and (5) – Other staff of integration joint board
   - Section 12 – Integration joint boards: further provision
   - Section 14(1A) – Functions delegated to local authority or Health Board
   - Section 15 – Transfer of staff where functions delegated to local authority or Health Board
   - Section 18A – Health funding: further provision
   - Sections 22 and 22A – Directions by integration authority; Section 22: supplementary
   - Section 22A(6) – Section 22: supplementary
   - Section 30B – Requirement to prepare replacement strategic plan
   - Section 33(3) – Integration authority: performance report
   - Section 34(3A) – Revised integration scheme

\(^2\) Public Bodies (Joint Working) (Scotland) Bill Supplementary Delegated Powers Memorandum available at: [http://www.scottish.parliament.uk/S4_Bills/Public_Bodies_SDPM.pdf](http://www.scottish.parliament.uk/S4_Bills/Public_Bodies_SDPM.pdf)
• Section 36 – Power to make provision in consequence of new integration scheme

• Section 41C(3) – Joint inspections of health services and social services

• Section 44(4A) – Shared services (Common Services Agency)

9. The Scottish Government has written to the Committee to advise that it intends to bring forward an amendment at stage 3 which would make the powers at section 1(4C) and (4D) subject to the affirmative procedure. The correspondence from the Government is reproduced at the Annex.

10. The Committee reports that it finds the powers in section 1(4B) to (4D), (4F) and (4G) are acceptable in principle.

11. The Committee also notes the Scottish Government’s intention to bring forward an amendment at Stage 3 to provide that the powers conferred by section 1(4C) and (4D) would be subject to the affirmative procedure. The Committee is content with that proposal, and that the powers in section 1(4B), (4F) and (4G) are subject to the negative procedure.

12. The Committee therefore reports that it is content with the provisions in the Bill which have been amended at Stage 2 to insert or substantially alter provisions conferring powers to make subordinate legislation.
ANNEX

Correspondence from the Scottish Government, dated 14 February 2014.

I draw your attention to the Scottish Government’s intention to lay a Stage 3 amendment in relation to section 1(4C) and (4D), which will amend the choice of procedure that these powers will be subject to. On reflection, given the significance of the powers at 1(4C) and (4D), the Scottish Government consider it more appropriate that these powers be subject to affirmative procedure.
1. The Committee reported on the delegated powers in the Public Bodies (Scotland) Bill as amended at stage 2 on 19 February 2014 in its [16th Report of 2014](#).

2. Further to this, the Scottish Government has written to the Committee advising it of amendments it has lodged at stage 3 which relate to delegated powers and explaining the purpose of these amendments.

3. The Government initially wrote on 19 February advising the Committee of the amendments it was lodging at stage 3. This letter is attached at Annex A. Subsequently, on 21 February, the Government wrote again to the Committee in order to explain the purpose and effect of the amendments. This letter is attached at Annex B.

4. **Members are invited to note the Scottish Government’s response and to make any comments they wish.**
Correspondence from the Scottish Government – 19 February 2014

Further to my letter of 14 February and the Supplementary Delegated Powers Memorandum for the Public Bodies (Joint Working) (Scotland) Bill as amended at Stage 2, this letter sets out amendments at Stage 3 that confer delegated powers on the Scottish Ministers.

Section 1 – Integration schemes: same local authority and Health Board area

An amendment provides that regulations made under subsection 1(3)(e) may include provision about certain specific matters. Regulations under section 1(3)(e) are to be subject to the affirmative procedure.

After section 18 - Power of Scottish Ministers to make provision giving effect to integration scheme

An amendment provides for a new power for the Scottish Ministers make such provision by regulation as they think appropriate for the purpose of giving effect to any matters included in integration schemes by virtue of being prescribed in regulations made under section 1(3)(e). Regulations under this section are to be subject to the affirmative procedure.

Section 36 – Power to make provision in consequence of new integration scheme

An amendment provides a new power for the Scottish Ministers, when preparing a scheme in relation to the transfer of staff as a consequence of a new integration scheme, to prescribe persons appearing to the Scottish Ministers to have an interest for the purposes of consultation before a scheme is made under section 36. This amendment is similar to amendments made at stage 2 to sections 12 and 15, and reflects an undertaking given by the Cabinet Secretary to the Health and Sport Committee at Stage 2 to bring forward such an amendment in respect of section 36. Regulations under section 36 are to be subject to the negative procedure.

Section 46 – Scottish Ministers: power to form companies etc.

An amendment to section 46 provides for the Scottish Ministers to prescribe additional purposes for which the Scottish Ministers may form or participate in forming bodies corporate and participate in bodies corporate that are formed. The Scottish Ministers may only prescribe purposes which relate to their functions under the National Health Service (Scotland) Act 1978. Regulations under section 46 are to be subject to the negative procedure.

Section 49 – Subordinate legislation

An amendment to section 49 adds sections 1(3)(e), (4C), (4D) and the new section to be added in after section 18 (Power of Scottish Ministers to make provision giving effect to integration scheme) to the provisions which will be subject to the affirmative procedure.
Correspondence from the Scottish Government – 21 February 2014

This letter provides some additional information in relation to Stage 3 amendments lodged by the Scottish Government which, if agreed to, will amend existing powers to make subordinate legislation and insert new powers to make subordinate legislation.

Section 1(3)(e) – Integration schemes: same local authority and Health Board area (amended power)

An amendment has been lodged relating to the existing power in section 1(3)(e) of the Bill. Section 1(3)(e) enables the Scottish Ministers to make regulations to prescribe certain information about certain additional prescribed matters that must be included in an integration scheme prepared under section 1(2) of the Bill. The amendment provides some indicative examples of the provision that may be made in these regulations. This additional provision is made to indicate the type of provision in any regulations made under section 1(3)(e).

An amendment has also been lodged to provide that the power will be subject to the affirmative procedure, recognising that the power to prescribe the information (and the matters on which such information is to be provided) to be set out in an integration scheme is important as integration schemes are central to establishing effective integrated arrangements. The higher level of parliamentary scrutiny is therefore considered appropriate.

After section 18 - Power of Scottish Ministers to make provision giving effect to integration scheme (new power)

This new section, if agreed to, will confer a new power on the Scottish Ministers to make such provision by regulations as they think appropriate for the purpose of giving effect to any matters included in integration schemes by virtue of being prescribed in regulations made under section 1(3)(e).

The matters to be included in the integration scheme under sections 1(3)(a)-(d), such as the model of integration and the functions to be delegated, are subject to additional detail in later provisions of the Bill as to how the detail included in the integration scheme is to be given effect to. As section 1(3)(e) allows for additional matters to be prescribed which must be included in the integration scheme, it is necessary that the Scottish Ministers are also able to make provision to set out the means by which these aspects of the integration scheme will take effect. As the information to be included in the plan under section 1(3)(e) is not set out on the face of the Bill, it is not possible to make provision giving effect to such information in the Bill and regulations are therefore necessary.

Regulations under this section are to subject to the affirmative procedure. This higher level of parliamentary scrutiny is considered appropriate given the matters that may be prescribed to be addressed in integration scheme are central to establishing effective integrated arrangements.
Section 20A – Carrying out of functions conferred on officers of local authorities.

The power in section 20A provides for the Scottish Ministers to set out in regulations a list of existing statutory functions, conferred on an officer of a local authority, that may be deemed to be conferred on an officer of the Health Board or of any other local authorities that prepared the same integration scheme.

The power enables the Scottish Ministers to make clear which functions section 20A applies to, and the conditions which must be satisfied before a function is deemed to be conferred on a person other than the person on whom it was directly conferred by statute.

Regulations under this section are subject to the negative procedure. This is considered appropriate given that regulations do not provide for any new statutory functions but will set out limited circumstances in which a statutory function may apply to another person for the purposes of integration.

Section 20B - Carrying out of functions conferred on officers of Health Boards

The power in section 20B provides for the Scottish Ministers to set out in regulations a list of existing statutory functions, conferred on an officer of a Health Board, that may be deemed to be conferred on an officer of the local authority or any other local authority that prepared the same integration scheme.

The power enables the Scottish Ministers to make clear which functions section 20B applies to, and the conditions which must be satisfied before a function is deemed to be conferred on a person other than the person on whom it was directly conferred by statute.

Regulations under this section are subject to the negative procedure. This is considered appropriate given that regulations do not provide for any new statutory functions but will set out limited circumstances in which a statutory function may apply to another person for the purposes of integration.

Section 36 – Power to make provision in consequence of new integration scheme (amended power)

Section 36(6)(c), if the relevant amendment is agreed to, will confer a new power on the Scottish Ministers, when preparing a scheme in relation to the transfer of staff etc. as a consequence of a new integration scheme, to prescribe additional groups of persons appearing to the Scottish Ministers to have an interest who must be consulted before the Scottish Ministers make a transfer scheme under section 36(3).

This amendment is similar to amendments made at Stage 2 to sections 12 and 15, and reflects an undertaking given by the Cabinet Secretary to the Health and Sport Committee at Stage 2, to bring forward such an amendment in respect of section 36.

Regulations under section 36(6)(c) will be subject to the negative procedure. This is considered appropriate given the regulations will deal with matters of detail in relation to the persons to be consulted before making any transfer scheme rather than any broad principle.
Section 46 – Scottish Ministers: power to form companies etc. (new power)

If agreed to, the amendment to section 46 of the Bill (which inserts a new section 84B(2A) and (2B) into the National Health Service (Scotland) Act 1978) will confer a power on the Scottish Ministers to prescribe additional purposes for which the Scottish Ministers may: (a) form or participate in forming bodies corporate; and (b) participate in bodies corporate that are formed. The Scottish Ministers may only prescribe purposes which relate to their functions under the National Health Service (Scotland) Act 1978.

Section 46 of the Bill is intended to allow Scottish Ministers, (and any health service body such as a Health Board to whom Ministers delegate their functions under the National Health Service (Scotland) Act 1978), to participate in all types of body corporate, and for a broad range of purposes. This will allow them to enter into joint venture agreements with other bodies, including in particular with local authorities. Local authorities’ powers in this area are broad and not subject to specific statutory constraints. By contrast, the powers of the Scottish Ministers and Health Bodies are limited by the provisions of section 84B of the 1978 Act. This amendment aims to ensure that the purposes for which Scottish Ministers and Health Bodies may form or participate in bodies corporate may be adjusted in future without the need for further primary legislation but the power is limited as the purposes must relate to the functions conferred by the National Health Service (Scotland) Act 1978. The Scottish Ministers will require to make regulations to prescribe any such additional purposes. This will ensure that health bodies and other public sector bodies are able to jointly participate in bodies corporate for a broad range of purposes, subject to the approval and control of the Scottish Ministers.

Regulations under section 46 are to be subject to the negative procedure. This is considered the appropriate level of scrutiny given the regulation will deal with matters of detail rather than any broad purpose.
Present:
Bruce Crawford (Committee Substitute)  Nigel Don (Convener)
Mike MacKenzie  Margaret McCulloch
John Scott  Stewart Stevenson

Apologies were received from Richard Baker, Stuart McMillan (Deputy Convener).

Public Bodies (Joint Working) (Scotland) Bill: The Committee considered further the delegated powers provisions in this Bill and noted correspondence from the Scottish Government regarding amendments, which relate to delegated powers, lodged by them at Stage 3. The Convener agreed, on behalf of the Committee, to highlight a concern relating to the delegated power in amendment 86 during the Stage 3 debate.
Public Bodies (Joint Working) (Scotland) Bill: After Stage 2

10:37

The Convener: As members will recall, the committee agreed its report on the Public Bodies (Joint Working) (Scotland) Bill as amended at stage 2 at last week’s meeting. Further to that, the Scottish Government has written to the committee advising it of amendments that it has lodged at stage 3 that relate to delegated powers and explaining the purpose of those amendments.

Members have seen the correspondence from the Scottish Government and we have just had a briefing. I invite them to comment on what is before us.

Stewart Stevenson: There is a simple shortcoming in the information that is before the committee in relation to section 46 and the amendment that allows the Scottish ministers to form companies and bodies corporate. Such an amendment being lodged at stage 3 clearly suggests that something has arisen in the ministers’ consideration of the bill that has caused them to introduce the measure, but there is nothing before us that helps me to understand the reason behind that.

It is a power to cover future events as yet unknown, so I can understand the general point, but it would be helpful to the Parliament if we understood the specific reason that the minister had for lodging the amendment. We can see its effect and the process by which the measure would be implemented. I have no concerns about either of those points but, without knowing the reason why the amendment was lodged, there is a shortcoming in our ability to understand it properly.

John Scott: I agree utterly with what Stewart Stevenson says on this occasion. I am concerned that the measure is being introduced at stage 3 without the normal parliamentary scrutiny that one would expect. I appreciate that there may be policy issues here, but nonetheless the power is far reaching, as I understand it, and we should have had more information than we currently have to enable us to evaluate the intent.

Bruce Crawford: I agree that we should have more information, although I am not sure that the power is as far reaching as members might imagine. I remember having the same discussion when the bill that formed Scottish Water was considered. At that time, I challenged the then Labour and Liberal Executive on whether the use of the term “body corporate” was necessarily about the formation of companies. Allan Wilson, who was then the minister, quite rightly told me that it can be about forming joint ventures with other public bodies and not just outside organisations. The step that the Government is taking is not unusual, although I agree that the committee should have had more information about the intent and purpose.

John Scott: I appreciate that. I remember that Bruce Crawford and I sat on that bill committee together, and I note that there is a precedent, as he reminded us. However, stage 3 of the Public Bodies (Joint Working) (Scotland) Bill will take place this afternoon. It is simply not good enough that we have not had more of an explanation.

Convener, perhaps you will wish to take part in this afternoon’s debate, to elicit the information from the Government minister. I do not know; it is, of course, a matter for you.

The Convener: Clearly, it is a matter for the committee, and if the committee is concerned, it is probably appropriate that the convener takes part and expresses the committee’s concerns. However, I would like to hear all members’ views. I am conscious that Mike MacKenzie may want to say something.

Mike MacKenzie (Highlands and Islands) (SNP): I have a general point to make about the timing. The power might be entirely benign or even beneficial—it might be something that we would welcome—but the timeframe does not allow us to explore it. In general terms, we ought to try to devise a means of avoiding this situation.

The Convener: Yes. Of course, we have mentioned the issue several times in the past few weeks. We still have the convener of the appropriate committee listening in, and I am sure that he will explore that.

I am in the committee’s hands as to what we should do this afternoon. The obvious thought is that I, on your behalf, should raise the issue at the appropriate point, when amendment 86 is called. I would simply ask the Government whether it can say any more about the purpose for which the power is there and note that, if there is a serious policy behind it, we might have expected that the negative procedure would not be used.

Stewart Stevenson: Just for clarity, convener, I agree that you should use the phrase “on behalf of the committee”. It is important that we agree that you will be speaking not as an individual but on behalf of the committee.

The Convener: Yes. That would reflect this morning’s discussion.

Stewart Stevenson: That is fine. I just wanted us to be clear about that.

John Scott: I have every confidence in you, convener.
The Convener: I do not want to over-egg this, but is there anything else that we need to say, or has everything that is appropriate been said? I think that it has.

John Scott: We are perhaps the least important part of the process, but I note that the committee that is responsible for the bill, those who gave evidence on it and others who scrutinised it during the consultation are not aware of the power. We are at the end of the chain, but many others who might have wished to comment have not been able to do so.

The Convener: Right. I think that I know what I have to do. Thank you for that.

10:43

Meeting continued in private until 10:52.
Public Bodies (Joint Working) (Scotland) Bill

Marshalled List of Amendments selected for Stage 3

The Bill will be considered in the following order—

Sections 1 to 53  Schedule

Long Title

Amendments marked * are new (including manuscript amendments) or have been altered.

Section 1

Alex Neil

1 In section 1, page 1, line 20, leave out <where subsection (5A) applies> and insert <in relation to any functions to which subsection (5A) applies that are to be delegated>.

Alex Neil

2 In section 1, page 1, line 21, leave out from <in> to end of line 22 and insert <for use by the person to whom the functions are delegated in respect of those functions,>.

Alex Neil

3 In section 1, page 1, line 23, leave out from beginning to <it> in line 24 and insert <in relation to any functions other than those mentioned in paragraph (ca) that are to be delegated (including any functions mentioned in that paragraph but in relation to which the Health Board deems subsection (5A)>.

Alex Neil

4 In section 1, page 1, line 25, leave out from <a> to <is> in line 26 and insert <the delegated functions by the person delegating the functions to the person to whom the functions are>.

Nanette Milne

95 In section 1, page 1, line 26, at end insert—

<( ) arrangements for a single point of entry to complaints systems for all services provided in pursuance of functions delegated under paragraph (b) or (c).>.

Malcolm Chisholm

96 In section 1, page 1, line 26, at end insert—

<(da) arrangements for seeking the advice of the persons mentioned in subsection (3A) with regard to the quality, safety and standards of services provided in pursuance of functions delegated under paragraph (b) or (c).>
Malcolm Chisholm

97 In section 1, page 1, line 27, at end insert—

<\(3A\) The persons mentioned in subsection (3)(da) are—

(a) the medical director of the Health Board,
(b) the director of nursing of the Health Board,
(c) the chief social work officer of the local authority.>

Alex Neil

5 In section 1, page 2, line 9, after <in> insert <Part 1 of>

Alex Neil

6 In section 1, page 2, line 9, at end insert <, or

( ) by virtue of an enactment listed in Part 2 of the schedule.>

Alex Neil

98 In section 1, page 2, line 12, after second <by> insert <or by virtue of>

Alex Neil

99 In section 1, page 2, line 33, after second <by> insert <or by virtue of>

Alex Neil

7 In section 1, page 2, line 42, at end insert—

<\(\) Regulations under subsection (3)(e) may include provision—

(a) conferring discretion on local authorities and Health Boards,
(b) requiring local authorities and Health Boards to establish processes and procedures relating to prescribed matters,
(c) imposing requirements on local authorities and Health Boards about the disclosure of information,
(d) in relation to such other matters relating to integration schemes as the Scottish Ministers think fit.>

Section 2

Alex Neil

8 In section 2, page 3, line 24, after <authority> insert <and the Health Board>

Section 4

Alex Neil

9 In section 4, page 4, line 1, leave out <functions which are delegated under an integration scheme> and insert <integration functions>

Malcolm Chisholm

100 In section 4, page 4, line 2, after <wellbeing> insert <and independent living>
Nanette Milne

101 In section 4, page 4, line 7, after <needs> insert <, aspirations, abilities, characteristics and circumstances>

Nanette Milne

102 In section 4, page 4, line 7, at end insert <including the need for access to independent advocacy services,>

Alex Neil

10 In section 4, page 4, line 9, at end insert—

<( ) takes account of the particular characteristics and circumstances of different service-users,>

<( ) respects the rights of service-users,>

Malcolm Chisholm

103 In section 4, page 4, line 10, leave out <takes account of the> and insert <has regard to the right to>

Malcolm Chisholm

104 In section 4, page 4, line 10, at end insert—

<( ) enables service-users to exercise choice and control and to participate in decisions regarding their need for services and the provision of those services to them,>

Malcolm Chisholm

105 In section 4, page 4, leave out lines 11 and 12 and insert—

<( ) has regard to the right of service-users to participate in the life of the community in which they live,>

Section 5

Alex Neil

11 In section 5, page 4, line 24, after <wellbeing> insert <(the “national health and wellbeing outcomes”)>
Section 7

Alex Neil
14 In section 7, page 5, line 19, leave out subsection (2)

Section 11

Alex Neil
15 In section 11, page 6, line 37, leave out <appoint> and insert <employ>

Alex Neil
16 In section 11, page 7, line 6, leave out subsection (3)

Section 12A

Alex Neil
17 In section 12A, page 8, line 31, leave out subsection (1)

Alex Neil
18 In section 12A, page 9, line 1, leave out <95,>

After section 18

Alex Neil
19 After section 18, insert—

<Power of Scottish Ministers to make provision giving effect to integration scheme

The Scottish Ministers may by regulations make such provision as they think fit for the purpose of giving effect to provision included by virtue of section 1(3)(e) in integration schemes approved by them under section 7.>

Section 18A

Alex Neil
106 Move section 18A to after section 22A

Section 19

Alex Neil
20 In section 19, page 12, line 1, leave out <imposes on> and insert <transfers to>

Alex Neil
21 In section 19, page 12, line 5, leave out <confers any right on the new employer> and insert <transfers to the new employer any right>
Section 20A

Alex Neil

22 In section 20A, page 12, line 24, leave out <function conferred by> and insert <prescribed function conferred by or by virtue of>

Alex Neil

23 In section 20A, page 12, line 26, at end insert <, and>
     ( ) any prescribed conditions are satisfied.>

Alex Neil

24 In section 20A, page 12, line 27, after second <the> insert <prescribed>

Alex Neil

25 In section 20A, page 12, line 30, after <Board> insert <or (as the case may be) a local authority and Health Board acting jointly>

Alex Neil

26 In section 20A, page 12, line 30, after second <the> insert <prescribed>

Section 20B

Alex Neil

27 In section 20B, page 12, line 34, leave out <function conferred by> and insert <prescribed function conferred by or by virtue of>

Alex Neil

28 In section 20B, page 12, line 36, at end insert <, and>
     ( ) any prescribed conditions are satisfied.>

Alex Neil

29 In section 20B, page 12, line 37, after second <the> insert <prescribed>

Alex Neil

30 In section 20B, page 13, line 1, after <Board> insert <or (as the case may be) a local authority and Health Board acting jointly>

Alex Neil

31 In section 20B, page 13, line 1, after second <the> insert <prescribed>

Section 22

Alex Neil

32 In section 22, page 13, line 19, leave out <on its behalf>
Alex Neil

33 In section 22, page 13, line 23, leave out <on its behalf>

Section 22A

Alex Neil

34 In section 22A, page 13, line 39, at end insert—

<(  ) must, where provision of the type mentioned in section 1(3)(ca) is included in the integration scheme in relation to the function to which the direction relates, set out the amount which has been set aside by the Health Board for the use of the person who is to carry out the function,>}

Alex Neil

35 In section 22A, page 14, line 1, after <must> insert <, in any other case,>

Alex Neil

36 In section 22A, page 14, line 2, leave out <on its behalf>

Alex Neil

37 In section 22A, page 14, line 3, at end insert—

<(  ) must specify how such an amount or, as the case may be, such a payment is to be used,>}

Alex Neil

38 In section 22A, page 14, leave out lines 13 and 14

Alex Neil

39 In section 22A, page 14, line 15, leave out second <the> and insert <any>

Alex Neil

40 In section 22A, page 14, line 25, leave out from <or> to end of line 26

Alex Neil

41 In section 22A, page 14, line 32, leave out <national health and wellbeing outcomes> and insert <integration delivery principles and contribute to achieving the national health and wellbeing outcomes in relation to the carrying out of the functions>

Alex Neil

42 In section 22A, page 14, line 35, leave out <national health and wellbeing outcomes in relation to> and insert <integration delivery principles or contribute to achieving the national health and wellbeing outcomes in relation to the carrying out of>
Section 23

Rhoda Grant

43 In section 23, page 15, line 5, after <outcomes,> insert—

<( ) setting out arrangements between the integration authority and other such
authorities for ensuring that integration functions are carried out in a way that
takes account of the particular needs of service-users moving into the area of the
local authority from the area of another local authority.>

Alex Neil

44 In section 23, page 15, line 12, leave out <not to be delegated to the authority on> and insert <to
be delegated to the authority before>

Alex Neil

107 In section 23, page 15, line 23, leave out <14(2)> and insert <14(1A)>

Section 24

Alex Neil

45 In section 24, page 15, line 34, leave out <utilised by> and insert <used in relation to>

Alex Neil

46 In section 24, page 15, line 36, leave out <utilised by> and insert <used in relation to>

Section 25

Alex Neil

47 In section 25, page 16, line 3, leave out <functions which are delegated under an integration
scheme> and insert <integration functions>

Malcolm Chisholm

108* In section 25, page 16, line 4, after <wellbeing> insert <and independent living>

Nanette Milne

109 In section 25, page 16, line 9, after <needs> insert <, aspirations, abilities, characteristics and
circumstances>

Nanette Milne

110 In section 25, page 16, line 9, at end insert <including the need for access to independent
advocacy services,>

Alex Neil

48 In section 25, page 16, line 11, at end insert—

<( ) takes account of the particular characteristics and circumstances of
different service-users,

( ) respects the rights of service-users,>
Malcolm Chisholm
111 In section 25, page 16, line 12, leave out <takes account of the> and insert <has regard to the right to>

Malcolm Chisholm
112 In section 25, page 16, line 12, at end insert—

<( ) enables service-users to exercise choice and control and to participate in decisions regarding their need for services and the provision of those services to them,>

Malcolm Chisholm
113 In section 25, page 16, leave out lines 13 and 14 and insert—

<( ) has regard to the right of service-users to participate in the life of the community in which they live,>

Neil Findlay
49 In section 25, page 16, line 20, after <arising,> insert—

<( ) supports and rewards staff employed in the provision of those services in a way that will best protect the quality of the service,>

Section 26

Alex Neil
114 In section 26, page 16, line 31, leave out <it> and insert <the local authority>

Alex Neil
115 In section 26, page 16, line 33, after second <the> insert <local>

Rhoda Grant
116 In section 26, page 16, line 40, at end insert—

<( ) at least one person who the integration authority considers to be representative of service-users in the area to which the strategic plan relates,

( ) at least one person who the integration authority considers to be representative of carers in the area to which the strategic plan relates,>

Alex Neil
50 In section 26, page 17, line 19, leave out <its> and insert <a>

Section 27

Nanette Milne
117 In section 27, page 18, line 23, at end insert—

<( ) groups appearing to the integration authority to be representative of non-commercial organisations contributing to the health and wellbeing of service-users in the area covered by the strategic plan,>
Section 30A

51 In section 30A, page 20, line 9, at end insert—
<( ) Sections 24, 27, 27A and 29 apply in relation to a strategic plan prepared by virtue of
subsection (3) as those sections apply in relation to a strategic plan prepared by virtue of
section 23.>

Alex Neil

52 In section 30A, page 20, line 14, leave out <23(4)> and insert <23(6)>

Alex Neil

53 In section 30A, page 20, line 19, leave out <revised> and insert <replacement>

Section 30B

54 In section 30B, page 20, line 26, leave out <is consistent with the integration delivery principles
and> and insert <complies with the integration delivery principles and contributes to achieving>

Alex Neil

55 In section 30B, page 20, line 37, at end insert—
<( ) Sections 24, 27, 27A and 29 apply in relation to a strategic plan prepared by virtue of
subsection (2) as those sections apply in relation to a strategic plan prepared by virtue of
section 23.>

Section 31

118 In section 31, page 21, line 9, leave out <(see section 25)>.

Alex Neil

119 In section 31, page 21, line 10, leave out <(see section 5)>

Section 32

56 In section 32, page 21, line 14, after <the> insert <integration>

Section 33

Alex Neil

57 In section 33, page 21, line 33, after <in> insert <planning and>
Section 33B

Bob Doris

120 In section 33B, page 23, line 14, at end insert—

<(3A) When carrying out a review of the scheme under subsection (2), the local authority and the Health Board must jointly review the impact of the scheme on—

(a) the rights of children,
(b) the outcomes for children,
(c) the continuity of services provided to those persons moving from services generally provided to persons under 18 years of age to services generally provided to persons aged 18 years or over,
(d) such other matters as may be prescribed.

