Official Report, Meeting of the Parliament, 25 February 2014

Bill (As Passed) (SP Bill 32B)
Foreword

Purpose of the series

The aim of this series is to bring together in a single place all the official Parliamentary documents relating to the passage of the Bill that becomes an Act of the Scottish Parliament (ASP). The list of documents included in any particular volume will depend on the nature of the Bill and the circumstances of its passage, but a typical volume will include:

- every print of the Bill (usually three – “As Introduced”, “As Amended at Stage 2” and “As Passed”);
- the accompanying documents published with the “As Introduced” print of the Bill (and any revised versions published at later Stages);
- every Marshalled List of amendments from Stages 2 and 3;
- every Groupings list from Stages 2 and 3;
- the lead Committee’s “Stage 1 report” (which itself includes reports of other committees involved in the Stage 1 process, relevant committee Minutes and extracts from the Official Report of Stage 1 proceedings);
- the Official Report of the Stage 1 and Stage 3 debates in the Parliament;
- the Official Report of Stage 2 committee consideration;
- the Minutes (or relevant extracts) of relevant Committee meetings and of the Parliament for Stages 1 and 3.

All documents included are re-printed in the original layout and format, but with minor typographical and layout errors corrected. An exception is the groupings of amendments for Stage 2 and Stage 3 (a list of amendments in debating order was included in the original documents to assist members during actual proceedings but is omitted here as the text of amendments is already contained in the relevant marshalled list).

Where documents in the volume include web-links to external sources or to documents not incorporated in this volume, these links have been checked and are correct at the time of publishing this volume. The Scottish Parliament is not responsible for the content of external Internet sites. The links in this volume will not be monitored after publication, and no guarantee can be given that all links will continue to be effective.

Documents in each volume are arranged in the order in which they relate to the passage of the Bill through its various stages, from introduction to passing. The Act itself is not included on the grounds that it is already generally available and is, in any case, not a Parliamentary publication.

Outline of the legislative process

Bills in the Scottish Parliament follow a three-stage process. The fundamentals of the process are laid down by section 36(1) of the Scotland Act 1998, and amplified by Chapter 9 of the Parliament’s Standing Orders. In outline, the process is as follows:
• Introduction, followed by publication of the Bill and its accompanying documents;
• Stage 1: the Bill is first referred to a relevant committee, which produces a report informed by evidence from interested parties, then the Parliament debates the Bill and decides whether to agree to its general principles;
• Stage 2: the Bill returns to a committee for detailed consideration of amendments;
• Stage 3: the Bill is considered by the Parliament, with consideration of further amendments followed by a debate and a decision on whether to pass the Bill.

After a Bill is passed, three law officers and the Secretary of State have a period of four weeks within which they may challenge the Bill under sections 33 and 35 of the Scotland Act respectively. The Bill may then be submitted for Royal Assent, at which point it becomes an Act.

Standing Orders allow for some variations from the above pattern in some cases. For example, Bills may be referred back to a committee during Stage 3 for further Stage 2 consideration. In addition, the procedures vary for certain categories of Bills, such as Committee Bills or Emergency Bills. For some volumes in the series, relevant proceedings prior to introduction (such as pre-legislative scrutiny of a draft Bill) may be included.

The reader who is unfamiliar with Bill procedures, or with the terminology of legislation more generally, is advised to consult in the first instance the Guidance on Public Bills published by the Parliament. That Guidance, and the Standing Orders, are available free of charge on the Parliament’s website (www.scottish.parliament.uk).

The series is produced by the Legislation Team within the Parliament’s Chamber Office. Comments on this volume or on the series as a whole may be sent to the Legislation Team at the Scottish Parliament, Edinburgh EH99 1SP.

Notes on this volume

The Bill to which this volume relates followed the standard 3 stage process described above.

The Health and Sport Committee’s Stage 1 Report did not include in full the oral and written evidence received by the Committee. This was also the case for the reports to the Health and Sport Committee by the Local Government and Regeneration Committee, Finance Committee and Delegated Powers and Law Reform Committee. This material was originally published on the web only, and is now included in full in this volume.

This volume also includes in full notes of fact-finding visits made by the Health and Sport Committee, and policy statements on a variety of issues relevant to the Bill that were provided by the Scottish Government to assist the Committee’s consideration of the Bill.

The Scottish Government made a written response to the report of the Delegated Powers and Law Reform Committee at Stage 1, in addition to the Government’s
The Delegated Powers and Law Reform Committee noted the general response to the Stage 1 Report of the lead committee. At its meeting on 26 November 2013, the Delegated Powers and Law Reform Committee noted the response without debate. No extracts from the minutes or the Official Report of that meeting are, therefore, included in this volume. Relevant papers for that meeting, including the Scottish Government’s response, are, however, included.

The motion for a financial resolution for the Bill was not considered by the Parliament on the same day as the Stage 1 debate, but the following week on 3 December 2013. The motion was moved and agreed without debate or division and so no Official Report extract is included in this volume. The relevant extract from the Minutes of the Parliament is, however, included in this volume in the After Stage 1 section.

The Delegated Powers and Law Reform Committee considered the delegated powers in the Bill after Stage 2 and reported to the Parliament. That report is included in this volume. However, the Committee agreed its report without debate and no extracts from the minutes or the Official Report of the relevant meeting of the Committee are, therefore, included.

At its meeting on 25 February 2014, the Delegated Powers and Law Reform Committee also considered the delegated powers aspects of Scottish Government amendments at Stage 3. The relevant papers, along with extracts from the minutes and the Official Report of the meeting, are included in this volume.

Public Bodies (Joint Working) (Scotland) Bill

[AS INTRODUCED]

An Act of the Scottish Parliament to make provision in relation to the carrying out of functions of local authorities and Health Boards; to make further provision about certain functions of public bodies; to make further provision in relation to certain functions under the National Health Service (Scotland) Act 1978; and for connected purposes.

PART 1

FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration plans

1 Integration plans: same local authority and Health Board area

(1) Subsection (2) applies where the area of a local authority is the same as the area of a Health Board.

(2) The local authority and the Health Board must jointly prepare an integration plan for the area of the local authority.

(3) An integration plan is a plan setting out—

(a) which integration model mentioned in subsection (4) is to apply,

(b) the functions that are to be delegated in accordance with that model,

(c) where functions are to be delegated in accordance with the model mentioned in subsection (4)(b), (c) or (d), the functions of the person to whom functions are to be delegated which are to be carried out in conjunction with the delegated functions,

(d) a method of calculating payments that are to be made in respect of a delegated function by the person delegating the function to the person to whom the function is delegated,

(e) prescribed information about such other matters as may be prescribed.

(4) The integration models are—

(a) delegation of functions by the local authority to a body corporate that is to be established by order under section 9 (an “integration joint board”) and delegation of functions by the Health Board to the integration joint board,

(b) delegation of functions by the local authority to the Health Board,
(c) delegation of functions by the Health Board to the local authority,

(d) delegation of functions by the local authority to the Health Board and delegation of functions by the Health Board to the local authority.

(5) A function may not be set out under subsection (3)(c) if it is a function which by virtue of regulations under subsection (6)(a) or (b) may not be delegated under an integration plan.

(6) The Scottish Ministers may by regulations prescribe—

(a) functions of local authorities that must, may or may not be delegated under an integration plan,

(b) functions of Health Boards that must, may or may not be delegated under an integration plan,

(c) functions of local authorities or Health Boards—

(i) that must be delegated under an integration plan other than in prescribed circumstances,

(ii) that may be delegated under an integration plan only in prescribed circumstances,

(iii) that may not be delegated under an integration plan in prescribed circumstances,

(d) functions of local authorities or Health Boards that may be delegated under an integration plan only if other prescribed functions are also delegated to the same person under the plan.

(7) In this section, “Health Board” means a Health Board constituted under section 2(1)(a) of the National Health Service (Scotland) Act 1978 (c.29).

2 Integration plans: two or more local authorities in Health Board area

(1) This section applies where the areas of two or more local authorities fall within the area of a Health Board.

(2) Each local authority and the Health Board must comply with subsection (3) or (4) as respects each local authority area.

(3) Each local authority and the Health Board must jointly prepare an integration plan for the area of the local authority.

(4) Two or more local authorities and the Health Board must jointly prepare an integration plan for the areas of those local authorities.

(5) In preparing an integration plan under subsection (3) or (4), a local authority must take into account—

(a) any other integration plan that has been, or is being, prepared in relation to the area of the same Health Board, and

(b) the likely effect on the Health Board of both or all the plans prepared under this section.
3 Considerations in preparing integration plan
   (1) This section applies where a local authority and a Health Board are preparing an integration plan.
   (2) The local authority and the Health Board must have regard to—
      (a) the integration planning principles (see section 4), and
      (b) the national health and wellbeing outcomes (see section 5).

4 Integration planning principles
   (1) The integration planning principles are—
      (a) that the main purpose of services which must or may be provided in pursuance of functions which must or may be delegated under an integration plan is to improve the wellbeing of recipients,
      (b) that, in so far as consistent with the main purpose, those services should be provided in the way which, so far as possible—
         (i) is integrated from the point of view of recipients,
         (ii) takes account of the particular needs of different recipients,
         (iii) takes account of the particular needs of recipients in different parts of the area in which the service is being provided,
         (iv) is planned and led locally in a way which is engaged with the community and local professionals,
         (v) best anticipates needs and prevents them arising, and
         (vi) makes the best use of the available facilities, people and other resources.
   (2) In subsection (1), “recipients” means persons to whom or in relation to whom the services are provided.

5 Power to prescribe national outcomes
   (1) The Scottish Ministers may by regulations prescribe outcomes in relation to health and wellbeing.
   (2) Such outcomes are to be known as “the national health and wellbeing outcomes”.
   (3) Before making regulations under subsection (1), the Scottish Ministers must consult—
      (a) each local authority,
      (b) each Health Board,
      (c) each integration joint board at the time established,
      (d) in respect of each group mentioned in subsection (4), such persons appearing to be representative of the group as the Scottish Ministers think fit.
   (4) The groups mentioned in subsection (3)(d) are—
      (a) health professionals,
      (b) users of health care,
      (c) carers of users of health care,
Part 1—Functions of local authorities and Health Boards

(d) commercial providers of health care,
(e) non-commercial providers of health care,
(f) social care professionals,
(g) users of social care,
(h) carers of users of social care,
(i) commercial providers of social care,
(j) non-commercial providers of social care.

6 Consultation

(1) This section applies where a local authority and a Health Board are required by section 1(2) or 2(2) to prepare an integration plan.

(2) Before submitting the integration plan for approval under section 7, the local authority and the Health Board must jointly consult—

(a) such persons or groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed, and

(b) such other persons as the local authority and the Health Board think fit.

(3) In finalising the integration plan, the local authority and the Health Board must take account of any views expressed by virtue of subsection (2).

7 Approval of integration plan

(1) After complying with section 6 and before the prescribed day, a local authority and a Health Board must jointly submit an integration plan to the Scottish Ministers for approval.

(2) Any information included in an integration plan by virtue of section 1(3)(e) need not be approved by the Scottish Ministers but may be taken into account by them in deciding whether to approve the plan.

(3) The Scottish Ministers may—

(a) approve the plan submitted under subsection (1),

(b) refuse to approve it.

(4) If the Scottish Ministers refuse to approve the plan, the local authority and the Health Board must jointly modify the plan and submit it for approval under subsection (1).

(5) The Scottish Ministers may, on their own account or on the request of the local authority and the Health Board, specify that subsection (1) applies as if the prescribed day were such later day as the Scottish Ministers may specify.

(6) A request under subsection (5) must be made in writing and must include the reasons for the request.

(7) A day specified under subsection (5) is to be treated as if it were the prescribed day for the purposes of the other provisions of this Act.
8 Publication of integration plan

As soon as practicable after an integration plan is approved under section 7, the local authority and the Health Board must publish it.

Implementation of integration plan

9 Functions delegated to integration joint board

(1) This section applies where the Scottish Ministers approve under section 7 an integration plan setting out that the integration model in section 1(4)(a) is to apply.

(2) The Scottish Ministers may by order establish the integration joint board to which the functions are to be delegated.

(3) The functions are to be delegated before the prescribed day.

10 Chief officer of integration joint board

(1) An integration joint board is to appoint, as a member of staff, a chief officer.

(2) Subsection (3) applies where the person to be appointed is an existing member of staff of a constituent authority.

(3) The person is to be seconded to the board by that authority.

(4) Where subsection (3) does not apply, the person to be appointed—

(a) is to be appointed as a member of staff of a constituent authority, and

(b) is then to be seconded to the board by that authority.

(5) The Scottish Ministers may in relation to any integration joint board by order—

(a) disapply the requirements of subsections (2) to (4), and

(b) make provision enabling the board to employ a chief officer on such terms and conditions as the board determines.

(6) Before appointing a person as chief officer an integration joint board is to consult the constituent authorities.

(7) The responsibilities of a chief officer are subject to the agreement of the Scottish Ministers.

(8) The references in this section to constituent authorities are to the local authority and the Health Board which prepared the integration plan in pursuance of which the integration joint board was established.

11 Other staff of integration joint board

(1) The Scottish Ministers may by order make provision enabling integration joint boards to appoint staff other than a chief officer.

(2) Such an order may include such further provision as regards such staff as the Scottish Ministers think fit, including in particular provision as to—

(a) the appointment of staff,

(b) the numbers of staff,

(c) the terms and conditions of staff.
(3) Provision as to a matter mentioned in subsection (2)(a), (b) or (c) may include provision making the matter subject to the determination, direction or agreement of any person.

(4) Without prejudice to section 49(1)(a), an order under this section may make different provision in relation to different integration joint boards.

12 **Integration joint boards: further provision**

(1) The Scottish Ministers may by order make provision—

(a) about the membership of integration joint boards,

(b) about the proceedings of integration joint boards,

(c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions,

(d) about the supply of services or facilities to integration joint boards by a local authority or Health Board,

(e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.

(2) Without prejudice to section 49(1)(a), an order under this section may make different provision in relation to different integration joint boards.

(3) The Scottish Ministers may by scheme make provision about the transfer to an integration joint board of staff, property, rights, liabilities or obligations of a local authority or a Health Board.

13 **Payments to integration joint boards in respect of delegated functions**

(1) Subsections (2) and (3) apply where—

(a) an integration plan sets out that the integration model in section 1(4)(a) is to apply, and

(b) the plan is approved by the Scottish Ministers under section 7.

(2) The local authority must make a payment to the integration joint board of the amount calculated in accordance with the method of calculation set out in the plan in relation to each function delegated by it.

(3) The Health Board must make a payment to the integration joint board of the amount calculated in accordance with the method of calculation set out in the plan in relation to each function delegated by it.

14 **Functions delegated to local authority or Health Board**

(1) This section applies where the Scottish Ministers approve under section 7 an integration plan setting out that the integration model in section 1(4)(b), (c) or (d) is to apply.

(2) Before the prescribed day—

(a) the local authority and the Health Board must jointly establish a committee (an “integration joint monitoring committee”) for the purpose of monitoring the carrying out of the integration functions for the area of the local authority,

(b) the functions are to be delegated.
15 Transfer of staff where functions delegated to local authority or Health Board
(1) The Scottish Ministers may by scheme make provision about the transfer of staff from a person who is to delegate functions under an integration plan falling within subsection (2) to the person to whom the functions are to be delegated.
(2) An integration plan falls within this subsection if it sets out that the integration model in section 1(4)(b), (c) or (d) is to apply.

16 Integration joint monitoring committees: further provision
(1) The Scottish Ministers may by order make provision about—
   (a) the establishment of integration joint monitoring committees,
   (b) the membership of integration joint monitoring committees,
   (c) the proceedings of integration joint monitoring committees,
   (d) any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.
(2) Without prejudice to section 49(1)(a), an order under subsection (1) may make different provision in relation to different integration joint monitoring committees.

17 Payments to Health Boards in respect of delegated functions
(1) Subsection (2) applies where—
   (a) an integration plan sets out that the integration model in section 1(4)(b) or (d) is to apply, and
   (b) the plan is approved by the Scottish Ministers under section 7.
(2) The local authority must make a payment to the Health Board of the amount calculated in accordance with the method of calculation that is set out in the plan in relation to each function delegated to the Health Board.

18 Payments to local authorities in respect of delegated functions
(1) Subsection (2) applies where—
   (a) an integration plan sets out that the integration model in section 1(4)(c) or (d) is to apply, and
   (b) the plan is approved by the Scottish Ministers under section 7.
(2) The Health Board must make a payment to the local authority of the amount calculated in accordance with the method of calculation that is set out in the plan in relation to each function delegated to the local authority.

19 Transfer of staff: effect on contract of employment
(1) This section applies where by virtue of section 12(3) or 15(1) a person is to be transferred from the employment of one person (“the original employer”) to another (“the new employer”).
(2) If, before the day of the transfer, the person informs the original employer that the person does not wish to become an employee of the new employer, the person’s contract of employment is terminated on the day before the day of the transfer.

(3) Otherwise—

(a) the contract of employment between the person and the original employer has effect on and after the day of the transfer as if originally made between the person and the new employer,

(b) the rights, powers, duties and liabilities of the original employer under or in connection with the contract of employment are by virtue of this section transferred to the new employer on the day of the transfer, and

(c) anything done before the day of the transfer by or in relation to the original employer in respect of the contract of employment or the person is to be treated on and after that day as having been done by or in relation to the new employer.

(4) A person is not to be treated for any purpose as being dismissed by reason of the operation of any provision of this section in relation to the person.

(5) Nothing in this section affects any right of a person to terminate the person’s contract of employment if a substantial detrimental change in the person’s working conditions is made.

(6) No such right arises by reason only that, by virtue of this section, the identity of the person’s employer changes.

20 Co-operation

(1) This section applies where the Scottish Ministers approve under section 7 one or more plans prepared by virtue of section 2(3) or (4) in relation to the same Health Board.

(2) The persons mentioned in subsection (3) must co-operate with each other in relation to the efficient and effective use of buildings, staff and equipment to which the plan or plans relate.

(3) The persons are—

(a) each local authority,

(b) the Health Board.

Carrying out of delegated functions

21 Effect of delegation of functions

(1) This section applies where a function is delegated in pursuance of an integration plan.

(2) The person to whom the function is delegated—

(a) is subject to the same duties in connection with the carrying out of the function as the person who delegated the function would have been subject in the event that the function had not been delegated,

(b) has the same rights and powers (including in particular powers to make payments or impose charges) in connection with the carrying out of the function as the person who delegated the function would have had in the event that the function had not been delegated,

(c) is in all respects as if the person who delegated the function—
(i) entitled to enforce any rights acquired in the carrying out of the function,
(ii) liable in respect of any liabilities incurred (including in particular liability in damages for wrongful or negligent acts or omissions) in the carrying out of the function.

5 (3) In subsection (2)—

(a) the reference in paragraph (a) to duties includes duties imposed after the delegation takes place,
(b) the reference in paragraph (b) to rights and powers includes rights or powers conferred after the delegation takes place.

10 (4) All proceedings for the enforcement of rights or liabilities mentioned in subsection (2)(c) are to be brought by or against the person to whom the function is delegated in the person’s own name.

(5) The Scottish Ministers may by order provide that an integration joint board must or must not exercise a power conferred by virtue of subsection (2)(b).

22 Further powers of persons to whom functions are delegated

(1) In addition to the powers conferred by section 21(2)(b)—

(a) an integration joint board may by direction specify that a function delegated to it in pursuance of an integration plan is to be carried out on its behalf by the local authority or Health Board which prepared the integration plan,

(b) a local authority or Health Board to which a function is delegated in pursuance of an integration plan may by direction specify that the function is to be carried out on its behalf by the local authority or Health Board which delegated the function in pursuance of the plan.

(2) A direction under subsection (1)—

(a) may include provision—

(i) about the manner in which the function is to be carried out,
(ii) about the rights, powers, duties or liabilities of the person who is to carry out the function,

(b) must set out, or set out a method of calculating, payments that are to be made by the person giving the direction to the person who is to carry out the function.

(3) A person giving a direction under subsection (1) must make payments in accordance with the provision included in the direction by virtue of subsection (2)(b).

(4) Where a person is carrying out a function by virtue of a direction under subsection (1), subsections (2) to (4) of section 21 apply as if—

(a) the person were a person to whom the function had been delegated under those subsections,
(b) the person who gave the direction were a person who had delegated the function under those subsections.

(5) Subsection (4) is subject to any provision included in the direction by virtue of subsection (2)(a)(ii).
(6) A person to whom a direction under subsection (1) is given must comply with the direction.

(7) A direction under subsection (1)—
   (a) may vary or revoke any earlier direction under this section,
   (b) must be in writing.

(8) The Scottish Ministers may by order provide that an integration joint board must or must not give a direction under subsection (1).

Strategic planning etc.

23 Requirement to prepare strategic plans

10 (1) The integration authority for the area of a local authority must prepare strategic plans in accordance with this section.

(2) A strategic plan is a document—
   (a) setting out the arrangements for the carrying out of the integration functions for the area of the local authority over the period of the plan,
   (b) setting out how those arrangements are intended to achieve, or contribute to achieving, the national health and wellbeing outcomes, and
   (c) including such other material as the integration authority thinks fit.

(3) The provision required to be included in a strategic plan by virtue of subsection (2)(a) is to include provision—
   (a) dividing the area of the local authority into two or more localities, and
   (b) setting out separately arrangements for the carrying out of the integration functions in relation to each such locality.

(4) The first strategic plan of an integration authority is—
   (a) to be prepared before the prescribed day, and
   (b) to relate to the period of 3 years beginning with the prescribed day.

(5) Subsequent strategic plans of an integration authority are—
   (a) to be prepared before each anniversary of the day prescribed under subsection (4)(b), and
   (b) to relate to the period of 3 years beginning with the anniversary mentioned in paragraph (a) by reference to which the plan is to be prepared.

24 Considerations in preparing strategic plan

In preparing a strategic plan, the integration authority for the area of a local authority must have regard to—
   (a) the integration delivery principles (see section 25), and
   (b) the national health and wellbeing outcomes (see section 5).

25 Integration delivery principles

(1) The integration delivery principles are—
that the main purpose of services which must or may be provided in pursuance of the integration functions for the area of the local authority is to improve the wellbeing of recipients,

(b) that, in so far as consistent with the main purpose, those services should be provided in the way which, so far as possible—

(i) is integrated from the point of view of recipients,

(ii) takes account of the particular needs of different recipients,

(iii) takes account of the particular needs of recipients in different parts of the area in which the service is being provided,

(iv) is planned and led locally in a way which is engaged with the community and local professionals,

(v) best anticipates needs and prevents them arising, and

(vi) makes the best use of the available facilities, people and other resources.

(2) In subsection (1), “recipients” means persons to whom or in relation to whom the services are provided.

26 Establishment of consultation group

(1) For the purpose of preparing a strategic plan, an integration authority in relation to the area of a local authority is to establish a group comprising—

(a) where the integration authority is an integration joint board, one person nominated by each of the local authority and the Health Board which prepared the integration plan in pursuance of which the integration authority was established,

(b) where the integration authority is a Health Board, one person nominated by the local authority with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its functions,

(c) where the integration authority is a local authority, one person nominated by the Health Board with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its functions,

(d) one person in respect of each of the groups mentioned in subsection (2), being a person who the integration authority considers to be representative of that group, and

(e) such other persons as the integration authority considers appropriate.

(2) The groups referred to in subsection (1)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(3) The procedure of the group is to be such as the authority determines.

(4) The integration authority may pay to members of the group such expenses and allowances as the authority determines.

27 Steps following establishment of consultation group

(1) Having established a group under section 26, an integration authority in relation to the area of a local authority is to—

(a) prepare proposals for what the strategic plan should contain, and
(b) seek the views of the group on the proposals.

(2) Taking account of any views expressed by virtue of subsection (1)(b), the integration authority is then to—
   (a) prepare a first draft of the strategic plan, and
   (b) seek the views of the group on the draft.

(3) Taking account of any views expressed by virtue of subsection (2)(b), the integration authority is then to—
   (a) prepare a second draft of the strategic plan,
   (b) send a copy to—
       (i) the persons mentioned in subsection (4), and
       (ii) such other persons as it considers appropriate, and
   (c) invite the recipients to express views (within such period as the integration authority considers appropriate) on the draft.

(4) The persons referred to in subsection (3)(b)(i) are—
   (a) where the integration authority is an integration joint board, the local authority and the Health Board which prepared the integration plan in pursuance of which the integration joint board was established,
   (b) where the integration authority is a local authority, the Health Board with which the local authority prepared the integration plan in pursuance of which the integration authority acquired its delegated functions,
   (c) where the integration authority is a Health Board, the local authority with which the Health Board prepared the integration plan in pursuance of which the integration authority acquired its delegated functions, and
   (d) persons who the integration authority considers to be representative of each of the groups mentioned in subsection (5).

(5) The groups referred to in subsection (4)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

(6) In finalising the strategic plan, the integration authority must take account of any views expressed by virtue of subsection (3)(c).

28 Requirement for agreement to certain strategic plans

(1) This section applies in relation to a strategic plan prepared by an integration authority which is a Health Board or a local authority.

(2) After finalising the plan, the integration authority must submit it to the person mentioned in subsection (3) for approval.

(3) That person is—
   (a) where the integration authority is a local authority, the Health Board with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its delegated functions,
   (b) where the integration authority is a Health Board, the local authority with which the integration authority prepared the integration plan in pursuance of which the integration authority acquired its delegated functions.
(4) If that person does not approve the plan, the integration authority must modify the plan and submit it for approval under subsection (2).

29 **Publication of strategic plans**

(1) As soon as practicable after the occurrence of the event mentioned in subsection (2), an integration authority must publish its strategic plan.

(2) That event is—

   (a) where the integration authority is an integration joint board, the finalisation of the plan under section 27,

   (b) where the integration authority is a local authority and a Health Board acting jointly, the finalisation of the plan under section 27,

   (c) where the integration authority is a Health Board or a local authority, the agreement of the plan under section 28.

(3) At the same time as publishing a strategic plan, an integration authority must also publish a statement of the action which it took in pursuance of section 27.

30 **Significant decisions outside strategic plan: public involvement**

(1) This section applies where the integration authority for the area of a local authority—

   (a) proposes to take a significant decision about the arrangements for the carrying out of the integration functions for the area of the authority, and

   (b) intends the decision to take effect other than in its next strategic plan.

(2) In subsection (1)(a), “significant decision” means a decision which the integration authority considers might significantly affect the provision of a service provided in pursuance of the integration functions in the area of the local authority.

(3) The integration authority must take such action as it thinks fit with a view to securing that persons mentioned in subsection (4) are involved in and consulted on the decision.

(4) Those persons are users of the service which is being or may be provided.

**Carrying out of integration functions**

31 **Carrying out of integration functions: general**

In carrying out an integration function for the area of a local authority, a person must have regard to—

   (a) the integration delivery principles (see section 25), and

   (b) the national health and wellbeing outcomes (see section 5).

32 **Carrying out of integration functions: localities**

(1) This section applies where a person carrying out an integration function for the area of a local authority proposes to take a decision which the person considers might significantly affect the provision in a locality of the area of a service provided in pursuance of the function.

(2) In subsection (1), “locality” means a locality of an area as set out in the strategic plan in pursuance of section 23(3)(a).
(3) The person must take such action as the person thinks fit with a view to securing that the groups mentioned in subsection (4) are involved in and consulted on the decision.

(4) The groups referred to in subsection (3) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

5 Integration authority: performance report

(1) Each integration authority must prepare and publish a performance report for the reporting year.

(2) A performance report is a report setting out an assessment of performance during the reporting year in carrying out the integration functions for the area of the local authority.

(3) The Scottish Ministers may by regulations prescribe—

- the form and content of performance reports,
- the period during which performance reports must be published.

(4) In this section, “reporting year”, in relation to an integration authority, means—

- the period beginning with the date prescribed under section 23(4)(b) and ending on the first anniversary of that date, and
- each subsequent period of a year.

Change of integration plan

34 Revised integration plan

(1) This section applies where an integration plan has been approved by the Scottish Ministers under section 7.

(2) The local authority and the Health Board may vary the plan by jointly preparing a revised integration plan.

(3) A revised integration plan may—

- set out additional functions that are to be delegated under the plan as mentioned in section 1(3)(b),
- set out functions that are delegated by virtue of the integration plan approved under section 7 that are no longer to be delegated,
- if the integration plan delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are to be carried out in conjunction with the delegated functions,
- if the integration plan delegates functions in accordance with the integration model mentioned in section 1(4)(b), (c) or (d), set out functions that are no longer to be carried out in conjunction with the delegated functions,
- change the method of calculating payments as mentioned in section 1(3)(d).

(4) The local authority and the Health Board must jointly submit the revised plan to the Scottish Ministers for approval under section 7.

(5) A revised integration plan takes effect on such day as may be specified by the Scottish Ministers.
35  **New integration plan**

(1) This section applies where an integration plan has been approved by the Scottish Ministers under section 7.

(2) If the local authority and the Health Board wish to change any of the matters mentioned in subsection (3) they must prepare a new integration plan under section 1.

(3) The matters are—

(a) the local authority which prepared the integration plan,  
(b) the integration model.

36  **Power to make provision in consequence of new integration plan**

(1) This section applies where the Scottish Ministers approve an integration plan which has been prepared by virtue of section 35.

(2) In consequence of the replacement of an integration plan by a new integration plan, the Scottish Ministers may by order provide for the winding-up of an integration joint board.

(3) In consequence of the replacement of an integration plan by a new integration plan, the Scottish Ministers may by scheme make such provision about the transfer of staff, property, rights, liabilities or obligations of an integration joint board, a local authority or a Health Board as they consider necessary.

**Supplementary**

37  **Information-sharing**

(1) Where a local authority and a Health Board are jointly preparing an integration plan, each of them may disclose information to the other for or in relation to the purpose of preparing the plan.

(2) Where two or more local authorities and a Health Board are jointly preparing an integration plan, each of them may disclose information to any of the others for or in relation to the purpose of preparing the plan.

(3) A person mentioned in subsection (4) may disclose information to any other person mentioned in that subsection for or in relation to any of the purposes mentioned in subsection (5).

(4) The persons are—

(a) a local authority,  
(b) a Health Board,  
(c) an integration joint board.

(5) The purposes are—

(a) functions that are delegated by virtue of an integration plan approved under section 7,  
(b) functions that are to be carried out in conjunction with delegated functions,  
(c) the preparation of a strategic plan.
(6) Subsections (1) to (3) apply despite any duty of confidentiality owed to any person in respect of the information by the person disclosing the information.

38 Grants to local authorities

(1) The Scottish Ministers may make a grant to a local authority in respect of costs incurred by the authority by virtue of this Part.

(2) The payment of a grant under subsection (1) may be made subject to such conditions (including conditions as to repayment) as the Scottish Ministers may determine.

39 Default power of Scottish Ministers

(1) Subsection (2) applies where a local authority and a Health Board fail before the day prescribed for the purposes of section 7 to submit an integration plan for the approval of the Scottish Ministers under that section.

(2) The Scottish Ministers may—

(a) specify functions of the local authority and the Health Board which are to be delegated to an integration joint board,

(b) by order establish the integration joint board to which the functions are to be delegated,

(c) require the local authority and the Health Board to delegate the specified functions to the integration joint board before the prescribed day,

(d) require the local authority and the Health Board to make such payments to the integration joint board as the Scottish Ministers may specify, and

(e) require the local authority and the Health Board to comply with such other requirements in relation to the functions as the Scottish Ministers may specify.

40 Directions

(1) The Scottish Ministers may give directions to a local authority in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration plan,

(c) functions specified in the plan that are to be carried out in conjunction with those functions.

(2) The Scottish Ministers may give directions to a Health Board in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration plan,

(c) functions specified in the plan that are to be carried out in conjunction with those functions.

(3) The Scottish Ministers may give directions to an integration joint board in relation to the carrying out of—

(a) functions conferred on it by this Act,

(b) functions delegated to it in pursuance of an integration plan.
(4) A local authority, a Health Board or an integration joint board must comply with a direction given to it under this section.

(5) Directions under this section—
   (a) may vary or revoke earlier directions under this section,
   (b) must be in writing.

41 Guidance

Each local authority, Health Board and integration joint board must have regard to any guidance issued by the Scottish Ministers about their functions under or in relation to this Act.

42 Meaning of “integration authority”

For the purposes of this Part, the “integration authority” for the area of a local authority is—

(a) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the integration joint board established in pursuance of the plan,

(b) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b), the Health Board to which the functions are delegated,

(c) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c), the local authority to which the functions are delegated,

(d) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d), the local authority and the Health Board to which the functions are delegated, acting jointly.

43 Meaning of “integration functions”

(1) For the purposes of this Part, the “integration functions” for the area of a local authority are—

(a) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(a), the functions delegated to the integration joint board in pursuance of the plan,

(b) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(b)—
   (i) the functions delegated to the Health Board in pursuance of the plan, and
   (ii) the functions to be carried out in conjunction with those functions,

(c) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(c)—
   (i) the functions delegated to the local authority in pursuance of the plan, and
   (ii) the functions to be carried out in conjunction with those functions,
(d) where in pursuance of the integration plan for the area functions are delegated in accordance with the integration model mentioned in section 1(4)(d)—

(i) the functions delegated to each of the Health Board and the local authority in pursuance of the plan, and

(ii) the functions to be carried out in conjunction with those functions.

(2) In subsection (1), the references to the functions which are to be carried out in conjunction with delegated functions are to the functions set out in the integration plan in pursuance of section 1(3)(c).

**PART 2**

**SHARED SERVICES**

44 **Shared services**

(1) The Common Services Agency for the Scottish Health Service (the “Agency”) may, with the consent of the Scottish Ministers, enter into arrangements with a person mentioned in subsection (2) under which the Agency provides, or secures the provision of, any goods or services for the person.

(2) The persons are—

(a) the Scottish Ministers,

(b) any other office-holder in the Scottish Administration,

(c) any Scottish public authority,

(d) any Scottish public authority with mixed functions or no reserved functions,

(e) any government department,

(f) any cross-border public authority.

(3) Services which may be provided under subsection (1) include in particular—

(a) administrative services,

(b) technical services,

(c) legal services.

(4) The power to make arrangements under subsection (1) is without prejudice to any other power of the Agency to provide goods or services to other persons.

(5) In this section—

“cross-border public authority” has the meaning given by section 88(5) of the Scotland Act 1998 (c.46),

“government department”, and “Scottish public authority” have the meanings given by section 126(1) of that Act,

“office-holder in the Scottish Administration” is to be construed in accordance with section 126(7) of that Act,

“Scottish public authority with mixed functions or no reserved functions” is to be construed in accordance with paragraphs 1 and 2 of Part 3 of Schedule 5 to that Act.
45  **Extension of schemes for meeting losses and liabilities of health service bodies**

(1) Section 85B of the National Health Service (Scotland) Act 1978 (schemes for meeting losses and liabilities of health service bodies) is amended as follows.

(2) In subsection (2)—
   
   (a) the word “and” immediately after paragraph (ea) is repealed,
   
   (b) after paragraph (f) add—
      
      “(g) local authorities; and

      (h) integration joint boards established by order under section 9(2) of the 2014 Act,”.

(3) After subsection (2A) insert—

“(2B) The reference—

   (a) in paragraph (a) of subsection (1) to property of a local authority is to be construed as a reference to property held by a local authority in connection with the exercise of its relevant functions;

   (b) in paragraph (b) of that subsection to the functions of a local authority is to be construed as a reference to the relevant functions of a local authority.

(2C) In subsection (2B), “relevant functions” means—

   (a) integration functions; and

   (b) such other functions as the Scottish Ministers may by order specify.

(2D) In subsection (2C)(a), “integration functions” means functions which in pursuance of an integration plan under the 2014 Act are—

   (a) delegated to the authority;

   (b) to be carried out in conjunction with functions delegated to the authority (that is, functions set out in the integration plan in pursuance of section 1(3)(c) of that Act); or

   (c) to be carried out by the authority by virtue of a direction under section 22 of the 2014 Act.”.

(4) After subsection (4) insert—

“(4A) Subsection (4)(a) does not apply in relation to a local authority.”.

(5) After subsection (5) insert—

“(6) In this section, “the 2014 Act” means the Public Bodies (Joint Working) (Scotland) Act 2014.”.

---

**PART 3**

**HEALTH SERVICE: FUNCTIONS**

46  **Scottish Ministers: power to form companies etc.**

In section 84B of the National Health Service (Scotland) Act 1978 (joint ventures)—
(a) in subsection (1), for “companies”, wherever it occurs, substitute “bodies corporate”,

(b) in subsection (2), for “company” substitute “body corporate”, and

(c) in subsection (3), the definition of “companies” is repealed.

47 Health Boards: carrying out of functions

After section 12J of the National Health Service (Scotland) Act 1978, insert—

"12K Power of Health Board to carry out other Health Board’s functions

A Health Board may, with the agreement of another Health Board and the Scottish Ministers, carry out on behalf of that other Health Board any function of that other Health Board.”.

PART 4

GENERAL

48 Interpretation

(1) In this Act—

“Health Board” has the meaning given by section 1(7),

“health care” has the same meaning as in section 10A(1)(b) of the National Health Service (Scotland) Act 1978,

“health professionals” means persons of such description engaged in the provision of health care as may be prescribed,

“integration joint board” has the meaning given by section 1(4)(a),

“integration joint monitoring committee” has the meaning given by section 14(2)(a),

“integration plan” has the meaning given by section 1(3),

“prescribed” means prescribed by the Scottish Ministers by regulations,

“social care” means—

(a) social services (having the same meaning as in Part 5 of the Public Services Reform (Scotland) Act 2010), and

(b) such functions of local authorities relating to the provision of accommodation for persons who are homeless as may be prescribed,

“social care professionals” means persons of such description engaged in the provision of social care as may be prescribed,

“strategic plan” has the meaning given by section 23(2).

(2) For the purposes of this Act, a provider of a service is a “commercial” provider if the aim of the person in providing the service is or includes making a profit.

(3) References in this Act (other than sections 2(3) and 37(1))—

(a) to a local authority include, in the case where the integration plan is being or has been jointly prepared under section 2(4), references to both or all the authorities which are preparing or have prepared the plan, acting jointly,
(b) to the area of a local authority mean, in a case where the integration plan is being
or has been jointly prepared under section 2(4), the combined area of the local
authorities which are preparing or have prepared the plan.

(4) References in this Act to a function include references to a function so far as exercisable
in relation to persons or matters of a particular class or description.

49 Subordinate legislation

(1) Regulations and orders under this Act may—
(a) make different provision for different purposes,
(b) include such supplementary, incidental, consequential, transitional or transitory
    provision, or savings, as the Scottish Ministers consider appropriate.

(2) Regulations under section 5(1) are subject to the affirmative procedure.

(3) An order under section 50 containing provision which adds to, replaces or omits any
    part of the text of an Act is subject to the affirmative procedure.

(4) Otherwise, regulations and orders under this Act are subject to the negative procedure.

(5) This section does not apply to an order under section 52(2).

50 Ancillary provision

(1) The Scottish Ministers may by order—
(a) make such supplementary, incidental or consequential provision as they consider
    appropriate for the purposes of, in consequence of, or for giving full effect to, any
    provision of this Act,
(b) make such transitional or transitory provision or savings as they consider
    appropriate for the purposes of, or in connection with, the coming into force of
    any provision of this Act.

(2) An order under this section may modify any enactment (including this Act).

51 Repeals

(1) Sections 4A and 4B of the National Health Service (Scotland) Act 1978 (c.29) (which
    make provision about community health partnerships) are repealed.
(2) Sections 15 to 17 of the Community Care and Health (Scotland) Act 2002 (asp 5)
    (which make provision about joint working among local authorities and certain health
    bodies) are repealed.
(3) Section 2 of the National Health Service Reform (Scotland) Act 2004 (asp 7) (which
    inserts sections 4A and 4B into the National Health Service (Scotland) Act 1978) is
    repealed.
(4) Section 20 of the Social Care (Self-directed Support) (Scotland) Act 2013 (asp 1)
    (which amends section 15(4) of the Community Care and Health (Scotland) Act 2002) is
    repealed.

52 Commencement

(1) This Part (other than sections 48 and 51) comes into force on the day after Royal Assent.
(2) The other provisions of this Act come into force on such day as the Scottish Ministers may by order appoint.

(3) An order under subsection (2) may contain transitory or transitional provision or savings.

53  **Short title**

The short title of this Act is the Public Bodies (Joint Working) (Scotland) Act 2014.
Public Bodies (Joint Working) (Scotland) Bill
[AS INTRODUCED]

An Act of the Scottish Parliament to make provision in relation to the carrying out of functions of local authorities and Health Boards; to make further provision about certain functions of public bodies; to make further provision in relation to certain functions under the National Health Service (Scotland) Act 1978; and for connected purposes.

Introduced by: Alex Neil
Supported by: Derek Mackay
On: 28 May 2013
Bill type: Government Bill
These documents relate to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

PUBLIC BODIES (JOINT WORKING) (SCOTLAND) BILL

EXPLANATORY NOTES

(AND OTHER ACCOMPANYING DOCUMENTS)

CONTENTS

As required under Rule 9.3 of the Parliament’s Standing Orders, the following documents are published to accompany the Public Bodies (Joint Working) (Scotland) Bill introduced in the Scottish Parliament on 28 May 2013:

- Explanatory Notes;
- a Financial Memorandum;
- a Scottish Government Statement on legislative competence; and
- the Presiding Officer’s Statement on legislative competence.

A Policy Memorandum is printed separately as SP Bill 32–PM.
EXPLANATORY NOTES

INTRODUCTION

1. These Explanatory Notes have been prepared by the Scottish Government in order to assist the reader of the Bill and to help inform debate on it. They do not form part of the Bill and have not been endorsed by the Parliament.

2. The Notes should be read in conjunction with the Bill. They are not, and are not meant to be, a comprehensive description of the Bill. So where a section or schedule, or a part of a section or schedule, does not seem to require any explanation or comment, none is given.

THE BILL

3. The Bill provides the framework which will support the improvement of the quality and consistency of health and social care services in Scotland. This framework permits the integration of local authority services with health services. In addition, the Bill provides for the Common Services Agency commonly known as NHS National Services Scotland to provide goods and services to public bodies including local authorities; for the Scottish Ministers to form a wider range of joint venture structures than at present in order to make the most effective use of resources; and to extend the Clinical Negligence and Other Risks Scheme (CNORIS) indemnity scheme run by the Scottish Ministers.

Outline of the Bill

4. In summary the Bill:
   - Provides for national outcomes for health and wellbeing, and for delivery of which Health Boards and local authorities will be accountable to the Scottish Ministers and the public (note that the provisions of the Bill apply to area Health Boards and not Special Health Boards)
   - Sets out principles for planning and delivery of integrated functions, which local authorities, Health Boards and joint integration boards will be required to have regard to. They set out that the main purpose of integrated services is to improve the wellbeing of recipients, as well as an expectation that planning and delivery will take account of key principles relating to integrated delivery; the requirement to balance the needs of individuals with the overall needs of the population; anticipation and prevention of need; and effective use of resources.
   - Establishes integration joint boards and integration joint monitoring committees as the partnership arrangements for the governance and oversight of health and social care services. The Bill will remove Community Health Partnerships from statute.
   - Requires Health Board and local authority partners to enter into arrangements (the integration plan) to delegate functions and appropriate resources to ensure the effective delivery of those functions. The Bill provides two options for integrating budgets and functions. First, delegation to an integration joint board established as a body corporate - in this case the Health Board and the local authority agree the
amount of resources to be committed by each partner for the delivery of services to support the functions delegated. Second, delegation between partners. In this case the Health Board and/or local authority delegates functions and the corresponding amount of resource, to the other partner.

- Requires integration joint boards to appoint a chief officer, who will through the board be jointly accountable to the constituent Health Board and local authorities, responsible for the management of the integrated budget and the delivery of services for the area of the integration plan. The chief officer will also lead the development and delivery of the strategic plan for the joint board.

- Requires integration joint boards, and Health Boards or local authorities to whom functions are delegated acting in the capacity of “integration authority” to prepare a strategic plan for the area, which sets out arrangements for delivery of integration functions and how it will meet the national health and wellbeing outcomes. The integration authority will be required to involve a range of partners in the development of the plan and consult widely. In addition, locality planning duties will require the integration authority to make suitable arrangements to consult and plan locally for the needs of its population.

- Delivers opportunities for more effective use of public services and resources by allowing for Health Boards to be able to contract on behalf of other Health Boards for contracts which involve providing facilities, and by allowing the Scottish Ministers to form a wider range joint ventures structures to collaborate effectively with local authorities and enable a joint approach to asset management and disposal.

- Provides for the extension of the Common Services Agency’s ability to deliver shared services to public bodies including local authorities.

- Enables the Scottish Ministers to extend the range of bodies able to participate in the CNORIS scheme for meeting losses and liabilities of certain health service bodies. The scheme is established for relevant bodies to meet expenses arising from any loss or damage to their property; and liabilities to third parties for loss, damage or injury arising from the carrying out of the functions of the scheme members. The Bill amends the bodies able to participate in the scheme to include local authorities and integration joint boards.

COMMENTARY ON SECTIONS

Part 1

FUNCTIONS OF LOCAL AUTHORITIES AND HEALTH BOARDS

Integration plans

Section 1 – Integration plans: same local authority and Health Board area

5. Section 1 makes provision about integration plans and sets out the four models of integration from which local authorities and Health Boards are to choose for the purposes of integration planning and integrated delivery of services in accordance with the Bill.
6. Integration planning is predicated on the delegation of local authority and/or Health Board functions using one of the four models of delegation set out in subsection (4): (a) the local authority and the Health Board delegate functions to an integration joint board established as a body corporate by order by the Scottish Ministers; (b) the local authority delegates functions to the Health Board; (c) the Health Board delegates functions to a local authority, and (d) the local authority delegates functions to the Health Board and the Health Board delegates functions to the local authority.

7. By virtue of subsections (1) and (2), where the area of a local authority is the same as the area of a Health Board i.e. there is a single local authority within the Health Board area, the local authority and the Health Board are required to jointly prepare an integration plan for the area of the local authority.

8. Subsection (3) sets out what the integration plan must include. The required information is: (a) which model of integration is to be used, (b) the functions which are to be delegated in the way identified, (c) where functions are delegated to a Health Board, local authority or both, the functions of that body which are to be carried out in conjunction with the delegated functions, (the functions which may be set out in this part of the plan are described in subsection (5)), (d) a method of calculating payments which are to be made with respect to the delegated functions, and (e) any additional information that may be required by the Scottish Ministers by regulations.

9. Subsection (6) enables the Scottish Ministers to make provision in regulations about functions of local authorities and Health Boards which may, may not or must be delegated under integration plans. If no regulations are made local authorities and Health Boards will be free to choose which of their functions to delegate under the Bill. This provision will however give the Scottish Ministers flexibility to set parameters, including minimum requirements, for the delegation of functions.

10. Subsection (7), read with section 48(1)(Interpretation) defines what is meant by “Health Board” for the purposes of the Bill. Its effect is that the provisions of the Bill apply to area Health Boards only, not Special Health Boards.

Section 2 - Integration plans: two or more local authorities in Health Board area

11. Section 2 sets out integration planning requirements where more than one local authority sits within the boundary of a single Health Board area (in contrast to the requirements in section 1(2) which apply where there is a single local authority in a Health Board area).

12. By virtue of subsection (2), each local authority and the Health Board are to agree which of the alternative duties in subsections (3) and (4) they will comply with in respect of the local authority area (compliance with one or the other is mandatory). The options are for a local authority to jointly prepare an integration plan with that Health Board, for its own area only (subsection (3)), or for the local authority to join together with one or more other local authorities to, with the Health Board, jointly prepare an integration plan for the areas of those local authorities (subsection (4)). The result is that within a single Health Board area which houses more than one local authority there may be any number of single local authority plans and/or multiple local authority plans. For example, in an area with 3 local authorities there may...
be a plan for a single area plus a plan covering the other two areas; or in an area with 6 local authorities there could be a plan covering three areas, plus a plan covering two areas, plus a plan for a single area. The effect is to provide flexibility so that planning decisions can be taken on the basis of what is appropriate for the areas in question i.e. multiple local authorities, within the area of the same Health Board, can plan together, where appropriate or they may choose to plan separately.

13. Subsection (5) sets out that when preparing an integration plan, whether between an individual local authority and Health Board, or multiple local authorities and a Health Board, a local authority must (a) take into account any other integration plan that is currently or has been prepared for the same Health Board area, and (b) the potential impact on the Health Board of any plans prepared in relation to that Health Board. This provision establishes the importance of different integration plans within a single Health Board area paying due regard to their combined effect, and inter-operability, in relation, in particular, to the effective running of the Health Board.

Section 3 – Considerations in preparing integration plan

14. Section 3 requires the local authority and Health Board to consider the integration principles and the national health and wellbeing outcomes when preparing their integration plan. This provides the link with the national outcomes for health and wellbeing from the outset and underpins the purpose of integrating services, to ensure integration arrangements which embed a preventative, anticipatory and person-centred approach to the planning and delivery of services. Section 4 provides further information on integration principles and section 5 provides further information on national health and wellbeing outcomes.

Section 4 – Integration planning principles

15. Section 4 establishes the integration planning principles that must be taken into account when preparing an integration plan.

16. The effect of subsection (1)(a) is to ensure that decisions about integration of functions take account of the principle that services, for the purposes of carrying out functions that must or may be delegated, are to improve the wellbeing of users of that service.

17. Subsection (1)(b) supplements this by setting out principles for delivery which must also be taken into account in taking decisions about how functions will be integrated. The effect is to ensure a focus on integrated delivery, consideration of the needs of different individuals and different areas, local planning and leadership, anticipation and prevention, and effective use of resources.

Section 5 – Power to prescribe national outcomes

18. This section provides for the Scottish Ministers to set out in regulations, national outcomes that relate to health and wellbeing. The national outcomes will provide for improved experience of services and outcomes that services achieve. The intention is for the national
outcomes on health and wellbeing to be reflected in the Single Outcome Agreements, which the national outcomes expressed within the National Performance Framework.

19. Before doing so, the Scottish Ministers are required to consult persons set out in subsections (3) and (4). The effect of the provision is to involve the groups identified in the development of the national outcomes on health and wellbeing.

**Section 6 – Consultation**

20. Section 6 sets out consultation requirements in relation to the preparation of integration plans.

21. The local authority and Health Board, before submitting the integration plan for approval, are required to consult (a) those persons or groups of person, set out by the Scottish Ministers, by regulations, and (b) any other persons as the local authority and Health Board think fit. The consultation must be carried out jointly by the local authority and the Health Board. The local authority and Health Board are required to take account of views expressed as part of the consultation, when finalising the integration plan.

**Section 7 - Approval of integration plan**

22. This section requires a local authority and Health Board to jointly submit the integration plan to the Scottish Ministers for approval, before a date that will be set by the Scottish Ministers by regulations.

23. Subsection (5) gives Ministers a discretionary power to grant an extension for submission of a plan for approval. The Scottish Ministers may grant an extension on their own initiative or on the request of the local authority and the Health Board. Where the request comes from the local authority and the Health Board it must be made jointly and reasons must be given. The effect is to enable a plan to be accepted after the statutory deadline for submission, where there is good reason.

24. The Scottish Ministers may decide either to approve an integration plan submitted to them, or to refuse to approve it. Although any information that may be included by virtue of section 1(3)(e) does not form part of the information to be approved, it may be taken into account by Ministers in coming to their decision.

25. If the Scottish Ministers refuse to approve the submitted integration plan, the local authority and Health Board must jointly amend the plan and resubmit it for approval.

**Section 8 – Publication of integration plan**

26. Section 8 requires the local authority and Health Board to publish the approved integration plan, as soon as practicable after it has been approved.
Implementation of integration plan

Section 9 – Functions delegated to integration joint board

27. This section provides that, where the Scottish Ministers approve an integration plan which sets out that functions will be delegated to an integration joint board under section 1(4)(a), Ministers may by order establish the integration joint boards, which will have the functions specified in the integration plan delegated to it.

28. Subsection (3) provides for the functions in the integration plan to be delegated before a date set, by the Scottish Ministers, by regulations.

Section 10 – Chief officer of integration joint board

29. Section 10 requires the integration joint board to appoint a member of staff to be its chief officer. The integration joint board will not necessarily be given powers to employ its own staff. Section 11 provides for the Scottish Ministers to give the ability to joint boards to appoint staff. In the absence of an order being made under section 11 to allow for the appointment of staff, subsections (2), (3) and (4) set out the default position that the chief officer is to be seconded to it from one of its constituent local authorities or Health Board. In the event that there is a wish in future for the chief officer to be employed directly by the joint integration board, Ministers have powers to make an order under subsection (5) to enable this.

30. Subsection (4) provides that where the person to be appointed is not an existing member of staff of a local authority or Health Board by which the integration joint board was established, the person is first to be appointed to the local authority or the Health Board and then seconded to the integration joint board.

31. Subsection (6) requires the integration joint board to consult the Health Board and local authority, before appointing the chief officer of the integration joint board.

32. Subsection (7) provides for the Scottish Ministers to approve the responsibilities of the chief officer.

Section 11 – Other staff of integration joint board

33. This section provides for the Scottish Ministers, by order, to give integration joint boards the ability to appoint staff other than a chief officer and to make further provision in relation to the staffing of integration joint boards (generally or making different provision in relation to different joint boards) as the Scottish Ministers think fit, including; (a) the appointment of staff, (b) the numbers of staff, (c) the terms and conditions of staff. The Scottish Ministers may make provision for these matters to be subject to the determination, direction or agreement of any person. This allows the Scottish Ministers to permit other persons, such as integration joint boards, to decide these matters.
Section 12 – Integration joint boards: further provision

34. This section enables the Scottish Ministers to make further provision about integration joint boards.

35. Subsection (1) gives the Scottish Ministers powers to make provision by order (either generally or making different provision about different joint boards) about the membership, proceedings and general powers of integration joint boards; the supply of services or facilities to integration joint boards by a local authority or Health Board; and any other matter as the Scottish Ministers think fit in relation to the establishment or operation of integration joint boards.

36. Subsection (3) provides for the Scottish Ministers to make schemes for the transfer to an integration joint board of staff, property, rights, liabilities, or obligations of a local authority or a Health Board. This power may be exercised to support the delivery of delegated functions by the integration joint board, where that is considered appropriate.

Section 13 - Payments to integration joint boards in respect of delegated functions

37. Section 13 provides for the allocation of resources by the local authority and Health Board in relation to functions delegated by them to an integration joint board, to support the effective carrying out of the functions.

38. The duty requires payments to be made of the amount calculated in accordance with the method set out in the integration plan as approved by the Scottish Ministers.

Section 14 – Functions delegated to local authority or Health Board

39. Section 14 applies where the Scottish Ministers approve an integration plan under section 7 and that plan contains provision about the delegation of functions by a local authority to a Health Board or functions delegated by a Health Board to a local authority, or both, as the case may be, under section 1(4)(b), (c) or (d).

40. Subsection (2) requires the local authority and Health Board to set up, before a date set by the Scottish Ministers by regulations, an integration joint monitoring committee to monitor the operational delivery of the functions set out in the integration plan. It also requires that the local authority and the Health Board must delegate the functions in accordance with the integration plan before that date.

Section 15 – Transfer of staff where functions delegated to a local authority or Health Board

41. Section 15 provides that the Scottish Ministers may make provision by scheme about the transfer or secondment of staff from the body responsible for delegating the functions in the integration plan as set out in 1(4)(b), (c) or (d), to the body the functions are delegated to. This provision therefore relates to transfers to local authorities or Health Boards, as opposed transfers to integration joint boards which are dealt with by section 12(3).
Section 16 – Integration joint monitoring committees: further provision

42. Section 16 confers a power on the Scottish Ministers to make provision by order about the establishment, membership and proceedings of integration joint monitoring committees (either generally or making different provision about different committees), as well as any about any other matter relating to their operation as Ministers think fit.

Section 17 – Payments to Health Boards in respect of delegated functions

43. Section 17 requires that where a local authority delegates a function to the Health Board, in accordance with an approved integration plan, the local authority must make payment to the Health Board of an amount calculated in accordance with the method set out in the integration plan.

Section 18 – Payments to local authorities in respect of delegated functions

44. Section 18 requires that where a Health Board delegates a function to a local authority, in accordance with an approved integration plan, the Health Board must make payment to the local authority of an amount calculated in accordance with the method set out in the integration plan.

Section 19 – Transfer of staff: effect on contract of employment

45. Section 19 makes provision about the effect on an individual’s contract of employment on the transfer (or proposed transfer in the case of subsection (2)) of that individual’s employment by scheme under section 12 or 15.

46. Subsection (2) provides that where, before the day of transfer, a person who is to be transferred informs their original employer that they do not wish to transfer employment, the person’s contract of employment is terminated on the day before the day of transfer. The effect of this is that a person who does not wish to transfer does not have to do so but instead his or her contract will end immediately before the transfer would have taken place.

47. Subsection (3) sets out the effects of a transfer on an employee’s contract. In effect, the contract continues as it was before the transfer, except that the new employer takes the place of the previous employer. This means that the rights, powers, duties and liabilities of the original employer under or in connection with the contract of employment are transferred to the new employer and anything done by or in relation to the original employer in respect of the contract of employment is treated as having been done by or in relation to the new employer.

48. Subsection (4) makes provision to put beyond doubt that a person is not to be treated as being dismissed as a result of any provision of this section.

49. Subsection (5) protects any right that a person may have under general employment law to terminate their contract where there is a substantial detrimental change to his or her working conditions.
50. Subsection (6) makes clear that the change in employer as a result of the transfer of a person under this section does not constitute a substantial detrimental change to a person’s working conditions. This has the effect that the transfer of a person by scheme under section 12 or 15 cannot be considered a substantial detrimental change such as to give rise to any right protected by subsection (5).

Section 20 - Co-operation

51. Section 20 operates where two or more local authorities have joined together to prepare an integration plan under section 2(4), or there is otherwise more than one integration plan in relation to a Health Board’s area. It puts a duty on the local authorities involved and the Health Board to cooperate with each other in relation to the efficient and effective use of buildings, staff and equipment relevant to the plan or plans.

Carrying out of delegated functions

Section 21 – Effect of delegation of functions

52. Section 21 sets out the effect the delegation of functions, by one body to another, on the rights, powers, duties and liabilities of those bodies. Where a function is delegated from one body to another, the body to whom the function is delegated (referred to here as the “receiving” body) will be subject to the duties, rights and powers of the delegating body, that is the integration joint board, Health Board and/or the local authority as the case may be. This extends to duties imposed and rights and powers conferred after the function is delegated.

53. The receiving body is also entitled to enforce any rights acquired, and is liable in respect of any liabilities incurred, in the carrying out of the delegated functions. Any proceedings in relation to the enforcement of relevant rights and liabilities must be brought by or against the receiving body in its own name and not in the name of the body which has delegated the function.

54. This section, at subsection (6), also confers a power on the Scottish Ministers, by order, to require an integration joint board to exercise or not exercise a right or power, conferred by subsection (2)(b), in relation to a delegated function.

Section 22 – Further powers of persons to whom functions are delegated

55. This section (at subsection (1)(a)) enables integration joint boards to direct the local authorities or the Health Board that have delegated functions to it in accordance with an integration plan, to carry out a function on its behalf.

56. It also (at subsection (1)(b)) enables a local authority or Health Board which has had functions delegated to it in accordance with an integration plan to direct the local authority or Health Board which delegated the function to it to carry out the functions on its behalf.

57. Directions by local authorities, Health Boards and joint integration boards under subsection (1) must set out the payment or calculation method for payments to the person
directed to carry out the function. The person making the direction is required by subsection (3) to make payments accordingly.

58. A direction may also include further detail such as how the delegated functions are to be delivered operationally, or about the rights, powers, duties or liabilities of the body carrying out the function. By virtue of subsections (4) and (5), unless different provision is made in the direction about such rights, powers, duties and liabilities, section 21(2) to (5) will apply as though the person carrying out the function was the person to whom it was delegated under the integration plan.

59. Subsection (6) requires local authorities and Health Boards to comply with any direction given to them under this section.

60. Subsection (7) provides for directions made under this section to revoke or vary any earlier direction and that a direction made under subsection (1) must be made in writing.

61. Subsection (8) confers a power on the Scottish Ministers, by order, to require an integration joint board to give or not give a direction under subsection (1). This will enable the Scottish Ministers to determine whether the integration joint board carries out the delegated functions itself or to require the functions delegated to the integration joint board to be carried out on its behalf.

Strategic planning etc.

Section 23 – Requirement to prepare strategic plans

62. Section 23 requires the integration authority for the area of each local authority to prepare a strategic plan. This section sets out what a strategic plan is and the period the plan relates to. Section 39 sets out who is the integration authority for a local authority area, depending on the integration model adopted in the integration plan.

63. The integration authority can include such material as it thinks fit in the strategic plan, however there are two mandatory elements:

- A strategic plan must set out the arrangements for carrying out the integration functions (defined in section 40) in the local authority area over the period of the plan (subsection (2)(a)). The area must be divided into localities for this purpose, and the arrangements for each locality must be set out separately (subsection (3)).
- A strategic plan must also set out the way in which the arrangements for carrying out the functions are intended to achieve or contribute towards achieving the national health and wellbeing outcomes.

64. The first strategic plan of an integration authority must be prepared before a date set by the Scottish Ministers by regulations, and must cover the three year period starting with a date also to be set by the Scottish Ministers by regulations (subsection (4)).
These documents relate to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

65. Subsequent strategic plans must be prepared on an annual basis, before each anniversary of the start date of the first strategic plan, and cover a three year period beginning with the date of that anniversary (subsection (5)).

Section 24 – Considerations in preparing strategic plan

66. Section 24 requires the integration authority to take into account to the integration delivery principles (set out in section 25) and the national health and wellbeing outcomes (prescribed under section 5) in preparing a strategic plan. The effect of section 24 is to ensure the principles and national outcomes are at the heart of planning for the population and embeds a person centred approach, alongside anticipatory and preventative care planning.

Section 25 – Integration delivery principles

67. Section 25 sets out the integration delivery principles that must be taken into account in preparation of the strategic plan and in the actual carrying out of integration functions (as required by section 31).

68. The effect of subsection (1)(a) is to ensure that in making arrangements for the carrying out of integration functions, the integration authority takes account of the principle that the purpose of the services provided in pursuance of those functions is to improve the wellbeing of users of the service.

69. Subsection (1)(b) supplements this by setting out principles for delivery which must also be taken into account in making arrangements for delivery of integration functions. The effect is to ensure a focus on integrated delivery, consideration of the needs of different individuals and different areas, local planning and leadership, anticipation and prevention, and effective use of resources.

Section 26 – Establishment of consultation group

70. Section 26 puts an obligation on integration authorities to establish a consultation group for each local authority area, for the purposes of preparing the strategic plan for that area.

71. Depending on the model of integration chosen, the group must involve members nominated by the local authority or the Health Board, or both, as set out in subsection (1)(a), (b) and (c). In effect, this provides for the partners who prepared the integration plan and are party to the integrated arrangements to be involved in the development of the strategic plan. In addition, the integration authority will be required by subsection (1)(d) and (e) to involve a range of relevant stakeholders.

72. The group must also include representatives of groups prescribed by the Scottish Ministers by regulations under subsection (2) as having an interest, and other persons as the integration authority considers appropriate.

73. The integration authority is to determine the procedure of the group, and may pay members of the group expenses and allowances.
Section 27 – Steps following establishment of consultation group

74. Section 27 sets out the process for the involvement of the range of stakeholders on the consultation group in the development of the strategic plan, assuring their engagement in the process from the start.

75. The integration authority is required to prepare proposals about matters the strategic plan should contain, and consult the group on the proposals (subsection (1)) and then to prepare a first draft of the strategic plan, taking into account the views of the group expressed during the consultation. The integration authority must then consult the group on the draft (subsection (2)).

76. Taking account of the views in response to the consultation on the first draft, the integration authority is required to prepare a second draft of the strategic plan and send a copy of it for comment to persons mentioned in subsection (4), and any other persons the integration authority considers appropriate (subsection (3)).

77. The persons mentioned in subsection (4) include the local authority and the Health Board or both (depending on the model of integration chosen) as well as representatives of any groups prescribed by the Scottish Ministers under subsection (5). The effect of this is to ensure that any others with an interest will have an opportunity to comment on the draft plan.

78. Subsection (6) requires the integration authority to take into account the views obtained through consultation on the second draft of the strategic plan when finalising the strategic plan.

Section 28 – Requirement for agreement to certain strategic plans

79. Section 28 applies where a strategic plan is prepared by an integration authority that is a local authority or a Health Board.

80. It ensures that the body who has delegated functions to the integration authority is in agreement with the arrangements for delivery of those functions set out in the plan. This is achieved by duties on the integration authority to submit the finalised strategic plan for approval to the delegating Health Board, where the integration authority is a local authority; or the delegating local authority, where the integration authority is a Health Board.

81. Subsection (4) requires the integration authority to modify the plan where it is not approved and submit the modified plan for approval.

Section 29 – Publication of strategic plans

82. Section 29 places a duty on integration authorities to publish strategic plans.

83. Where the integration authority is an integration joint board or the strategic plan relates to an integration plan in which functions are delegated to both the local authority and the Health Board, the plan must be published as soon as it has been finalised. Where the integration
authority is a local authority or a Health Board and approval is required under section 28, the plan must be published as soon as it has been approved.

84. Subsection (3) requires an integration authority to publish a statement at the same time it publishes its strategic plan, which describes the consultation it undertook under section 27.

Section 30 – Significant decisions outside strategic plan: public involvement

85. Section 30 makes provision for where an integration authority plans on making a decision that would have a significant effect on the arrangements for provision of a service in pursuance of integrated functions outwith the context of the strategic planning cycle.

86. The integration authority is required to take appropriate action in order to involve and consult users or potential users of the service which is being or may be provided in relation to the decision.

Carrying out of integration functions

Section 31 – Carrying out of integration functions: general

87. Section 31 obliges integration joint boards, local authorities and Health Boards to have regard to the national health and wellbeing outcomes and the integration delivery principles set out in section 25, when carrying out an integration function. The effect is to embed the principles in delivery as well as in planning to ensure a shift towards preventative and anticipatory care and that the services delivered meet the different needs of different individuals and are ‘person centred’.

Section 32 – Carrying out of integration functions: localities

88. Section 32 requires person carrying out an integration function for the area of a local authority (which may be the local authority, the Health Board or the integration joint board depending on the integration model adopted and any directions made under section 22) to involve and consult interested persons prescribed by the Scottish Ministers by regulations where it proposes to take a decision that it considers might significantly affect the service provision in a locality of the area of the local authority.

Section 33- Integration authority: performance report

89. This section requires each integration authority to prepare and publish a performance report for each reporting year.

90. The report must set out an assessment of performance in carrying out the integrated functions during the reporting year.

91. Subsection (3) enables the Scottish Ministers to make regulations that set out the form and content of performance reports, and the period within which performance reports must be published.
92. In accordance with subsection (4) the “reporting year” is the period of one year starting on the start date set by the Scottish Ministers for the first strategic plan (under section 23(4)(b)) and each subsequent year.

*Change of integration plan*

**Section 34 – Revised integration plan**

93. This section sets out the process for varying the integration plan after it has been approved by the Scottish Ministers.

94. Any variation must be made jointly by the local authority and the Health Board and is to be achieved by the preparation of a revised integration plan.

95. Subsection (3) establishes the scope of variation that may apply to the integration plan. A revised integration plan may include further functions that are to be delegated, set out functions that are no longer to be delegated, amend the functions that are to be carried out in conjunction with the delegated functions when delegating to a Health Board only or a local authority only or to both, and make adjustments to the method of calculating payments.

96. A revised integration plan must be jointly submitted by the local authority and the Health Board to the Scottish Ministers for approval, who will set the date on which the revised integration plan will take effect.

**Section 35 – New integration plan**

97. Section 35 sets out that a local authority and Health Board must prepare a new integration plan under section 1 where they wish to change the local authorities that are party to the plan or the integration model. The new plan is subject to all the same requirements including as to consultation and the requirement for Ministerial approval as the originally prepared plan.

**Section 36 – Power to make provision in consequence of replacement of integration plan**

98. This section confers powers on the Scottish Ministers to take steps in consequence of a new integration plan approved under section 35. They are empowered to provide by order for the winding-up of any integration joint board that was established in pursuance of the original plan. They can also provide by scheme for the transfer of staff, property, rights, liabilities or obligations of an integration joint board, local authority or Health Board as may be necessary in light of the new plan.

*Supplementary*

**Section 37 – Information-sharing**

99. Section 37 allows for the disclosure of information between local authorities, Health Boards and integration joint boards for the purpose of preparing an integration plan, carrying out the functions that are delegated, the functions that are to be carried out in conjunction with delegated functions and the preparation of a strategic plan. The sharing of information for these
purposes can take place without breaching any duty of confidentiality that may be owed by a Health Board or local authority to any person.

**Section 38 – Grants to local authorities**

100. Section 38 provides for the Scottish Ministers to make grant payments to local authorities in respect of costs incurred by virtue of Part 1 of the Bill, and to set conditions in relation to grants made.

**Section 39 – Default power of Scottish Ministers**

101. Section 39 provides for the Scottish Ministers to take action where a local authority and Health Board have failed to submit an integration plan to them for approval by the deadline set under section 7.

102. In such circumstances the Scottish Ministers may require the local authority and Health Board to adopt the integration joint board model of integration and may decide the functions to be delegated to it. They may also establish the integration joint board by order, set a deadline by which the local authority and Health Board must delegate the specified functions to the integration joint board, specify payments to be made by the local authority and Health Board to the integration joint board and impose other requirements in relation to the delegated functions.

**Section 40 – Directions**

103. Section 40 confers a power on the Scottish Ministers to give directions to integration joint boards, Health Boards and local authorities.

104. Directions given to a local authority or Health Board under this section may relate to the functions conferred on them by this Bill, the carrying out of functions delegated to them in pursuance of an integration plan, and the functions to be carried out in conjunction with the delegated functions (subsections (1) and (2)).

105. Directions to an integration joint board may relate to the functions conferred on it by this Bill and the carrying out of functions delegated to it in pursuance of an integration plan (subsection (3)).

106. Integration joint boards, Health Boards and local authorities are required to comply with a direction given to them by the Scottish Ministers under this section.

107. Subsection (5) provides that directions made under this section may vary or revoke earlier directions made under this section and are to be made in writing.

**Section 41 – Guidance**

108. Section 41 requires every local authority, Health Board and integration joint board to take account of any guidance issued by the Scottish Ministers about their functions, under or in relation to the Bill.
Section 42 – Meaning of “integration authority”

109. Section 42 sets out who is the integration authority for a local authority area for the purposes of Part 1 of the Bill. This depends on the model of integration adopted, so that the integration authority is: the integration joint board, where the integration plan provides for functions to be delegated to an integration Joint Board; the Health Board, where in accordance with the integration plan functions are delegated to the Health Board only; the local authority where, in accordance with the integration plan, functions are delegated to the local authority only; or both the local authority and the Health Board acting jointly where, in accordance with the integration plan, functions are delegated to both the local authority and the Health Board.

Section 43 – Meaning of “integration functions”

110. Section 43 sets out what the integration functions for the area of a local authority are for the purposes of Part 1 of the Bill. Where the integration plan provides for functions to be delegated to an integration joint board, the integration functions are those delegated to the board in pursuance of the plan. Where the integration plan provides for functions to be delegated to either a local authority or to a Health Board or to both a local authority and a Health Board, the integration functions are those delegated in pursuance of the plan, as well as the functions specified in the plan as ones which are to be exercised in conjunction with the delegated functions.

PART 2

SHARED SERVICES

Section 44 - Shared services

111. Section 44(1) provides for the Common Services Agency for the Scottish Health Service to provide, or arrange the provision of, goods and services to the bodies listed in subsection (2). The Common Services Agency may only provide, or arrange the provision of, goods and services to those bodies with the consent of the Scottish Ministers.

112. Subsection (3) provides an illustrative list of the services which may be provided. The list comprises administrative, technical and legal services.

113. The Common Services Agency also has powers under the National Health Service (Scotland) Act 1978 (“the 1978 Act”) to provide goods and services to certain persons. For example, under section 15, the Common Services Agency may provide goods to doctors, dentists and ophthalmologists who are providing primary medical services under a contract with a Health Board. Subsection (4) sets out that the power of the Common Services Agency to provide goods and services under subsection (1) of this section sits alongside and does not compromise any other power of the Common Services Agency to provide goods or services to other persons.
Section 45 – Extension of schemes for meeting losses and liabilities of health service bodies

114. Section 45 amends section 85B of the National Health Service (Scotland) Act 1978 (the “1978 Act”) to permit local authorities and integration joint boards to participate in the scheme established under that section for the purposes of meeting losses and liabilities incurred in the exercise of relevant functions.

115. Subsection (3) inserts references into the 1978 Act, which have the effect of restricting the functions of local authorities that can be covered by a scheme made under section 85B of the 1978 Act. It restricts the functions to integration functions and to functions that a local authority carries out in accordance with a direction from an integration joint board. The Scottish Ministers are given the power to specify by order other functions of local authorities that can be covered by a scheme under section 85B of the 1978 Act “Integration functions” are defined for the purposes of this section in relation to local authorities as functions which are: delegated to the authority under an integration plan; to be carried out in conjunction with delegated functions; or to be carried out by the local authority in pursuance of a direction by a Health Board or integration joint board under section 22.

116. Subsection (4) amends the existing power in the 1978 Act so that the Scottish Ministers are not able to direct local authorities to participate in a scheme made under section 85B of the 1978 Act.

PART 3

HEALTH SERVICE: FUNCTIONS

Section 46 – Scottish Ministers: power to form companies etc.

117. Section 46 provides for amendments to section 84B (Joint ventures) of the 1978 Act. Currently, the Scottish Ministers may only form or participate in companies as defined by section 1(1) of the Companies Act 2006. The amendment permits the Scottish Ministers to form and participate in any type of body corporate. This includes limited liability partnerships and Scottish Charitable Incorporated Organisations.

Section 47 – Health Boards: carrying out of functions

118. Section 47 amends the 1978 Act to permit Health Boards to exercise any function of another Health Board where the other Health Board and the Scottish Ministers give their consent.

PART 4

GENERAL

Section 48 – Interpretation

119. Section 48 provides various definitions that apply to this Act.
Section 49 - Subordinate legislation

120. The Bill contains various powers for the Scottish Ministers to make regulations and orders. This section makes further provision about regulations and orders under the Bill in particular enabling them to make different provision for different purposes, and to include supplementary, incidental, consequential, transitional or transitory provision. It also provides that regulations under section 5(1) and any order under section 50 which amends the text of another Act is subject to the affirmative procedure. Other regulations and orders under the Bill are subject to the negative procedure.

Section 50 - Ancillary provision

121. This section provides powers for the Scottish Ministers to make supplementary, incidental or consequential provision by order, as they consider appropriate for the purposes of, or in connection with, or for the purposes of giving full effect to, any provision made by, or by virtue of, this Act. Such an order may also make such transitional, transitory or savings provision as the Scottish Ministers consider appropriate for the purposes of, or in connection with, the coming into force of any provision.

Section 51 – Repeals

122. Subsection (1) and (3) repeal sections 4A and 4B of the National Health Service (Scotland) Act 1978 (c.29) and section 2 of the National Health Service Reform (Scotland) Act 2004 (asp 7), thereby removing Community Health Partnerships from statute.

123. Subsection (2) repeals sections 15 to 17 of the Community Care and Health (Scotland) Act 2002 (asp5) which provide the current mechanism for Health Boards and local authorities to delegate functions and make payments in relation to those functions, and for the transfer of staff in relation to the delegated functions.

124. Subsection (4) repeals section 20 of the Social Care (Self-directed Support) (Scotland) Act 2013 (asp1) which amends section 15 of the Community Care and Health (Scotland) Act 2002 (which is itself repealed by subsection (2)).

Section 52 – Commencement

125. Section 52 establishes that sections 49, 50, 52 and 53 of the Bill come into force on the day after Royal Assent. Powers are conferred on the Scottish Ministers to commence the other provisions of the Act on dates appointed by order and to make transitory, transitional or savings provisions in connection with commencement.

Section 53 – Short title

126. Section 53 states that the short title of this Act is the Public Bodies (Joint Working) (Scotland) Act 2014.
FINANCIAL MEMORANDUM

INTRODUCTION

1. This document relates to the Public Bodies (Joint Working) (Scotland) Bill introduced in the Scottish Parliament on 28 May 2013. It has been prepared by the Scottish Government to satisfy Rule 9.3.2 of the Parliament’s Standing Orders. It does not form part of the Bill and has not been endorsed by the Parliament.

2. The purpose of this Financial Memorandum is to set out:
   • the best estimates of the administrative, compliance and other costs to which the provisions of the Bill will give rise, as well as likely efficiency savings;
   • the best estimates of the timescales over which the costs and savings are expected to arise; and
   • an indication of the margins of uncertainty in these estimates.

3. The Bill sets out different models for Health Boards and local authorities to integrate health and social care services. The Financial Memorandum summarises the cost implications of each model.

4. The Bill provides the framework which will support improvement of the quality and consistency of health and social care services through the integration of health and social care in Scotland. This framework permits integration of other local authority services with health services. The Scottish Ministers intend to use the framework to integrate adult health and social care services as a minimum, and for statutory partners to decide locally whether to include other functions in their integrated arrangements. The Financial Memorandum, therefore, only gives consideration to costs in relation to integration of adult health and social care functions.

5. The Financial Memorandum draws upon a variety of evidence sources to present general modelling of the costs of the different models of integration for which the Bill provides. It does not provide a blueprint for how individual Health Boards and local authorities will integrate adult health and social care locally. Minimum functions that must be included in local integrated arrangements will be prescribed in regulations and statutory guidance.

6. The Financial Memorandum is structured as follows:

   Part One
   Cost implications to the Scottish Government from provisions in the Bill:
   Transitional costs

   Part Two
   2.1 Recurrent cost implications to Health Boards and local authorities from provisions in Part 1 of the Bill
2.2 Cost implications to Health Boards and local authorities from provisions in Part 2 of the Bill

2.3 Cost implications to Health Boards and local authorities from provisions in Part 3 of the Bill

2.4 Consequential cost implications to Health Boards and local authorities from provisions in Part 1 of the Bill

Part Three
Cost implications to other Public Bodies from provisions in the Bill

Part Four
Consequential cost implications to other bodies, individuals and businesses from provisions in the Bill.

7. The following terms are used in this Financial Memorandum:

- **Community Health Partnerships (CHPs)**, as constituted under the NHS Reform (Scotland) Act 2004 and The Community Health Partnership (Scotland) Regulations 2004. Two forms of CHP have evolved, as follows: a health only structure, and a health structure that incorporates aspects of social care alongside health. For the purposes of this Financial Memorandum, the term “Community Health Partnership” refers to both types of structure.

- **Section 33 bodies**, which are bodies identified by that section in the Value Added Tax Act 1994 that are funded by local taxation and are able to reclaim, except for minor exceptions, all of the VAT they incur in the purchasing of goods and services. Local authorities have section 33 VAT status.

- **Section 41 bodies**, which are bodies identified by that section in the Value Added Tax Act 1994 that are able to reclaim VAT on certain services. Health Boards have section 41 VAT status.

**BACKGROUND**

**Summary of Health Board and local authority health and social care expenditure**

8. The policy intention of the Scottish Ministers is to prescribe in regulations that adult health and social care functions must be integrated as a minimum. The following material provides information by way of context for expenditure in this area and with regard to the financial challenges that Health Boards and local authorities face in relation to health and social care services for adults.

9. In 2011/12, estimated total expenditure by Health Boards on the provision of services for adults was almost £9bn. Table 1 sets out the spend by category of care.
Table 1: Health Board expenditure by sector, £m, 2011/12.

10. The figures in Table 1 include £332m of resources transferred to local authorities in 2011-12 to fund jointly planned community care services, which have resulted in long-stay hospital closures and bed reductions over the last 20 years.

11. In 2011/12, net expenditure by local authorities on adult social care was £2.1bn, 43% of which was spent on residential care.

(Source: Annex A Scottish Local Government Finance Statistics 2011/12\(^2\)).

12. These are figures net of the resource transfer received from Health Boards noted above and also income received from charging, which was £43m for adults.

13. In 2010/11, nearly two thirds of health and social care expenditure on people aged 75+ was accounted for by spending on care delivered in institutional settings (care homes and hospitals). Emergency admissions to hospital accounted for nearly 70% of total hospital expenditure for people aged 75+, equating to one third of total health and social care expenditure on this age group – approximately £900m. The cost of all inpatient and day cases (planned and unplanned) for people aged 75+ was £1,200m, which represents 44% of total expenditure on occupied bed days in hospital.

14. The number of people whose discharge from hospital is delayed, once their clinical care is complete, and the length of time for which they are delayed, are symptoms of disjointed care pathways. In the nine months to December 2012, the number of occupied bed days accounted for by delayed discharge totalled 366,311, suggesting an annual total of 488,000 days. This is

---

\(^1\) SG ASD analysis of information provided in Executive Summary 100, [http://www.isdscotland.org/Health-Topics/Finance/Publications/2012-11-27/Costs_R100_2012.xls](http://www.isdscotland.org/Health-Topics/Finance/Publications/2012-11-27/Costs_R100_2012.xls)

\(^2\) [http://www.scotland.gov.uk/Publications/2013/02/4659 - Annex A](http://www.scotland.gov.uk/Publications/2013/02/4659 - Annex A)
equivalent to 44 hospital wards, an estimated fully absorbed cost to the NHS of £120m, and a direct cost estimated at £88m. Most people affected by delayed discharge are older people.

15. As of 31 March 2012, there were 916 care homes in Scotland for older people. Despite increases in the numbers of older people in the population, the total care home population has been relatively stable for the past decade because of the Scottish Government’s policies to enable more vulnerable people to be cared for at home.

16. Over the same period, a trend has emerged in the number of local authority funded elderly care home residents reducing annually by around 2%. This is due to an overall decrease in the number of placements in residential care, resulting from policy aims to provide more care at home, and is also a result of a growing proportion of self-funders in care homes. The current average contribution to care home fees from clients recently increased to £144 per week; based on the average national contract (2012/13 rate) of £527, the current average local authority contribution per resident is £383.

17. Expenditure on health and social care services is projected to increase, both because of demographic change – more people living for longer – and because more people are living with multiple co-morbidities. The Registrar General has projected that the number of people in Scotland aged over 75 will grow by around 10,000 every year, over the decade ahead. Changes in demography will vary in scale, depending on location. Around one quarter of Scotland’s population will be aged 65 and over by 2033; for some of our more rural areas the proportion is predicted to rise to nearly one third.

18. The Finance Committee\(^3\) noted that, taking current patterns of utilisation of health and social care services as a starting point, demand for health and social care could increase by between 18.4% and 28.7% between 2010 and 2030, depending on the trajectory of healthy life expectancy. These estimates do not take account of increased numbers of adults with learning or physical disabilities due to improvements in life expectancy at all ages\(^4\).

**Integrated care**

19. Reform needs to deliver care that is better joined up and delivers better outcomes for patients, service users and carers, wherever they live. By improving the continuity and person-focus of care, some efficiencies may be achievable where it is possible to deliver care within the community setting rather than an institutional setting. Any such efficiencies must be taken within the context of the overall growing population of people with multiple support needs.

20. As noted above, the challenge and associated opportunities for improvement are particularly relevant to the provision of care and support for older people, a growing group within the population, who are frequently admitted to expensive institutional care – hospitals and

---

care homes – for long periods, when a package of support in the community might have served their needs better, with better outcomes and at equal or lower cost per person.

21. Evidence from the UK\(^5\) and further afield, shows that better outcomes for people, better use of resources (money and people’s time) and better experience of care can all flow when services are planned and delivered in an effectively integrated way – between GPs, hospitals and community based health and social care teams. Integration of health and social care will enable partners to redesign services and use resources across sectors differently to shift the balance of care away from reactive institutional based care to preventive and community based care that better meets the needs of adults with complex needs\(^6\).

22. Despite the presence of some confounding factors, an initial comparison of unplanned bed days for people aged 75+ between Torbay Care Trust, (one of the most successful examples of integration in England\(^7\)) and Scottish partnerships shows that the levels achieved in Torbay are lower than those in Scotland\(^8\).

23. It is possible to estimate some of the potential efficiencies that may be achieved through integration, as described below:

**Delayed discharge**

24. Delayed discharge occurs when patients are unnecessarily delayed in a hospital setting when their needs could more appropriately be met in the community. Reducing delayed discharge therefore provides both a better outcome for the individual and a reduced cost to the public purse.

25. Local authorities and Health Boards have worked hard over the last 10 years to reduce unnecessary delays in getting people out of hospital. However, progress has been more difficult in recent years, as can be seen in chart 1 below.

---

\(^8\) ISD Comparison of Occupied Bed Days for 65+, 75+ and 85+ between Scottish partnerships and Torbay Care Trust. Unpublished analysis. ISD can provide this information on request: [http://www.isdscotland.org/](http://www.isdscotland.org/)
Chart 1: NHS Delayed Discharges by length of delay (excluding code 9s (complex cases) and delays of 3 days or less): Scotland; Historical Trend April 2001 to January 2013

26. It is projected that 488,000 bed days will be used in 2012/13 by patients awaiting discharge from hospital. Delayed discharge happens for a variety of reasons. ISD published data shows that 96% of delayed patients were delayed for reasons of community care assessment or community care arrangements. Health Boards and local authorities will be required to ensure that the maximum delay is no longer than 14 days by April 2015; requirements on Health Boards and local authorities to put in place strategic planning arrangements will enable better allocation of resources to achieve this target. The public expenditure implications of moving to a 14 day limit on delays can be estimated by comparing the current cost of service provision with the costs of alternative (more appropriate) community based health and social care services.

27. For this estimate, the bed days used by delayed patients (excluding those who are complex cases) were converted into bed weeks. For the baseline expenditure the bed weeks used by delayed discharge patients were costed at an adjusted cost per bed day, and for the projected expenditure post integration, those bed weeks were costed at a weighted average rate of residential care, home care, and care at home. These estimates suggest that reducing delayed discharge by reallocating expenditure from hospital to community based health and social care to

---

facilitate timely departure from hospital and provide alternatives to admission to hospital, could generate potential efficiencies of around £22m per annum for a maximum 14 day delay. If partnerships wish to be more ambitious and move beyond the target, a further £41m of potential efficiencies may be generated for a 72 hour limit for delays.

**Anticipatory care plans**

28. Anticipatory care plans (ACP) are produced for an identified population, which has been assessed as at risk of admission to hospital, using a risk assessment tool. The benefit of the plan is that it allows individuals who are at risk of unplanned admission to have a plan for their care that will help to avoid unnecessary admission to hospital. Effective anticipatory care planning depends on two factors: accurate identification of people at risk of admission, and deployment of an integrated multi-disciplinary team working with the care group to plan their care. Many unplanned admissions to hospital for older people would be avoidable if alternative care options were available to local care professionals, patients and carers. This is desirable because unnecessary time spent in hospital by older people can lead to rapidly diminishing life skills and further avoidable institutional care. It is expensive, both in terms of the human cost of accelerating dependence and diminishing independence, and in financial terms.

29. The potential implications of anticipatory care plans for the cost of health and social care in Scotland have been estimated based on the findings of the Nairn study. By extrapolating the results to a Scotland-wide level using an estimate of the potential number of patients with similar risk characteristics as were included in the Nairn study, it is estimated that potential efficiencies of approximately £12m may be generated.

**Reducing variation**

30. There is variation in per capita expenditure on health and social care across partnerships. For healthcare, the variation cannot be explained by differences in need across partnership populations or in input costs and may be due to inefficiencies. For adult social care expenditure, the picture is less clear and we are unable to determine whether the variation is due to differences in local democratic decisions, input costs, prevalence of unpaid care, the relative size of the voluntary sector or inefficiencies. Furthermore, some of the variation in per capita expenditure by one partner may be required to compensate for variation in per capita expenditure by the other partner.

31. The requirement on Health Boards and local authorities to delegate resources to the integration joint board or the lead agency, will highlight the extent of variation and will enable them to understand more clearly the underlying causes. Over time, it is anticipated that Health Boards and local authorities may respond to greater clarity regarding variation in their allocations to the integration joint board or the lead agency by moving to a more equitable allocation of resources to partnerships thereby driving efficiencies in their use of integrated

---

resources. Such an effect would probably be most immediately apparent in those partnerships within the same Health Board area, where local comparisons will most readily be made. In the longer term such an effect could be observed across Scotland, particularly if there is an appetite for benchmarking and sharing good practice.

32. The potential for efficiencies from reducing variation in allocations to partnerships with the same Health Boards has been estimated by comparing the expenditure per person between partnerships. Due to the confounders for variation in per capita social care expenditure noted above, this estimate is limited to the variation in costs per head for healthcare expenditure.

33. The costs per head are adjusted for local population need, using the resource allocation formula weightings, to ensure that it does not include variation that is driven by differences in local population need. If costs per head in the higher cost partnerships are reduced to the average cost per head for the partnerships with the relevant Health Board, this could generate potential efficiencies of around £104m per annum.

34. The Bill will enable Health Boards and local authorities to plan and deliver holistic integrated health and social care services and to improve efficiency in allocation and utilisation of their joint resources. In summary, it is estimated that the potential efficiencies for partnerships from the combined effect of Anticipatory Care Plans, reducing Delayed Discharge and reducing variation, to be between £138m and £157m. These potential efficiencies should be considered in the context of the scale of the projected increase in expenditure attributable to demographic change, noted in paragraph 17, and will need to be reinvested within the partnerships in order to help meet demand.

35. It is important to note that there is considerable uncertainty around these estimates and the eventual outcome and phasing will be dependent on local decisions taken by partners on resource allocation and utilisation through their strategic plans. Nevertheless, these estimates provide a reasonable indication of the potential scale of efficiencies. Any actual realisation of efficiencies from reduced demand for care in institutional settings will be contingent on the scale of the planned change and on cost behaviour, i.e., how costs are affected by a change in an organisation’s volume and pattern of activity.

36. All of these factors will need to be taken into account by integration authorities in developing their strategic plans and this level of understanding will be important if partnerships are to maximise the value of their integrated resources in addressing the demographic challenges over the longer term.

PART ONE

COST IMPLICATIONS TO THE SCOTTISH GOVERNMENT FROM PROVISIONS IN THE BILL: TRANSITIONAL COSTS

37. The Bill sets out a number of key provisions described further in the Explanatory Notes. Table 3 summarises transitional non-recurrent costs to the Scottish Government associated with Bill implementation:
### Table 3 - Summary of Scottish Government investment (£m)

38. The following sections provide further information on the costs listed above.

**Transition team**

39. In NHS Highland (and also in Torbay Care Trust and North East Lincolnshire Care Trust, which have established similar arrangements) a transition team was set up for the purpose of leading and overseeing the transition arrangement in moving to a delegation between partners model of integration. NHS Highland delegated functions in relation to children’s community
health services to Highland Council and Highland Council delegated functions relating to adult social care services to NHS Highland.

40. The Highland Partnership, between NHS Highland and Highland Council, in taking forward the delegation between partners model of integration, received £450k from the Scottish Government, over the period 2010-2012 to support a programme of change management necessary to achieve the model of integration permissible within the current legislation and the specifications of their integration plan.

41. For the purpose of the estimates of the potential costs of transition, the costs of the Highland transition team have been used. These have been adjusted to exclude the sums that relate to the children’s services aspect of the Highland arrangements. In addition, Highland were able to prioritise existing resources to carry out some of these tasks so that some of the costs were opportunity costs. There is uncertainty whether this could be replicated in other partnerships and this is reflected in the scenarios considered at paragraph 45.

42. There are also likely to be economies of scale in cases where Health Boards are developing partnerships with more than one local authority, and this has also been considered in the estimates.

43. The scale and volume of the transition tasks noted above is different for the two main models of integration permitted in the Bill, delegation to a body corporate and delegation between partners; the second model can operate in a number of ways, as described in the Bill. The volume of transition tasks required for delegation between partners, especially in the cases where provision of services is delegated and staff are transferred, being greater than for delegation to a body corporate or delegation between partners, with no staff transfers. The Bill sets out that partnership arrangements will be formed between one local authority and one Health Board and provides for flexibility for more than one local authority to join together to form partnership arrangements with the same Health Board.

44. Given that the costs of transition are contingent on whether partners choose delegation to a body corporate or delegation between partners and the extent that they are able to offset some of the costs through prioritising existing capacity and through economies of scale for multiple partner Boards, a range for the potential total transition cost is possible. In order to provide an overview of this potential, a number of scenarios are set out below, each of which have different assumptions regarding the main variables. Note that in considering scenarios, the likely case is based on the assumption that all partners, with the exception of Highland, will opt for delegation to a body corporate; this reflects feedback on the preference of partnerships between the two main models.

45. Three scenarios have been considered, each of which is based on the Bill receiving Royal Assent and commencement of provisions to establish partnership arrangements being enacted in the financial year 2014/15:

- A prudent likely case, where all partnerships (except Highland) opt for delegation to a body corporate and are able to realise economies of scale. Under this scenario the
These documents relate to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

non-recurrent cost of establishing transition arrangements will be £9.8m, with £7.4m incurred in 2014/15 and the balance in 2015/16;

- A lowest cost case where all partnerships opt for delegation to a body corporate and are able to realise opportunity costs and economies of scale. Under the second scenario the non-recurrent cost of establishing transition arrangements will be £6.4m with £4.8m incurred in 2014/15 and the balance in 2015/16;

- A highest cost case, where all partnerships opt for delegation between partners and do not achieve opportunity costs or economies of scale. This scenario would require £22.6m, with £16.9m in 2014/15 and the balance in 2015/16.

Displacement of staff in Community Health Partnership roles

46. There are a number of roles, as described above, which support the current arrangements in Community Health Partnerships. Some staff employed by Health Boards will be displaced with the removal of Community Health Partnerships. In addition, there are staff employed by local authorities who carry out similar roles in respect of adult social care services that are currently aligned with Community Health Partnerships. It is reasonable to assume that most of these will be transferred to posts in support of the new partnership arrangements. The possible exception to this may be staff currently occupying Community Health Partnership Director/General Manager posts, who may or may not be in competition for the new chief officer post in those partnerships which choose the body corporate model of integration.

47. It is acknowledged that local authorities have committees established to provide governance, with responsibility for delivery arrangements for social care services, including adult social care functions. The Bill does not prescribe the removal of such committees; however, it is reasonable to expect that some of these arrangements may no longer be necessary given the proposed responsibilities of the partnership arrangements (integration joint board or lead agency). In any case, it would be for individual local authorities to determine, and therefore no costs have been included.

48. There are currently 25.6 WTE Community Health Partnerships leadership posts in Scotland (and 28 post holders) at a recurrent annual cost of £2.6m. Health Boards will offer a range of options to displaced staff in leadership posts including voluntary redundancy terms. If such options are not accepted by the individuals involved, they will be enrolled in Health Board re-deployment registers on protected salaries. It should be noted that in the event of the latter, the non-recurrent cost of the protected salary of these staff may be incurred for several years until the individual gives notice or a suitable vacancy arises.

49. The specific criteria and guidance for the recruitment and appointment of chief officer posts is being developed jointly by the Scottish Government and relevant stakeholders. The cost of displaced staff will vary depending on the proportion that are successful in applications for chief officer posts and also on whether displaced staff accept voluntary redundancy or move to the redeployment register; and so a potential range exists for the cost of displacement. To illustrate this potential range three scenarios are set out below. Two are at the extremes in which either all the displaced Community Health Partnership leadership staff are appointed to the new chief officer posts or none are appointed; and one in which half of the staff are appointed to the posts.
50. No estimates are made for any displaced local authority staff as the Bill does not prescribe the removal of any local authority post and, in any case, it will be for individual local authorities to determine such matters. The Bill will not remove the requirement for existing local authority or Health Board statutory posts with the exception of Community Health Partnerships director posts.

51. For the purposes of this estimate, it has been assumed that half of the displaced staff accept voluntary redundancy, and half move on to redeployment registers for a period of three years:

- If all of the 28 displaced Community Health Partnership leadership staff that move to redeployment are successful in securing the post of chief officer, then there will be no non-recurrent cost incurred.
- If none of the 28 displaced Community Health Partnership leadership staff that move to redeployment are successful in securing the post of chief officer, the non-recurrent cost would be £3.5m incurred in 2014/15 and £1.3m incurred in each year thereafter until 2016/17.
- If half of the 28 displaced Community Health Partnership leadership staff that move to redeployment are successful in securing the post of chief officer, the non-recurrent cost would be £1.8m incurred in 2014/15 and £0.7m incurred in each year until 2016/17.

**Strategic workforce and organisational development**

52. The duties placed on statutory partners by the proposals will require a sustained and integrated approach by partners to organisational and professional/management development, in addition to effective, on-going education and training for a wide range of staff groups.

53. Support will be necessary at all levels in the new partnerships, including the establishment of new integration joint boards, or integration joint monitoring committees, through to education and training for frontline practitioners, working in new ways to support service users. Supporting partnerships to understand and build the conditions for change and improvement will be necessary for sustained success in delivering better outcomes for people and communities. Statutory partners will need to ensure that their organisational development plans reflect the integration agenda and offer a comprehensive, systematic and practical approach to improving individual and organisational effectiveness. This shared endeavour will be necessary to support the culture change that will be required to underpin greater multi-disciplinary and multi-agency joint working and to reflect the move towards a greater community focus for service planning and delivery.

54. Significant support for professionals and staff is already available locally and via a range of innovative national programmes of work delivered by NHS Education Scotland and Scottish Social Services Council, as part of the Scottish Government’s Reshaping Care of Older People Programme, e.g. dementia and palliative care training. Locally, Community Health Partnerships are continuing to develop their workforce to enable delivery of local Change Fund Plans for Older People, supported by a range of improvement bodies to support care pathway development and joint working with third and independent sector partners.
55. Support for leadership development will also be important; for Health Board and local authority Chief Executives, the new arrangements will change their relationship and they will be jointly and equally accountable for the delivery of agreed national outcomes; the role of the chief officers will require a high level of skill, expertise and experience and the ability to lead change and system wide improvement in a highly complex working environment. More widely, professional leadership will be essential to create the right conditions for the development of a flexible and adaptive workforce, particularly in the context of locality planning.

56. An organisational development programme that integrates the existing partnership organisational development capacity with national support will be required to provide:

- Integration joint board and integration joint monitoring committees development sessions, including work locally on the development of a shared set of values, purpose and vision for the Board and its members;
- Development sessions for Health Board non-executive directors and local authority elected members;
- Supporting the development of skills and behaviours needed for the chief officer posts;
- Targeted programme of support for Health Board and local authority chief executives and chief officers;
- The Scottish Government will work with national partners via public sector leaders forum to support development for key groups of staff and professional;
- Development support for senior professional teams, including GPs and Chief Social Work Officers to lead change within localities and as part of the strategic commissioning process locally;
- Support for staff working in non-statutory organisations.

57. The Scottish Government is working with stakeholders through the Workforce Development Strategic Group to support developments in workforce and organisation development and model approaches to collaborative working, which will support the effective integration of health and social care and locality planning arrangements. The Scottish Government has provided £85k in 2012-13 to support this work and anticipates providing further funding of £1m in 2013-14 and £0.685m in 2014-15 to support implementation of the Bill.

VAT

58. Health Boards and/or local authorities will be required to delegate resources and functions, under delegation between partners arrangements, to the host organisation, that is the partner that will be responsible for the delivery and management of functions on behalf of the other partner, or to the body corporate. Health Boards and local authorities will incur a number of non-recurrent and recurrent costs associated with financial governance of the delegated functions and resources.

13http://www.scotland.gov.uk/Topics/Health/Policy/Adult-Health-SocialCare-Integration/WorkforceDevelopmentGroup
59. Different VAT arrangements pertain in Health Boards and local authorities. Health Boards are section 41 bodies (VAT Act 1994) for VAT purposes, such that they can only reclaim VAT on certain specified services. In contrast, local authorities are section 33 bodies (VAT Act 1994) and, with a few minor exceptions, have full VAT recovery. The different VAT status of the partners complicates the recovery of VAT on goods and services purchased through the resources in an integrated budget and this introduces risks for recurrent resources. This is considered in detail in the recurrent costs section below. There is existing HM Revenue and Customs (HMRC) guidance for the delegation between partners model, and the Scottish Government will work with HMRC to tailor this to the Scottish context and to develop new guidance for the delegation to a body corporate model. Professional advisors have been appointed by Scottish Government at a non-recurrent cost of £35k.

60. In addition, each partnership will have to obtain agreement from HM Revenue and Customs on a case-by-case basis, which will involve preparation of financial statements. Based on experience in Highland, this will be marginal and is covered by the non-recurrent transitional costs outlined above. There will be a cost to HM Revenue and Customs for the process of application and approval of the integrated VAT arrangements for each partnership. Scottish Government officials are working with HM Revenue and Customs on these matters.

**Strategic planning**

61. Investment is required in Health Boards and local authorities to ensure that strategic planning is taken forward with maximum effectiveness. This issue has been recognised for some time and a programme of development has been established. A Local Learning Development Framework has been produced by the Institute of Public Care (IPC). Building on that, the Scottish Government is working with IPC and the Joint Improvement Team (JIT) to develop an accredited course on strategic commissioning, aimed at the statutory, independent and third sectors. This will cost £100k over two years. In addition, the JIT is undertaking a two year national improvement and support programme, working directly with local partnerships at a cost of £150k a year for two years from 2013/14.

**Support to the third sector**

62. It is intended, through secondary legislation, that integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. The Scottish Government recognise the key role non-statutory, not-for profit providers of health and social care services play in the provision of care, working in partnership with statutory partners. It is expected that there will be a degree of overlap between these activities and those currently required for third sector participation in community planning and in developing change fund commissioning plans.

63. However, initial scoping work with third sector partners has identified a number of levels at which additional resources might be required to ensure sufficient knowledge and capacity to enable third sector partners to fully participate. These include:

- Strategic involvement at integration joint board and integration joint monitoring committee level;
• Bringing together and contributing on a co-production basis, the full extent of the third sector’s knowledge, expertise, and information, both in relation to communities and the sector itself, to strategic commissioning and locality planning; and

• Development of local capacity, including workforce development, partnership working and facilitation, to ensure a focus on prevention and upstream interventions, essential to delivering the full benefits of health and social care integration.

64. Scottish Government officials, with third sector partners, are scoping out a range of these estimated costs, which will be attributable to statutory partners. However, it is also anticipated that, in addition, some initial transitional cost for this function will be provided by the Scottish Government as part of the transitional costs to third sector partners in the partnership. Transitional costs of £360k will be made available to the third sector over 2013/14 and 2014/15 to support a national partnership initiative which will aid local change work. This will be alongside and complement local discussions between the third sector and statutory partners about how other transitional support available locally is utilised, including support to the sector locally. Third sector partners will also be expected to consider efficient and effective use of current resources and funding streams to enhance their capability and capacity.

Other financial governance

65. Delegating resources in a delegation between partners model to create the integrated budget in the host partner will require changes to financial recording and reporting in both partners, as well as preparation of the statements in support of the integrated budget and development of the finance sections of the integration plan. In addition, in the delegation to a body corporate model, Financial Procedure Notes and Standing Orders will need to be developed in the new bodies. The non-recurrent costs associated with this are based on the Highland experience and are included in the transition costs to the Scottish Government noted above.

Capital and assets

66. There are likely to be non-recurrent costs associated with carrying out due diligence reviews on assets and liabilities transferred to the host partner in the delegation between partners model. The estimate for these, based on the Highland experience, is included in the transition costs noted above. Under delegation to a body corporate, it is not intended that the new bodies will own capital assets, so there is no need to provide for costs associated with carrying out due diligence reviews on transferred assets and liabilities as is the case for delegation between partners model. This will result in a small reduction in the cost required for the transition team, but this will be offset by the small additional cost required for developing the Standing Orders etc. for the new body.

Health and social care activity information

67. To provide partnerships with information for developing their strategic plans and to inform performance management, a linked patient/client level health and social care dataset and information system will be required. It is likely to be more efficient that this be developed as a national solution by Information Services Division and for partnerships to access their data.
remotely. Non-recurrent estimates for the development of this, based on a preliminary assessment by ISD, are £250k in 2013/14 and £500k in 2014/15.

Summary - overall transitional costs to the Scottish Government

68. The Scottish Government will provide approximately £16.7m, which will be available to Health Boards and local authorities as partners in integration joint boards or lead agency arrangements, on a proportional basis for transitional costs, to implement the organisational development and other change management functions necessary, as set out above, to meet the requirements set out in the Bill. In moving to these arrangements, it is reasonable to assume that Health Boards and local authorities will realise opportunity costs, which will be expected to be used to support transitional arrangements.

PART TWO

2.1 – RECURRENT COST IMPLICATIONS TO HEALTH BOARDS AND LOCAL AUTHORITIES FROM PROVISIONS IN PART 1 OF THE BILL

Table 4 provides a summary of the recurrent costs to Health Boards and local authorities associated with delegation between partner model of integration set out in the Bill.

**Establishment of an integration joint board or integration joint monitoring committee**

69. The partnership will be required to establish a joint board or joint committee, depending on the model of integration used, and its membership will be determined by the Health Board and local authority that are partners in the partnership arrangements within the requirements of the legislation. The cost implications to establish and maintain the joint boards or joint committees are immaterial as they will be mitigated by the removal of Community Health Partnership committees.

**Appointment of a chief officer in a body corporate model**

70. The Bill requires the appointment of a chief officer, where partners delegate functions and resources to the integration joint board within the body corporate model of integration. The chief officer will be responsible for the effective management of the integrated budget to deliver the services set out in the integration plan in order to achieve the nationally agreed outcomes via the strategic plan.

71. It is anticipated that the recurrent cost of a chief officer in each partnership that chooses to integrate via the delegation to a body corporate model of integration will be a maximum of £3.5m p.a. if all partnerships adopt this model; this estimate is based on 30 Whole Time
Equivalent (WTE) posts. This cost will be offset by the existing resource incurred by Health Board and local authority partners used to fund CHP general managers of £2.6m p.a., giving a maximum net additional cost of £900k p.a.. Approximately half of this cost is attributable to increasing the number of WTEs from 23.6 to 30 and the balance is attributable to the likely increased grading of the chief officer posts compared to Community Health Partnership general managers. The Scottish Government will provide guidance to support Partners on the appointment of the chief officer.

Other roles in the partnership

There are other recurrent costs associated with Community Health Partnerships, such as clinical leadership, financial management, HR support and administration functions, which will be required by the new partnerships and, therefore, the changes under the Bill are assumed to be cost neutral.

VAT

The different VAT status of the statutory partners complicates the recovery of VAT on goods and services under integrated arrangements, which introduces a risk that VAT currently recovered may not be possible post integration. The extent of potential exposure for this risk is a recurrent cost of £32m p.a. based on the estimated total VAT recovered by local authorities for adult social care services.

The VAT implications for integration are contingent on whether partners opt for delegation between partners or delegation to a body corporate.

VAT: delegation between partners

The VAT regime of the host partner in the delegation between partners model will apply to the integrated budget and this introduces a risk of additional recurrent costs in cases where local authority functions are delegated to Health Boards and VAT previously recovered by local authorities is no longer able to be recovered under NHS arrangements.

This risk is mitigated by establishing arrangements under existing HMRC guidance for delegation between partners, which allows a solution for partnerships that is VAT neutral compared to the pre-partnership position. The experience of the Care Trusts in Torbay and North East Lincolnshire, both of which took advantage of the solution in the guidance, was a VAT neutral outcome. Highland Partnership are also following this approach and, although its position is not yet finalised with HMRC, it expects a VAT neutral outcome also. The likely position, therefore, is that there will be no additional cost under the new arrangements for VAT.

VAT: delegation to a body corporate

Unlike with the delegation between partners model, where HMRC guidance allows a VAT neutral solution, there is no guidance available for this model. Consequently, there is a risk that VAT currently reclaimed by local authorities is no longer able to be recovered under the VAT arrangements in the body corporate. However, Scottish Government appointed VAT advisors have indicated that the key factor in determining recovery of VAT in this model will be
the extent to which the body corporate delivers services, and that the proposed arrangements are likely to be interpreted by HMRC as the body corporate re-allocating the integrated budget and for delivery by Boards and local authorities; consequently, it is likely that a VAT neutral position is attainable.

78. Note that should the Scottish Ministers extend, at a future juncture, the remit of the body corporate to be allowed to take advantage of employment and contracting powers, then there is a risk that HMRC will revise their view and conclude that the body corporate is in fact providing services. Under this contingency, the VAT status of the body corporate is less clear and the recovery of VAT is at risk. The full extent of potential exposure for this risk is a recurrent cost of £32m p.a. based on the estimated total VAT recovered by local authorities for adult social care services.

79. The Scottish Government is working with its advisors and HMRC to develop new guidance for the delegation to a body corporate model, based on the same principal of VAT neutrality that informs the guidance for delegation between partners. The likely position, therefore, is that there will be no additional cost under the new arrangements for VAT.

Other financial governance

80. In cases where staff and functions are transferred between partners, there is a transfer of risk to the host partner with an associated cost of indemnity to the host partner. Under the body corporate model, it is not intended for the integration joint board to employ staff or provide services, so that there will be no staff transferred to the new body and no associated transfer of risk and need for indemnity.

81. Nevertheless, staff transfers between partners may result from the subsequent commissioning decisions of the partnership, in which case the issues noted above for delegation between partners would apply. Under current arrangements, host partners would be required to obtain cover for risks arising from delegated staff and functions from the market and this may be material, particularly in cases of local authorities hosting health functions.

82. Part two of the Bill makes provision to extend the scope of the CNORIS clinical and other risks self-assurance scheme to allow cover for local authority social care functions and membership of local authorities, such that risks associated with social care services hosted by Health Boards and/or health services hosted by local authorities can be covered under the scheme. Under this arrangement, indemnity is estimated to be cost neutral. In cases where there is no transfer of staff between partners, but where integration results in innovation in the roles of care staff, there may be an increase in indemnity premiums for local authorities; however, given the likely nature of these innovations, this is not considered to be material.

Other financial governance: delegation between partners

83. Internal and external audit of the integrated budget and associated systems will be provided by the host partner auditors and, based on the Highland Partnership experience, is expected to be cost neutral from a partnership (delegation between partners) perspective.
84. Integration will act as a catalyst for consideration of the opportunities for rationalisation of support services. These are likely to be most apparent in Finance and HR due to the delegation of resources and potential of transfer of staff, but can potentially extend to all support services. Highland Partnership are in the early stages of discussions on shared services. Notwithstanding this, the national opportunities for this will depend on the circumstances in each partnership arrangement. As a result, it is difficult to estimate the potential saving and any associated re-organisation costs, and so none are included for this.

Other financial governance: delegation to a body corporate

85. Financial recording and reporting for the body corporate will be provided through a separate domain within the systems of either parent body at marginal on-going cost. The body corporate will require its own audit arrangements, and, whereas these are likely to be provided by the auditors of either of the parent bodies, this will require new work and is estimated at £150k p.a.

86. The potential benefits from rationalisation of support services and the cost of additional capacity in costing teams noted above for recurrent costs of delegation between partners equally apply under this model.

Other financial governance: for both models

87. The inclusion of hospital services in the integrated budget will necessitate a greater emphasis on hospital activity and cost in Health Board financial management and financial planning systems, which will require investment in costing teams. The estimate for this is £800k p.a. based on increasing the capacity of Health Boards costing teams to a proportionately consistent level.

Strategic planning

88. Integration joint boards and the lead agency will be under a duty to produce a strategic plan. The plan will be developed in collaboration with the third and independent sector providers, outlining how the objectives of the integration plan will be delivered using the integrated budget. Partners will be expected to adequately support involvement and consultation of a range of stakeholders in the planning process.

Locality planning

89. The Bill will place a requirement on partnerships to establish effective locality planning arrangements at a level of planning and commissioning for services for an identified population. Local clinicians and care professionals, in particular, will play a greater role in locality planning, which will inform the partnerships’ strategic plans. Carers, patients, service users and their families will also inform locality planning arrangements. Locality planning arrangements currently exist in many Community Health Partnerships and local authorities, though it is expected that these will need to be re-configured and developed to cover the scope of the new proposals. In some areas there will be a need for additional resources to fund clinical involvement. The recurrent costs to fund clinical involvement are estimated as £3m p.a. from 2015/16 and are based on existing good practice in a number of partnerships.
Capital and assets

Capital and assets: delegation between partners

90. Integration of health and social care offers the potential for some rationalisation of Health Board and local authority estate, which may result in non-recurrent receipts from asset disposals and will accrue to the owner of the asset. In the case of the Highland Partnership, property rationalisation is at the heart of the redesign of adult services and has the potential to affect team bases and properties used for in-house care home and day-care services.

91. In addition, rationalisation may result in recurrent savings on revenue property costs. Consideration of this is at an early stage in Highland and figures for potential savings are not available. Moreover, extrapolating from Highland to a national estimate would be difficult given the different asset configurations in each partnership. Accordingly, there is insufficient evidence to estimate the potential benefits from asset rationalisation and no figures are included.

Capital and assets: delegation to body corporate

92. Notwithstanding that the new bodies will not own capital assets; integration under this model still offers the potential for rationalisation of Health Board and local authority estate as that under delegation between partners; this will be through the strategic commissioning process and of recurrent savings on revenue property costs. The same difficulties in estimating the potential benefit of this noted above apply for this model and no figure is included for this.

Health and social care activity information

93. To provide partnerships with information for developing their strategic plans and to inform performance management, a linked patient/client level health and social care dataset and information system will be required.

94. The recurrent running costs and depreciation for the linked patient/client level health and social care information system (outlined above) are estimated as £250k p.a. from 2015/16, based on a preliminary assessment by Information Services Division.

95. In addition, care economists and analyst capacity will be required by partnerships in developing their strategic plans, to analyse and model existing and future needs and activity. Some partnerships have used change fund resource to fund this on a non-recurrent basis and there are also three WTE posts at £150k p.a funded by the Scottish Government currently supporting this work. To provide this capacity across all partnership on a recurrent basis would require an additional £500k p.a.
2.2 – COST IMPLICATIONS TO HEALTH BOARDS AND LOCAL AUTHORITIES FROM PROVISIONS IN PART 2 OF THE BILL

Broadening the remit of the Common Services Agency

96. Current legislation provides that whilst the Common Services Agency (CSA), commonly known as NHS National Services Scotland, may provide goods and services to NHS bodies in Scotland generally, it may only provide a limited range of goods and services to other public bodies, and then only to a limited range of public bodies. It is considered that this acts as a block to the Common Services Agency being as efficient and productive as it might otherwise be, and also prevents a range of public bodies in Scotland working as efficiently and productively as they might.

97. In January 2013, the Scottish Ministers approved laying a Public Services Reform Act Order to enable the Common Services Agency to move from a provider of shared services to NHS bodies only, to a provider of shared services to Scottish public bodies (including local authorities). It is envisaged that there are opportunities for the Common Services Agency to offer services such as legal, procurement, counter fraud and IT support to the wider public sector, which have the potential to produce operating and cost efficiencies.

98. Scottish Ministers agreed that the changes to the remit of the Common Services Agency made through the Public Services Reform Act Order would then be reviewed and restated through an updated approach to provisions in the Bill.

99. It is difficult to accurately gauge the level of uptake off the Common Services Agency’s shared services across the wider public sector as this is not a mandatory measure - rather it is for public bodies themselves to determine the benefits of using the services provided by the Common Services Agency. However, what is apparent is that the costs to the public sector will be cost neutral. There will be no increase in the level of the Common Services Agency budget as a result of it delivering services to the wider public sector.

Extending the scope of CNORIS indemnity scheme

100. Current legislation (Section 85(B) of The National Health Service (Scotland) Act 1978) enables that a scheme may be created by regulation whereby any of the bodies listed in section 85(B) may make provision to meet:

- (i) expenses arising from any loss of or damage to their property; and
- (ii) liabilities to third parties for loss, damage or injury arising out of the carrying out of the functions of such members.

101. The Clinical Negligence and Other Risks Insurance Scheme (CNORIS) was created on 1 April 2000 pursuant to The National Health Service (Clinical Negligence and Other Risks Indemnity Scheme) (Scotland) Regulations 2000; the regulations limit membership to all the NHS entities plus the Mental Welfare Commission for Scotland and also define the scope of the functions covered by the scheme. Under these arrangements, local authorities are not permitted to participate in the scheme nor are social work functions permitted to be covered.
102. Consequently, under the lead agency model, cases where local authorities host delegated health functions or where Health Boards host local authority functions, would not be covered by the scheme. In these cases, indemnity cover would need to be obtained from the market and this may be prohibitive.

103. The Bill amends s85(B) of the National Health Service (Scotland) Act 1978 to allow membership by local authorities and to extend cover to social care functions. This provision will allow local authorities and Health Boards to obtain indemnity cover under CNORIS and avoid the potentially material costs of market indemnity.

2.3 – COST IMPLICATIONS TO HEALTH BOARDS AND LOCAL AUTHORITIES FROM PROVISIONS IN PART 3 OF THE BILL

Joint venture structures

104. The Bill also aims to address two barriers to efficient procurement of infrastructure projects and address differences in the approaches available to Health Boards and local authorities to manage and maximise value from surplus assets.

105. In respect of collaborative procurement, there are two elements of cost reduction to Health Boards – development costs/fees for projects and on-going Special Purpose Vehicle costs. By way of an example, several Health Boards who are members of the hub North Territory are proposing to enter into one Design, Build, Finance and Maintain (DBFM) contract with a Special Purpose Vehicle (SPV) formed for this purpose by their hubco. Under this contract, each Health Board will be provided with individual facilities. Bundling the various facilities into one DBFM contract will maximise financial efficiency through economies of scale and avoiding the additional costs of setting up and running SPVs for each facility, and will facilitate funding by aggregating the otherwise individual borrowing requirements. Not having additional powers means that there will be two financial close processes (one for NHS Grampian and one for NHS Highland) required rather than one, and two special purpose vehicles created rather than one.

106. The financial implications of this example would be additional fees of up to £250,000 to get to financial close and additional costs of £75,000 to £100,000 per annum over the life of the agreement (25 years) in respect of the management of the additional Special Purpose Vehicle. These costs are in effect recovered from Health Boards via the unitary payments made in respect of premises developed.

107. In this example alone, having these powers would save NHS Scotland a minimum of £2.125m in revenue costs over 25 years or an average of £85,000 per annum. We can reasonably expect that the requirement for such bundles that cross Health Board boundaries would occur every 2 to 3 years. Financial modelling (using lower end cost estimates) shows in cash terms, over a 25 year period, savings in the order of £15.9m could be made when compared to the existing position of requiring separate financial close and SPV arrangements for such bundled projects.

108. Proposals for flexibility in company structures have no direct financial implications in themselves. These proposals will allow collaboration on an equal basis between partners and,
whilst structures such as LLP’s offer some tax efficiencies, these cannot be quantified at this time, and will be dependent on the application of such structures, which cannot be quantified at this time.

Implications for business

109. The bodies/stakeholders affected by the proposals are Health Boards, local authorities and private sector suppliers contracted to provide community based facilities. The proposals will streamline procurement of facilities and improve efficiency for those bodies developing such facilities.

110. There are no additional regulations or requirements being placed on private sector stakeholders. In respect of collaborative procurement, the powers sought will be used in the context of existing contractual arrangements and documentation. The proposals will not impact on access to public sector markets.

111. For Health Boards, there will be increased flexibility in the procurement of facilities and a consequent reduction in both development and on-going costs. Private Sector Development Partners have already been selected via open procurement in accordance with EU procurement law.