(3B) In subsection (3A)—

“children” means persons who have not attained the age of 18 years, “the rights of children” has the same meaning as in section 4(1) of the Children and Young People (Scotland) Act 2014.>

Bob Doris

121 In section 33B, page 23, line 16, after <(3)),> insert <and

( ) any impacts identified under subsection (3A),>
Bob Doris

123 In section 33C, page 23, line 41, after <(3),> insert <and

( ) any impacts identified under subsection (4A),>

Section 34

Alex Neil

59 In section 34, page 24, line 20, leave out <plan> and insert <scheme>

Alex Neil

60 In section 34, page 24, line 22, leave out <or (as the case may be) (4A)>>

Alex Neil

61 In section 34, page 24, line 29, leave out from beginning to <(3),> in line 30

Alex Neil

62 In section 34, page 24, line 32, leave out subsection (4A)

Section 35

Alex Neil

124 In section 35, page 25, line 1, leave out <any of the matters> and insert <a matter>

Section 36

Alex Neil

63 In section 36, page 25, line 22, at end insert—

<(5) Before making a scheme under subsection (3) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (6) such persons appearing to be representative of the group as the Scottish Ministers think fit.

(6) The groups mentioned in subsection (5) are—

(a) health professionals,

(b) social care professionals,

(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.>}

Alex Neil
81 In section 41B, page 29, line 41, leave out <Public Bodies (Joint Working) (Scotland) Act 2014;> and insert <2014 Act;
“national health and wellbeing outcomes” has the same meaning as in section 5(1) of the 2014 Act;>

Section 41C

Alex Neil
82 In section 41C, page 30, line 19, at end insert—
<( ) On the request of SCSWIS and HIS, any other person or body mentioned in section 115(6) may conduct an inspection under subsection (1) jointly with SCSWIS and HIS.>

Section 41D

Alex Neil
83 In section 41D, page 31, line 9, leave out <of its functions under> and insert <functions conferred on it by>
After section 41D

Alex Neil

84 After section 41D, insert—

<Children’s services planning

In section 7(1) of the Children and Young People (Scotland) Act 2014 (which makes provision for introductory matters relating to children’s services planning), in the definition of “other service provider”, after paragraph (e), insert—

“(f) an integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014.”.>

Section 46

Alex Neil

85 In section 46, page 35, line 13, at end insert—

<( ) after subsection (1), insert—

“(1A) The Scottish Ministers may do any (or all) of the following—

(a) form or participate in forming bodies corporate for any of the purposes mentioned in subsection (1B),

(b) participate in bodies corporate formed for any of those purposes,

(c) with a view to securing or facilitating any of the purposes for which such a body corporate is formed—

(i) transfer, or secure the transfer, to the body corporate of heritable or moveable property held by the Scottish Ministers, a Health Board, the Common Services Agency for the Scottish Health Service (“the Agency”) or Healthcare Improvement Scotland (“HIS”) under or by virtue of, or for the purposes of, this Act and any rights, liabilities or obligations relating to the property,

(ii) otherwise invest in the body corporate (whether by acquiring assets, securities or rights or otherwise),

(iii) provide loans and guarantees and make other kinds of financial provision to or in respect of the body corporate.

(1B) The purposes are—

(a) management or development of any heritable property held by the Scottish Ministers, a Health Board, the Agency or HIS under or by virtue of, or for the purposes of, this Act,

(b) management of any moveable property so held,

(c) disposal of any such heritable or moveable property.”.>

Alex Neil

86 In section 46, page 35, line 14, after <corporate”,> insert—

<( ) after subsection (2), insert—

“(2A) The Scottish Ministers may—
(a) form or participate in forming bodies corporate for a prescribed purpose,
(b) participate in bodies corporate formed for a prescribed purpose.

(2B) A purpose prescribed under subsection (2A) must relate to the functions conferred on the Scottish Ministers by or under this Act.”.

Section 48

Alex Neil

125 In section 48, page 35, line 30, at end insert—

<PART 2

FUNCTIONS CONFERRED BY VIRTUE OF ENACTMENTS

Section 4 of the Community Care and Health (Scotland) Act 2002.
Section 153 of the Children’s Hearings (Scotland) Act 2011.>
Groupings of Amendments for Stage 3

This document provides procedural information which will assist in preparing for and following proceedings on the above Bill. The information provided is as follows:

- the list of groupings (that is, the order in which amendments will be debated). Any procedural points relevant to each group are noted;
- the text of amendments to be debated on the day of Stage 3 consideration, set out in the order in which they will be debated. **THIS LIST DOES NOT REPLACE THE MARSHALLED LIST, WHICH SETS OUT THE AMENDMENTS IN THE ORDER IN WHICH THEY WILL BE DISPOSED OF.**

Groupings of amendments

Note: The time limits indicated are those set out in the timetabling motion to be considered by the Parliament before the Stage 3 proceedings begin. If that motion is agreed to, debate on the groups above each line must be concluded by the time indicated, although the amendments in those groups may still be moved formally and disposed of later in the proceedings.

**Group 1: Integration schemes: same local authority and health board area**
1, 2, 3, 4, 7, 14, 19, 63

**Group 2: Integration scheme: arrangements for complaints and advice**
95, 96, 97

**Group 3: Local authorities: functions which may be delegated**
5, 6, 98, 99, 91, 92, 93, 94

**Group 4: Minor and technical amendments**
8, 106, 20, 21, 56, 58, 59, 60, 61, 62, 124, 64, 83, 125, 88, 90

Debate to end no later than 40 minutes after proceedings begin

**Group 5: Principles**
9, 100, 101, 102, 10, 103, 104, 105, 47, 108, 109, 110, 48, 111, 112, 113, 49, 118, 89

**Group 6: National health and wellbeing outcomes**
11, 12, 13, 119, 87

**Group 7: Integration joint boards: staff and finance etc.**
15, 16, 17, 18
Group 8: Carrying out of functions conferred on officers of local authorities and health boards
22, 23, 24, 25, 26, 27, 28, 29, 30, 31

Debate to end no later than 1 hour 20 minutes after proceedings begin

Group 9: Directions by integration authority
32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42

Group 10: Integration authority: strategic planning
43, 44, 107, 45, 46, 114, 115, 116, 50, 117

Group 11: Review and replacement of strategic plan
51, 52, 53, 54, 55

Debate to end no later than 2 hours after proceedings begin

Group 12: Review of integration scheme: impact on children
120, 121, 122, 123

Group 13: Inspections by SCSWIS and HIS
65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82

Group 14: Children’s services planning
84

Group 15: Scottish Ministers: power to form companies
85, 86

Debate to end no later than 2 hours 30 minutes after proceedings begin
Note: (DT) signifies a decision taken at Decision Time.

Business Motion: Joe FitzPatrick, on behalf of the Parliamentary Bureau, moved S4M-09141—that the Parliament agrees that, during stage 3 of the Public Bodies (Joint Working) (Scotland) Bill, debate on groups of amendments shall, subject to Rule 9.8.4A, be brought to a conclusion by the time limit indicated, that time limit being calculated from when the stage begins and excluding any periods when other business is under consideration or when a meeting of the Parliament is suspended (other than a suspension following the first division in the stage being called) or otherwise not in progress:

- Groups 1 to 4: 40 minutes
- Groups 5 to 8: 1 hour 20 minutes
- Groups 9 to 11: 2 hours
- Groups 12 to 15: 2 hours 30 minutes.

The motion was agreed to.

Public Bodies (Joint Working) (Scotland) Bill - Stage 3: The Bill was considered at Stage 3.

The following amendments were agreed to (without division): 1, 2, 3, 4, 5, 6, 98, 99, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 106, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 44, 107, 45, 46, 47, 48, 114, 115, 50, 51, 52, 53, 54, 55, 118, 119, 56, 57, 58, 59, 60, 61, 62, 124, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 125, 87, 88, 90, 91, 92, 93 and 94.

The following amendments were disagreed to (by division)—

- 95 (For 49, Against 61, Abstentions 0)
- 96 (For 53, Against 61, Abstentions 0)
- 100 (For 54, Against 62, Abstentions 0)
- 101 (For 54, Against 62, Abstentions 0)
- 102 (For 52, Against 64, Abstentions 0)
- 103 (For 53, Against 61, Abstentions 0)
- 104 (For 54, Against 62, Abstentions 0)
- 105 (For 54, Against 62, Abstentions 0)
- 43 (For 53, Against 62, Abstentions 0)
- 108 (For 54, Against 61, Abstentions 0)
- 111 (For 53, Against 62, Abstentions 0)
Amendment 120 was moved and, with the agreement of the Parliament, withdrawn.

The following amendments were not moved: 97, 109, 110, 121, 122 and 123.

**Public Bodies (Joint Working) (Scotland) Bill:** The Cabinet Secretary for Health and Wellbeing (Alex Neil) moved S4M-09115—That the Parliament agrees that the Public Bodies (Joint Working) (Scotland) Bill be passed.

After debate, the motion was agreed to (DT).
The Presiding Officer (Tricia Marwick): The next item of business is stage 3 proceedings on the Public Bodies (Joint Working) (Scotland) Bill. In dealing with the amendments, members should have copies of the bill as amended at stage 2, the marshalled list and the groupings of amendments. The division bell will sound and proceedings will be suspended for five minutes for the first division of the afternoon. The period of voting for the first division will be 30 seconds. Thereafter, we will allow a period of one minute for the first division after a debate.

Section 1—Integration schemes: same local authority and Health Board area

The Deputy Presiding Officer (Elaine Smith): Group 1 is on integration schemes: same local authority and health board area. Amendment 1, in the name of the cabinet secretary, is grouped with amendments 2 to 4, 7, 14, 19 and 63.

The Cabinet Secretary for Health and Wellbeing (Alex Neil): The amendments in group 1 relate to integration schemes, which deal with the agreement between the health board and the local authority on local integrated arrangements. Amendments 1 to 4 seek to provide clarity regarding the details of financial calculations that must be included in the integration scheme, particularly in relation to large hospitals, such as Edinburgh royal infirmary and Glasgow Southern general, that serve the populations of more than one local authority.

Amendments 7 and 19 will ensure that Scottish ministers can require all necessary information to be included in integration schemes, and that they can ensure that health boards and local authorities are effectively bound into the agreements that they make in integration schemes.

Amendment 14 will ensure that ministers’ approval of all prescribed matters in an integration scheme is required. It will provide an important safeguard to ensure, for example, that ministers have the opportunity to approve suitably robust clinical and care governance arrangements under integration.

At the stage 2 Health and Sport Committee meeting on 21 January, I gave my support to Rhoda Grant’s amendments 216 and 218, which made changes to sections 12 and 15 of the bill to ensure that there would be consultation with professionals and other groups on matters relating to transfer of staff under those sections.

Neil Findlay (Lothian) (Lab): On amendment 63, will the appropriate trade unions be included in the consultation that will take place before a scheme is implemented?

Alex Neil: Yes. We have given a commitment to talk to the appropriate representatives of the staff side at all times.

At the same time, I gave an undertaking to the committee that the same provision would be inserted in section 36, which also makes provision for the transfer of staff. Amendment 63 seeks to insert that provision in section 36.

I move amendment 1.

Jim Hume (South Scotland) (LD): Local decision making and accountability are crucial if we want our health service to be integrated in a way that is suited to our local needs. Alex Neil’s amendment 14 seeks to take out—at quite a late stage—information in any integration scheme that would not need to be approved by a minister. To me, that means that, if amendment 14 is agreed to, ministerial approval would be needed for integration schemes to be approved.

I have similar concerns about amendments 7 and 19, as they provide for ministers to be able to alter integration schemes as they see fit. The Convention of Scottish Local Authorities has argued that the bill is too prescriptive and that there should be more flexibility at local level.

As amendments 14, 7 and 19 would result in the centre taking even more power and might allow for less flexibility, I seek assurances from the cabinet secretary on local accountability for integrated schemes before I decide whether to support the amendments.

Alex Neil: I assure the member—I think that, in committee, members of parties were united on this point—that we want to ensure that as much localism as possible is built into decisions at locality level and at partnership level, particularly in relation to the commissioning plan and the strategic plan for each integrated scheme, as well as the arrangements for the integrated scheme itself. That is fundamental to the success of the bill’s provisions as a whole.

I do not think that I need to say much more, as only one member had comments to make. I am happy to give Mr Hume the assurances that he sought.

Amendment 1 agreed to.

Amendments 2 to 4 moved—[Alex Neil]—and agreed to.
The Deputy Presiding Officer: Group 2 is on integration scheme: arrangements for complaints and advice. Amendment 95, in the name of Nanette Milne, is grouped with amendments 96 and 97.

Nanette Milne (North East Scotland) (Con): Complaints represent one of the ways in which people who are engaged at an individual level with services have their voices heard and access their rights. Everyone who makes a complaint about health and social care support and services in Scotland has the right to be listened to and have their concerns resolved as quickly and efficiently as possible. Most health boards and local authorities have developed clear and accessible complaints processes over a number of years to value the input of people who use support and services, and to ensure quality service provision that meets their needs. Listening to and learning from complaints can highlight where support or services need to be changed.

If integration is to produce seamless services for the people who use them, I agree with the Health and Social Care Alliance Scotland that health and social care partnerships must be required to provide a clear single route into complaints processes as that is one means of ensuring that the needs and experiences of service users can be listened to and learned from, and can help to drive improvement. Complaints processes are a key accountability mechanism to enable people to access their rights in relation to health and social care. Complaints handling arrangements have the potential to be further complicated through integration, but the bill makes no reference to the complaints process.

I decided not to move an amendment similar to amendment 95 at stage 2. I reserved my position after hearing the cabinet secretary say that a new social work complaints system is under development that "will be more accessible, allow complaints to be completed faster and produce a co-ordinated response for the complainant."—[Official Report, Health and Sport Committee, 21 January 2014; c 4754.]

However, the Health and Social Care Alliance Scotland, which raised the issue with me, still believes that the bill would be strengthened by the inclusion of a reference to ensuring effective access to a complaints system. As the development of the new system is still work in progress, I lodged amendment 95 for Parliament’s consideration at stage 3.

I support Malcolm Chisholm’s amendments 96 and 97, which aim to ensure that those in leadership positions with expertise in delivering care will have a clear route to share their expertise with integration authorities. The Government supported the involvement of medical and social work leads in its policy statements on secondary legislation at stage 2 and agreed to reconsider the place of senior nurses at stage 3. I would like to hear from the cabinet secretary that nurses, as well as doctors and social workers, should be similarly involved with integration authorities.

I move amendment 95.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I support Nanette Milne’s amendment 95. However, my amendments 96 and 97 relate to the quality, safety and standards of service, which I am sure we all agree must be absolutely central to the integration reforms. Moreover, I think that regulated professionals with accountability for providing high-quality care should also be central, with structures that support them to deliver their responsibilities meaningfully. In view of that, it is regrettable that there is little if anything about care governance arrangements in the bill. Quite rightly, there is a great deal about financial arrangements and arrangements for the delegation of functions, but I think that there is a gap in relation to care governance. I think that the fairly modest amendments 96 and 97 would help to fill that gap.

The cabinet secretary might say that his policy statement on section 12, which clearly is not in the bill itself, refers to the clinical director and chief social worker being non-voting members of the integration joint boards. That is all well and good as far as it goes, but I think that we need something more explicit about exactly the advice that will be sought from them and the arrangements for that. However, there is a glaring omission—Nanette Milne referred to this point—because there is no mention of the chief nursing officer in relation to the policy statement on section 12 or, as far as I can see, in relation to any other policy statements or words of the bill.

As someone who made sure—if I am allowed to say that—that the chief nursing officer was a member of every national health service board, I am particularly concerned about this issue, as members will appreciate. However, to be fair, the cabinet secretary was also concerned when I lodged an amendment at stage 2 that was similar but not identical to amendments 96 and 97. At the end of his winding-up speech, he said:

“Mr Chisholm’s one point that is worthy of further consideration—”

it was rather unworthy to say that I had only one point—

“is about whether the chief nursing officer in each board area should be included in the list that is in the bill. I am prepared to consider a stage 3 amendment to that effect. I accept his point, as 43 per cent of health service employees in Scotland are nurses and midwives.”—[Official
Perhaps the health secretary forgot his words, so very helpfully I have proposed amendments about arrangements for seeking the advice of professional leads who are experts in the delivery of quality care. Crucially, the professional leads referred to in the amendments include the chief nursing officer.

Many partnerships may well make arrangements that are similar to what I propose, but I believe that primary legislation should set out minimum mandatory expectations. My amendments provide a minimum guarantee that those who are able to make professional judgments on the quality of care can support innovation and development, improve decision making and raise concerns where appropriate.

If, by any chance, I am taken by surprise and the cabinet secretary does not support my amendments, I would at the very least urge him to insert the words “chief nursing officer” into the policy statement on section 12 because, by his own admission at committee, that was a glaring omission. Obviously, however, I would prefer him to support the amendments.

Dr Richard Simpson (Mid Scotland and Fife) (Lab): I support all three amendments in the group. The issue of complaints systems is important.

The cabinet secretary will remember that, during consideration of the Patient Rights (Scotland) Bill, we had an extensive debate about introducing a new system based on the four Cs—compliments, comments, concerns and complaints—as a modification of the system that had been introduced in the state hospital. There is a danger that, without Nanette Milne’s amendment 95, we will end up with an increased landscape and increased complexity rather than reduced complexity. Her amendment, which means that we would at least have

“a single point of entry to complaints systems for all services”,

is an initial step, but in the longer term we must simplify the overall system, because even with the amendment, there will still be multiple points of entry for complaints. A person has to decide whether they are a patient, someone who receives social care or someone who receives social work assessment, and those are just three examples of the different systems that exist at present.

I also support Malcolm Chisholm’s amendments 96 and 97, particularly in respect of nurses. The bill, if nothing else, is about the integration of community services, and in modern community services, nurses are often in the leadership positions. They need to be included, so I very much support amendment 97.

Alex Neil: First, I will deal with the complaints system. I recognise that the system for social work complaints is no longer up to date or adequate. That is why we are working to develop a new system that will be more accessible, better co-ordinated and quicker. I will use existing powers in relation to secondary legislation to make those changes, which is why we do not need any additional provisions in primary legislation. I already have the powers that I need to make the necessary changes.

I am confident that, when we make those changes, Nanette Milne and others will realise that the intention of her amendment 95 will be achieved under my existing powers. The bill is not the appropriate legislative vehicle in which to make changes to the complaints system, especially when we have not consulted on them as part of consideration of the bill. When I produce a final set of proposals, we will consult people before we implement them.

I agree with the spirit of Malcolm Chisholm’s amendments 96 and 97, as it is clearly fundamental that health boards and local authorities seek advice from health and social care professionals on all aspects of integrated service planning and delivery. However, I do not agree with the way in which the amendments seek to achieve that. I say again that we are on the same page. The only issue is how best to achieve our shared objective.

My first concern, which I described during the stage 2 sessions in committee, is that I do not believe that it is appropriate to name some health and social care professionals in the bill but not others, and thereby to make a distinction between those who are named and those who are not. It is equally important that, for example, the views of the director of public health, general practitioner representatives and allied health professionals, among others, are sought and considered. I will expect integration schemes to describe the engagement process for all professionals and not just a few, as Malcolm Chisholm suggests.

Furthermore, amendments 96 and 97 do not include non-statutory partners in health and social care. To my mind, users and carers have a lead role in describing what a quality service should be, and the third sector is a significant provider of care services.

Malcolm Chisholm: I hear what the cabinet secretary says, but the fact of the matter is that the policy statement on section 12 specifically names the clinical director, who will be a doctor, and the chief social work officer. There is no logic whatsoever in not also naming the chief nursing
Alex Neil: The logic is that a senior medic and a senior social worker in the role of chief social work officer had to be made clear in the bill, particularly in relation to the responsibilities of the chief social work officer, who has to attend partnership boards as part of their role. There is a distinction because the bill refers specifically to the statutory function of those two positions.

Integration schemes will be required to provide detail on the arrangements for engaging with those groups of stakeholders as well. I am prepared to specify, for example, the chief nursing officer in the guidance that we will issue after further consultation. As I said, if we start to name everyone in the bill, it will become very long and people who should be named will still be left out. It is therefore far better to specify those people in regulations and guidance than to name them in the bill.

Amendments 7 and 19 strengthen regulation-making powers with regard to the content and effect of the integration scheme, and I will ensure that we set out appropriate processes for the engagement of professionals and non-statutory stakeholders. We are on the same page. We are trying to achieve exactly the same objective, but it is better not to take those particular measures into the bill but to put them into guidance and regulations and, where appropriate, secondary legislation.

On that basis, I invite Nanette Milne to withdraw amendment 95 and ask Malcolm Chisholm not to move amendments 96 and 97.

Nanette Milne: This is beginning to sound a bit like a rerun of the Health and Sport Committee meeting at stage 2, when we were, “All on the same page, but—”

I hear what the cabinet secretary says about the complaints system; as we know, he said it at the committee as well. However, this is still a work in progress. We do not know what the new system will be, so I press amendment 95.

The Deputy Presiding Officer: The question is, that amendment 95 be agreed to. Are we agreed?

Members: No.

The Deputy Presiding Officer: There will be a division. As this is the first division of the afternoon, the Parliament is suspended for five minutes, after which there will be a 30-second vote.
Amendment 95 disagreed to.

Amendment 96 moved—[Malcolm Chisholm].

The Deputy Presiding Officer: The question is, that amendment 96 be agreed to. Are we agreed?

Members: No.

The Deputy Presiding Officer: There will be a division.
Amendments 5, 6, 94, 98 and 99 make minor adjustments to section 1 and the schedule to include functions conferred by virtue of an enactment as well as functions conferred directly by an enactment.

Amendments 91 to 93 make minor additions to the list of enactments set out in the schedule to the bill that confer functions that may be delegated.

I move amendment 5.

Amendment 5 agreed to.

Amendments 6, 98, 99 and 7 moved—[Alex Neil]—and agreed to.

Section 2—Integration schemes: two or more local authorities in Health Board area

The Deputy Presiding Officer: Group 3 is on local authorities and functions that may be delegated. Amendment 5, in the name of the cabinet secretary, is grouped with amendments 6, 94, 98 and 99 to 94. Amendment 5 makes minor adjustments to section 1 and the schedule to include functions conferred by virtue of an enactment as well as functions conferred directly by an enactment. Amendment 91 to 93 make minor additions to the list of enactments set out in the schedule to the bill that confer functions that may be delegated.

I move amendment 5.

Amendment 5 agreed to.

Amendments 6, 98, 99 and 7 moved—[Alex Neil]—and agreed to.