2.4 - CONSEQUENTIAL COST IMPLICATIONS TO HEALTH BOARDS AND LOCAL AUTHORITIES FROM PROVISIONS IN PART 1 OF THE BILL

Harmonisation of terms and conditions

112. The Bill will not require the transfer of staff between Health Boards and local authorities or to the integration joint board. Nevertheless, partners may choose to transfer some staff between them in order to better integrate delivery teams. Where staff transfer, they will do so under TUPE arrangements but there is a risk of a potential cost to partners in terms of harmonisation of terms and conditions, including equality of pay; the risk is different depending on which model of financial integration is chosen.

Harmonisation of terms and conditions: delegation between partners

113. Experience in Highland, Torbay and North East Lincolnshire indicates that transfer of staff is likely under this model; if staff transfer, the risk of harmonisation of terms and conditions depends on which organisation is the host partner:

114. Where staff transfer to the Health Board, the initiative for harmonisation would be with the Board; experience from Torbay and North East Lincolnshire, where staff transferred to the Care Trusts, was that the Trusts encouraged transferred staff to migrate onto the same terms and conditions as their new colleagues and that this helped to establish multi-disciplinary co-located teams and deliver truly integrated services. Although staff would be free to remain on TUPE terms and conditions, it is unlikely because migration of staff onto NHS terms and conditions would be to their individual advantage.
115. Where staff transfer to the local authority, the initiative for harmonisation would be with the local authority in the same way as in the case above, but there would also be a risk of an equal pay claim from the existing local authority staff.

116. In cases where staff transfer from a local authority to a Health Board but remain in the local government pension scheme, the Health Board will be required to recognise in its accounts the proportion of any surplus or deficit on the local authority pension fund that relates to the transferred staff; this may be a charge (in the case of a deficit) or a credit (in the case of a surplus) to the Board Accounts. Statutory mitigation enables local authorities to manage the fluctuations that relate to its employees through its reserves, but this facility is not available to Health Boards and so has the potential for instability in Health Board accounts and, in the case of deficits, creates a potential cost. The Scottish Government is considering options for a solution to this issue and no estimate has been included in the scenarios at paragraph 121.

Harmonisation of terms and conditions: delegation to a body corporate

117. Discussions with stakeholders lead us to think that most partners will use the body corporate model. Under this model, it is not intended that staff will transfer to the body corporate, but partners may nonetheless choose in time to transfer some staff between each other in the same way as under delegation between partners, in order to integrate delivery teams. The risk of cost of harmonisation is therefore contingent on a future decision to transfer staff between partners.

118. In the event of such transfers, the situation would be similar to those under delegation between partners outlined above. Note that there may be an additional theoretical risk that, under this model of integration, future claims may be brought by staff, or groups of staff, on the grounds that they undertake similar duties but work for separate employers on different pay, terms and conditions, within an integrated system. Such situations exist now, but may increase and be more obvious to staff as integration takes effect and is more widely acknowledged. The risk, and scale of any such potential cost pressures, is very difficult to estimate in advance.

119. Given the contingent nature of staff transfers under delegation to a body corporate, in the scenarios for potential costs described below, we have assumed that no staff will transfer under this model and have therefore assumed no harmonisation costs.

120. Costs associated with staff transfer have been scoped on the basis of three scenarios and are dependent on the model of integration agreed by the Health Board and local authority; the estimates are based on the synthesis of a number of analyses: the experience in NE Lincolnshire and Torbay Care Trusts; analysis by Health and Social Care Directorates Analytical Services Division for transfer of adult social care service staff to Agenda for Change; and detailed analysis for a sample of adult NHS Highland adult social care staff. The scenarios assume that transferred staff remain in their original pension schemes, and it includes an estimate of additional employers’ pension contributions due.

121. The following material provides the three estimates for costs associated with staff transfer under the two main models of integration (delegation to a body corporate or delegation between partners).
These documents relate to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

- A likely case, where all partnerships opt for delegation to a body corporate model (except Highland); this is also the lowest cost scenario. The cost under the first scenario is £nil p.a.;
- A mid cost case where half of partnerships opt for delegation to a body corporate model and half opt for delegation between partners model; the cost in this case would be £13.5m.
- A highest cost case, where all partnerships opt for delegation between partners model with functions delegated to Health Boards and adult social care staff transferring to Boards. The cost under the highest cost case is £27m p.a.

PART THREE

COST IMPLICATIONS TO OTHER PUBLIC BODIES FROM PROVISIONS IN THE BILL

Scrutiny of strategic plans and service delivery

122. The Bill places a duty on the Health Board and local authority to achieve the nationally agreed outcomes for health and social care. The outcomes and the performance indicators will be prescribed by the Scottish Ministers. Where other functions beyond adult health and social have been delegated, the Health Board and/or local authority will be required to take account of other relevant outcome measures. The performance of partnerships in achieving the nationally agreed outcomes and other relevant outcomes in relation to the delegated functions will be assessed jointly by Healthcare Improvement Scotland and the Care Inspectorate. Healthcare Improvement Scotland and the Care Inspectorate undertook ‘pilot’ joint inspection of integrated services in early 2013. Estimates based on the pilots from Care Inspectorate and Healthcare Improvement Scotland suggest a cost of £173,362 per joint inspection. It is anticipated that these bodies will undertake six inspections per year.

123. Additional resource, longer term, will also be required to fund the Care Inspectorate and Healthcare Improvement Scotland for scrutiny of strategic commissioning. The scrutiny bodies will review strategic plans as part of joint inspections, assessing whether the plan meets all statutory requirements and has been created within the statutory duties laid out in the Bill. It is anticipated the scrutiny bodies will carry out six joint inspections per year, with a recurrent cost estimated at £670k p.a., some of this work is already underway. This is based on an assessment by Care Inspectorate and Healthcare Improvement Scotland of the additional requirements being placed upon them. It will be incurred from 2015/16.

PART FOUR

CONSEQUENTIAL COST IMPLICATIONS TO OTHER BODIES, INDIVIDUALS AND BUSINESSES FROM PROVISIONS IN THE BILL

124. As discussed above, the Bill will place duties on Health Boards and local authorities, therefore, costs will mainly fall to these statutory bodies. However, providers of social care services, in particular, but also other community services, are provided by third or independent organisations. The Business Regulatory Impact Assessment also explores the potential
consequential impacts of the provisions in the Bill on businesses, though the provisions in the Bill only directly impact on Health Boards and local authorities. The Business Regulatory Impact Assessment is published separately. It is reasonable to anticipate that as a result of the requirement for Health Boards and local authorities to jointly plan and deliver adult health and social care services through the effective use of the integrated budget and resources, that businesses may incur costs in order to support the delivery of services that will shift in the balance of care to community provision.

125. The costs to businesses are anticipated to be the following;

- Costs for delivery of training; to diversify the business to take into account the demand for community provision, increase capacity and support delivery of more community based services and skills to participate in the commissioning and planning process;
- Costs arising from diversification, rationalisation or expansion of business model in response to commissioning of health and social care services;
- Increased costs to business to support and train unpaid carers;
- Costs associated with participation in partnership planning arrangements; and
- Costs associated with compliance with Information Technology, data sharing and data protection protocols.

126. However, given that these will be dependent on the commissioning decisions of the partnerships, no costs are included.
Direct costs resulting from the Bill

ANNEX

Current areas of Scottish Government investment relevant to the scope of the Bill

128. Improved joint working between Health Boards and local authorities, to improve outcomes and the experience of those most in need and their carers, has been a longstanding policy objective of the Scottish Government. This is evident in a range of current and future initiatives. Table 7 provides a summary of the wider financial commitments of the Scottish Government to support the integration agenda. Future funding will be subject to the spending review.

129. The following sections provide further information on the investments listed above.
Reshaping Care for Older People Change Fund

130. The Reshaping Care for Older People Change Fund\(^\text{14}\) represents one of the Scottish Government’s key preventative spend funds (£300 million of the overall £500 million preventative spend budget: £70m/£80m/£80m/£70m across the four financial years from 2011-12 to 2014-15 respectively). Statutory, voluntary and independent sector partners responsible for delivering health and social care across Scotland are using the Fund as bridging finance to make better use of their total combined resources for older people’s services. The Fund is already helping to redesign care services for Scotland’s growing older population - helping to prevent delays, provide more proactive community-based services and better care and support at home. In line with the Scottish Government’s proposals for the integration of adult health and social care, the future Change Fund to 2015 will be explicitly linked to delivery of joint commissioning strategies.

Support to the third sector

131. The Scottish Government is providing £8.2 million for three years from 2012/13 to support the network of 32 third sector interfaces in Scotland. There is a single third sector interface within each local authority area in Scotland. The third sector interface has four key functions:

- Volunteering development;
- Social enterprise development;
- Supporting and developing a strong third sector;
- Building the relationship with community planning.

132. A set of common service standards was developed which ensures a consistent level of service expectation across the interface network in each of the 32 local authorities in Scotland.

133. The Joint Improvement Team (JIT) has a specific remit to support health and social care partnerships to operate more effectively \textit{as partnerships}, across all their services and any other areas of activity. This has traditionally involved Health Boards and local authorities. More recently, the arrangements required by the Reshaping Care for Older People Programme (RCOP) and its attendant Change Fund have brought the third and independent sectors firmly and formally into the partnership relationship.

134. The JIT and the Third Sector Unit of Scottish Government have jointly funded a three year project delivered by the Health and Social Care Alliance (the Alliance) in partnership with other third sector partners, and designed to build the capacity of the third sector to engage with RCOP. The project’s full title is ‘Change Fund: Enhancing the Role of the Third Sector\(^\text{15}\) and has a budget of £180,000 p.a. The project has a focus on supporting Third Sector Interfaces and

\textbf{\textsuperscript{14}} \url{http://www.scotland.gov.uk/Topics/Health/Support-Social-Care/Support/Older-People/ReshapingCare}
\textbf{\textsuperscript{15}} \url{http://www.alliance-scotland.org.uk/what-we-do/projects/change-fund-enhancing-the-role-of-the-third-sector-programme/}
national third sector organisations but it also has sufficient locus to work with other third sector organisations as appropriate.

135. A Stitch in Time? is a partnership based National Demonstration Project, facilitated by Evaluation Support Scotland (ESS) in partnership with other third sector partners, and supported by the Scottish Government Third Sector Unit and the JIT providing £0.318m over 3 years from 2012/13. It aims to fully understand the contribution of third sector-delivered interventions to the outcomes of the Reshaping Care for Older People programme in a defined geographical area.

Independent sector

136. The Joint Improvement Team have funded Scottish Care with grant payments of £60,000 in 2011-12 and £90,000 in 2012-13. These grants are to enable support for capacity development in the independent sector in relation to Reshaping Care for Older People and related work. This includes developing and sustaining the independent sector’s capacity to contribute to the Reshaping Care objectives and development and implementation of the Reshaping Care for Older People’s Change Fund plans, along with contributing towards the developing work on health and social care integration and other related government policies.

Data sharing and information technology

137. The Scottish Government eHealth budget currently includes a dedicated budget of £2m p.a. to support Health and Social Care IT integration. The NHS and local authorities have invested significant amounts in previous years to put in place modern IT systems. The focus of future work will be on exploiting the capabilities of these systems to improve information sharing.

138. The eHealth Strategy published in Autumn 2011 included a commitment to produce a Health and Social Care IT strategy (by early 2014) in partnership with local authorities. In addition, a Data Sharing Technology Board (DSTB) has been established under local authority chairmanship and is meeting regularly. This Board is responsible for decisions on the existing infrastructure and the development of consensus on the way forward. The Board undertakes this role in a broader context of co-operation between stakeholders through their role in the development of the Health and Social Care IT Strategy.

Health and social care activity information

139. Analysis of existing population needs and resource allocation and utilisation is a critical stage in the joint commissioning cycle. A number of partnerships have used the Change Fund for Older People’s Services to pay for analyst posts to support the development of their strategic plans. In addition, the Scottish Government has provided £150k p.a. funding to Information Services Division for a further 3 WTE economists and analysts to provide support to other partnerships. These posts have used mapping data from the Integrated Resource Framework to analyse current health and social care expenditure in those partnerships and have carried out

---

cohort analyses on specific care groups, for example, dementia, substance misuse and delayed discharges.

SCOTTISH GOVERNMENT STATEMENT ON LEGISLATIVE COMPETENCE

On 28 May 2013, the Cabinet Secretary for Health and Wellbeing (Alex Neil MSP) made the following statement:

“In my view, the provisions of the Public Bodies (Joint Working) (Scotland) Bill would be within the legislative competence of the Scottish Parliament.”

PRESIDING OFFICER’S STATEMENT ON LEGISLATIVE COMPETENCE

On 28 May 2013, the Presiding Officer (Rt Hon Tricia Marwick MSP) made the following statement:

“In my view, the provisions of the Public Bodies (Joint Working) (Scotland) Bill would be within the legislative competence of the Scottish Parliament.”
INTRODUCTION

1. This document relates to the Public Bodies (Joint Working) (Scotland) Bill introduced in the Scottish Parliament on 28 May 2013. It has been prepared by the Scottish Government to satisfy Rule 9.3.3 of the Parliament’s Standing Orders. The contents are entirely the responsibility of the Scottish Government and have not been endorsed by the Parliament. Explanatory Notes and other accompanying documents are published separately as SP Bill 32–EN.

POLICY OVERVIEW

2. The Bill provides the framework which will support improvement of the quality and consistency of health and social care services through the integration of health and social care in Scotland. This framework permits integration of other local authority services with health services. The Scottish Ministers intend to use the framework to integrate adult health and social care services as a minimum, and for statutory partners to decide locally whether to include other functions in their integrated arrangements. The policy ambition for integrating health and social care services is to improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older.

“...effective services must be designed with and for people and communities – not delivered ‘top-down’ for administrative convenience.

“This complexity [in public service delivery in Scotland] is reflected in inadequate strategic coordination between public service organisations that work routinely to different objectives, with separate budgets and processes for accountability.

“Points of authority and control are dispersed widely among varied public bodies, making joint working and reform difficult. Collaboration often relies on the persistence and flexibility of individual front-line workers and leaders.”

The Christie Commission Report
Commission on the future delivery of public services, June 2011
3. There is a great deal to be proud of in terms of health and social care provision in Scotland. The Healthcare Quality Strategy for NHS Scotland\(^1\) underpins the Scottish Government’s commitment to deliver the highest quality healthcare services to people in Scotland and, in recent years, Scotland has seen significant improvements in terms of standards and outcomes, with improvements in waiting times, patient safety and delayed discharge from hospital. The Scottish Government’s introduction of a Dementia Strategy\(^2\), continuing commitment to Free Personal and Nursing Care and Reshaping Care for Older People\(^3\) programme, which is supported by the Change Fund for older people’s services, all demonstrate determination to assure innovative, high quality care and support services that improve people’s lives. The Scottish Government’s Carers’ Strategy\(^4\) supports unpaid carers, who are themselves essential providers of health and social care, and the Social Care (Self-directed Support) (Scotland) Act 2013\(^5\) seeks to put greater control into the hands of individuals using care and support services.

4. Nevertheless, there is widespread recognition across Scotland that reform needs to go further. Separate – and sometimes disjointed – systems of health and social care can no longer adequately meet the needs and expectations of increasing numbers of people who are living into older age, often with multiple, complex, long-term conditions, and who need joined-up, integrated services. Addressing these challenges will demand commitment, innovation, stamina and collaboration from all of us who are involved, in different ways, in planning, managing, delivering, using and supporting health and social care services.

5. The Scottish Government, its statutory partners in local government and NHS Scotland, and its non-statutory partners in the third and independent sectors, agree that better integration of health and social care services is required in order to ensure the on-going provision of high quality, appropriate, sustainable services. Integration is not an end in itself – it will only improve the experience of people using services when partner organisations work together to ensure that services are being integrated as an effective means for achieving better outcomes.

6. When referring to “integrated health and social care”, what is meant is that services should be planned and delivered seamlessly from the perspective of the patient, service user or carer, and that systems for managing services should actively support such seamlessness.

7. There has been very significant progress in improving pathways of care in recent years. The Joint Futures policy, Community Health Partnerships and the work of the Joint Improvement Team have also contributed to development of partnership working across health and social care. Nevertheless, many clinicians, care professionals and managers in health and social care currently describe two key disconnects in Scotland’s system of health and social care. The first disconnect is found within the NHS, between primary care (GPs, community nurses,
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

allied health professionals etc.) and secondary care (hospitals). The second disconnect is between health and social care, responsibility for delivery of which lies with local authorities.

8. These disconnects make it difficult to address people’s needs holistically, and to ensure that resources follow patients’, service users’ and carers’ needs. Problems often arise in providing for the needs of people who access many services over prolonged periods, such as people with long term conditions, and people with complex needs. Many of these people, though by no means all, are older. Problems are also encountered at transition points, particularly as children with complex needs reach adulthood.

9. From the perspective of people who use the system – patients, service users, carers and families – the problems to be addressed can be summarised as follows:

- There is inconsistency in the quality of care for people, and the support provided to carers, across Scotland, particularly in terms of older people’s services;
- People are too often unnecessarily delayed in hospital when they are clinically ready for discharge; and
- The services required to enable people to stay safely at home are not always available quickly enough, which can lead to avoidable and undesirable admissions to hospital.

10. The consultation on integration of adult health and social care, and the public engagement exercise of Reshaping Care for Older People, indicated that these are the main problems that people want to see addressed. Clinicians and other professionals who provide health and social care support also indicate that, as far as possible, it is better for people’s wellbeing if they are supported in their own homes or another homely setting in the community, rather than being admitted unnecessarily to hospital.

11. In terms of older people’s services specifically, it is also known that:

- Almost one third of total spend on older people’s services annually is on unplanned admissions to hospital;
- More is spent annually on unplanned admissions for older people than is on social care for the same group of people; and
- Even allowing for the possibility that people may live longer and in better health in future, and taking into account the Scottish Government’s current emphasis on improving anticipatory and preventative care, Scotland will in future experience a material increase in the number of people who require care. The resources required to provide support will rise in the years ahead⁶.

12. Despite a good track record of partnership working over many years, Scotland’s current system of health and social care still incorporates within it barriers in terms of structures, professional territories, governance arrangements and financial management that often have no helpful bearing on the needs of the large, growing group of older service users, and in many cases work against general aspirations of efficiency and clinical/care quality. Reform is needed

⁶ Reshaping Care for Older People http://www.jitscotland.org.uk/action-areas/reshaping-care-for-older-people/
to address these barriers and to deliver care that is better joined up and, as a consequence, delivers better outcomes for patients, service users and carers.

13. The goal for integration of health and social care is to tackle these challenges and, in particular, to address the disconnects described above – so that the balance of care shifts from institutional care to services provided in the community, and resources follow people’s needs. This is in line with the Scottish Government’s commitment to a person-centred approach, which builds on the Scottish Government’s policy on Self Directed Support\(^7\) and the principles of the Healthcare Quality Strategy for NHS Scotland.\(^8\)

14. In considering the legislative context for these reforms, it is worth noting that the Scottish Government is clear that legislation alone will not achieve the scale of improvement that is required in order to address the challenges of demographic change and fiscal constraint. Leadership is key, locally and nationally, to achieve the changes in working practices, culture and behaviour that are required.

Scope – demographic considerations

15. The Scottish Government’s ambitions for improving integration of adult health and social care services are not limited to improving older people’s services but extend to all adult health and social care services. People can, and do, experience complex care and health support requirements at any age, and it is recognised the importance of ensuring that better integration of health and social care services results in improvements for all patients, service users and carers.

16. However, the factors driving closer integration are particularly relevant to care and support for older people. It is known that, too often, older people are admitted to institutional care for long periods when a package of assessment, treatment and rehabilitation, and support in the community – or more support to their carers – might have served their needs, and maintained their independence, better.

17. Demographic change in itself also makes the case for change urgent, and suggests that focus is required as a priority on improving services for older people. The Registrar General has projected that the number of people in Scotland aged over 75 will grow by around 10,000 every year, over the decade ahead. Changes in demography will vary in scale depending on location. Around one quarter of Scotland’s population will be aged 65 and over by 2033; for some of Scotland’s more rural areas the proportion is predicted to rise by nearly one third.

18. Given these pressures, it might seem appropriate to focus integration of health and social care on older people exclusively. However, there are a number of arguments against limiting plans for integration in this way. Conditions associated with old age and frailty are often experienced much earlier than 65, particularly but not exclusively in areas with high levels of deprivation. People with disabilities also have requirements for care across all age groups. A focus on older people alone would create an artificial divide within adult services, with people at transition from children’s services, and with younger adults with physical and learning difficulties.

This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

Scope – enabling integration beyond adult health and social care

19. The Bill enables Health Boards and local authorities to integrate planning and service provision arrangements for all areas of health and social care. Regulations will set out functions that may not be delegated (such as, for example, nationally delegated and funded NHS functions and certain mental health social work functions). Regulations and statutory guidance will establish the requirement on Health Boards and local authorities to integrate services for adults, which will be the minimum functions to be required to be delegated to achieve approval by Scottish Ministers of integration plans. Nationally agreed outcomes for health and social care will employ measures that enable local and national partners to understand success at local level in terms of shifting the balance of care towards support provided within the community for people with complex support needs.

Partnership working – more than statutory partners

20. The Bill is designed to enable locally-implemented integration. It focuses on bringing together the accountability of statutory partners – Health Boards and local authorities – in an equitable way, to deliver better outcomes for patients, service user and carers. The Bill enables, through secondary legislation, Health Boards, local authorities and integration joint boards to fully and appropriately involve non-statutory providers of health and social care with planning and decision-making within the partnership arrangements. This is consistent with principles of co-production\(^9\), which underpin the Government’s vision for mutual and person-centred public services\(^10\), which encourage the utilisation of the talents, capacities and potential of all of Scotland’s people and communities in designing and delivering health and social services\(^11\). In addition, it will be important, and is intended through secondary legislation, to involve and consult carers and users of health and social care services in all aspects of the integrated arrangements.

21. The third and independent sectors, including carers’ organisations, also provide significant levels of care and support and are crucial partners, with the statutory services, in the provision of a wide range of support. As work continues with partners and stakeholders to deliver this agenda for integration of health and social care, it will be particularly important that there is a focus on building on the principles of inter-agency working enshrined in the Change Fund for older people’s services\(^12\). The fundamental purpose of the policy on integration, which underpins the legislation, is to improve people’s wellbeing; the reform will not succeed if, in bringing health and social care together, the need to build upon the progress that has been made in bringing third and independent sector partners to the table when planning delivery of services is overlooked. The contribution of the third and independent sectors in enabling delivery of

\(^9\) Co-production of Health and Wellbeing in Scotland \url{http://www.jitscotland.org.uk/action-areas/reshaping-care-for-older-people/community-capacity-building/community-capacity-building-resources/}

\(^12\) Reshaping Care for Older People \url{http://www.scotland.gov.uk/Topics/Health/Support-Social-Care/Support/Older-People/ReshapingCare}
better outcomes is also a crucial factor in the Scottish Government’s wider public service reform\textsuperscript{13} plans.

22. Other areas of service also play a key role in the delivery of better outcomes for people with long term conditions and complex needs, and for older people in particular. Housing is an important example of this. The National Strategy for Housing for Older People\textsuperscript{14} highlights ways in which the right housing and related services (such as adaptions and handyperson services) can help to support independent living, and can contribute to health and social care objectives. It will be important that, in bringing primary and secondary health closer together, and health and social care closer together, partners ensure that housing services (including those provided by housing associations and the third sector, as well as by local authorities) are fully included in the integrated approach to service planning and provision, and that health and social care planning and local housing strategies are mutually supportive.

\textbf{CONSULTATION}

23. During the 2011 Scottish elections, almost all party manifestos included a commitment to integrate health and social care, with a majority of MSPs agreeing with the principle of a substantive shift towards better joined up working across primary and secondary health care, and between health and social care. Following the election, the Scottish Government worked closely with stakeholders from across the health and social care landscape to develop proposals for integration.

24. In May 2012, the Scottish Government published its consultation on proposals for the integration of adult health and social care\textsuperscript{15}. The consultation described the proposals for which the Scottish Ministers intend to legislate, and set the context for the Bill. The consultation closed on 11 September 2012.

25. Over the period of the consultation, Scottish Government officials held a number of consultation events\textsuperscript{16} across Scotland, providing the opportunity for professionals, patients, service users and carers, as well as providers of services, to hear first-hand about the consultation proposals and to have the opportunity to ask questions and discuss the proposals. In addition, officials met with a broad range of stakeholders at events and meetings organised by local partnerships to provide further opportunities to discuss the consultation proposals.

26. Three hundred and fifteen written responses to the consultation were received from a range of different stakeholders and individuals, reflecting the breadth of interest in this area of public service reform. Non-confidential responses\textsuperscript{17} were published on the Scottish Government website. An analysis\textsuperscript{18} of written responses to the consultation was published on 19 December 2012.

\textsuperscript{13} Public Service Reform \url{http://www.scotland.gov.uk/Topics/Government/PublicServiceReform}
\textsuperscript{14} A Strategy for Housing for Scotland’s Older People \url{http://www.scotland.gov.uk/Publications/2011/12/16091323/0}
\textsuperscript{15} Integration of Adult Health and Social Care Consultation on Proposals \url{http://www.scotland.gov.uk/Publications/2012/05/6469}
\textsuperscript{16} Consultation events \url{http://www.scotland.gov.uk/Topics/Health/Policy/Adult-Health-SocialCare-Integration}
\textsuperscript{17} Responses to the Consultation \url{http://www.scotland.gov.uk/Publications/2012/10/5025}
\textsuperscript{18} Consultation Analysis Report \url{http://www.scotland.gov.uk/Publications/2012/12/1068}
27. The Scottish Ministers and officials considered the consultation responses and continued to work collaboratively with key stakeholders to develop the proposals further.

28. The Bill Advisory Group was established to provide advice on the development of the Bill. Members of the Group represent a wide range of stakeholders involved in the provision of health and social care. The Group also has oversight of the working groups that support the development of the Bill on professional and technical aspects of the policy. The Bill Advisory Group takes into account other policies and developing legislation as part of its role to provide scrutiny to the development of the Bill. The Cabinet Secretary for Health and Wellbeing chairs the Bill Advisory Group at relevant points in the Bill process alongside Cllr Johnston, COSLA Health and Wellbeing Spokesperson, as vice chair. Further information regarding the Bill Advisory Group, including remit and minutes of meetings, can be found on the Scottish Government website.

29. A number of working groups were established in 2012, to support the development of the consultation proposals in the first instance, and to provide practical and, subsequently, technical advice on the detail of the practical implementation. The members of these groups provide professional expertise on a range of matters, such as development of outcome measures, commissioning skills, finance and accounting issues, and workforce issues.

30. The Scottish Government response to the consultation was published on 13 February 2013, and provided further detail on the Scottish Ministers’ intentions for the forthcoming Bill.

31. As part of the consultation, officials held discussions with equality groups on the possible impact of the proposals, and this formed an Equality Impact Assessment. The results of this assessment have been taken into account in the development of the Bill, and are outlined later in this Policy Memorandum.

OUTCOME OF THE CONSULTATION

National outcomes for health and wellbeing and scope

32. The majority view supported nationally agreed outcomes to be included in Single Outcome Agreements (SOAs) and for statutory partners to be held jointly and equally accountable for delivery. However, there were differing opinions about the proposal to focus initially, after legislation is enacted, on improving outcomes for older people, and then to extend the focus to improving integration of all areas of adult health and social care.

33. Those in favour expressed the view that it is sensible to start with the largest group of service users, allowing integration authorities to incorporate improvements before extending to all adults.

19 Bill Advisory Group [http://www.scotland.gov.uk/Topics/Health/Policy/Adult-Health-SocialCare-Integration/Meetings](http://www.scotland.gov.uk/Topics/Health/Policy/Adult-Health-SocialCare-Integration/Meetings)

21 Scottish Government Response to the Consultation [http://www.scotland.gov.uk/Publications/2013/02/4208](http://www.scotland.gov.uk/Publications/2013/02/4208)
34. Other respondents indicated concerns that, by focusing on ‘older people’ first, an artificial divide may be created that may have a negative impact on other groups of patients and service users, who did not meet the ‘age criteria’.

35. Sometimes, as people responded to the consultation, a question was asked about whether the proposed scope was limited to older people. Where this point was raised at discussion events, Scottish Government officials reiterated the point that the Scottish Ministers intend to legislate for all areas of adult health and social care, providing flexibility for integration beyond adult health and social care services, for example children’s services, where there is local agreement to do so.

**Governance and accountability**

36. Respondents noted that joint accountability requires robust information, clear outcomes, evidenced performance management and public reporting through external scrutiny. Most respondents expressed the view that the proposals should be strengthened with respect to plans for performance management arrangements, and that these should focus on the delivery of outcomes which are clear, balanced and not solely target driven. There was also reference to the importance of involving non-statutory partners in the development of performance management arrangements.

37. Many respondents expressed the view that an integration authority should be about the synergy between a single council and a single Health Board. Concerns were raised that should an integration authority span more than one local authority area then local issues could be lost in larger partnership considerations, and that it may over-complicate existing structures. Additionally, some respondents felt that experience shows that small partnerships are more effective at delivering the needs of the individual and their communities, and that funding should be devolved more locally.

38. On proposals regarding committee membership, local authority respondents asked particularly for flexibility regarding the number of councillors who could sit on the Health and social care partnership committee. There was a consistent view that accountability should be to the full council and not the leader of the council or its officers.

39. Concerns were raised particularly by stakeholders from the third and independent sectors, carers’ representative groups, and public and service users’ representative groups that the proposals for accountability arrangements focussed particularly on the statutory partners. The view was expressed that other groups should also be recognised and involved in integrated accountability arrangements.

40. There was also a consistent view that the proposals should be strengthened with respect to assuring effective public participation in the processes of planning services. Public participation forums were quoted as an example of a successful means of engaging with the public and building in the views of unpaid carers and service users.
Integrated budgets and resourcing

41. Most respondents expressed the view that the models described within the proposals could successfully deliver the objective to use adult health and social care budgets to best effect for the patient or service user. Preference was given in most responses to the ‘body corporate’ model. However, some respondents, mainly from local authorities, expressed the view that more options should be available, and that decisions regarding which model to use should be made locally.

42. In terms of whether or not the Scottish Ministers should give direction on minimum categories of spend for inclusion in the integrated budget, there was a general view in favour of Ministerial prescription kept to a minimum spend, to allow for local discretion and flexibility and to accommodate local priorities. A few respondents expressed concerns that, if the Scottish Ministers prescribe a minimum, only that minimum will be included in the integrated budget.

43. There were mixed views regarding whether Health Boards and local authorities should be free to choose whether to include the budgets for other Community Health Partnership functions (beyond adult services) within the scope of the integration authority. The majority of respondents expressed the view that this should be left to local determination. A few respondents suggested a stepped approach, starting with the minimum and, when integration authorities are able to demonstrate this working, moving to include more services. There were some respondents who expressed the view that the Scottish Ministers should prescribe the extent of the integrated budget in order to assure consistency of approach. Some respondents also expressed the view that budgets for children’s and housing services particularly should be included within the scope of the integrated budget from the start.

Chief Officer (referred to as Jointly Accountable Officer within the consultation document)

44. Respondents expressed differing views regarding the appointment of chief officers and expressed a need for further information on the role and remit of the post. Some respondents thought that responsibility for planning and delivery of integrated services should sit with the chief executives of Health Boards and local authorities, and existing Community Health Partnership general managers. Others felt that the role would be necessary in order to manage the integrated budget effectively.

45. There was general agreement that if chief officers are appointed they need to be multi-skilled, experienced, knowledgeable and expert managers, able to operate with autonomy, wield influence and exercise authority within both statutory structures, as well as within the integration authority. Many respondents expressed the view that the chief officer post must be senior enough to reflect these requirements.

Professionally led locality planning and commissioning of services

46. The majority of respondents expressed a desire for locality planning arrangements to be developed locally, supported by Scottish Government guidance. A few respondents expressed the view that the Scottish Government should direct locality planning arrangements to ensure consistency across service delivery areas.
47. The proposal that a duty should be placed upon integration authorities to consult local professionals, including GPs, on how best to put in place local arrangements for planning and implementing service provision was welcomed. However, some respondents asked that the duty be strengthened by using the terms ‘involve’ and ‘engage’ rather than ‘consult’. Reference was also made to the need to make specific mention of other clinical staff, health and social care professionals and service users.

48. Respondents expressed the view that, in order to encourage active participation of clinicians and social care professionals in planning service provision, they would need to have a clear understanding of the requirements of their localities. Many respondents added that integration authorities could be strengthened by setting up joint professional and stakeholder advisory committees to contribute to the development of strategic plans. It was suggested that structured support for stakeholder involvement would be required.

49. Opinions were split regarding locality planning being organised around clusters of GP practices. Whilst many supported this approach in principle, many respondents supported locality planning being developed at the level of “natural communities”. There was also a consistent view that the size of localities should be determined locally. There was a mixed view of the level of devolved responsibility for decision-making to localities. The strongest proponents of devolved decision-making came from professional membership organisations, local authorities and public representative bodies.

50. The Bill reflects the proposals detailed in the consultation document, with some modifications in response to stakeholder views. For example, locality planning will be part of the strategic planning process but the Bill will not be prescriptive with regard to size or scope of localities themselves. This responds to stakeholders’ consistently expressed view that locality arrangements should be determined locally. The Bill also clarifies that the appointment of a chief officer only applies where the ‘body corporate’ model is used.

**BILL OUTLINE**

51. The Bill is designed to establish a framework to support the integration of local authority and Health Board functions. The Bill will permit the Scottish Ministers to require the integration of, as a minimum, adult health and social care, based on the principles of a person-centred approach to service planning. The principles established in the Bill for integration, along with the national outcomes that the Bill enables the Scottish Ministers to put in place, will focus Health Boards’ and local authorities’ attention on ensuring that arrangements for governance, planning, investment and risk management take full account of the consequences, challenges and opportunities that present as the shape of Scottish society changes.

52. For the purposes of the Bill, partnership arrangements are described as integration authorities, which can be established using any of the models of integration described below. Health Boards and local authorities will be expected to agree, locally, which model to use:

- the Health Board and local authority choose to deliver integrated services through delegation to an integration joint board, established as a body corporate;
- the Health Board and local authority choose to deliver services through delegation to the Health Board in a delegation between partners arrangement and establish a joint monitoring committee;
the Health Board and local authority choose to deliver integrated services through
degregation to the local authority in a delegation between partners arrangement and
establish a joint monitoring committee; or

the Health Board and local authority choose to deliver integrated services through
degregation to the Health Board and the local authority in a delegation between
partners arrangement and establish a joint monitoring committee.

53. In summary, the Bill:

- Provides for the Scottish Ministers to specify national outcomes for health and
  wellbeing, and for delivery of which, Health Boards and local authorities will be
  accountable to the Scottish Ministers and the public (note that the provisions of the
  Bill apply to area Health Boards and not Special Health Boards)

- Sets out principles for planning and delivery of integrated functions, which local
  authorities, Health Boards and joint integration boards will be required to have
  regard to. They set out that the main purpose of integrated services is to improve the
  wellbeing of recipients, as well as an expectation that planning and delivery will take
  account of key principles relating to integrated delivery; the requirement to balance
  the needs of individuals with the overall needs of the population; anticipation and
  prevention of need; and effective use of resources.

- Establishes integration joint boards and integration joint monitoring committees as
  the partnership arrangements for the governance and oversight of health and social
  care services. The Bill will remove Community Health Partnerships from statute.

- Requires Health Board and local authority partners to enter into arrangements (the
  integration plan) to delegate functions and appropriate resources to ensure the
  effective delivery of those functions. The Bill provides for two options for
  integrating budgets and functions. First, delegation to an integration joint board
  established as a body corporate - in this case the Health Board and the local authority
  agree the amount of resources to be committed by each partner for the delivery of
  services to support the functions delegated. Second, delegation between partners. In
  this case the Health Board and/or local authority delegates functions and the
  corresponding amount of resource, to the other partner.

- Requires integration joint boards to appoint a chief officer, who will be jointly
  accountable, through the board, to the constituent Health Board and local authorities,
  and responsible for the management of the integrated budget and the delivery of
  services for the area of the integration plan. The chief officer will also lead the
  development and delivery of the strategic plan for the joint board.

- Requires integration joint boards, and Health Boards or local authorities to whom
  functions are delegated acting in the capacity of “integration authority” to prepare a
  strategic plan for the area, which sets out arrangements for delivery of integration
  functions and how it will meet the national health and wellbeing outcomes. The
  integration authority will be required to involve a range of partners in the
  development of the plan and consult widely. In addition, locality planning duties will
  require the integration authority to make suitable arrangements to consult and plan
  locally for the needs of its population.

- Delivers opportunities for more effective use of public services and resources by
  allowing for Health Boards to be able to contract on behalf of other Health Boards
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

for contracts which involve providing facilities, and by allowing the Scottish Ministers to form a wider range of joint ventures structures to collaborate effectively with local authorities and enable a joint approach to asset management and disposal.

- Provides for the extension of the Common Services Agency’s ability to deliver shared services to public bodies including local authorities.

- Enables the Scottish Ministers to extend the range of bodies able to participate in the CNORIS scheme for meeting losses and liabilities of certain health service bodies. The scheme is established for relevant bodies to meet expenses arising from any loss or damage to their property; and liabilities to third parties for loss, damage or injury arising from the carrying out of the functions of the scheme members. The Bill amends the bodies able to participate in the scheme to include local authorities and integration joint boards.

54. The underlying principle, of key importance in the Bill, is that Health Boards and local authorities must take joint and equal responsibility for the delivery of nationally agreed outcomes for health and wellbeing.

55. Factors identified from areas elsewhere in Scotland and the UK22 as key to success include: planning across existing delivery systems for the wellbeing of identified care groups (e.g. planning for older people across health and social care, not producing separate plans); integrating resources across systems to support the delivery of integrated services; assuring a strong role for local care professionals and clinicians in the planning of local services; and strong, committed local leadership focussed on clearly identified local needs. The Bill sets out the process for establishment and governance of partnership arrangements as follows:

a) Each Health Board and local authority will be required to establish an integration authority (body corporate or delegation between partners arrangements) to deliver nationally agreed outcomes for health and wellbeing.

b) In the “body corporate” model, the Health Board and the local authority delegate functions and resources to the integration authority, which is a joint board established as a body corporate. In this model, the integration joint board is required to appoint a chief officer who will lead development of the strategic plan, and manage the integrated budget and integrated planning and delivery of services.

c) In the “delegation between partners” model of integration, the Health Board or local authority or both, delegates functions and resources to the other or each other, for delivery of services. This model is sometimes referred to as a “lead agency” model, with the partner to whom functions are delegated becoming the “lead agency”. In this model, the Bill does not require the appointment of a chief officer. The integration plan will establish that the chief executive of the “lead agency” will be jointly accountable to the Health Board and local authority for management of the integrated services, and will lead development of the strategic plan.

d) The terms of the arrangement will be described in an integration plan, the details of which will include the model of integration to be used, functions and resources to be delegated, to the integration authority (integration joint board, Health Board and/ or local authority) and method of calculating money to be delegated to support delivery of the functions.

e) The integration plan will also cover a wide range of other aspects of the arrangement, such as provision for dispute resolution, financial management, staff governance and clinical and care governance. Regulations will be made specifying the required content of the integration plan.

f) Nationally agreed outcomes provide the context for effective joint planning, and the requirement to establish partnership arrangements reinforces the importance of establishing integrated arrangements that span traditional structures. The principle of joint and equal accountability is enshrined in the role of the chief officer in the “body corporate” model, and in the dual accountability of the lead chief executive in the “delegation between partners” model.

56. Once established, the integration authority will be under a duty to produce a strategic plan, which will set out the detailed arrangements for the joint carrying out of integrated functions in its area, as well as the outcomes to be achieved by the integration authority via delivery of services, using the resources delegated to it by the Health Board and/or local authority, which form the integrated budget.

57. In the “body corporate” model, the chief officer will lead the process of producing the strategic plan and its subsequent delivery. In the “lead agency” model, that responsibility will fall to the chief executive of the lead partner. Where the Health Board delegates functions to the local authority and the local authority delegates functions to the Health Board, both chief executives will be jointly responsible for the preparation and delivery of the strategic plan, which will cover more than the delegated functions.

58. The strategic plan is therefore a joint plan that spans the integrated services, and it is of critical importance to the success of the integrated arrangement.

59. In both models, services are delivered via the Health Board and local authority, and third and independent sector providers. Staff will continue to be employed by the Health Board and local authority. If in future it were considered appropriate to change this position so that, where the “body corporate” model is used, the integration joint board itself should be able to employ staff, there is a power for the Scottish Ministers to provide for this by regulations.

60. The Bill places a duty upon integration authorities (integration joint boards, Health Boards and/or local authorities) to work with local professionals, across extended multi-disciplinary teams and the third and independent sectors, to determine how best to put in place local arrangements for planning service provision. Integration authorities will be required to put in place, and to subsequently support, review and maintain such arrangements. On an on-going basis, integration authorities will be required to take account of the input of localities to the development of their strategic plans.

61. Further detail on the objectives that lie behind the Bill provisions is provided below.

**OBJECTIVES OF THE BILL – KEY FEATURES AND PROVISIONS**

62. The Bill responds to the changing shape and needs of Scotland’s population. More people are living longer, some of them with significant, complex needs for support, an effective, sustainable response to which requires better joined up health and social care services.
63. The context for these legislative changes is characterised by complexity; complexity of people’s needs and complexity in the service planning and delivery landscape. As a country, Scotland’s response to such complexity must be driven by strong local leadership and effective local planning based on a strong understanding of local needs and priorities. For all of these reasons, a key objective of this Bill is to enable and require appropriate, local, responses to changing patterns of need, within a national context of accountability for clearly articulated, joint outcomes.

64. From the outset of this programme of reform, the Scottish Government has stated that it is not its intention to develop proposals that rest on a principle of centrally directed structural change in NHS Scotland and local government. That does not mean, however, that the Scottish Ministers will fail to address aspects of current structures that are not currently well suited to achieving an effectively integrated response to need. The reform focusses on those aspects of governance, accountability and management arrangements that must be integrated to avoid the detriment of working in silos. Beyond that threshold, local leaders and local systems will determine effective local delivery and management arrangements, within the context of a presumption of integration, joint working, and a focus on planning for and providing person-centred care.

Part 1 – Functions of local authorities and Health Boards

Integration plans: principles

65. The Bill will establish the framework within which partners will plan and deliver integrated services. However, the Scottish Government recognises that legislation alone is not sufficient to enable the cultural shift required to transform decision-making about service planning and activity spend, in order to shift the balance of care from institutional to community settings and embed preventative and anticipatory care provision.

66. The integration principles establish the objectives of the policy within the legislative framework, setting out the aims that partners must take account of when undertaking their duties. Importantly, this will provide for public assurance that, at the heart of the Bill, is the desire to embed a person-centred approach to public service delivery of health and social care.

67. In terms of the aims of the reform, the principles enshrine the observation by the Christie Commission23 that “effective services must be designed with and for people and communities”, underpinning the planning and decision-making process from the outset. Public bodies will be required to cooperate, not simply for their own administrative convenience, but with a view to the changing needs of the population, whose health and social care needs are not experienced in isolation from one another.

National outcomes

68. The Scottish Government is committed to an outcomes based approach to planning and delivery of public services.

23 Commission on the future delivery of public services
http://www.scotland.gov.uk/About/Review/publicservicescommission
69. Currently, performance management and reporting frameworks for NHS Scotland and local authorities are considerably different from one another.

70. The introduction of the Concordat\(^24\) between the Scottish Government and COSLA in November 2007 brought with it the end of ring-fencing of local government funding and associated scrutiny by the Scottish Government of local authority spending. Single Outcome Agreements (SOAs) are now agreed between each Community Planning Partnership (CPP) and the Scottish Government.

71. SOAs provide the mechanism via which CPPs agree local strategic priorities and outcomes, and demonstrate how the SOA contributes to the National Outcomes that are part of the Scottish Government’s National Performance Framework. Each SOA is specific to local priorities, with performance management and continuous improvement arrangements that are unique to individual local authorities, although with some common characteristics between local authorities.

72. In contrast, within NHS Scotland, management plans and decisions for the delivery of national targets are scrutinised and agreed with the Health and Social Care Directorates within the Scottish Government, with decisions for major service change ultimately sitting with the Scottish Ministers.

73. By introducing nationally agreed health and wellbeing outcomes, the Scottish Government will, for the first time, introduce a mechanism for ensuring that Health Boards and local authorities are jointly and equally accountable for planning and delivery of effectively integrated services. To strengthen this, the national outcomes will be established in legislation.

74. The Scottish Government also recognises that, by definition, outcomes may need to develop over time. Underlying measures will, in time, need to respond to changes in the wider environment, patterns of service planning and delivery, and so on. The Bill, therefore, establishes that the Scottish Ministers will set out national outcomes for health and wellbeing in regulations, which can, in future, be amended to keep pace with developing needs and aspirations for health and social care in Scotland.

75. Partners will play a key role in the development of the outcomes and, indeed, the performance indicators, and the Scottish Ministers will be required to involve a range of key stakeholders, including health and social care professionals, third and independent sector, carers and service users.

76. The nationally agreed outcomes for health and social care will be consulted upon, agreed and will be reflected in SOAs.

Integration plans

77. An integration plan (referred to in the consultation on integration as a “Partnership Agreement”) between the Health Board and local authority will set out the terms of establishing each integration authority arrangement, which applies where the area of the local authority falls within the area of that Health Board. Some partners are already delivering shared services and the Scottish Ministers have been clear that they did not want to cut across these arrangements. Therefore, the Bill provides flexibility for one or more local authorities to join together, where they fall within the area of the same Health Board, to prepare an integration plan for the delegation of functions and resources. The Bill will establish the framework for such arrangements and their approval process.

- The purpose of the integration plan is to establish the context and provide the necessary clarity of the arrangements in which the integration authorities will operate. It will set out the governance arrangements for the integration authority, functions and budgets to be delegated, outcomes to be achieved, and the model of financial integration to be implemented. Other aspects of the integrated arrangements, such as dispute resolution, clinical and care governance will also be set out in the integration plan.

- Health Boards and local authorities will be required to involve and consult a wide range of stakeholders including health and social care professionals, representatives of Health Board and local authority employees, carers, and service users. Health Boards and local authorities will be required to take account of the views of the consultees.

- The integration plan will be agreed by the full council and Health Board, approved by the Scottish Ministers, and will be made publicly available.

Models of integration

78. The Scottish Ministers recognise that some partnerships have already made good progress in terms of integration, using the mechanisms available to them under current permissive legislation, and have sought to ensure that such arrangements can, with minor adaptation, continue. For this reason, the Bill continues to permit the arrangement for “delegation between partners”, sometimes referred to as “lead agency arrangements”, an example of which has been implemented by NHS Highland and the Highland Council. So as to ensure flexibility in models for integration, the Bill also provides for a “delegation to a body corporate” model, which establishes a joint board to enable it to hold an integrated budget, and allocate it between the constituent Health Board and local authority or authorities.

Body corporate model

79. In this model, the integration authority is established as a body corporate with its own functions and budgets acquired through delegation to the integration joint board. It is anticipated that the joint board will exercise those functions and manage use of the budget by arranging for the provision of services by the Health Board or local authority (which in turn may make arrangements with others). If in future it were considered appropriate for the integration joint board to provide services, there is a power for the Scottish Ministers to provide for this by regulations.
80. The integration joint board is an executive board. Ministerial intention is that its responsibilities are to:

- Oversee development of, and prepare, the strategic plan for the area covered by the integration plan;
- Allocate resources at a high level, between the Health Board and the local authority, in accordance with the strategic plan and within the parameters set out in the integration plan; and
- Ensure delivery of the national and local outcomes.

81. The integration joint board is required to appoint a senior accountable officer, the chief officer, to lead development of the strategic plan and oversee its delivery, to use the resources to best meet both local and national outcomes, set out in the strategic plan within the scope of the integration plan. The chief officer of the integration joint board will be appointed in consultation with the Health Board and local authority, and guidance will further describe the relationship with the two chief executives.

**Delegation between partners**

82. In this model, functions and budgets are delegated between statutory partners. Where functions and budgets are delegated to the local authority by the Health Board, the local authority becomes the “lead agency”, and is responsible for the delivery of the delegated functions using the delegated budgets. Where functions and budgets are delegated to the Health Board by the local authority, the Health Board becomes the “lead agency”, and is responsible for the delivery of the delegated functions using the delegated budgets.

83. It is possible for the Health Board and local authority to delegate functions in both directions – the two agencies can each be lead agencies at the same time, for different areas of service delivery (e.g. the arrangement in Highland).

84. An integration joint monitoring committee will scrutinise the effectiveness of the integrated arrangement on behalf of the local authority and the Health Board.

85. The integration joint monitoring committee will be a joint committee of the local authority and the Health Board and will be accountable to both. Membership of the joint committee will be determined by the full council and the Health Board (some members appointed by the Health Board and others by the council), and the joint committee will report to the full council and the Health Board.

86. The role of the joint monitoring committee is to:

- Hold the lead agency to account for the agreed resources/budgets on behalf of the Health Board and the council (and doing that in a manner designed to ensure integrated provision of services in a person-centred way); and
- Report to the Health Board and council in relation to those matters using a robust reporting mechanism specified in the integration plan.

87. Under these arrangements, Health Boards and local authorities remain statutorily responsible for the delegated functions. Duties set out in legislation that apply to integrated
functions remain the responsibility of the relevant statutory partner, although the lead agency is accountable, through the integration joint monitoring committee, for the discharge of functions delegated to it by the delegating partner. To support these arrangements and ensure effective delivery and accountability for functions, the lead agency is conferred the same duties, rights and powers in relation to them as the Health Board and local authority would have. This includes the ability to enforce rights in connection with the carrying out of the functions as well as liability in respect of any liabilities incurred.

Integration joint boards and integration joint monitoring committees

88. Integration joint boards and integration joint monitoring committees will be established as the joint and equal responsibility of Health Boards and local authorities to oversee planning and delivery of integrated services. This arrangement is in contrast to the status of Community Health Partnerships, which were introduced through the NHS Reform (Scotland) Act 2004 as committees of Health Boards.

89. The joint and equal accountability of the integration authority (integration joint board, Health Board and/or local authority) is important because it establishes a mechanism to provide governance, oversee the individual’s whole journey of care, through social care, primary and community health care, and secondary health care, and provides an oversight of use of the whole envelope of resource that supports service planning across that journey. In the eyes of the patient and service users, their experience of care is, as a whole, not neatly segmented into traditional planning mechanisms – so the structures established now need to reflect that. Integration joint boards and integration joint monitoring committees will be accountable and provide scrutiny of the integrated arrangements to the full council and Health Board.

90. The Bill repeals section 2 of the National Health Services Reform (Scotland) Act 2004, removing Community Health Partnerships from statute and establishing integrated arrangements under the requirements set out in the Bill.

Governance

91. To ensure that proper joint governance and assurance is put in place for the new integrated arrangements, the Health Board and local authority will be required to establish either a joint monitoring committee or joint board to oversee the partnership arrangements, dependent on the model of integration chosen. The integration joint monitoring committee will be established where partners choose the “delegation between partners” model, and a joint board will be established where partners choose the “delegation to a body corporate” model.

92. The integration joint monitoring committee’s role is to scrutinise the operation of the lead agency arrangement and provide assurance to both the Health Board and the local authority that it is achieving the aims and objectives as set out in the integration plan, as well as delivering the national and any local outcomes expressed through the strategic plan. The integration joint monitoring committee will ensure that an appropriate governance arrangement is in place for the Health Board and local authority to discharge their statutory responsibility for health and social care provision respectively, whilst delegating the delivery of these services to another body.

93. The integration joint board will be accountable to the Health Board and the full council for the delivery of the delegated functions and the national and local outcomes expressed through
the strategic plan. The integration joint board will be a decision-making body and take
responsibility for the delivery of outcomes, the discharge of the integrated budget, and the
performance management of the partnership arrangements. The board will provide direction to
the chief officer in the discharge of his or her duties, which will be to deliver the strategic plan
using the integrated budget.

94. Whichever model of integration is used, similar requirements will apply with regard to
membership of the integration joint boards and integration joint monitoring committee, which
will be defined in secondary legislation. In terms of voting rights, the Scottish Government
remains mindful of the significant statutory and budgetary responsibilities of the local authority
and Health Board. Decision-making will only be effectively delegated to integration authorities
if local authorities and Health Boards remain confident that all voting committee members are
publically accountable for their decisions and there is parity in the number of Health Board and
local authority representatives.

95. The regulations set out matters relating to voting members allowable on the integration
joint boards and similar terms for integration joint committees. This will ensure that local
democratic accountability is respected and that these governance arrangements do not become
overly large and bureaucratic. Partners will have flexibility within these parameters to agree the
numbers of members who will sit on the integration joint board and integration joint committee.

96. The Scottish Government recognises that for these governance arrangements to operate
most effectively, integration joint boards and integration joint committees will need access to a
range of advice from those who are partners in the delivery of services, and from those who
support or receive it. The Scottish Government will require, through regulations, that integration
joint boards and joint monitoring committees have representation from health and social care
professionals representing the whole pathway of care, staff, the third sector, users, the public,
and carers. This will ensure that the decision-making processes and scrutiny of the operational
delivery are fully informed and take account of these perspectives.

97. The Health Board and the local authority remain statutorily responsible for discharging
their responsibilities with regard to the provision of these services. However, in the integration
joint board model, as in the lead agency model, to support these arrangements and ensure
effective delivery and accountability for functions, the joint board is conferred the same duties,
rights and powers in relation to them as the Health Board and local authority would have. This
includes the ability to enforce rights in connection with the carrying out of the functions as well
as liability in respect of any liabilities incurred.

Scope of delegated functions

98. The policy is to require integration of adult health and social care services and the Bill
provides for the Scottish Ministers to establish by regulation the functions that must, may and
may not be delegated. It is to be left to statutory partners to agree locally whether to include
other services, such as children’s or housing services, in the integrated arrangements. The Bill
enables the Scottish Ministers, in the future, to extend the scope of services that must be
integrated. Approval of the integration plan by the Scottish Ministers will ensure that, as a
minimum, adult health and social care functions are included in the integrated arrangements.
99. Functions that can be delegated, and functions that cannot be delegated, are described via regulations and statutory guidance, to provide clarity and flexibility, and to keep pace with future service innovation. Budgets will follow delegated functions.

100. It is the Scottish Ministers’ intention, via regulations, to replicate the current scope of mental health social work functions that cannot be delegated, and to prohibit delegation of nationally delegated and funded NHS functions (e.g. national breast cancer screening programme).

### Integrated budgets and resourcing

101. The premise underpinning integration of budgets is that the allocation and utilisation of resources should recognise the interdependencies between health and social care services, and that the service imperative of integrating all aspects of care from prevention through to specialist treatment in improving care should be reflected in, and enabled by, integrated resources models.

102. The ability to look at overall expenditure for defined populations and user groups, and to use budgets flexibly, is a hallmark of integrated care. This is important, both to enable efficient allocation of resources and also to ensure that needs are met in the most appropriate and cost-effective way. The experience of integrated partnerships outside Scotland is that pooling resources has resulted in funds that are nominally allocated to one sector being used to increase investment in another, contributing to measurable changes in the location of care over a period of years, including reduced use of hospitals and care homes.\(^25\)

103. Alongside the introduction of this Bill, the Scottish Government continues its work on the Integrated Resource Framework\(^26\) for health and social care, and continues to work with Information Services Division of NHS Scotland and COSLA, in order to develop a database to provide partners with this information at individual client/patient level on a routine basis.

104. The Scottish Ministers have committed to establishing a minimum scope for inclusion in the integrated budget. The minimum scope is not included on the face of the Bill, but will be defined via regulations and statutory guidance, through the scope of the delegated functions; the Bill itself takes the power to the Scottish Ministers to make such direction. The focus of the minimum scope will be to identify those areas of spend and activity where the greatest opportunity exists for service redesign in favour of preventative and anticipatory care. With respect to hospital services, the minimum scope will therefore target specialties that are predominantly for unplanned care.

105. The Bill permits two models of integration, as described previously. Financial arrangements for each model are as follows:

- In the “delegation to a body corporate” model of partnership, budgets for the delegated functions are delegated to the body corporate under the management of the chief officer; and

---

\(^25\) Transforming the delivery of health and social care Kings fund 2012

\(^26\) Integrated Resources Framework [http://www.scotland.gov.uk/Publications/2012/07/4786](http://www.scotland.gov.uk/Publications/2012/07/4786)
• In the “delegation between partners” model of partnership, the budgets for the delegated functions are combined with the lead agency’s own resource to form the integrated budget for the population of interest. The lead agency hosts the integrated budget on behalf of both partners, under the management of the chief executive of the lead agency.

106. Whichever model is used, each integration authority will allocate operational budgets for service delivery from the integrated budget, in order to deliver the strategic plan. The integrated budget will be made up of the sum of operational budgets as follows: community health care; adult social care; and the budget for in-scope hospital services (i.e., the budget for appropriate aspects of hospital activity included in the integration authority arrangement. It is intended that the strategic plan will set out how the integrated budget will be allocated each year across the sectors to deliver the required improvements in outcomes. In this way, the strategic plan will effectively define the in-year operational budgets across the integration authority for community health care, adult social care, and the budget for in-scope hospital services.

107. The Scottish Government’s focus on people with multiple complex support needs, and, particularly, older people, reflects patterns of spend and activity across health and social care, which demonstrate that, in 2010/11, approximately two thirds of spending on health and social care support for people over 75 took place in institutional settings; 90% of occupied bed days for people aged over 75 was the result of unplanned admission to hospital; and 70% of all hospital expenditure on people aged over 75 was unplanned.

108. This demonstrates the importance of ensuring that health and social care services are effectively integrated, in order to put in place the context for planning and delivering support that focusses on anticipatory and preventative care. It also illustrates the scale of the challenge being addressed. Activity and spend on this care group – people with multiple complex support needs, many of whom are aged over 75 – is not a peripheral aspect of health and social care activity. It is a fast growing area of need that is rapidly dominating day-to-day pressures across the system. The Scottish Government’s consideration of the minimum scope of budgets for inclusion in the integrated budget must reflect that scale, as must the requirement on Health Boards and local authorities to delegate sufficient functions and budgets to the integration authorities to achieve the level of change that is required.

109. The status quo is not an option. The risks in current arrangements can be described as follows:

- In policy terms:
  a. they do not fit with the resource models anticipated by the Christie Commission, which should bring together and deploy as flexibly as possible all resources devoted by partners to respective localities.
  b. local clinicians, elected members, user and carer groups and other stakeholders will not engage in locality planning arrangements if budgets for unplanned hospital capacity, which make up the single largest component of resource spent on unscheduled care, are not included.

---

27 2010/11 IRF mapping. ISD.
• In **clinical** terms, given pressures in terms of demand resulting from demographic change, existing unscheduled care pathways, which are biased to reactive care in institutional settings, are expanded. The risk here is that the transformational improvements possible through integration, and seen outside Scotland, will not be achieved, to the detriment of patient and service user outcomes. A likely consequence is that the system will increase capacity along current patterns of institutional care – i.e., a vicious cycle of spending more and more money on services that do not support people with multiple complex needs many of whom are frail older people, to best effect.

• In **financial** terms, they do not recognise the reality of the integrated nature of health and social care services, particularly for frail elderly people and those with complex needs. Unless it is recognised that all parts of this system have a direct bearing on the effectiveness of the others, it will not be possible to plan overall expenditure for defined populations and user groups, and to use budgets flexibly, resulting in inefficient use of resources and poor outcomes.

110. There are risks associated with any change and the arrangements described in the Bill, by requiring allocations to the integrated budget, will constrain Health Boards and local authorities in their ability to manage across the whole of their budgets, both in setting their budgets and in managing in-year variances, for example:

• In setting budgets, Health Board and local authority flexibility to allocate their resources across the full range of their budgets may be constrained by “ring-fencing” of their previous allocations to the integration authority (integration joint board, Health Board and/or local authority). This risk will be proportional to the extent of the minimum scope of services to be included in the integrated budget.

• In managing variances on the budget for hospital services due to unforeseen cost pressures; the risk here is that the Health Board is left to manage the overspend whilst being unable to direct under-spends in community health budgets to offset these, a facility that is currently available to Health Boards.

• Both Health Boards and local authorities need to address adverse variances on their out-of-scope budgets. Here, the parent bodies are limited in their options for managing compensating in-year under-spends to those from within the out of scope budgets; under existing arrangements they have greater flexibility and are able to direct under-spends from the in-scope integration authority budgets as well.

111. These risks will be mitigated through the joint nature of governance of the integration authority and the provisions of the integration plan and strategic plan, whichever model is used, and through the direct accountabilities and responsibilities of the chief officer in the body corporate model. Statutory guidance will specify the content of the integration plan in order to put in place a framework that enables appropriate local management and mitigation of these risks.

**Chief officer**

112. In the integrated health and social care environment for which the Scottish Government is legislating, joint accountability at senior level is required, in simple terms, to achieve two objectives:
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

- To provide a point of joint accountability upwards, from the integration joint board, via which there is accountability to the full council and Health Board; and
- To provide a single, senior point of joint and integrated management down through the delivery mechanisms in each partner organisation.

113. Where the “delegation to a body corporate” model is used, the Bill requires integration joint boards to appoint a senior, accountable officer, the chief officer, who will manage the integrated budget for health and social care, and deliver the outcomes specified in the integration plan through delivery of the strategic plan. The consultation paper on integration of health and social care referred to this post as the “Jointly Accountable Officer”. The chief officer will oversee carrying out of the functions of the integration joint board. The relationship with the chief executives is important to ensure that the proper consideration of areas of health and social care outwith the integrated arrangements are taken account of in the course of planning and delivering integrated services.

114. In the “delegation between partners” model, the first objective – accountability upwards, via the joint committee and thence to the full council and Health Board – is provided via the chief executive of the lead agency. Joint and integrated management of delivery is achieved via delegation from the chief executive to other staff in the lead agency.

115. The Scottish Ministers recognise the key importance of statutory roles as currently defined in legislation and have no intention of changing these. This should provide firm reassurance of the Scottish Government’s commitment to the role of the Chief Social Work Officer role, the Chief Financial Officer, the Director of Public Health, and other statutory roles, and to professional and clinical leadership in general. The Scottish Government is strongly of the view that the influence of high quality professional leaders in partnership arrangements is central to the effectiveness of the new arrangements. The Scottish Government is already working closely with professional leaders on this agenda, for example, in revising the Scottish Government guidance to strengthen the role of the Chief Social Work Officer, the development of clinical and care governance guidance, and the development of financial management guidance within the new integrated arrangements.

Health and social care workforce

116. Where the delegation to the body corporate model is used, it is the policy intention that the body corporate will not employ staff at this stage and that staff will continue to be employed by the Health Board and local authority. However, the Bill provides for the Scottish Ministers to enable the body corporate to employ staff, at a later stage, should they consider it necessary to deliver effective, quality, integrated services. Notwithstanding, it is understood that staff may transfer between partners, regardless of the model of integration used, to ensure service delivery mechanisms are aligned, and provision to permit this is included in the Bill.

Strategic commissioning of health and social care services

117. Strategic commissioning is the term used for all the activities involved in assessing and forecasting needs, linking investment to agreed desired outcomes, considering options, planning the nature, range and quality of future services, and working in partnership to put these in place.
Joint commissioning is where these actions are undertaken by two or more agencies working together, typically health and local government, and often from a pooled or aligned budget.

118. Audit Scotland was critical of commissioning skills in Scotland in its report, Commissioning Social Care (March 2012\(^{28}\)), and recommended that local authorities, along with Health Boards and other relevant partners, should develop commissioning strategies. Following that publication, the Public Audit Committee recommended that “it should be a requirement for each of the proposed partnerships to produce a long-term joint social care commissioning strategy”. Furthermore, the Finance Committee\(^ {29}\) recently invited the Scottish Government to respond to the findings that there were few examples of good joint planning, and a slowness to develop strategic commissioning.

119. The Scottish Government believes that it is through the strategic commissioning process that the required shift in the balance of care will be achieved. This is not a low-level or peripheral service planning activity. It is a central, and key aspect of these reforms, which will have a significant impact on future development of Single Outcome Agreements and local delivery plans.

120. The Bill establishes that integration authorities (integration joint board or Health Board and/or local authority in a lead agency arrangement) are required to produce a strategic plan (strategic commissioning plan), which sets out how they will plan and deliver services for their area over the medium term (3 years). Guidance will set out that strategic plans will also be expected to plan for the longer term (10 years). Further, the role of clinicians and care professionals, along with the full involvement of the third and independent sectors, service users and carers, will be embedded as a mandatory feature of the commissioning and planning process. This will strengthen the cross-sector arrangements that have been established during the first two years of the Change Fund\(^ {30}\).

121. As part of the strategic commissioning process, the Bill will require integration authorities to:

- Embed patients/clients and their carers in the decision-making process;
- Treat the third and independent sectors as key partners; and
- Involve GPs, other clinicians and social care professionals in all stages of the planning work, from the initial stages to the final draft.

Good strategic plans should also:

- Identify the total resources available across health and social care for each client group and relate this information to the needs of local populations;
- Agree desired outcomes and link investment to them;
- Assure sound clinical and care governance is embedded;

\(^{30}\) Change Fund Plans
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

- Use a coherent approach to selecting and prioritising investment and disinvestment decisions; and
- Reflect closely the needs and plans articulated at the locality level.

122. The Bill establishes the framework for preparation of, and consultation on, the strategic plan, with a duty on integration joint boards, Health Boards and local authorities to have regard to statutory guidance.

**Locality planning**

123. Different kinds of planning for health and social care services respond to different kinds of need, from individual care plans, for example, to specialist national services delivered from a single site. In general terms, service planning is at its best when it focusses on the needs of its target population and the outcomes it will deliver for individuals.

124. Some aspects of service planning, particularly in relation to the provision of preventative and anticipatory care, can, the Scottish Government believes, operate with greater effectiveness and efficiency at a more local level than the integration authority itself - at the level, instead, of local communities, which may be identified by their distinct geographic, cultural or demographic features. This is entirely consistent with a renewed emphasis on integration at the local level in line with the Christie Report. 31

125. This kind of planning, which is described as “locality planning” in the consultation, should be led by and actively involve professionals, including GPs, acute clinicians, social workers, nurses, allied health professionals, pharmacists and others. The evidence is clear that the active involvement of such professionals will be key to success. The Bill requires a co-production approach to planning activities and this must also include carers and users of health and social care services. Local professionals are well-placed to contribute to, and lead, locality planning arrangements that to a large extent shape the development of the strategic plan by the integration joint board, Health Board and local authority (depending on which model is used). In order to achieve maximum benefit for patients and service users, locality planning also needs to ensure the direct involvement of local elected members, representatives of the third and independent sectors, and carers’ and patients’ representatives.

126. The Bill does not prescribe a model, or models, of locality planning, because it is believed that, by definition, arrangements that work best locally are developed and agreed upon locally. A range of examples of this type of planning can be seen in both health and social care services across Scotland. They are typified by professional teams, along with representatives of the various groups described above, working together to better understand the requirements and desired outcomes of particular local care groups (groups of people with similar health and social care needs), and to decide and put into effect changes to improve the delivery of those outcomes.

127. In order for locality planning to have real traction on strategic commissioning, integration authorities will need to ensure that professionals have time to participate in the process and are transparent and effective mechanisms for effecting change. They will also need to ensure that

31 Commission on the Future Delivery of Public Services
http://www.scotland.gov.uk/About/Review/publicservicescommission
localities can genuinely influence how resources are allocated within their communities, within a broadly equitable share of integrated resources, rather than on the basis of historic patterns of resource allocation and service provision.

128. As the Bill does not prescribe mechanisms for locality planning, the modalities are left to local agreement but there is a clear requirement to ensure a pivotal role for locality planning arrangements with respect to strategic commissioning.

129. As locality planning arrangements mature and develop, the Scottish Government would expect, for example, to see integration authorities choosing to delegate to localities decisions on a material proportion of the integrated budget, and ensure that local communities benefit from any shift in service provision towards preventative and anticipatory care that they achieve.

130. The Bill places a duty upon integration authorities to work with local professionals, across extended multi-disciplinary health and social care teams, and the third and independent sectors, to determine how best to put in place local arrangements for planning service provision and on the operation of their locality function. Integration authorities will be required to put in place, and to subsequently support, review and maintain, such arrangements. Integration authorities will be required to develop their strategic plans on the basis of their respective locality plans.

**Scrutiny**

131. Healthcare Improvement Scotland (HIS) and Social Care Social Work Improvement Scotland (SCSWIS) (commonly known as the Care Inspectorate) are to have a joint scrutiny role of integration authorities. The scrutiny bodies will retain their current functions in relation to health services and social services respectively.

132. In the “delegation to a body corporate” model, joint inspections will scrutinise the integration joint board and the services provided under their direction.

133. In the “delegation between partners” model, joint inspections will scrutinise the lead agency and the services which it provides on behalf of the delegating partner, as well as the services of the lead agency as part of the integrated arrangements.

134. The scrutiny bodies will be required to scrutinise strategic plans for quality and standards, and to ensure the plan will effectively achieve the objectives of the integration plan and the nationally agreed outcomes.

**Part 2 – Shared services**

135. The National Health Service (Scotland) Act 1978, enables the Common Services Agency (commonly known as NHS National Services Scotland (NSS)) to provide goods and services to NHS bodies in Scotland, as well as a limited range of goods and services to other public bodies, and then only to a limited range of public bodies.

136. A review by the Scottish Government identified that expansion of the remit of the Common Services Agency offered the potential to improve efficiency and productivity across
the public sector by making available to other public bodies the Common Services Agency’s
expertise in the delivery of competitive based shared services.

137. In particular, the following services currently delivered by the Common Services Agency
to NHS Scotland have been identified as having the potential to be shared with the wider public
sector:

- Legal services – The Central Legal Office (CLO) have expertise in delivering legal
services in a public sector environment covering litigation, employment, commercial
contracts and property;
- Counter fraud services – The Counter Fraud Services currently protects NHS
Scotland from fraud, using a centrally-based, professionally accredited team of
specialists, dedicated to counter fraud work;
- Procurement – National Procurement (NP) has a well-established capability that
services the whole of NHS Scotland with approximately £1.1 billion of NHS
expenditure managed under NSS contracts; and
- IT services – National Information Systems Group (NISG) is currently the single
point of support to NHS IT systems and is already engaged in cross-sector initiatives
which are at the forefront of the realisation of the McClelland recommendations.
- Information – The Information Services Division (ISD) provides health information,
health intelligence, statistical services and advice that support the NHS in
progressing quality improvement in health and social care, and facilitates robust
planning and decision-making.

138. The delivery of the Common Services Agency shared services and goods across the wider
public sector will not be mandatory and it will remain a matter for these bodies themselves to
determine the benefits of engaging with the Common Services Agency.

CNORIS indemnity scheme

139. The National Health Service (Scotland) Act 1978, provides for the creation of an
indemnity scheme for bodies list in section 85B of the Act and is operated by NHS Scotland.
The resulting regulations provide for the scheme to meet:

- Expenses arising from any loss or damage to their property; and
- Liabilities to third parties for loss, damage or injury arising from carrying out of the
functions of such members.

140. Currently regulations limit the members of the scheme to all NHS bodies and the Mental
Welfare Commission for Scotland and also define the scope of the functions covered by the
scheme. Under these arrangements, local authorities are not permitted to participate in the
scheme nor are social work functions permitted to be covered.

141. The Bill amends the 1978 Act to extend the range of bodies that can participate in the
scheme to include local authorities and integration joint boards. It will be a matter for each local
authority and integration joint board as to whether to participate in the CNORIS scheme.
142. Given that the premise of the Bill is that health functions are able to be delegated to local authorities, in the case of delegation between partners, and where there is agreement to do so or delegation to the integration joint board, the Scottish Ministers consider it appropriate to extend the CNORIS indemnity scheme to local authorities and integration joint boards.

143. The Bill amends the 1978 Act to extend the range of bodies that can participate in the scheme to include local authorities and integration joint boards and to extend the scope of functions that can be covered by the scheme to include local authority functions.

Part 3 - Health service: functions

Joint ventures structures

144. To facilitate opportunities brought about by integration and in order to ensure the most effective use of resources, the Scottish Government wants to broaden the opportunities to allow Health Boards to form joint venture structures. There are two issues that need to be addressed: the ability of Health Boards to form companies under the National Health Service (Scotland) Act 1978; and the ability of a Health Board to exercise its functions outwith its own Health Board area.

Ability of Health Boards to form companies

145. Currently there are a number of opportunities available to local authorities which are not available to Health Boards, with regard to management and disposal of surplus assets. Under the National Health Service (Scotland) Act 1978, Health Boards are only able to form joint ventures as company structures as defined in the Companies Act 1985.

146. To support Health Boards to collaborate effectively with local authorities and to benefit from the efficiency that a joint approach to asset management and disposal would generate for Health Boards, the Scottish Government wants Health Boards to be able to form corporate structures other than companies for joint ventures purposes, such as for the management and disposal of property and assets.

147. The Bill gives the Scottish Ministers the power to form, to participate in forming, and to participate in other “corporate structures”, in addition to their ability to form and participate in forming companies. The Bill also gives the Scottish Ministers the power to invest, provide guarantees and make other kinds of financial provisions to other corporate structures as well as companies. These powers of the Scottish Ministers will be delegated to Health Boards in accordance with the National Health Service (Scotland) Act 1978.

Ability of a Health Board to exercise its functions outwith its own Health Board area

148. The “Hub Initiative” is a programme led by the Scottish Futures Trust32, which works collaboratively with local authorities and Health Boards across Scotland (as well as many public sector bodies) to deliver value-for-money on public sector infrastructure. The initiative provides an opportunity to improve the planning, procurement and delivery of community based infrastructure in support of local services through the creation of a joint venture company between the public and private sectors. The Scottish Futures Trust32 is an arms-length company

32 Scottish Futures Trust http://www.scottishfuturestrust.org.uk/
wholly owned by the Scottish Ministers (and accountable through the Board of Non-Executive Directors).

149. As the Hub Initiative has been developed and a pipeline of projects identified, it has become clear that in order to attract revenue finance (from lenders such as banks) there requires to be a critical mass of capital investment in order to deliver value for money. One key method of creating such a critical mass is to aggregate or “bundle” a number of projects together either within a single Health Board Area or across the broader hub territory (which can incorporate a number of Health Board areas).

150. In the former scenario, there are no legal issues. In the latter scenario, where there are a number of Health Boards involved, currently powers do not allow one Health Board to procure facilities on behalf of another Health Board. This therefore requires multiple project agreements and special purpose vehicles.

151. For example, several Health Boards who are members of the hub North Territory are proposing to enter into a design, build, finance and maintain (DBFM) contract with a special purpose vehicle formed for this purpose by their hubco. Under this contract, each Health Board will be provided with individual facilities. Bundling the various facilities into one DBFM contract will maximise financial efficiency through economies of scale and avoid the additional costs of setting up and running Special Purpose Vehicles for each facility and will also facilitate funding by aggregating the otherwise individual borrowing requirements.

152. The simplest and most cost efficient way to achieve this contractually is for one Health Board to act as a lead in the project and enter into a contract for the building of such facilities across the whole area (i.e. including the areas outwith its own boundaries), with “back to back” contracts between that Health Board and the other Health Boards.

153. A Health Board would therefore be attempting to enter into a contract for the provision of facilities that it will not use itself (i.e. the facilities in the other Health Board areas). Health Boards, at the moment, do not have the power to enter contracts for facilities on behalf of other Health Board.

154. A similar problem arises in relation to a Health Board’s ability to enter into externally financed development agreements (which would be relevant in undertaking a “bundle” of projects which are spread across a number of Health Board areas). Currently Health Boards do not have the ability to exercise this power on behalf of other Health Boards, which they would need if they were to enter into contracts as described above.

155. The Bill therefore seeks to allow Health Boards to be able to contract on behalf of other Health Boards for contracts which involve providing facilities, for example a DBFM contract.

156. The Bill therefore also allows Health Boards to be able to enter into externally financed development agreements in relation to the provision of facilities for other Health Boards.
ALTERNATIVE APPROACHES

157. As the Scottish Government developed these proposals, considered the evidence regarding improving outcomes for people using health and social care services, and consulted partner organisations and stakeholders on priorities for integration, the conclusion was reached that reform based on centrally-directed structural change would be unlikely to deliver the shift in outcomes required. Available evidence suggests particularly that structural change per se is not a pre-requisite for achieving better outcomes, though it can be helpful where local leadership for change is strong and consistent.

158. A number of apparently straightforward mechanisms to bring health and social care together were apparent from the start of policy consideration of this commitment. Social care might be moved from local authority control to NHS control; part of community health provision could be moved from NHS control to local authority control; a new, “third provider” of health and social care could be established; or health and social care could be placed in the control of Community Planning Partnerships. The Scottish Ministers rejected each of these for the following reasons:

- The first option – moving social care from local authority control to the NHS – would have involved considerable upheaval and costs in terms of moving staff between employers, and would also have presented a serious distraction to the need to focus more effectively on improving outcomes and people’s experience of care. In order to work – and address the barriers within health, as well as between health and social care – the outcome would have to be a completely new national health and care service, not “just” an NHS with additional responsibility for social care.

- The second option – moving community health provision to the control of local authorities – would have failed to address the key issue of improving the degree of integrated working between primary and secondary care. This option would also have carried with it the costs, in terms of money and time, of centrally-directed staff transfer noted above.

- The third option – establishing a new “third provider” of health and social care – is a variation on the first, in which social care, along with all of health provision, is transferred to the control of a new body, and the same potential pitfalls would apply.

- The fourth option – placing delivery of health and social care in the hands of Community Planning Partnerships – was rejected because Community Planning Partnerships are not delivery constructs. Instead, they provide an environment for a range of statutory partners in an area to come together to make sure that their individual planning activities add up to an effective whole in terms of local service design and provision.

159. Available evidence drew out the importance of certain aspects of high-functioning integrated arrangements elsewhere in the UK and further afield:

- Planning in terms of population needs, rather than in terms of historic structures (planning across health and social care for older people, for example, or for children

with complex needs, rather than developing separate “health” and “social care” plans).

- Integrating resources across health and social care to support population-based planning and eliminate the risk of cost-shunting between agencies.
- Assuring a strong role for local professionals and clinicians in the processes of planning for local populations.
- Strong local leadership and shared accountability for delivery.

160. Having rejected the structurally-led models described above, Ministers chose to take forward proposals for legislation that enshrine these key features of effective integration in practical local arrangements. Health Boards and local authorities will be required to plan together for the delivery of services that address the needs of the local population, focussing in particular on preventative and anticipatory care, using their combined resources to best effect, and ensuring a key role for local professionals and leadership in planning.

161. The Scottish Ministers looked at whether Community Planning Partnerships (CPPs) could deliver integrated health and social care. However, CPPs are not delivery constructs; they provide an environment for a range of statutory partners in an area to come together to make sure that their individual planning activities add up to an effective whole in terms of local service design and provision. Partnership arrangements under the Bill, on the other hand, have been designed to bring together resources, planning and delivery of adult health and social care. Integration authorities will be expected to play a strong and effective role in community planning.

162. In terms of existing legislation, the provisions under the Community Care and Health (Scotland) Act 2002 provide one mechanism for integrating NHS and local authority functions: delegation of functions and resources between partners. This is the model that was used by the Highland partnership to integrate health and social care for adults and children in 2012, and it remains available to Health Boards and local authorities under the provisions of this Bill.

163. When considering how best to give effect to how to integrate health and social care, and taking into account extensive discussions with partner organisations and stakeholders, the Scottish Ministers concluded that another model should also be developed, building upon arrangements for joint working already seen in some areas (such as West Lothian), which would permit Health Boards and local authorities to put arrangements in place that are best suited to local need and experience. This model is described in the Bill as delegation to a body corporate.

164. It was considered necessary to improve the model of integration provided by the Community Care and Health (Scotland) Act 2002 (delegation between partners) because it has not successfully delivered the consistent approach to integrated working that is required. This Bill improves that model of integration by putting strategic planning for person-centred, preventative care, with strong local and professional leadership, at its heart. The Bill also changes the context for local use of this model by requiring all Health Boards and local authorities to engage in integrated working, using either this approach or the body corporate model.
165. The policy intention is to integrate planning and delivery of health and social care functions. The Bill permits delegation of a broader range of local authority functions to the integration authority, although powers are taken to the Scottish Ministers to define in regulations which functions must, may and may not be delegated by either a local authority or Health Board. It is the Scottish Ministers’ intention to use these powers to describe what is meant by the broad term “social care”, which extends beyond social work functions to include, for example, some aspects of housing provision by local authorities. The Scottish Ministers have concluded that, for the purposes of integrating health and social care, it is more appropriate to describe what is meant by social care functions in regulations, rather than in primary legislation, as this will allow for greater flexibility in future as innovative patterns of service provision, which the Scottish Government anticipates will blur traditional lines between “health” and “social care” support, are developed.

EFFECTS ON EQUAL OPPORTUNITIES

166. An Equality Impact Assessment (EQIA) has been carried out and a summary of the results will be published on the Scottish Government website. The Scottish Government considered the potential impacts, both positive and negative, across the protected characteristics required for EQIAs.

167. To help increase the Scottish Government’s understanding of all equality groups, it set up an Equalities Reference Group (ERG). The group met for the first time in October 2012 and has provided valuable input to the impact assessment process. Membership is made up of a variety of representatives with an interest in equalities, including Age Scotland, Carers Network, Stonewall and Health and Social Care Alliance.

168. The EQIA concluded that the legislation will not directly or indirectly discriminate on the basis of age, disability, gender, gender reassignment, pregnancy and maternity, sexual orientation, race and religion or belief.

169. The EQIA has informed the Bill process, including plans for the implementation of the policy. For example, the consultation proposed that legislation should apply to adult health and social care services, with a particular focus, at first, on improving outcomes for older people. Respondents to the consultation clearly and consistently stated that it would not be a good idea to restrict integration to older people defined by age. While acknowledging that there is a strong correlation between long term conditions and age, respondents felt that it would be better to think in terms of people’s wellbeing and state of health, and the complexity of their needs, rather than in terms of chronological age itself. The Bill and policy will therefore focus on improving outcomes for people with complex needs, for their wellbeing, and also to ensure that the whole health and social care system works effectively for everyone who needs support, whatever their age or circumstances.

170. To ensure that there will be continual assessment of equalities in communities, statutory partners via the partnership arrangements in the Bill will be responsible for developing an EQIA and for monitoring and evaluating implementation of the policy within their local area. Integration authorities will be expected to take account of the findings from the Scottish Government’s EQIA and on-going advice from the Equality Reference Group.
EFFECTS ON HUMAN RIGHTS

171. The Bill does not give rise to any issues under the European Convention on Human Rights. In fact, it is arguable that the Bill goes further in enhancing the relevant rights of individuals by providing mechanisms that will provide a level of consistent care for the population of Scotland, so that people do not experience variation in quality of service provision. One of the principles of these proposals is putting the individual at the centre of health and social care service planning, ensuring a patient and service user centred approach, which means that the Bill will provide the mechanisms to ensure that individuals receive the care they need and that the individual encounters a seamless and joined up experience of the care pathway.

EFFECTS ON ISLAND COMMUNITIES

172. The Bill applies to all local authority areas and Health Boards and therefore to all communities across Scotland, including island communities. Island communities may experience a more concentrated need for services for older people and may also experience difficulty in recruiting and retention of health and social care practitioners. However, it is hoped that the opportunities afforded through the partnership arrangements will result in a more planned, joined up and flexible service provision to island populations, which will contribute to alleviating these difficulties.

EFFECTS ON LOCAL GOVERNMENT

173. The Bill directly impacts on local authorities in discharging their duties under social care legislation. The effect is already set out in this policy memorandum and in the other accompanying documents to the Bill. The principles of the Bill establish the approach which local government is required to take in carrying out its integrated functions. The Bill establishes equality of responsibility and accountability of service planning and delivery between the local authority and Health Boards, whilst leaving the statutory responsibility for social care with local authorities. To deliver the duties in the Bill, local government is required to better understand the needs of its constituent population and the associated spend, including the associated outcomes.

174. The Bill does not remove existing duties and requirements of local government in respect of the assessment and charging for some social care services.

EFFECTS ON SUSTAINABLE DEVELOPMENT

175. The Bill will have no negative impact on sustainable development and will have a strong positive effect on the health and wellbeing of the population of Scotland by helping to make health and social care services more responsive to individual needs.

176. The environmental impact of the Bill has been considered and it is likely to have a minimal effect in relation to the environment and, as such, is exempt for the purposes of section 7 of the Environmental Assessment (Scotland) Act 2005.
PURPOSE

1. This memorandum has been prepared by the Scottish Government in accordance with Rule 9.4A of the Parliament’s Standing Orders, in relation to the Public Bodies (Joint Working) (Scotland) Bill. It describes the purpose of each of the subordinate legislation provisions in the Bill and outlines the reasons for seeking the proposed powers. This memorandum should be read in conjunction with the Explanatory Notes and Policy Memorandum for the Bill.

2. The contents of this Memorandum are entirely the responsibility of the Scottish Government and have not been endorsed by the Scottish Parliament.

Overview of the Bill

3. The Bill primarily provides the framework for the improvement of the quality and consistency of health and social care services through the integration of health and social care services in Scotland. In addition, the Bill provides for the Common Services Agency (also known as NHS National Services Scotland) to provide goods and services to public bodies including local authorities; for the Scottish Ministers to form a wider range of joint venture structures in relation to persons providing functions and services under the National Health Service (Scotland) Act 1978 than at present in order to make the most effective use of resources; and to extend the scheme for meeting losses and liabilities of health service bodies which is run by NHS Scotland on behalf of the Scottish Ministers to local authorities and “integration joint boards” established under Part 1.

Outline of Bill provisions

4. In summary the Bill:

- Provides for nationally agreed outcomes for health and social care, and for delivery of which Health Boards and local authorities are equally and jointly accountable to the Scottish Ministers and the public.
Establishes integration joint boards and integration joint monitoring committees as the partnership arrangements for the governance, planning and delivery of health and social care services. The Bill will remove Community Health Partnerships from statute. Health Boards and local authorities will establish functions and resources to be integrated, for the improvement of person-centred care, in an integration plan, which will set out the detail of their integrated arrangements.

Requires Health Board and local authority partners to enter into arrangements (the integration plan) to delegate functions and appropriate resources to ensure the effective delivery of those functions. The Bill provides for two options for integrating budgets and functions. First, delegation to an integration joint board established as a body corporate. In this case the Health Board and the local authority agree the amount of resources to be committed by each partner for the delivery of services to support the functions delegated. Second, delegation between partners. In this case the Health Board and/or local authority delegates functions and the corresponding amount of resource, to the other partner, which then hosts the services and the integrated budget.

Requires integration joint boards to appoint a chief officer who will be responsible for the management of the integrated budget and the delivery of services to meet the outcomes in the integration plans. The chief officer will lead the development and delivery of the strategic plan for the joint board. Where delegation is between partners, these responsibilities fall to the Chief Executive of the host partner.

Requires integration joint boards, and Health Boards or local authorities acting in the capacity of a ‘lead agency’ (the “integration authority”), to prepare a strategic plan for the area, which sets out how it will meet both local and nationally agreed outcomes. The integration authority will involve a range of partners in the development of the plan and will consult widely, taking into account any views expressed. In addition, the integration authority will be required to make suitable arrangements to plan locally for the needs of its population, ensuring the involvement of a range of partners, including clinicians and care professionals, in the development and implementation of local planning arrangements.

Delivers opportunities for more effective use of public services and resources by allowing for Health Boards to be able to contract on behalf of other Health Boards for contracts which involve providing facilities, and by allowing the Scottish Ministers to form a wider range of joint ventures structures to collaborate effectively with local authorities and enable a joint approach to asset management and disposal.

Provides for the extension of the Common Services Agency’s ability to deliver shared services to public bodies including local authorities.

Enables the Scottish Ministers to extend the range of bodies able to participate in the scheme for meeting losses and liabilities of certain health service bodies. The scheme is established under section 85B of the National Health Service (Scotland) Act 1978 for relevant bodies to meet expenses arising from any loss or damage to their property; and liabilities to third parties for loss, damage or injury arising from the carrying out of the
functions of the scheme members. The Bill amends the bodies able to participate in the scheme to include local authorities and integration joint boards.

Rationale for subordinate legislation

5. The Bill contains a number of delegated powers which are explained in more detail below. In deciding whether legislative provisions should be specified on the face of the Bill or left to subordinate legislation, the Scottish Government has had regard to the need to:

- Strike the right balance between the importance of the issue and providing flexibility to respond to changing circumstances with the benefit of experience, without the need for primary legislation;
- Anticipate the unexpected, which might otherwise frustrate the purpose of the provision in primary legislation approved by the Parliament;
- Make proper use of valuable parliamentary time;
- Allow detailed administrative arrangements to be kept up to date with the basic structures and principles set out in the primary legislation; and
- Consider the likely frequency of amendment.

6. The delegated powers provisions are listed below, with a short explanation of what each power allows, why the power has been taken in the Bill and why the selected form of parliamentary procedure has been considered appropriate. Powers that are referred to here as being exercisable by regulations or orders are to be made by Scottish statutory instrument.

Part 1 – Functions of Local Authorities and Health Boards

Integration

Delegated powers

Section 1 – Integration plans: same local authority and Health Board area

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

7. Subsection (3) provides that an integration plan is a plan setting out certain matters including, under subsection (3)(e) prescribed information about such other matters as may be prescribed.

8. Subsection (6) provides that the Scottish Ministers may by regulations prescribe: (a) functions of local authorities that must, may or may not be delegated under an integration plan;
(b) functions of Health Boards that must, may or may not be delegated under an integration plan; 
(c) functions of local authorities or Health Boards that must be delegated under an integration plan other than in prescribed circumstances; functions of local authorities or Health Boards that may be delegated under an integration plan only in prescribed circumstances; functions of local authorities or Health Boards that may not be delegated under an integration plan in prescribed circumstances; and (d) functions of local authorities or Health Boards that may be delegated under an integration plan only if other prescribed functions are also delegated to the same person under the plan.

Reason for taking this power

9. Subsection (3)(a) to (d) sets out the bare bones of an integration plan. The power in subsection (3)(e) allows Ministers to prescribe matters (additional to those specified in subsection (3)(a) to (d)) which are to be set out in an integration plan, and to prescribe information which must be provided in relation to those matters. This will allow Ministers to ensure that integration plans set out a full scheme for integration, and that the requirements can be adapted in light of future developments.

10. The power in subsection (6) allows Ministers to determine which functions must or may be delegated under an integration plan, and which may not. The Scottish Ministers seek innovation in service provision as part of these reforms. This provision enables the Scottish Ministers to take account of changing circumstances across health and social care in future, including in relation to the nature and form of services provided. It also enables Ministers to reconsider the range of functions that may be delegated as integration develops. For example, a function that may currently not be considered appropriate for delegation, may seem entirely appropriate for delegation in a few years’ time. Such an approach will support continuous closer integration and adaptation of services. It is anticipated that any review will be taken forward in consultation with relevant stakeholders with the aim of strengthening and developing the delivery of integrated health and social care services.

Choice of procedure

11. The powers in subsection (3)(e) are subject to negative procedure. This is considered to provide an appropriate level of scrutiny given that the powers allow Ministers only to make detailed provision as to matters which are additional to the core elements of the integration plan.

12. The power in subsection (6) is subject to negative procedure. This is considered to provide an appropriate level of scrutiny given that the power sets the framework within which Health Boards and local authorities will determine which functions to delegate when implementing the integration of health and social care services under the Bill. It is considered therefore that a more detailed level of Parliamentary scrutiny is not required.
Section 5 – Power to prescribe national outcomes

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: affirmative procedure

Provision

13. Subsection (1) provides that the Scottish Ministers may by regulations prescribe outcomes in relation to health and wellbeing, following consultation under subsection (3).

14. This provision allows Ministers to prescribe national health and wellbeing outcomes, but to do so only after consulting with a range of interests across health and social care. It also allows them to amend the prescribed outcomes from time to time in order to recognise progress and to ensure – through updated national health and wellbeing outcomes - that integration authorities focus resources on the areas where Ministers, with the benefit of consultees’ views, consider it is most needed.

Reason for taking this power

15. This provision helps to ensure that integration is taken forward with a focus on its purpose which is improving outcomes. By allowing Ministers to set national outcomes, it provides for a consistent focus nationally. It is appropriate that outcomes are set by regulations as this requires a process of consultation to be followed, contemporaneously with integration plans being prepared, to inform the outcomes. It also provides flexibility for the Scottish Ministers to amend outcomes in the future, in response to innovation locally and changing circumstances, and in order to support continuous improvement.

Choice of procedure

16. This is subject to affirmative procedure as the national outcomes are fundamental to health and social care integration in that they express its practical purpose. Whilst this level of scrutiny involves more parliamentary time, it is considered that the national outcomes are sufficiently important to justify this, and it is not anticipated that they will be regularly amended.
Section 6 – Consultation

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

17. Subsection (2)(a) provides that before submitting the integration plan for approval under section 7, the local authority and the Health Board must jointly consult such persons of groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed. “Prescribed” means prescribed by regulations.

Reason for taking this power

18. This power will ensure that those who may be affected by the policy are appropriately consulted regarding the content of the integration plan. It is considered appropriate to set out the consultees in legislation, as this will ensure that the full range of persons and groups with an interest in the functions being integrated are consulted consistently throughout Scotland. It is also appropriate that the list be set out in secondary legislation as opposed to in the Bill itself, as this will allow the necessary level of flexibility for the list of consultees to be adjusted in future to reflect changes in service users and service delivery over time, as services adapt to changing needs. It will also enable new groups to be added in response to any future changes to the functions to be integrated (for example if an order under section 1(6) expands the types of functions that may or must be integrated).

Choice of procedure

19. This is subject to negative procedure, which is considered appropriate as the regulations will deal with matters of detail relating to the consultation requirement rather than broad principle. The Scottish Ministers consider that a more detailed level of Parliamentary scrutiny is not required for a provision of this nature.

Section 7 – Approval of integration plan

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

20. Subsection (1) provides that a local authority and a Health Board must submit an integration plan to the Scottish Ministers for approval by the prescribed day.

Reason for taking this power

21. The power in subsection (1) allows Ministers to set the date by which integration plans will be submitted for approval. This provides Ministers with flexibility to set an appropriate date in the circumstances prevailing once the Bill is passed and implementation has commenced.
Choice of procedure

22. This provision subsection (1) is subject to negative procedure. This is considered to provide an appropriate level of parliamentary scrutiny for an essentially administrative matter such as setting the date by which a duty must be complied with.

Section 9 – Functions delegated to integration joint board

<table>
<thead>
<tr>
<th>Power conferred on:</th>
<th>Scottish Ministers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power exercisable by:</td>
<td>order /regulations made by Scottish statutory instrument</td>
</tr>
<tr>
<td>Parliamentary procedure:</td>
<td>negative procedure</td>
</tr>
</tbody>
</table>

Provision

23. Subsection (2) provides that Ministers may establish an integration joint board by Order.

24. Subsection (3) provides that the Scottish Ministers may by regulations prescribe a day before which functions are to be delegated, where functions are being delegated to an integration joint board.

Reason for taking this power

25. In relation to subsection (2), it would be impractical to create individual integration joint boards in primary legislation, given that integration joint boards require to be created only where the corporate body model is the model of integration chosen locally. It is appropriate that the creation of a new body, such as an integration joint board requires some legislative underpinning, and so an order making power is considered appropriate. The order will establish the joint board for an area or areas.

26. In relation to subsection (3), “prescribed” means prescribed by regulations. This power is necessary to allow flexibility as to the date for delegation to occur in relation to different integration joint boards, recognising and accommodating the fact that there will be some variation in the progress achieved in different areas.

Choice of procedure

27. Negative procedure is considered appropriate in relation to an Order under subsection (2) given the formal nature of the order insofar as it establishes integration joint boards.

28. Regulations under subsection (3) will make provision for, the essentially administrative matter of, setting the date by which functions are to be delegated. Negative procedure is considered to provide an appropriate level of scrutiny for such an administrative matter.
Section 10 – Chief officer of integration joint board

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

29. Subsection (5) provides that the Scottish Ministers may in relation to any integration joint board by order: (a) disapply the requirements of subsections (2) to (4) which require that the chief officer is seconded to the integration joint board from a constituent authority (local authority or Health Board), and (b) make provision enabling the board to employ a chief officer on such terms and conditions as the board determines.

Reason for taking this power

30. If the person appointed as chief officer is an existing member of staff of the local authority or Health Board which has delegated functions to the integration joint board, then the chief officer will be seconded from the Health Board or local authority. If not, then the person will be appointed as a member of staff of either the local authority or the Health Board and will then be seconded to the integration joint board. This provision will allow the Scottish Ministers to disapply these arrangements and gives them the power to enable integration joint boards to employ a chief officer directly. This provision is essentially included as a safeguard – it is anticipated that the option of enabling the direct employment of a chief officer will be exercised only in the event that arrangements agreed locally fail to work.

Choice of procedure

31. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for an administrative provision of this nature which, if used, will simply activate the alternative position (i.e. employment by the board on terms and conditions set by them) already set out in the Bill.

Section 11 – Other staff of integration joint board

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

32. Subsection (1) provides that the Scottish Ministers may by order make provision enabling integration joint boards to appoint staff other than a chief officer. Subsection (2) adds that such an order may include such further provision as regards such staff as the Scottish Ministers think
fit, including in particular provision as to: (a) the appointment of staff; (b) the numbers of staff; and (c) the terms and conditions of staff.

Reason for this power

33. To allow flexibility to appoint staff with appropriate skills and abilities to deliver integration plans. Such provision is not proposed to be made on the face of the Bill as it is envisaged that integration joint boards will not necessarily require to employ staff; delivery of functions is likely to be carried out by the constituent local authorities and Health Board rather than by the board directly. This provision is essentially included as a safeguard – i.e., as with the provision to enable direct employment by the joint board of the chief officer, it is anticipated that the option of enabling direct employment of staff will be exercised only in the event that locally agreed arrangements fail to work. It is considered appropriate to include this power in the Bill to enable a different approach to be taken in light of changing circumstances, if this proves necessary in the future.

Choice of procedure

34. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature which will set out administrative arrangements relating to the employment of staff.

Section 12 – Integration joint boards: further provision

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

35. Subsection (1) provides that the Scottish Ministers may by order make provision about: (a) the membership of integration joint boards; (b) their proceedings; (c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions; (d) the supply of services or facilities to integration joint boards by a local authority or Health Board; and (e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit.

Reason for taking this power

36. It is considered appropriate to enable the Scottish Ministers to establish appropriate parameters for operational arrangements within the new integrated partnerships, whilst leaving scope for future flexibility to respond to progress and innovation. It is also considered necessary as a safeguard to enable integration joint boards to fully transact. It is envisaged that this option will only be exercised in the event arrangements agreed locally fail. It is considered that this level of detail is most appropriately dealt with in secondary legislation. It is also necessary to
allow the flexibility that secondary legislation provides so that the arrangements may take into account the particular circumstances of individual joint boards – for example boards which are delegated a greater number of functions or which intend to carry out delegated functions themselves rather than directing the constituent authorities to do so are likely to require stronger supporting arrangements (e.g. larger membership or more extensive general powers) than boards which have lesser responsibilities.

**Choice of procedure**

37. This power is subject to negative procedure. This is considered appropriate as the order will deal with matters of detail rather than of broad principle. It is considered that a more detailed level of Parliamentary scrutiny would be inappropriate for a provision of this nature.

**Section 14 – Implementation of integration plan where functions delegated to local authority or Health Board**

**Power conferred on:** Scottish Ministers  
**Power exercisable by:** regulations made by Scottish statutory instrument  
**Parliamentary procedure:** negative procedure

**Provision**

38. Subsection (2) provides that the Scottish Ministers may prescribe by regulations a day before which: (a) the local authority and the Health Board must jointly establish a committee (an “integration joint monitoring committee”) for the purpose of monitoring the carrying out of the integration functions for the area of the local authority; and (b) the functions are to be delegated.

**Reason for taking this power**

39. This provision is required in order to allow Ministers to set an appropriate deadline for implementation of integrated arrangements, and to ensure that the monitoring committees which will scrutinise those arrangements are functional from the outset of their operation. The ability to set a timescale for these matters will also support the alignment of statutory planning and reporting periods with the start date of the integrated arrangements.

**Choice of procedure**

40. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for an administrative provision of this nature which simply sets the date by which certain arrangements under the Bill must be put in place.
Section 16 – Provision about integration joint monitoring committees

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

41. Subsection (1) provides that the Scottish Ministers may by order make provision about: (a) the establishment of integration joint monitoring committees; (b) membership of integration joint monitoring committees; (c) the proceedings of integration joint monitoring committees; and (d) any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

Reason for taking this power

42. These provisions enable Ministers to establish appropriate parameters for operational arrangements within the new integrated partnerships, while leaving scope for future flexibility to respond to progress and innovation over time.

Choice of procedure

43. This is subject to negative procedure which is considered appropriate. A higher level of Parliamentary scrutiny is not required for a provision of this nature which will deal with matters of detail rather than of broad principle.

Section 21 – Effect of delegation of functions

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

44. Subsection (5) provides that the Scottish Ministers may by order provide that an integration joint board must or must not exercise a power conferred by virtue of subsection (2)(b) i.e. a power that may be exercised in connection with the carrying out of a delegated function, that would otherwise be a power solely of the delegator.

Reason for taking this power

45. These provisions enable Ministers to establish appropriate parameters for responsibilities of the integration joint board, taking account of whether in practice the board or the constituent authorities will be carrying out the delegated functions, while leaving scope for future flexibility to respond to progress and innovation over time. It is anticipated that an order under this section
may be made in conjunction with an order under section 22(8) so that, for example, if functions are to be carried out directly by the integration joint board the board may be required to exercise the necessary powers to do so; or so that the board may be prevented from exercising powers simultaneously with constituent authorities if those authorities are given responsibility for carrying out the functions by virtue of a direction under section 22.

Choice of procedure

46. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature. Any order made under this power will constitute technical provision about the practical carrying out of functions delegated under the Bill. It would not add to or modify the powers of integration joint boards and would simply be used to provide that they must or must not be exercised, where appropriate.

Section 22 – Further powers of persons to whom functions are delegated

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

47. Subsection (8) provides that the Scottish Ministers may by order provide that an integration joint board must or must not give a direction under subsection (1).

Reason for taking this power

48. These provisions enable Ministers to establish appropriate parameters for responsibilities of the integration joint board, in light of whether in practice it is considered appropriate for the board to carry out functions directly or whether the constituent authorities should be given responsibility for them. Without this power, the Bill would allow the integration joint board complete discretion as to whether to carry out delegated functions itself or to require others to do so. It is considered appropriate that Ministers are able to influence the mechanisms for delivery of delegated functions within the integration joint board model, if this is considered necessary in light of practical experience and changing circumstances.

Choice of procedure

49. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for a technical provision of this nature which merely allows Ministers to require that a particular delivery mechanism, already set out in the Bill, is used.
Section 23 – Requirement to prepare strategic plans

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

50. Subsection (4) provides that the first strategic plan of an integration authority is: (a) to be prepared before such date as may be prescribed by the Scottish Ministers by order; and (b) to relate to the period of 3 years beginning with such date as may be prescribed by the Scottish Ministers.

Reason for taking this power

51. This provision enables two dates to be prescribed. The first allows the Scottish Ministers flexibility to set the date by which strategic plans are to be prepared. The second allows the Scottish Ministers to prescribe the start date for the 3-year period that the first strategic plan is to cover. Integration of health and social care is an ongoing priority for Health Boards and local authorities; flexibility of this kind will allow the Scottish Ministers to respond to progress locally, and will allow the planning cycle to be synchronised in future, even where the start date for integration varies from place to place. This will allow the Scottish Ministers to align the start date of the strategic plan with the period of the performance report.

Choice of procedure

52. This is subject to negative procedure, which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for administrative provision of this nature which sets the date by which the duty to prepare a plan under Bill must be complied with and the start date for that plan.

Section 26 – Establishment of consultation group

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

53. Subsection 2 provides that the groups referred to in subsection (1)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed. “Prescribed” means prescribed by regulations.
Reason for taking this power

54. It is considered appropriate to set out requirements as to representatives to be included in the consultation group in legislation, as this will ensure that the full range of persons and groups with an interest in the arrangements being detailed in the plan are consulted consistently throughout Scotland. It is also appropriate that the list be set out in secondary legislation as opposed to in the Bill itself, as this will allow the necessary level of flexibility for the membership to be adjusted in future in light of any future changes to integrated functions as well as the changing complexion of service users and providers over time.

Choice of procedure

55. This is subject to negative procedure which is considered appropriate as the regulations will deal with the detail of consultation requirements rather than broad principle. A higher level of Parliamentary scrutiny is not required for a provision of this nature.

Section 27 – Steps following establishment of consultation group

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

56. Subsection (5) provides that groups referred to in subsection (4)(d) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed. “Prescribed” means prescribed by regulations.

Reason for taking this power

57. It is considered appropriate to set out requirements as to who is to be consulted on the draft strategic plan in legislation, as this will ensure that the full range of persons and groups with an interest in the arrangements being detailed in the plan are consulted consistently throughout Scotland. It is also appropriate that the list be set out in secondary legislation as opposed to in the Bill itself, as this will allow the necessary level of flexibility for the list of consultees to be adjusted in future in light of any future changes to integrated functions as well as the changing complexion of service users and providers over time.

Choice of procedure

58. This is subject to negative procedure which is considered appropriate as the regulations deal with the detail of arrangements for consultation rather than broad principle. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature.
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

Section 32 – Carrying out of integration functions: localities

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

59. Subsection (4) provides that the groups referred to in subsection (3) are such groups of persons appearing to the Scottish Ministers to have an interest as may be prescribed.

Reason for taking this power

60. It is considered appropriate to set out in legislation requirements as to who is to be consulted on decisions relating to service provision in localities within local authority areas. This will ensure that the full range of persons and groups with an interest in the service will be consulted at the local level, and that there is a consistent approach to ensuring involvement of local groups across Scotland. It is also appropriate that the list be set out in secondary legislation as opposed to in the Bill itself, as this will allow the necessary level of flexibility for the list of consultees to be adjusted in future in light of any future changes to integrated functions as well as the changing complexion of service users and providers over time.

Choice of procedure

61. This is subject to negative procedure which is considered appropriate as the regulations deal with the detail of arrangements for consultation rather than broad principle. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature.

Section 33 – Integration authority: performance report

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

62. Subsection (3) provides that the Scottish Ministers may by regulations prescribe: (a) the form and content of performance reports; and (b) the period during which performance reports must be published. It is anticipated that performance reports will be required to include information assessing performance against the national outcomes and the strategic plan.
This document relates to the Public Bodies (Joint Working) (Scotland) Bill (SP Bill 32) as introduced in the Scottish Parliament on 28 May 2013

Reason for taking the power

63. To ensure consistency of reporting on delivery of outcomes across Scotland in order to address unnecessary variation. The power will provide flexibility for the form and content of reports to be adapted as appropriate, in response to progress and innovation over time, ensuring that all relevant matters are reported on and enabling Health Boards and local authorities to be held to account. It will also ensure consistency in timescales for reporting across Scotland.

Choice of procedure

64. This is subject to negative procedure which is considered appropriate. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature about timescales for and content of reports. The provision will contain a level of administrative detail which would not normally be included in primary legislation.

Section 36 – Power to make provision in consequence of new integration plan

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

65. Subsection (2) provides that, in consequence of the replacement of an integration plan by a new plan, the Scottish Ministers may by order provide for the winding-up of an integration joint board.

Reason for taking this power

66. This power enables the Scottish Ministers to deal with a possible consequence of moving from an old plan to a new plan, in the event that the parties opt in the new plan to adopt a different model of integration not involving an integration joint board; or in the event that the parties to the plan change and the appropriate course of action is for the previous joint board to be replaced by a new joint board. In such circumstances it would be necessary for the pre-existing integration joint board to cease its activities and it is appropriate for the practical arrangements for the cessation of activities and dissolution of the board to be provided for in secondary legislation.

Choice of procedure

67. This is subject to negative procedure which is considered appropriate as an order providing for the winding-up of an integration joint board will relate to practical and administrative matters which do not merit a higher level of Parliamentary scrutiny.
Section 39 – Default power of Scottish Ministers

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

68. Subsection (2)(b) confers power on the Scottish Ministers to establish by order an integration joint board.

Reason for taking this power

69. The power is exercisable where a local authority and a Health Board have failed to comply with the duty imposed on them by section 7 to submit an integration plan to Ministers for their approval. It is envisaged that it would be exercised only as a last resort where there is a need for Ministers to step in to avert potential failure to integrate services in the area in question. In such circumstances, where the local authority and the Health Board have failed to work together to prepare a plan in fulfilment of their statutory duties, it is appropriate that a new body should be established to take on responsibility for the integrated arrangements. An order under this section will formally establish the integration joint board for this purpose.

Choice of procedure

70. This is subject to negative procedure which is considered appropriate as the order is simply the mechanism to formally establish an integration joint board in circumstances which are themselves set out in the Bill. A more detailed level of Parliamentary scrutiny is not required for a provision of this nature.
Part 2 – Shared Services

Section 45 – Extension of schemes for meeting losses and liabilities of health service bodies

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

71. Section 45(3) amends section 85B of the National Health Service (Scotland) Act 1978 to introduce a new subsection (2C). This new subsection confers a power on the Scottish Ministers to specify functions of local authorities (in addition to integration functions) to which the scheme will apply.

Reason for taking this power

72. Section 45 restricts the application of a scheme under section 85B of the 1978 Act, as far as concerns local authorities, to “integration functions” which are defined as functions delegated to the local authority, functions to be carried out in conjunction with those delegated functions, or functions that a local authority carries out in accordance with a direction from an integration joint board or Health Board under section 22. The Scottish Ministers are given the power to specify by order other functions of local authorities that can be covered by the scheme. This would enable any or all functions of local authorities to be covered by the scheme if that is considered appropriate in the future.

Choice of procedure

73. This is subject to the negative procedure which is considered appropriate. A higher level of Parliamentary scrutiny is not required for an administrative provision of this nature which would simply extend the functions to which the statutory scheme applies.
Section 48 – Interpretation

Power conferred on: Scottish Ministers
Power exercisable by: regulations made by Scottish statutory instrument
Parliamentary procedure: negative procedure

Provision

74. Subsection (1) confers a power on the Scottish Ministers to prescribe by regulations persons who are “health professionals”, “social care professionals” and what is meant by “social care” for the purposes of the Bill.

Reason for taking this power

75. These definitions are relevant to the requirement for Ministers to consult relevant groups before prescribing national outcomes for health and wellbeing under section 5. It is appropriate for these definitions to be set out in regulations rather than on the face of the Bill as we do not wish to restrict the scope of functions the must or may be delegated, and nor do we want to restrict the range of groups that should be consulted when innovative future practice may make changes desirable.

Choice of procedure

76. These are subject to negative procedure which is considered appropriate as the definitions are a matter of detail rather than of broad principle. This power is for defining purposes only to allow appropriate consultation. It is considered that a more detailed level of Parliamentary scrutiny would be inappropriate for provisions of this nature.

Section 50 – Ancillary provision

Power conferred on: Scottish Ministers
Power exercisable by: order made by Scottish statutory instrument
Parliamentary procedure: negative procedure; affirmative procedure if making textual amendments of an Act.

Provision

77. Section 50 provides that the Scottish Ministers may by order: (a) make such supplementary, incidental or consequential provision as they consider appropriate for the purposes of, in consequence of, or for giving full effect to, any provision or the Act; and (b) make such transitional or transitory provision or savings as they consider appropriate for the purposes of, or in connection with, the coming into force of any provision of the Act.
Reason for taking this power

78. The new procedures introduced by the Bill may give rise to the need for ancillary provisions. The Scottish Ministers may need to make such provision by order to support the full implementation of the Bill. This provision empowers the Scottish Ministers to make provisions concerning incidental, supplemental, consequential, transitional, transitory provision or savings where this is thought to be necessary.

79. Without these powers to make ancillary provision, it might be necessary to return to Parliament, through subsequent primary legislation, to deal with a matter, which is clearly within the scope and policy intentions of the original Bill. It would not be an effective use of Parliament’s time, or the Scottish Government’s resources to deal with such matters through primary legislation. They are best addressed through subordinate legislation.

Choice of procedure

80. These orders are in general made subject to the negative procedure but an exception is made where the order adds to, replaces or omits any part of the text of an Act. In that case, the affirmative procedure applies. This approach on procedure is in line with the approach taken in most Bills and there are not considered to be any special factors justifying a different approach in this case.

Section 52 – Commencement

- **Power conferred on:** Scottish Ministers
- **Power exercisable by:** order made by Scottish statutory instrument
- **Parliamentary procedure:** no procedure

Provision

81. Subsection (2) provides that the provisions of the Act (other than sections 49, 50, 52 and 53) come into force on such day as the Scottish Ministers may by order appoint.

Reasons for taking this power

82. This is a standard commencement by order power. As usual with commencement orders, no provision is made for laying the order in Parliament as the power is to commence provisions, which the Parliament has already scrutinised, together with any consequential or transitory arrangements.

Choice of procedure

83. Whilst the order will not be subject to Parliamentary procedure, the Subordinate Legislation Committee will, in terms of remit, have the opportunity to consider the order.

Health and Sport Committee

Remit and membership

Remit:

To consider and report on health policy, the NHS in Scotland, anti poverty measures, equalities, sport and other matters falling within the responsibility of the Cabinet Secretary for Health, Wellbeing and Cities Strategy apart from those covered by the remit of the Economy, Energy and Tourism Committee.

Membership:

Bob Doris (Deputy Convener)
Rhoda Grant
Colin Keir
Richard Lyle
Aileen McLeod
Duncan McNeil (Convener)
Nanette Milne
Gil Paterson
Dr Richard Simpson

Committee Clerking Team:

Clerk to the Committee
Eugene Windsor

Senior Assistant Clerk
Rodger Evans

Assistant Clerk
Myer Cohen

Committee Assistant
Bryan McConachie
The Committee reports to the Parliament as follows—

INTRODUCTION

1. The Public Bodies (Joint Working) (Scotland) Bill was introduced in the Parliament on 28 May 2013, by Alex Neil, Cabinet Secretary for Health and Well-being. The Health and Sport Committee was designated as the lead Committee by the Parliamentary Bureau. The lead committee is required, under Rule 9.4.1 of the Parliament’s Standing Orders, to report to the Parliament on the general principles of the Bill.

2. Following the Bill’s introduction, the Committee issued a call for evidence. A total of 81 submissions was received. A further six submissions were received following the closing date.

3. The Committee took oral evidence on the Bill at its meetings on 3, 10, 17 and 24 September and 1 October 2013. The Committee thanks those organisations and individuals who submitted written evidence and those who gave oral evidence and participated in round-table sessions at Committee meetings.

4. Two visits were also undertaken by Committee members. On 23 September 2013, members of the Committee visited projects in Inverness, as guests of Highland Council and NHS Highland. On 30 September 2013, members visited West Lothian Council and the Lothian Centre for Independent Living. The Committee thanks these bodies for their helpful input into the scrutiny process.

5. The Committee also received reports on the Bill from the Finance Committee, the Local Government and Regeneration Committee, and the Delegated Powers and Law Reform Committee. The reports from these committees are considered later in the report.

1 Public Bodies (Joint Working) (Scotland) Bill, as introduced (SP Bill 32, Session 4 (2013)). Available at: http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32s4-introd.pdf
BACKGROUND

6. There is no single definition of ‘integration’ or ‘integrated care’. The Bill’s policy memorandum states that what is meant by integration is that “services should be planned and delivered seamlessly from the perspective of the patient, service user or carer, and that systems for managing such services should actively support such seamlessness”.2

7. Commonly in Scotland, the terms are used to refer to the joined-up delivery of NHS and social care services. Integration may be vertical, between the different levels of the NHS, or horizontal, between different statutory and non-statutory services. The quest for integrated care is replicated internationally and is a burgeoning discipline within health research.

8. Recent impetus behind integration policy in Scotland has come both as a result of various pieces of work (for example the Christie Commission) that have considered the impact of demographic change, the forecast increased demand for health and social care over the coming decades, and declining levels of public expenditure. It is also an attempt to solve other problems (considered in more detail below) that people experience on their care pathway.

9. Greater integration of health and social care is not a new concept to Scotland and there have been many attempts to achieve greater integration dating back to the 1970s. Previous structures which attempted to achieve greater integration included Local Healthcare Co-operatives (LHCCs) and Community Health Partnerships (CHPs).

10. LHCCs were part of Primary Care Trusts (PCTs) and were organised around groups of GP practices in distinct geographical areas. They were not underpinned by legislation, but they were intended to bring health and social care providers together to deliver services.

11. CHPs were created under the National Health Service Reform (Scotland) Act 2004 and replaced LHCCs. They were established as committees of the health boards and were intended to bridge the gap between primary and secondary healthcare, and between health and social care. The current Bill, if passed, will remove CHPs from statute.

12. Despite such initiatives, however, there have been persistent concerns that joint working between partners has not been as effective as it could have been, or that it has at least been patchy across the country.

13. The Policy Memorandum notes that while there has been “very significant progress” in improving pathways of care in recent years, many clinicians, care professionals and managers in health and social care currently describe two “key disconnects” in Scotland’s system of health and social care. One of these disconnects is found within the NHS, between primary care (GPs, community

---

2 Public Bodies (Joint Working) (Scotland) Bill. Policy Memorandum (SP Bill 32-PM, Session 4 (2013)), paragraph 6. Available at: http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32s4-introd-pm.pdf
nurses, the allied health professionals etc.) and secondary care (hospitals). The other is found between health, delivered by the NHS, and social care, delivered by local authorities.

14. The Policy Memorandum goes on to note that these disconnects make it difficult to address people’s needs holistically, and to ensure that resources follow the needs of patients, service users and carers. Moreover, it says, problems often arise in providing for the needs of people who access many services over prolonged periods, such as people with long-term conditions, and people with complex needs.

15. These problems are summarised by the Policy Memorandum, from the perspective of people who use the system (patients, service users, carers and families) as:

- inconsistency in the quality of care for people, and the support provided to carers, particularly in terms of older people’s services;

- people too often being unnecessarily delayed in hospital when they are clinically ready for discharge, and

- services required to enable people to stay safely at home not always being available quickly enough, sometimes leading to avoidable and undesirable admissions to hospital.

16. The Policy Memorandum also notes that, in terms of older people’s services, almost a third of total annual spend is on unplanned admissions to hospital and more is spent annually on unplanned admissions than on social care. Finally, even allowing for the possibility that people may live longer and in better health in future, and taking into account the current emphasis on improving anticipatory and preventative care, Scotland will in future experience an overall increase in the number of people who require care. The resources required to provide support will, therefore, rise in the years ahead.

17. The Scottish Government has concluded, according to the Policy Memorandum, that despite “a good track record of partnership working” Scotland’s health and social care still incorporates “barriers in terms of structures, professional territories, governance arrangements and financial management that often have no helpful bearing on the needs of the large, growing group of older service users, and in many cases work against general aspirations of efficiency and clinical/care quality”. Reform, the Policy Memorandum therefore argues, is needed to address these barriers and to “deliver care that is better joined up and, as a consequence, delivers better outcomes for patients, service users and carers”.

18. The Bill is intended to address the disconnects described above, so that “the balance of care shifts from institutional care to services provided in the community, and resources follow people’s needs”.

3
STRUCTURE AND MAIN PROVISIONS OF THE BILL

19. The Bill is made up of four parts. Part 1 is the largest part, with 43 sections, and contains the main provisions intended to establish the integration of adult care and health services.

20. Part 2 contains provisions to enable the functions of National Services Scotland (also known as the Common Services Agency) to be extended to other public bodies.