Section 4—Integration planning principles

The Deputy Presiding Officer: Group 5 is on principles. Amendment 9, in the name of the cabinet secretary, is grouped with amendments 100 to 102, 10, 103 to 105, 47, 108 to 110, 48, 111 to 113, 49, 118 and 89. Amendment 9 makes minor adjustments to section 4 and the schedule to include functions conferred by virtue of an enactment as well as functions conferred directly by an enactment. Amendment 91 to 93 make minor additions to the list of enactments set out in the schedule to the bill that confer functions that may be delegated.

I move amendment 8.

Amendment 8 agreed to.
lodged a number of amendments at stage 2 to further strengthen the integration principles.

Amendments 10 and 48 in my name ensure that the rights of service users are taken into account and further embed a rights-based approach in the bill.

Nanette Milne’s amendments 101 and 109 are not necessary. Amendments 10 and 48 in my name, together with the requirement to consider the particular needs of different service users, already take into account the abilities and wishes of service users.

Health boards and local authorities are already subject to statutory requirements and guidance in relation to assessment. However, given the importance of considering individuals’ needs within an integrated approach to care, I intend to provide statutory guidance on this matter. The guidance will provide further support to health boards and local authorities to ensure that their understanding of “need” is appropriate.

In considering the use of the term “independent living” in amendments 100 and 108 in the name of Malcolm Chisholm, I accept and agree—as I noted at stage 2—that it is important to ensure that those principles and ideals are reflected in standards of planning, delivery and design of services. Terms such as “independent living” are, by their nature, potentially subject to changing or differing interpretation. The integration principles must apply equally to all users of health and social care services covered by the bill, not only vulnerable or disabled people. We will continue to embed the Scottish Government’s vision statement on independent living for disabled people in all the work that we do, including as we take forward integration.

Including the need for access to independent advocacy services has not been consulted on with stakeholders and has not been costed. It is not clear how, or by whom, those services would be delivered, nor is it clear whether there is capacity within advocacy services in Scotland at present to service such a commitment.

On individual choice, it is important to distinguish between the requirements that the Social Care (Self-directed Support) (Scotland) Act 2013 places on local authorities to provide choice and control over social care services and the purpose of the bill, which is to bring together the responsibilities, accountability, delivery and planning for health and social care services.

Choice and control cannot apply equally to all service users in all circumstances and to all health and social care services under the bill. What is important is that the integration planning and delivery principles require the health board, local authority and integration authority to consider the needs of service users and to plan for integration and to deliver services from the perspective of the service user. Therefore, I cannot support Malcolm Chisholm’s amendments 104 and 112.

It is important that the care that people receive is delivered in a person-centred way. That is, they should receive the right care, at the right time, in the right place. That will, naturally, be different for different individuals and in different circumstances. We cannot take a simplistic, one-size-fits-all approach. However, good professional practice will, of course, include appropriate recording of hours to meet the needs of individuals.

We also cannot recognise one set of individuals who provide care and support over any other group, be they unpaid carers or paid staff in the employment of health boards, local authorities, third sector organisations or independent contractors. It is, of course, important that everyone who makes a contribution to good-quality care is recognised for doing so.

I assure members that I continue to meet many of the stakeholders who have expressed support for the opposition amendments in the group. I am fully committed to continuing that dialogue and to examining ways that we can build those considerations into regulations and guidance, but the opposition amendments in the group do not achieve the aims that they seek.

I ask Malcolm Chisholm not to move amendments 100, 103 to 105, 108 and 111 to 113; Nanette Milne not to move amendments 101, 102, 109 and 110; and Neil Findlay not to move amendments 49 and 89.

I move amendment 9.

The Deputy Presiding Officer: Before I call the next five members who wish to speak on this group, I ask members to show courtesy to the cabinet secretary and all members who are participating in the debate and take their conversations outside the chamber.

Malcolm Chisholm: Thank you, Presiding Officer. I apologise to you and the cabinet secretary. I think that I heard most of his speech, but there was a good reason why I had to leave the chamber after my previous speech: I handed in to the official report my notes for this speech, which is not an error that I recommend to members.

The reason why I needed my notes back is that on them is a definition of independent living that, I am told, has been accepted by the cabinet secretary, COSLA, NHS Scotland and the Scottish independent living coalition. In particular, it has been accepted in a document called “Our Shared Vision for Independent Living in Scotland”.

A few moments ago, I heard Alex Neil say that there was no clear, indisputable definition of independent living. If I wanted to be unkind, which I never am, I could say that we spent a whole afternoon agreeing amendments about sustainable economic growth in a certain bill a few weeks ago, when it is generally agreed that there is no generally accepted definition of that concept. That did not stop the Scottish Government.

There is a more accepted definition of independent living that I will read out, because there is time. Independent living means “disabled people of all ages having the same freedom, choice, dignity and control”—

choice and control will come up later as well—

“as other citizens at home, at work, and in the community. It does not mean living by yourself, or fending for yourself. It means rights to practical assistance and support to participate in society and live an ordinary life.”

I think, therefore, that there is an accepted definition of independent living, and I think that it would be helpful if it were in the bill. There is certainly a great demand for that from many groups. In the committee, it might have been suggested that only certain people have independent living, but we all have it. Obviously, however, disabled people have had to fight for it. They, in particular, would welcome the inclusion of the definition in the bill.

15:00

The same applies to the word “rights”. Again, I welcome the cabinet secretary’s change of heart. When I moved a similar amendment in the committee, he argued that it was not necessary to add particular words about rights in the bill because, clearly, all Scottish Parliament legislation has to be consistent with the European convention on human rights. In fact, however, there is a particular, rights-based approach to health and social care that was recognised by the Government in the Social Care (Self-directed Support) (Scotland) Act 2013 and, in committee, we simply asked why we could not also have it in the bill. We should commend the cabinet secretary’s movement on the issue, which means that we will have words in the bill about respecting the rights of service users. I seek to build on that by echoing words from the 2013 act, which refers to service users’ “right to dignity”, and to their “right to participate in the life of the community in which they live. Those are just slight changes to the words that the cabinet secretary has put into the bill, in order to reflect the rights-based language of the 2013 act. As he has taken the first step on rights, I hope that he will take the next step and accept those amendments.

My other amendments are about choice and control, words that I have already quoted and that have met with the cabinet secretary’s approval in that context. The key words in amendment 104 concern the service users’ right to participate in decisions. I think that we all accept that that is crucial to a person-centred approach to health and social care. One of the big changes that has gradually been taking place over the course of the past few years is the move from the old, paternalistic models of health and social care to those in which patients or service users or whoever have the right to participate. That is generally accepted, but I think that the words “choice” and “control” are also important. The question of who is capable and who is incapable of exercising choice and control is part of a long-standing, well-researched and well-rehearsed debate. However, what is important to state is that it is vital not to roll back the years of progress in extending opportunities for choice and control. There is plenty of evidence that, with the right support, even people with profound difficulties and impairments, as well as, of course, frail, older people, can exercise choice in their lives. I therefore reject what the cabinet secretary said in committee and repeated today about it not being appropriate to place certain people in such a category.

I support the other amendments in this group, including, obviously, Neil Findlay’s, and also Nanette Milne’s. Issues about advocacy were raised in the committee, but I accept the wording that she has suggested in amendment 102, about taking account of “the need for access to independent advocacy”.

Nanette Milne: This group of amendments builds on a series of amendments at stage 2 that placed human rights principles more clearly at the heart of integration planning and delivery principles, giving respect to a person’s dignity and participation in the community, replacing the term “recipients of care” with “service users”, and amending the principles to ensure that service users, unpaid carers and those involved in health and social care from across the sectors are engaged in the planning and local delivery of services.

My amendments 101 and 109, by making explicit reference to people’s aspirations and abilities, as well as needs, and Malcolm Chisholm’s amendments 104 and 112, which refer to choice and control, more strongly reflect human rights and, particularly, a more person-centred approach, and strengthen amendments 10 and 48, in the name of the cabinet secretary, which I also support.

Also further embedding human rights in the legislation are Malcolm Chisholm’s amendment
108, referring to independent living, amendment 111, promoting service users’ right to dignity, and amendment 113, regarding the right of service users

"to participate in the life of the community in which they live".

My amendments 102 and 110 would ensure that consideration was given to supporting service users through access to independent advocacy. An independent advocate can help people to express their own needs and make informed decisions, and speak on behalf of people who are unable to speak for themselves or who choose not to do so. Ensuring that independent advocacy is included for those who wish to access it would support the bill’s aims and principles and help to ensure that the voices of individuals and communities are at the heart of the planning, design, delivery and review of services.

I await Neil Findlay’s contribution on his amendment 49 before I decide whether to support it.

Neil Findlay: Amendment 49 will address one of the fundamental problems with the current social care system: poverty pay. Social care in Scotland is rapidly becoming a minimum wage sector. Councils that are hamstrung by underfunding and cuts to budgets and without the ability to set their own taxes are forced into externalising services and cutting the costs of contracts to third sector and other organisations. Voluntary groups tell us that they simply cannot and will not provide the services that are needed, because they cannot fulfil contracts at current prices. Councils are trying to make savings, but they can cut from the same cloth only so often.

A number of voluntary organisations tell us that they want out of the care sector altogether. That move is driven not by the needs of their clients but by their need to survive. Many want to speak out on that issue, but will not do so for fear of what would happen to their local and national funding.

Meanwhile, more than 40,000 home care workers are trying to exist on poverty pay; 40,000 people are paid below the living wage. The esteem in which the job is held is at an all-time low. Staff are often not paid for travelling time, some have to pay for their own phone calls back to their base, and training budgets have been slashed. In a society in which we pay footballers £300,000 a week, young care staff are paid as little as £5.13 an hour to look after our mums and dads, grannies and granddads, and elderly friends and relatives. That is a national embarrassment and a scandal that must be brought to an end.

Staff need to be rewarded in a way that protects the services that they provide, and that should be done by introducing the living wage. If the Scottish Government does not implement the living wage for care staff across the country and fund local government appropriately to do so, Labour will.

Neil Findlay: If the living wage is good enough for NHS staff, it is good enough for staff who support the same patients and clients when they return to the community. Therefore, I ask members to support amendment 49.

Amendment 89 seeks to end the culture of strict time-limited care visits. Last week, Unison released its “Time to care” survey, in which it reported that 56 per cent of its members who were questioned were on time-limited care visits. Many members complained bitterly about the pressures that they are under and the impact on those for whom they care. I hope that the cabinet secretary has read that shocking report; if he has not, I will give him a copy.

In its briefing on amendment 89, the Coalition of Care and Support Providers in Scotland reported that its members have a policy of refusing to tender for work that is on a 15-minute schedule because

"it does not align with their approach to care and support; others believe that they would not be able to provide an acceptable quality of service within this time frame, especially to people with complex needs; and others again have based their decision on their experience of providing 30-minute visits (with one member commenting that in their view, 15 minutes would be too short even for ‘welfare’ visits)." 

It went on to say that 15-minute visits are

"increasingly a feature of care at home framework contracts."

Those comments come directly from the front line. We should listen to those concerns.

In a recent report, Age Scotland highlighted that care visits are now down to as little as seven minutes. I know that the cabinet secretary is a rather sprightly, fit young man, but I am sure that, even for an athlete such as he, washing, dressing, cooking, feeding and toileting would be a challenge in 15 minutes, never mind seven minutes. I urge people to think of the challenges that care workers face in trying to help people who have mobility problems or an illness such as cancer or dementia. Time and task visits run totally contrary to a person-centred approach. They run contrary to a human rights-based approach and common decency, dignity and respect.

If personalisation and human rights mean anything we have to change conveyor belt care, which is an affront to people’s dignity and the staff who want to provide a good service but have
some of the worst working conditions of any group of people working in the health and social care sector. The duration of a care visit must reflect the needs of the client, which is what amendment 89 seeks to ensure. I hope that the cabinet secretary accepts that important amendment, as this issue and poverty pay are two of the most important elements that undermine the quality of care that is provided in Scotland, and they are largely ignored by the bill.

**Gil Paterson (Clydebank and Milngavie) (SNP):** As a member of the Health and Sport Committee, I have been pleased to work on the bill in committee at stages 1 and 2. The guiding principle has been for the bill to be person centred, to ensure that service users are at the heart of service planning and delivery.

With people in Scotland living longer and the number of people with complex illnesses increasing, there is a huge challenge ahead for our health service. To meet that challenge there must be a joined-up approach, which is why it is vital to integrate health and social care services, which are indeed person centred. If we do not do that, there is a danger that those who need support at a vital time could be missed or passed from pillar to post, without receiving the best service.

During stage 2, members lodged a number of amendments. After lengthy discussions we believed that those amendments would not strengthen the bill and we rejected them. I am still of that opinion, which is why I urge members to vote against the non-Government amendments before them.

**Jim Hume:** Malcolm Chisholm’s amendment 100 and Nanette Milne’s amendment 101 are useful and important additions to the bill. They focus us and the legislation on the fact that person-centred care is what we all want to achieve.

For once, I disagree with the cabinet secretary about the term “independent living”, and I concur with Malcolm Chisholm. I add the United Nations to the list of organisations that recognise the term “independent living”. The UN Convention on the Rights of Persons with Disabilities refers to independent living and we could not argue with the UN. The convention states:

“Recognizing the importance for persons with disabilities of their individual autonomy and independence, including the freedom to make their own choices.”

That is a strength of Malcolm Chisholm’s amendment 100.

Nanette Milne’s amendment 101 also recognises that person-centred care is a desired outcome of the bill. We know that beds are scarcer now and that most people wish to be treated at home.

We will support Malcolm Chisholm’s and Nanette Milne’s amendments and in doing so we will put into legislation person-centred care and independent living as the focus of delivery.

**Alex Neil:** I will deal with the points that have been raised as comprehensively as I can.

I fully accept the intention of Nanette Milne’s amendments, which are already reflected in the principles outlined at the start of the bill. To add to them at this stage would not be very helpful. A lot of the detail in her amendments would be more appropriately covered in regulations and guidance.

With regard to independent living, the bill’s principles must apply equally and appropriately to all users of health and social care services under the bill, not just vulnerable or disabled service users. They must also apply to children, able-bodied adults who suffer injury or disease, older people in residential homes and adult prisoners. Although the Scottish Government and COSLA have signed up to an independent living vision statement, as Malcolm Chisholm said, it is an entirely different matter to set out in primary legislation a static definition. It is worth noting that the UNCRPD describes “living independently”, so there are already different interpretations and definitions of “independent living”.

15:15

Furthermore, it is proposed that the national health and wellbeing outcomes, which will be prescribed in secondary legislation, will have an outcome on independent living. Secondary legislation provides for more flexibility when legislating on matters that may change over time.

I have no issue at all with the principle of what we are trying to achieve. We are all on the same page and we are all trying to achieve the same objective. However, if we build certain definitions into law, that can work against the people we are trying to help and we can end up in a legalistic fight when we want to get on with the job of ensuring that the services are properly designed, planned and delivered.

Neil Findlay’s amendments would not do what he said he wants to do. I will explain one of the reasons why, although it is not the only reason—and I support the living wage. Had the European Union’s Lisbon treaty allowed it, the Procurement Reform (Scotland) Bill would have incorporated a provision whereby the providers under every public contract would have had to offer the living wage before they could even be considered for the tender. When we took advice, we were strongly advised by the European Union that that was
totally unacceptable under the terms and conditions of the Lisbon treaty. We therefore have to consider other ways to ensure a good-quality standard of living for people working in the social care sector. I fully accept the need to do more.

Neil Findlay: Senior figures in the European Commission, including its President, offer the Scottish Government a lot of advice, some of which it wants to ignore. Is it a choice as to which advice the Scottish Government listens to?

Alex Neil: We listen to advice from officials who are properly informed in the law; not everyone is, even at a very senior level.

That was the situation, and the Procurement Reform (Scotland) Bill could have been called in if we had included such a provision in it.

I absolutely accept the general principle that we have to do more in relation to people working in the social care sector, and we are in discussion with representatives of the sector about how best to do that.

Neil Findlay: Will the minister take another intervention?

Alex Neil: I will not take another one.

Neil Findlay: Will the minister take another intervention on that point?

The Deputy Presiding Officer: The minister has said no.

Alex Neil: I should gently point out to Neil Findlay that the situation would have been helped had the minimum wage been raised in line with inflation in recent times, which is not the case.

Neil Findlay: Will the minister take an intervention?

Alex Neil: I fail to understand why Neil Findlay is voting for a union in which the real-terms value of the minimum wage has been decreased, instead of voting for independence, when we have a commitment to raise the minimum wage in line with inflation.

Amendment 9 agreed to.

Amendment 100 moved—[Malcolm Chisholm].

The Deputy Presiding Officer: The question is, that amendment 100 be agreed to. Are we agreed?

Members: No.

The Deputy Presiding Officer: There will be a division.

The Deputy Presiding Officer: The result of the division is: For 54, Against 62, Abstentions 0.

Amendment 105 disagreed to.

The Deputy Presiding Officer: I ask for order in the chamber when results are being given.

Section 5—Power to prescribe national outcomes

The Deputy Presiding Officer: We move on to group 6, on the national health and wellbeing outcomes. Amendment 11, in the name of the cabinet secretary, is grouped with amendments 12, 13, 119 and 87.

Alex Neil: Amendments 11 to 13, 119 and 87 relate to the provisions that enable the Scottish ministers to prescribe national outcomes for health and wellbeing.

Amendments 11, 12 and 87 clarify what the national outcomes for health and wellbeing are, as defined by the bill, and where they are to be found, for readers of the National Health Service (Scotland) Act 1978.

Amendment 13 will add housing stakeholders to the list of persons whom the Scottish ministers must consult before they prescribe national outcomes for health and wellbeing. It is particularly important to ensure a strong role for housing in integration. After all, it is our policy commitment to enable people to be cared for at home or in another homely setting for as long as possible. Amendment 13 provides that assurance.

Amendment 119 is a minor amendment that is consequential to amendments 11, 12 and 18.

I move amendment 11.

Rhoda Grant (Highlands and Islands) (Lab): I welcome amendment 13 and the involvement of housing providers. Providers of sheltered and supported care have a lot to contribute to enable people to stay at home and be more independent for longer, so it is important that they are involved.

Amendment 11 agreed to.

Amendments 12 and 13 moved—[Alex Neil]—and agreed to.

Section 7—Approval of integration scheme

Amendment 14 moved—[Alex Neil]—and agreed to.

Section 11—Other staff of integration joint board

The Deputy Presiding Officer: Group 7 is on integration joint boards: staff, finances and so on. Amendment 15, in the name of the cabinet secretary, is grouped with amendments 16 to 18.

Alex Neil: Amendment 15 provides clarity with respect to the order-making power in section 11 to enable integration joint boards to employ staff other than a chief officer. The word “employ” is used, rather than “appoint”, to make it clear that what is envisaged under such circumstances is a relationship of employment.

Amendment 16 will remove section 11(3), because it is not considered necessary.

Amendments 17 and 18 reflect the position that the chief officer is accountable for all matters that relate to the integration joint board, and they enable the integration joint board to appoint an officer for matters of financial administration. The effect is to allow the integration joint board to place financial accountability in the hands of a finance professional, if the board agrees that that is appropriate, which will strengthen the financial governance of the integration joint board. Such an arrangement will not be obligatory—the chief officer can be the accountable officer for all matters, including financial administration—but the approach allows for local flexibility.

I move amendment 15.

Amendment 15 agreed to.

Amendment 16 moved—[Alex Neil]—and agreed to.

Section 12A—Integration joint boards: finance and audit

Amendments 17 and 18 moved—[Alex Neil]—and agreed to.

After section 18

Amendment 19 moved—[Alex Neil]—and agreed to.
Section 18A—Health funding: further provision
Amendment 106 moved—[Alex Neil]—and agreed to.

Section 19—Transfer of staff: effect on contract of employment
Amendments 20 and 21 moved—[Alex Neil]—and agreed to.

Section 20A—Carrying out of functions conferred on officers of local authorities
The Deputy Presiding Officer: Group 8 is on the carrying out of functions that are conferred on officers of local authorities and health boards. Amendment 22, in the name of the cabinet secretary, is grouped with amendments 23 to 31.

15:30

Alex Neil: The amendments will ensure that sections 20A and 20B operate in practice in the intended way. The deeming provisions in those sections are necessary to ensure that certain specific functions operate properly when health and social care functions are integrated.

Amendments 24, 26, 29 and 31 provide that the deeming provisions in sections 20A and 20B relate only to provisions that are prescribed by regulations. Amendments 22 and 27 are minor amendments to refer to functions that are conferred on local authority and health board officers by, or by virtue of, an enactment. Amendments 23 and 28 provide that, before the deeming provisions apply, any additional conditions that are prescribed by regulations must be satisfied. The amendments will make the position subject to further ministerial control, to ensure on a case-by-case basis that it is appropriate for section 20A(2) or 20B(2) to apply to a particular function.

Amendments 25 and 30 are minor amendments to ensure that sections 20A and 20B apply when an integration authority is a health board and local authority acting jointly, as provided for under section 42(d), so that staff of either body can carry out any function to which sections 20A and 20B apply.

I move amendment 22.

Amendment 22 agreed to.

Amendments 23 to 26 moved—[Alex Neil]—and agreed to.

Section 20B—Carrying out of functions conferred on officers of Health Boards
Amendments 27 to 31 moved—[Alex Neil]—and agreed to.

Section 22—Directions by integration authority
The Deputy Presiding Officer: Group 9 is on directions by an integration authority. Amendment 32, in the name of the cabinet secretary, is grouped with amendments 33 to 42.

Alex Neil: Amendments 32, 33 and 36 make it clear that a person who is carrying out a function under a direction from an integration authority is accountable for carrying out that function.

Amendment 34 clarifies finance matters as they pertain to directions and provides that, when a health board function that is carried out in a hospital that serves two or more local authority areas has been delegated, the direction must set out the amount that the health board has set aside for use by the person who is to carry out the function. Amendment 37 requires the direction to include instructions on how the amounts that have been set aside or paid are to be used.

Amendments 35 and 39 provide consistency with amendment 34. Amendment 38 provides consistency on liability, as set out at stage 2. Amendment 40 removes a redundant provision that is unnecessary to achieve the required effect.

Amendments 41 and 42 clarify the circumstances in which the Scottish ministers may make an order to provide that an integration joint board may decide not to issue directions as being when the Scottish ministers consider that an order would not only contribute to achieving the national health and wellbeing outcomes but further achieve the integration delivery principles.

I move amendment 32.

Amendment 32 agreed to.

Amendment 33 moved—[Alex Neil]—and agreed to.

Section 22A—Section 22: supplementary
Amendments 34 to 42 moved—[Alex Neil]—and agreed to.

Section 23—Requirement to prepare strategic plans
The Deputy Presiding Officer: Group 10 is on integration authority: strategic planning. Amendment 43, in the name of Rhoda Grant, is grouped with amendments 44, 107, 45, 46, 114 to 116, 50 and 117.

Rhoda Grant: Amendment 43 is about allowing people who require support packages to move with confidence between local authority areas. Currently, the person must live in a local authority area before he or she can be assessed for care. That prohibits people from moving because they...
have no confidence in the services that they will receive, or in whether the services will be adequate for their particular needs.

People need to move for personal and work-related reasons, therefore it is important that when they make those decisions they have confidence that what they will receive from a service provider is adequate for their needs immediately, when they move. They also need to take into account the different rates that different local authorities charge for services. That must be factored in if they are moving for work-related reasons. The rest of us would factor in things such as pension payments, overtime and travel to work, but they need to factor in the cost of living within an area before they can make a decision. Therefore, it is important that they have that information as soon as possible when they start to consider such decisions. That is a basic human right that the rest of us take for granted.

We all know that moving house can be daunting and it is not a decision that we take lightly, but it is much more difficult for someone who is dependent on assistance to live their life. Amendment 43 would place on local authorities a duty to take into account the needs of service users who move into their areas. That must be put into action as quickly as possible to allow those people to make those decisions and to have informed choices.

Amendment 116 would ensure that a representative of service users and a representative of carers were placed on the strategic planning group. It is important that we embrace co-production. Care is not something that just happens to people; it is something that they should have control over in terms of both its design and what it helps them to achieve. They must have autonomy in that and they must be involved in how we design their care.

Person-centred care is widely recognised, but sometimes it is delivered in a paternalistic way. We need to recognise that when people need assistance to live and go about their daily lives, they are still entitled to live their lives as they see fit. Amendment 116 would put those principles at the heart of service design, so I urge members to support it.

I also support the other amendments in the group, especially Nanette Milne’s amendment 117, which would involve the voluntary sector in the strategic plan, which I think is very important.

I move amendment 43.

**Alex Neil:** The amendments in the group relate to integrated strategic planning, which lies at the heart of the bill and the process of reform.

The aim of Rhoda Grant’s amendment 43 is to improve portability of services when a service user moves between two local authority areas. I am sympathetic to Rhoda Grant’s concerns in that regard. When we updated guidance on the issue in 2010, we were made aware of how difficult it can be for people to move if they are not sure that the care services that they need will be in place when they move.