21. Part 3 is intended to enable health boards to form a wider range of corporate structures and to exercise functions outside their own board area.

22. Part 4 contains general provisions relating to interpretation, subordinate legislation, ancillary provision, repeals, commencement and the short title.

Main policy provisions in the Bill

23. The Policy Memorandum sets out a summary of the policy provisions contained in the Bill. According to the Memorandum, the Bill:

- Provides for the Scottish Ministers to specify national outcomes for health and wellbeing, which health boards and local authorities will be accountable to the Scottish Ministers and to the public for delivering

- Sets out principles for the planning and delivery of integrated functions

- Establishes integration joint boards and integration joint monitoring committees for the governance and oversight of health and social care services and removes community health partnerships from statute

- Requires health boards and local authorities to prepare jointly an integration plan (using one of two possible models) to delegate functions and appropriate resources to ensure effective delivery of those functions

- Requires integration joint boards to appoint a chief officer, jointly accountable through the board to the constituent health board and local authorities, and responsible for management of the integrated budget, delivery of services for the plan area and development and delivery of the strategic plan for the joint board

- Requires integration joint boards (and health boards or local authorities to whom functions are delegated acting in the capacity of “integration authority”) to prepare a strategic plan for the area, setting out arrangements for delivery of integration functions, involving a range of partners in the development of the plan and consulting widely. In addition, locality planning duties will require the integration authority to make suitable arrangements to consult and plan locally for the needs of its population.

- Provides for health boards to be able to contract on behalf of other health boards for contracts which involve providing facilities, and powers for
Scottish Ministers to form a wider range of joint ventures structures to collaborate with local authorities and enable a joint approach to asset management and disposal.

- Provides for the extension of the Common Services Agency’s ability to deliver shared services to public bodies, including local authorities.
- Enables the Scottish Ministers to extend the range of bodies (to include local authorities and integration joint boards) able to participate in the Clinical Negligence and Other Risks Indemnity Scheme (CNORIS) scheme for meeting losses and liabilities of certain health service bodies.

OVERALL VIEWS ON THE BILL: THEMES FROM THE WRITTEN EVIDENCE

24. The written evidence received by the Committee was broadly supportive of the policy intentions behind the Bill. The Committee’s call for evidence had invited respondents to indicate whether they agreed with the general principles of the Bill and its provisions. The SPICe summary of evidence reports that few respondents answered with an outright yes/no and 15 respondents either did not answer or did not express a clear opinion. However, 64 of the 65 that did address the question responded positively and expressed general support for the Bill and its policy objectives. Only one submission (from the Chartered Institute for Public Finance and Accounting) clearly did not support the Bill on the grounds that it felt the case for legislation had not been made.

25. Although most respondents were positive about the Bill and supported its policy intentions, some had concerns about its implementation or some of its provisions.

26. The Committee’s call for evidence had also invited respondents to comment on the extent to which they believed that the Bill would achieve its policy objectives. The SPICe analysis has categorised the responses in terms of those who thought the Bill would achieve its objectives, those who thought it might achieve its objectives, and those who thought it would not achieve its objectives.

27. By far the largest proportion of respondents felt that the Bill might achieve its objectives, with just a handful of responses unequivocally of the opinion that the Bill either would or would not work.

28. Of those who thought the Bill might achieve its objectives, the main reasons given for this were—

- integration requires more than just structural change, cultural change is also required

---

3 The scheme is established for relevant bodies to meet expenses arising from any loss or damage to their property; and liabilities to third parties for loss, damage or injury arising from the carrying out of the functions of the scheme members

the Bill has the potential to help so long as certain other things happen (e.g. effective local leadership, effective strategic commissioning, greater focus on co-production and stakeholder involvement)

it will depend on the detail of implementation, much of which will be within regulations and guidance

it has the potential to help but there are concerns about specific aspects of the Bill (e.g. may make services and structures more complex, may increase fragmentation, will not address integration within the NHS)

29. The themes of general broad support for the policy intentions behind the Bill, coupled with reservations about different aspects of its implementation, also ran broadly through the oral evidence taken by the Committee. These themes are explored in more detail in subsequent sections of the report.

COMMITTEE’S EVIDENCE AND ANALYSIS

Need for the bill: high-level issues and general comments

30. Almost all written and oral evidence received by the Committee supported the intentions of the Bill, but a number of concerns were consistently raised about the extent to which the provisions in the Bill would enable the overall policy objectives to be achieved.

31. The Scottish Independent Advocacy Alliance argued that the Bill and its policy intentions were “not clearly aligned”. It argued that the Bill “appears to concentrate on structural and financial aspects of integrating the NHS and [local authorities] and does not give enough regard to the cultural shift that is required.”

32. Glasgow City Council suggested that a key issue in the patient/service user overall experience was the “disconnect between acute and primary care within the NHS in relation to the patient experience and their outcomes” which was “in addition to the disconnect between health and local authorities which the Bill provides for”. The council’s submission went on to argue that the Bill failed to address the first disconnect and it was therefore “difficult to see how addressing only one of the key disconnects identified as having a negative impact on the patient/service user experience is likely to achieve the policy objectives”.

33. COSLA’s submission expressed its broad support for a public service reform agenda that develops outcomes-based approaches, uses resources flexibly, promotes co-production, early intervention and prevention, facilitates service integration and enhances local democratic scrutiny. It concluded that “the overall thrust of the Scottish Government proposals on health and social care integration would align with many of these general principles”. COSLA went on to argue, however, that the proposals were too prescriptive and too detailed, and

8 COSLA. Written submission, paragraph 8.
suggested that there should be more flexibility at a local level to determine the shape and governance of the proposed partnership arrangements. The issues of the tensions between local democracy and ministerial direction from the centre is considered in more detail later in the report.

34. A number of submissions, for example the one from the Coalition of Care and Support Providers in Scotland (CCPS), suggested that integration should be seen as a means to an end, not an end in itself. Professor Alison Petch went further, saying—

“We must focus on the individual and think about all aspects of their life. People need housing, which is a critical element that tends to be forgotten, and they need training, health support and social care support. If we start by thinking about the individual and all the bits around them, some of the boundaries fall away. I know that the word “holistic” is much misused, but the approach must really consider what is necessary to deliver what people need.”

35. Many witnesses pointed out that while the proposed legislation would assist the process of integration, it would not, in itself, make it happen. Andrew Eccles of Glasgow School of Social Work, told the Committee that the bill would not guarantee integration, saying that it would be “folly to imagine that”. He noted that “more subtle and complex engagement with some of the issues” was required. He did, however, accept that legislation was required, stating that the Bill “puts down a marker”, and that it was “important that the issue is not off the agenda.”

36. More detailed reasons why the bill is needed were provided to the Committee by Peter Gabbitas of the City of Edinburgh Council. Firstly, he explained that the current legislation governing establishment of committees by local authorities (the Local Government (Scotland) Act 1973) requires that any committee formed by a council has to have elected members as at least two thirds of its membership. Secondly, there were “issues to do with assets and different accounting regimes”, and “issues with the budgets” both of which will be addressed by regulations. The bill, he concluded, was therefore required for a number of reasons, but he suggested that the biggest one was to do with community health partnerships, which, under the legislation that established them, were responsible for commissioning and influencing acute services but had not been established “in a way that allowed them to do that effectively.”

37. Professor Alison Petch reminded the Committee of the need “to be clear about what we mean by [outcomes] and whether we are talking about outcomes for the individual or for communities, or of a particular policy.” She argued that alongside the proposed national health and social care integration outcomes—which she thought were “pretty much going in the right direction with their

---

9 COSLA. Written submission, paragraph 8.
10 Coalition of Care and Support Providers in Scotland. Written submission.
emphasis on the individual – “there are organisational outcomes such as the health improvement, efficiency, access and treatment, or HEAT, targets and single outcome agreements, along with “the most important outcomes of all—the outcomes for the individual”\(^{15}\).

38. The MS society’s written submission argued that the Bill was in danger of focusing too heavily on structural change and how to achieve it at “the expense of the primary focus on improving outcomes for people”\(^{16}\). Delivering coordinated and effective care, it went on to argue, “requires more than structural change and integrated budgets” noting that “strong leadership and a radical change in culture will be key to improving services”.

39. The themes of the need for strong leadership and cultural change were echoed in many of the other submissions and in the oral evidence. Andrew Eccles said in oral evidence that the key issue would be one of working cultures. It would be about spending time and effort getting people to understand where each other was “coming from” and “developing trust, which is key”\(^{17}\). That, he said, would “be more important than organisational or procedural shifts”\(^{18}\).

40. Professor Alison Petch, noting that there were “some very good examples of the traditional barriers melting away when teams work together at the front line” cautioned that “the large amount of ignorance among different professional groups about what their future partners do” was not to be underestimated. She went on to argue that while increasing people’s knowledge and understanding would “address some of that”, there was also a challenge because, “in times of uncertainty and change, people tend to scuttle back to their tribes”. She said there was a “need to ensure that people look in the other direction and see that, through working together, they will better support the people whom all this is for.”\(^{19}\)

41. The Local Government and Regeneration Committee (LGRC) held a joint evidence session with the Cabinet Secretary for Health and Well-being and the Minister for Children and Young People. The Committee’s report\(^{20}\) notes that “both the Cabinet Secretary and the Minister in evidence stated similar aims for their bills, principally “improving outcomes for the service user” while recognising that the approach taken differed”. The Bills, the LGRC was told, “complement one another”\(^{21}\) and “will streamline structures and make it easier to see the focus for partnership working”\(^{22}\).

\(^{22}\) Local Government and Regeneration Committee, Official Report, 4 Sept 2013, Col 2526.
42. This Committee also questioned the Cabinet Secretary on the need for the Bill. He told the Committee—

“Many attempts have been made to make it happen. It has happened in one or two areas—West Lothian is the most notable example—but without statutory underpinning it has not happened. In one or two areas there is still, frankly, resistance to the proposals. We cannot deliver the quality of care that we require to deliver to our adult population—in particular, the disabled population and older people—without the full integration of adult health and social care services.

Our strong view, which is based on the evidence of the past 10 or 20 years, is that integration will not happen without statutory underpinning. We hope that statutory underpinning will not only make it happen on the ground throughout Scotland, but help to change the culture in health boards and local authorities so that people see the need to put the person—the end user, the patient—at the centre of everything that we do and to give overriding consideration to their needs rather than the needs of either a health board or a local authority.”

43. The Committee notes the views of some witnesses that much could have been done to integrate adult health and social care under existing legislation. However, the Committee also recognises that voluntary progress towards integration under current legislation has been limited, although there are clearly some examples of excellent progress.

44. Many of the witnesses told the Committee that structural change brought through legislation would not, in itself, deliver the integration of services that is desired. That will require cultural change within local government and NHS boards, which will require strong leadership that is committed both to improving outcomes for individual patients and to true integration that will be capable not only of delivering those outcomes but of doing so with more efficient use of the available resources. The Committee endorses these views.

45. The Committee, nevertheless, accepts that the Bill is required both to generate the momentum needed to make the widely desired progress a reality and to give a solid, statutory footing to the policy.

Models of integration

46. Each health board and local authority will be required to develop an integration plan, setting out its proposals for the establishment an ‘integration authority’. The integration authority may be established under one of two possible models.

47. Under the ‘body corporate model’, a joint board would be established from the local authority and the health board, with the same number of voting members from each body. This board would have its own chief officer who would lead

---

development of the strategic plan, and manage the integrated budget and integrated planning and delivery of services. In this model, the integration authority would be established as a body corporate with its own functions and budgets acquired through delegation to the integration joint board. It is anticipated that the joint board would exercise those functions and manage use of the budget by arranging for the provision of services by the health board or local authority (which in turn may make arrangements with others). If in future it were considered appropriate for the integration joint board to provide services, there is a power proposed in the bill for the Scottish Ministers to provide for this by regulations.

48. Alternatively, local authority and health board partners may delegate agreed functions to each other under the so-called ‘lead agency model’. Under this model, a joint monitoring committee of the local authority and the health board, accountable to both, would be established to scrutinise the effectiveness of the integrated arrangement on behalf of the local authority and the health board. It would also hold the lead agency to account for the agreed resources and budgets on behalf of the health board and the council (in a manner designed to ensure integrated provision of services in a person-centred way). It would report to the health board and council in relation to those matters using a “robust reporting mechanism” specified in the integration plan. No chief officer would be required, as the existing chief officers of the health board and the local authority would be accountable for delivery of the national well-being outcomes according to an agreed division of responsibilities. Under these arrangements, health boards and local authorities would remain statutorily responsible for the delegated functions. Duties set out in legislation that apply to integrated functions would remain the responsibility of the relevant statutory partner, although the lead agency would be accountable, through the integration joint monitoring committee, for the discharge of functions delegated to it by the delegating partner.

49. It is understood that only NHS Highland and the Highland Council are likely to choose the lead agency model, with all others expected to opt for the body corporate model.

Body corporate model – governance issues
50. A number of issues were raised in the Committee’s oral evidence sessions regarding the governance arrangements for the body corporate model. COSLA, in its written submission to the Committee, noted that the merits and demerits of this model had been “debated extensively within the local government family, without reaching a consensus”\(^24\). It noted that some councils – including West Lothian, East Renfrewshire and others – already successfully operated a similar structure, with jointly-appointed directors overseeing the activity of the Health and Social Care Partnership.

51. The COSLA submission went on to argue, however, that many councils were “concerned about the body corporate model in general and the role of the Jointly Accountable Officer in particular”\(^25\). It said there was “a perceived challenge around the power, budget and authority invested in the JAO role, particularly for large councils”, noting that the body corporate could hold a budget greater than

\(^{24}\) COSLA. Written submission, paragraph 52.
\(^{25}\) COSLA. Written submission, paragraph 51.
either parent organisation. Some COSLA members had argued that, given the scale and nature of the budgetary authority, the lines of accountability were “not sufficiently strong” and that the joint board would not "carry the same authority or capacity to scrutinise" as the parent bodies.

52. COSLA also noted a “perceived challenge” that the body corporate model “threatens integrated social work services” in that it has the potential to separate adult care from children’s services. This was considered to be of particular importance for those councils with significant levels of deprivation, large numbers of looked-after children, a high prevalence of drug and alcohol misuse, violence and crime and health inequalities. Acknowledging that it was open to councils to “bring all social work services into the integrated partnership”, it suggested that this would “create barriers with other important services (such as education)” and would make the budgetary problem “even more pronounced” by giving the JAO an even larger operational resource to manage.

53. Peter Gabbitas of City of Edinburgh Council told the Committee—

“At times, the bill is a bit confusing and unclear about the relationship with the parent body, and I think that that is because it is trying to empower and give a status to the health and social care partnership. In doing so, however, it does not make it clear what the relationship of the body corporate is to the parent body and, as a consequence, both parent bodies in Lothian are concerned about that. Some things do not require the parent bodies’ approval and it does not actually say in the legislation that the plan for which it is responsible has to be signed off by the two parent bodies. We can assume that that might be what is required implicitly, but the bill does not say that explicitly.”

54. Mr Gabbitas went on to raise some further points related to the governance of the body corporate model. First, he suggested that the Bill did not say that the parent bodies were to appoint the jointly accountable officer, arguing that the bill was written in a way that implied that the health and social care partnership would be established and would then appoint the jointly accountable officer. He suggested that this was about “the principle and what the bill is saying about the power balance between the parent bodies and the organisation”.

55. Secondly, he argued that it was unclear whether the parent bodies would retain ultimate responsibility. In the event, for example, of a health and social care partnership doing “something really awful to a patient” it was not clear whether the partnership, the NHS board or the local authority, or all three, would be legally accountable for that.

26 COSLA. Written submission, paragraph 53.
27 COSLA. Written submission, paragraph 53.
28 COSLA. Written submission, paragraph 54.
29 COSLA. Written submission, paragraph 54.
30 COSLA. Written submission, paragraph 54.
56. Finally, Mr Gabbitas raised other concerns about power and authority—

“For example, the bill says that ministers may appoint people to the integration board directly. There is concern about that power because the policy memorandum implies that it is the two parent bodies that will appoint people to the board, whereas the bill says that ministers may appoint people to the integration board. That implies that, at some stage, down the line a minister could just arbitrarily decide to appoint people who are not members of the health board or the local authority. I am sure that that is not the intention, but at present the bill gives ministers that power.”

57. A number of written submissions also drew the Committee’s attention to governance issues. Falkirk Council said that there was “some uncertainty around the details of the governance arrangements”. The Chartered Society of Physiotherapy Scotland argued that “a ‘statutory governance framework’ must be put in place to ensure that joint arrangements and new corporate bodies operate consistently and effectively across Scotland”. The Care Inspectorate believed that the governance arrangements needed “to be further clarified through partnership arrangements”. The Royal College of Nursing noted a general concern that “significant issues on the future governance and operation of integrated care are being left to secondary legislation, leaving many questions which have been raised during the development of this Bill as yet unanswered”. Scottish Borders Partnership noted that clarity around joint accountability and governance would “assist partnerships to move forward in an open transparent culture”.

58. A number of points were raised by Audit Scotland regarding the governance arrangements—

“The Bill sets out plans for a Chief Officer. This addresses one of our concerns that the existing CHP model was not given sufficient powers and authority to lead on key decisions about how resources are used in the local area. However, there are challenges and tensions with this proposed approach and the role and remit of the Board of the NHS board and the council elected members. There need to be clear arrangements for any disagreements between the partners, including disagreements about finances, services, performance, and leadership to be resolved. The Chief Officer may be accountable for significant resources; therefore, the leadership dynamic within both the NHS board and the Local Authority will be shifted by this arrangement. It is essential that there is more clarity about how the Chief Officer will report into the NHS board and into the Local Authority, and that clear performance management and accountability arrangements are put in place.”

35 Falkirk Council. Written submission, paragraph 2.

37 Care Inspectorate. Written submission, paragraph 23.
38 Royal College of Nursing. Written submission.
39 Scottish Borders Partnership. Written submission.
40 Audit Scotland. Written submission, paragraph 13.
59. The Committee also heard a number of comments about governance in its oral evidence sessions. Allan Gunning of NHS Ayrshire and Arran told the Committee that governance was one of the areas that needed to be “clarified and nailed down”. He said there were “some uncertainties” adding that

“we do not want to set up the new bodies when there are uncertainties that will dominate the agenda; instead, we want the bodies to deliver the policy changes that are envisaged in the bill. There is still some work in progress there, but I am sure that it will be sorted out in due course.”

60. A similar point was made by Susan Manion of the Association of Community Health Partnerships, who said that a “significant amount of clarification” was required on governance and accountability. She noted that existing accountability issues “cause difficulties between councils and health boards”, and it would be “absolutely central to get that aspect sorted”.

61. The Cabinet Secretary responded to some of these points when he gave evidence to the Committee, saying—

“I will be clear. The chief officer will be appointed by the joint board. He or she will report to it. That person will not be able to make unilateral decisions; they will be answerable to the joint board … The first thing to stress is that the chief officer will be responsible to and report to the board. They will not be unaccountable. The second thing to stress is that, on a strategic level, they will report simultaneously to the chief executives of the health board and the local authority.

“Clear lines are laid out for the role, powers and job description of the chief officer. Some of the fears are perhaps based on misconceptions rather than being real, because it is clear to us that what the officer does will be very much under the board’s control.”

62. The Committee notes that, while most of the evidence it received is supportive, in principle, of the body corporate model, a number of detailed concerns remain around the governance arrangements.

63. Specifically, the Committee notes, from the evidence, firstly, that a degree of confusion remains over the relationship between the joint board (under the body corporate model) and its parent bodies – the relevant NHS board and local authority. While the Committee understands that the chief officer will be accountable to the board, there is much less clarity, at this stage, on how the joint board, the NHS board and the local authority will relate to each other and how this will work in practice. The Committee also notes that there is no requirement for the parent bodies to sign off the strategic plan. It is clear that it is for the body corporate to sign off such a plan. However, the Committee would welcome clarity as to the recourse of a

---

The parent body should it be unhappy with any strategic plan. The Committee therefore invites the Cabinet Secretary, in his response to this report, firstly, to set out his plans in more detail regarding the governance arrangements and specifically to address in detail how it is expected that the bodies concerned will relate to each other.

64. Secondly, the Committee notes the power at section 12(1) of the Bill for the Scottish Ministers to make provision by order (either generally or making different provisions about different joint boards) about the membership, proceedings and general powers of joint boards, the supply of services or facilities to joint boards by local authorities or health boards and any other matter as they think fit in relation to the establishment or operation of joint boards. These are wide-ranging powers, but currently it is unclear how they might be used. The Committee therefore calls on the Cabinet Secretary to set out in detail the kinds of circumstances in which he considers that it would be appropriate to use the powers set out in section 12(1) of the Bill.

65. The Committee also recognises that much of the subordinate legislation that is to follow the enactment of the Bill will, rightly, be the subject of consultation. Nevertheless, it would be helpful if drafts of some of the proposed regulations could be made available for consideration by stakeholders before the Bill has completed its parliamentary passage.

Lead agency model

66. COSLA’s submission argued that the lead agency model, and in particular the specific arrangements in the Highland partnership, represented “a key step in the formation of more outcome focused and integrated service delivery models”46. It notes, however, that very few of its member councils had indicated that the lead agency model was being considered locally. Despite this, COSLA’s submission goes on to argue that the lead agency model has “untapped potential”. It called for partnerships to “consider the delegation of appropriate public health services from NHS boards to the council”, noting that there were already examples of NHS boards and councils adopting an integrated approach to public health. It argued that this might “allow for a more focussed approach to tackling health inequalities” exploiting the “link-in with related council-run services like environmental health and the ‘place-making’ function of councils”47. It also pointed to the experience in Denmark, where 98 local municipalities are responsible for all domiciliary personal and domestic help, home nursing, supported housing, nursing homes, and public health care.

67. As noted earlier, it is understood that the Highland Council/NHS Highland area is the only area expected to choose the lead agency model.

68. A delegation from the Committee visited Inverness on 23 September 2013 to hear from staff and management in NHS Highland of their experience of working as an integrated adult health and care service, under the lead agency model, since April 2012. The NHS Highland Chairman and Chief Executive, along with frontline

---

46 COSLA. Written submission, paragraph 55.
47 COSLA. Written submission, paragraph 57.
staff, many of whom had transferred from Highland Council to NHS Highland, attended the meeting at the Mackenzie Centre.

69. It was indicated by NHS Highland that it and Highland Council had rejected the body corporate model, on the basis that the board and council had coterminous boundaries that made it perhaps easier to adopt the lead agency model, particularly given the degree of integration that already existed.

70. Committee members noted the enthusiasm of the staff present for the way that services were developing under the new structural arrangements and the leadership and commitment shown by the senior officials, elected members of the council and the chair and members of the NHS board to initiate the steps towards integration. There was an acknowledgement that, although much had been achieved, a great deal still remained to be done on the road to full integration and that it was very much a work in progress. Nevertheless, it was clear that at all levels in the new organisation, there was a strong commitment to placing the person at the centre of the process, and towards developing a service that was as flexible as possible and focussed on securing the best possible outcomes for that person.

71. The NHS Highland senior management and chairman at the meeting welcomed the Bill, though they noted that all that had been achieved in Highland could, and indeed, has been, achieved without it. Nevertheless, they were thankful that the Bill cemented the lead agency model, as it has been developed in Highland, as one of two possible models of integration, and that nothing in the Bill would require any of the development work in Highland to be undone.

72. Asked about why it appeared that no other part of Scotland was set to follow the Highland lead agency model, staff responded that it was, in their view, because the model required partners to be genuinely prepared to give up power, and to be prepared to fully integrate budgets and transfer staff.

73. UNISON and the Royal College of Nursing both raised concerns about staffing arrangements under the lead agency model. These are returned to later in the report in the staffing section.

74. The Committee recognises that the lead agency model will be appropriate for NHS Highland and Highland Council, given their geography, scale and history of joint working. The Committee therefore welcomes the fact that the Bill does not require the two partners in Highland to dismantle what has been developed so far and gives them the opportunity to build on and enhance the work that has already been done to integrate services in that area.

75. The Committee notes that, so far, no other councils and NHS boards appear to be likely to choose the lead agency model, but accepts that the local partners are best placed to make the decision.
National outcomes

76. The Policy Memorandum notes that performance management and reporting frameworks for NHS Scotland and local authorities are currently “considerably different from one another”\textsuperscript{48}.

77. Currently in local government, Single Outcome Agreements (SOAs) are agreed between each Community Planning Partnership (CPP) and the Scottish Government. They provide the mechanism through which CPPs agree local strategic priorities and outcomes, and demonstrate how the SOA contributes to the National Outcomes that are part of the Scottish Government’s National Performance Framework. In NHS Scotland, management plans and decisions for the delivery of national targets are scrutinised and agreed with the Health and Social Care Directorates within the Scottish Government, with decisions for major service change ultimately sitting with the Scottish Ministers.

78. The Policy Memorandum argues that, by introducing nationally agreed health and wellbeing outcomes, the Scottish Government will “introduce a mechanism for ensuring that Health Boards and local authorities are jointly and equally accountable for planning and delivery of effectively integrated services”\textsuperscript{49}. It also says that, to strengthen this, the national outcomes will be established in legislation.

79. Acknowledging that outcomes may need to develop over time, the Scottish Government proposes to take powers through the Bill for Scottish Ministers to set out national outcomes for health and wellbeing in regulations, which can be amended over time to “keep pace with developing needs and aspirations for health and social care in Scotland”\textsuperscript{50}. The Policy Memorandum also acknowledges that partners will play “a key role”\textsuperscript{51} in the development of the outcomes and the performance indicators, and Ministers will be required to involve a range of key stakeholders, including health and social care professionals, third and independent sector, carers and service users. Finally, it indicates that the nationally agreed outcomes for health and social care will be consulted upon, agreed and will be reflected in SOAs.

80. The idea of national outcomes and the general emphasis on an outcomes-based approach was broadly welcomed in the majority of the evidence received by the Committee. In the local authority sector, North Ayrshire Council welcomed “the focus within the Bill on outcomes for the citizens of Scotland and the drive to judge partnership effectiveness through nationally agreed outcomes”\textsuperscript{52}. West Dunbartonshire Community Health and Care Partnership welcomed key outcomes agreed for the new Partnerships being visible within their Community Planning Partnership (CPP) SOAs but made the plea that national guidance be “disciplined” in “not specifying too many headline outcomes/targets as national non-negotiables”\textsuperscript{53}, which could be argued to undermine the fundamental concept of an

\textsuperscript{50} Policy Memorandum, paragraph 74.
\textsuperscript{51} Policy Memorandum, paragraph 75.
\textsuperscript{52} North Ayrshire Council. Written submission.
\textsuperscript{53} West Dunbartonshire Community Health and Care Partnership. Written submission.
SOA. South Lanarkshire Council welcomed the national outcomes framework while South Ayrshire Council supported “the development of new national outcomes which should permit the progress and success of the new arrangements to be effectively measured, thus driving continuous improvement”\textsuperscript{54}. Finally, North Lanarkshire Council said it was “supportive of the concept of a national outcomes framework provided local government is seen as an equal partner in [its] development”\textsuperscript{55}.

81. Within the NHS sector there was similar broad support. NHS Lanarkshire recognised “the importance of being jointly accountable for the delivery of national outcomes and for improving service delivery”\textsuperscript{56}. The Care Inspectorate welcomed “the approach to develop high level national strategic outcomes with regard to health and wellbeing”\textsuperscript{57} while NHS Education for Scotland indicated that “the core of having national outcomes for health and wellbeing which involves a range of key stakeholders in developing these outcomes and performance indicators is clearly a strength”\textsuperscript{58}.

82. There was a similar picture within the voluntary sector. Carers Scotland welcomed “commitment to prescribe national outcomes”\textsuperscript{59} which it said had “the potential to achieve consistency across Scotland in the delivery of holistic health and social care services”. Coalition of Care and Support Providers in Scotland Linked stated that the Bill should “make it clear that integration authorities will be held accountable for the agreed national outcomes”\textsuperscript{60}. It also suggested that, while the Bill makes provision for such outcomes to be prescribed by Ministers, it does not require integration authorities to achieve them – only to ‘have regard’ to them in integration and strategic planning processes. Children in Scotland’s submission argued that the development of the national health and wellbeing outcomes would be key to integrating health and social care, and that “the third sector and service users should have a voice where possible in shaping these”\textsuperscript{61}.

83. The Committee also welcomes the general emphasis in the Bill on outcomes-based approaches and the provision for the Scottish Ministers to set national outcomes following consultation. The Committee believes it is important to have national outcomes to ensure a degree of consistency of standards across the country, but also recognizes the importance of retaining a degree of local flexibility in order to take account of local circumstances.

84. The Committee also welcomes the Bill’s provision that NHS boards and local authorities will be jointly accountable for delivery of the national outcomes locally. This should help to cement joint partnerships and reinforce the message that health, wellbeing and care are not the sole responsibilities of any single agency. NHS boards, local authorities and,
indeed, third and independent sector partners all have an important role to play.

85. Finally, the Committee believes that, while it is clearly helpful to have national outcomes, the most important outcomes are those for the individual patient, and it is important to bear in mind that the national outcomes must be focused on continuous commitment to improving these individual outcomes.

Ministerial powers, scope and democratic oversight

86. The Bill has been criticised by some organisations in relation to the powers it would afford to the Scottish Ministers and the perceived degree of latitude in terms of other services beyond adult care that could, in future, come within its scope. The Association of Directors of Social Work (ADSW) submission, for example, stated that the Bill was “more prescriptive” than anticipated and was “very mechanistic about the steps expected to be taken by local authorities and NHS Boards to achieve integrated services”. It went on to say that the Bill “ascribes extensive powers to Ministers that had not previously featured in the consultation document” and noted its firm view that “these cover areas that are a matter for local determination”

87. COSLA’s submission supported a public service reform agenda that develops outcomes-based approaches, uses resources flexibly, promotes co-production, early intervention and prevention, facilitates service integration and enhances local democratic scrutiny. It concluded that “the overall thrust of the Scottish Government proposals on health and social care integration would align with many of these general principles”. COSLA went on to argue, however, that the proposals were “at times too prescriptive and too detailed”, and suggested that, as a general rule there “should be more flexibility at a local level to determine the shape and governance of the proposed partnership arrangements”. COSLA also maintained that health and social care partnership arrangements “should be subject to stronger-than-proposed local democratic oversight”.

88. COSLA went further during one of the Committee’s roundtable sessions on 10 September 2013. Ron Culley, COSLA’s chief officer of health and social care, told the Committee—

“I do not think that there has been a departure in terms of the policy intention, but there is a very clear departure in terms of what the bill allows. That is why we are fundamentally concerned about the current articulation of the integration project in the bill, particularly in respect of its scope. All local government functions are within the scope of the bill as it is written. Through regulation, a Scottish Government minister could bring any local government function within the scope of the legislation—not just social care but education, housing or whatever. We are fundamentally opposed to that.

---

63 COSLA’s submission has not been counted in the analysis of responses because it was received too late.
We think that there must be a bill that represents the policy intention and that this bill does not do that. That is why we have strongly advocated an amendment that would provide a much tighter definition of the local government functions that may or may not be delegated. The policy intention is all about adult social care, so we want a bill that carries out that intention. That is our fundamental concern.\(^{64}\)

89. Ron Culley went on to suggest that the issue of reform of health and social care could be looked at on two axes. One was the relationship between the NHS and local government, on which Mr Culley said that COSLA was “comfortable with that discussion and wanted to see reform advanced in that area”\(^{65}\). The other axis, he said, was the central/local dimension, on which he argued that the bill would “give far too much power to the centre” and that COSLA wanted “partnerships to be given more authority and responsibility to get on with the job”. He concluded that COSLA’s objection was not to the legislation as such but “to the way in which the bill has been framed”.\(^{66}\)

90. Similar points were made by Falkirk Council, which was concerned that the Bill “provides Ministers with the power to extend the scope of integration authorities by regulation” The Council argued that this was “a very far reaching power which could see the delegation of a much wider range of local authority without recourse to further legislation”\(^{67}\).

91. COSLA’s position, as noted above, is that the Bill should be amended to make it clear that its provisions were restricted to adult health and social care and that Ministers should not have powers, for example, to require local authorities and other bodies to integrate children’s services. However, other witnesses, including some individual local authorities, did not want to see such a restriction. North Ayrshire Council, for example, welcomed “the local flexibility which the Bill has captured”, which had “allowed us to agree to integrate our children and family services within our local partnership agreement”\(^{68}\).

92. The City of Edinburgh Council commented that children could not be seen in isolation from their families, and that, where local authorities had integrated their children’s social care services with their education services, there was a need to consider the best approach to linking with children’s health services to ensure whole families can be well supported. The council would like to “establish a separate partnership for children’s health and social care services” and that it would “be helpful if the Bill could provide a steer on the practicalities of this”\(^{69}\).

93. West Dunbartonshire Community Health and Care Partnership argued that while there was a “pragmatic logic for the proposition of an initial focus on improving outcomes for older people” there was “a risk that a series of arrangements could be developed that would not be efficiently scaled up or transferable to other care groups”. Noting that there was, in the context of the

---

\(^{67}\) Falkirk Council. Written submission.

\(^{68}\) North Ayrshire Council. Written submission.

\(^{69}\) City of Edinburgh Council. Written submission.
Older People’s Change Fund “considerable focus” on the Reshaping Care for Older People’s agenda the initial focus on older people would, in practical terms, “probably provide little (if any) added value to what is already being driven forward” and would “possibly skew the implementation of integration more generically” as it might “suggest a piecemeal approach, with different integration models devised for different care groups with complicated structures and unwieldy bureaucracies as a consequence”70.

94. Other bodies also expressed support for the wider provisions in the Bill that would permit the future integration of other services. Children in Scotland’s submission welcomed “the intent to extend integration of health and social care services beyond older people’s services as the original intention seemed to be”71. It went on to note that the responses received to the initial consultation “suggested that an arbitrary point or age at which integration begins to apply (eg age 65) would not be helpful” adding that it “would be concerned that where only adult health and social services were integrated there would be issues in transitioning from children’s to adult services”.

95. A similar point was made by Barnardo’s, which expressed a “major concern” that “the intent behind the proposals is still far too adult focused”. It went on to argue that it was “important for policy-makers to recognise and understand that these proposals will also affect children’s services” and stated its concern that children’s services would “not be recognised as an equal priority and suffer as a result”. Barnardo’s also argued that it was “far from clear” where the responsibility for children’s services would lie in those areas where integration authorities do not choose to take on responsibility for them, saying that this would “create significant uncertainty”72.

96. The College of Occupational Therapists (COT) made a similar point, noting that decisions on the possible integration of services other than adult health and social care services would be a matter for local decision making. COT said that this raised some concerns in relation to “true integration”.

97. A number of submissions also argued that there was a need for housing services to be included within the scope of the legislation. The submission from the Care Inspectorate, for example, stated—

“Some local authorities have integrated Housing Services with Social Work Services, yet there is no emphasis on Housing Services as being part of integration plans. Housing Services are integral to supporting people within their local communities and are often key to individuals remaining in a homely, community based environment. We believe it would be helpful to see the role of Housing Services in integration clarified. Whilst we have specifically mentioned housing we are aware that a number of local authority services (particularly education, through lifelong learning, and leisure), health services, the third sector and others within Community Planning Partnerships have a key role in delivering successful integration plans.”

70 West Dunbartonshire Community Health and Care Partnership. Written submission.
71 Children in Scotland. Written submission.
72 Barnardo’s Scotland. Written submission.
98. Other submissions made very similar points. The submission from the Housing Co-ordination Group (HCG)\(^73\) made the point that the housing sector supports the principles of integration for improved outcomes set out in the Bill and understands the need for legislation to promote joint working to pursue these principles. However, it added that the success of the new ‘integrated authorities’ would “largely depend on effective joint strategic commissioning to which the housing sector can make a crucial contribution”. The HCG submission went on to note—

“The current arrangements for involving the housing sector have not produced a consistent [or] adequate approach and the Bill, as it stands, could result in an ‘integrated authority’ deciding not to involve the housing sector as a partner. To ensure that housing issues, and the housing sector, form an integral part of contributing to the delivery of national outcomes, the HCG urges that the contribution of the housing sector be recognised within the legislation, urging the new ‘integrated authorities’ to involve their strategic housing partners.”\(^74\)

99. The HCG also made a submission on the Bill to the Local Government and Regeneration Committee, calling for the legislation to recognise the contribution of the housing sector. Addressing this point, the LGRC report stated that it “would expect that in situations when housing is likely to be central to the delivery of successful partnership working, [housing] are involved at board level.”\(^75\)

100. In relation to the wider legislative landscape, the Local Government and Regeneration Committee considered how the proposed community empowerment and renewal bill would sit alongside the Public Bodies (Joint Working) (Scotland) Bill and the Children and Young People (Scotland) Bill. Specifically, the report called on the Scottish Government to “provide clarity around implementation of the Bills and how they fit with the role of CPPs (Community Planning Partnerships) in the new partnerships and arrangements.”\(^76\)

101. The points raised by COSLA were put to the Cabinet Secretary by the Committee. The Cabinet Secretary’s reply appeared to indicate that he had taken on board the points made by COSLA—

“COSLA has expressed concern that it believes that there is a need for tighter definition of what we mean by “social care” in the bill. The concern is that the way in which the bill is drafted could be interpreted to mean that I have the power not just over social care, but over a whole gamut of local authority services. We have been working at political and official level and we

\(^73\) The HCG consists of the Association of Local Authority Chief Housing Officers (ALACHO); the Chartered Institute of Housing in Scotland; the Scottish Federation of Housing Associations (SFHA); Glasgow and West of Scotland Forum of Housing Associations (GWSF); the Housing Support Enabling Unit (HSEU); and Care and Repair Scotland.

\(^74\) Scottish Parliament Local Government and Regeneration Committee. Committee Memorandum on the Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill. Available at: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/LGR_Committee_memorandum_on_SP_Bill_27_and_SP_Bill_32.pdf [Accessed 28 October 2013]

\(^75\) Memorandum from Local Government and Regeneration Committee. Paragraph 45.
have agreed that we will lodge amendments at stage 2. Those amendments, jointly agreed between COSLA and us, will I think absolutely allay any fears that I am trying to widen my powers. I am absolutely sure that my Cabinet colleagues would not want that to happen, anyway. The bill, with those amendments, will make it absolutely definitively clear what is meant by the powers in relation to social care and that they do not cover much wider areas of local authority responsibility.\(^{77}\)

102. The Committee notes that there are different views within the evidence about whether the provisions in the Bill to enable Ministers to require services to be integrated beyond adult health and social care are appropriate.

103. The Committee also notes the strong representations it received arguing that it was essential that housing services be included within the proposed integration arrangements.

104. The Committee notes the indication by the Cabinet Secretary that the Scottish Government will be lodging amendments at Stage 2 that will restrict the services that require to be integrated under the Bill to adult health and social care.

105. While the Committee notes concerns about statutory integration of additional services, it would support a permissive and flexible approach that would allow health boards and local authorities, if they so wished, to develop the integration of appropriate services in cases where it would improve the service and be of benefit to service users.

Relationship with other legislation and other local partnerships

Existing and proposed legislation

106. A number of submissions received by the Committee questioned how the provisions in the Bill would integrate with other existing legislation, with other bills currently making their parliamentary passage and with bills that are planned but have not yet been introduced.

107. The question of how the provisions in the Bill would work alongside those of The Social Care (Self-directed Support) (Scotland) Act 2013 was raised by a number of written submissions.\(^{78}\)

108. Most of the points raised in relation to the Social Care (Self-directed Support) (Scotland) Act 2013 simply called for clarity about how the two pieces of legislation would relate to each other once both were in place. The submission from Glasgow City Council was fairly typical—

\(^{78}\) Carers Scotland, NSPCC, British Association of Social Workers, Voluntary Health Scotland, Youthlink Scotland, CCPS, Children in Scotland, MS Society, Scottish Health Council, Scottish Association for Mental Health, Health and Social Care Alliance, UNISON, Barnardo’s Scotland, Enable Scotland, Capability Scotland, Inclusion Scotland and Independent Living in Scotland, Audit Scotland, Scottish Care, Marie Curie Cancer Care and Glasgow City Council.
“The Bill fails to make any connection with the recently passed Self Directed Support Act and as such it is difficult to see how these two very different pieces of legislation impacting on the delivery of services to the adult population will work alongside each other. The Bill would be strengthened by making this connection and also by giving an indication as to how self directed support will impact on the NHS functions of a Partnership within a local area.”

109. Similar points were raised by a number of witnesses in relation to the Children and Young People (Scotland) Bill and the proposed community empowerment and renewal bill, which has been announced in the Scottish Government legislative programme for 2013-14, but has not yet been introduced.

110. Again, most of the submissions suggested that there was a lack of clarity about how these different pieces of legislation would mesh with each other. The submission from NSPCC Scotland, for example, argued that the Bill and its supporting documents made “very few connections with other pieces of recent and proposed legislation that will impact on children, young people and their families” noting, in particular, that there was “no mention at all of the Children and Young People (Scotland) Bill”.

111. The latter Bill makes provision for a duty on Scottish Ministers and public bodies to take steps to “secure better or further effect” the requirements of the United Nations Charter on the Rights of the Child (UNCRC) (ss1-2 of the Bill). It also seeks to create a framework for joint planning of children’s services, involving local authorities, health boards and other ‘service providers’ (ss7-18). Noting that there would be “certain crossover” between both bills, NSPCC argued that this raised questions about how they were intended to ‘fit’ together. NSPCC further commented that there appeared to be no consideration of children’s rights in the Public Bodies (Joint Working) (Scotland) Bill and no apparent consultation with children and young people. NSPCC was, therefore, “unsure how the proposed children’s services planning processes in the Children and Young People Bill, and the proposed integration planning and functions set out in the Bill at hand, will interact in practice.

112. NSPCC made similar points in relation to the Social Care (Self Directed Support)(Scotland) Act 2012 and the proposed Community Empowerment and Renewal Bill and concluded—
“It is unclear to us whether all of these parallel developments have been considered in the round. There appears to have been little strategic thinking about the position of children’s services and we are concerned that this might lead to confusion and fragmentation. It is arguable whether the disparate nature of the various pieces of legislation which affect children’s services suggests a lack of coherent vision for how the whole range of services meet the needs of children and young people in Scotland.”

113. The Cabinet Secretary told the Committee—

“Alongside the Social Care (Self-directed Support) (Scotland) Act 2013 and the Children and Young People (Scotland) Bill, the Public Bodies (Joint Working) (Scotland) Bill is part of the Government’s broader agenda to deliver public services that better meet the needs of people and communities. The bill provides the legislative framework for partnership working at both a strategic and a local level, involving professionals, service users and partners. The planning and delivery principles in the bill encapsulate the principles of Christie, putting the person at the centre of service planning and delivery, and requiring a focus on prevention and anticipatory care planning.”

Other local partnerships

114. Some submissions also raised questions about how the proposed structures set out in the Bill would be expected to relate to Community Planning Partnerships, established under the Local Government in Scotland Act 2003. Barnardo’s, for example, said—

“The legislation and accompanying documents have not made it clear what the relationship will be between the proposed integration authorities and Community Planning Partnerships (CPPs). We are concerned that if this is not laid out clearly either on the face of the Bill or in subsequent guidelines then there will be blurred lines of responsibility and accountability. We are concerned that this may lead to confusion and ultimately affect service delivery.”

115. The Committee notes the Cabinet Secretary’s comments on how the Bill is part of the broader agenda to deliver public services that better meet the needs of people and communities. Nevertheless, it is clear that there are widespread perceptions of lack of clarity about what the implications of the different pieces of legislation will be in practice, some general concerns about the extent to which the different pieces of legislation have been considered in the round, and some uncertainty about how the proposed new structures will articulate with established local structures such as community planning partnerships.

116. The Committee appreciates that the Bill is an enabling and permissive one that leaves much for local determination, and that flexibility is welcome. However, witnesses believed that what is set out in the Bill and the Policy
Memorandum has been insufficient, or at least requires additional detail, to give them a clear enough picture about how the existing and planned legislation and existing local decision-making partnerships are expected to inter-relate.

117. The Committee therefore calls on the Scottish Government to consider in more detail, and report back to the Committee, firstly, how the Bill is expected to work alongside the Social Care (Self-directed support) (Scotland) Act 2013 and the Children and Young People (Scotland) Bill (when enacted); and secondly, how the proposed integration joint boards will work alongside existing community planning partnerships. Additionally, the Committee invites the Cabinet Secretary to consider whether there is a need to include guidance on these matters within the statutory guidance that is expected to follow the passage of the Bill.

Role of the third and independent sectors

Views from the third sector

118. The Committee received a large number of submissions from third sector organisations regarding the role of the third sector within the proposed integrated arrangements. Most of these submissions argued that the third sector should be stated in the Bill as a key strategic partner alongside the health board and local authority. Voluntary Health Scotland, for example, stated that the “third sector should be acknowledged as a strategic partner in the integration of health and social care, and engaged with throughout the development of integration authorities and strategic plans”\textsuperscript{88}. The British Psychological Society expressed a similar view, saying that the involvement of the third sector “should be extended beyond the requirement for them to be consulted, to being included as equal partners in the strategic planning and governance arrangements”\textsuperscript{89}.

119. The view of the third sector can perhaps best be summed up by this comment from CCPS —

“The Bill places duties on integration authorities to consult the third sector (and, in certain sections, to consult third sector service providers specifically); in our view this duty is not strong enough. The third sector, and providers specifically, should be treated not as consultees, but as full partners in the planning and delivery of care and support.”\textsuperscript{90}

120. Many other submissions made similar points. However, Youthlink Scotland, while arguing that the third sector “must be fully involved in the planning and decision-making processes” acknowledged that there were “a number of questions regarding how this would work in practice”. The third sector, it noted, was “diverse, with a range of sometimes competing views”. Who, it asked, would the third sector representatives be, and how would this be decided? It also noted that there would be “practical difficulties for national voluntary organisations in engaging in … diverse models of integration across Scotland” and that while it was possible

\textsuperscript{88} Voluntary Health Scotland. Written submission.
\textsuperscript{89} British Psychological Society. Written submission.
\textsuperscript{90} CCPS. Written submission.
umbrella bodies, such as voluntary organisations’ councils, could represent the sector, but this required “further discussion”. Youthlink Scotland also noted that the Policy Memorandum suggested that the third sector would not have voting rights on the governance bodies, which it said “could lead the third sector being perceived as a ‘second tier’ member with less influence”91.

121. The Committee’s evidence session on 17 September 2013 heard from representatives of the third sector. Martin Sime of the Scottish Council for Voluntary Organisations told the Committee that this issue “goes to the heart of one set of concerns that we have about the bill, which clearly sees the third sector in a secondary role”92. He went on to say—

“There is still a widespread view that we are here to deliver other people’s priorities. That is a misunderstanding and misrepresentation of the crucial role the sector has to play, and of its many different interests in this field. We understand that the bill is structured as it is, providing for an equal number of representatives from the two big public service “beasts” for the balance of power. We recognise that if the third sector had a voting seat at that table it would, in effect, hold the balance of power.”93

122. Mr Sime went on to argue that the third sector should be represented at all levels in the new structures adding that it was important that the sector had “a seat at the strategic tables because it has a strategic contribution to make to the bill, and not just to its objectives”94. He also argued that if it were only the statutory agencies who would to be able to vote, the third sector and other interests should have “some power of veto over the plans”95 and how they were developed.

123. Ranald Mair of Scottish Care told the Committee that it would be “a missed opportunity”96 if the third (and independent) sectors were not “fully included in the governance arrangements in the future”. He noted that the sectors had been full partners in the change fund and the reshaping care for older people programme, which were “four-way partnerships within which the third and independent sectors have sign-off responsibilities, and which have created a sense of joint ownership of delivery of care and of development of new models of care. He concluded that the Bill “sets us back dangerously to a point where the third and independent sectors become “consultees”, and not full partners in a process.

124. These comments were echoed by Nigel Henderson of the Coalition of Care and Support Providers in Scotland, who told the Committee: “It is interesting to reflect that we are trusted to provide care and support to some of the most vulnerable people in Scotland but are not trusted or respected as equal partners”. He added, while acknowledging that the third sector “does not always speak with one voice” and “includes a diverse range of organisations” with “diverse interests”, that the “basic premise” should be involvement of the third sector. It was, he said, “very important that we do not leave the two big statutory authorities to do this by

91 Youthlink Scotland. Written submission.
themselves” because “they need people like us to help to shape, to create and to innovate for the desired outcomes.”

125. A similar point was made by Pam Duncan of Independent Living in Scotland—

“health boards and local authorities are bridling a bit about the third sector’s requirements for plan sign-off, and I know that MSPs will be concerned about that as well, because there is a statutory responsibility. Where we have had collective sign-off for change fund plans over the past three years, we have had quite a significant change in the culture of how local officials work with their partners. The sign-off of plans is not a power thing for the third sector; it is a mechanism to get collaboration and culture change in services.”

126. Third sector organisations accepted in evidence to the Committee that the third sector had been recognised within the Bill’s Policy Memorandum, but argued strongly that these principles should be set out on the face of the Bill. Nigel Henderson of CCPS told the Committee—

“The Parliament has a history of putting principles right up front in bills, but with this legislation, many of the principles and aims are in the policy memorandum. We would like more of those to appear in the text of the bill, particularly in respect of the inclusion and equal status of the third sector.”

127. Ranald Mair of Scottish Care told the Committee that the text of the bill did “not need to go into huge detail about the involvement of the third and independent sector, but it should contain the requirement for the sector to be fully included”. He said that the issue was the absence of any reference to the third sector. While he said that the sector did “not need a lot of comfort built into the text of the bill”, but that “some acknowledgement that we exist would be marginally helpful”.

Views from the statutory sector
128. Evidence received by the Committee from the statutory sector, though welcoming the involvement of the third sector, placed less emphasis on its involvement in planning. Allan Gunning of NHS Ayrshire and Arran spoke of the “point of principle” of the “more formalised role of the third and independent sectors and of users and carers in local communities, which will build very well on the good work that has been done through reshaping care for older people” missed opportunity.

129. Jeff Ace, of NHS Dumfries and Galloway, told the Committee—

“I would not want there to be a requirement for third and independent sector bodies to be represented on committee X, Y or Z or board A, B or C. That

---

could require a lot of commitment from the sectors, for relatively little advantage. Where we need the sectors to work with us is on actual service provision and the local solutions that we can put in place—that would be preferable to their having what might be a tokenistic presence at a region-wide committee, which would not play to their strengths.”

130. This view was backed up by Allan Gunning of NHS Ayrshire and Arran, who said it was “important that there is positive engagement with the sector”. He added, however, that “the arrangements must follow the governance and accountability arrangements” and that “we must be very clear about the distinction between strategic involvement and where the responsibility lies at the end of the day, which will be with the statutory partners”.

131. The Committee questioned representatives of the third sector about the potential for a conflict of interest if third sector organisations were to be involved in strategic planning and commissioning of services for which they or other third sector organisations might tender. In response, the third sector organisations pointed to the evidence base from the reshaping care programme and the change fund that the third sector had “discharged that involvement in an even-handed and non-partisan way”, and pointed out also that it had the option to “withdraw from certain decisions” and/or declare their interest if there were a perceived conflict. They also noted that not all charities had a service delivery interest; some – like third sector interfaces – had a representational interest. They also mentioned that charities were subject to regulatory frameworks, and that voluntary organisations that deliver care to do not distribute profit and there is no personal gain or private advantage, with any resources generated going back into their cause. Finally, they referred to what they saw as “the pursuit of the institutional self-interest of health services and local government” and called for “one set of rules for everybody, as well as transparency for everyone”.

Others
132. The British Medical Association’s submission to the Committee noted, the intention (expressed in the financial memorandum, Paragraph 62) to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. The BMA agreed that there was “a need to ensure closer working relationships between health boards, local authorities and the third and independent sector”, but went on to say that “there should be clarity on the exact nature of this involvement, how representation would be achieved and perhaps more importantly how this non-statutory sector would have influence over the resources in the statutory health and local authority structures”.

---

106 BMA Scotland. Written submission.
Scottish Government view

133. When the representations from the third sector were put to the Cabinet Secretary by the Committee, he told members that “the third and independent sectors will be embedded in the process as key stakeholders in shaping the redesign of services”\textsuperscript{107}. Later, he told the Committee—

“The absolute guarantee is that we need to make sure that all the key stakeholders—the public, the end users, the third sector and the independent sector—are involved. The bill states throughout that they have to be involved—not just consulted, but involved—at both partnership level and, more important, the local level, because that is where a lot of the key decisions that will concern end users will be made.”\textsuperscript{108}

134. The Committee notes that the Bill makes little specific reference to the third and independent sectors, beyond the requirement in section 4 (Integration planning principles) that services provided in pursuance of functions delegated under an integration plan should be provided in the way which, so far as possible, (amongst other things) makes the best use of the available facilities, people and other resources. (sub paragraph vi) and section 6 (Consultation) which provides that, before submitting the integration plan for approval by the Scottish Ministers, the local authority and the health board must jointly consult persons appearing to the Scottish Ministers to have an interest and “such other persons as the local authority and the Health Board think fit”\textsuperscript{109}.

135. The Policy Memorandum, however, refers to the third and independent sectors more specifically. It notes, at paragraph 21, that the third and independent sectors, “provide significant levels of care and support and are crucial partners, with the statutory services, in the provision of a wide range of support”\textsuperscript{110} adds that “it will be particularly important that there is a focus on building on the principles of inter-agency working enshrined in the Change Fund for older people’s services”. It continues that “the reform will not succeed if ... the need to build upon the progress that has been made in bringing third and independent sector partners to the table when planning delivery of services is overlooked”. The paragraph also notes that the “contribution of the third and independent sectors in enabling delivery of better outcomes is also a crucial factor in the Scottish Government’s wider public service reform plans”.\textsuperscript{111}

136. Later, at paragraph 60, The Policy Memorandum notes that the Bill places a duty upon integration authorities to work “with local professionals, across extended multi-disciplinary teams and the third and independent sectors, to determine how best to put in place local arrangements for planning service provision”\textsuperscript{110}. At paragraph 75, it stresses the key role that partners will play in the development of the national outcomes noting that the Scottish Ministers will be required to involve “a range of key stakeholders, including health and social care professionals, third and independent sector, carers and service users”\textsuperscript{111}. Finally,
at paragraph 96, noting that, for governance arrangements to operate effectively, integration joint boards and integration joint committees will need access to a range of advice from those “who are partners in the delivery of services”. It then indicates that the Scottish Government will require, through regulations, that integration joint boards and joint monitoring committees have representation from health and social care professionals representing the whole pathway of care, staff, the third sector, users, the public, and carers.\footnote{Policy Memorandum, paragraph 96.}

137. The Committee recognises the concerns of the third sector and its wishes to be fully involved in the strategic planning process under the new integrated arrangements. The Committee also recognises the good practice that can be demonstrated by the third and independent sector in the social care field, the value that it offers and the creativity that it can bring to the planning process. The Committee fully accepts that it is important that the third and independent sectors be seen as key partners as the process of integration is taken forward.

138. The Committee considers, however, that the Policy Memorandum does recognise the contribution made by the third and independent sectors and this may well be the appropriate place for it to be recognised. The duties set out in the Bill are placed on public bodies that were established by other statutes. Third and independent sector bodies are not established in this way, have their own governance and management arrangements and are not accountable to the Scottish Parliament or to the Scottish Ministers. This, as a number of witnesses have noted, limits what can be contained in the text of the Bill about the third and independent sectors.

139. The Committee also notes the evidence of representatives of third sector service-providing bodies, about the potential conflict of interest that might arise were third sector bodies to be directly involved in designing and commissioning services for which the sector might subsequently be expected to tender.

140. The Committee is also mindful of the comments of the BMA, calling for clarity on the exact nature of third sector involvement, how representation would be achieved and how the sector would have influence over the resources in the statutory health and local authority structures.

141. The Committee is reassured on the role of the third and independent sectors by the references to them in the Policy Memorandum and by the reassurances given by the Cabinet Secretary in evidence to the Committee. The Committee also considers that, though much of the written evidence referred to the third sector generically, there is probably a need to distinguish between the third sector that provides services and the third sector that represents users, which is considered in the next section of the report.

142. Nevertheless, the Committee acknowledges the strength of feeling on this issue, particularly in the third sector. The Committee therefore calls on
the Cabinet Secretary to consider whether there is any way of strengthening the commitment to the involvement of the third and independent sectors in the integration process.

Carer, patient and service user involvement

143. Evidence from carers organisations to the Committee argued that there needed to be a more explicit commitment to the involvement of carers of the face of the Bill.

144. The Carers Trust Scotland submission stated that “service users, carers and the wider third sector must be involved in the planning, development and delivery of services”. Similarly, the submission from the Scottish Association for Mental Health (SAMH) said, “The meaningful involvement of patients, service users, carers, and the third sector is necessary – even fundamental – to achieve the policy objectives of the Bill”. SAMH also called for service users to be represented on joint boards.

145. The Carers Trust Scotland also echoed points raised by the Health and Social Care Alliance regarding the need to clarify what will happen to Public Participation Forums.

146. The Scottish Health Council (SHC) was positive in its view that integration has the potential to lead to better public involvement, but called for the Bill “to go further to ensure this aspiration is enshrined effectively in the primary legislation”. SHC argued out that the Bill did “not appear to go as far as suggested in the Scottish Government’s response to the 2012 consultation exercise, which had said: “It is therefore our intention ... to legislate for a duty on Health and Social Care Partnerships to ‘engage with and involve’, rather than merely to ‘consult’ ... representatives of patients, people who use services, and carers regarding how best to put in place local arrangements for planning service provision.” The Scottish Health Council concluded that it “would like to see the Bill strengthened accordingly”.

147. In a further late submission to the Committee, the SHC built on its earlier evidence, suggesting that a single standard for participation in health and social care should be developed, alongside a quality assurance system to ensure improvement can be demonstrated. SHC argued that this should be linked to a national outcome, along the lines that “people are encouraged and supported to work with health and social care providers to achieve services that meet local needs and improve health and wellbeing”.

148. In other evidence received by the Committee, Children in Scotland said that the development of the national health and wellbeing outcomes would be key in this process, and that service users “should have a voice where possible in shaping these”.

---

113 Carers Trust Scotland. Written submission.
114 Scottish Association for Mental Health. Written submission.
149. In oral evidence, the Coalition of Carers in Scotland stated that “it is extremely important that, like other key stakeholders, carers feel that they have ownership of the process and that they are at the table from the beginning”\textsuperscript{115}.

150. According to the Policy Memorandum, the Scottish Government will require, through regulations, “that integration joint boards and joint monitoring committees have representation from health and social care professionals representing the whole pathway of care, staff, the third sector, users, the public, and carers”. It says that this will “ensure that the decision-making processes and scrutiny of the operational delivery are fully informed and take account of these perspectives”\textsuperscript{116}.

151. The Committee notes that involvement of carers, patients and services users and organisations representing them is not made explicit on the face of the Bill, although there is a consistent theme of their involvement throughout the Policy Memorandum.

152. The Committee notes the difficulties (which also apply to the third sector, as discussed in a previous section) of specifying the involvement of non-statutory bodies on the face of the Bill. Nevertheless, the Committee invites the Scottish Government to consider whether anything further can be done by way of amendment to provide carers and carers’ organisations with reassurance that their involvement in the design and production of future integrated services is guaranteed.

153. The Committee also invites the Scottish Government to consider the proposal from the Scottish Health Council that a single standard for participation, linked to a national outcome, be developed.

Quality and scrutiny
154. A number of submissions received by the Committee raised issues related to quality. The Royal College of Nursing Scotland submission, for example, argued that “quality and safety should be paramount, and deserve to be embedded in the heart of the primary legislation, not left to regulation or guidance alone.” The RCN went on to say that it was concerned that the Bill was “too lightly focused” on “ensuring robust assurances of care quality and safety in this new landscape”. It argued that “primary legislation should set the core foundations of reform, which secondary legislation, guidance and practice can build upon”, noting, however, that quality in care services had not been “included in the key principles of integration in the published Bill”\textsuperscript{117}.

155. This viewpoint was echoed by other respondents who also noted the absence of mention of scrutiny or quality in the Bill. CCPS commented that “the Bill makes no reference to any requirement for independent scrutiny of integration authorities in respect of quality, performance or the achievement of national outcomes”\textsuperscript{118}. The Scottish Independent Advocacy Alliance argued that “there needs to be more attention given to quality assurance so that there is greater

\textsuperscript{115} Scottish Parliament Health and Sport Committee. \textit{Official Report, 24 September 2013, Col 4308}
\textsuperscript{116} Policy Memorandum, paragraph 96.
\textsuperscript{117} Royal College of Nursing. Written submission.
\textsuperscript{118} CCPS. Written submission.
clarity and transparency about when principles are being adhered to and when they are not and when outcomes are achieved or not.  

156. Parkinson’s UK argued that it was “essential that integrated services are planned and commissioned on the basis of quality, and not just cost.”

157. Addressing some of these concerns in its submission, Health Improvement Scotland (HIS) stated that it was “working with the Care Inspectorate to develop a joined-up approach to scrutiny and test a new methodology for integrated inspection of the care of adults, and will ensure that any new arrangements support the Bill’s approach.” Furthermore, HIS noted “we believe that integrated services must also be supported by a single set of standards across health and social care and would welcome progress with the review of the National Care Standards, to ensure aspects such as dignity are central to the patient experience, no matter where the care is delivered.”

158. Audit Scotland was supportive of “the introduction of a core set of national outcome measures and the requirement on partners to jointly plan and use their resources to best meet local needs.”

159. The Committee notes that work on developing quality assurance is being taken forward by the Care Inspectorate, Healthcare Improvement Scotland and others. The Committee looks forward to receiving details of this and calls on the Scottish Government to provide an update in its response to this report.

160. The Committee is sympathetic to the arguments put forward by the Royal College of Nursing and invites the Scottish Government to consider whether quality care principles should be embedded within the integration principles set out in the Bill.

161. The Committee would also welcome clarification from the Cabinet Secretary on how it is anticipated that the nationally agreed outcome measures will articulate with existing frameworks such as Single Outcome Agreements (SOAs) and HEAT targets.

Complaints

162. Written evidence received by the Committee noted the absence of reference within the Bill to complaints procedures. The submission from Carers Scotland was typical of the comments received—

“We reflect concerns from other third sector partners over the lack of reference to formal complaints procedures within the Bill. Both local authorities and health boards currently have their own complaints procedures and processes and we believe that one complaint procedure should be

---

119 Scottish Independent Advocacy Alliance. Written submission.
120 Parkinson’s UK. Written submission.
121 Healthcare Improvement Scotland. Written submission.
122 Audit Scotland. Written submission.
introduced for integrated partnerships to avoid confusion for people who use services and carers.\(^{123}\)

163. Youthlink Scotland’s submission noted that the integration of services would “presumably lead to the merging of three different complaints mechanisms”. It added that, whatever system was decided upon, it was important that means of complaint and redress were “accessible, local, and young-person friendly, so that problems can be resolved quickly and easily”\(^{124}\).

164. Other bodies that expressed similar views included the Scottish Independent Advocacy Alliance, Enable Scotland, Parkinson’s UK, the Health and Social Care Alliance and Citizens Advice Scotland.

165. In oral evidence to the Committee, the Scottish Public Services Ombudsman (SPSO) questioned the lack of integration of complaints processes. Integration will see closer working between different entities with the aim of the service user experiencing a seamless delivery of health and social care, yet there are currently no firm plans for complaints procedures to be integrated too. Jim Martin, the Ombudsman, said the Bill “does not deal with situations where an individual is unhappy about the outcome they receive and does not address the complexity of complaints processes in place in this area”. He added—

“If we want to get the system to join up, we have to ensure that it is as easy as possible for people, when things go wrong, to get holistic solutions to the holistic problems that they face. The need for standardisation is there.”\(^{125}\)

166. The Ombudsman’s position was endorsed by Annette Bruton, Chief Executive of the Care Inspectorate. She noted that the advantage for people of the current complaints system in social care was that, when the Care Inspectorate carries out a complaint investigation, it prompts an inspection. This means that when someone complains to the Care Inspectorate about, for example, the care that their mother is receiving in a care home, it can not only investigate the complaint but, depending on its seriousness, immediately go ahead and inspect the home. She concluded that it was—

“not simply a case of having a coherent, joined-up complaints system that is systemically different from what we have now. We need to be able to use complaints to get immediate solutions to people’s problems.”\(^{126}\)

167. In oral evidence, HIS noted that there would be a challenge in merging complaints processes, particularly those of the Care Inspectorate and that of the Ombudsman (which deals with clinical care complaints), but noted their intention to conduct further work in this area, including undertaking pilot exercises of potential complaints systems.\(^{127}\)

\(^{123}\) Carers Scotland. Written submission.
\(^{124}\) Youthlink Scotland. Written submission.
168. Audit Scotland and the Information Commissioner’s Office raised concerns surrounding legal entity when it comes to complaints, with differences in accountability between the body corporate and lead agency models of integration.\textsuperscript{126} Citizens Advice Scotland also voiced its concerns over the lack of reference to public feedback mechanisms, including complaints, within the proposals.\textsuperscript{129}

169. The Committee questioned the Cabinet Secretary on this issue, who said that the Scottish Government had “a stream of work on exactly the issue of establishing a complaints procedure that is fit for purpose”. He said he did “not anticipate needing a big change in primary legislation”\textsuperscript{130}. A working group was looking at this issue and was expected to report by the end of the year.

170. The Committee agrees with witnesses that there is a need for a streamlined complaints system that will be easy for users to access and navigate and will be able to be used across the integrated health and social care landscape.

171. It is noted by the Committee that a Scottish Government working group is working on this subject and is expected to report by the end of the year. The Committee looks forward to receiving and considering this report in due course.

Human rights and advocacy

Human rights

172. A number of responses called for the Bill to take a human rights-based approach, with human rights principles as an integral part of the legislation. Some referred the Committee to the guiding principles on public sector reform included in the report of the Commission on the Future Delivery of Public Services (the Christie Report). This report notes that “a first key objective of reform should be to ensure that our public services are built around people and communities, their needs, aspirations, capacities and skills, and work to build up their autonomy and resilience.”\textsuperscript{131}

173. In its submission, for example, the Health and Social Care Alliance Scotland called for “a set of human rights based principles at the start of the Bill, or amendments to the existing principles so that they more strongly reflect an outcomes approach, rather than a needs-based approach and co-production/asset-based approaches rather than a professional/provider-led agenda.”\textsuperscript{132}

174. The Scottish Association for Mental Health (SAMH) spoke of “a rights-based culture as part of the new joint working, which would require a more person-
centred approach”. SAMH and others also raised the discrepancy between health (free at the point of need) and some social care services which are charged for. Inclusion Scotland called for “a human rights based social model of care”\(^{133}\).

175. Participants at the event hosted by the Lothian Centre for Independent Living (LCiL) also argued strongly for the embedding of human rights within the legislation. This had been based on one of the so-called “5 asks” (statements of principle that had resulted from consultation that LCiL had undertaken) the first of which was that “independent living, equality and human rights should be explicit in the principles and outcomes of health and social care integration”.

176. The Policy Memorandum argues that the Bill “does not give rise to any issues under the European Convention on Human Rights”. It goes on to say—

“In fact, it is arguable that the Bill goes further in enhancing the relevant rights of individuals by providing mechanisms that will provide a level of consistent care for the population of Scotland, so that people do not experience variation in quality of service provision. One of the principles of these proposals is putting the individual at the centre of health and social care service planning, ensuring a patient and service user centred approach, which means that the Bill will provide the mechanisms to ensure that individuals receive the care they need and that the individual encounters a seamless and joined up experience of the care pathway.”\(^{134}\)

177. The Committee notes the comments of some witnesses regarding the embedding of human rights principles within legislation. The Committee also notes that it received similar representations during its Stage 1 scrutiny of the Social Care (Self-directed Support) (Scotland) Bill. In response to the Committee’s Stage 1 report, the Scottish Government agreed to consider the issue further, and subsequently brought forward amendments requiring that local authorities take reasonable steps to facilitate the principles that the rights (of a person choosing one of the SDS options) to dignity and to participate in the life of the community were to be respected. These principles are drawn from Article 27 of the United Nations Universal Declaration of Human Rights.

178. The Committee accepts that all legislation passed by the Scottish Parliament requires, under the Scotland Act 1998, to be fully compliant with the European Convention on Human Rights. Nevertheless, the Committee invites the Scottish Government to consider whether there might be an appropriate way of amending the Bill to ensure that human rights principles are more explicitly stated in the text of the Bill.

\(^{133}\) Scottish Association for Mental Health. Written submission.

\(^{134}\) Policy Memorandum, paragraph 171.
Advocacy

179. Submissions from Leonard Cheshire Disability\(^{135}\) and the Scottish Independent Advocacy Alliance\(^{136}\) called for consideration to be given to advocacy in the design and provision of care and support.

180. The Scottish Independent Advocacy Alliance argued that the Bill “should include a right of access to independent advocacy in the same way as identified in the Mental Health (Care and Treatment) (Scotland) Act 2003”.

181. Leonard Cheshire Disability said that research it had carried out had shown that people with learning disabilities often felt misunderstood or not listened to when accessing services. It urged the Committee to consider the need for advocacy in the design and delivery of care and support.

182. A similar point was made by Voices Of Experience Scotland (VOX), which said that in its view, “the approach does not sufficiently address the need for the voice of the individual service user to be heard or make provision for the advocacy support that will be vital in order to ensure that while these changes take place the individual has a strong voice in their care arrangements”\(^{137}\).

183. None of the witnesses who gave oral evidence to the Committee made any specific reference to advocacy, which makes it difficult for the Committee to comment.

184. While the Committee recognises the value of independent advocacy in some circumstances, it thinks it probably unlikely that it will be required by the majority of patients and service users who will be impacted by the provisions of this Bill. In this sense, it does not necessarily seem appropriate to follow the example of the Mental Health (Care and Treatment) (Scotland) Act 2003.

Involvement and engagement of GPs

185. Throughout the Committee’s Stage 1 inquiry, and during its fact-finding visits, reference was frequently made to the need to involve and engage GPs in the new integrated arrangements, if they were to be a success. It was suggested that one of the reasons that community health partnerships had not been as successful as had been hoped was because GPs were insufficiently engaged with them.

186. Glasgow City Council, in its written evidence, noting that the Bill requires partnerships to engage with health professionals, argues that this, in itself, “is not sufficient to ensure that GPs for instance will engage effectively given the independent status of that group of professionals”. It goes on to say, from experience of CHCPs in Glasgow, that “integration works best when GPs and other stakeholders are engaged effectively”. Merely requiring in law, it says, that health and social care partnerships must work with GPs, carers, the voluntary and independent sector within a locality planning framework “will not of itself deliver the policy objectives when there is no expectation set out on these stakeholder groups

\(^{135}\) Leonard Cheshire Disability. Written submission.

\(^{136}\) Scottish Independent Advocacy Alliance. Written submission.

\(^{137}\) Voices Of Experience Scotland. Written submission.
to participate and work collegiately for the greater good”. The Council concludes that, with one third of total spend on older people’s services being accounted for by unplanned admissions to hospital, “clearly, without effective GP engagement, attempts to keep people in the community as opposed to within a hospital setting will be hindered. It “cannot be stressed enough that the inclusion of GPs within the legislation is vital if the overall objectives of the Bill are to be achieved”138.

187. Peter Gabbitas of the City of Edinburgh Council told the Committee that as somebody who was responsible for Edinburgh’s CHP for many years, he did not think that he and his colleagues had “effectively harnessed the hearts and minds of GPs in Edinburgh”139. He said he recognised that failing and the need to address it—

“We are doing specific things locally to try to do that, not least of which is the move back to a locality infrastructure with clearly identified managers to whom GPs can relate in a geographical area that makes sense to them. That builds on what we used to have, going back a while, when there were local health care co-operatives.”140

188. The “agendas”, in relation to integration, need to be locally relevant to practice populations, according to evidence presented by Allan Gunning of NHS Ayrshire and Arran. He gave an example of a GP who said GPs know that there is “necessary bureaucracy in the running of public services, and all of that can go on”141. He went on—

“However, what they want to see on the agenda is a debate about issues such as the quality of the incontinence service. That GP said that such things are real to them and that, if they can spend their time shaping that agenda, it will be worth engaging.”142

189. A similar point was made by Robbie Pearson, Director of Assurance and Scrutiny at Healthcare Improvement Scotland. He told the Committee that, in developing health and social care integration, it was “crucial” that “we bring together elements such as GPs in local communities”. The increasing engagement of GPs in this agenda, he said, would be “a marker of success in the future”, whereas this had “not been so robust with the community health partnerships”143.

190. Some of the Committee’s witnesses noted that, while the involvement of GPs was highly desirable, it could mean taking them away from the provision of essential services.

138 Glasgow City Council. Written submission.
191. Soumen Sengupta of West Dunbartonshire Community Health and Care Partnership remarked that an “interesting conversation” was to be had with the BMA and others about the GP contract nationally and “how we create a set-up that obliges all GPs to be part of the discussion, so that it does not include only the ones who are interested in a particular area”. That, he said, posed “certain challenges, because those staff are colleagues who provide services, so the more involved they are in the ‘management’ of the service, the less time they have available to be part of service delivery”\(^{144}\).

192. Peter Gabbitas of the City of Edinburgh Council raised the issue of the balance between what can be decided locally and what is determined through national negotiation. Peter Gabbitas told the Committee that although there had been a recent move from a (UK) national contract to a Scottish contract, the change had been “around the margins, because it is still a national Scottish contract and the number of things that we can determine locally is minimal”. He said that if the balance between what is determined nationally and what is up for local negotiation were reversed, that would “put health and social care partnerships into a much stronger relationship with primary care, because we could pull a lot of levers that we do not currently control”\(^{145}\).

193. Mr Gabbitas acknowledged that the BMA would probably be “horrified at the thought of moving away from a national contract”. It would, however, make an “enormous difference” – even “a bit of change in the balance between the money that is determined at national level in the contract and what can be determined locally, with, for example, an 80:20 split, with 20 per cent determined locally” would “create a reason to get very active with primary care”\(^{146}\).

194. The BMA’s written submission to the Committee set out its support for the fundamental principles of the Bill—

“Integrating health and social care successfully is a huge problem that has troubled past and present administrations in Scotland, but so far none has come up with a solution to the systemic problems that exist within the health and social care sectors. BMA Scotland hopes that this legislation will establish a robust vehicle for successful integration, and its broad objectives are in line with this. There is shared desire among everyone involved in the patient journey to provide high quality, seamless care wherever that care is provided, be it in hospitals, GP surgeries or in a patient’s home. The Bill is clear in its intent to drive this initiative forward, and it is appropriate that the fundamental principle throughout is to improve the wellbeing of recipients.”\(^{147}\)

195. The BMA also argued in its submission that (according to a 2012 BMA survey) doctors believed that collaborative cultures with shared values, good professional relationships and effective leadership were essential if integration was

---

\(^{147}\) BMA Scotland. Written submission.
to get off the ground. It also argued that these elements were also vital to securing improved clinical outcomes and better patient experiences, which it saw as key measures of success of efforts to integrate. This collaborative approach, the BMA said, would “need to be sufficiently robust in order to ensure that shared services deliver what is most needed by the local population”, citing a 2007 BMA survey, which had indicated that “the lack of influence of CHPs” was “a key factor in doctors’ disengagement from this structure”. In that survey, two-thirds of respondents had considered the “lack of effective communication between CHPs and general practice to be a barrier to effective GP engagement” while 48.7 per cent of respondents had considered “the lack of financial support to allow effective GP/practice staff engagement with CHPs to be a barrier to effective GP engagement”. The submission also noted that the 2011 Audit Scotland report had highlighted the lack of engagement of GPs as “a key factor in the failure of many of these organisations”, concluding that “unless this is explicitly addressed during the legislative process, then there is a risk that the failures will be repeated”.148

196. Many of the points made by the BMA were echoed in the oral evidence given to the Committee by the Royal College of General Practitioners Scotland (RCGP): Like the BMA, the RCGP set out its broad support for the general principles of the Bill. Its representative Dr John Gillies told members—

“This, in RCGP we believe that legislation is absolutely necessary, welcome and overdue. We have increased and appropriate expectations of health and social care because of the demographic shift to a more elderly population, the rise in complex conditions, multimorbidity among patients with long-term conditions and the deprivation in Scotland. We do not, however, have a health system or a social care system that is designed to address those problems. The bill should go some way towards addressing that.”149

197. The RCGP made points similar to those raised by the BMA in relation to the support that would be required by GPs and other independent contractors in order to be able to participate fully in the new arrangements. He told the Committee that if a GP had to leave their practice for an afternoon to attend a group, they would need to be replaced by a locum. Such support arrangements, he said, needed “to be considered when we think about how we contribute to the future”. If the system was to function properly, he said, GPs would “have to be supported to attend the meetings” and it was “important to include provision for that”.150

198. Dr Gillies, in common with representatives of other professions, also raised the question of capacity. He argued that “doing more in the community and adding responsibilities to those of clinicians, doctors and nurses in the community” would “have to be carefully thought through if it is to work”.151 There would, he said, be “no point in saying that we need to look after more people in the community” without having the clinical capacity (including AHPs) “to deal with the resulting

148 BMA Scotland. Written submission.
workload”. The RCGP believed that while innovative ways of working, including virtual wards, could be used to develop capacity, there was “a need to increase the number of GPs to deal with demographic change”\textsuperscript{152}.

199. The report to the Committee from the Local Government and Regeneration Committee welcomed “all moves towards co-location of services recognising local solutions are required to meet local needs.” It also quoted written evidence from GPs at the Deep End, which stated that “general practice is the main public service that is in regular contact with virtually the whole of the general population … These intrinsic features make general practices the natural hubs around which integrated care should be based, with groups of general practices supported, within the context of local service planning, to deliver integrated care in partnership with secondary care, area-based NHS services, social work and community organisations.”\textsuperscript{153}

200. The Committee raised the question with the Cabinet Secretary of engagement of GPs. He said that GPs, along with the third and independent sectors, would “be embedded in the process as key stakeholders in shaping the redesign of services”\textsuperscript{154}. Comparing the current legislation with the experience of CHPs, he said that “a lot of enthusiasm is out there, because people realise that we are serious this time”\textsuperscript{155}. He went on—

“‘We are going to do this—there will be a law—and people will have no other option, so integration will have to be done.’”\textsuperscript{156}

201. In relation to what had been learned from the experience of CHPs, he said—

“Two mistakes were made with the CHPs. One was that they were made sub-committees of health boards. The other was that integration was not a statutory requirement; it is only now becoming a statutory requirement. That is why the disillusionment set in.

“Every medical professional—such as doctors, nurses and particularly community nurses—whom I have met has been utterly signed up to integration. We will make absolutely sure in guidance that, at the locality level and the partnership level, all the key people—the stakeholders who need to be involved and not just consulted—are involved.”\textsuperscript{157}

202. The Committee notes the evidence it heard about the importance of GPs being fully supportive of and engaged with the proposed arrangements for the integration of health and social care. Along with all its witnesses, the

\textsuperscript{153} Scottish Parliament Local Government and Regeneration Committee. \textit{Committee Memorandum on the Children and Young People (Scotland) Bill and the Public Bodies (Joint Working) (Scotland) Bill}. Available at: http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Inquiries/LGRCommittee_memorandum_on_SP_Bill_27_and_SP_Bill_32.pdf [Accessed 28 October 2013]
Committee accepts that this will be absolutely vital if integration is to be successful in the longer term.

203. The Committee also notes the Cabinet Secretary’s comments about the lessons that have been learned with the experience of CHPs, the statutory basis that the new arrangements will have and the commitment that GPs, along with other professionals and the third and independent sectors will be “embedded” in shaping the redesign of services and seeks further clarification about how this will be achieved.

204. There was some evidence, however, from the doctors’ organisations that there is no spare capacity within the GP system to allow participation in planning and design of the new integrated arrangement without arrangements being made to cover, for example GPs attending meetings. The Committee invites the Cabinet Secretary to consider this point in more detail and report back to it on what arrangements the Scottish Government proposes in order to address this issue.

205. The Committee notes the Cabinet Secretary’s announcement on 5 November 2013\(^{156}\) that the Scottish Government intends to “modernise” the GP contract as part of a review of access to GP practices across Scotland, which is to be undertaken in partnership with the BMA Scotland. The Committee calls on the Cabinet Secretary to consider what role the revised contract can play in encouraging or helping GPs to play a full role in the integration process.

206. The Committee also notes that there is provision at section 26(4) of the bill for the integration board to pay to members of the consultation group, established as part of the strategic planning process, such expenses and allowances as it determines. The Committee invites the Scottish Government to consider whether this provision could helpfully be extended to cover participation in the locality planning process.

Strategic plans

207. The Policy Memorandum notes that “strategic commissioning is the term used for all the activities involved in assessing and forecasting needs, linking investment to agreed desired outcomes, considering options, planning the nature, range and quality of future services, and working in partnership to put these in place”\(^{159}\). The Policy Memorandum further notes the 2012 Audit Scotland report Commissioning Social Care, which was “critical of commissioning skills in Scotland”\(^{160}\) and subsequent reports by the Parliament’s Public Audit Committee and Finance Committee, which called for there to be a requirement for each of the proposed social care partnerships to produce a long-term joint social care commissioning strategy and for the Scottish Government to respond to Audit Scotland’s findings respectively. The Bill, therefore, lays considerable stress on

\(^{159}\) Policy Memorandum, paragraph 117.

\(^{160}\) Policy Memorandum, paragraph 118.
the importance of strategic commissioning. The Policy Memorandum states that the Scottish Government believes that through the strategic commissioning process “the required shift in the balance of care will be achieved”. It is, it argues not “a low-level or peripheral service planning activity” but is a “central, and key aspect of these reforms, which will have a significant impact on future development of Single Outcome Agreements and local delivery plans”\(^{161}\).

208. Under the Bill, integration authorities (integration joint board or health board and/or local authority in a lead agency arrangement) would be required to produce a strategic plan (strategic commissioning plan), which would set out how they would plan and deliver services for their area over a period of three years. According to the Policy Memorandum, guidance would also set out that strategic plans would also be expected to plan for the longer term (10 years). The Policy Memorandum goes on to say that the roles of clinicians and care professionals and the “full involvement of the third and independent sectors, service users and carers” would be “embedded as a mandatory feature of the commissioning and planning process”. This, it says, will “strengthen the cross-sector arrangements that have been established during the first two years of the Change Fund”\(^{162}\).

209. The Bill’s proposals in regard to strategic plans were broadly welcomed in almost all the written evidence. NHS Lanarkshire, for example, describing the strategic planning proposals as “key strength” of the bill said that the approaches in the Bill around joint strategic planning “afford the opportunity to strike the right balance and flexibility to meet specific local priorities”\(^{163}\). NHS Dumfries and Galloway also saw the “focus on an agreed strategic plan that sets out how the partnership will deliver agreed outcomes, and ensuring accountability for delivery, coupled with local reporting these provisions”\(^{164}\) as a key strength. The submission from Midlothian Council suggested that the Bill’s provisions would be “helpful in encouraging the focus to be on improved joint working and on effective joint strategic commissioning with the objective of improving outcomes for users and carers”\(^{165}\), while Scottish Borders Partnership supported “the focus on outcomes and the approach to strategic planning”\(^{166}\).

210. CCPS welcomed the emphasis on strategic planning “as a driver for change” and noted that it was “enthusiastic about the potential of joint strategic commissioning to begin to reorient investment and activity towards the achievement of outcomes for communities and individuals”\(^{167}\).

211. Healthcare Improvement Scotland welcomed both the strengthened role clinicians and social care professionals would have in strategic commissioning and that strategic plans should “assure that sound clinical and care governance is embedded”\(^{168}\). However, the BMA, in acknowledging the development of strategic plans as a “first crucial step towards integrating health and social care services”

\(^{161}\) Policy Memorandum, paragraph 119.

also stated that it would “welcome greater clarity on how the role of clinicians in the strategic commissioning of services for adults will be strengthened”. It also argued that there must be “a robust system in place to guarantee the opportunity for meaningful engagement with professionals in the planning of services”\textsuperscript{169}.

212. In oral evidence, there was also a broad welcome for the strategic planning proposals. Ron Culley of COSLA told the Committee local authorities wanted to “invest their time and energy in the commissioning agenda” to “make local partnerships the bedrock of that agenda in order to ensure that we can use the resource differently in a very difficult financial context”\textsuperscript{170}. Alan Gunning of NHS Ayrshire and Arran, noting that the strategic planning proposals had “echoes of a return to the internal market for the NHS” went on to say that joint strategic commissioning was “really designed to bring about improvement by assessing needs, determining the best way to meet them and ensuring that the required services are delivered”\textsuperscript{171}.

213. Alan Gray of NHS Grampian stressed to the Committee the importance of spending sufficient time on the planning process. He said—

“It will take time to work through. The plan is strategic and it will have to have a horizon of five to 10 years. The important thing is that we do not rush into making short-term decisions but, instead, take the time to work out how to redesign our current healthcare system to meet the future demands that we are all facing. We need to change the way in which hospital services are organised.”\textsuperscript{172}

214. A number of witnesses touched on the challenges posed by the need for service redesign and disinvestment. Rachel Cackett of the Royal College of Nursing, for example, told the Committee—

“Strategic commissioning is a powerful process that will involve making decisions about investment and disinvestment, and assurance will be needed that any care that is commissioned is safe and of good quality. The link from that to the governance boards and back up to the partner agencies will ensure, similarly, that we have good-quality care that is delivered by the right people in the right place in accordance with the needs that have been identified.”\textsuperscript{173}

215. The Committee welcomes the proposals in the Bill for strategic planning and the commitment in the Policy Memorandum to the full involvement of the third and independent sector carers, patients and service users. It notes that the initial plan that is to be produced by integration authorities will cover a period of three years and that the Scottish

\textsuperscript{169} BMA Scotland. Written submission.
Government will, in due course issue guidance in respect of longer term planning.

216. The Committee also recognises that a key part of the strategic planning and commissioning process will be the redesign of services, which may involve relocation or reprioritisation of resources under any new arrangements that might be agreed. This is likely to be challenging.

Locality planning

217. The Bill provides, at section 23(3) that strategic plans produced by health and social care partnerships must include provision for dividing the area of the local authority into two or more localities, and setting out separately arrangements for the carrying out of the integration functions in relation to each such locality.

218. The rationale for this is set out in some detail in the Policy Memorandum. It argues that – in line with the renewed emphasis on integration at the local level following the Christie Report – some aspects of service planning can operate more effectively and efficiently at a more local level than the integration authority itself.

219. The Policy Memorandum goes on to say that this locality planning should be led by and actively involve professionals, including GPs, acute clinicians, social workers, nurses, allied health professionals, pharmacists and others and that the active involvement of such professionals will be key to success. It is also intended include carers and users of health and social care services. In order to achieve maximum benefit for patients and service users, it says, locality planning also needs to ensure the direct involvement of local elected members, representatives of the third and independent sectors, and carers’ and patients’ representatives.  

220. No model of locality planning is prescribed in the Bill, as it is considered by the Scottish Government that local arrangements are best developed and agreed upon locally. However, the Policy Memorandum indicates that the Scottish Government would expect, in due course, to see integration authorities “to delegate to localities decisions on a material proportion of the integrated budget, and ensure that local communities benefit from any shift in service provision towards preventative and anticipatory care that they achieve”.

221. The written evidence received by the Committee was broadly welcoming of the idea of locality planning. NHS Dumfries and Galloway identified the “locality focus that delivers the agreed strategic aims in a way that makes sense locally and which takes account of different local contexts” as a key strength of the Bill. The focus on locality planning was also welcomed by the Scottish Borders Partnership and by South Ayrshire Council, which described it as “an important aspect of the Bill”. Many others also supported the principle.

---

174 Policy Memorandum, paragraphs 124-125.
175 Policy Memorandum, paragraph 129.
176 NHS Dumfries and Galloway. Written submission.
177 Scottish Borders Partnership. Written submission.
178 South Ayrshire Council. Written submission.
222. North Ayrshire Council noted that one concerning aspect was “the need to balance the views and influence of all interested groups so that one group does not dominate others”. This, it said, would “be challenging given the range of interested groups”\(^{179}\).

223. The Coalition of Carers in Scotland, noting that the Bill’s Explanatory Notes indicated that, through secondary legislation, integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity, also note that no such commitment is made in respect of carers.\(^{180}\)

224. NHS Education for Scotland argued that the relationship between national and locality planning “may require to be strengthened in order to ensure efficiencies across the sector on a national basis can be achieved”\(^{181}\).

225. The BMA raised an interesting point—

“The BMA believes that it would be essential for localities to have budgetary authority if they are to genuinely influence the provision of services locally. We would therefore welcome more information on the government’s intentions as to how authority would be delegated between the Joint Integration Boards and the locality structures”\(^{182}\).

226. Audit Scotland’s written submission noted that the Bill “provides little detail about how locality arrangements might work in practice” and concluded that “there needs to be a real contribution from professional staff groups to informing how resources are used and services improved”\(^{183}\).

227. The oral evidence taken by the Committee provided a similar picture, with most witnesses welcoming the idea of locality planning. Allan Gunning, of NHS Ayrshire and Arran, for example, said—

“Finally, the third point of principle relates to the statutory underpinning for locality planning, which I think will be particularly important for health. Planning for place has not always been deeply embedded in the NHS planning process—we tend to look at disease classification, age or whatever. As we know, however, many of the challenges that face us relate to people with co-morbidities and complex needs who do not fall into the neat planning categories that we might have used in the past. I see a powerful model for locality planning that will build up a picture of and assess local needs and which will create the opportunity for a different type of relationship between public services, the other partners that I have mentioned and the communities that they serve. That will in turn flow into a coherent strategic

---

\(^{183}\) Audit Scotland. Written submission.
plan that will spell out the intended changes and a performance regime that will monitor whether those changes are actually being delivered."  

228. Jeff Ace of NHS Dumfries and Galloway argued that the NHS had “centralised” its decision making over the past five years or so, and integration would provide “a critical mass back at the locality and community level so that we can start to reverse some of that decision-making power and bring our general practitioner community in particular strongly into the process.”

229. Rachel Cackett of the Royal College of Nursing, although acknowledging that locality planning was “a key issue”, argued that the Bill was “fairly sketchy about it” and suggested that professionals did not “entirely understand how it will work in practice”. However, she disagreed that locality planning was the best way for professions to get involved. She said—

“Although it is very important that those with local knowledge on the ground—the service providers and those who are using the service—are engaged in development, we must understand how the process fits in with the joint strategic commissioning process … Locality planning is key, and especially important in ensuring that there is wide involvement, but if it becomes the only focus for involvement we will start to miss out on assurance mechanisms and the important strategic oversight of professionals and others in supporting the governance of the new bodies.”

230. Dr John Gillies of the RCGP noted that while most people who worked for local authorities and health boards were employees, most general practitioners and some other community providers, including pharmacists, were contractors who worked for the national health service according to a contract, but were not employees. He explained how this might affect their ability to take part in locality planning—

“When one considers how GPs, pharmacists and other primary care contractors will contribute to the new arrangements, it is important to remember that they will need additional support. If a GP has to leave her practice for an afternoon to attend a group, she will have to be replaced by a locum. Such support arrangements need to be considered when we think about how we contribute to the future. Many of those issues are covered in the “All Hands On Deck” report, which was produced for the joint improvement team. If the system is to function, GPs will have to be supported to attend the meetings. It is important to include provision for that.”

231. From the trade union perspective, Dave Watson of UNISON told the Committee—

On locality planning, we need to see the detail. Part of the problem with locality planning in Scotland has often been that it has not been very local. In other words, there are genuine localities, but services have not drilled down to those levels, largely because local authorities and health boards are very large—there are those who argue that there should be fewer such bodies, but we are not among them; we have the largest such organisations in Europe.188

232. Alison Taylor, a Scottish Government official supporting the Cabinet Secretary at Committee explained why the Bill was not prescriptive about locality planning—

“As you can see from the bill, we have not set out a prescriptive process on locality planning. That is in direct response to what we were told by stakeholders and partners, particularly those who were already doing something like locality planning well. It would be difficult to find two examples that are particularly similar, as there is huge local variation in how locality planning works, who exactly is around the table—that can depend on the balance of local need—how often they meet and what sorts of decisions they look at. The onus was very much on us to encourage the development of local innovation and not to be prescriptive.”189

233. The Committee notes the evidence it received about locality planning, almost all of which was positive albeit with a few caveats.

234. The Committee is also fully supportive of the idea of locality planning, which will be essential if services are to redesigned in a bottom-up way that engages individuals and local communities in a flexible way that delivers the best possible outcomes for patients and other service users.

235. It is recognised that the Bill provides little detail on how locality planning will work in practice and is not prescriptive about the model to be used. The Committee understands that this is a cause for concern among some of its witnesses. However, the Committee accepts the Scottish Government’s argument that it is important that there is a high degree of local flexibility and opportunities for local areas to develop the model most appropriate to that area. There should be sufficient experience developed over the last 10 years through community planning, community health partnerships and the development of local consultation on a wide range of issues to enable partnerships to have the capacity to develop appropriate locality planning methodologies.

236. The Committee understands that work on developing methodologies for locality planning is continuing through the various working groups associated with the Bill implementation, but asks that the Cabinet Secretary respond to the Committee indicating how the principles of locality planning set out in the Policy Memorandum can be reflected in the Bill.

Financial and budgetary issues

237. The Committee was conscious, throughout its stage 1 inquiry, of the key role of financial and budgetary issues in relation to the implementation of the Bill’s provisions. Much of the thrust of the Bill is designed to provide for more efficient use of limited resources through integration and redesign of services to deliver better outcomes for individual patients and provide better value for the public funds that are invested in these services. Clearly, integration suggests a need for some degree of pooling of the budgets of the relevant bodies and organisations. As integrated budgets inevitably involve both organisations in a partnership giving up a degree of budgetary control, it is always likely to be one of the potentially more sensitive areas.

238. The Committee was also aware of the tension between NHS services, which are free at the point of delivery, and care services, which need not be free. This was coupled with the tension brought about by the differences in funding and governance arrangements between local government and the NHS, with the latter directly accountable to the Cabinet Secretary and with its funding currently protected within the Scottish Government budget, and the former accountable to its own electorate and with around 80% of its funding coming directly from central government without the same degree of protection within the budget.

239. Finally, the Committee was aware of the tensions around possible transfers of funding from NHS acute services to care services and the difficulties in determining the level to be transferred.

240. These tensions were reflected in the evidence received by the Committee, as the report will go on to explore.

241. The Bill was also scrutinised by the Parliament’s Finance Committee, which reported to the Committee. The contents of the Finance Committee’s report are also considered in this section of the report.

Cost creep

242. Parkinson’s UK raised the issue of ‘cost creep’ with the Committee. It said it had "very particular concerns about issues arising from integrating free, universal NHS Services with means tested social care that is subject to eligibility criteria". This echoed previously expressed concerns over NHS Continuing Care, where it appeared that many people had been obliged to pay for social care to meet health needs which ought to have been funded by the NHS. The submission went on to argue that the Bill could “have the unintended consequence of expanding the problem to much larger numbers of people, who could find themselves having to pay for services that they are entitled to have funded by the NHS”. Parkinson’s UK was concerned that this was particularly likely to affect people with progressive neurological conditions and those with conditions, including Parkinson’s, which most commonly affect older people.

243. These concerns were echoed by the Health and Social Care Alliance, whose submission argued that “people with progressive neurological conditions like

190 Parkinson’s UK. Written submission.
Parkinson’s could be at high risk of ‘cost creep’ when means tested, chargeable social care services are merged with NHS services that are free of charge.\(^{191}\)

244. This issue was of particular concern to the independent living movement. Pam Duncan of Independent Living in Scotland) told the Committee that disabled people and their organisations believed that to charge people for a service such as community care, which was “so crucial to their independence and their human rights”, was “unfair and unparalleled” adding that “we do not charge anyone else for the privilege of enjoying their human rights in the same sense.”\(^{192}\)

245. She went on to say—

“we believe that the issue needs to be addressed in the bill, not least because of that unfairness, but also because of the bureaucracy and the difficulties around how we are going to tell which parts of the budget are chargeable and which are not. None of us wants people to start charging for services that people would ordinarily have got from the NHS for free; equally, we do not want people to continue to have to pay for social care when, without it, they could not possibly participate in society.”\(^{193}\)

246. Members of the Committee also heard similar concerns expressed when they visited Lothian Centre for Independent Living. According to the evidence from Independent Living in Scotland, the amount that is collected in charges for social care approximately £50 million across Scotland. Pam Duncan remarked that although this was “in the grand scheme of things” was “not a huge amount of money”, the charges could represent up to 100 per cent of a disabled person’s income.\(^{194}\)

247. The Committee notes the concerns expressed in written and oral evidence about the potential for “cost creep” and the possibility that, were this to happen, it would be likely to affect certain groups of patients and people disproportionately. The Committee recognises these concerns and invites the Scottish Government to indicate what measures it proposes to take to reassure these groups and individuals who might be most likely to be affected by cost creep.

248. The Committee will also wish to continue to monitor this issue as the implementation of the Bill, when enacted, is rolled out.

_Budgets_

249. The Policy Memorandum sets out that in the body corporate model (expected to be adopted everywhere except Highland) the joint board, under the leadership and direction of its chief officer, would manage the integrated budget and integrated planning and delivery of services. Under the lead agency model,

\(^{191}\) Health and Social Care Alliance. Written submission.
functions and resources would be delegated to each other between the local authority and health board, for delivery of services. In both cases, the integration plan would include details of the method of calculating money to be delegated to support delivery of the functions.

250. The current expectation is that, under the body corporate model, the joint board would not employ any staff to deliver services (although there are provisions within the Bill to allow the joint board to employ staff in the future) – the delivery staff would either remain in the employment of the health board or local authority (or in third and independent sector organisations) – but the joint board would be responsible for negotiating agreement between the partners the level of resources required to deliver the services agreed in the plan and for developing the pooled or integrated budgets required to support these services.

251. Alison Petch of IRISS made an interesting general point in relation to the budget provisions in the Bill—

“An area in which I wonder whether the bill could be much stronger is budgets, because budget pooling will be critical to much of what we are talking about. With the best will in the world, we know that budget pooling is what sends people back to their little territories to try to protect their boundaries. I noted that some of the submissions to the committee express concern about protecting health budgets.”

252. Representatives of the third sector and carers expressed concern about the possibility of local authorities and health boards seeking to minimise the contribution they would make to the integrated budget. Nigel Henderson of CCPS, for example, told the Committee that his organisation worried that the Bill might create a whole new infrastructure that “might have very little control over very little money”. He concluded that there needed to be “more prescription about what money should be allocated to the joint health and social care partnership fund.”

253. He went on to say—

“Somewhat tongue in cheek, we put forward the notion that the Government should surely practice what it preaches. It currently has an NHS budget and a local government budget. Should it not start out with an integrated budget? You therefore do an element of top-slicing and say, “This is the budget for health and social care partnerships. This is the budget for the health service. This is the budget for local authorities.” You therefore have a new budget line in the Scottish Parliament budget.”

“I understand that that could be very controversial, as it would be seen to take away local control and accountability and perhaps to go back to the days of ring fencing. There are dangers, because we know that if money is

ring fenced that is as much as will be spent. However, to start the process off in the way that it needs to continue, it might be a possibility to start for a period of time with an integrated budget right at the centre.”

254. Much of the evidence, particularly from the local authority sector, concentrated on three areas: the assumptions in the Financial Memorandum and the extent to which they adequately reflected the costs that would be expected to fall on local authorities; the mechanics of agreeing a budget, and the level of budgetary resource that could be diverted from the acute sector in order to support the delivery of services in the community.

255. COSLA’s written evidence included a long list of cost issues\(^\text{198}\) that it considered had not been fully taken into account in the Financial Memorandum. These included the:

- increased audit burden – £150,000 across Scotland “seems too low”.
- financial recording and reporting costs are likely to increase, irrespective of the integration model adopted.
- whether funding for the Chief Officer can be met from the current CHP General Managers’ salary.
- financial provision being made to the NHS for CHP leadership post-holders displaced as a result of the development of partnerships, but no similar resources, either recurring or non-recurring, being made available to local authorities.
- possibility of other management costs emerging within the parent bodies as a result of the restructuring caused by the formation of partnership boards.
- the anticipated recurring costs associated with ICT “seems low”.
- additional costs associated with development of financial information identified for health sector only.
- unclear whether any assumptions have been made around remuneration for Board Members.
- assumption that support services for the joint boards can be funded from existing CHP support services is “unrealistic” as not all CHPs currently have the full range of support services that will be required in the new partnerships.
- section 45 provision for extension of schemes for meeting losses and liabilities for health service bodies. COSLA has concern that this will allow NHS to carry reserves from one year to another.

\(^\text{198}\) COSLA. Written submission, paragraph 79.
• risks to VAT recovery and staff pay and conditions harmonisation estimated by FM as up to £32m and £27m respectively. No Scottish Government commitment to fund these pressures should they occur in future.

• Should staff transfer be required, TUPE implications may be significant and potential financial solutions may not meet TUPE regulations.

256. Many of these concerns were also reflected in the submissions from individual local authorities.

257. While the Finance Committee report made no reference to the extent to which the financial provisions in the Bill will be sufficient to cover its costs, it notes that the complexities involved in the move to integration and considers it, at this stage, “not unreasonable for there to be uncertainty as to the costs of establishing the framework for, and the delivery of, integrated services”\(^{199}\). However, the Finance Committee is “concerned” about the “level of uncertainty surrounding the estimated costs” and suggests that it will be “important for review and monitoring of the costs to be undertaken throughout the implementation”. It intends to include this as part of its “wider and ongoing commitment to monitor the delivery of the shift to preventative spending”. The Finance Committee also suggests that the Health and Sport Committee may also wish to actively monitor the cost of the implementation of the Bill by asking the Scottish Government to provide regular updates on the work of the integrated resources advisory group and on the establishment of the health and social care partnerships provided for in the Bill.

258. The Committee questioned the Cabinet Secretary on many of the funding and budgetary issues that had been raised by COSLA and others. In noting that work on many of these issues was ongoing through the Bill advisory group, the ministerial steering group, and the implementation group and associated working parties, he told the Committee—

“On funding, we have had a good discussion on the budget process this morning and we will provide an additional briefing on the mechanics of it and the flow of budget decisions. The key point is that there will be an integrated budget. We will no longer have the ridiculous position whereby for each hospital patient there is a dog fight between the health board and the local authority about who will pay when the person is discharged, which means that we end up with delayed discharge. There are a range of issues such as that one.”\(^{200}\)

259. He went on to say that he thought that, when the system had become fully operational, there would be “much more efficient and efficacious use of public funding”\(^{201}\). He thought that there would be a reduction in unnecessary hospitalisations, which would lead to better patient outcomes, and treating people

at home instead of “spending so much money on keeping them unnecessarily in the acute setting in hospital”. This, he said, would “free up resources that can be used to improve the quality of care more generally”\(^\text{202}\).

260. The Committee notes the comments of COSLA and others on the extent to which the cost assumptions are accurate and whether sufficient financial provision has been made.

261. The Committee fully accepts that the drive towards integration, although intended to deliver better outcomes for patients, is also about helping make more efficient and effective use of public funds invested in health and social care through NHS boards and local authorities. In that sense, the expectation is that, through integration, better and more efficient services will be able to be provided for approximately the same level of overall resource.

262. The Committee also accepts that work and discussions are ongoing on the detailed financial arrangements that will be put in place as the implementation of the Bill rolls out. The Committee agrees with the Finance Committee that it is not unreasonable for there to be uncertainties about the costs of the Bill at this stage, and also agrees with it that there will be a need for ongoing monitoring. However, the Committee also agrees with witnesses who indicated that further clarity on these matters, as the Bill progresses, would be helpful.

263. Finally, the Committee welcomes the Finance Committee’s commitment to continue to monitor financial aspects of the implementation of the Bill as part of its monitoring of the delivery of the shift to preventative spending and its suggestion that the Health and Sport Committee also continue to monitor implementation issues as they arise.

264. The Committee would expect to carry out this role as part of its wider, general role of scrutinising the Scottish Government and holding it to account as regards its delivery of health and sport matters, but there will be opportunities to monitor developments in more specific detail over the remainder of the parliamentary session as appropriate.

Transfer of resources from acute to care sector

265. As mentioned earlier, many submissions and oral evidence comments referred to the issue of the transfer of funds between the acute and care sectors and how the level of any such transfers would be determined.

266. The British Association of Social Workers submission argued that the “mechanisms of moving budgets” from acute health services into supporting complex chronic health and social care would “be key to achieving the objectives of this legislation”\(^\text{203}\). A similar point was made by Carers Scotland.\(^\text{204}\) Although it recognised that it may take time for these changes to deliver savings, it said it was

\(^{203}\) British Association of Social Workers. Written submission.

\(^{204}\) Carers Scotland. Written submission.
“unclear what mechanisms will be put in place to identify these savings and ensure that they are, over time, reinvested into integrated services, rather than being simply reabsorbed into acute health care settings”. This movement of resources, it said, was “critical to success”.

267. Similar points were made by a number of local authorities. Falkirk Council argued that further clarification was needed on what proportion of the acute budget from the NHS would be put into the partnership arrangements. South Ayrshire Council argued that the most effective use of the “total and very limited financial resources available cannot be fully addressed without partnerships having a say in how financial resources are used within the acute sector”. Without this, it said, there would “not be an end to ‘cost shunting’.”

268. The Committee took part in a wide-ranging discussion of some of these issues during one of its roundtable sessions on the Bill. Most contributors acknowledged the difficulties associated with determining which areas of acute provision might be within scope for transfer to care in the community and the fears in the acute sector that acute budgets could simply be disaggregated and reaggregated across a number of different partnerships organised in different ways across a health board’s area. COSLA was adamant that large elements of acute sector budgets should be within scope. Ron Culley told the Committee—

“We will probably want to look at unscheduled care, or what is known as the emergency pathway, because it eats up about a third of the total resource. That will be pivotal, and we need to explore what that pathway involves. It is not just about front-door and accident and emergency services, but about all the elements of our acute general hospitals that become involved, such as general medicine, psychiatry and so on. Once we begin to think about the issue in those terms, we start to see that a substantial part of the acute budget is in scope.”

269. He went on—

“It needs to be that way, however, because otherwise nothing will change. If we go through the pain of integration and nothing changes, I do not know what we will have done it for.”

270. The Committee put some of these points to the Cabinet Secretary. He was clear that Scottish Ministers did not intend to set a minimum figure or percentage for transfer—

“There cannot be a simplistic percentage cut in the acute budget that is then redirected. That is not the right way to plan ahead.

---

205 Falkirk Council. Written submission.
206 South Ayrshire Council. Written submission.
The strategic commissioning role of the partnership is absolutely crucial. We already agree with COSLA that, where there is an acute budget related to the partnership’s responsibilities, how much is spent on acute care in relation to the overall responsibilities of the partnership will be very transparent. The partnership will then have the ability to influence the acute care budget.”

209

271. The Cabinet Secretary went on to explain that a key point of the proposed changes was “substantially to increase acute care in the community”. He said that if the joint boards were not going to give some responsibility for the acute budget, that “would defeat that particular purpose of the integration agenda.” He also suggested that, because of the wide variation in responsibilities between different acute hospitals, it would not be appropriate to “think in terms of a precise percentage of the acute budget”210. He concluded—

“If we just said that a percentage of the acute budget should be transferred in the same way across the country, the impact of that would be extremely different in different areas, because of the different roles played by some of the bigger hospitals in particular. That is why it has to be a local decision, dependent on the configuration of acute services in each area.”211

272. Kathleen Bessos, a Scottish Government official supporting the Cabinet Secretary provided the Committee with further detail on the technical aspects of how it was anticipated that integrated budgets would be developed. She said that the important thing is that “we stick with the principle that the resources that are associated with the functions that are delegated to the joint board go with the functions”. The key question, she said, then became “which aspects of acute resources lend themselves to being used in a different way”. She went on to explain that Scottish Government officials had been working closely with the chief executives of the NHS boards to unpick the complexities of how to give enough influence to change how acute budgets are used, “without introducing either incredible amounts of bureaucracy or complete chaos and confusion, with the potential for the acute service not to be able to plan coherently across their patch because they cover more than one local authority area”212. She concluded—

“We think that we have got a position that has been agreed with COSLA and with NHS boards on what that model looks like, so we are saying that the strategic commissioning plan must describe the money that is in scope. Within that commissioning plan there will be decisions taken by the partnership board, in discussion with the health board, the council and others, about the timeframe around which changes to acute services will happen. Those resources will then be realigned and redeployed as the commissioning plan is operationalised.”213

273. She went to explain that, in the case of community acute hospitals, it would be likely that all of their budget would go with the functions and “be in the integrated pot”, so that that resource could “be used flexibly on a daily basis”.

However, she said, redesigning and realigning some aspects of acute service “needs to sit within the context of the agreed commissioning plan, the timescale over which the change will happen, and complete transparency about what resource is available to be redeployed.”

274. Finally, she told the Committee that the deputy director for health finance in the Scottish Government had already asked partnerships to give an early indication of what percentage of resources would be in scope for transfer. Once she had a comprehensive picture, she said, she was sure that the deputy director “would not be unhappy to share the generality of that, given that the partners are in the early days of working through the amount”.

275. Following this, the Scottish Government provided the Committee with further information on this issue—

“We expect the extent of Health Board budgets included within the scope of integrated strategic planning to vary in different Health Board and partnership areas. Based on the discussions we have had with some Health Boards to date, and noting that the figures are high level and indicative at this stage, we anticipate that approximately half of the total Health Board budgets (one third of Health Board hospital budgets) will be included within the scope of the integrated strategic plan. This would represent approximately 75% of total expenditure on unplanned bed days for people aged 75+, which is in keeping with the policy intention of integration to focus strategic planning on areas of activity with the greatest scope for redesign in favour of preventative and anticipatory care.”

276. The Committee accepts that, while budget discussions about which aspects and how much of an acute budget can be realigned and reallocated to an integrated services will be one of the most challenging areas for negotiation, it is essential that such challenges are met if services are to be redesigned on an integrated basis.

277. The views of COSLA and others that an element of acute budgets should be top-sliced at source and allocated to care services budgets are noted, but the Committee inclines more towards the Cabinet Secretary’s position that it is for each partnership to determine what functions and aspects of acute budgets are within scope for redesign and it would not be appropriate to impose a percentage figure from the centre. In this respect, the Committee is heartened to learn that a model has been agreed between the Scottish Government, COSLA and NHS boards on how the strategic commissioning plans would determine the resources that would fall within integration scope.

278. The Committee welcomes the additional information it has received from the Scottish Government officials setting out current expectations about the percentage of resources that would be likely to be in scope for transfer.

---

215 Email from Scottish Government officials to Committee clerks, sent 7 November 2013.
279. The Committee would intend to continue to monitor progress on this over the remainder of the parliamentary session, but in the meantime asks the Cabinet Secretary to clarify the extent to which there is expected to be variation between health boards. The Committee questions whether it would be the case, for example, that larger percentages would be expected to be within scope for transfer in the smaller board areas that have fewer specialised services, than would be the case in the larger boards such as NHS Greater Glasgow or Clyde or NHS Lothian.

280. The Committee would also be interested to learn from the Scottish Government the outcome of discussions with COSLA about the level of resources that local government would be expected to contribute to integrated budgets.

VAT

281. The Financial Memorandum\textsuperscript{216} explains that the different VAT status of the statutory partners (local authorities and NHS boards) complicates the recovery of VAT on goods and services under integrated arrangements, which introduces a risk that VAT currently recovered may not be possible post integration. The extent of potential exposure for this risk identified by the FM is a recurrent cost of £32m p.a. based on the estimated total VAT recovered by local authorities for adult social care services.

282. The FM goes on to explain that VAT implications for integration depend on whether partners opt for delegation between partners or delegation to a body corporate. In the case of the lead agency model, the VAT regime of the host partner in the delegation between partners model will apply to the integrated budget. This introduces a risk of additional recurrent costs in cases where local authority functions are delegated to health boards and VAT previously recovered by local authorities is no longer able to be recovered under NHS arrangements. According to the FM, this risk is “mitigated by establishing arrangements under existing HMRC guidance for delegation between partners, which allows a solution for partnerships that is VAT neutral compared to the pre-partnership position”\textsuperscript{217}. It is understood that the care trusts in Torbay and North East Lincolnshire both took advantage of the solution in the guidance, which led to a VAT neutral outcome. The FM reports that Highland Partnership is also following this approach and, although its position has not yet been finalised with HMRC, it also expects a VAT neutral outcome.

283. Under the body corporate model, there is no guidance available for this. Consequently, there is a risk that VAT currently reclaimed by local authorities would no longer able to be recovered under the VAT arrangements in the body corporate. However, the FM indicates that Scottish Government appointed VAT advisors have indicated that the key factor in determining recovery of VAT in this model will be the extent to which the body corporate delivers services, and that the

\textsuperscript{216} Public Bodies (Joint Working) (Scotland) Bill. Explanatory Notes (and other accompanying documents) (SP Bill 32-EN, Session 4 (2013)). Available at: \url{http://www.scottish.parliament.uk/S4_Bills/Public\20Bodies\20(Joint\20Working)\20(Scotland)\20Bill/b32s4-introd-en.pdf}

\textsuperscript{217} Explanatory Notes, paragraph 76.
proposed arrangements are likely to be interpreted by HMRC as the body corporate re-allocating the integrated budget and for delivery by boards and local authorities. Consequently, it is likely, concludes the FM, that a VAT neutral position is attainable. However, the FM cautions that, should the Scottish Ministers extend, in future, the remit of the body corporate to allow it to take advantage of employment and contracting powers, there would be a risk that HMRC would revise its view to conclude that the body corporate was, in fact, providing services. In that situation, the VAT status of the body corporate would be “less clear” and the recovery of VAT would be “at risk”. The FM notes that the full extent of potential exposure for this risk is a recurrent cost of £32m p.a. based on the estimated total VAT recovered by local authorities for adult social care services.  

284. The COSLA submission to the Committee noted that—

“VAT is a particular concern for COSLA. We are seeking early clarification from Scottish Government and HMRC as to the VAT arrangements that would obtain under the body corporate model. Further thought also needs to be given to the VAT implications of the body corporate acquiring more general financial powers in the future.”

285. The Cabinet Secretary updated the Committee on developments in relation to VAT when he appeared before it on the Bill—

“We are in a state of advanced negotiations with HM Revenue & Customs on that very issue. Although I cannot forecast exactly what the outcome will be, I am reasonably confident that we will hopefully end up in a position where there will be no VAT implications in terms of additional expenditure arising from these measures.”

286. The Committee notes that the Cabinet Secretary is “reasonably confident” that there will be no VAT implications arising from the Bill’s provisions. Nevertheless, the Committee would welcome an update in due course, when the final outcome of discussions with HMRC has become clear.

ICT

287. The Finance Committee’s report to the Committee indicates that the Finance Committee received submissions from a number of local authorities and from ADSW, that insufficient account had been taken in the FM of the likely costs of integration of IT systems between health boards and local authorities.

288. The Committee questioned Maureen Falconer of the Information Commissioner’s office regarding the issues around information sharing between and within bodies. She told the Committee—

“Within the NHS, there is a problem in that the different systems cannot speak to one another. The situation is the same in the local authorities—many use the same systems, but not all do—and in education. The different
systems cannot talk to one another. Until we have the panacea of central procurement that sends down from on high a system that can be implemented in the public sector across the board—I do not think that will ever happen—the ability of organisations to talk to one another will always be a problem.”

289. The Finance Committee invited the Health and Sport Committee to ask the Scottish Government what discussions it has had with local authorities and health boards about the IT developments that will be necessary to improve data sharing, whether additional funding had been requested and, if so, why there was no discussion of this in the FM.

290. The Committee did not have time to put this question to the Cabinet Secretary during his appearance before it on 1 October 2013. However, the Committee is aware of historical difficulties in attempting to join up different electronic records and in IT procurement, which invariably seem to lead to rapidly rising costs. The Committee therefore invites the Cabinet Secretary to address the Finance Committee question in the Scottish Government response to this report.

Cost of additional inspections
291. Healthcare Improvement Scotland raised this issue with the Finance Committee, which, in turn referred to it in its report to the Committee. HIS had indicated to the Finance Committee in order to comply with the Bill, it would be necessary for it to review the skills and resources required for inspections. It said it would consider the associated financial implications in the context of its broader financial strategy, but noted that additional costs might “require some uplift to our baseline funding which is currently reducing on an annual basis” adding that any uplift would require to be agreed with Scottish Government finance colleagues.

292. The Committee asked the Cabinet Secretary about the additional costs that were expected to fall on HIS. In response, the Cabinet Secretary indicated that the Care Inspectorate and HIS were working together on the implications of integration for the delivery of inspection services and HIS would launch a consultation soon in which one of the subject areas that would be covered would be the implications of integration. He concluded that an integrated inspection strategy would ultimately be required.

293. The Committee understands that this work is in progress and requests that the Scottish Government provide an update on progress on this issue in its response to this report.

Staffing issues
294. UNISON, in its written submission to the Committee noted that, in its response to the 2012 consultation, workplace issues had been given “scant

---

221 Scottish Parliament Health and Sport Committee. Official Report, 1 October 2013, Col 4389
222 Healthcare Improvement Scotland. Written submission to Finance Committee, paragraphs 4 and 6.
consideration” and recorded its disappointment that, in its view, these issues remain unaddressed—

“We believe that one of the greatest challenges for implementation of the proposals will be the difficulties of bringing together two large groups of staff who have their own cultures, systems of governance, terms and conditions, all of which have the potential to create massive problems when implementing the plans. We continue to be disappointed that these issues have not been addressed and would strongly urge that a provision for staff and their trade unions to be involved in the integration and planning process should be included in the Bill.”

295. UNISON went on to set out a range of issues including staff transfer, pensions, secondment, staff employed by different employers, procurement, equality duties, governance and statutory roles. It also stated that it “did not favour models that involved the wholesale transfer of staff across councils and health boards, as in the Highland Model”. It noted that its members in Highland had “experienced many difficulties with terms and conditions of staff, pension arrangements, etc. and stated that it believed that major issues, such as the status and situation of Mental Health Officers, still remained to be resolved.

296. The Royal College of Nursing submission expressed surprise at the inclusion in the Bill of a provision to enable, at a future point, through subordinate legislation, joint boards established under the body corporate model to employ staff directly. It said that this “risks undermining current arrangements” It concluded that “a far greater, open discussion [was] required to understand the consequences of this section on the sustainability and the principles of the NHS in Scotland”.

297. The Committee discussed staffing issues with those who took part in the visits to Highland and West Lothian (where considerable work has already been carried out to integrate services). While in both locations, there was acknowledgement that there were issues that needed to be addressed with regard to staffing arrangements, there were no reports of major difficulties having arisen.

298. Dave Watson of UNISON enlarged on the union’s written submission when he gave oral evidence to the Committee—

“From our perspective, the staffing governance is particularly unclear. As you will know, in the health service we have a strong, internationally renowned staff governance framework. It is slightly different in local government, but nonetheless there are statutory and non-statutory provisions there. Our concern is that there are a lot of big decisions that the bodies could make if the budgets are allocated to them and that those decisions will impact not just them—because in most cases, they will not be the employer—but other
employers. The staff governance arrangements around that seem to be somewhat muddled and confused.”

299. Dave Watson went on to say that he could see “dozens of potential legal difficulties with the bill as it stands in terms of staffing issues”. These included arrangements for secondment and issues of staff on different terms and conditions. He concluded that while such matters were “mundane”, they were “absolutely key to getting better integration at local level”.

300. A similar point about staff governance was raised by Rachel Cackett of the RCN. She explained that different experiences of how well integration was working in different areas often came down to the amount of time that had been freed up in their teams to allow “really simple things to happen”. She mentioned specifically, for example, time “for a social worker and a district nurse to sit down and explain to each other the limits of practice within their regulatory bodies, and what they were allowed to do and not allowed to do to enable proper joint work”.