However, I do not believe that amendment 43 provides a workable approach to tackling that challenge. The provision of a service by a local authority to a service user is based on the person’s physical presence in that local authority area, so a local authority cannot begin to provide services to an individual until the service user is physically present in its area.

As I said, however, I am aware of the importance of the issue. The bill will place a duty on integration authorities to have regard to the effect of their strategic plans on other integration authorities, which provides for the broad imperative that no integration authority can plan for and deliver care in isolation from others. The bill also places service users firmly at the centre of service planning and delivery and will embed their perspective within all the processes of co-production that it describes.

For those reasons, I cannot support amendment 43 and call on Rhoda Grant to seek to withdraw it.

Nonetheless, I commit to continuing to work closely with stakeholders and partners on guidance to ensure that local systems set up effective voluntary systems that work together to carry out assessments in advance of a person moving between local authority areas, especially for people who may move frequently, such as Gypsy Traveller communities.

The effect of Rhoda Grant’s amendment 116 and Nanette Milne’s amendment 117 would be to provide that the service user, a representative of carers and a broad range of third sector organisations would all be directly involved in strategic planning. The amendments are not necessary. At stage 2, I provided the Health and Sport Committee with policy statements that made clear my intention to set out in regulations which groups of people must be included in local strategic planning groups. Under those regulations, service users, carers and representatives of the third sector will be included. It would be disproportionate to list individual groups in the bill, while leaving the involvement of other key parties, such as health boards, local authorities, GPs and social care professionals, to regulations. Therefore, I do not support amendments 116 and 117 and call on Rhoda Grant and Nanette Milne not to move them.

I turn to the amendments in my name. Amendment 44 will ensure that, when an
integration authority sets out a start date for integration in its strategic plan, that date can only be earlier than the date that will be prescribed by the Scottish ministers for integration to begin.

Amendments 45 and 46 are minor amendments that will provide clarity that the integration authority must have regard to the effect of its strategic plan on services, facilities and resources used.

Amendment 50 makes it clear that the strategic planning group is the integration authority’s, not the constituent authority’s. It also allows for the fact that a health board may have representatives on more than one strategic planning group if it is involved in integrated arrangements with more than one local authority.

Amendment 107 will correct a reference to another section of the bill.

Amendment 114 is a minor amendment that will ensure that it is clear that it is the local authority that will nominate its representative on the strategic planning group.

Amendment 115 is a minor amendment that will ensure that it is clear that, when the integrated arrangement includes more than one local authority with a single health board, it is the local authorities that will nominate their representative on the strategic planning group.

Amendment 117 is, arguably, the most important of my amendments. It respects the third sector as a key strategic partner, alongside health boards and local authorities. The third sector forms a major part of the wider health and social care landscape, particularly in relation to preventative support, and it delivers more than a third of registered social care. As such, its role should certainly be clearly articulated in statutory guidance and secondary legislation, if not in the bill.

The Health and Social Care Alliance and many others have called, and continue to call, for third sector sign-off of strategic plans that are prepared by health and social care partnerships. They cite the fact that the sector’s involvement in joint signing-off under the reshaping care for older people change fund has enabled many areas to overcome barriers to partnership and has been a key driver for the cultural change that is widely acknowledged to be the essential foundation of integration. The sector thinks that without its having a more formalised role there is a risk that the bill will not fully achieve its policy objectives.

Although the arrangements that amendment 117 proposes are not as strong as the joint sign-off arrangements under reshaping care for older people, the Health and Social Care Alliance has given its support to my amendment, which proposes that third sector organisations be invited to express their views on draft strategic plans, and that those views would have to be taken into account. That would help to embed in the bill the role of the third sector as a key strategic partner.

I am happy to support Rhoda Grant’s amendment 43, which would require strategic plans to set out arrangements for considering the needs of service users who move between local authority areas, and her amendment 116, which would give service users and carers representation on strategic planning groups. In addition, I am happy to support the cabinet secretary’s amendments.

The Deputy Presiding Officer: No other members wish to speak, so I ask Rhoda Grant to wind up and to indicate whether she intends to press amendment 43.

Rhoda Grant: I say to the cabinet secretary that I understand that guidance is in place on portability of care, but it is not working. Legislation is necessary to address the issue.

15:45

The cabinet secretary said that local authorities cannot design a care package for a person until that person is living in the area. However, any of us who has experience of trying to bring together a care package for elderly parents or others knows how long it takes to decide. It is a real barrier and it stops people moving about, but surely that is part of their human rights. They cannot choose to move without knowing about the service that they are going to receive. I ask the cabinet secretary to reconsider and to support amendment 43, which would really put users and carers at the heart of the bill. It is a hugely bureaucratic bill that is all about systems and bodies, and how we set them up. However, if we are not delivering—

The Deputy Presiding Officer: Ms Grant—I am sorry, but can I stop you for a moment? There is too much chatter going on in the chamber. Can you pull your microphone around slightly, Ms Grant? Thank you.

Rhoda Grant: If we are not legislating in the bill for service users and carers and if it is not designed to make their lives better, then I do not know what we are here for. Therefore, it is important that they be at the very heart of the bill and on the face of the bill. I urge members to support amendment 42 as well as amendment 43.

The Deputy Presiding Officer: The question is, that amendment 43 be agreed to. Are we agreed?

Members: No.

The Deputy Presiding Officer: There will be a division. As this is the first division in the group,
there will be a one-minute division. Please vote now.

The Deputy Presiding Officer: The result of the division is: For 53, Against 62, Abstentions 0.

Amendment 117 disagreed to.
Section 30A—Review of strategic plan

The Deputy Presiding Officer: Group 11 amendments are on the review and replacement of the strategic plan. Amendment 51, in the name of the cabinet secretary, is grouped with amendments 52 to 55.

Alex Neil: These amendments will ensure that when a replacement strategic plan is produced following a review of the plan, the integration authority is subject to the same requirements as apply to the development of a first strategic plan. In other words, the integration authority must pay regard to the national outcomes for health and wellbeing and the integration delivery principles, along with the requirements on consultation, provision of information and publication that are set out in the bill in relation to strategic planning, when it is producing a replacement strategic plan.

Amendments 52 and 53 are drafting amendments

I move amendment 51.

Amendment 51 agreed to.

Amendments 52 and 53 moved—[Alex Neil]—and agreed to.

Section 30B—Requirement to prepare replacement strategic plan

Amendments 54 and 55 moved—[Alex Neil]—and agreed to.

Section 31—Carrying out of integration functions: general

Amendments 118 and 119 moved—[Alex Neil]—and agreed to.

Section 32—Carrying out of integration functions: localities

Amendment 56 moved—[Alex Neil]—and agreed to.

Section 33—Integration authority: performance report

Amendment 57 moved—[Alex Neil]—and agreed to.

Section 33B—Review of integration scheme

The Deputy Presiding Officer: Group 12 is on the review of the integration scheme and the impact on children. Amendment 120, in the name of Bob Doris, is grouped with amendments 121, 122 and 123.

16:00

Bob Doris (Glasgow) (SNP): These amendments were partly inspired by my meeting parents at a Glasgow project, which was a children’s inclusion partnership service jointly run by Barnardo’s Scotland and Stepping Stones for Families in Maryhill.

Like many families across Scotland, many families in Maryhill who are living in poverty need the support that local children and family services provide. It is vital that the bill improves the services that they rely on. Throughout its scrutiny of the bill, the Health and Sport Committee has been considering carefully the potential impact of the bill on children’s services.

I welcome the cabinet secretary’s amendments at stage 2, which clarify that a number of options are available to health boards and local authorities as they consider whether children’s services should be part of the wider integration agenda along with adult health and social care.

Whether children’s services are moved into integration schemes or kept separate will of course be up to local decision making—that is absolutely right. However, it is particularly important that we do not create a situation in which transitions for young people who are moving from children’s services to adult services become difficult or systems that do not integrate well or do not dovetail with each other.

Barnardo’s Scotland argued at stage 1 that it was not always clear where the responsibility for children’s services would lie, particularly in areas where integration authorities do not choose to take on responsibility for children’s services. Barnardo’s said at stage 1 that it was concerned that any confusion could create uncertainty. However, Barnardo’s—like most other organisations—is fully supportive of the principles that underpin the integration agenda.

I seek a commitment from the cabinet secretary that he is willing to ensure that transitions do not become an issue and that, regardless of whether children’s services are integrated or not, guidance will ensure that local authorities and health boards consider the impact of integration on children and children’s services as they review their integration schemes in due course. I also seek a commitment that children’s organisations will be involved as appropriate and as guidance is developed. I would welcome that reassurance. If those commitments are forthcoming, I will be content not to press the amendments in this group.

I move amendment 120.

Jim Hume: I recognise that Bob Doris wants to make a point about making children’s rights a key part of the bill. That is a very good thing—children should be considered in any decisions that are made and I will support Bob Doris if he presses his amendments.
However, the cabinet secretary has already said in relation to Malcolm Chisholm’s amendments on independent living that disabled people should not be highlighted for special treatment as the bill is about everybody. It should be a given that children will be considered in any health and social care integration, as should older people, disabled people, lesbian, gay, bisexual and transgender people, women and people from ethnic minorities—all sectors of our community, in fact. I am quite interested in why Bob Doris thought it necessary to have these amendments, which highlight only children’s rights, but not other amendments to highlight other people’s rights.

Alex Neil: The bill rightly provides for local flexibility for health boards and local authorities to include other services beyond adult health and social care in their integrated arrangements, such as children’s services.

When statutory partners choose not to include children’s services, that does not negate the need to plan effectively for those services; nor does it remove the need to ensure effective transitions between children’s and adult services.

When children’s services are included in the integrated arrangement, the integration planning principles require health boards and local authorities to take account of the needs of service users.

Similarly, the national health and wellbeing outcomes must be applied and taken into account for all users of services within the integrated arrangement when reviewing an integration scheme.

It is important that the planning requirements of the Children and Young People (Scotland) Bill and this bill are aligned, so amendment 84 in group 14 provides for that statutory link.

I also committed at stage 2 to ensuring that integration joint boards are included as partners in community planning under the community empowerment (Scotland) bill.

Further, under part 1 of the Children and Young People (Scotland) Bill, local authorities and health boards—among others—will be required to report on how they are addressing children’s rights as set out in the United Nations Convention on the Rights of the Child.

I welcome the opportunity to assure Parliament that where statutory partners choose to integrate only adult services, appropriate mechanisms are in place and robust consideration has been given to the planning of other services. Statutory guidance will further strengthen those arrangements. I therefore hope that I have reassured Bob Doris on all the perfectly legitimate points that he raised. I hope that I have reassured him that we are doing the right thing by our children. I therefore ask him to withdraw amendment 120 and not move amendments 121 to 123.

Bob Doris: Jim Hume made a reasonable point about singling out certain groups over others on the face of the bill. That said, Barnardo’s and others want to ensure that guidance is appropriate and fully consistent with the ambitions contained in the bill. Given the comments that the cabinet secretary has made and the strong reassurances that he has given, I am minded to withdraw amendment 120 and not to move amendments 121 to 123.

Amendment 120, by agreement, withdrawn. Amendment 121 not moved.

Section 33C—Requirement to review integration scheme
Amendment 58 moved—[Alex Neil]—and agreed to. Amendments 122 and 123 not moved.

Section 34—Revised integration scheme
Amendments 59 to 62 moved—[Alex Neil]—and agreed to.

Section 35—New integration scheme
Amendment 124 moved—[Alex Neil]—and agreed to.

Section 36—Power to make provision in consequence of new integration scheme
Amendment 63 moved—[Alex Neil]—and agreed to.

Section 37—Information-sharing
Amendment 64 moved—[Alex Neil]—and agreed to.

Section 41A—Social Care and Social Work Improvement Scotland

The Deputy Presiding Officer (John Scott): Group 13 is on inspections by Social Care and Social Work Improvement Scotland and Healthcare Improvement Scotland. Amendment 65, in the name of the cabinet secretary, is grouped with amendments 66 to 82.

Alex Neil: The bill allows Healthcare Improvement Scotland and Social Care and Social Work Improvement Scotland, known as the Care Inspectorate, to inspect the co-ordination of health and social care services. Upon reflection, I do not think that that goes far enough. I have extended the remit to include the planning, organisation and
co-ordination of those services. That broader inspection framework will provide a better basis for scrutinising integrated services.

Amendment 82 allows HIS and SCSWIS, when undertaking a joint inspection, to invite other bodies mentioned in section 115(6) of the Public Services Reform (Scotland) Act 2010 to carry out an inspection with them.

I move amendment 65.

Amendment 65 agreed to.

Amendments 66 to 70 moved—[Alex Neil]—and agreed to.

Section 41B—Healthcare Improvement Scotland

Amendments 71 to 81 moved—[Alex Neil]—and agreed to.

Section 41C—Joint inspections of health services and social services

Amendment 82 moved—[Alex Neil]—and agreed to.

Section 41D—Amendments of section 56 of Local Government (Scotland) Act 1973

Amendment 83 moved—[Alex Neil]—and agreed to.

After section 41D

The Deputy Presiding Officer: Group 14 is on children’s services planning. Amendment 84, in the name of the cabinet secretary, is the only amendment in the group.

Alex Neil: Amendment 84 will insert a new section after section 41, adding a new paragraph into the definition of “other service provider” in section 7(1) of the Children and Young People (Scotland) Bill, to add integration joint boards to that definition.

The amendment will ensure proper cohesion of the planning requirements placed upon statutory bodies under this bill and the Children and Young People (Scotland) Bill, by ensuring that those requirements apply to integration joint boards established under this bill.

I move amendment 84.

Bob Doris: When we debated my amendments in group 12, the cabinet secretary referred to amendment 84. The purpose of group 12 was to ensure that a review of health and social care integration would place the rights of the child and outcomes for children at its heart. I was reassured that that could be dealt with in guidance but, on amendment 84, I agree with the cabinet secretary that such matters need to be placed in the bill.

I very much hope that integration boards will choose to integrate children’s services, if not in the short term then at some point in the future. Therefore, we must ensure that Government legislation in various areas is properly aligned and it is right to amend the newly passed Children and Young People (Scotland) Bill to ensure that, should children’s services be integrated, the integration board that decides to do that is fully recognised in the Children and Young People (Scotland) Bill.

That is crucial for strategic planning and to ensure that the ambitions of the Children and Young People (Scotland) Bill are realised as part of the integration agenda.

I will support amendment 84.

Amendment 84 agreed to.

Section 46—Scottish Ministers: power to form companies etc

The Deputy Presiding Officer: Group 15 is on the Scottish ministers and the power to form companies. Amendment 85, in the name of the cabinet secretary, is grouped with amendment 86.

Alex Neil: Amendment 85 seeks to achieve the stated policy intention of allowing NHS bodies access to a range of joint-venture structures for the management and disposal of assets. It extends the purposes for which joint-venture structures can be formed by NHS bodies to include the management and disposal of assets.

The purposes for which NHS bodies can form joint ventures are closely defined in section 84B of the National Health Service (Scotland) Act 1978. Amendment 86 is a technical amendment that introduces a mechanism to provide future flexibility in the use of joint-venture structures by allowing the Scottish ministers to make regulations prescribing additional purposes for which joint ventures may be formed. Such purposes must relate to health functions under the 1978 act.

I move amendment 85.

Nigel Don (Angus North and Mearns) (SNP): I speak as the convener of, and on behalf of, the Delegated Powers and Law Reform Committee. I seek clarification and reassurance from the cabinet secretary on concerns that the committee has about amendment 86. This morning, the committee considered the stage 3 amendments to the bill that relate to delegated powers. There is an unusually high number of such amendments for stage 3, but the committee has concerns only about amendment 86.

In a letter to the committee, the Scottish Government explained that the amendment
conferred power on the Scottish ministers to prescribe purposes additional to those expressed in the bill for which they may form, or participate in forming, bodies corporate and participate in bodies corporate that are formed. The letter further explains that the power will enable ministers to adjust the purposes for which the Scottish ministers and health boards may form, or participate in, bodies corporate without the need for further primary legislation but that the power is limited in that the purpose must relate to the functions conferred by the National Health Service (Scotland) Act 1978.

However, the letter offers no further explanation of why the power has been taken and no explanation of why the need for the power has become apparent only at this juncture, nor is any explanation offered or are any examples given of how the power might be used.

In the absence of such an explanation or examples, the committee was unable to form a clear view on the appropriateness of the power contained in the amendment. Furthermore, the committee is unclear about the significance of the matters that might be provided for by the power and, therefore, unable to form a clear view on whether the negative procedure is the appropriate procedure to attach to the power or whether a higher level of parliamentary scrutiny would be more appropriate.

Therefore, I invite the cabinet secretary to provide further explanation of why the power is being taken, how it might be used, the significance of the matters for which it might be used and the appropriateness of the use of the negative procedure for regulations under the power.

Neil Findlay: Amendment 86 was a significant omission from the bill at stages 1 and 2 and should have been introduced then. It should not have been introduced at this late stage without having gone through any real scrutiny. Introducing the ability to form a company or a body corporate for a broad range of purposes without any real scrutiny is not the way to legislate. Introducing the ability to form a company or a body corporate for a broad range of purposes without any real scrutiny is not the way to legislate. There may be perfectly legitimate reasons for forming such bodies, but the minister must respect Parliament and the parliamentary process when introducing legislation.

Alex Neil: I am happy to explain to the committee the reasoning behind the amendment.

The purpose behind section 84B of the 1978 act is to ensure that best value is obtained in the use of health service resources and that services can be provided in conjunction with other bodies, where that is in the interests of the public purse.

It is likely that the majority of purposes for which joint ventures are used will be covered by the wording of the 1978 act. However, amendment 86 is necessary to allow an expansion of the purposes for which joint ventures may be used, so as not to stifle innovation.

I can reassure members that this power is intended to be used for narrow purposes. The power of the Scottish ministers to prescribe purposes is constrained by the provision requiring them to be linked to the functions under the 1978 act. Given that restriction, and the intention to use the power to make narrow, technical changes to the purposes for which joint ventures are permitted, negative parliamentary procedure allows a sufficient level of scrutiny.

Examples of which joint ventures might be formed in future include the provision of shared services or support services in conjunction with local authorities, such as hard and soft facilities management, which would include non-NHS buildings services or services such as catering, vehicle maintenance and so on. The amendment will allow further, similar uses of joint ventures, which might otherwise be obstructed.

Section 84B was established for a particular purpose, and the key point is that, where innovation in this area becomes possible, seeking an appropriate primary legislative vehicle to amend the purposes that are set out in section 84B is restrictive. The amendment seeks to enable innovation and remove barriers and delay.

I hope that that provides the necessary reassurance to the committee convener and to the Delegated Powers and Law Reform Committee itself.

Amendment 85 agreed to.

Amendment 86 moved—[Alex Neil]—and agreed to.

Section 48—Interpretation

Amendments 125, 87 and 88 moved—[Alex Neil]—and agreed to.

Amendment 89 moved—[Neil Findlay].

The Deputy Presiding Officer: The question is, that amendment 89 be agreed to. Are we agreed?

Members: No.

The Deputy Presiding Officer: There will be a division.

For

Baillie, Jackie (Dumbarton) (Lab)
Baker, Claire (Mid Scotland and Fife) (Lab)
Baker, Richard (North East Scotland) (Lab)
Baxter, Jayne (Mid Scotland and Fife) (Lab)
Beamish, Claudia (South Scotland) (Lab)
Bibby, Neil (West Scotland) (Lab)
Standing Orders, Decision Time be taken at 5.20 pm.

—

5.20 pm.

Standing Orders, to bring forward decision time to

consideration of amendments.

Agreed to.

Amendment 90 disagreed to.

The Deputy Presiding Officer: The result of
the division is: For 52, Against 59, Abstentions 0.

Amendment 89 disagreed to.

Section 49—Subordinate legislation

Amendment 90 moved—[Alex Neil]—and

grounded to.

Schedule—Enacts conferring on local
authorities functions which may be delegated

Amendments 91 to 94 moved—[Alex Neil]—and

grounded to.

The Deputy Presiding Officer: That ends the
consideration of amendments.

As we have completed the consideration of amendments ahead of schedule, I am minded to

take a motion without notice on behalf of the Parliamentary Bureau, under rule 11.2.4 of the
standing orders, to bring forward decision time to 5.20 pm.

Motion moved.

That the Parliament agrees that, under Rule 11.2.4 of Standing Orders, Decision Time be taken at 5.20 pm.—[Joe FitzPatrick.]

Motion agreed to.
Public Bodies (Joint Working) (Scotland) Bill

The Deputy Presiding Officer (John Scott):
The next item of business is a debate on motion S4M-09115, in the name of Alex Neil, on the Public Bodies (Joint Working) (Scotland) Bill.

16:20

The Cabinet Secretary for Health and Wellbeing (Alex Neil): It gives me considerable pleasure to open the stage 3 debate on the Public Bodies (Joint Working) (Scotland) Bill, which brings together health and social care services in Scotland. It is particularly appropriate that the bill’s development has been characterised by strong, committed effort—joined-up teamwork, in other words—by members across the chamber and in committee. If I may quote myself, I think that we have all been on the same page and trying to achieve the same things, even when we have disagreed about wording.

I particularly thank Duncan McNeil and the Health and Sport Committee, which was the lead committee, for their careful consideration of the bill. I also thank the Local Government and Regeneration Committee, the Finance Committee and the Delegated Powers and Law Reform Committee for their careful scrutiny, input and support. I pay tribute to the work of my team in the civil service, which has provided me, as it always does, with first-class support at every stage.

We have heard before today that it is much to the benefit of the bill that it draws on the commitment, co-operation and inspiration of a broad and deep range of partners and stakeholders across all sectors. Local government, the national health service, the third and independent sectors, professional groups and representatives of patients, carers, service users and families have all, in different and complementary ways, lent us their expertise, experience, ambitions and aspirations.

Our consultation on the proposals that underpin the bill received more than 300 responses, and the information sessions that we ran during the consultation exercise attracted roughly 900 attendees to the discussion and debate.

The bill as introduced in May last year yielded 85 written responses during stage 1, and the interests of many of our stakeholders and partners were represented during committee sessions at stage 2.

Last, but by no means least, our various working groups—particularly our bill advisory group and the ministerial strategic group on health and community care, both of which I chair—have been active participants in the development process right up until today.

I signal my sincere thanks to everyone who has been involved so far—but the job is not yet finished, of course. I look forward to continuing to work with everybody as we develop regulations and guidance to support the bill and—most important—as we put integrated arrangements into place.

The whole point—indeed, the only point—of integrating health and social care is to improve people’s lives. Even as we debate the bill, our focus is on improving outcomes for people who currently use health and social care services across Scotland.

The Public Bodies (Joint Working) (Scotland) Bill—perhaps that is not the sexiest name for a piece of legislation, albeit one that is very important—provides a legislative framework for integrating health and social care services. I remember that, at the start of the process, a former Labour minister advised me that we should stick to our guns to make joint working a statutory requirement for local authorities and health boards, because there have been many attempts in the past to integrate health and social care services with varying degrees of success—or lack of success. The statutory underpinning that we will provide is essential to ensuring that such integration works, and does so within a timeous period.

Neil Findlay (Lothian) (Lab): One thing that we can learn is that many of the advances that have been made where I live in West Lothian have been made without legislation. Much of the challenge is perhaps not so much about statutory change but about the cultural change in health and social care.

Alex Neil: Absolutely. West Lothian is a very good example of an area where integration has worked successfully under successive administrations. Unfortunately, I could give many examples of other local authority areas where that has not been the case. We need to put integration on a statutory basis so that the experience of West Lothian can be rolled out across the country.

The bill also sits very well alongside the Social Care (Self-directed Support) (Scotland) Act 2013, which was piloted through Parliament last year by my colleague Michael Matheson, and other policies, such as that in the Children and Young People (Scotland) Bill, which we passed last week, that drive forward our commitment to personalising care. By focusing on person-centred planning and delivery, the Public Bodies (Joint Working) (Scotland) Bill will help to ensure joined-up, seamless health and social care provision that will improve people’s lives. It will support our
commitments to ensure that people get the right care in the right place at the right time and to support people to stay in their own home or another homely setting as independently as possible for as long as possible.

I will take a moment to remind members of the foundations of our approach. We are legislating for national health and wellbeing outcomes and we will underpin the requirement for health boards and local authorities to plan effectively together to deliver quality sustainable care services for the people whom they serve. We are bringing together the very substantial resources that we commit to health and social care in Scotland, to make it easier for local systems to deliver joined-up, effective and efficient services that meet the needs of increasing numbers of people with long-term and often complex conditions. Many of those people are older, but not all of them are, and an important feature of our approach is that local systems must integrate for all adults. In addition, those systems are free to choose locally to integrate children's services as well.

We are bringing together accountability for results across health and social care. Too often in the past, people have found themselves between systems when there is no division in their lives between what we have categorised historically as health needs and social care needs. The bill focuses on the whole person and the needs of the community in which they live. It places on statutory organisations co-ordinated planning and delivery requirements that radiate from people's needs, rather than expecting people to fit into historical patterns of service planning and delivery.