301. The Cabinet Secretary explained to the Committee the rationale for the joint board established under the body corporate model not to employ staff directly—

“let me just begin with the principle, which is that the body corporate itself will not be employing people. Obviously, that may change through time, but what we envisage is that, to start with, the people who work directly for the body corporate, such as the chief accounting officer, will be seconded from the local authority or the health board. The reason for that is that, as you will know, employment law is very complicated and it could raise a lot of issues that would make the whole integration process unnecessarily complicated. Therefore, the wisest thing to do at this stage is what we are doing, which is to work on the basis that people will technically be employees of the local authority or the health board, not of the body corporate.”

302. Challenged by the Committee on whether financial provision should have been incorporated into the Bill against the possibility of equal pay claims, the Cabinet Secretary told the Committee it would be “nothing to do with us”. Equal pay claims would be a matter for the local authority or health board, depending on which was the employer

303. On pension funding, he suggested that concerns were “a wee bit of a red herring, in that the bodies corporate will not employ people and therefore will not be directly involved in pension issues”. He acknowledged, however, that, over time, they might employ people, so there could be an issue. He indicated that a “technical amendment” to the bill was probably required to deal with that. However, he said that beyond that, the Scottish Government did not see a big
issue with pensions, for the reason that the bodies corporate would not actually employ anybody.\textsuperscript{233}

304. The Committee, while fully supportive of the proposals for integration, recognises the potential for progress to be hindered as a result of staffing issues. While detailed staffing arrangements are a matter for negotiation between the local authorities, the health boards and the relevant trades unions, there may well be matters of principle, such as some of those mentioned by UNISON and others, that could best be agreed centrally at a national level.

305. While the Committee has no wish to entrench cultural barriers and reinforce professional boundaries, both of which would limit the potential success of the Bill, there is a need for clarity and consistency on staff issues that may be raised by integration of different staffs working for different employers and coming from different professional backgrounds. These would include issues related to professional standards, codes of conduct and the role of regulatory professional bodies.

306. The Committee therefore calls on the Scottish Government, in its response to this report, to set out the steps that it is taking to identify the relevant issues and the work that it plans to do with the appropriate professional bodies, trades unions and others to resolve them.

Part 2 – shared services

307. This part of the Bill proposes to enable National Services Scotland (also known as the Common Services Agency) to extend its services to other public bodies. The following functions of National Services Scotland have been identified as having the potential to be extended to other public bodies:

- Central Legal Office,
- Counter fraud services,
- National Procurement,
- National Information Systems Group (IT services) and
- Information Services Division.

308. The sharing of these services would be entirely voluntary for either party.

309. The Bill also proposes to extend the NHS’ indemnity scheme (known as CNORIS – the Clinical Negligence and Other Risks Indemnity Scheme). Health boards contribute an annual amount and CNORIS covers the expenses arising from any loss or damage to property and any liabilities to third parties for loss, damage or injury. The Bill proposes to allow local authorities and joint integration Boards to participate in the scheme.

\textsuperscript{233} Scottish Parliament Health and Sport Committee. \textit{Official Report, 1 October 2013, Col 4422.}
310. In June 2013, the Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) (Scotland) Order 2013 came into force. This order allowed NSS to share its services with other public bodies. The policy memorandum outlines that:

“Scottish Ministers agreed that the changes to the remit of the Common Services Agency made through the Public Services Reform Act Order would then be reviewed and restated through an updated approach to provisions in the Bill.” (Para 98)

311. The Committee heard from NHS National Services Scotland (NSS) that the above Order was introduced in anticipation of further integration in Scotland and ahead of “the approach then being properly codified in the bill.” NSS told the Committee that the order had provided “a stopgap”, which allowed it to operate and to “start to get to know people beyond the health service.” It was, it said, intended to provide “the room for manoeuvre that enables us to give support more broadly.”

312. In oral evidence, NSS explained that the capacity of NSS to provide additional services was dependent on the service in question: some areas, legal services for example, would require additional resource at a cost; while other facilities could be shared beyond health care services at no cost. The Committee heard that NSS already provides assistance to local authorities on IT contracting.

313. The Committee notes this part of the Bill, which provides for the ability of NHS National Services Scotland to extend its services to other public bodies and appears to be an entirely sensible development.

Part 3 – Health service functions

314. According to the Policy Memorandum, this part of the Bill is intended “to facilitate opportunities brought about by integration and…ensure the most effective use of resources”. It seeks to address two issues: “the ability of health boards to form companies under the National Health Service (Scotland) Act 1978; and the ability of a health board to exercise its functions outwith its own health board area.”

315. The ability of health boards to form companies is restricted under the Companies Act 1985. The policy memorandum indicates that the Scottish Government wants health boards “to be able to form corporate structures other than companies for joint ventures purposes, such as the management and disposal of property and assets.”

316. The Scottish Futures Trust outlined the benefits of this approach under questioning—

234 Available at: http://www.legislation.gov.uk/sdsi/2013/9780111020623
235 Policy Memorandum, paragraph 98.
238 Policy Memorandum, paragraph 144.
“it can be the case that, for historic reasons, different bits of the public sector own parcels of land that are next to each other, such as where a health centre is situated next to a council office. If we find that those become surplus because of a reorganisation in a town or village, the ability for a local authority and health board to enter into a joint venture with a private development partner for the disposal of those assets could increase their value and be of benefit to the public sector.”

317. Under current legislation, whereas local authorities can enter into limited liability partnerships, health boards are unable to do so. However, were such a partnership approach to be designated as a company, health boards would be able to be part of that. According to the Scottish Future’s Trust—

“relieving that anomaly and allowing bodies to work better together in an LLP structure, which is recognised as being a good corporate form for this sort of thing, would be a useful enhancement of what health boards are allowed to do.”

318. As noted above, the Bill provides for a health board to be able to exercise its functions out with its own area. The Committee heard that this was expected to be particularly beneficial in relation to procurement. It would allow for a single health board to lead on the procurement of facilities, for example multiple health centres, both for itself and on behalf of neighbouring health boards under a single procurement agreement, known as the ‘hub model’. The Scottish Futures Trust outlined its view that, as the model allows for local public bodies to procure and occupy facilities together, “shared facilities and co-location can be a catalyst for integration”.

319. The Committee notes that the Bill provides health boards with the ability to form companies (under the National Health Service (Scotland) Act 1978) for joint ventures purposes, such as the management and disposal of property and assets.

320. The Committee also notes the provision in the Bill which would allow health boards to exercise functions beyond their own territories.

321. The Committee considers that these are entirely appropriate and sensible proposals.

Delegated Powers and Law Reform Committee scrutiny

322. Under Rule 9.6.2 of Standing Orders, where a bill contains provisions conferring powers to make subordinate legislation, the Delegated Powers and Law Reform Committee (DPLR) must consider and report to the lead committee on those provisions.
323. A copy of the DPLR report\textsuperscript{242} is attached as an annexe.

324. The DPLR Committee report drew the attention of the Health and Sport Committee, as lead committee, to a number of points, as follows:

- The power contained in section 12(1)(a). This proposes to enable Scottish Ministers by order to make provision about the membership of integration joint boards, without any limitations as to the number of members of a particular board that may be prescribed, or as to who may be prescribed as members.

- In relation to Section 15 – (Transfer of staff where functions delegated to local authority or Health Board), it was highlighted that the exercise of this power would not be subject to Parliamentary scrutiny.

325. The DPLR Committee understands that the current power to make provision for any transfer or secondment of staff contained in the Community Care and Health (Scotland) Act 2002, where arrangements may be entered between local authorities and NHS bodies for the delegation of functions, is exercisable by Regulations which are subject to Parliamentary scrutiny by the negative procedure (sections 15(4)(c) and 23 of that Act).

326. In contrast, the power in section 15 of the Bill to make provision about the transfer of staff, where functions are delegated to a local authority or Health Board, is proposed to be exercisable by a scheme which would not be published as a Scottish statutory instrument, nor subject to Parliamentary scrutiny.

327. The Committee understands therefore that section 15 proposes to remove scrutiny by the Parliament, in comparison with the similar power in the 2002 Act which would be repealed by the Bill.

328. Similarly, the DPLR report also highlighted section 36(c) which would also have the effect of removing parliamentary scrutiny in the exercise of this power.

329. Section 16(1) provides that the Scottish Ministers may, by order, make provision about the establishment of, membership of, and the proceedings of, integration joint monitoring committees, and any other matter relating to the operation of integration joint monitoring committees that the Scottish Ministers think fit.

330. The DPLR report drew the attention of the Health and Sport Committee to this provision.

331. The Committee thanks the Delegated Powers and Law Reform Committee for its report and draws it to the attention of the Scottish Government.

Local Government and Regeneration Committee scrutiny

332. The Local Government and Regeneration Committee (LGRC) considered this Bill alongside stage one of the Children and Young People (Scotland) Bill, in relation to the delivery of local government services. Both bills include proposals for joint working between local government and public bodies. LGRC was interested in how the bills complement each other and work together to help deliver and support the public sector reform agenda.

333. LGRC considered written evidence from a range of organisations and held an oral evidence session with NHS Ayrshire and Arran, GPs at the Deep End, East Ayrshire Council, North Ayrshire Council and the Housing Coordinating Group.

334. The main points made by Local Government and Regeneration Committee have been incorporated into the body of the report, where appropriate. The Committee thanks the Local Government and Regeneration Committee for its report.

Consultation

335. Part of the function of Stage 1 of the parliamentary scrutiny of bills is to consider whether any consultation carried out by the bill’s promoter has been adequate.

336. The Policy Memorandum reports that in May 2012, the Scottish Government published its consultation on proposals for the integration of adult health and social care. It goes on to record that over the period of the consultation, Scottish Government officials held a number of consultation events across Scotland, providing the opportunity for professionals, patients, service users and carers, as well as providers of services, to hear about the consultation proposals and to ask questions and discuss the proposals. Officials, it says, met a broad range of stakeholders at events and meetings organised by local partnerships to provide further opportunities to discuss the consultation proposals.\(^\text{243}\)

337. The Policy Memorandum also reports that 315 responses to the consultation were received. An analysis of written responses to the consultation was published on 19 December 2012.

338. In as far as any of the submissions received by the Committee mentioned the consultation, most appeared content that it was appropriate and thorough, though there were a few comments that the Bill had changed more than expected from what had been discussed in consultation events.

339. Overall, the Committee considers that the consultation carried out by the Scottish Government was adequate and appropriate.

CONCLUDING REMARKS

340. The Committee fully supports the principles of integration of health and social care, which should provide better outcomes for patients and service...
users as well as delivering better value for the investment made in health, local government and support to the third and independent sectors.

341. While the Committee accepts that legislation, in itself, does not guarantee successful integration of services and that cultural change and quality leadership are also vitally important, it recognises that the statutory footing that the Bill will bring is essential in cementing and reinforcing the progress that has already been made.

342. It is clear that much work is being carried out across the country through a range of working groups and this should help to ease practical difficulties that may arise as implementation of the Bill, when passed, progresses.

343. This report has identified a number of issues that have arisen in evidence where further clarification or, in some cases, reassurances from the Scottish Government would be welcome before the Parliament has the opportunity to debate the Bill at stage 1. There are also a number of areas where the Bill could potentially be strengthened by amendment, and some of these have been drawn to the attention of the Scottish Government in the report.

344. The Committee has already stated its broad support for the Bill. Notwithstanding the comments it has made in the report, the Committee supports the general principles and recommends to the Parliament that they be approved.
ANNEXE A: EXTRACT FROM MINUTES OF THE HEALTH AND SPORT COMMITTEE

24th Meeting, 2013 (Session 4)
Tuesday 3 September 2013

2. **Public Bodies (Joint Working) (Scotland) Bill:** The Committee took evidence on the Bill at Stage 1 from—

Ian Crichton, Chief Executive, Simon Belfer, Director of Finance and Business Services, and Professor Marion Bain, Medical Director, NHS National Services Scotland;

Peter Reekie, Director of Finance, The Scottish Futures Trust.

25th Meeting, 2013 (Session 4)
Tuesday 10 September 2013

3. **Public Bodies (Joint Working) (Scotland) Bill:** The Committee took evidence on the Bill at Stage 1 from—

Andrew Eccles, Glasgow School of Social Work;

Alison Petch, Director, Institute for Research and Innovation in Social Services (IRISS);

Duncan Mackay, Head of Social Work Development, North Lanarkshire Council;

Soumen Sengupta, Head of Strategy, Planning and Health Improvement, West Dunbartonshire Community Health and Care Partnership;

Peter Gabbitas, Director of Health and Social Care, and Susanne Harrison, Integration Programme Manager, City of Edinburgh Council;

Ron Culley, Chief Officer, Health & Social Care, and Councillor Peter Johnston, Spokesperson for Health and Well-being, COSLA;

Ritchie Johnson, Director of Housing and Social Work, Aberdeenshire Council.

26th Meeting, 2013 (Session 4)
Tuesday 17 September 2013

2. **Public Bodies (Joint Working) (Scotland) Bill:** The Committee took evidence on the Bill at Stage 1 from—
Dr Allan Gunning, Executive Director – Policy, Planning and Performance, NHS Ayrshire and Arran;

Jeff Ace, Chief Executive, NHS Dumfries and Galloway;

Susan Manion, Chair, Association of Community Health Partnerships;

Alan Gray, Director of Finance, NHS Grampian;

Ranald Mair, Chief Executive, Scottish Care;

Nigel Henderson, Convener, Coalition of Care and Support Providers in Scotland;

Martin Sime, Chief Executive, Scottish Council for Voluntary Organisations.

27th Meeting, 2013 (Session 4)

Tuesday 24 September 2013

2. Public Bodies (Joint Working) (Scotland) Bill: The Committee took evidence on the Bill at Stage 1 from—

Claire Cairns, Network Coordinator, The Coalition of Carers in Scotland;

Pam Duncan, Policy Officer, Independent Living in Scotland (ILiS);

Ian Welsh, Chief Executive, Health and Social Care Alliance Scotland, (the ALLIANCE);

Karen Hamilton, Borders Public Partnership Forum;

Dr John Gillies, Chair, Royal College of General Practitioners Scotland;

Rachel Cackett, Policy Advisor, Royal College of Nursing Scotland;

Ruth Stark, Social Worker and Manager, Scottish Association of Social Work;

Gabrielle Stewart, Member, Allied Health Professions Federation Scotland;  
Dr John Taylor, Consultant Psychiatrist, Associate Medical Director NHS Ayrshire and Arran and Vice Chair of the RCPsych in Scotland, Royal College of Psychiatrists in Scotland;

Dr Christine McAlpine, Consultant Physician, Member BGS (Scotland) Council, British Geriatric Society (Scotland);

Dave Watson, Scottish Organiser (Bargaining and Campaigns), Unison.
3. **Public Bodies (Joint Working) (Scotland) Bill:** The Committee took evidence on the Bill at Stage 1 from—

Claire Sweeney, Portfolio manager, Performance Audit and Best Value Group, Audit Scotland;

Annette Bruton, Chief Executive, and Paul Edie, Chair, Care Inspectorate;

Dr Denise Coia, Chairman, and Robbie Pearson, Director of Scrutiny and Assurance, Healthcare Improvement Scotland;

Maureen Falconer, Senior Policy Officer, Information Commissioner’s Office;

Jim Martin, Ombudsman, and Paul McFadden, Head of Complaints Standards, Scottish Public Services Ombudsman.

6. **Public Bodies (Joint Working) (Scotland) Bill:** The Committee took evidence on the Bill at Stage 1 from—

Alex Neil, Cabinet Secretary for Health and Well-being, Kathleen Bessos, Deputy Director, John Paterson, Divisional Solicitor, and Alison Taylor, Team Leader, Scottish Government.

---

2. **Public Bodies (Joint Working) (Scotland) Bill (in private):** The Committee considered a draft report. Various changes were agreed to, and the Committee agreed to consider a revised draft, in private, at its meeting on 12 November.

3. **Public Bodies (Joint Working) (Scotland) Bill (in private):** The Committee considered a revised draft Stage 1 report. Various changes were agreed to, and the report was agreed for publication.

Public Bodies (Joint Working) (Scotland) Bill: Stage 1

10:15

The Convener: Item 2 is our first evidence-taking session on the Public Bodies (Joint Working) (Scotland) Bill. I welcome to the committee three witnesses from NHS National Services Scotland: Ian Crichton, the chief executive; Simon Belfer, the director of finance and business services; and Professor Marion Bain, the medical director. I also welcome—last but not least—Peter Reekie, the director of finance in the Scottish Futures Trust.

The first question comes from Gil Paterson.

Gil Paterson (Clydebank and Milngavie) (SNP): Goodwill towards the concept of integration comes across from people who come before the committee. Most people express a need for integration to happen. Why has the Government gone for legislation? Might that approach lead to a breakdown in the goodwill that is needed to make integration work?

Ian Crichton (NHS National Services Scotland): Do you mean legislation in relation to NSS’s area or legislation in general?

Gil Paterson: I mean legislation to make joint working function properly.

Ian Crichton: It probably shows that the Government’s patience to wait for people to get there themselves is limited. I do not think that we need legislation for us to be able to work together; during the past year, NSS has done a lot of work to improve the way in which we work with other public bodies without there being such legislation. However, over probably the past decade, the evidence is that without a bit of a push, the public sector finds it difficult to integrate.

Gil Paterson: The committee has heard from many places about the good work that has been going on in Highland. It looks as if there is a way to achieve integration without having to twist folks’ arms. Has the Government looked at the Highland experience? Has it perhaps overlooked the possibility of ensuring that the Highland model works effectively, rather than introducing legislation?

Ian Crichton: I am not an expert on the bill but, as I understand it, it provides that people will be able to choose from two different models: some kind of body corporate that is created between two existing bodies; and a model such as Highland has adopted. The Government seems keen to allow local choice in how integration actually happens. The role of NSS is a little different. We
are trying to support that effort, regardless of the choice that people make locally.

**Gil Paterson:** You mentioned local choice. If people backslide or cannot make up their minds about which model to choose, will the Government step in and say, “Enough is enough. You need to go ahead, and this is the model that you must use”? Has the Government got the balls to do that?

**Ian Crichton:** I think that that is a matter for the Government to comment on.

**Gil Paterson:** Okay. Thank you.

**Aileen McLeod (South Scotland) (SNP):** Part 2 of the bill will enable National Services Scotland to extend its services to other public bodies. In June, the Public Services Reform (Functions of the Common Services Agency for the Scottish Health Service) (Scotland) Order 2013 came into force. For clarification, will the witnesses from NSS say whether the provisions in the bill differ from those in the order?

**Simon Belfer (NHS National Services Scotland):** The provisions are largely the same. The idea was to enable us to start having conversations with other parts of the public sector by putting in place the reform order as a stopgap, with the approach then being properly codified in the bill.

There are a couple of areas in which there are differences, which we will take up with the people who drafted the bill. The definitions of “services” and “customers” in the reform order are slightly different from those in the bill. Those are small, technical differences, which we will happily take up as the bill progresses—I can go into more detail if you want. However, the provisions in the order and the bill are largely the same.

**Aileen McLeod:** Do you have plans to extend your services?

**Ian Crichton:** It is important that we ensure that the committee understands why we wanted the reform order in the first place. We knew that the bill was coming, and we know that Scotland will integrate its health and social care during the next decade. If there is to be an integrated landscape in the future, in which the national health service will be quite different—and particularly if new bodies are to be created between existing ones—it will be important that we have the room for manoeuvre that enables us to give support more broadly. That was a key reason why we wanted the reform order.

Another reason was that we felt that we could help public bodies make use of the range of services that we provide, without generating significant incremental cost. Given current budget constraint, we thought that there were opportunities in that regard. The order provided us with a stopgap, which allows us to operate and to start to get to know people beyond the health service. The bill will build on that, to enable that to be substantively the case in the new Scotland.

**Aileen McLeod:** What capacity is there in NSS to extend services?

**Ian Crichton:** It varies, depending on the area that you look at. We provide a broad range of services—I am sure that the committee knows this, but we should ensure that there is a common view of the spectrum—from the Scottish National Blood Transfusion Service to the central legal office, national procurement and information technology services. We are responsible for health information and informatics.

Our capability in those different areas varies. Let us take the CLO—the lawyers. For us to provide services beyond the NHS, we will probably need to add one, two or three lawyers, depending on demand. We charge people on a cost-recovery basis for the work that we do and we do not need to change the systems or the way in which people are trained, so we have something that is ready to go. We can compare our capacity in that area with, for example, our health facilities capability. The nutrition guidelines that the health service uses, which Scotland has put a lot of money into, are just as applicable for care homes as they are for the health service, so we can use stuff and incur almost no more costs. How far our capacity can extend or push really depends on the service that you are considering.

**Aileen McLeod:** Thank you. That is helpful.

**Rhoda Grant (Highlands and Islands) (Lab):** What plans does NSS have to extend into areas that other public bodies cover?

**Ian Crichton:** Our planning is evolving. We have spent the past year getting to know a lot of other public bodies, because fundamentally we want to provide a helping hand. We have constrained capacity, so we have been keen to channel capacity where it makes sense to do so.

We have been working with a few local authorities on IT contracts. IT in the public sector can be challenging; it is a very technical thing to buy and often the people who are selling it understand the market better than the people who are buying it do. We have good specialisms in areas such as telecommunications and can bring significant benefits to bear in that regard, so we have been able to support local authorities on IT and contracting.

Probably the best example in that regard is the Scottish wide area network, which is the first element of the McClelland reforms—it relates to very technical, complicated procurement. We have
taken the lead on that across the whole sector. We expect to continue to play a role in supporting the McClelland reforms as they roll out across Scotland.

We are helping a couple of local authorities with data linkage. In an integrated Scotland, we will want health information to flow across bodies better than it currently does. There is a lot for us to learn about how local authorities manage information—and a lot for local authorities to learn about how we do that. We need to start working with other sectors to join things up. That is another example.

We do not currently have a plan that says, “We will go after this number of bodies and this is how we will do it.”

Rhoda Grant: I am trying to get to the bottom of why legislation is required. What was in place previously that prohibited you from doing what you are describing?

Ian Crichton: The actions of my body were restricted to the national health service. We were not allowed to operate beyond the NHS.

Rhoda Grant: Okay. Am I right in assuming that you would enter into other areas and work jointly only on invitation? Would that be part of the agreement between a local authority, for example, and NSS?

Ian Crichton: There are two elements to that. First, we need to be invited in. As far as local issues are concerned, there is no public body to which we would provide a service that did not ask for it. We can provide national expertise but make it available locally. That is not something that we impose.

The other element of control over our operations comes through Scottish ministers’ discretion around whether we can act in a certain area. A specific part of my local development plan for NSS this year lays out the areas where we will operate over the next 12 months on behalf of Scotland. An example of that is the Scottish wide area network that I mentioned. Even with the Scottish wide area network, the contract is left as a framework, so it does not force people who do not want to be involved on to it. Everybody who is in on it is a volunteer.

Rhoda Grant: You said that you operate on a cost-recovery basis. Do you speak about and negotiate that with the authorities concerned prior to carrying out the work?

Ian Crichton: One of the things that changes with the landscape is whether there is a need to tender. In health, we do not need to tender for the business that we provide because of the way that the funding flows from the Parliament. The situation will be more complicated if we start to operate beyond the health service, and our lawyers and Scottish Government lawyers are examining that.

The Convener: Richard Lyle is next.

Dr Richard Simpson (Mid Scotland and Fife) (Lab): I would like to pursue the information technology side of things—

The Convener: Richard Lyle! [Laughter.]

Dr Simpson: Sorry.

Richard Lyle (Central Scotland) (SNP): I thought that Dr Simpson had changed his name there.

Coming from a local authority background, I am aware that many councils are concerned about the bill. We all know the reasons why the bill has been introduced. Ian Crichton mentioned the Government’s frustration regarding social care. Will each area make its own decision on how much it wants to put in? Is it all or nothing? Is it a matter of identifying the problem and of saying, “Here is where we are falling down, this is how we’re going to fix it, this is how it will work, and we won’t need to debate who will pay for that, because we’ll put the money in”? Will local areas be able to make their own decisions, or is everything in social care going into the pot?

Ian Crichton: I can talk only from our perspective. We provide support where people feel that they need it. I will give an example from the health service. Last year, we put together a property framework—frameworks 2—which gives us a list of contractors that we have been able to vet and with which we have been able to agree pricing up front. We know that there will be value for money, with penalty clauses around things being delivered late and so on. That framework is then made available to any public bodies that want it so that they can draw from it for their own benefit. Previously, that would have just applied to the health service. Last year, we put together a framework that gives

That framework is then made available to any public bodies that want it so that they can draw from it for their own benefit. Previously, that would have just applied to the health service. Last year, we put together a framework that gives
Simon Belfer: There are two parts to the question. What will go into the integration pot will be for the local authority and the local health board to decide—whether they adopt the lead agency model or the body corporate model. Part 2 allows us to offer services if requested or required by a body other than the health board. It also enables a local authority to use us. Those two things are slightly different and separate. There would be a discussion where we stated the services that we offer and asked whether the body was interested. We would have a normal discussion, a negotiation and an arrangement around those services. That is quite different from saying what must go into the integration pot, which will involve the local authority and local health board. Does that help?

Richard Lyle: Yes, thank you.

10:30

Dr Simpson: It is confusing to have two Richards. I apologise to my colleague, Richard Lyle.

I want to pursue the IT side. We have not made the huge IT mistakes that have been made south of the border. However, we have a rather fragmented system, and it seems from Simon Belfer’s description that that will continue. For example, the NHS Fife Scottish care information store cannot be accessed by consultants in Tayside—and that is just the NHS element. Once we put health and social care together, there will be an even greater problem, unless there is some agreement about the form of IT. There will be 32 community healthcare and social care partnerships, so the system will be even more fragmented.

We can add to that the fact that we have just wasted £56 million on e-care. That is not your responsibility, but if you are going to get into that area you should be aware that the track record on the local authority side is not all that great, either. After six or seven years, e-care has not been a success. That could be quite useful for what is coming.

There is a third element, which is the issue of privacy and confidentiality for the patient. I have been and continue to be concerned that the terms of the judgment in the European case of I v Finland have yet to be met in Scotland, because we have only a retrospective system of identifying breaches in confidentiality. The judgment in the I v Finland case said clearly that systems of patient consent to time-limited access should be introduced, but those are not being introduced in Scotland, where we rely on a retrospective system.

If we add social care to that, as well as pharmacy, which is also looking for access, as are other prescribers such as optometrists and podiatrists, the potential access to confidential information becomes a major issue. Will the bill allow you to be any more prescriptive or directive in ensuring that the principles of confidentiality are maintained, and that systems are integrated and speak to one another so that we do not have fragmentation? Those two elements are at either end of the problem.

Ian Crichton: I shall make an initial response and then hand over to Marion Bain.

You are right to say that the issues in that area can be boiled down to three key things that Scotland needs to think about. The first is information governance, and you have mentioned responsibility for patient privacy. There is also responsibility to ensure that, if we have the information, it joins up and protects people. Those two sides of information governance are challenging.

The second element, as you also rightly pointed out, is that there has been extensive systems fragmentation over time, primarily because a lot of different bodies have responsibility for buying what they want. Sometimes they have bought the same systems from a supplier who picks each of them off, and sometimes boards have bought things that are cheap but which might not have a lot of resilience behind them. Therefore, we have had a fragmented scenario. In health, the situation has significantly improved over the past five years with convergence of patient management systems. IT for general practitioners has really been separated into two different areas, so on the whole there has been a degree of convergence in the health service. That could be quite useful for what is coming.

More important than the systems—because systems can be interfaced—are the standards. Scotland now has a big opportunity to ensure that we secure decent standards. If we can sort out those standards, it does not matter whether people have different IT systems, because they will at least all be operating to the same level and doing the same kind of things. We have made some progress, but there is more to be made. Given that we support such efforts, I would welcome more direction on standards. McClelland gives Scotland the opportunity to do some of that, but Marion Bain knows more than I will ever know about the information governance space.

Professor Marion Bain (NHS National Services Scotland): I agree with all those comments. We know that there has been a problem over many years. In answer to the question, I do not think that it is our role to be prescriptive about such things, but the bill will...
allow us to be supportive in moving the agenda forward. Actually, the issue is a really good example of why we as an organisation are so keen to be involved in this space.

Part of our current role within the health service is not just to provide the specialist IT expertise but to put that alongside the information governance, so they go hand in hand. In the part of our organisation that deals with IT, we have information governance specialists as well as IT specialists—alongside clinical input—which allows us to have systems that provide what people need in caring for patients. That is the sort of area where, having built up our support for the NHS, we could naturally support the broader health of Scotland by being able to apply the approach to the whole health and social care agenda, so that we get that safe sharing of information for the benefit of the public, with everyone having the confidence that confidentiality is being adequately considered.

In many ways, that is a good example of why we in NSS are very keen on the bill and on the work that is already being done. We feel that we will be able to take some of the things that we are already established in, which provide real benefit, and allow them to be applied more widely.

Dr Simpson: Well, I look forward to that.

Bob Doris (Glasgow) (SNP): First, as a tiny supplementary to Richard Simpson’s question, I want to ask about where NHS National Services Scotland fits in. Even prior to health and social care integration, there is still a lot of fragmentation of IT systems within the health service. The situation will not be changed by the bill, which I understand is more about how you will be able to use some of the good work that you are currently doing with local authorities and other public bodies. Should there always be the ability to have local decision making about IT systems? In a nation of 5.3 million people, should the 14 health boards still have the ability to buy 14 different IT systems? Surely to goodness, as we move forward, there should be some central co-ordination of that.

Ian Crichton: I mentioned standards, and I think that standards are more important than systems. What is required to run hospital and community resources in Orkney might be quite different from what is needed to run services in Glasgow, so there would be a danger in prescribing everything centrally. The centre needs to get better at having a clearer strategy, such as through the e-health strategy board. The strategy needs to be increasingly clear about our route map, if you like, but I think that there has been more clarity in recent years. There would be a real danger in prescribing everything from the centre.

As with most things in life, there needs to be a balance. We need to ensure that everyone is clear about the standards and then, as people go to market to procure, a body such as ours can be really useful—we have some heavy hitters who have expertise in such procurement exercises—in ensuring that procurement is done properly. We are used to supporting the health boards in that space.

Bob Doris: I will not indulge myself by asking further supplemnetaries on that, although it is an area of interest.

I want to ask about the different corporate structures that will emerge from health and social care integration, particularly for health boards. I have to admit that I was unaware of those until I started looking at the bill in more detail. I do not know all the details, but I hope that Mr Reekie will be able to help us with the provisions on the disposal of surplus assets by health boards. What are the current constraints? How will the provisions on health and social care address some of those constraints?

Peter Reekie (Scottish Futures Trust): As you will know, part 3 of the bill has a couple of provisions that are very relevant. On disposals, we are particularly keen to see health boards and local authorities being able to work a lot more closely together on their property strategies, both for building new facilities and for the disposal of facilities that are no longer needed.

Often it would be possible to get a better deal on the disposal of assets by bringing packages of things together that would be more interesting to private sector development partners. Members will be aware of this from their own localities, but it can be the case that, for historic reasons, different bits of the public sector own parcels of land that are next to each other, such as where a health centre is situated next to a council office. If we find that those become surplus because of a reorganisation in a town or village, the ability for a local authority and health board to enter into a joint venture with a private development partner for the disposal of those assets could increase their value and be of benefit to the public sector.

Currently, a local authority can go into a limited liability partnership, which is the sort of corporate structure that the private sector often uses in such situations, with the private sector and work out mutually agreeable risk and reward sharing over a period of time to redevelop the property. Because of the structure of the current legislation, health boards are not allowed to become a member of one of those limited liability partnerships. If such an agreement is set up as a company, health boards can be in; if it is set up as a limited liability partnership, they cannot. That is an anomaly in the current legislative structure. Relieving that
anomaly and allowing bodies to work better together in an LLP structure, which is recognised as being a good corporate form for this sort of thing, would be a useful enhancement of what health boards are allowed to do.

**Bob Doris:** When I was preparing for today’s meeting, I read that health boards’ ability to provide services or enter into joint infrastructure agreements with neighbouring health boards is also quite constrained, but that that will change under the bill. Could you say a bit more about that, particularly about where the barriers might be at the moment, or could you describe a potential infrastructure venture that could not go ahead with the current arrangements but which would be able to go ahead following integration?

**Peter Reekie:** Again, this is about efficiency and giving us the ability to do things commercially as efficiently as possible. In the hub programme, for example, if a health board is buying two or three small health centres, there are a number of reasons why it might make sense to package those into a bundle. If we are developing a design, build, finance and maintain contract over a number of years, the costs of the legal and financial advice for a transaction and the costs of running that agreement are not huge, but they are significant. Therefore, if we are able to bundle together two or three small health centres into a single transaction, that will just be plain better value.

If all those three health centres are in the same health board area, buying them is really easy to do. We can have a single contract and it will all work really well. If we have a hub territory that spans a number of health board areas, as we do, and we would like to bundle together a couple of health centres that are in different health board areas, that is more tricky, because one health centre is not allowed to contract on behalf of the other for the provision of that facility.

In the north area, we have managed to get around that. NHS Grampian and NHS Highland are working together in Forres, Woodside and Tain; they have a single procurement agreement for three health centres. However, we have had to use a slightly complex structure in which one contract has two clients, and that has caused more legal thinking than would be required if one health board was able to take the lead and enter into a contract for the three health centres, allowing the other health board to occupy one of them afterwards. Allowing that to happen would just make things simpler.

**Bob Doris:** Okay. Can I just make sure that I am clear about this? I represent Glasgow region, and under the hub model, in the area of Glasgow in which I stay, Woodside centre is going to be rebuilt, as is Maryhill health centre and one in the south of the city. I assume that they will all be packaged together to get the best deal for the public purse. I know that nothing is plain sailing in this world but, would the contract for the venture that you have just described to me have been far easier to pull together if it fell within one health board area?

**Peter Reekie:** Yes, if it was all within one health board area. A single client would make the contractual structure much simpler. There would be one contract and one client. In your example it would be Greater Glasgow and Clyde NHS Board and Hub West Scotland. In the north area that I was talking about, and Forres, Woodside and Tain health centres, NHS Grampian and NHS Highland were trying to bundle projects together, and the ability for one of the health boards to act as a lead would have made that a lot easier.

**Bob Doris:** It is always dangerous to ask a question without knowing the answer to it, but if you needed to build a health centre in a location that made it geographically suitable to provide services to patients from two different health board areas, could you do that under the current structure? Will that change with the bill?

10:45

**Peter Reekie:** I think that the ability of health boards to provide services to one another is considered separately from the bill. That is not my area of expertise, but I know that it is possible for health boards to provide medical services to patients from outwith their areas.

**The Convener:** Richard Simpson and Nanette Milne have supplementaries.

**Dr Simpson:** Part of the purpose of integration is to allow different services to be co-located. For example, at the Broxburn and Fauldhouse centres, which were quite expensive, health services are integrated with social services. Such integration is extremely important but, beyond that, integration is also about allowing the benefits people to provide services from the same place. As well as providing the flexibility for health boards to co-operate as you have described, will the bill provide the flexibility for local authorities and other agencies such as the Department for Work and Pensions to contract jointly for buildings from which co-located services will be provided?

**Peter Reekie:** One of the most powerful points of the hub programme is that it allows local public bodies, particularly health boards and local authorities, to procure and occupy facilities together. There are several good examples of that on the ground. Not far from here, Hub South East Scotland has just handed over the Wester Hailes healthy living centre, which brings together NHS Lothian, City of Edinburgh Council and some third sector organisations in one facility. Primary care
and outreach consultant clinics will be provided alongside social care and children and families services. It is our belief that shared facilities and co-location can be a catalyst for integration; they do not necessarily have to follow on behind it.

To address one of the points that was made earlier, NHS Lothian is providing the IT and the City of Edinburgh Council the facilities management across that facility, although it is probably occupied 60:40 by the health board and the council. There are good examples of integration being facilitated through a hub arrangement in a shared facility.

Members might also be interested to know that on the other side of the country, in Eastwood, we have just worked with NHS Greater Glasgow and Clyde, Renfrewshire Council and Architecture and Design Scotland, through Hub West Scotland, to come up with a reference design for an integrated health centre that brings together local authority and primary care services in one place. That work has involved two of Scotland’s top architects—BDP and Gareth Hoskins Architects. The results of that reference design will be on our website so that people in other areas across Scotland will be able to piggyback on it and use it as an exemplar for designing buildings that bring services together.

Dr Simpson: That is extremely welcome. The bill will allow you to put together a contract across health boards. Will you be able to do that across local authorities as well, or can you already do that?

Peter Reekie: That can already be done between local authorities and health boards.

Dr Simpson: Can it be done between local authorities?

Peter Reekie: I believe that that is possible, but such overlap is less of an issue for us in hub contracting arrangements.

Dr Simpson: Right, but if, for example, three health centres were to be co-located with three local authority services but two different local authorities and two different health boards were involved, would the current legislation or the new bill allow you to put all that together so that one health board could contract on behalf not only of the other health board but of the two local authorities? Unless we get full integration, we will go only part of the way to addressing the issue.

Peter Reekie: I confess to not knowing the detail of whether local authorities can act on behalf of one another in the same way that the bill will allow health boards to do, but I can find out about that and provide you with some written evidence, if you would like me to.

Dr Simpson: That would be very helpful.

The Convener: We heard in the bill team briefing that the legislation puts health boards on a similar footing to local authorities. I will sneek in with a supplementary here. We have already discussed co-location and assets. Will giving health boards powers that are similar to those of local government enable them to form arm’s-length companies and other such bodies, as local authorities have done in order to deliver leisure and other services? Is that a possible consequence, or is it not envisaged?

Peter Reekie: It is not envisaged as a natural consequence of the bill. Part 3 specifically allows health boards to enter into different corporate structures, but it really refers to the possibility of a board becoming a member of a limited liability partnership as well as a company. Health boards can already co-invest or become part of companies that exist under the Companies Act 2006, and the bill extends that provision to include LLPs and other corporate structures.

Nanette Milne (North East Scotland) (Con): I have a regional interest in the issue. I think that I am right in saying that the proposed health centre at Inverurie in Aberdeenshire is to be bundled with another one in Highland. How is the lead board determined when such projects are set up?

Peter Reekie: A range of factors are involved in the decision. One factor might be which board in the bundle has progressed furthest with its project; another might be the range of skills and experience of the teams in the different health boards. The decision could be made simply on a value basis, with regard to which project carries the balance of the capital value. There are no specific arrangements in place.

Nanette Milne: Once the lead board is chosen, how much impact will carrying out that function have on its time and resource requirements?

Peter Reekie: That would be very project-specific. Project management and commercial resources will be required for all the projects. Overall, the whole is less than the sum of the parts, so all the boards acting together will need less overall resource than they would if they were acting separately. The lead board will obviously be required to lead on the project management and commercial aspects of the deal, although running those through the hub will minimise the impact in comparison with that using more traditional procurement models, because the partner will already be in place and much of the documentation and commercial agreements will already be tied down.

Nanette Milne: Finally, once the project is complete and the buildings are there, where does responsibility for maintenance thereafter lie? Does
it remain with the lead board, or is it split between the two boards?

**Peter Reekie**: This type of structure is envisaged mainly for contracts that will be let on a design, build, finance and maintain basis, so the maintenance of the facilities will become the responsibility of the delivery partner for the next 25 years or so.

**Mark McDonald (Aberdeen Donside)**: We discussed disposal of assets earlier, including some physical assets, which could include land. Many local authorities are land-rich, but I am not sure whether any health boards have large amounts of land in their portfolios.

It would be interesting to know where we are in identifying surplus assets that health boards currently hold. How many of those assets could the legislation potentially unlock?

In a situation in which capital moneys are tight, additional capital can be realised through the disposal of assets and the reinvestment of capital receipts. Has any work been done to identify surplus capital assets that are not disposable at present as a result of the blockages that you have identified?

**Peter Reekie**: A lot of work is being carried out on identifying surplus assets in individual local authorities and health boards, and those bodies now have very good sight of their potential surplus assets now and in the future. We are trying to deliver a more integrated look at those assets and are working with a number of health boards and local authorities on place-based reviews. In other words, we are looking across the whole assets of a health board or local authority in a town or part of a city to find out which areas it would be best to develop and which it would be best to dispose of. It is not that the bodies themselves do not know what they have or where it is; however, by bringing them together, we can sometimes create better value or a more integrated future plan.

I do not have figures for the total ability to increase value through what you might call the marriage value of bringing together sites across Scotland, but I can tell the committee that bringing together parcels of land and certain elements of assets often increases their value and that allowing this to happen can only be a good thing.

**Mark McDonald**: In that case, is it fair to say that this is less about allowing the disposal of assets that currently cannot be disposed of than it is about maximising the value of those assets by allowing these kinds of arrangements between local authorities, health boards and the private sector to take place? Is it more about maximisation than about unlocking the ability to dispose of assets?

**Peter Reekie**: Yes, it is about maximisation. However, in the process of maximising value or allowing bodies to jointly plan what they want to do and the order in which they do it, there will be investment as well as divestment and certain things could become possible commercially that would not have been possible before. Property developers talk about what is above and below water; that waterline moves and if by bringing certain sites together we can add value to them and take them above the waterline, we can allow things to happen that would not have been able to happen before.

**The Convener**: Do any other members have questions?

**Rhoda Grant**: Going back to Peter Reekie’s comment about procurement and pulling things together, I should say that, aside from that, part of the Health and Sport Committee’s role is to look at health inequalities. Part of health inequalities is the inability to find a job. If you bundle such contracts together over such a huge area, you will actually stop the workforce being part of the bidding process. When you think about, say, building a health centre in Glasgow, how do you calculate the entire cost to and what is best value for the public purse? How do you make work available and open to those in areas in deprivation who need it?

**Peter Reekie**: I do not think that by bundling projects together you affect which individual does the work on the ground at different sites. All of our hub companies have to advertise and compete their contracts at a lower level, and the competition for what we call tier 2 contractors will bring in the most appropriate and value-for-money contractor to each opportunity. In the past, a very high number of contracts have gone to local small to medium-sized enterprises—for example, well over 80 per cent of the contracts for the Drumbrae project in Edinburgh were delivered by local SMEs—and given the nature of the construction industry and how it delivers these things some of those packages will be subcontracted out again to very small-scale entities local to the individual project. It is important in, say, mechanical and electrical packages that there is a good amount of design integration, and that design will be carried out by a larger-level regional contractor that might well be able to cover three health centres.

**Rhoda Grant**: Are they forced to do that by whatever has been written into the contracting process?

**Peter Reekie**: Yes. Subcontract tendering is written into the contract, as are key performance indicators for community benefits and jobs and training places on every single project that is delivered through hub.
The Convener: Concerns have been highlighted about what you can do with regard to procurement and so on, but I suppose that what we have been asking about is your evaluation of a bid at a local level. I acknowledge that the construction industry is free-flowing and reaches across the whole country and that people in my constituency will benefit from a project in Edinburgh, but the fact is that more and more local construction partnerships are being set up in our constituencies and are requiring contractors to take on local apprentices or local labour at the appropriate level. Is that sort of element prominent and costed in each of your contracts?

Peter Reekie: Absolutely. It is prominent in every contract.

Bob Doris: I was only going to make a comment, convener, but I now also have a question to ask. I moved into a new house a year ago now and the builder is still on site—

Peter Reekie: It wisnae me.

Bob Doris: Everything that happens with the house is dealt with by a subcontractor, who is often locally based. Only one large construction company in the whole of Scotland has direct staff; in every other case, the work is subbed out, usually to local firms. I think that it is important to put that on the record.

Given that the hub model is about greater buying power, have you been able to put more community benefit clauses into contracts than you were able to before? Has the amount of community benefit increased because of your increased buying power? In other words, have you been able to drive down prices at one end and drive up community benefit at the other end? I would certainly be interested to find out whether that has been a feature of this approach.

Peter Reekie: The hub model gives us a long-term relationship with the development partner and the ability to say to them, "This will affect your future workload as well as this individual project, because you need to show that you are meeting all of our KPIs on employment and training in order to get the future pipeline of work that you want from hub." By linking that long chain of projects together and allowing people to see where future work is coming from and to plan for that through community partnerships and long-term relationships with local subcontractor supply chains, we deliver not only better value in cost terms but, in my view, better outcomes for communities.

Bob Doris: I know that there has been a bit of drift in our scrutiny of this issue, convener—

Mark McDonald: Just a tad.
North Lanarkshire Council welcomes the opportunity to give evidence on this important area of policy and legislation.

North Lanarkshire Council has long worked with NHS, third and independent sector partners to achieve success by extending the boundaries of collaborative working and develop integrated services where they can demonstrably deliver improved outcomes for our citizens in more efficient ways. This approach has yielded high performance levels, consistently evidenced by external inspections and evaluations, and has also led to the development of a suite of integrated services e.g. joint community assessment and rehabilitation teams, a joint equipment and adaptations service, integrated day services for older people, integrated addiction teams etc. Performance is overseen by robust joint governance arrangements, led by the North Lanarkshire Health & Care Partnership.

The efficacy of the approach gained high profile recognition as recently as July 2011 when the Nuffield Trust published “Integration in Action: Four International Case Studies” featuring North Lanarkshire Health & Care Partnership, Community Care North Carolina (USA), Greater Rochester Independent Practice Association (USA), and Regionale HuisartsenZorg Heuvelland (Netherlands).

In respect of joint commissioning, the North Lanarkshire partnership was one of the first in Scotland to have a comprehensive joint commissioning strategy. The Audit Scotland report “Commissioning Social Care” (April 2012) cites this as a best practice exemplar, together with another local example on service user and carer participation.

It is, therefore, in the above context that the council supports the overall aspiration for closer joint working between the NHS and local authorities and even more pressingly, the need for much more effective relationships across primary and acute care. This is especially relevant in North Lanarkshire where people from this authority can be admitted to, and discharged from, 7 different hospitals in 4 different health board areas. The Scottish Government’s complementary proposal to align NHS boundaries with those of local authorities is supported as an aid to community planning and commissioning, but it is a source of concern that neither the plans for integration nor the boundary changes will address many of the issues associated with the acute sector.

For this reason it is essential that the Scottish Government completes what it created a national working group to do- and ensure that the acute dimension is appropriately represented in new partnership arrangements. There are also significant factors that influence patient flow to acute settings over which local partnerships have little influence e.g. the roles of NHS24 and the Scottish Ambulance Service, that require to be taken into account to effect
transformational change. Our local experience is that the relationship between the local authority and primary care is actually the least pressing concern that requires to be addressed when viewed from a whole system perspective.

The council is also supportive of the concept of a national outcomes framework provided local government is seen as an equal partner in their development but unless the acute contribution is well defined the partnership will not be able to deliver all the intended outcomes.

North Lanarkshire Council’s views diverge from that of the Scottish Government in respect of three main areas:
• The proposed extent of ministerial powers contained within the Bill
• The proposed dilution of local elected democratic accountability
• The prescriptive nature of the Bill’s requirements

Ministerial Powers
The Bill ascribes extensive powers to Ministers that had not previously featured in consultation or discussions on the content of the legislation. That “Scottish Ministers may by regulations prescribe functions of local authorities that must, may or may not be delegated under an integration plan” creates a power, without recourse to further primary legislation, to transfer any local authority functions i.e. those that lie beyond community care such as Housing or Education. This should properly be a matter solely for local determination.

The Bill also states that
“The Scottish Ministers may by order make provision:
(a) about the membership of integration joint boards
(b) about the proceedings of integration joint boards
(c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions
(d) about the supply of services or facilities to integration joint boards by a local authority or Health Board
(e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit”

Again, these are all areas that should properly be a matter solely for local determination, for which it would be quite inappropriate to assume as a power of central government.

Finally, the integration plan should be a matter for local agreement, not Scottish Government approval, nor should it be for the Scottish Government to concern itself with the managerial arrangements partnerships put in place (the Bill states that “the responsibilities of the Chief Officer are subject to the agreement of Scottish Ministers”).
Dilution of Local Democratic Accountability

In addition to the above, there are a number of provisions contained within the Bill that dilute the council’s responsibility to exercise dutiful governance. Under the body corporate model, the Integration Board assumes autonomy for a budget that is likely to be greater than that which remains in the domain of a council, but without the need to refer back to the parent bodies. The desire to empower Integration Boards is understood but this carries significant risks that are not ameliorated by the small numbers of elected council members proposed on Integration Boards.

For social policy to succeed in the face of factors such as demographic change, it is essential that the aspirations of Reshaping Care for Older People to transfer resources from spend on institutional care (including hospitals) to community based support, are realised. At the heart of this is the level of funding of health and social care as a whole.

The nature and, in North Lanarkshire’s case, distribution of acute sector care; the high profile generated by the public experience of it; and the target-driven performance regime that accompanies it; combine to create a magnetic draw on scarce resources. It is critical that the local government contribution to integrated budgets is not used, for example, to place more people in care homes when there are problems managing patient flow in acute settings or prop up unsustainable arrangements in our hospitals.

The oversight from local government in the proposed governance arrangements is far too slight to prevent such occurrences, particularly when set alongside the level of authority invested in the Chief Officer.

Prescriptive Nature of the Bill’s Requirements

The Bill’s focus on outcomes does not sit comfortably with the lack of scope for partnerships to determine the arrangements that best suit local circumstances (whilst still remaining accountable for defined outcomes). Outcomes are much more important than structures – an extensive body of research suggests there is very little evidence of a direct relationship between the two.

It is therefore very disappointing that the Scottish Government has chosen to require partnerships to adopt one of two models, instead of simply requiring them to focus, and be accountable for, the outcomes associated with integration. This is a ‘two sizes fits all’ approach that does not recognise the progress some partnerships have made through local integration and collaboration via arrangements that are fit for local purpose.

Perhaps the biggest risk of all for this council in entering into either model is that of fragmenting high profile, high performing, well integrated responsibilities associated with public protection; children’s services; justice; addiction; homelessness and housing. This council’s Housing and Social Work Services manage all these functions under a single Executive Director. People do not live their lives in isolation from one another. There is a close relationship between addiction and child protection, for example. Many people
with addictions commit offences to fund their addiction. It would be the height of folly to create different organisational arrangements that dis-integrate some areas of activity, whilst integrating others. That is, nonetheless, a real risk.

It is recognised that the Bill does not prevent partners designating a wider suite of functions to fall within integrated arrangements. But this in turn increases the need for governance arrangements that adequately reflect the responsibilities of local government.

Other Comments
The scale of putting in place such arrangements must not be underestimated by politicians. For example, in respect of workforce planning there are issues to be addressed regarding industrial relations (as there is a different model in either sector), terms and conditions in integrated teams and potential equal pay claims (as there is a different model in either sector).

In either model a local authority would seek to be assured that the responsibilities of a Section 95 Officer can be properly executed. There is also a range of ongoing work with the Scottish Government that requires to be concluded relating to accounting treatment and VAT; financial recording and reporting; financial controls, assurance and risk, financial planning, performance and function; capital and assets etc.

North Lanarkshire Council
16 August 2013
Public Bodies (Joint Working) (Scotland) Bill

West Dunbartonshire Community Health and Care Partnership

Introduction
As an already fully integrated health and social care partnership, West Dunbartonshire Community Health & Care Partnership (CHCP) is particularly well-placed to comment on the national proposals, reflective of our actual experience of working to realise the benefits of integration in practice.

Q.1. Do you agree with the general principles of the Bill and its provisions?
West Dunbartonshire Community Health & Care Partnership welcomes the Public Bodies (Joint Working) (Scotland) Bill.

West Dunbartonshire CHCP covers all of children’s services (health and social care) as well as criminal justice social work. While it is unsurprising that the Bill has provided for local discretion in relation to the inclusion of those social work services, we did note that the Scottish Government’s response following its consultation to shape the Bill effectively accepted the logic that local health and social care partnerships should have the ambition and provide the leadership to grasp such a wider remit – not least in regards to also responding to the requirements of the new Children & Young People’s Bill.

Q.2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The significance of delivering integrated governance and strategic management arrangements that represent a single “health and social care system” is important to acknowledge. As such, the Bill is well-placed to enable its key policy objective, i.e. to improve the quality and consistency of seamless health and social care services.

However, it is important to also recognise that no organisational model can provide a convenient “magic bullet” nor act as a panacea for the complexity and scale of health and social care challenges - particularly within the extremely challenging financial climate that is anticipated to persist for some years to come. A key finding of Audit’s Scotland’s Review of Community Health Partnerships Report was that CHPs had inconsistently delivered on a joined-up service agenda across Scotland. Our view is that was an unfair criticism to level at CHPs themselves, as this was at least a part-consequence of the original legislation attempting to achieve too many different policy objectives; and Audit Scotland viewing all of the objectives set as having equivalent weight and priority. As such, it is important that the accompanying guidance (if not necessarily the Bill itself) is appropriately calibrated to avoid sowing the seeds of unfair expectations.
Q.3. Please indicate which, if any, aspects of the Bill's policy objectives you would consider as key strengths

Two of the most compelling characteristics of the Bill’s vision for a successfully integrated system are:

- Consistency of key outcomes, so that people have a similar experience of services (and also carers have a similar experience of support) while allowing for appropriate local approaches to delivery.
- Commitment to streamlining existing bodies and structures.

Within West Dunbartonshire, the established CHCP’s status as a joint vehicle for the planning, allocation and management of WDC and NHSGGC health and social care resources (both strategically and operationally) is recognised as a clear manifestation of community planning in practice. In our view, comprehensive integrated partnerships will be better placed to focus on prevention and early intervention - working with the whole family and whole community – and act as effective Community Planning Partners in the spirit of the Christie Commission’s recommendations for public sector transformation.

This is one reason why it is critical that each Partnerships’ Chief Officer (and their senior team) are entrusted with the authority and mandate to deliver what is a hugely ambitious agenda within a highly visible arena; and that they can rely on visible support - alongside fair and robust scrutiny – from their local Integration Authority, Council, NHS Health Board and indeed the Scottish Parliament. It is important then that in parallel with enacting the Bill, the opportunity is taken to streamline reporting and scrutiny regimes rather than multiplying silo-ed activity and bureaucracy – e.g. so that Partnerships are not having to invest valuable expertise and resources reporting on the same issues through different routes; and using different formats/templates for different Boards/Committees; myriad national external scrutiny and improvement bodies; and different Scottish Government Directorates.

We are also supportive of the position that key outcomes agreed for the new Partnerships to be visible within their respective Community Planning Partnership (CPP) Single Outcomes Agreements (SOA) – but that the guidance is disciplined in not specifying too many headline outcomes/targets as national non-negotiables. Merely seeking to include a battery of national outcomes/targets for the new Partnership could be argued to undermine the fundamental concept of an SOA, i.e. that it is developed and agreed on the basis of a local determination of priorities across a range of stakeholders based on the particular needs of local communities.

Q.4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

While there is a pragmatic logic for the proposition of an initial focus on improving outcomes for older people, there is a risk that a series of arrangements could be developed that would not be efficiently scaled up or transferable to other care groups. The reality is that within the context of the Older People’s Change Fund there is already considerable focus (including
dedicated performance reporting and robust governance) on the Reshaping Care for Older People’s agenda – so in practical terms, such an initial focus as suggested would probably provide little (if any) added value to what is already being driven forward; and would possibly skew the implementation of integration more generically (as it may suggest a piecemeal approach, with different integration models devised for different care groups with complicated structures and unwieldy bureaucracies as a consequence).

In a similar vein, it is difficult to rationalise why any local area would not share an equivalent ambition for a successfully integrated system for children and young people’s health and social care services; and for the accountabilities for such a system not to be hardwired into the responsibilities for these new Partnerships. Child Protection case reviews repeatedly highlight inadequate and hesitant interagency communication and information sharing as contributing factors to significant incidents. While it would be naïve to argue that an integrated management and governance would somehow be a “magic bullet” to resolve such behaviour, it is reasonable to view them as enabling factors for more effective risk assessment and care management. One example of this would be a single Chief Social Work Officer for an authority area within the new Partnership consistently articulating the same message for child protection to all health and social care professionals across all services. This would appear to be consistent with the Children & Young People’s Bill. Unified delivery of these services in a single Partnership will improve quality, efficiency and effectiveness. It is important to note that we do not believe that the joint working with other Council functions – particularly Education services - in relation to children and young people would be undermined by fully comprehensive Health and Social Care Partnerships. Indeed, just as the proposals as they currently stand recognise the importance of robust working arrangements between the new Partnerships and Council Housing services in relation to the Reshaping Care for Older People agenda, we see no reason why an equivalent emphasis should not be placed in terms of Education services in relation to the Getting It Right For Every Child agenda and the duties on public bodies that are separately confirmed by the Children & Young People’s Bill. As such we would be keen for the respective guidance accompanying both Bill’s to more explicitly cross-reference each other to encourage and enable local areas to implement both in at least a joined-up and co-ordinated manner; and for national scrutiny and improvement bodies to be required to think and operate in a similarly joined-up and consistent fashion..

There is a need for further clarification of the relationship between both the Integration Authority and the Chief Officers with respect to NHS acute activity, not least to ensure that the accountability that rests with the Chief Officer is reflected in the level of authority that they and their management teams have; and also not to fracture or complicate the delivery of hospital acute service provision.

There is a need for further clarification of the financial governance and accounting arrangements that will be deployed in respect of the new Partnerships. The Bill’s Financial Memorandum expresses an expectation that
by moving more towards early intervention and preventative support that use and cost of more acute services can be achieved - however this would require a freeing-up of resources from these acute provisions to allow the investment in the early intervention services. There must also be a danger that the early intervention does nothing but simply delay the intake to acute provision for a few years and the demand actually does not diminish overall and in fact the total cost of overall provision is actually increased. Given the above vagueness regarding potential savings it is difficult to place too much reliance on them. When also taking into account the stated need for any such savings to be reinvested in Partnerships to help meet projected future demand, this gives the impression that the Scottish Government feel that there is no need to fund the future demand pressures as Partnerships will be able to self fund through efficiencies - despite the efficiencies being clearly described as being effectively crude estimates with little evidence to support them. There must also be doubts about the practical ability of the acute provision to actually provide resource release to non-acute services – and indeed. This will be particularly difficult as, based on past experience and future demand pressures, these services are more likely to place funding pressures on Partnerships rather than bring efficiency / resource release opportunities.

On a linked issue, perhaps the Bill and guidance could allow for a reduction in the number of currently silo-ed and increasingly over-lapping national audit/inspection/improvement bodies: such a reduction could be used to free-up much needed resource to be transferred to the new Partnerships to assist in meeting the costs of care given the predicted demographic changes over the next few years.

We support the development of locality planning as a transparent vehicle for engagement with local professionals in decision-making in relation to the communities we all serve. It is important to ensure that new Partnerships enjoy legitimacy as a force for positive change amongst professional groups, including NHS external contractors; and also provide a means to ensure that those same professionals constructively discharge a wider leadership role across their respective peer groups and within their respective professional communities. This would be strengthened by an accompanying consideration of how national government can encourage all GPs and other external NHS contractors to constructively participate in these arrangements so that the responsibility for the effectiveness of these arrangements are mutually shared by all; and indeed ensure that the Partnership’s decision making processes benefit from the widest evidence-based contributions of staff and not solely relying on the inputs of enthusiastic local clinicians/professionals.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As an established CHCP, West Dunbartonshire has already achieved the more substantive efficiencies associated with integration, most notably by rationalising its senior management arrangements. We can evidence that (even within the context of having to manage two distinct ledgers) integration enables more co-ordinated and efficient use of health and social care
resources. Our CHCP can also demonstrate how joined up management and support can enable staff to work well together irrespective of their contractual employing organisation - not least as affirmed by the recent UK Healthcare People Management Association (HMPA) Excellence in Human Resource Management award that the CHCP has been recognised with.