The bill is a response to the findings of the report of the Christie commission on the future delivery of public services that effective services must be designed with and for people and communities—and I believe that they should be designed by people and communities as well—not delivered on a top-down basis for administrative convenience. Also—and this is key—the bill will ensure a full and proper role for clinicians and other professionals in planning and delivering services. We have listened to concerns that that role has been lost or diluted in recent years, and we have responded. We recognise that the expertise and sharp-end experience of the professions and of people who use services must together guide the shape of services in future.

Locality planning arrangements under the bill provide the locus and opportunity for effective professional leadership of integration. We know from the evidence on integrated care that it is all about successful co-production: people working together to tackle challenges in innovative ways.

When it comes to health and social care support, our emphasis in Government is on prevention. We know that a concerted effort to anticipate people's needs and prevent problems from arising in the first place is the way to improve outcomes.

The challenges are difficult. As we have worked with partners and stakeholders to develop the bill, we have not always agreed with one another. What is important, though, is that we have a shared goal: we know what our destination is and we have worked together to agree the route.

That work goes on. We have today released updated data on delayed discharges, which shows us clearly that although we have made great strides in recent years, we have more work to do to ensure that people receive the quality of care that we all want to be proud of in Scotland. Of course, we are not starting from scratch. We can already see many examples—we have just referred to some of them—of good partnership working across Scotland. I saw one this morning. Cowan Court in Penicuik in Midlothian is a brilliant example of an innovative approach to integrating housing, social care and healthcare. We need to build on and develop that good practice and increase the pace at which such facilities are rolled out across Scotland.

The bill provides the right foundation for those improvements, and it provides the imperative that I believe is needed to ensure consistent progress across the country. The bill offers a good and careful balance. It sets out the framework for integration and makes it a necessary requirement of health boards and local authorities to deliver effective integrated care. At the same time, it provides flexibility to allow local arrangements to respond to local needs and to encourage and enhance local innovation and leadership. I welcome this opportunity to provide further clarity on the bill, and to discuss the stage 3 amendments, which we have just completed.

When we pass the bill, we will significantly enhance both the health and the social care of the people of Scotland.

I move,

That the Parliament agrees that the Public Bodies (Joint Working) (Scotland) Bill be passed.

16:30

Neil Findlay (Lothian) (Lab): The issue of social care should be at the top of the political agenda in Scotland. As politicians discuss the intricacies of currency unions, European Union membership and all the rest of it, our elderly and vulnerable people are experiencing a care system that is in crisis as a direct result of cuts to local government.
We know that most people want to remain in their own homes when appropriate, among familiar people and surroundings for as long as possible. We also know that, over the next decade, the elderly population will increase significantly as we live longer lives—or as some of us live longer lives, depending on where we live and how rich or poor we are. We have to be careful when we speak about the issue. Increasing life expectancy is all too often spoken of in negative terms, with phrases such as “time bomb” and “burden” bandied about, but living longer also throws up tremendous work, leisure, travel and community opportunities for the older population. More people should have more time to enjoy a more fulfilling life and contribute to our society. We should all be careful about how we refer to our ageing population.

We cannot, however, get away from the fact that there will be financial and practical implications. Politicians and policy makers have to address those matters and plan for the situation now, not when it becomes a reality, although it is a reality at the moment. The bill will move us a bit down that road, but it has missed the real issues that are facing social care in the here and now. My frustration at the way in which the bill has progressed is that it has failed to address the deep-seated problems in the care system.

One of those is an issue that many of us perhaps want to avoid, which is money. The savings that the Christie commission identified that are supposed to be achieved by freeing up NHS beds through people remaining at home do not have a cat in hell’s chance of being achieved under the current social care system. Organisation after organisation that I have met and spoken to has said, when asked the question, that the social care system is in a state of crisis.

In the care home sector in Edinburgh, 15 per cent of private care home places are out of commission, and the figure is 20 per cent in Glasgow and 15 per cent in Highland. All those places are out of commission because of concerns about standards. In Edinburgh alone, more than 100 NHS beds are blocked because there is no safe place for people to be discharged to, and I understand that there was further bad news on that today. A few weeks ago, a care home in Fife got top marks from an inspector one week and then, the next week, appalling levels of care were identified, and the same inspector regraded the home at a much lower level.

In home care, we have a social care system that is based on the minimum wage, with working conditions being driven down to the lowest common denominator, contract prices being forced down, training budgets being cut, a recruitment crisis and staff morale on the floor. One carer told me recently:

“People only go into home care because they can’t get another job and only stay long enough until another one is found.”

Last week, Unison Scotland published the very disturbing report, “Scotland—It’s time to care. A survey of Scotland’s homecare workers”. The report said that 56 per cent of staff surveyed said that they were on time-limited visits to their clients and that, although the visits normally lasted 15 minutes, some were as short as seven minutes. One worker said that it is

“Rush, rush, rush, I think they forget we are dealing with human beings, old ones at that.”

Another said:

“Clients are anxious they don’t know which carer is coming from day to day”,

while another said:

“Clients are losing out, care is not given properly, clients are missed out or forgotten about, no one cares or listens to staff or our clients.”

Fifty per cent of care staff said that they do not get paid for the time taken to travel between clients, some said that they have to pay for their uniforms, others said that they have to pay for phone calls to their employer, and many said that they do not get breaks.

Another member of care staff said that the

“Service is not able to retain staff due to terrible wages, my work load has increased and I’m getting paid less.”

Another said:

“Before Christmas I ended up 2 weeks on sick leave, because I was doing 16-18 visits during long day and my body couldn’t cope any more, I had to work although I was sick, and when I asked my manager to take half a day off I was told there is no one to cover my shift. My breaks were reduced to minimum and there was not even time for having hot meal during day.”

The report highlights that care visits are missed out, staff are asked to administer medication with almost no training and corners are cut at every turn. In short, it is a system in crisis at a time when the Scottish Government’s white paper, “Scotland’s Future: Your Guide to an Independent Scotland”, claims that we have “world-leading ... social care”. I ask the minister to come into the real world, speak to the people who are delivering care services and ask them whether the social care system in Scotland is world leading. I ask him to read the report and then reflect on that statement in the white paper.

We need to change how social care is procured and delivered. I support moves in the Procurement Reform (Scotland) Bill to omit the need for social care contracts to be advertised and for organisations to compete. If contracts are awarded
to the private sector or the third sector, that should be based not on price but on what added value can be offered. People who work in social care do a vital job that should have a career structure, a training regime and pay and status to match.

I hope that the bill will begin to move matters forward, but I fear that we have missed an opportunity to address the very real and deep-seated problems that exist in the here and now. Good practice takes place across Scotland, but if we do not get the basics right, the system will continue to fail our vulnerable people.

16:37

Nanette Milne (North East Scotland) (Con): I confirm that the Scottish Conservatives will support the bill at decision time. It is a better bill following the amendments that have been agreed to at stages 2 and 3—many of them from the Government—and I am pleased that the cabinet secretary has taken on board a number of stakeholders’ and Opposition members’ suggestions.

There is no doubt that, across the board, we have been seeking to achieve the best possible outcomes for adults who require health and social care services. However, there have been differences of opinion along the way on how best to reach that goal. Those have centred mainly on what should be in the bill and what should be in guidance and statutory regulation.

As I said at stage 1, I fully accept the necessity for the legislation because, despite many initiatives in recent years—some of them very successful—to secure better integration of health and social care, joint working between partners to bridge the gap between primary and secondary healthcare and between health and social care is still at best patchy across the country.

The bill is fairly technical. Basically, it sets the framework for the changes that are needed to achieve the joined-up services that are required by many adults in Scotland today and in the future if they are to remain in their local communities living a fulfilled and dignified life within their capabilities for as long as possible. That particularly applies to the increasing number of elderly people with multiple health problems, both physical and cognitive, who have complex care needs that require significant support from social services.

However, the legislation will be successful only if its fundamental aim of improving the wellbeing of care recipients is at the forefront of its implementation. That will require a change of culture and attitudes, and will depend on strong leadership at the local level and the full cooperation of people across many disciplines, with everyone focused on achieving the best possible outcomes for those in their care. That is not a cheap option and it will involve some innovative thinking in service provision in an environment of ever-scarce resources. Neil Findlay makes a fair point about resources. In my city of Aberdeen, it is difficult to get home carers because of the competing high salaries in the oil industry.

Many people have been involved, at stakeholder and government levels, in the development of the bill, and all are to be congratulated on bringing it thus far, although much more co-operative work will be required to develop the statutory regulation and guidance that will determine the effectiveness of integration.

Much is already going on in different parts of the country to integrate health and social care services at the local level. Health and Sport Committee members have seen the enthusiastic commitment of staff in Highland and in West Lothian as they work to that end under the two different models in the bill. The work is on-going, but the commitment in Highland and West Lothian to person-centred care and the development of services that are focused on securing the best possible outcomes for people is encouraging. Different parts of Scotland are at different stages in the development of integrated services, and many areas are awaiting the statutory regulation and guidance, so it will be important to get that right.

There is no doubt that concerns remain about how the legislation will work on the ground. I mention three concerns, which the British Medical Association set out in its briefing for stage 3. First, there is a lack of clarity about the detail of the implementation of integration and there is a need for the Scottish Government to engage with organisations such as the BMA in the development of regulations and guidelines. Secondly, there is a lack of clarity on how the third sector will interface with the statutory bodies, to ensure a closer working relationship. The sector has a crucial role, at the strategic and local levels, in the planning, design and delivery of care. Thirdly, it is vital that general practitioners are embedded as key stakeholders in the reshaping of services, as the health secretary has promised and as I have said in the past. If that does not happen, GPs will walk away and the new system will be no more successful than the discredited community health partnerships that it replaces.

At the local level, all interested parties must be closely involved in planning the care services that are required. GPs, specialists in secondary care, nurses, allied health professionals, social workers, the third sector, service users and carers must all have an input into planning services so that they properly meet the needs of and achieve the best outcomes for people who require health and social
care and so that those people are able to live a life that is as fulfilled as possible in their local communities.

As I said, we will support the bill, but key to its success will be the guidance and regulation that underpin it. We will keep a careful watch on how that develops, and we will ask the cabinet secretary for updates on progress towards achieving the integrated services that our older population throughout Scotland deserves, now and into the future.

16:42

Aileen McLeod (South Scotland) (SNP): I am delighted to speak in support of the bill, which will implement substantial and wide-ranging reforms to how we deliver adult health and social care.

The Health and Sport Committee benefited from a wealth of collective experience and expertise from a wide range of stakeholders, including local government, the NHS, housing, allied health professionals and the third and independent sectors. Representatives provided invaluable written and oral evidence to the committee throughout our scrutiny of the bill, and we are grateful for their efforts.

I sincerely hope that those representatives feel, as I do, that their contribution helped us to reach a stage at which we have the legislative framework that will achieve the aim that the cabinet secretary set out when we first debated integrating health and social care services throughout Scotland: to improve outcomes for the growing number of people who need health and social care support, most of whom have multiple complex needs, some of whom are older and all of whom should have access to the right care, at the right time, in the right place.

I very much welcome the Government’s recognition of the key role that housing has to play in improving the health and wellbeing outcomes of our citizens, not least given the policy commitment and 2020 vision of enabling people to be cared for “at home, or in a homely setting” for as long as possible, and in a way that enables them to be as independent as possible, as the cabinet secretary said. I am therefore glad that housing stakeholders have been added to the list of persons whom the Scottish ministers must consult before they prescribe national outcomes for health and wellbeing.

Many members can point to good examples of integrated care in our areas. I recently visited the Crossroads Newton Stewart & Machars Care Attendant Scheme in Wigtown, in Dumfries and Galloway, which provides a range of services, including respite care, personal care, palliative care and assistance with transport and shopping. The staff do a fantastic job in enabling more people to live independently, through close partnership working with social work services, the NHS, the community hospital in Newton Stewart, Marie Curie Cancer Care nurses, occupational therapists and other health professionals. Their services help to integrate the care that an individual receives. They already deliver care in a person-centred way, but of course they are working in one area of a large rural region.

The local council and the health board in Dumfries and Galloway have recognised the inherent strengths of existing arrangements, which already deliver measurable benefits. They also recognise that the locality is where we can make a big difference to people’s outcomes. It is very much at the local level where service provision in the community is critical.

I have reflected before, as has the cabinet secretary, that the localities are where the action will happen and where important decisions will be made. The model that Dumfries and Galloway has chosen—of four localities that are based on the areas of the current area partnership committees—very much reflects that. There is broad agreement across the region that integration will produce a radical improvement at all levels of health and social care.

That is our ultimate aim. This evening’s vote represents the culmination of a lengthy process of engagement, debate, scrutiny and amendment. I am confident that it will produce an outcome that we can all be proud of—an approach to adult health and social care that is genuinely seamless and responsive, with services that are firmly integrated around the needs of individuals, their carers and their families and which place people at the centre of service planning and delivery. That was the message that the Christie commission gave, and I believe that the bill will enable us to change how we deliver public services to meet the needs of people in our communities better.

I hope that members across the chamber will support the bill.

16:46

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I welcome the bill and the changes that the cabinet secretary was willing to make at stages 2 and 3. For example, although he did not go as far today as I, disability organisations and other third sector organisations wished, he incorporated to some extent the language of rights into the bill.

At stage 2, the cabinet secretary addressed some of the problems that I and others highlighted
at stage 1 in relation to the financial arrangements. For example, the bill originally said:

“...The Health Board must make a payment to the integration joint board”.

The fear was that that would reintroduce contracting arrangements, which we in Scotland put behind us several years ago. He changed the arrangement at stage 2 by introducing a reference to money being set aside. I welcome the changes that he made.

However, in welcoming the bill, we must not overstate the difference that it will make per se. It is a necessary but not a sufficient condition for making progress on better integrated care. As Alison Petch—perhaps the leading Scottish academic on community care—said to the committee a few months ago,

“...legislation is not really what drives day-to-day delivery.”—[Official Report, Health and Sport Committee, 10 September 2013; c 4205-6.]

We can look at that from two points of view. As Neil Findlay said at various times today, wider issues must be addressed, such as the length of care visits. The other point is that what really drives change is culture change—that phrase has been used today and at other times—as well as leadership and bringing teams together on the ground.

The words “on the ground” are fundamental. In its briefing, which Nanette Milne just mentioned, the BMA uses that phrase when it expresses concern about

“...the lack of clarity of what integration will actually ‘look’ like on the ground.”

It also says that

“...the success or failure of integration will be the result of the effectiveness of the locality partnerships.”

In the committee, I expressed concern that the bill does not contain more on the locality arrangements. There is only one reference, in section 23, which says that the local authority area will be divided

“...into two or more localities”.

We had quite a long debate about that in the committee, and it was reassuring to hear from the cabinet secretary that he will produce statutory guidance on localities. However, given that that is where the bill’s success or failure is to be determined, I think—like many others—that it is somewhat surprising that the bill does not contain more on the subject.

When I mentioned the issue at stage 1, I said that

“I would like it to be included in negotiations on the GP contract.”—[Official Report, 26 November 2013; c 24890.]

The fact that GPs were not involved sufficiently in community health partnerships was one of the fundamental reasons why they failed. I must take responsibility for that, although it is partly because of that experience that I am saying that more should be included in the bill.

Community health partnerships did not turn out exactly as I had envisaged them in terms of the locality arrangements, and I hope that things will be different this time. In the past few weeks, I have read that something was incorporated into the renegotiated Scottish GP contract about GPs’ role in the integration locality arrangement. If the cabinet secretary could say something about that in his winding-up speech, that would be appreciated.

The issue is not just about GPs, though, as secondary care clinicians must be involved on the ground as well. The bill is about integration that should be vertical as well as horizontal. The third sector—including disability organisations, which we should remember have a particular contribution to make—also needs to be involved on the ground, and it is on the ground where the bill will succeed or fail.

Yes, the bill is necessary, and we all agree that it is a step forward and we all hope that it will lead to the improvements that we want. However, as a final word, let us have the statutory guidance and regulations as quickly as possible. Processes must obviously be gone through, but one of the issues that I raised in committee was about regulations on what could not be handed over to the integration authority, as I heard concerns that local authorities and NHS boards will have to wait to see what they can put into the plans. Let us at least know as quickly as possible what is ruled out, and let us then leave it to health boards and local authorities to get on with the delivery on the ground.

16:51

Bob Doris (Glasgow) (SNP): As the deputy convener of the Health and Sport Committee, I thank all stakeholders who were involved in the bill process. I also thank the Scottish Government, which has been very willing to adapt and change the bill on the basis of representations that have been made to it.

I thought that an earlier speech was going to be about project fear but, to be fair to Mr Findlay, the member went on to talk about project care. I would like to stress that it is actually project health and social care. We have heard a lot about social care without hearing about the other side of the coin, and it is important to get that balance. Nevertheless, there is a meeting of minds and political will on the issue across all the political...
parties. I am reminded of what Malcolm Chisholm said about what is going to happen at the coalface—I hope that I will have time to speak about that.

The bill—shortly to be an act—is not the change in itself but is designed to facilitate change. The change will be an end to cost shunting at a local level with the development of single budgets, so that, for example, the bed blocking that perhaps happened for financial reasons will no longer take place. The change will be the strategic commissioning or the co-production of integrated services. The change will be building on existing best practice and, just as important, redesigning services in every local area in a way that improves the health and social care outcomes of the people we represent.

Some of that change is happening right now through the change fund for older people, which is providing £300 million over four years or so to promote such change. Importantly, that money is to be spent only if it is agreed by both councils and health boards. They can and do work jointly when they are instructed to do so, and I am sure that there is a will to go further in addition to the statutory basis that the bill will introduce. It is also significant that the change fund requires sign-off by the third sector.

With the statutory underpinning of health and social care integration, a far larger single budget will come into play in the innovative service redesign right across health and social care. Although the third sector, as non-statutory bodies, will not have sign-off over that larger budget, I expect it at a local level to be directly involved in the co-production and, where appropriate, the co-commissioning of services and in looking at new ways of service delivery right across Scotland. Likewise, I expect our communities to have a direct say about what they want services to look like, and I expect other stakeholder professionals, whether allied health professionals or our GPs, to have a strong say as well.

With that in mind, I think that some of the points that the BMA has made are a bit oxymoronic. As soon as we start dictating what a local plan should look like, it is not truly a local plan. There has to be a degree of flexibility to allow the new body corporates that are coming online and all the stakeholders at local and strategic level to have their say, and to avoid their being presented with a fait accompli on the ground locally, which would not serve anyone’s interests.

As Aileen McLeod did, I will finish by mentioning a good local project as an example of the good work that we want to see: the good morning project in Glasgow, which I know that the cabinet secretary has been to visit. As part of that project, older people get a daily telephone call from a volunteer caller—who is called “a friend on the phone”—to ensure that they are okay, that they are not lonely and that they have no health needs that are going unmet.

I have no doubt that such innovative services keep older people safe, secure, happy and content in their own homes for longer and prevent them from presenting elsewhere, which would be a poorer outcome for them and a more expensive one, too. I want to see such initiatives on health and social care integration being implemented on the ground right across the country.

16:56

Jim Hume (South Scotland) (LD): Liberal Democrats have long called for the delivery of a commonsense approach of having health boards, local authorities and the third sector work more closely together to provide more joined-up care and better outcomes for patients. All sectors agree that the integration of health and social care is a move in the right direction that is needed if integrated, person-centred care is to be achieved.

We know that the incidence of emergency admissions has increased in the past few years and that the largest increase has been among the over-75 age group. That contributed to a 7 per cent increase between June 2012 and June 2013 in the number of bed days associated with delayed discharge patients. The fact that we have an ageing population and an increasing incidence of patients who present with multiple conditions makes such figures inevitable. They exist in a climate in which the number of staffed beds in the NHS has reduced dramatically over the past six years, which makes the problems of an ageing population and bed blocking all the more acute for the NHS.

The number of geriatric beds dropped from 7,500 in 2012 to 7,229 in 2013. In 2007, there were more than 9,000 geriatric beds. The number of staffed geriatric beds is the lowest in more than 10 years, while the number of emergency admissions of older people is at its highest level in that period. The Government is failing to meet the national indicator to reduce emergency admissions to hospital, and an Audit Scotland report found that at least 90 per cent of the patients who experienced a delay of more than three days were aged 65 or over. It is against that backdrop of the pressures and challenges that the NHS faces that integration is necessary.

In supporting the bill at stage 1, Liberal Democrats had some concerns that we felt needed further attention. It is critical that proper engagement is entered into with the NHS, local authorities and the third sector so that a truly integrated pathway delivers for the patient. Health
and social care partnerships must work with GPs, carers, the voluntary sector and the independent sector in a locality planning framework.

GPs talk about the fact that they very much welcome the bill but, worryingly, they are still unclear about what it will mean for them on the ground on a day-to-day basis. Therefore, we need to involve and engage GPs in the new integrated arrangements. One of the reasons why community health partnerships were not successful was that GPs were not engaged. In its submission, Glasgow City Council stated:

“without effective GP engagement, attempts to keep people in the community as opposed to within a hospital setting will be hindered. It cannot be stressed enough that the inclusion of GPs within the legislation is vital if the overall objectives of the Bill are to be achieved.”

The proportion of the NHS budget that goes to general practice fell from 9.47 per cent in 2004-05 to 7.78 per cent in 2011-12. If GPs are to play a more central role in a person’s care by engaging with the new health and social care framework, the Government needs to acknowledge the demands that are being placed on their time against a backdrop of constricting budgets.

The legislation will mean nothing if it cannot be tailored to best fit the needs of the local population, using the knowledge of health and social care professionals working in communities. Indeed, the Convention of Scottish Local Authorities has argued that the bill’s provisions are at times too prescriptive and detailed and that they should allow more flexibility at a local level to determine the shape and governance of the proposed partnership arrangements—hence my earlier concerns regarding ministerial powers versus local accountability.

I am glad that the minister stated in his opening remarks that the job has not finished and will continue. We shall therefore support the bill today.

The Deputy Presiding Officer: We move to closing speeches. I call Cameron Buchanan, who has four minutes, please.

17:00

Cameron Buchanan (Lothian) (Con): I am pleased to contribute to this afternoon’s stage 3 debate and to support the Public Bodies (Joint Working) (Scotland) Bill, which perhaps does not have a sexy title, but is about removing barriers to better working between our public bodies. Given the potential that it holds for improved and more efficient services, it is indeed a welcome move by the Scottish Government.

However, I find it to be a bill of two halves. If I may, I will address the latter half first. Part 2 and onwards largely concerns barriers to existing working. There are already moves towards joint commissioning of facilities—for example, with the hub initiatives—and large-scale procurement through National Services Scotland. However, ambition in this regard has been restricted in scope or blocked altogether due to the limitations of existing legislation. The bill is straightforward and adopts a commonsense approach by removing such restrictions for the future.

Part 1 of the bill is, however, another matter entirely, in that it is designed to deliver momentum towards integrated working and the statutory basis to facilitate it, which is a far more complex and ambitious proposition. As the cabinet secretary and my colleague Nanette Milne have pointed out, the bill provides a framework and an initial push.

However, it is widely accepted that there is also a need for a culture change. Already there are local authorities and health boards that are well down the road to integration, including NHS Lothian and the City of Edinburgh Council, West Lothian Council and Midlothian Council in my region. However, the picture is very different elsewhere, so the Government will have to maintain pressure if we are to see change and overcome the resistance to that change that undoubtedly exists.

That was borne out by the evidence of Professor Alison Petch to the Health and Sport Committee. She warned of the ignorance about one another’s working that exists between the various professional groups. With so much of the detail still to be consulted on and confirmed, in particular around financial accountability and conflict resolution, the Government must ensure that no momentum is lost later, and it must press local authorities and health boards to commit to the integration process and, beyond that, to begin their strategic planning.

Even assuming that there is that vital impetus and the bill achieves better integration between health and social work, we already have evidence that that will not, in itself, be enough. I have learned quickly that with every new bill or subject in the Scottish Parliament there comes a complete set of new buzzwords and accompanying jargon. With this bill we have the word “disconnect”; the bill highlights the key disconnect in co-ordination between health and social care agencies. However, as Glasgow City Council pointed out in its evidence to the Health and Sport Committee, there is as much of a problem with co-ordination and working between primary healthcare professionals and those in acute care—that is, within the health profession. The bill does not directly address that, but it is vital to delivery of the type of change that we are looking for. Working within agencies is as important as working between agencies, especially if we are to achieve
the reduction in spending on hospital visits, and to focus more on community-based care.

There has been a good deal of comment from Malcolm Chisholm and others on how demographic changes—in particular the challenges of an ageing population—make the bill necessary. I think that we all agree that we must be smarter in our public spending; a co-ordinated focus on preventative spending is central to that. However, if we are to deliver a genuinely integrated, joined-up and person-centred approach, the bill must be the start of the process, and not the end. The real test of the legislation will be in the experiences of those who use our health and social care services. The overarching goals must be improved delivery, fewer delays, reduced waiting times and fewer non-scheduled hospital admissions. Those are the standards by which reform will be judged; the bill, though welcome, is just one step towards achieving them. However, we shall support the bill.

17:04

Rhoda Grant (Highlands and Islands) (Lab): I thank all the stakeholders who gave evidence to the Health and Sport Committee when we were scrutinising the bill. I also thank the committee clerks and the support staff for their assistance, and the Scottish Parliament information centre, which helped us very much. I give special thanks to the bill team, who helped us all to draft amendments for the bill. Without that help, we would have been in an even more difficult situation today in respect of lodging our amendments. I thank all the people who made it possible to do that.

We in the Labour Party support the general principles of the bill. We want a seamless service for users, who must be at the heart of the service in planning their own care to fit their needs and their life chances. I agree with Malcolm Chisholm about the bill being necessary but insufficient to make the change that we need. We need to go much further to properly integrate health and social care, and I agree with the cabinet secretary that there is much unfinished business in the area.

The catchphrase that the minister has used all the time as we have gone through the bill process is that we are “on the same page”. Some of us had hoped that the script on that page would be a little bolder, so we will continue to push for a bolder vision of integration of health and social care.

We need a change of culture. Nanette Milne mentioned that in her speech today, but it has run through the whole debate. The culture needs to change, but we cannot legislate for that.

We have to embrace co-production. The bill will improve that to an extent, but we have a huge distance to go to ensure that the person is at the very centre of care—that they are at the heart of the legislation and how we deliver care. We provide services to allow people to go out and live their lives, so we cannot dictate to them how they should do that. They need to be at the centre of it, and that is where the culture change comes. It involves our recognising that their needs are much more important than the needs of the organisations and the people who deliver the care.

We have all heard stories of people being told what they can and cannot eat, what time they must eat, what time they need to get out of bed and when they have to go to bed. I have heard heartbreaking stories about situations in which parents are not even allowed to sit up with their teenage children of an evening because the parents have to go to bed long before they would put their children to bed. How can they parent their children under those circumstances? We need to look at how we deliver services in order to ensure that the needs of service users, their carers and families are met, and that their ambitions are met.

Neil Findlay talked about the Unison survey. I read it, and it makes stark reading, covering—as it does—what the people who deliver care services feel. They are underpaid and undervalued and they are not given enough time to care. They see what needs to be done, but they are not given the time to deliver it. We need to involve and value all workers who deliver care. Many members talked about GPs, including Jim Hume and Malcolm Chisholm, and we heard about the third sector and those who represent service users, but we must also consider care providers. Bob Doris mentioned allied health professionals. All those people are crucial. We have to remember that they are involved in delivering care and we need to respect their views and pay them accordingly. Caring should not be a Cinderella service. If we really value the people for whom we care, we need to ensure that we also value the people who deliver that care.

As I said, I agree with the cabinet secretary that there is much unfinished business; inspection is one area that falls into that category. The inspection landscape is cluttered, with different regimes for health and social care. We need them to be integrated. We recommend that there be a new independent body that would be available to both staff and patients, because it is important that we have protection for whistleblowers. Many of the complaints about how care is delivered have come from staff who work for inadequate providers. They need to be able to raise their concerns, and the inspection regime needs teeth—it needs to be able to take steps to right the wrongs.
The inspection regime also needs to be transparent. One of the big challenges that we have learned of while considering the bill is in respect of inspection of home care. How do we get into a person’s home to inspect the care that they receive, especially when they are so dependent on the person who delivers the care to them? We need to look at all those things and see how we can tighten up services.

We heard today from Neil Findlay that social care is in crisis; he talked about the number of care homes that are out of commission due to poor standards. Surely we should find out about that sooner and steps should be taken sooner to try to bring them up to standard. We are seeing bed blocking increasing and people are not receiving care that is appropriate to their needs because it is not available in the community. We need to look at how we can improve standards throughout the care sector.

We all understand that shifting the balance of care from acute hospitals to communities is what we desire. It keeps people out of hospital, and allows them to be independent and enabled. It is what we would want in that situation, and it is also more cost effective. However, we cannot shift the balance of care out of acute care altogether. Neil Findlay raised concerns about the savings that were highlighted by the Christie commission and how we can possibly achieve them. People will still need acute care and that has to be delivered in hospital settings, but if we want to keep people well for longer, we also have to provide high-quality care in the community. That care will also have to deal with multiple conditions. As people live for longer, they will have more conditions that need to be dealt with, so we need all workers to be working towards that.

Integration of health and social care is really necessary. I hope that the bill will start the process. Legislation will not change everything; it will not change the culture, so we need to take the lead in order that we can do that. I hope that the bill helps us to do that.

The Presiding Officer (Tricia Marwick): Thank you Ms Grant. Alex Neil will wind up the debate. Cabinet secretary, I would appreciate it if you would continue until 5.20.

17:11

Alex Neil: Thank you, Presiding Officer, I shall do my best to continue until 5.20.

First, I will respond to a number of the important points that have been made by members from all sides of the chamber.

On the question about where we go from here the bill gets royal assent, the next step is to move on secondary legislation, regulations, and guidance. I am very keen to do that as soon as possible because we want the integration boards to be fully operational from April 2015. It is also important that we continue, as we have throughout this exercise, to take the key stakeholders with us. We have agreement from the members of the stakeholder groups and the bill advisory group, which has been advising the Government on the bill throughout the entire process, that they will continue to advise the Government about discussions on secondary legislation, regulations, guidance and all the rest of it. Continuing with that group and the stakeholders is the right way to proceed. The more consensus we get, the more buy-in we will get throughout the process, and the more success we will have in implementing the provisions of the legislation.

On general practitioners’ involvement, I could not agree more that they have an absolutely vital role to play. The entire primary care sector has a vital role to play—although I should say that I expect consultants from the hospitals to play a much bigger role in the community, as well. I agree about the importance of GP involvement, particularly in localities and partnerships themselves.

Having said that, I should also emphasise to members something that they probably already know. In the guidance that I have issued for local delivery plans being submitted by boards to the Scottish Government for approval, I have stated very clearly that I expect every local delivery plan from every health board in Scotland to show a significant increase in spend in the primary care sector from April 2014 onwards. That will not mean a cut in acute services, because there will be a real increase in every board’s future budgets. It means that a bigger share of the growth should be allocated to primary care services in order to allow us to increase the resources that are available to primary care while simultaneously ensuring that there are not cuts in the acute services that are—as Rhoda Grant said—absolutely essential.

Rhoda Grant: The cabinet secretary will be aware that one of the major growth areas in health board budgets is the cost of medicines. One person told me that that cost is now ahead of staff costs in healthcare budgets. Will he factor that in when he is looking at increases to health board budgets?

Alex Neil: As far as I am concerned, we account for the prescriptions budget separately from the budget for primary care services, although much of it is paid through primary care. For example, if Rhoda Grant looks at the accounts that we present to Parliament, she will see that we have a specific line item on the cost of
prescriptions, which is running at roughly £1.3 billion a year.

When I talk about additional spend in the primary care sector, I am not talking about the prescription element of it—I am talking about the services element. That includes primarily GP services, because there is no doubt at all in my mind that in order for us to achieve our health outcomes—including a reduction in unnecessary admissions to hospital—we have to improve and expand primary care services as part of the integration process. Primary care services must be absolutely integral to commissioning and strategic planning of the integrated authorities. I agree that speed is of the essence.

I also agree with Malcolm Chisholm about the importance of involving disability organisations. Clearly, although integrated services are for the entire adult population, the main users of the services are older people and disabled people. They and their stakeholder groups need to be involved in discussions nationally and locally.

The cultural issues that have been referred to by a number of members are also important. I believe that the bill itself will be a major tool in changing the culture—in particular, in changing it from one that delivers services to people to one that delivers services with people and for people, in agreement with them. It will be a change to a culture in which people are involved in designing delivery of services.

The role of users and user groups in the design and delivery of services is also crucial. Again, in particular at locality level, that will be an essential prerequisite to success.

I emphasise that although the bill is largely about the financial and organisational arrangements for integration, we should never lose sight of the purpose of the bill, which is to improve dramatically service provision for people who use the services. It is not just about delayed discharges; I believe that experience shows that where there is integration, the problem of delayed discharges is much easier to deal with. I believe that, over time, we can eliminate delayed discharges, as has largely been done, for example, in West Lothian. The bill is also about, for example, ensuring that people can be treated much more in the community, either at home or in a homely setting in the community—both in terms of their healthcare and social care. That is a key element in improving the health outcomes of the population.

Neil Findlay: The minister has spoken at length and I have yet to hear him mention anything about the two fundamental problems that we have: the poor pay and conditions of the staff who deliver the care, and the time-limited appointments that are made for clients. I have yet to hear him mention those problems.

Alex Neil: On the latter point, there are already two or three investigations on issues related to social care outcomes. The time element is being looked at as part of those investigations. Neil Findlay should know that because the Association of Directors of Social Work and the Care Inspectorate are looking at those specific issues.

I said earlier that terms and conditions in the social care sector need to be addressed and that we need to do that with our local authority colleagues. It is a bit rich for Neil Findlay of the Labour Party to be complaining about how the workers are treated when we have seen what has happened in Glasgow City Council, where the workers have been treated with total contempt by the Labour administration—[Interruption.]

The Presiding Officer: Mr Findlay—enough.

Alex Neil: —so much so that they have been forced into industrial action. I do not think that we will be taking any lessons from Mr Findlay or from any of his Labour colleagues on how to treat workers.

I will not mention Aberdeen, where there has been what has been described by some people as a disastrous move in transferring services to an arms-length external organisation—Bon Accord Care Ltd. That is hardly the model that we want. Again, we will certainly not be taking any lessons from the Labour administration in Aberdeen or from the Labour spokesperson on how to treat workers or how to treat service users.

The Presiding Officer: Can you bring your remarks to a close, cabinet secretary?

Alex Neil: The passage of the bill, which—with the exception of Neil Findlay’s contribution—has happened on a consensual basis, is a significant landmark in health and social care in Scotland. I believe that its passage will do a great deal to improve both healthcare and social care in Scotland. I hope that every member will vote for it.

Amendments to the Bill since the previous version are indicated by sidelining in the right margin. Wherever possible, provisions that were in the Bill as introduced retain the original numbering.

Public Bodies (Joint Working) (Scotland) Bill
[AS PASSED]

An Act of the Scottish Parliament to make provision in relation to the carrying out of functions of local authorities and Health Boards; to make further provision about certain functions of public bodies; to make further provision in relation to certain functions under the National Health Service (Scotland) Act 1978; and for connected purposes.

PART 1
FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration schemes

1 Integration schemes: same local authority and Health Board area

(1) Subsection (2) applies where the area of a local authority is the same as the area of a Health Board.

(2) The local authority and the Health Board must jointly prepare an integration scheme for the area of the local authority.

(3) An integration scheme is a scheme setting out—
   (a) which integration model mentioned in subsection (4) is to apply,
   (b) the functions that are to be delegated in accordance with that model,
   (c) where functions are to be delegated in accordance with the model mentioned in subsection (4)(b), (c) or (d), the functions of the person to whom functions are to be delegated which are to be carried out in conjunction with the delegated functions,
   (ca) in relation to any functions to which subsection (5A) applies that are to be delegated, a method of determining amounts to be made available by the Health Board for use by the person to whom the functions are delegated in respect of those functions,
   (d) in relation to any functions other than those mentioned in paragraph (ca) that are to be delegated (including any functions mentioned in that paragraph but in relation to which the Health Board deems subsection (5A) not to apply), a method of determining payments that are to be made in respect of the delegated functions by the person delegating the functions to the person to whom the functions are delegated,
   (e) prescribed information about such other matters as may be prescribed.
The integration models are—

(a) delegation of functions by the local authority to a body corporate that is to be established by order under section 9 (an “integration joint board”) and delegation of functions by the Health Board to the integration joint board,

(b) delegation of functions by the local authority to the Health Board,

(c) delegation of functions by the Health Board to the local authority,

(d) delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

A local authority may delegate a function under an integration scheme only if the function is conferred—

(a) by an enactment listed in Part 1 of the schedule, or

(b) by virtue of an enactment listed in Part 2 of the schedule.

A Health Board may delegate a function under an integration scheme only if the function is prescribed.

The Scottish Ministers may by regulations prescribe which of the functions conferred by or by virtue of enactments listed in the schedule local authorities must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (b) is to apply under the scheme.

The Scottish Ministers may by regulations prescribe functions of Health Boards which Health Boards must delegate under an integration scheme so far as the functions are exercisable in relation to persons of at least 18 years of age where the integration model mentioned in subsection (4)(a) or (c) is to apply under the scheme.

If the integration model mentioned in subsection (4)(d) is to apply under an integration scheme either—

(a) the local authority must delegate the functions prescribed under subsection (4C) so far as the functions are exercisable in relation to persons of at least 18 years of age, or

(b) the Health Board must delegate the functions prescribed under subsection (4D) so far as the functions are exercisable in relation to persons of at least 18 years of age.

The Scottish Ministers may by regulations prescribe functions of Health Boards that a Health Board—

(a) must delegate under an integration scheme other than in prescribed circumstances,

(b) may not delegate under an integration scheme in prescribed circumstances.

The Scottish Ministers may by regulations prescribe which of the functions conferred by or by virtue of enactments listed in the schedule local authorities may not delegate in prescribed circumstances.

The Scottish Ministers may by regulations remove an enactment from the schedule.

A function may not be set out under subsection (3)(c) if it is a function which may not be delegated under an integration scheme.

This subsection applies where functions that a Health Board proposes to delegate under an integration scheme—
Part 1—Functions of local authorities and Health Boards

(a) are carried out in a hospital in the area of the Health Board, and
(b) are provided for the areas of two or more local authorities.

(5B) Regulations under subsection (3)(e) may include provision—

(a) conferring discretion on local authorities and Health Boards,
(b) requiring local authorities and Health Boards to establish processes and
procedures relating to prescribed matters,
(c) imposing requirements on local authorities and Health Boards about the disclosure
of information,
(d) in relation to such other matters relating to integration schemes as the Scottish
Ministers think fit.

(7) In this section, “Health Board” means a Health Board constituted under section 2(1)(a)
of the National Health Service (Scotland) Act 1978 (c.29).

2 Integration schemes: two or more local authorities in Health Board area

(1) This section applies where the areas of two or more local authorities fall within the area
of a Health Board.

(2) Each local authority and the Health Board must comply with subsection (3) or (4).

(3) Each local authority and the Health Board must jointly prepare an integration scheme
for the area of the local authority.

(4) Two or more local authorities and the Health Board must jointly prepare an integration
scheme for the areas of those local authorities.

(4A) For the purposes of subsection (4), if the local authorities and the Health Board decide
that the integration model mentioned in paragraph (c) or (d) of section 1(4) is to apply—

(a) functions are to be delegated under those models to only one of the local
authorities,
(b) the authorities and the Health Board must set out in the integration scheme which
local authority the functions are to be delegated to (the “lead authority”),
(c) paragraph (c) of section 1(4) applies as if for the words “to the local authority”
there were substituted the words “and the local authority or authorities to the lead
authority”, and
(d) paragraph (d) of section 1(4) applies as if for the words from “to”, where it first
occurs, to “local” there were substituted “or authorities to the Health Board and
delegation of functions by the Health Board and the local authority or authorities
to the lead”.

(5) In preparing an integration scheme under subsection (3) or (4), a local authority and the
Health Board must take into account—

(a) any other integration scheme that has been, or is being, prepared in relation to the
area of the same Health Board, and
(b) the likely effect on the Health Board of both or all the schemes prepared under
this section.
3 Considerations in preparing integration scheme

(1) This section applies where a local authority and a Health Board are preparing an integration scheme.

(2) The local authority and the Health Board must have regard to—

(a) the integration planning principles (see section 4), and

(b) the national health and wellbeing outcomes (see section 5).

4 Integration planning principles

(1) The integration planning principles are—

(a) that the main purpose of services which are provided in pursuance of integration functions is to improve the wellbeing of service-users,

(b) that, in so far as consistent with the main purpose, those services should be provided in a way which, so far as possible—

(i) is integrated from the point of view of service-users,

(ii) takes account of the particular needs of different service-users,

(iii) takes account of the particular needs of service-users in different parts of the area in which the service is being provided,

(iii)a)takes account of the particular characteristics and circumstances of different service-users,

(iii)b)respects the rights of service-users,

(iii)a) takes account of the dignity of service-users,

(iii)b) takes account of the participation by service-users in the community in which service-users live,

(iii)c)protects and improves the safety of service-users,

(iii)d)improves the quality of the service,

(iv) is planned and led locally in a way which is engaged with the community (including in particular service-users, those who look after service-users and those who are involved in the provision of health or social care),

(v) best anticipates needs and prevents them arising, and

(vi) makes the best use of the available facilities, people and other resources.

(2) In subsection (1), “service-users” means persons to whom or in relation to whom the services are provided.

5 Power to prescribe national outcomes

(1) The Scottish Ministers may by regulations prescribe outcomes in relation to health and wellbeing (the “national health and wellbeing outcomes”).

(3) Before making regulations under subsection (1), the Scottish Ministers must consult—

(a) each local authority,

(b) each Health Board,

(c) each integration joint board at the time established,
(d) in respect of each group mentioned in subsection (4), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(4) The groups mentioned in subsection (3)(d) are—

(a) health professionals,
(b) users of health care,
(c) carers of users of health care,
(d) commercial providers of health care,
(e) non-commercial providers of health care,
(f) social care professionals,
(g) users of social care,
(h) carers of users of social care,
(i) commercial providers of social care,
(j) non-commercial providers of social care,
(k) such persons having functions in relation to housing as the Scottish Ministers think fit.

6 Consultation

(1) This section applies where a local authority and a Health Board are required by section 1(2) or 2(2) to prepare an integration scheme.

(2) Before submitting the integration scheme for approval under section 7, the local authority and the Health Board must jointly consult—

(a) such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed, and
(b) such other persons as the local authority and the Health Board think fit.

(3) In finalising the integration scheme, the local authority and the Health Board must take account of any views expressed by virtue of subsection (2).

7 Approval of integration scheme

(1) After complying with section 6 and before the prescribed day, a local authority and a Health Board must jointly submit an integration scheme to the Scottish Ministers for approval.

(3) The Scottish Ministers may—

(a) approve the scheme submitted under subsection (1),
(b) refuse to approve it.

(4) If the Scottish Ministers refuse to approve the scheme they must—

(a) give the local authority and the Health Board reasons for the refusal (including identifying which particular parts of the scheme caused them to decide to refuse approval),
(b) explain how the scheme should be modified, and
(c) specify a day by which the local authority and the Health Board must jointly modify the scheme and submit it for approval.

(4A) Following submission of a modified scheme under subsection (4), the Scottish Ministers may—

(a) approve the modified scheme, or

(b) refuse to approve it.

(4B) Where the Scottish Ministers refuse to approve a modified scheme, the local authority and the Health Board are to be treated as if they failed before the prescribed day to submit an integration scheme under this section; and section 39 applies accordingly.

(5) The Scottish Ministers may, on their own account or on the request of the local authority and the Health Board, specify that subsection (1) applies as if the prescribed day were such later day as the Scottish Ministers may specify.

(6) A request under subsection (5) must be made in writing and must include the reasons for the request.

(7) A day specified under subsection (5) is to be treated as if it were the prescribed day for the purposes of the other provisions of this Act.

8 Publication of integration scheme

As soon as practicable after an integration scheme is approved under section 7, the local authority and the Health Board must publish it.

Implementation of integration scheme

9 Functions delegated to integration joint board

(1) This section applies where the Scottish Ministers approve under section 7 an integration scheme setting out that the integration model in section 1(4)(a) is to apply.

(2) The Scottish Ministers may by order establish the integration joint board to which the functions are to be delegated.

(3) If the functions are not delegated on the day specified by virtue of section 23(3A), they are delegated on the prescribed day.

10 Chief officer of integration joint board

(1) An integration joint board is to appoint, as a member of staff, a chief officer.

(2) Subsection (3) applies where the person to be appointed is an existing member of staff of a constituent authority.

(3) The person is to be seconded to the board by that authority.

(4) Where subsection (3) does not apply, the person to be appointed—

(a) is to be appointed as a member of staff of a constituent authority, and

(b) is then to be seconded to the board by that authority.

(5) The Scottish Ministers may in relation to any integration joint board by order—

(a) disapply the requirements of subsections (2) to (4), and
Public Bodies (Joint Working) (Scotland) Bill

Part 1—Functions of local authorities and Health Boards

(b) make provision enabling the board to employ a chief officer on such terms and conditions as the board determines.

(6) Before appointing a person as chief officer an integration joint board is to consult each constituent authority.

(7) The responsibilities of a chief officer are subject to the agreement of the Scottish Ministers.

11 Other staff of integration joint board

(1) The Scottish Ministers may by order make provision enabling integration joint boards to employ staff other than a chief officer.

(2) Such an order may include such further provision as regards such staff as the Scottish Ministers think fit, including in particular provision as to—

(a) the appointment of staff,
(b) the numbers of staff,
(c) the terms and conditions of staff.

(4) Without prejudice to section 49(1)(a), an order under this section may—

(a) make provision in relation to only one integration joint board, or some integration joint boards,
(b) make different provision in relation to different integration joint boards.

(5) Before making an order under this section, the Scottish Ministers must consult—

(a) if the order relates to integration joint boards generally, each—

(i) local authority,
(ii) Health Board, and
(iii) integration joint board then established,

(b) if the order relates to one integration joint board, or some integration joint boards—

(i) the constituent authorities in relation to that or those boards, and
(ii) that or those boards, to the extent then established.

12 Integration joint boards: further provision

(1) The Scottish Ministers may by order make provision—

(a) about the membership of integration joint boards,
(b) about the proceedings of integration joint boards,
(c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of functions conferred on them by or by virtue of this Act,
(d) about the supply of services or facilities to integration joint boards by a constituent authority,
(da) enabling integration joint boards to establish committees for any purpose,
(db) about such other matters relating to any such committee as the Scottish Ministers think fit,

(dc) enabling an integration joint board to delegate to its chief officer, any other member of its staff or any such committee functions delegated to the integration joint board in pursuance of an integration scheme,

(e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.

(2) Without prejudice to section 49(1)(a), an order under subsection (1) (other than an order containing provision of the type mentioned in paragraph (a) or (b) of that subsection) may—

(a) make provision in relation to only one integration joint board, or some integration joint boards,

(b) make different provision in relation to different integration joint boards.

(2A) Before making an order under this section, the Scottish Ministers must consult—

(a) if the order relates to integration joint boards generally, each—

(i) local authority,

(ii) Health Board, and

(iii) integration joint board then established,

(b) if the order relates to one integration joint board, or some integration joint boards—

(i) the constituent authorities in relation to that or those boards, and

(ii) that or those boards, to the extent then established.

(3) The Scottish Ministers may by scheme make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of their constituent authorities.

(3A) Before making a scheme under subsection (3), the Scottish Ministers must consult—

(a) the integration joint board to which the scheme relates, and

(b) the constituent authorities in relation to that board.

(4) Before making a scheme under subsection (3) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (5), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(5) The groups mentioned in subsection (4) are—

(a) health professionals,

(b) social care professionals,

(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

12A Integration joint boards: finance and audit

(2) In section 106 of the Local Government (Scotland) Act 1973 (application of Part 7 of Act to bodies other than local authorities etc.)—

(a) in subsection (1), after paragraph (ba) insert—
“(bb) an integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014 (but subject to subsection (1A)),”, and

(b) after that subsection, insert—

“(1A) Despite subsection (1), sections 101A and 105A of this Act do not apply with respect to an integration joint board.”.

13 Payments to integration joint boards in respect of delegated functions

(1) Subsections (2) and (3) apply where—

(a) an integration scheme sets out that the integration model in section 1(4)(a) is to apply, and

(b) the scheme is approved by the Scottish Ministers under section 7.

(2) The local authority must make a payment to the integration joint board of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

(2A) Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the integration joint board an amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

(3) Where an integration scheme contains provision of the type mentioned in section 1(3)(d), the Health Board must make a payment to the integration joint board of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by it.

14 Functions delegated to local authority or Health Board

(1) This section applies where the Scottish Ministers approve under section 7 an integration scheme setting out that the integration model in section 1(4)(b), (c) or (d) is to apply.

(1A) If the functions are not delegated on the day specified by virtue of section 23(3A), they are delegated on the prescribed day.

(2) Before the functions are delegated, the local authority and the Health Board must jointly establish a committee (an “integration joint monitoring committee”) for the purpose of monitoring the carrying out of the integration functions for the area of the local authority.

15 Transfer of staff where functions delegated to local authority or Health Board

(1) The Scottish Ministers may by scheme make provision about the transfer of staff from a person who is to delegate functions under an integration scheme falling within subsection (2) to the person to whom the functions are to be delegated.

(1A) Before making a scheme under subsection (1) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (1B), such persons appearing to be representative of the group as the Scottish Ministers think fit.

(1B) The groups mentioned in subsection (1A) are—

(a) health professionals,
(b) social care professionals,
(c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(2) An integration scheme falls within this subsection if it sets out that the integration model in section 1(4)(b), (c) or (d) is to apply.

(3) Before making a scheme under subsection (1), the Scottish Ministers must consult—
(a) the person who is to delegate functions under an integration scheme falling within subsection (2), and
(b) the person to whom the functions are to be delegated.

16 Integration joint monitoring committees: further provision

(1) The Scottish Ministers may by order make provision about—
(a) the establishment of integration joint monitoring committees,
(b) the membership of integration joint monitoring committees,
(c) the proceedings of integration joint monitoring committees,
(d) any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

(2) Without prejudice to section 49(1)(a), an order under subsection (1) may make different provision in relation to different integration joint monitoring committees.

17 Payments to Health Boards in respect of delegated functions

(1) Subsection (2) applies where—
(a) an integration scheme sets out that the integration model in section 1(4)(b) or (d) is to apply, and
(b) the scheme is approved by the Scottish Ministers under section 7.

(2) The local authority must make a payment to the Health Board of the amount determined in accordance with the method that is set out in the scheme in relation to each function delegated to the Health Board.

18 Payments to local authorities in respect of delegated functions

(1) This section applies where—
(a) an integration scheme sets out that the integration model in section 1(4)(c) or (d) is to apply, and
(b) the scheme is approved by the Scottish Ministers under section 7.

(1A) Where an integration scheme contains provision of the type mentioned in section 1(3)(ca), the Health Board must set aside for use by the local authority an amount determined in accordance with the method set out in the scheme in relation to each function delegated to the local authority.

(2) Where an integration scheme contains provision of the type mentioned in section 1(3)(d), the Health Board must make a payment to the local authority of the amount determined in accordance with the method set out in the scheme in relation to each function delegated to the local authority.
(3) Each local authority which delegates functions to another local authority (the “lead authority”) under the scheme must make a payment to the lead authority of the amount determined in accordance with the method set out in the scheme in relation to each function delegated by the authority to the lead authority.

18ZA  Power of Scottish Ministers to make provision giving effect to integration scheme

The Scottish Ministers may by regulations make such provision as they think fit for the purpose of giving effect to provision included by virtue of section 1(3)(e) in integration schemes approved by them under section 7.

19  Transfer of staff: effect on contract of employment

(1) This section applies where by virtue of section 12(3), 15(1) or 36(3) a person is to be transferred from the employment of one person (“the original employer”) to another (“the new employer”).

(2) If, before the day of the transfer, the person informs the original employer that the person does not wish to become an employee of the new employer, the person’s contract of employment is terminated on the day before the day of the transfer.

(3) Otherwise—

(a) the contract of employment between the person and the original employer has effect on and after the day of the transfer as if originally made between the person and the new employer,

(b) the rights, powers, duties and liabilities of the original employer under or in connection with the contract of employment are by virtue of this section transferred to the new employer on the day of the transfer, and

(c) anything done before the day of the transfer by or in relation to the original employer in respect of the contract of employment or the person is to be treated on and after that day as having been done by or in relation to the new employer.

(3A) Nothing in subsection (3)—

(a) transfers to the new employer any liability for a share in any deficit in a pension scheme of the original employer that—

(i) is attributable to the person’s membership of the scheme, and

(ii) accrued before the day of the transfer, or

(b) transfers to the new employer any right in respect of a share in any surplus in such a pension scheme that is so attributable and that so accrued.

(4) A person is not to be treated for any purpose as being dismissed by reason of the operation of any provision of this section in relation to the person.

(5) Nothing in this section affects any right of a person to terminate the person’s contract of employment if a substantial detrimental change in the person’s working conditions is made.

(6) No such right arises by reason only that, by virtue of this section, the identity of the person’s employer changes.
20 Co-operation

(1) This section applies where the Scottish Ministers approve under section 7 one or more schemes prepared by virtue of section 2(3) or (4) in relation to the same Health Board.

(2) The persons mentioned in subsection (3) must co-operate with each other in relation to the efficient and effective use of their resources (including in particular buildings, staff and equipment) in pursuance of the scheme or schemes.

(3) The persons are—
(a) each local authority,
(b) the Health Board.

20A Carrying out of functions conferred on officers of local authorities

(1) This section applies where—
(a) a prescribed function conferred by or by virtue of an enactment on an officer of a local authority relates to a function delegated to an integration authority under an integration scheme, and
(b) any prescribed conditions are satisfied.

(2) Where the integration authority is an integration joint board, the prescribed function is deemed to have been conferred also on an officer of the Health Board and any other local authorities that are the constituent authorities of the integration joint board.

(3) Where the integration authority is a local authority or Health Board or (as the case may be) a local authority and Health Board acting jointly, the prescribed function is deemed to have been conferred also on an officer of the Health Board and any other local authority which prepared the integration scheme.

20B Carrying out of functions conferred on officers of Health Boards

(1) This section applies where—
(a) a prescribed function conferred by or by virtue of an enactment on an officer of a Health Board relates to a function delegated to an integration authority under an integration scheme, and
(b) any prescribed conditions are satisfied.

(2) Where the integration authority is an integration joint board, the prescribed function is deemed to have been conferred also on an officer of the local authority or authorities that are the constituent authorities of the integration joint board.

(3) Where the integration authority is a local authority or Health Board or (as the case may be) a local authority and Health Board acting jointly, the prescribed function is deemed to have been conferred also on an officer of the local authority or authorities which prepared the integration scheme.

Carrying out of delegated functions

21 Effect of delegation of functions

(1) This section applies where a function is delegated in pursuance of an integration scheme.
part 1

functions of local authorities and health boards

(2) The integration authority to which the function is delegated is to carry out the function.

(3) The integration authority has all of the powers and duties from time to time applying in connection with the carrying out of the function.

(4) Despite subsection (2), the delegation of the function in pursuance of an integration scheme does not prevent the carrying out of the function by the person by whom the delegation is made.

(5) The Scottish Ministers may by order provide that an integration authority which is an integration joint board must or must not exercise a power of the type mentioned in subsection (3) in connection with the carrying out of a function specified in the order.

22

directions by integration authority

(1) Where the integration authority is an integration joint board, it must give a direction to a constituent authority to carry out each function delegated to the integration authority.

(2) Where the integration authority is a local authority or a Health Board, it may give a direction to the Health Board or local authority which prepared the integration scheme by virtue of which it is the integration authority to carry out any function delegated to the integration authority.

(3) A person to whom a direction under this section may be given must provide the integration authority with such information as the integration authority may reasonably require for the purpose of its deciding—

(a) whether to give the direction,
(b) the content of the direction.

(4) A direction under this section may be given to more than one person in relation to the same function.

(5) If a direction such as is mentioned in subsection (4) is given, the direction may—

(a) require the persons to carry out the function jointly or only in so far as is specified in the direction,
(b) require each person to carry out the function in relation to an area specified in the direction,
(c) require each person to do particular things in relation to the function.

22a

section 22: supplementary

(1) A direction under section 22—

(za) must, where provision of the type mentioned in section 1(3)(ca) is included in the integration scheme in relation to the function to which the direction relates, set out the amount which has been set aside by the Health Board for the use of the person who is to carry out the function,

(a) must, in any other case, set out, or set out a method of determining, payments that are to be made by the integration authority to the person who is to carry out the function,

(aa) must specify how such an amount or, as the case may be, such a payment is to be used,

(b) may—
(i) regulate the manner in which the function is to be carried out,

(ii) make such supplementary, incidental or consequential provision as the integration authority considers appropriate.

(2) The provision referred to in subsection (1)(b)(ii) may include in particular the imposition on the person who is to carry out the function of requirements—

(a) to provide information to the integration authority,

(b) to take action to enable the integration authority to comply with any order of a court made against it in connection with the carrying out of the function.

(3) The integration authority must make payments in accordance with any provision included in the direction by virtue of subsection (1)(a).

(4) A person to whom a direction under section 22 is given must comply with the direction.

(5) A direction under section 22—

(a) may vary or revoke an earlier direction under that section given by the same integration authority,

(b) must be in writing.

(6) If the conditions in subsection (7) are met, the Scottish Ministers may by order provide that an integration authority which is an integration joint board may decide not to give a direction under section 22 in relation to the carrying out of a function specified in the order.

(7) The conditions are—

(a) that the Scottish Ministers receive a written application from the constituent authorities requesting that an order be made in relation to the functions specified in the application, and

(b) that the Scottish Ministers consider that the making of an order in relation to some or all of those functions would improve compliance with the integration delivery principles and contribute to achieving the national health and wellbeing outcomes in relation to the carrying out of the functions.

(8) If the Scottish Ministers do not consider under subsection (7)(b) that the making of an order under subsection (6) would improve compliance with the integration delivery principles or contribute to achieving the national health and wellbeing outcomes in relation to the carrying out of any functions, they need not include those functions in the order.

### 18A Health funding: further provision

(1) This section applies where under section 13(2A) or 18(1A) a Health Board is required to set aside an amount in respect of certain functions delegated to an integration authority.

(2) The integration authority may by direction require a Health Board—

(a) to carry out a function delegated to the integration authority by the Health Board and in relation to which amounts have been set aside, and

(b) to use an amount of the set aside amount specified in the direction (the “specified amount”) for that purpose.
(3) If the integration authority gives a direction under subsection (2) and, despite the
direction, the Health Board does not use all of the specified amount, the integration
authority may require the Health Board to pay to it the unused amount of the specified
amount.

(4) If the integration authority gives a direction under subsection (2) and, despite the
direction, the Health Board requires to use more than the specified amount, the Health
Board may require the integration authority to reimburse it for the additional amount
used.

(5) The Health Board must give reports to the integration authority about such matters
relating to the amounts set aside as the integration authority may specify.

(6) Reports under subsection (5) must be given at such times and in relation to such periods
as the integration authority may specify.

Strategic planning etc.

23 Requirement to prepare strategic plans

(1) The integration authority for the area of a local authority must prepare strategic plans in
accordance with this section.

(2) A strategic plan is a document—
   (a) setting out the arrangements for the carrying out of the integration functions for
       the area of the local authority over the period of the plan,
   (b) setting out how those arrangements are intended to achieve, or contribute to
       achieving, the national health and wellbeing outcomes, and
   (c) including such other material as the integration authority thinks fit.

(3) The provision required to be included in a strategic plan by virtue of subsection (2)(a) is
to include provision—
   (a) dividing the area of the local authority into two or more localities, and
   (b) setting out separately arrangements for the carrying out of the integration
       functions in relation to each such locality.

(3A) If the functions of the integration authority are to be delegated to the authority before the
day prescribed under section 9(3) or, as the case may be, section 14(1A), the first
strategic plan must specify the day on which functions are to be delegated to the
authority.

(4) The first strategic plan of an integration authority is to be prepared before the integration
start day.

(6) In this section, “integration start day” means—
   (a) in relation to an integration authority which is an integration joint board, the day
       on which functions are delegated to the authority by virtue of subsection (3A) or,
       as the case may be, section 9(3),
   (b) in relation to any other integration authority, the day on which functions are
delegated by virtue of subsection (3A) or, as the case may be, section 14(1A) to,
or to the constituent authorities of, the integration authority.
24 Considerations in preparing strategic plan

(1) This section applies where an integration authority in relation to the area of a local authority is preparing a strategic plan.

(2) The integration authority must have regard to—

   (a) the integration delivery principles (see section 25), and

   (b) the national health and wellbeing outcomes (see section 5).

(3) The integration authority must have regard to the effect which any arrangements which it is considering setting out in the strategic plan in pursuance of section 23(2)(a) may have on services, facilities or resources—

   (a) used in relation to arrangements set out in pursuance of that section in a strategic plan prepared by another integration authority,

   (b) which would be used in relation to arrangements which another integration authority is considering setting out in pursuance of that section in a strategic plan which it is preparing.

(4) The references in subsections (3)(a) and (b) to a strategic plan are to a strategic plan relating to the same period as, or relating to part of the same period as, the strategic plan which is being prepared by the integration authority.

25 Integration delivery principles

(1) The integration delivery principles are—

   (a) that the main purpose of services which are provided in pursuance of integration functions is to improve the wellbeing of service-users,

   (b) that, in so far as consistent with the main purpose, those services should be provided in a way which, so far as possible—

      (i) is integrated from the point of view of service-users,

      (ii) takes account of the particular needs of different service-users,

      (iii) takes account of the particular needs of service-users in different parts of the area in which the service is being provided,

      (iiiza) takes account of the particular characteristics and circumstances of different service-users,

      (iiizb) respects the rights of service-users,

      (iiia) takes account of the dignity of service-users,

      (iiib) takes account of the participation by service-users in the community in which service-users live,

      (iiic) protects and improves the safety of service-users,

      (iid) improves the quality of the service,

      (iv) is planned and led locally in a way which is engaged with the community (including in particular service-users, those who look after service-users and those who are involved in the provision of health or social care),

      (v) best anticipates needs and prevents them arising, and

      (vi) makes the best use of the available facilities, people and other resources.
(2) In subsection (1), “service-users” means persons to whom or in relation to whom the services are provided.

26 Establishment of strategic planning group

(1) Before preparing its first strategic plan, an integration authority in relation to the area of a local authority is to establish a group (its “strategic planning group”) comprising—

(a) where the integration authority is an integration joint board—

(i) at least one person nominated by the Health Board which is a constituent authority in relation to the integration joint board,

(ii) where one local authority is a constituent authority in relation to the integration joint board, at least one person nominated by the local authority,

(iii) where two or more local authorities are constituent authorities in relation to the integration joint board, at least one person nominated by the local authorities,

(b) where the integration authority is a Health Board, at least one person nominated by the local authority or authorities with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its functions,

(c) where the integration authority is a local authority, at least one person nominated by the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its functions,

(d) one person in respect of each of the groups mentioned in subsection (2), being a person who the integration authority considers to be representative of that group, and

(e) such other persons as the integration authority considers appropriate.

(2) The groups referred to in subsection (1)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(2A) The integration authority is to determine—

(a) the number of members of its strategic planning group,

(b) so far as not set out in this section, the processes for appointment, removal and replacement of members.

(2B) The integration authority may—

(a) appoint members of its strategic planning group from persons nominated under subsection (1),

(b) in such circumstances as the authority considers appropriate, remove persons appointed under paragraph (a) from membership of the group,

(c) appoint members in place of members who resign or are removed from membership of the group.

(2C) A constituent authority may—

(a) remove from a strategic planning group a member appointed to represent it,

(b) nominate under subsection (1) another person in place of a member of the group appointed to represent it.
(2D) A member of a strategic planning group may resign at any time.

(2E) During the period to which any strategic plan of an integration authority relates, its strategic planning group is also to comprise a person to represent the interests of each locality set out in the plan in pursuance of section 23(3)(a).

(2F) It is for the integration authority to—

(a) decide which persons are suitable to represent the interests of a locality, and
(b) select the representative.

(2G) An integration authority may under subsection (2F)(b) select a single person in respect of two or more localities.

(2H) The validity of anything done by an integration authority’s strategic planning group is not affected by any vacancy in its membership.

(3) The procedure of an integration authority’s strategic planning group is to be such as the authority determines.

(4) An integration authority may pay to members of its strategic planning group such expenses and allowances as the authority determines.

27 Preparation of strategic plan

(1) This section applies where an integration authority in relation to the area of a local authority is preparing a strategic plan.

(1A) The integration authority is to—

(a) prepare proposals for what the strategic plan should contain, and
(b) seek the views of its strategic planning group on the proposals.

(2) Taking account of any views expressed by virtue of subsection (1A)(b), the integration authority is then to—

(a) prepare a first draft of the strategic plan, and
(b) seek the views of its strategic planning group on the draft.

(3) Taking account of any views expressed by virtue of subsection (2)(b), the integration authority is then to—

(a) prepare a second draft of the strategic plan,
(b) send a copy to—

(i) the persons mentioned in subsection (4), and
(ii) such other persons as it considers appropriate, and
(c) invite the recipients to express views (within such period as the integration authority considers appropriate) on the draft.

(4) The persons referred to in subsection (3)(b)(i) are—

(a) where the integration authority is an integration joint board, each constituent authority,
(b) where the integration authority is a local authority, the Health Board with which the local authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions,
Part 1—Functions of local authorities and Health Boards

19

(c) where the integration authority is a Health Board, the local authority with which
the Health Board prepared the integration scheme in pursuance of which the
integration authority acquired its delegated functions, and

(d) persons who the integration authority considers to be representative of each of the
groups mentioned in subsection (5).

(5) The groups referred to in subsection (4)(d) are such groups of persons appearing to the
Scottish Ministers to have an interest as may be prescribed.

(6) In finalising the strategic plan, the integration authority must take account of any views
expressed by virtue of subsection (3)(c).

27A Provision of information for purpose of preparing strategic plan

(1) A constituent authority must provide an integration authority which is an integration
joint board with such information as the authority may reasonably require for the
purpose of preparing a strategic plan.

(2) The person mentioned in subsection (3) must provide an integration authority which is a
Health Board or a local authority with such information as the integration authority may
reasonably require for the purpose of preparing a strategic plan.

(3) That person is the local authority or the Health Board with which the integration
authority prepared the integration scheme in pursuance of which the integration
authority acquired its delegated functions.

29 Publication of strategic plans

(1) As soon as practicable after the finalisation of the plan under section 27, an integration
authority must publish its strategic plan.

(3) At the same time as publishing a strategic plan, an integration authority must also
publish a statement of the action which it took in pursuance of section 27.

30 Significant decisions outside strategic plan: public involvement

(1) This section applies where the integration authority for the area of a local authority—
(a) proposes to take a significant decision about the arrangements for the carrying out
of the integration functions for the area of the authority, and
(b) intends the decision to take effect other than by virtue of revising its strategic plan
under section 30A.

(2) In subsection (1)(a), “significant decision” means a decision which the integration
authority considers might significantly affect the provision of a service provided in
pursuance of the integration functions in the area of the local authority.

(3) The integration authority must—
(a) seek and have regard to the views of its strategic planning group, and
(b) take such action as it thinks fit with a view to securing that persons mentioned in
subsection (4) are involved in and consulted on the decision.

(4) Those persons are users of the service which is being or may be provided.
30A  Review of strategic plan

(1) An integration authority—

(a) must before the expiry of the relevant period review the effectiveness of its strategic plan,

(b) may from time to time carry out such a review.

(2) In carrying out a review under subsection (1), the integration authority must—

(a) have regard to—

(i) the integration delivery principles, and
(ii) the national health and wellbeing outcomes, and

(b) seek and have regard to the views of its strategic planning group on—

(i) the effectiveness of the arrangements for the carrying out of the integration functions in the area of the local authority, and
(ii) whether the integration authority should prepare a replacement strategic plan.

(3) Following a review under subsection (1), an integration authority may prepare a replacement strategic plan.

(4) Subject to subsection (2), the process of such a review is to be such as the integration authority determines.

(5) A constituent authority must provide an integration authority which is an integration joint board with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(6) The person mentioned in subsection (7) must provide an integration authority which is a Health Board or a local authority with such information as the integration authority may reasonably require for the purpose of carrying out a review under subsection (1).

(7) That person is the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions.

(7A) Sections 24, 27, 27A and 29 apply in relation to a strategic plan prepared by virtue of subsection (3) as those sections apply in relation to a strategic plan prepared by virtue of section 23.

(8) A strategic plan prepared in pursuance of this section must specify a day on which the period of the plan is to begin.

(9) In subsection (1), “relevant period”, in relation to an integration authority, means—

(a) the period of 3 years beginning with the integration start day (as defined in section 23(6)), and

(b) each subsequent period of 3 years beginning with—

(i) where a replacement strategic plan is prepared following a review under subsection (1), the day specified under subsection (8),
(ii) where no replacement strategic plan is prepared following such a review, the day on which the integration authority decides not to prepare a replacement strategic plan.
30B  Requirement to prepare replacement strategic plan

(1) This section applies where the integration authority in relation to the area of a local authority is an integration joint board.

(2) If it appears to a constituent authority that the strategic plan is preventing, or is likely to prevent, the constituent authority from carrying out any of its functions appropriately or in a way which complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, the constituent authorities acting jointly may direct the integration authority to prepare a replacement strategic plan.

(3) A direction under subsection (2) must—
   (a) be in writing,
   (b) include a statement summarising the reasons for giving it.

(4) A direction under subsection (2) must specify—
   (a) a day by which the replacement strategic plan must be prepared, and
   (b) a day on which the period of the plan is to begin.

(5) The constituent authorities acting jointly may by direction substitute a different day for a day specified under subsection (4).

(6) An integration authority must comply with a direction given to it under subsection (2).

(7) Sections 24, 27, 27A and 29 apply in relation to a strategic plan prepared by virtue of subsection (2) as those sections apply in relation to a strategic plan prepared by virtue of section 23.

30C  Strategic plan: annual financial statement

(1) Each integration authority must publish an annual financial statement—
   (a) when it publishes its first strategic plan, and
   (b) each year after that.

(2) An annual financial statement must set out in relation to the strategic plan to which it relates the amount that the integration authority intends to spend in implementation of the plan.

Carrying out of integration functions

31  Carrying out of integration functions: general

In carrying out an integration function for the area of a local authority, a person must have regard to—
   (a) the integration delivery principles, and
   (b) the national health and wellbeing outcomes.

32  Carrying out of integration functions: localities

(1) This section applies where—
an integration authority carrying out an integration function for the area of a local
authority proposes to take a decision which the integration authority considers
might significantly affect the provision in a locality of the area of a service
provided in pursuance of the function, or

(b) a person carrying out an integration function for the area of a local authority
proposes to take a decision which the person considers might significantly affect
the provision in a locality of the area of a service provided in pursuance of the
function.

(2) In subsection (1), “locality” means a locality of an area as set out in the strategic plan in
pursuance of section 23(3)(a).

(3) The integration authority or, as the case may be, person must take such action as the
authority or person thinks fit with a view to securing that the groups mentioned in
subsection (4) are involved in and consulted on the decision.

(4) The groups referred to in subsection (3) are such groups of persons appearing to the
Scottish Ministers to have an interest as may be prescribed.

(5) The integration authority may pay to members of groups consulted under subsection (3)
such expenses and allowances as the authority determines.

33 Integration authority: performance report

(1) Each integration authority must prepare a performance report for the reporting year.

(2) A performance report is a report setting out an assessment of performance during the
reporting year to which it relates in planning and carrying out the integration functions
for the area of the local authority.

(3) The Scottish Ministers may by regulations prescribe the form and content of
performance reports.

(3A) An integration authority must—

(a) publish each performance report before the expiry of the period of 4 months
beginning with the end of the reporting year, and

(b) provide a copy of it to the persons mentioned in subsection (3B).

(3B) Those persons are—

(a) where the integration authority is an integration joint board, each constituent
authority,

(b) where the integration authority is a local authority and a Health Board acting
jointly, the integration joint monitoring committee,

(c) where the integration authority is a Health Board or a local authority—

(i) the integration joint monitoring committee, and

(ii) the other authority.

(3C) A constituent authority must provide an integration authority which is an integration
joint board with such information as the authority may reasonably require for the
purpose of preparing a performance report.

(3D) The other authority must provide an integration authority which is a Health Board or a
local authority with such information as the integration authority may reasonably require
for the purpose of preparing a performance report.
In this section—

“other authority” means the local authority or the Health Board with which the integration authority prepared the integration scheme in pursuance of which the integration authority acquired its delegated functions,

“reporting year”, in relation to an integration authority, means—

(a) the period beginning with the date prescribed under section 9(3) or, as the case may be, 14(1A) and ending on the first anniversary of that date, and

(b) each subsequent period of a year.

33A Reports

(1) An integration joint monitoring committee may give reports to the integration authority on any aspect of the carrying out of the integration functions for the area of the local authority for which the integration joint monitoring committee is established.

(2) A report may include recommendations as to how those integration functions should be carried out in future.

(3) Where a report is given to an integration authority under subsection (1), the integration authority must—

(a) have regard to the report and any recommendations included in it,

(b) take such action as the authority considers necessary, and

(c) if the report includes recommendations, give the integration joint monitoring committee a response to them in writing as soon as is reasonably practicable after the authority is given the report.

(4) An integration joint monitoring committee may publish—

(a) reports given under subsection (1),

(b) responses given under subsection (3)(c).

(5) The local authority and the Health Board which prepared the integration scheme by virtue of which the integration joint monitoring committee is established must provide the committee with such reports, information or other assistance as the committee may reasonably require for the purpose of preparing a report under subsection (1).

Review of integration scheme

33B Review of integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) The local authority and the Health Board must carry out a review of the scheme before the expiry of the relevant period for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).
After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.

In subsection (2), the “relevant period” means—

(a) the period of 5 years beginning with the day on which the scheme was approved under section 7, and
(b) each subsequent period of 5 years beginning with—

(i) where the local authority and the Health Board vary the scheme under section 34, the day specified under subsection (5) of that section,

(ii) where the local authority and the Health Board decide no changes to the scheme are necessary or desirable, the day on which that decision is made.

33C Requirement to review integration scheme

(1) This section applies where an integration scheme has been approved by the Scottish Ministers under section 7.

(2) On the request of the local authority or the Health Board, the local authority and the Health Board must jointly carry out a review of the scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(3) On each occasion on which the Scottish Ministers exercise the power conferred by section 1(3)(e), the Scottish Ministers may require the local authority and the Health Board jointly to carry out a review of the integration scheme for the purpose of identifying whether any changes to the scheme are necessary or desirable.

(4) Sections 3 and 6 apply to a review of an integration scheme under subsection (2) or (3) as they apply to the preparation of an integration scheme (but as if the words “Before submitting the integration scheme for approval under section 7,” in section 6(2) were omitted).

(5) After taking account of any views of persons consulted under section 6 (as applied by subsection (3)), the local authority and the Health Board must decide whether any changes to the scheme are necessary or desirable.

34 Revised integration scheme

(1) This section applies where a local authority and a Health Board decide under section 33B or 33C that changes to an integration scheme are necessary or desirable.

(2) The local authority and the Health Board may vary the scheme by jointly preparing a revised integration scheme.

(3) A revised integration scheme may—

(a) set out additional functions that are to be delegated under the scheme as mentioned in section 1(3)(b),
(b) set out functions that are delegated by virtue of the integration scheme approved under section 7 that are no longer to be delegated,
(c) if the integration scheme delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are to be carried out in conjunction with the delegated functions,
(d) if the integration scheme delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are no longer to be carried out in conjunction with the delegated functions,

(da) change the method of determining amounts to be made available as mentioned in section 1(3)(ca),

(e) change the method of determining payments as mentioned in section 1(3)(d),

(f) change or remove any information included in the scheme by virtue of section 1(3)(e).

(3A) Before complying with subsection (4), the local authority and the Health Board must jointly consult—

(a) such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed, and

(b) such other persons as the local authority and the Health Board think fit.

(3B) In finalising the revised integration scheme, the local authority and the Health Board must take account of any views expressed by virtue of subsection (3A).

(4) The local authority and the Health Board must jointly submit the revised scheme to the Scottish Ministers for approval under section 7.

(5) A revised integration scheme takes effect on such day as may be specified by the Scottish Ministers.

(6) As soon as practicable after a revised integration scheme takes effect, the local authority and the Health Board must publish it.

35 New integration scheme

(1) This section applies where a local authority and a Health Board decide under section 33B or 33C that changes to an integration scheme are necessary or desirable.

(2) If the local authority and the Health Board wish to change a matter mentioned in subsection (3) they must prepare a new integration scheme under section 1 or (as the case may be) 2(2).

(3) The matters are—

(a) the local authority which prepared the integration scheme,

(b) the integration model.

(4) This Act applies in relation to a new integration scheme prepared by virtue of subsection (2) as it applies in relation to an integration scheme which requires to be prepared by section 1 or (as the case may be) 2(2).

36 Power to make provision in consequence of new integration scheme

(1) This section applies where the Scottish Ministers approve an integration scheme which has been prepared by virtue of section 35.

(2) In consequence of the replacement of an integration scheme by a new integration scheme, the Scottish Ministers may by order provide for the winding-up of an integration joint board.
(3) In consequence of the replacement of an integration scheme by a new integration scheme, the Scottish Ministers may by scheme make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

(4) Before making a scheme under subsection (3), the Scottish Ministers must consult—
   (a) the person from whom it is proposed to transfer staff, and
   (b) the person to whom it is proposed that the staff be transferred.

(5) Before making a scheme under subsection (3) in relation to staff, the Scottish Ministers must consult in respect of each group mentioned in subsection (6) such persons appearing to be representative of the group as the Scottish Ministers think fit.

(6) The groups mentioned in subsection (5) are—
   (a) health professionals,
   (b) social care professionals,
   (c) such other groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

Supplementary

37 Information-sharing

(1) Where a local authority and a Health Board are jointly preparing an integration scheme, each of them may disclose information to the other for or in relation to the purpose of preparing the scheme.

(2) Where two or more local authorities and a Health Board are jointly preparing an integration scheme, each of them may disclose information to any of the others for or in relation to the purpose of preparing the scheme.

(3) A person mentioned in subsection (4) may disclose information to any other person mentioned in that subsection for or in relation to any of the purposes mentioned in subsection (5).

(4) The persons are—
   (a) a local authority,
   (b) a Health Board,
   (c) an integration joint board.

(5) The purposes are—
   (ba) the carrying out of integration functions,
   (c) the preparation of a strategic plan.

(6) Subsections (1) to (3) apply despite any duty of confidentiality owed to any person in respect of the information by the person disclosing the information.

38 Grants to local authorities

(1) The Scottish Ministers may make a grant to a local authority in respect of costs incurred by the authority by virtue of this Part.
(2) The payment of a grant under subsection (1) may be made subject to such conditions (including conditions as to repayment) as the Scottish Ministers may determine.

39 Default power of Scottish Ministers

(1) Subsection (2) applies where a local authority and a Health Board fail before the day prescribed for the purposes of section 7, or the day specified under subsection (4)(c) of that section, to submit an integration scheme for the approval of the Scottish Ministers under that section.

(2) The Scottish Ministers may—

(a) specify functions of the local authority and the Health Board which are to be delegated to an integration joint board,

(b) by order establish the integration joint board to which the functions are to be delegated,

(c) require the local authority and the Health Board to delegate the specified functions to the integration joint board before the prescribed day,

(d) require the local authority and the Health Board to make such payments to the integration joint board as the Scottish Ministers may specify, and

(e) require the local authority and the Health Board to comply with such other requirements in relation to the functions as the Scottish Ministers may specify.

40 Directions

(1) The Scottish Ministers may give directions to a local authority in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration scheme,

(c) functions specified in the scheme that are to be carried out in conjunction with those functions.

(2) The Scottish Ministers may give directions to a Health Board in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration scheme,

(c) functions specified in the scheme that are to be carried out in conjunction with those functions.

(3) The Scottish Ministers may give directions to an integration joint board in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration scheme.

(4) A local authority, a Health Board or an integration joint board must comply with a direction given to it under this section.

(5) Directions under this section—

(a) may vary or revoke earlier directions under this section,
Part 1—Functions of local authorities and Health Boards

(b) must be in writing.

(6) The Scottish Ministers may not under subsection (1) or (2) give a direction requiring a local authority or Health Board to make a written application of the type mentioned in section 22A.

41 Guidance

(1) A person mentioned in subsection (2) must have regard to any guidance issued by the Scottish Ministers about its functions under or in relation to this Act.

(2) Those persons are—

(a) a local authority,
(b) a Health Board,
(c) an integration joint board,
(d) an integration joint monitoring committee.

41A Social Care and Social Work Improvement Scotland

In section 53 of the Public Services Reform (Scotland) Act 2010 (inspections by Social Care and Social Work Improvement Scotland)—

(a) in subsection (1), after paragraph (b), add—

“(c) where social services, services provided under the health service or services provided by an independent health care service are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (‘the 2014 Act’), the planning, organisation or co-ordination of those services.”,

(b) in subsection (2)—

(i) for “this section” substitute “subsection (1)(a) or (b)”,

(ii) after paragraph (e), add—

“(f) reviewing and evaluating the extent to which the social service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(g) reviewing and evaluating the extent to which the planning, organisation or co-ordination of social services, services provided under the health service and services provided by an independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(h) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(i) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and
Part 1—Functions of local authorities and Health Boards

(j) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 57.

(ba) after subsection (2), insert—

“(2A) The purposes of an inspection under subsection (1)(c) may include any of those mentioned in subsection (2)(f) to (j).”, and

(c) after subsection (6), add—

“(7) In this section—

“independent health care service” has the meaning given by section 10F(1) of the National Health Service (Scotland) Act 1978;

“integration delivery principles” has the meaning given by section 25 of the 2014 Act;

“national health and wellbeing outcomes” has the same meaning as in section 5(1) of the 2014 Act.”.

41B Healthcare Improvement Scotland

(1) The National Health Service (Scotland) Act 1978 is amended as follows.

(2) In section 10I (Healthcare Improvement Scotland: inspection of services provided under the health service)—

(za) for subsection (1), substitute—

“(1) HIS may inspect any service provided under the health service—

(a) in pursuance of its general duty of furthering improvement in the quality of health care in Scotland, or

(b) for any of the purposes mentioned in subsection (1B).”,

(a) after subsection (1), insert—

“(1A) Where a service provided under the health service and social services are provided by virtue of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), HIS may inspect the planning, organisation or co-ordination of those services for any of the purposes mentioned in subsection (1B).

(1B) The purposes are—

(a) reviewing and evaluating the extent to which the service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(b) reviewing and evaluating the extent to which the planning, organisation or co-ordination of services provided under the health service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(c) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,
(d) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(e) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”, and

(b) after subsection (2), insert—

“(3) In this section—

“integration delivery principles” has the meaning given by section 25 of the 2014 Act;

“national health and wellbeing outcomes” has the same meaning as in section 5(1) of the 2014 Act;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.

(3) In section 10J (inspections of independent health care services)—

(a) in subsection (1), after paragraph (b), add—

“(c) where services provided by an independent health care service and social services are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 ("the 2014 Act"), the planning, organisation or co-ordination of those services.”,

(b) in subsection (2)—

(i) for “this section” substitute “subsection (1)(a) or (b)”;

(ii) after paragraph (e), add—

“(f) reviewing and evaluating the extent to which the independent health care service is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(g) reviewing and evaluating the extent to which the planning, organisation or co-ordination of services provided by an independent health care service and social services is complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(h) reviewing and evaluating the effectiveness of a strategic plan prepared under section 23 of the 2014 Act in complying with the integration delivery principles and contributing to achieving the national health and wellbeing outcomes,

(i) encouraging improvement in the extent to which implementation of a strategic plan prepared under section 23 of the 2014 Act complies with the integration delivery principles and contributes to achieving the national health and wellbeing outcomes, and

(j) enabling consideration as to the need for any recommendations to be prepared as to any such improvement to be included in the report prepared under section 10N.”,
(ba) after subsection (2), insert—

“(2A) The purposes of an inspection under subsection (1)(c) may include any of those mentioned in subsection (2)(f) to (j).”, and

(c) after subsection (7), add—

“(8) In this section—

“integration delivery principles” has the meaning given by section 25 of the 2014 Act;

“national health and wellbeing outcomes” has the same meaning as in section 5(1) of the 2014 Act;

“social services” has the meaning given by section 46 of the Public Services Reform (Scotland) Act 2010.”.

41C Joint inspections of health services and social services

(1) The Public Services Reform (Scotland) Act 2010 is amended as follows.

(2) In section 115(11) (meaning of “confidential information”), for “section”, where it second occurs, substitute “sections 116A(4) and”.

(3) After section 116, insert—

“116A Joint inspections of social services and health services

(1) Social Care and Social Work Improvement Scotland (“SCSWIS”) and Healthcare Improvement Scotland (“HIS”) may jointly conduct an inspection in relation to—

(a) any social services, services provided under the health service or services provided by an independent health care service which are provided in pursuance of an integration scheme approved under section 7 of the Public Bodies (Joint Working) (Scotland) Act 2014 (“the 2014 Act”), or

(b) a local authority, Health Board or integration joint board (as defined in section 1(4)(a) of the 2014 Act) which is required by section 23 of the 2014 Act to prepare a strategic plan.

(2) The purposes of an inspection under this section may be any of those mentioned in section 10I(1) or (1B) or 10J(2) of the National Health Service (Scotland) Act 1978 or section 53(2) of this Act.

(2A) On the request of SCSWIS and HIS, any other person or body mentioned in section 115(6) may conduct an inspection under subsection (1) jointly with SCSWIS and HIS.

(3) In conducting an inspection under this section, SCSWIS and HIS must have regard to any code of practice or practice note issued by the Scottish Ministers for the purpose of—

(a) giving practical and general guidance on matters relating to such an inspection (including, without prejudice to that generality, such matters as access to confidential information and the holding, sharing and destruction of such information),

(b) promoting what appear to them to be desirable practices with regard to such matters.
(4) After conducting an inspection under this section, SCSWIS and HIS must—

(a) prepare a report, and

(b) give any person to whom the report relates an opportunity to comment on the report.

(5) SCSWIS and HIS must—

(a) give the report to the Scottish Ministers,

(b) give copies of the report to any person to whom the report relates, and

(c) make copies of the report available at their offices for inspection by any person at any reasonable time.

(6) In this section—

“independent health care service” has the meaning given by section 10F of the National Health Service (Scotland) Act 1978;

“social services” has the meaning given by section 46.”.

(4) In section 117 (regulations relating to joint inspections), after subsection 5, add—

“(6) In this section, “joint inspection” means an inspection conducted under section 115 or 116A.”.

41D Amendments of section 56 of Local Government (Scotland) Act 1973

In section 56 of the Local Government (Scotland) Act 1973 (arrangements for discharge of functions by local authorities)—

(a) after subsection (7), insert—

“(7A) A local authority is not to make arrangements under this section for the discharge of any functions conferred on it by the Public Bodies (Joint Working) (Scotland) Act 2014 by any other local authority.”, and

(b) after subsection (15), add—

“(16) In this section, “Act” includes an Act of the Scottish Parliament.”.

41E Children’s services planning

In section 7(1) of the Children and Young People (Scotland) Act 2014 (which makes provision for introductory matters relating to children’s services planning), in the definition of “other service provider”, after paragraph (e), insert—

“(f) an integration joint board established by order under section 9 of the Public Bodies (Joint Working) (Scotland) Act 2014.”.

42 Meaning of “integration authority”

For the purposes of this Part, the “integration authority” for the area of a local authority is—

(a) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the integration joint board established in pursuance of the scheme,
(b) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b), the Health Board to which the functions are delegated,

(c) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c), the local authority to which the functions are delegated,

(d) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d), the local authority and the Health Board to which the functions are delegated, acting jointly.

43 Meaning of “integration functions”

(1) For the purposes of this Part, the “integration functions” for the area of a local authority are—

(a) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the functions delegated to the integration joint board in pursuance of the scheme,

(b) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b)—

(i) the functions delegated to the Health Board in pursuance of the scheme,

(ii) the functions to be carried out in conjunction with those functions,

(c) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c)—

(i) the functions delegated to the local authority in pursuance of the scheme,

(ii) the functions to be carried out in conjunction with those functions,

(d) where in pursuance of the integration scheme for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d)—

(i) the functions delegated to each of the Health Board and the local authority in pursuance of the scheme, and

(ii) the functions to be carried out in conjunction with those functions.

(2) In subsection (1), the references to the functions which are to be carried out in conjunction with delegated functions are to the functions set out in the integration scheme in pursuance of section 1(3)(c).

43A Meaning of “constituent authority”

For the purposes of this Part, each local authority and the Health Board which prepared the integration scheme in pursuance of which an integration joint board was, or is to be, established is a “constituent authority” in relation to that board.

SHARED SERVICES

44 Shared services

(1) The Common Services Agency for the Scottish Health Service (the “Agency”) may, with the consent of the Scottish Ministers, enter into arrangements with a person mentioned in subsection (2) under which the Agency provides, or secures the provision of, any goods or services for the person.

(2) The persons are—

(a) the Scottish Ministers,
(b) any other office-holder in the Scottish Administration,
(c) any Scottish public authority,
(d) any Scottish public authority with mixed functions or no reserved functions,
(e) any government department,
(f) any cross-border public authority,
(g) any body corporate formed by a Health Board or by the Agency, or in the formation of which a Health Board or the Agency participated, by virtue of a delegation of the power in section 84B(1) of the National Health Service (Scotland) Act 1978 (joint ventures).

(3) Services which may be provided under subsection (1) include in particular—

(a) administrative services,
(b) technical services,
(c) legal services,
(d) other professional services,
(e) accommodation services.

(4) The power to make arrangements under subsection (1) is without prejudice to any other power of the Agency to provide goods or services to other persons.

(4A) The Scottish Ministers may by order amend subsection (2) so as to add or remove a person, or a description of a person, for the time being mentioned in or falling within that subsection.

(5) In this section—

“cross-border public authority” has the meaning given by section 88(5) of the Scotland Act 1998 (c.46),
“government department” has the meaning given by section 126(1) of that Act,
“office-holder in the Scottish Administration” is to be construed in accordance with section 126(7) of that Act,
“Scottish public authority” has the meaning given by section 126(1) of that Act except that it does not include—

(a) a Health Board,
(b) a Special Health Board (constituted under section 2(1)(b) of the National Health Service (Scotland) Act 1978), or
(c) Healthcare Improvement Scotland,

“Scottish public authority with mixed functions or no reserved functions” means persons, bodies and office-holders (other than the Agency) listed in schedule 5 to the Public Services Reform (Scotland) Act 2010 (improvement of public functions: listed bodies) under the heading “Scottish public authorities with mixed functions or no reserved functions”.

44A Section 44: consequential provision

(1) The National Health Service (Scotland) Act 1978 is amended in accordance with subsections (2) and (3).

(2) In section 10 (Common Services Agency)—
   (a) in subsection (1), the words from “which” to the end are repealed, and
   (b) after that subsection, insert—

   “(1A) The Agency has the functions conferred on it by—
   (a) this Act, and
   (b) section 44 of the Public Bodies (Joint Working) (Scotland) Act 2014.”

(3) In section 15 (supply of goods and services to local authorities etc.)—
   (a) in subsection (1)—
      (i) for “, a Health Board or the Agency”, in the first two places where it occurs, substitute “or a Health Board”, and
   (ii) in paragraph (e), the words “or the Agency” are repealed,
   (b) after that subsection, insert—

   “(1ZA) Paragraph (a) of subsection (1) applies to the Agency as it applies to a Health Board.”,
   (c) in subsection (2), after “including” insert “paragraph (a) as applied by subsection (1ZA) and”, and
   (d) subsections (2A) to (2D) are repealed.

(4) In section 17(2) of the Patient Rights (Scotland) Act 2011, for “that Act” substitute “the 1978 Act”.

44B Common Services Agency for the Scottish Health Service: residual liabilities

In section 2(1) of the National Health Service (Residual Liabilities) Act 1996 (certain Scottish health bodies: duty to transfer residual liabilities on ceasing to exist), for “or a Special Health Board” substitute “, a Special Health Board or the Common Services Agency for the Scottish Health Service”.

45 Extension of schemes for meeting losses and liabilities of health service bodies

(1) Section 85B of the National Health Service (Scotland) Act 1978 (schemes for meeting losses and liabilities of health service bodies) is amended as follows.

(2) In subsection (2)—
   (a) the word “and” immediately after paragraph (ea) is repealed,
(b) after paragraph (f) add—

“(g) local authorities; and
(h) integration joint boards established by order under section 9(2) of the 2014 Act.”.

(3) After subsection (2A) insert—

“(2B) The reference—

(a) in paragraph (a) of subsection (1) to property of a local authority is to be construed as a reference to property held by a local authority in connection with the exercise of its relevant functions;
(b) in paragraph (b) of that subsection to the functions of a local authority is to be construed as a reference to the relevant functions of a local authority.

(2C) In subsection (2B), “relevant functions” means—

(a) integration functions; and
(b) such other functions as the Scottish Ministers may by order specify.

(2D) In subsection (2C)(a), “integration functions” means functions which in pursuance of an integration scheme under the 2014 Act are—

(a) delegated to the authority;
(b) to be carried out in conjunction with functions delegated to the authority (that is, functions set out in the integration scheme in pursuance of section 1(3)(c) of that Act); or
(c) to be carried out by the authority by virtue of a direction under section 22 of the 2014 Act.”.

(4) After subsection (4) insert—

“(4A) Subsection (4)(a) does not apply in relation to a local authority.”.

(5) After subsection (5) insert—

“(6) In this section, “the 2014 Act” means the Public Bodies (Joint Working) (Scotland) Act 2014.”.

PART 3

HEALTH SERVICE: FUNCTIONS

46 Scottish Ministers: power to form companies etc.

In section 84B of the National Health Service (Scotland) Act 1978 (joint ventures)—

(a) in subsection (1), for “companies”, wherever it occurs, substitute “bodies corporate”;

(aa) after subsection (1), insert—

“(1A) The Scottish Ministers may do any (or all) of the following—

(a) form or participate in forming bodies corporate for any of the purposes mentioned in subsection (1B),
Part 4—General

47 Health Boards: carrying out of functions

After section 12J of the National Health Service (Scotland) Act 1978, insert—

“12K Power of Health Board to carry out other Health Board’s functions

A Health Board may, with the agreement of another Health Board and the Scottish Ministers, carry out on behalf of that other Health Board any function of that other Health Board.”.

PART 4

GENERAL

48 Interpretation

(1) In this Act—

“Health Board” has the meaning given by section 1(7),
“health care” has the same meaning as in section 10A(1)(b) of the National Health Service (Scotland) Act 1978,

“health professionals” means persons of such description engaged in the provision of health care as may be prescribed,

“integration delivery principles” has the meaning given by section 25,

“integration joint board” has the meaning given by section 1(4)(a),

“integration joint monitoring committee” has the meaning given by section 14(2),

“integration scheme” has the meaning given by section 1(3),

“national health and wellbeing outcomes” has the same meaning as in section 5(1),

“prescribed” means prescribed by the Scottish Ministers by regulations,

“social care” means—

(a) social services (having the same meaning as in Part 5 of the Public Services Reform (Scotland) Act 2010), and

(b) such functions of local authorities relating to the provision of accommodation for persons who are homeless as may be prescribed,

“social care professionals” means persons of such description engaged in the provision of social care as may be prescribed,

“strategic plan” has the meaning given by section 23(2).

For the purposes of this Act, a provider of a service is a “commercial” provider if the aim of the person in providing the service is or includes making a profit.

References in this Act (other than sections 2(3), 11(5)(a)(i), 12(2A)(a)(i), 33C(2) (first occurrence only), 37(1) and 43A)—

(a) to a local authority include, in the case where the integration scheme is being or has been jointly prepared under section 2(4), references to both or all the authorities which are preparing or have prepared the scheme, acting jointly,

(b) to the area of a local authority mean, in a case where the integration scheme is being or has been jointly prepared under section 2(4), the combined area of the local authorities which are preparing or have prepared the scheme.

References in this Act to a function include references to a function so far as exercisable in relation to persons or matters of a particular class or description.

Subordinate legislation

Regulations and orders under this Act may—

(a) make different provision for different purposes,

(aa) make different provision for different cases or classes of case,

(b) include such supplementary, incidental, consequential, transitional or transitory provision, or savings, as the Scottish Ministers consider appropriate.

Regulations under sections 1(3)(e), (4C), (4D) and (4H), 5(1) and 18ZA are subject to the affirmative procedure.

An order under section 44(4A) is subject to the affirmative procedure.
(3) An order under section 50 containing provision which adds to, replaces or omits any part of the text of an Act is subject to the affirmative procedure.

(4) Otherwise, regulations and orders under this Act are subject to the negative procedure.

(5) This section does not apply to an order under section 52(2).

50 Ancillary provision

(1) The Scottish Ministers may by order—
   (a) make such supplementary, incidental or consequential provision as they consider appropriate for the purposes of, in consequence of, or for giving full effect to, any provision of this Act,
   (b) make such transitional or transitory provision or savings as they consider appropriate for the purposes of, or in connection with, the coming into force of any provision of this Act.

(2) An order under this section may modify any enactment (including this Act).

51 Repeals and revocation

(A1) Section 5A of the Social Work (Scotland) Act 1968 (which makes provision about local authority plans for community care services) is repealed.

(1) Sections 4A and 4B of the National Health Service (Scotland) Act 1978 (c.29) (which make provision about community health partnerships) are repealed.

(2) Sections 15 to 17 of the Community Care and Health (Scotland) Act 2002 (asp 5) (which make provision about joint working among local authorities and certain health bodies) are repealed.

(3) Section 2 of the National Health Service Reform (Scotland) Act 2004 (asp 7) (which inserts sections 4A and 4B into the National Health Service (Scotland) Act 1978) is repealed.

(3A) Section 17(1) of the Patient Rights (Scotland) Act 2011 is repealed.

(4) Section 20 of the Social Care (Self-directed Support) (Scotland) Act 2013 (asp 1) (which amends section 15(4) of the Community Care and Health (Scotland) Act 2002) is repealed.

(5) The Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) (Scotland) Order 2013 (S.S.I. 2013/220) is revoked.

52 Commencement

(1) Sections 1(3) to (7), 5, 37 and 41 and this Part (other than section 51) come into force on the day after Royal Assent.

(2) The other provisions of this Act come into force on such day as the Scottish Ministers may by order appoint.

(3) An order under subsection (2) may contain transitory or transitional provision or savings.
53  **Short title**

The short title of this Act is the Public Bodies (Joint Working) (Scotland) Act 2014.
SCHEDULE
(introduced by section 1(4A))

FUNCTIONS OF LOCAL AUTHORITIES WHICH MAY BE DELEGATED