A pooled budget would certainly aid that further – but we also recognise that it requires adjustments to the wider corporate processes of the Council and the Health Board to strike the “right” balance between consistent practice across both corporate organisations; and providing the Partnership with sufficient flexibility to innovate and streamline its approach locally. As per above though, there will continue to be a host of challenging agendas that the new Partnerships will also have to contend with in relation to the sustainable management of financial resources, e.g. GP prescribing and self-directed support.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

We would highlight the extremely positive findings of our recent Care Inspectorate scrutiny assessment report of WD CHCP ([www.scswis.com/index.php?option=com_docman&task=cat_view&gid=287&Itemid=378](http://www.scswis.com/index.php?option=com_docman&task=cat_view&gid=287&Itemid=378)). This provides evidence from practice of how an existing integrated health and social care partnership has further improved care provision; and should alleviate expressed (and speculative) anxieties in relation to potential dilution of social work practice provided that the leadership (senior management and lead professionals) of the Partnership possesses sufficient expertise, integrity and vision.

A timely example of how an integrated health and social care partnership can improve the overall care experience with patients and carers has been our successful integration of Ardmore Day Hospital with Local Authority Day Care provision (which has just been recognised as a finalist in Scotland’s Dementia Awards 2013).

**West Dunbartonshire Community Health and Care Partnership**

2 August 2013
1 Do you agree with the general principles of the Bill and its provisions?

a) The City of Edinburgh Council and NHS Lothian have a long history of positive partnership working and the intentions of the Bill create a useful and forward thinking framework to allow continued improvement across governance, strategy, planning, resource management and, most importantly, frontline service provision to deliver positive outcomes for the people of Edinburgh who need health and social care services. Edinburgh has had a Joint Director for health and social care services for eight years.

b) In summary, the City of Edinburgh Council:
- strongly endorses the policy ambition for integrating health and social care as outlined in the Policy Memorandum
- strongly supports the policy intentions of Scottish Ministers behind the Public Bodies (Joint Working) (Scotland) Bill
- agrees that the intentions of the Bill create a positive framework for the delivery of integrated health and social care services
- welcomes the fact that the Bill does not focus on structurally-led models of reform and focuses on building on many years of positive joint working
- agrees that it offers an opportunity to improve the transition points between current primary and secondary health care and social care, subject to clarification of the scope of services
- strongly supports the integration planning principles
- strongly supports the intention to prescribe national outcomes for which both the NHS Board and Council are jointly accountable, and the intention to consult with health boards and local authorities on these; however, this must be balanced against local responsiveness to population needs
- strongly supports partnership working with NHS and also with a range of non-statutory partners for the long-term planning and provision of health and social care services
- very much welcomes the emphasis on meaningful and two way engagement with all relevant stakeholders, and whilst this will be a significant challenge on the scale required in Edinburgh, it is strongly supported
- welcomes the intention to provide some funding to NHS boards and local authorities to support the challenges of change management and organisational development during the transition
- is of the view that the provisions alone will not deliver the whole answer to the scale of rising demand expected now and in the future.
c) However, the Council also **has some specific concerns:**

- the Bill is insufficiently clear regarding the nature of the body corporate model and the governance and accountability roles of the parent bodies with respect to the joint board, its creation and operation
- there is an apparent mismatch between the focus of the Policy Memorandum and the detail of the Bill itself in relation to the potential scope of services; the powers included in the Bill could be interpreted as extending well beyond the policy focus of adult health and social care services; and this could create opportunities for integration of other local government services, without specific legislative consultation and debate and at the potential expense of local democratic accountability
- the extent of power and control being granted by the Bill to Scottish Government Ministers, which appears to be in conflict with the policy intention of local partnership working and with local democratic accountability and engagement; and
- the remedial measures reserved to Scottish Ministers when a partnership approach fails are unlikely to deliver the expected policy intentions, and a more supportive, conciliatory approach should be adopted to build relationships; given the history of partnership working in Edinburgh and progress so far, both the City of Edinburgh Council and NHS Lothian are confident that such measures will not be needed.

d) The comments below are written from the point of view of preferring the ‘body corporate’ model of integration over the ‘delegated models’ and are caveated by the need to address the issues listed later in this paper, which if not addressed will impinge on the nature of the partnership approach and hence on the reality of achieving policy objectives, benefits and outcomes for people, as well as on local democracy into the future.

2 **To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

a) The creation of an equal partnership approach to delivering services as outlined in the Policy Memorandum, which at the same time, maintains accountability through both parent bodies is a positive step in joining up services, resources and budgets for the benefit of people who use them. It has the potential to maintain an equal measure of both local democratic and ministerial accountability.

b) The City of Edinburgh Council considers that only by supporting the best of both NHS and council approaches can true service improvement be delivered on the ground, in terms of shifting the balance of care to the community for the benefit of the local population.

c) The scope of the functions to be 'delegated' is critical in achieving the policy objectives. There is a need to ensure that the scope includes the
provision of acute care to enable the delivery of the policy ambitions and outcomes.

d) Neither the City of Edinburgh Council nor NHS Lothian are in favour of the ‘delegated’ model as it will create significant upheaval for organisations, employees and possibly services users, and could be a major distraction for some years. A partnership approach would help to avoid this.

e) For the City of Edinburgh Council, the partnership approach would build on eight years of partnership working with NHS Lothian, through the Joint Board of Governance and a Jointly Accountable Officer.

f) Any model of integration will rely on continuing to build trust and confidence between the City of Edinburgh Council and NHS Lothian, and with other interested stakeholders across the city. Both are critical to developing a real joint vision for health and social care for Edinburgh. The policy intentions of the Bill provide a framework to do this.

3 Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

Integration plan - Section 1
a) The approach to making services, resources and budgets transparent between partner organisations via joint governance and an Integration Plan is positive and productive, and should allow a smoother, steadier response to the demand and budget pressures than could be achieved by large scale reorganisation.

Integration planning principles – Section 4
b) The major strength of the Bill is the policy intention to address disconnects in the current system, to remove barriers to current joint working and to shift the balance of care without the distraction and territorialism, which can be created by wholesale restructuring. The need to move beyond an organisation’s administrative convenience to a better focus on the needs of recipients, and the contribution of local professionals and the community is vital if society is to deal with the demand pressures forecast. A move towards person centred services through integration is a real opportunity to be grasped.

Engagement of non-statutory partners – Section 6, Section 26, Section 30
c) A further strength is the focus on involvement and engagement of a wide range of stakeholders in the co-production of service design, development and delivery. To enshrine this in legislation is a helpful step forward. The flexibility for the Integration Authority to determine additional consultees beyond a minimum is welcomed. The Shadow Edinburgh Health and Social Care Partnership has adopted an inclusive approach to – and made good progress with – the involvement of non statutory partners from the third sector, services
users, local professionals and carers who have a critical contribution to make to improving outcomes for people.

Section 1 (5)
d) It is also a strength that some functions may not to be delegated. This is to be welcomed in instances where specific accountabilities prevent a conflict of interest and protect individuals’ wellbeing, rights and liberties, e.g. the role of mental health officers.

Guidance and Regulations
e) The Council welcomes the intention of the Scottish Government to prepare specific guidance/ regulations, which will enable a responsive approach to changes in circumstances over time. However, the Council would wish for flexibility to local circumstances to be built into the guidance, where the approach taken by the parent bodies and Integration Authority meets with the policy ambition and spirit of the Bill.

4 What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

a) The main areas of expected benefits include:
- releasing untapped creativity around service design and delivery
- the acceleration of creating new, responsive, joint models of service delivery to allow the balance of care to be shifted from the acute to community setting, but with enhanced clinical/rehabilitation support
- supporting a shift in focus away from narrowly defined targets around processes towards improving outcomes for people and allowing a more holistic view of health and social care as a single system, particularly in service related to prevention, social justice and health inequality
- streamlined pathways of care, with fewer disconnects and a smoother more effective response for people
- real potential to reduce re-admission to hospital for individuals and to support ongoing independence in a homely environment; and
- joint performance in assessment and shared objectives should demonstrate real progress against joint national outcomes.

b) There may be efficiencies associated with all of the above, however, demand pressures are such that there are unlikely to be cashable savings, rather a reinvestment of staff and other resources to respond to rising and complex demand, supported by a shift of NHS resource to develop more community based health care out with the acute hospital setting.

c) There may also be small efficiencies with the joint approaches to budgets, planning and commissioning, however, these are likely to be offset by the costs of developing improved approaches to engagement with and involvement of non-statutory partners.
5 What effect do you anticipate integration plans will have on outcomes for those receiving services?

a) Having joint local outcomes governed through our joint Shadow Partnership arrangements is already having a positive impact on the operational management of Edinburgh’s health and social care services.

b) Looking forward, the impact of a transparent view of a large proportion of all health and social care resources for a local area, plus an agreed common aim (national outcomes), against which both organisations are measured equally cannot be underestimated.

c) Such a context creates a real opportunity for moving forward with the best interests of recipients at the forefront of everything we do, rather than being led by separate organisational drivers.

d) It creates an opportunity to develop real understanding of each service and each professional practitioner's important role in the whole system of health and social care.

e) It also creates the potential for financial and human resources, ICT and structural barriers to be removed or managed more effectively for staff at the frontline who often already work well together in spite of these barriers.

f) These factors can only impact positively on the quality of frontline services and the potential for positive cultural and service change for the benefit of people who need our services, allowing staff to focus on the person and not the barriers that hamper their work.

6 Concerns and Areas where the Bill could be Strengthened

a) The Council has some concerns about the detail of the Bill. Most comments relate to an apparent mismatch between the intentions of the Policy Memorandum, which the Council fully supports, compared with the details within the Bill and the extent to which Scottish Ministerial power needs to be balanced against local democratic accountability.

b) Consultation on Integration of Health and Social Care – Scope

1) The Scottish Government consulted on the specifics of integrating adult health care and social care services with local flexibility to extend this to other health and council services, e.g. some housing services and children’s services. Furthermore, the Policy Memorandum is clearly focused on adult health and social care services.

2) However, the detail of the Bill appears to have moved far beyond this focus, and can be interpreted as providing for much wider
ranging local authority services to be included within the scope of a body corporate model.

3) None of the key elements of the proposals, i.e. the preamble in the Bill, the Integration Plan, Integration Planning principles, Strategic Plan, etc., specifically mention the scope of the services for either the local authority or health board. Therefore, it seems possible for Ministers to make provision, by regulation, for other local authority services to be delegated to a body corporate or for the remit of a joint board to grow.

4) This does two things:
   - it creates the potential for other local government services to be delegated to a body corporate, whilst avoiding the need for Government consultation and legislative debate on the matter; and
   - it misses an opportunity to address specifically the two disconnects, which Scottish Government identified in the consultation in 2012, i.e. between social care and primary care, and primary care and secondary care.

5) This concern could be overcome if the Bill were to reference the minimum scope of local government and health board functions / services to be included, with appropriate definition of the term ‘functions’. It is important that the scope fully reflects the policy ambition to address the ‘disconnects’ between acute and primary care and primary care and social care.

6) One area of scope where further consideration is needed is in relation to children’s health and social care services. Children cannot be seen in isolation from their families, and where local authorities have integrated their children’s social care services with their education services, there is a need to consider the best approach to linking with children’s health services to ensure whole families can be well supported. Edinburgh would like to establish a separate partnership for children’s health and social care services and it would be helpful if the Bill could provide a steer on the practicalities of this.

c) Definition and Governance of Body Corporate – Section 1 (4):

1) The Bill is insufficiently clear on the nature and make-up of the ‘body corporate’ (joint board) model. It does not state what type of legal entity the body corporate will be; nor does it state its composition. There are no general principles proposed for the primary legislation, which would ensure that the local authority and health board will have representatives on the joint board. It is also
not clear from the Bill to whom the joint board will be accountable and how it will be held to account.

2) The term ‘body corporate’ appears to have a very particular definition in law, which is not referenced in the Bill; and definitions seem to preclude the development of a formal partnership with accountability arrangements, as required by the Policy Memorandum.

3) The Bill is strong on the powers and role of Scottish Ministers in relation to the different models of integration. To balance this, it should articulate more clearly the legal/governance accountability arrangements of the local authority and health board in relation to the joint board and the role, which each parent body will have in its creation, ongoing governance, accountability and operation in line with the Policy Memorandum.

4) Specifically, the Bill needs to demonstrate the clear role of the parent bodies in such matters as: formally agreeing the nature of the joint board; establishing the Integration Authority and the functions to be delegated; approval of the Integration Plan prior to submission to Scottish Ministers; approval of Strategic Plans, etc.; and the monitoring role through the Performance Report.

d) Delegation- Section 21 and 22

1) The Bill does not clearly articulate the capability of the joint board to carry out the delegated functions itself initially (as it has no staff), but rather has to direct the local authority and health board to carry out the functions. This brings into question whether the joint board can therefore have the same duties, rights and powers as the entity which delegated the functions?

2) It seems unusual to the Council that the effect of the delegation, as per section 21 of the Bill, is to make the person to whom the function is delegated subject to the same duties, and have the same rights and powers, as the person who delegated that function. It becomes difficult to see who is accountable to whom. It may be helpful to reflect on the current process within a local authority: where the Full Council may delegate a function to a Director, yet it is ultimately the Full Council that has the duty and is liable for any failure to discharge it. In turn, the Full Council can hold the Director to account by establishing performance measures, and ultimately through disciplinary action. We would assume that the Bill will be clarified with respect to the provisions and expectations for changes to local authority standing orders and financial regulations.

3) It is rare that all powers associated with a function would be delegated in a local authority – usually there is some form of
limitation to the delegation, for example a Director cannot discharge functions that carry a material risk or are politically controversial.

4) These points lead the Council to seek clarification on the term “delegation” of the function, as described in the Bill. It could be interpreted as being either a “duplication” of the function (if the local authority retains the duty to discharge the function) or a “transfer” of the function (if the local authority does not retain the duty to discharge the function as per the proposal in paragraph 97 of the Policy Memorandum).

e) Local Government (Scotland) Act 1973 s 57

1) Local authorities cannot delegate any functions to another body /committee unless it has a two thirds voting majority of councillors. It would be helpful if the definition of the body corporate model approach could be clarified around whether it can be a committee of the local authority and of the health board, and whether the 1973 legislation is now superseded or is repealed.

2) This Council’s preference would be that the joint board is a joint and equal committee of both the local authority and the health board, and if this is not possible, that the local authority be granted powers to establish the joint board. If this is not to be the case, it is hard to see how the local authority can delegate, and it then becomes ‘duplication’ or a ‘transfer’ of functions as described above.

f) Chief Officer of an Integration Authority – Section 10:

1) The joint board will appoint the Chief Officer and must only consult the local authority and health board. If the Chief Officer is not appointed by the local authority and health board, it is unclear how the local authority and health board can seek to hold the Chief Officer to account if he/she does not deliver the required outcomes.

2) More clarity on the points below would be welcome:
   - as a minimum, high level principles regarding the role of local authority and health board in the appointment of the Chief Officer
   - guidance on the appointment of a Chief Officer, specifically in cases where a Jointly Accountable Officer exists, and is already managing joint health and social care services across existing partnerships; and
   - the accountability relationships of the Chief Officer to the respective health board and local authority Chief Executives.
g) Rights and liabilities – Section 21

1) Additional information on the question of legal liabilities of the body corporate arrangements would also be welcome, in particular where and with whom ultimate responsibility lies. The mismatch between the policy intention and the details in the Bill on the body corporate currently make this difficult to determine. This is linked to the points about accountability and delegation above.

2) Specifically, does the Chief Officer, the parent body, the Chief Executives, or the joint board have ultimate responsibility? If the latter, how does referring to an individual person fit with a joint board of equal voting members?

h) Strategic Plan – Section 23

1) There is no requirement for a joint board to seek agreement from the local authority or health board to the Strategic Plan. This means that the local authority will not have the final say on the delivery of ‘delegated’ services for which they are allocated resources and for which they have ultimate responsibility (paragraph 97 of the Policy Memorandum).

i) Consultation Group – Section 26 and 27

1) In preparing the Strategic Plan, Integration Authorities are to establish consultation groups. Where the Integration Authority is a joint board, this group is to constitute one person nominated by each of the local authority and health board who prepared the integration plan. This suggests that the intention of the Bill is for the joint board to be a distinct body, rather than a “partnership” between the local authority and health board.

2) It is unclear why there is a requirement for the joint board to form a consultation group with a representative from the local authority and health board if the joint board itself is made up of representatives from the local authority and health board.

j) Performance Reporting – Section 33

1) The reporting arrangements for the Performance Report to the council and health board should be strengthened to create formal accountability and meet with the requirements in sections 91-97 of the Policy Memorandum.

k) Scottish Ministerial Powers - Sections 11, 12 and 39

1) The Bill creates some very specific powers for Ministers to instruct health boards and local authorities in a very particular course of action. The main ones of concern are listed below:
Scottish Ministers may appoint staff other than the Chief Officer to an integration joint board and to specify the terms and condition of such staff (Section 11).

2) The rationale for this power is unclear when the Policy Memorandum specifies that a partnership approach is required and that local flexibility is important. It seems unnecessary when the requirements to prepare an integration plan are clearly stated, and when section 39 provides for action in the case of a failure. It also seems to contradict the Policy Memorandum, which is clear on the negative impact of creating a new organisation.

3) This apparent contradiction should be clarified, and this Council is of the view that this power is unnecessary to deliver the policy intentions outlined in the Policy Memorandum. As a minimum, the Council would wish to have assurance that this could only be done with the express permission of the parent bodies.

4) When this power is combined with the lack of clarity about scope, it is possible to interpret that Scottish Ministers could instruct local government to create a separate body corporate to deliver any local government service via a joint board. This would be an unwelcome consequence of the intended spirit of the legislation and would seriously impact on local democratic accountability.

Scottish Ministers may make provision about membership of joint boards; proceedings of joint board; giving general powers to contract, acquire/dispose of property, borrow money or incur other liabilities; the supply of services or facilities etc (Section 12).

5) The use of such powers with respect to services delegated to the joint board does not reflect the need for local flexibility and partnership working. It is in conflict with the policy intention and could also have a negative impact on local democratic accountability.

6) It could be interpreted as a centralisation of local government responsibilities and accountabilities, which are currently in the hands of local elected members. The absence of clarity about the role of the parent bodies in these matters compounds this impression.

7) As a minimum, it would be helpful if the Bill would indicate the circumstances that would need to arise for these powers to be invoked, and how this would be balanced against the need for local democratic accountability. The power should be removed altogether and replaced with a power to prepare guidance and for local arrangements to take cognisance of this guidance.
Scottish Ministers may establish an Integration Authority of the body corporate model, and to specify the make-up and workings of this body (Section 39).

8) It is understood that Section 39 would be implemented only in cases where there was a failure to deliver on any model of Integration Authority. However, forcing a specific model of integration when partnership working has failed cannot be expected to deliver a positive outcome for service users.

9) It will also overrule local democratic accountability, where a local authority considers integration with the local health board may not be in the best interests of their service users or wider population at that time.

10) It may be more helpful to consider making provision for formal support arrangements, which could be put in place to develop and improve the potential for a partnership relationship and an agreed way forward to rise to the challenge of meeting national and local outcomes for people.

11) This section also requires the local authority to delegate specific functions and to make payments to the joint board. Such instruction could impact negatively on local democratic accountability. The power effectively allows Scottish Ministers to direct local authority spend, around 25% of which has been raised through local council tax. This can be interpreted as local money to be spent by democratically elected members and not directed by Scottish Ministers. This may be a particular issue when the political make-up of a local council differs from national government, and could be interpreted as a reduction of local government autonomy.

l) Information Sharing - Section 37

1) The supplementary section on the disclosure of information between partners in relation to the purpose of preparing the Integration Plan is welcomed. It may be helpful if subsection (5) could be expanded to include:
   - the functions that are delegated and their operation; and
   - the preparation and delivery of the strategic plan.

2) Or some other such wording, which would ensure the sharing of information not just for the preparation of the relevant plans, but for ongoing operation and delivery of services to meet the requirements of the plans. It would be helpful to have guidance from the Information Commissioner on what would need to be undertaken to ensure compliance with Data Protection and Freedom of Information, with respect to a the integration models.

m) Community Planning
1) More information and clarity would be useful on the expected relationship with Community Planning legislation, partnerships and structures, particularly the relationships between the body corporate and formal community planning structures, the national outcomes and the Single Outcome Agreement, locality planning arrangements and local community planning approaches.

7 Finance

a) The City of Edinburgh Council:
   - welcomes the provision of financial support for the transition
   - notes that the majority of cost and efficiency savings are to be achieved in the acute health sector; and
   - welcomes the acknowledgement of costs for third sector support, however, notes that there are likely to be recurring costs for such support.

b) General Concerns

1) This Council considers the assumption that all additional local authority costs can be met from within existing resources to be flawed and that the local authority costs should be examined in more detail.

2) If the majority of efficiency savings are to accrue in the acute health sector, it is critical that the scope of the services for integration are clearly articulated in the Bill, to ensure that there is the opportunity to shift resources appropriately from acute to community-based primary and social care settings.

c) Non-Recurring Costs

1) Provision is to be made for funding Community Health Partnership leadership post holders who are displaced as a result of the development of partnerships. Similar resources need to be available to local authorities.

2) It would be very helpful if there were to be increased funding for ICT development and recurring costs, given that this is a key strategic enabler to joint working.

d) Recurring Costs

1) It would be helpful if greater value could be given to the role of external audit. This will be particularly important, given the issues regarding governance and accountabilities in the sections above.

2) The additional costs for encouraging clinicians in locality planning should be extended to include other stakeholders who will have a
legitimate involvement.

3) There are likely to be additional costs for stakeholder engagement in both strategic planning and locality planning.

4) Given the nature of the joint board model, it is likely that recurring costs cannot be simply absorbed through the savings from existing administrative costs, specifically remuneration for board members and stakeholder engagement on the board.

5) VAT differences between health boards and councils continue to be a financial risk, unless and until clarification is received from HMRC.

6) It is likely that additional staff cost pressures will emerge over time as a result of integration, e.g. harmonisation of staff terms and conditions. It would be helpful to make an allowance for this in future.

8 Closing Remarks

a) The City of Edinburgh Council would like to reiterate its full support for the policy intentions of the Bill. The concerns raised relate to: the mismatch between the policy intentions and the exact proposals; the lack of clarity in the proposed law; and the very significant powers, which are to be granted to Scottish Ministers. These matters will impact on a large portion of local authority autonomy and spend, currently governed through locally elected councils.

b) There are many risks associated with a programme of change of this scale. The Policy Memorandum specifically refers to a number of financial and other risks and envisages that these risks will be mitigated through: the joint nature of the governance of the Integration Authority; the provisions of the Integration Plan and Strategic Plan; and through the direct accountabilities and responsibilities of the Chief Officer.

c) These mitigating factors could be jeopardised due to the mismatches identified between the Policy Memorandum and the Bill, and specifically the lack of clarity about the governance role of parent bodies.

d) The scale and impact of these risks on both health boards and local authorities increase significantly if their governance role is unclear and could impede progress with the agenda. This would be a retrograde step, and extremely unhelpful when both the City of Edinburgh Council and NHS Lothian consider that the policy ambition is well founded, well thought out and otherwise possible to achieve.

City of Edinburgh Council
15 August 2013
Key Messages

In developing our response to the Health and Sport Committee on the matter of the Public Bodies (Joint Working) (Scotland) Bill, we would draw attention to the following key messages:

- It is our general view that the integration of health and social care should form a corner-stone of the public service reform agenda and link to wider reforms associated with community planning;

- The Scottish Government’s policy proposals have a number of commendable features. In particular, they support outcomes-based service planning; recognise joint strategic commissioning as the bedrock of integrated service planning; and afford appropriate prominence to locality planning as a means of working with communities;

- However, COSLA believes that the Public Bodies Bill is in parts too prescriptive and too detailed, and as a general rule there should be more flexibility at a local level to determine the shape and governance of the proposed partnership arrangements;

- In respect of the Ministerial powers expressed in the bill, COSLA does not agree to any Minister having powers of autonomy to make decisions which affect Local Authorities without consultation and agreement. We believe that the range of local authority services under the direction of Scottish Ministers is far too great and that the Scottish Government should introduce an amendment to ensure that the bill is consistent with the policy intention and consultation exercise;

- We would maintain that health and social care partnership arrangements should be subject to stronger-than-proposed local democratic oversight. The bill falls short in describing effective arrangements in support of these principles.

- From the perspective of whole-system commissioning, it is absolutely vital that acute budgets form part of the integrated resource. While we recognise the technical challenges associated with this proposition, to leave acute resources outside of the integrated budget would render the health and social care partnership relatively impotent. The Scottish Government should define the minimum contribution of the acute sector to the integrated budget.

- We are calling on the Scottish Government and Parliament to resolve the longer-term funding challenges associated with the cost of health
and social care to the public purse in Scotland. We are confident that the pressures building on the health and care system over the next twenty years cannot be met by better integrated services alone: the integration of health and social care is necessary but ultimately insufficient as a means of eliminating the funding gap that is likely to emerge.

Introduction

1. The Health and Sport Committee has asked for evidence in respect of the Public Bodies (Joint Working) (Scotland) Bill. COSLA’s position on health and social care integration has been developed over a number of years and has been subject to considerable scrutiny by council leaders and our professional associations. We have also worked in detail with our partners in the Scottish Government and the NHS to ensure that the proposed arrangements are robust and practicable – but we continue to feel that the bill has a number of short-comings, which we would hope to resolve by working with the Scottish Government and Parliament.

2. There is a general consensus, within the context of public sector reform, that closer and better working practices between NHS Boards and local authorities are both necessary and desirable. However, a variety of views have been expressed within the local government family about how best to achieve this. Some believe that the proposed models of integration are appropriate and practicable; others feel that the Scottish Government’s proposals are too prescriptive and focus on structural change at the expense of outcomes; and others again believe that whatever the merits of the delivery arrangements, the proposals pay insufficient regard to important issues like the democratic accountability of the council. These matters – and others – are rehearsed in more detail below.

3. We also feel that it is important to make a distinction between the policy intention and the content of the bill. Whereas the policy intention is familiar in terms of the two primary models of integration (the body corporate model and the lead agency model), there are a number of new issues to consider in respect of the bill itself – some of which were not alluded to in the Scottish Government’s consultation process.

4. We have split our submission into three sections: an analysis of the bill and its implications for local government; commentary on the policy intention and the models of integration proposed; and an assessment of the financial and workforce implications.

Analysis of the Bill

5. Public services in Scotland face an unprecedented challenge: to improve outcomes for the people of Scotland and reduce inequalities at a time of increased demand, by ensuring the best use of increasingly limited resources.
6. Local government has invested significantly in arguing that effective and sustainable reform requires public agencies to be empowered to work together to improve lives across Scotland’s communities. We have also argued that Community Planning and Single Outcome Agreements are at the heart of this agenda. These views have gained considerable traction, and both the Christie Commission, and the Government’s response to it, have recognised the need to build on and strengthen those processes.

7. In considering the public service reform agenda more broadly, COSLA has expressed general support for an agenda that develops outcomes-based approaches; uses resources flexibly; promotes co-production, early intervention and prevention; facilitates service integration; and enhances local democratic scrutiny. These themes are all explored in detail in our recently published vision for local government.¹

8. The overall thrust of the Scottish Government proposals on health and social care integration would align with many of these general principles. COSLA would argue, however, that the proposals are at times too prescriptive and too detailed, and as a general rule there should be more flexibility at a local level to determine the shape and governance of the proposed partnership arrangements. We would also maintain that health and social care partnership arrangements should be subject to stronger-than-proposed local democratic oversight. The bill falls short in describing effective arrangements in support of these principles. In particular, we would highlight potential issues in relation to:

   - The ubiquity of Ministerial powers
   - The extent of Scottish Government oversight; and
   - Democratic accountability

Ubiquity of Ministerial Powers

9. COSLA does not agree to any Minister having powers of autonomy to make decisions which affect Local Authorities without consultation and agreement. We want to halt the erosion of local choice and discretion caused by the imposition of new duties from the centre, and assert a presumption against Ministers using or developing powers to act with regard to local government services.

10. To that end, we explicitly reject the provision within the Public Bodies (Joint Working) (Scotland) Bill where:

   Scottish Ministers may by regulations prescribe functions of local authorities that must, may or may not be delegated under an integration plan²

¹ www.cosla.gov.uk
² Part 1, Section 1, Subsection 6 (a)
11. This gives Scottish Ministers unshackled power to play around with local government services: it does not limit the scope of integration to adult social care (as is the policy intention – and as was the focus of the Scottish Government’s own consultation). The scope of the legislation means that the powers to make regulations extend to all local authority functions. It therefore establishes, without recourse to further primary legislation, Ministerial powers to require that any local authority function must be transferred to delegated arrangements (be those lead agency or joint board arrangements). While we would hope that the Parliament would remain true to the spirit of the bill in enacting any regulations in this area, the bill nonetheless opens up future risk in respect of other mainstream local authority services – like education or housing – being passed into delegated arrangements through regulations written by Scottish Ministers.

12. We have explored this matter in detail with Scottish Government officials, expressing a wish to see an amendment introduced at Stage 2 in the parliamentary process which would define the local government functions as adult social work or social care services alone. This would be consistent with the policy intention and consultation.

13. In addition to the scope of the bill being too broad, the use of Ministerial powers is further evidenced later in the bill, where

*The Scottish Ministers may by order make provision —*

(a) about the membership of integration joint boards,
(b) about the proceedings of integration joint boards,
(c) giving integration joint boards general powers (such as powers to contract, acquire or dispose of property or rights or borrow money or incur other liabilities) in connection with the carrying out of their functions,
(d) about the supply of services or facilities to integration joint boards by a local authority or Health Board,
(e) about any other matter relating to the establishment or operation of integration joint boards that the Scottish Ministers think fit

14. This invests too much authority in Scottish Ministers, at the expense of local partnerships. On the membership and proceedings of the integration joint boards, we would maintain that this is primarily a local matter – at the very most, these principles should be expressed in national guidance agreed with COSLA. We hold a strong belief that the parent bodies alone should identify who represents them on the integration board.

15. On the measures that allow Ministers to empower partnerships to establish fully incorporated integration authorities (with employment, contracting and borrowing powers etc.), we recognise the potential flexibility this could provide partnerships into the future. We are satisfied that the full incorporation of integration authorities (e.g. employment capabilities,

---

3 Part 1, Section 12, Subsection 1
borrowing powers etc.) is an option (should Ministers be agreeable to making provision), not a requirement, under the proposed legislation. However, the bill needs additional safeguards written into it: we want to ensure that a move to fully incorporate a partnership is only possible with the consent of the council and the Health Board.

16. The final clause (e) simply invests too great a degree of power in Scottish Ministers. We hold to a vision of democracy that is more decentralised – and which contains more checks on central government power.

17. Our final substantive point on the ubiquity of ministerial power relates to the shift towards outcomes based planning and service delivery. This represents one of the strengths of the integration agenda. The improvement of outcomes needs to be the methodological driver of change and the touchstone for assessing success. For this to work, the development of an outcomes based approach needs to be taken forward in partnership – both locally and nationally. However, we do not believe that the bill is faithful to this principle in that it gives Ministers the power to ‘prescribe’¹ these outcomes and defines local authorities as a mere consultee in the process of determining these. We think the bill should recognise local government as a democratic institution and reflect – as with Single Outcome Agreements – that the identification of outcomes should be agreed between the Scottish Government and Scottish local government.

The Extent of Scottish Government Oversight

18. As a democratic institution, COSLA believes that Scottish local government should be an equal partner to the Scottish Government – not a subsidiary. While we recognise the remit of government in developing national policy, we consider the accountability of councils to be first and foremost to the local electorate. Within this context, we feel that the Public Bodies (Joint Working) (Scotland) Bill is unnecessarily centralising in its content.

19. We are clear that the bill was intended as enabling legislation, which would empower local partnerships to overcome legislative barriers to establish fully integrated partnerships capable of managing the whole journey of care (from the community through primary healthcare to secondary healthcare). However, while the bill establishes the mechanisms that will allow partnerships to integrate services covering the whole journey of care, parts are written in a way that binds rather than enables.

20. For example, the bill states that the Local Authority and Health Board ‘must submit the integration plan to Scottish Ministers for approval’.⁵ Again, the bill invests authority in Scottish Ministers without fully explaining the criteria against which an integration plan will be judged. While we would acknowledge that the bill does not provide discretionary powers for

⁴ Part 1, Section 5, Subsection 1
⁵ Part 1, Section 7, Subsection 1
a Minister to instruct, for example, a partnership to include children’s services within its integration plan, we would hold that the relationship thus defined makes local government subservient to Scottish Ministers. The integration plan should ultimately be agreed by the two democratic institutions which are accountable to the electorate for performance against outcomes, namely, the Scottish Government (on behalf of the Health Board) and the Local Authority.

21. In addition, there are some instances of central government oversight being exerted in a way which is not sufficiently sensitive to partners’ roles and responsibilities, and goes beyond the scope that would normally be expected. For example, the Scottish Government has consistently indicated that the Jointly Accountable Officer (referred to as the ‘Chief Officer’ in the legislation) should report to the Chief Executive of the Health Board and Local Authority. While we do not object to this reporting relationship, it is slightly odd that primary legislation should involve itself in defining managerial relationships within organisations. What is more, the principle is expressed in legislation as: ‘the responsibilities of the Chief Officer are subject to the agreement of Scottish Ministers’. In our view, the term ‘responsibilities’ goes beyond the matter of the seniority of the JAO post. We believe that the responsibilities of the Chief Officer is rightly a matter for partnerships to determine.

22. There are further examples of the bill reaching too far in prescribing an approach to key processes which should designed by partnerships to suit local circumstances. A good example is around level of the direction on whom to consult over the integration plan and strategic plan respectively. In respect of the latter, the legislation goes beyond the principles of engagement for the strategic joint commissioning plan and outlines how the consultation and engagement process should be operated, and who should be involved. As such, we would like to see more limited expression of the principles on the face of the primary legislation, with more of the detail committed to secondary legislation and guidance. We think that this would give us more time to work on the content and would make the legislation less vulnerable to becoming outdated by changes in practice.

Democratic Accountability

23. The principle of delegation is at the heart of the Scottish Government’s plans to integrate adult health and social care services – whether to the body corporate or lead agency – and from there to the localities. This correctly requires us to invest a level of autonomy in the partnership board under the body corporate model.

24. However, as currently constructed, the bill establishes a situation whereby once the partnership is created through the integration plan (and the functions to be delegated are signed-off by the Local Authority, Health Board, and Scottish Government, along with the relevant budgets), the

6 Part 1, Section 10, Subsection 7
joint board then has the autonomy to make decisions on what its total budget is spent on without referring back to the parent bodies.

25. The key advantage to this arrangement is that it maximises unitary control over the integrated budget and the capacity to redesign services. It provides a commissioning capacity that extends to acute provision, primary care and social care and so optimises the ‘total resource’ that can be deployed and redeployed to improve outcomes. This is important because if we should integrate health and social care services only to find that we invest resources in line with historical spending patterns, then the exercise will have been a failure and a needless distraction. So the commissioning authority of the partnership board is important – but could be improved by stronger democratic oversight on the social care side.

26. The board will be autonomous from the council; it will not simply form part of the council’s committee structure. Similar to the issues that arose under the old police board structures, the elected members on the board will not be accountable to the council as such, only to the fulfilment of the board’s duties under the ‘integration plan’. While respecting the need to give the integration board some autonomy, we believe that the council committee structure has an important role to play in scrutinising the work of the integration authority and that the bill should make clear that there is an opportunity to connect the activity of the board to the broader council and indeed to the Community Planning Partnership.

27. While this would strengthen democratic oversight, additional measures should also be considered. For example, in respect of the major redesign of health services, the Cabinet Secretary reserves the right to ‘call-in’ decisions taken by Health Boards – and potentially overturn these. On the assumption that the Cabinet Secretary will not want to forego this power, we would maintain that there is a similar need for democratic oversight in respect of the redesign of social care services – and that the full council should have ‘call-in’ powers under these circumstances. For example, if the integration authority decided within its strategic plan to outsource care home provision, the decommissioning of in-house services and properties could represent a significant risk to the council. It seems appropriate that decisions of this magnitude should require the full democratic oversight of the council.

28. Finally, insofar as the primary democratic accountability of the council is to the electorate, local government is not performance managed by the Scottish Government – unlike the NHS. While we accept that the new partnership arrangements will require suitable performance management arrangements to be put in place that satisfy a number of parties, we are concerned about the ability of Scottish Ministers to prescribe in regulations the form and content of performance reports. If Ministers can identify content, they can identify priorities – and the priorities of the Scottish Government might not be shared by Scottish Local Authorities.

---

7 Part 1, Section 33, Subsection 3 (a)
For example, the HEAT system which is used to manage the NHS has traditionally focused on acute care, with a predominant focus on access and treatment times. Our worry is that this drives activity and resources towards the acute sector, which is the exact opposite of what we need to do in public policy terms.

**Analysis of the Policy Objectives**

29. The Scottish Government’s Policy Memorandum sets out the problems it seeks to resolve through the Public Bodies bill:

   *From the perspective of people who use the system – patients, service users, carers and families – the problems to be addressed can be summarised as follows:*

   - There is inconsistency in the quality of care for people, and the support provided to carers, across Scotland, particularly in terms of older people’s services;
   - People are too often unnecessarily delayed in hospital when they are clinically ready for discharge; and
   - The services required to enable people to stay safely at home are not always available quickly enough, which can lead to avoidable and undesirable admissions to hospital.

30. We would accept that the Scottish Government’s analysis of the challenges facing the health and social care system – particularly around the needs of older people - is broadly accurate. However, the size and nature of these challenges varies across Scotland.

31. What is more, while public services need to be able to respond to the growing number of older people inappropriately admitted to hospital, that is not all they will need to do. As such, we should be careful about defining a public policy problem too tightly, lest we beget a political or structural response that lacks the flexibility to engage with other complex challenges.

32. To cite a case in point: the report of the Commission on Public Service Reform was supportive of an agenda founded on the principles of coproduction, assets-based approaches to health improvement and early intervention. It is important that any new partnership arrangements not only allow for these principles to be built in, but are actually founded on them. In doing so, we should position partnerships to look not just at seamless service delivery for adults with health and social care needs - but to make inroads into appalling levels of health inequalities and integrate the public health function into partnership activity. Our starting point should be to engender the preconditions of good health.

33. We also need to be careful not to assume the same set of problems exist for all population groups. The proposals will require that services for adults as well as older people should be integrated. However, we need to be mindful that the interface issues can be slightly different for the adult
populations. For instance, for people experiencing mental ill-health or who have a learning disability, the interface with employment service and welfare advice is crucial. Or for people with drug or alcohol addictions, oftentimes a complex relationship exists within the family unit, and interface issues here are as focused as much on the criminal justice system, or the housing system, as any relationship between community care and acute hospital provision. Or again, in respect of children’s services, the connection to the education system is particularly important. We make these points to illustrate that it is not just the interface between health and social care which is at stake in these reforms. One of the reasons that public service reform is challenging is that whatever organisational boundaries exist, interface issues will continue to require management.

34. Finally, and contrary to much of the rhetoric expressed on the relationship between Scottish Local Government and NHS Scotland, COSLA would hold that the last ten years has witnessed the steady improvement of partnership working at both local and national levels. Beginning with large scale hospital closure programmes for people with disabilities, through to the position today, we would maintain that it is possible to trace steady improvement in the quality of partnership working and – importantly – the quality and cohesion of service delivery. That is not to say that we have achieved as much as we can; and it is clear that some partners have experienced significant strain on their relationship across this timespan – but we are building from a position of strength and that should be acknowledged.

Strengths of the Policy Framework

35. While there are a number of elements to the Government’s proposals with which we disagree, it does not alter our general view that the integration of health and social care should form a corner-stone of the public service reform agenda.

36. The Scottish Government’s policy proposals have a number of commendable features. In the first instance, they support outcomes-based service planning. One of the key factors that has shaped progress towards a shared set of over-arching outcomes has been an emerging consensus on public policy. This has been most recently expressed in the high level outcomes crafted in support of the integration agenda: we want people with disabilities, long term conditions or who become frail in their old age to live as safely and independently as possible in the community, and have control over their care and support. However, the simplicity of this idea sometimes gets lost amidst the difficult task of managing large bureaucracies like NHS Boards or councils, and under the pressure of significant financial constraints and different performance arrangements, too often organisational behaviours have driven activity in different directions.
37. COSLA acknowledges therefore, that a single set of agreed national outcomes to drive activity and performance has the potential to further improve the partnership agenda. We will want to make sure that outcomes reflect the priorities of local government, the NHS, Scottish Government, and our partners in the third and independent sectors, and achieve a strong strategic fit with SOAs. The outcomes should be agreed politically between the Scottish Government and COSLA.

38. However, even with nationally agreed outcomes driving performance, there remains the potential for performance management systems to drive activity in different directions. The NHS in Scotland is performance managed by the Scottish Government, with a high degree of prescription on target setting and performance monitoring – often on access and treatment times - coupled with centre-facing reporting arrangements. Councils, however, are performance managed through democratic scrutiny by local elected members, with locally-agreed targets and performance monitoring systems, coupled with community-facing reporting through duties on public performance reporting. We think that further alignment work needs to be undertaken in this area to ensure that the system becomes truly cohesive – and that targets and ambitions are measured against the outcomes experienced by citizens.

39. The second main strength of the Government’s proposal is in the prominence given to whole-system commissioning. The proposed arrangements recognise the commissioning agenda of the integrated partnership – based on the ‘total resource’ of the partnership - as the bedrock of integration and service redesign:

   *The ability to look at overall expenditure for defined populations and user groups, and to use budgets flexibly, is a hallmark of integrated care. This is important, both to enable efficient allocation of resources and also to ensure that needs are met in the most appropriate and cost-effective way.*

40. We agree with the Scottish Government’s proposal that partnerships should be required to develop a strategic joint commissioning plan for all adult health and social care services. The commissioning process will normally involve: assessing and forecasting population need; planning the range, type and quality of services and support mechanisms that need to be put in place to meet to those population needs; putting in place arrangements to deliver or procure these services and support mechanisms; and reviewing the process by establishing whether objectives have been met.

41. The reason that commissioning is important is that it links service delivery to population need. It also facilitates change and service redesign and the twin challenges of demographic change and diminishing public finance suggest that radical change is required. Good commissioning challenges conservative practice and acceptance of historical spending patterns. It

---

8 Policy Memorandum, paragraph 102
requires flexibility of resource to make different investment decisions. Simply put, it is the means by which partnerships can focus on delivering more upstream investment in community-based services and disinvest in institutional care.

42. For this reason, **it is absolutely vital that acute budgets form part of the integrated resource.** While we recognise the technical challenges associated with this proposition, to leave acute resources outside of the commissioning budget would render the integration agenda relatively impotent. **The Scottish Government should define the minimum contribution of the acute sector to the integrated budget.** While this requires further thought and discussion, if we are seriously committed to ‘making the resource follow the person’ then we should focus our energies on redesigning the emergency care pathway, which in turn would commit a range of acute and other inpatient resources including: front door (accident and emergency), general medicine and receiving services, and those specialisms which are mainly emergency-driven.

43. Whatever slice of acute resource is eventually committed to the integrated budget, it needs to be substantial. This is supported by the following statistics:

- Total spend on health and social care for people aged 75+ on 2010/11 was £3.1bn, of which 64% was spent on institutional care - hospitals and care homes;
- 44% of total occupied bed days (for people of all ages) was accounted for by people aged 75+
- 90% of occupied bed days for people aged 75+ were the result of unplanned admission to hospital
- 70% of all hospital expenditure on people aged 75+ is unplanned

44. Given this pattern of acute care consumption, a strong and effective commissioning plan based on an ambitious description of the ‘total resource’ will be necessary to combat the twin pressures of demographic change and diminishing public finance. Commissioning plans should establish how the balance of care will shift over time, as partners seek to move away from reliance on institutional care facilities such as hospitals or care homes.

45. The final main strength that we would like to acknowledge is around locality planning. Research from the Improvement Service has demonstrated that there can be considerable variation within local authority boundaries in terms of the distribution of outcomes – sometimes down to neighbourhood level. That would suggest that work undertaken with communities to improve health and well-being outcomes needs to be highly tailored to the circumstances of those localities – and that the professionals working in localities need to be empowered to work with communities to develop new mechanisms of support and service options. It will be important that localities – however defined – are
natural communities and that engagement structures are put in place within a community planning context.

Weaknesses of the Policy Framework

46. One of the central challenges associated with the proposals is in respect of bringing together the governance arrangements of two organisations – Councils and Health Boards - which have completely distinct DNA. We recognise the difficulty of the task presented to Government in this regard.

47. We have already touched – at paragraphs 26 and 27 – on how local democratic oversight could be improved. However, we also want to ensure that elected member input is maximised within the context of the Partnership Board.

48. The Scottish Government’s original proposal was to impose a limit of three elected members for each Partnership Board – partly because of the relative scarcity of NHS Non-executive Directors to form an equal number of NHS representatives. However, that proposal would undoubtedly have created a democratic deficit for some of our larger councils. Under these proposals, we could have seen as little as 4% of the elected membership overseeing 30% of the council budget. COSLA maintains that the public would want stronger local accountability than that and we are pleased that the Scottish Government has continued to work with us on this and related matters.

49. We think therefore that the Scottish Government would need to give very careful thought to applying a nationally prescribed maximum number of elected members. While we recognise that the Board needs to be able to operate effectively and come to decisions, this needs to be balanced against the need for a sufficient number of citizens’ elected representatives to be accountable for the decisions of the Board. We therefore invite the Health and Sport Committee to reflect on the important role that elected members should play on the proposed Partnership Boards.

50. On a related matter, we agree with the position of the Cabinet Secretary when he indicated to the Parliament on the 7th March that “it would not be right to have the executives of the health board as members of the board of the partnership’ and that Health Boards need to ensure ‘that the places on the committee are taken not just by non-executive directors but by patient representatives”. We fully endorse the Cabinet Secretary’s view on this matter; having officials fulfil a governance role in our view blurs the line of accountability.

51. The second main issue that some of our members were dissatisfied about was in respect of the limited number of delivery models which could be used to integrate service delivery (the lead agency model and the body

b_71090
corporate model). There has been limited interest in the lead agency model from within our membership, despite the profile of the work undertaken by the Highland Partnership; and a number of our member councils were unconvinced by the merits of the body corporate model, with the role of the Jointly Accountable Officer in particular being singled-out as problematic. It is worth going into more detail about the two models in question:

**Body Corporate Model**

52. The merits and demerits of this model were debated extensively within the local government family, without reaching a consensus. Some councils already successfully operate a similar structure, where jointly-appointed Directors oversee the activity of the Health and Social Care Partnership. We would highlight in this regard the experiences of West Lothian, East Renfrewshire and others, who can evidence tightly configured integrated arrangements that are capable of producing good population outcomes.

53. Against that, there were many who were concerned about the body corporate model in general and the role of the Jointly Accountable Officer in particular. There is a perceived challenge around the power, budget and authority invested in the JAO role, particularly for large councils – indeed, the body corporate could hold a budget greater than either parent organisation. Some argued, therefore, that given the scale and nature of the budgetary authority, the lines of accountability are not sufficiently strong: the Partnership Board doesn’t carry the same authority or capacity to scrutinise that the parent bodies do.

54. A second perceived challenge was that the body corporate model threatens integrated social work services – inasmuch as it has the potential to separate adult care from children’s services. This was deemed to be of particular importance for those councils with significant levels of deprivation, large numbers of looked after children; and a high prevalence of drug and alcohol misuse; violence and crime; and health inequalities. While it is, of course, open to councils to bring all social work services into the integrated partnership, it was felt that this would create barriers with other important services (such as education); and it would make the budgetary problem even more pronounced by giving the JAO an even larger operational resource to manage.

**Lead Agency Model**

55. COSLA believes that the Lead Agency model described in the consultation document, and in particular the specific arrangements being implemented by the Highland Partnership, represent a key step in the formation of more outcome focused and integrated service delivery models. We are keen to ensure that any gains made by the Highland Partnership are appropriately profiled across both children’s service and adult care, and would support any of our member councils who chose to adopt similar approaches.
56. At the same time, in survey work carried out by COSLA, very few of our member councils indicated that the Lead Agency model was being considered locally. Some councils may wish to explore the use of this model for key services (e.g. mental health) but few indicated that they would take on the population-based approach adopted by the Highland Partnership.

57. We also believe that the lead agency model has untapped potential. First, we think it would be interesting for partnerships to consider the delegation of appropriate public health services from the NHS Board to the Council. There are already examples of NHS Boards and councils adopting an integrated approach to public health and we therefore believe that the mechanisms laid down in legislation should open up the possibility of lead agency arrangements being devised for public health. This may allow for a more focussed approach to tackling health inequalities – and link-in with related council-run service like environmental health and the ‘place-making’ function of councils.

58. Secondly, in coming to an overall view about the means by which health and social care services can be integrated, we looked into the models of health and care delivery that exist in northern European countries like Denmark and Norway. In Denmark, for example, the 98 local municipalities are responsible for all domiciliary personal and domestic help, home nursing, supported housing, nursing homes, and public health care. In other words, local government delivers both the community healthcare function and public health function (which in Scotland currently resides with the NHS). Given that quality of life and healthy life expectancy in Denmark are high, we explored whether such arrangements could be put in place in Scotland (recognising that superior outcomes cannot be attributed to the basic Danish delivery structure on its own - other variables such as public sector investment also play in). We came to the conclusion that the most practical way to secure these arrangements in Scotland would be through the Lead Agency model.

59. We have outlined this possibility not because we think it should be commended to partnerships above other delivery arrangements – only to demonstrate that based on international evidence there are a number of models that are capable of improving population outcomes.

Analysis of the Financial Implications

60. In giving thought to the financial implications of the bill, three broad areas need to be considered: the potential of integrated arrangements to deliver efficiency savings; the mechanics of operating integrated budgets in pursuit of those objectives; and the additional cost to public authorities as a result of the bill.

Potential Efficiency Savings

61. A common definition of an efficiency saving is doing more for the same resource or doing the same with less resource. The financial memorandum
makes clear that in respect of health and social care integration, the objective is to do more with the same:

potential efficiencies should be considered in the context of the scale of the projected increase in expenditure attributable to demographic change… and will need to be reinvested within the partnerships in order to help meet demand.\textsuperscript{10}

62. This is because our ageing population is predicted to increase demand for health and social care services by between 18.4% and 28.7% between 2010 and 2030.\textsuperscript{11} This equates to a potential funding gap in the order of £2.5billion against current levels of investment. So the context for developing integrated services is not about being able to reduce public expenditure on health and social care – no serious commentator thinks that is advisable; rather, it is about doing more (i.e. dealing with increasing demand) within existing resources to improve outcomes.

63. Even then, the financial memorandum presents something of a conundrum. The main areas it identifies which are capable of using resources more efficiently are in respect of delayed discharge; anticipatory care; and reducing per capita cost variation. However, all of these efficiencies are contingent on being able to reallocate resources currently tied up in institutional settings. Delayed discharge efficiencies can be achieved by ‘reallocating expenditure from hospital to community based health and social care’;\textsuperscript{12} anticipatory care plans could result in lowering emergency admissions ‘if alternative care options were available to local care professionals, patients and carers’; and reducing per capita variation – which depends on reducing consumption of health and care resources to the average cost per head for the partnerships – will likewise depend on alternative care pathways being available.

64. COSLA wholeheartedly agrees with the need to shift the balance of care. However, some would argue that the impact of increasing demand has not been fully factored into the Scottish Government’s analysis. Our colleagues in NHS Scotland continue to believe that a more efficient health and care system will be able to stifle demand for secondary care – but not reduce it below current levels. If that supposition is accurate, then we will be unable to make the cash-releasing savings from the acute sector in order to invest upstream in community based alternatives; and if we cannot invest in community based alternatives, we will not be able to stifle demand for acute care. In other words, there is a very real risk of a vicious cycle emerging over the next few years in circumstances of flat or limited growth in public expenditure.

65. However, if we are simply using the NHS acute sector inefficiently, and there is a capacity to disinvest, then a different set of challenges emerge, which are more political in nature: we are going to have to close services.

\textsuperscript{10} Financial Memorandum, paragraph 34
\textsuperscript{11} Financial Memorandum, paragraph 18
\textsuperscript{12} Financial Memorandum, paragraph 27
Now this may be the right thing to do – it may improve outcomes and deliver higher quality care – but we can anticipate these being highly unpopular decisions. We need to be able to inhabit this new landscape – and bring the public with us.

66. Even then, however, we are calling on the Scottish Government and Parliament to resolve the longer-term funding challenges associated with the cost of health and social care to the public purse in Scotland. We are confident that the pressures building on the health and care system over the next twenty years cannot be met by better integrated services alone: the integration of health and social care is necessary but ultimately insufficient as a means of eliminating the £2.5billion funding gap that is likely to emerge.

The Mechanics of Integrated Budgets

67. COSLA agrees that a fully integrated budget – and the use of the ‘total resource’ - is necessary to give effect to integrated service planning and commissioning in pursuit of a common set of outcomes. However, there are a number of operational challenges which flow from the delegation of resources.

68. The policy memorandum sets out three main risks to Local Authorities and Health Boards as a result of operating an integrated budget:

- Budget setting;
- In-year financial performance management; and
- Management of acute sector provision.

69. Taking these matters in turn, there are a range of practical considerations that require some thought. For example, in delegating a budget to another party (whether the Health Board or a body corporate), the local authority would need to be assured that the duties of the Section 95 Officer can still be adequately performed.

70. In addition, the actual budget-setting process will need to be further considered. It will be important that the management of efficiencies/uplifts is agreed by both parent bodies and takes into account of the broader Scottish Government settlement and inflationary/demand pressures before coming to an agreement. It will be also be necessary to synchronise the formal budget setting timelines between councils and Health Boards.

71. For Health Boards with more than one local authority in their area, budgets will need to be discerned for each partnership area, and tensions may emerge as we move from historical spending patterns to weighted capitation. It is vital that the delegated budget from both parent organisations is completely transparent.

72. In terms of in-year financial management, the potential for cross-subsidising activity would be heavily proscribed for both councils and NHS
Boards (both councils and NHS Boards currently use cross-subsidisation as a tool to manage pressures) and this would require greater levels of discipline in spending – and, importantly, solutions to be developed for the management of over-spend. While this is clearly a job for partnerships locally, it is arguably too simplistic to suggest that overspend in social care budget lines becomes a council problem or overspend on prescribing an NHS problem.

73. Finally, on the stability of the acute sector, our NHS colleagues are concerned about their ability to manage District General Hospitals which serve a regional population base (across several local authority areas). The route of this concern would seem to be in the requirement to distribute a significant part of the acute hospital resource to the body corporate, which will then ‘commission’ the level of acute care that reflects population need. Were some of those partnerships to identify a different usage pattern in respect of the consumption of acute resource, it is argued that this could leave these institutions having to build a budget from several different sources without an over-arching strategic plan for usage. What is more, there is concern about what happens in the event that the commissioning partnership uses more acute resource than it had intended to under the joint commissioning plan.

74. We recognise that the scenario of a single Health Board with an irregular spread of District General Hospitals spread across a number of Local Authorities (the most common position in Scotland) is a particular challenging environment in which to progress the integration agenda and does not come without operational risk to the acute sector. However, it would be wrong to insulate the NHS acute budget from partnerships’ commissioning objectives and therefore we need to develop solutions that are capable of managing that risk. For example, there will need to be a supra-partnership agenda around the strategic development of the acute sector within and between Health Boards. We would suggest that this supra-partnership agenda is linked to individual Partnership Agreements. We also need to develop analytical capacities to map cost and activity data across health and social care partnerships. The Integrated Resource Framework pilots are instructive in this regard but now need to be rolled out to ensure that all partnerships have the requisite ability to examine cost and activity within the system.

75. In light of all of the technical challenges set out above, COSLA believes that National Guidance will be required to assist in the delegation of budgets to partnership level.

76. In addition to the issues set out in the policy and financial memorandum, COSLA has worked with local authority Directors of Finance and we would want to draw the Committee’s attention to a number of additional technical issues which are subject to on-going work with the Scottish Government:

- Accounting treatment and VAT
- Financial recording and reporting
Financial controls, assurance and risk
Financial planning, financial performance management and finance function
Capital and assets

77. VAT is a particular concern for COSLA. We are seeking early clarification from Scottish Government and HMRC as to the VAT arrangements that would obtain under the body corporate model. Further thought also needs to be given to the VAT implications of the body corporate acquiring more general financial powers in the future.

Costs of the Bill

78. In general terms, we welcome the Scottish Government’s commitment to funding one-off implementation costs of around £16.3 million, but we are disappointed that there is no funding commitment to the recurring costs for health boards and local authorities arising from the Bill.

79. Having consulted with Local Authority Directors of Finance, we would offer the following observations on the costs of implementing the bill:

- We anticipate that there will be an increased audit burden on statutory partners and therefore the stated additional cost of £150k across Scotland seems too low. The financial recording and reporting costs are likely to increase, irrespective of the integration model adopted;
- We are unsure that funding for the Chief Officer can be met from the current CHP General Managers’ salary.
- We are also disappointed to note that financial provision is being made to the NHS for CHP leadership post-holders who are displaced as a result of the development of partnerships, yet no similar resources, either recurring or non-recurring, are being made available to local authorities.
- We think that other management costs could emerge within the parent bodies as a result of the restructuring caused by the formation of partnership boards;
- The anticipated recurring costs associated with ICT seems low;
- Additional costs associated with development of financial information has been identified for the health sector only;
- It is unclear whether any assumptions have been made around remuneration for Board Members;
- The assumption that support services for the joint boards can be funded from existing CHP support services is unrealistic; not all CHPs currently have the full range of support services that will be required in the new Partnerships.
- Section 45 talks about extension of schemes for meeting losses and liabilities for health service bodies. We have a concern that this will allow NHS to carry reserves from one year to another.
- The Financial Memorandum correctly identifies the risks to VAT recovery and staff pay and conditions harmonisation, and estimates their potential annual costs at up to £32m and up to £27m respectively. We are concerned that the Financial Memorandum does not commit the Scottish Government to fund these pressures should they occur in future.
- Should staff transfer be required, we believe that the TUPE implications are significant and potential financial solutions may not meet TUPE regulations.

**Analysis of the Workforce Implications**

80. A good understanding of the importance of an integrated workforce has been built up over the past decade, particularly - but not exclusively - from the experience of CHCPs. The development of a properly integrated and skilled workforce will continue to be a key factor in ensuring high quality outcomes for service users and carers.

81. Successfully integrated partnerships will need to span different organisational cultures to embed effectively-coordinated teams of professionals working within health and social care settings. Many partnerships have a pre-existing or developing culture of multi-disciplinary working which is based on effective communication, trusted referral processes and a shared professional ethos. However, more work needs to be done to ensure that we fully harness the potential of integrated teams, and to identify and overcome any technical obstacles. For example, despite the successes of the last decade, single assessment processes and the advantages of co-location have not yet been fully realised. Investment in leadership capacity will be needed in order to drive forward cultural change.

82. Recognising and managing the distinctive models of Employee Relations (ER) across local government and NHS Scotland will also be an important factor in developing harmonious delivery models. Following the introduction of Agenda For Change, organisational development in the NHS Boards is progressed through local partnership agreements with the trade unions, while the broader ER framework remains heavily centralised, as expressed through the national partnership model for the NHS in Scotland and UK-wide negotiations on terms and conditions. By contrast, within local government, each council is an individual employer and the bulk of terms and conditions of employment and staff policies are developed locally in conjunction with relevant trade unions – albeit that pay tends to be negotiated nationally between COSLA and the trade unions. Collaborative work will therefore need to be undertaken to assess how the ER frameworks should adapt to the new integrated partnership arrangements. There will also be implications for the way in which trade unions work between themselves and across sectors.
83. Given the potential variance in pay and conditions for comparable posts across local authorities and the NHS, we are currently exploring with our professional associations whether this is likely to represent an equal pay risk. Given the challenges associated with equal pay, we would hope that the Scottish Government could commit to underwrite the costs of any successful equal pay claims which flow directly from the integration of health and social care.

84. Other technical challenges present themselves in respect the secondment arrangements to the integrated partnership and in the flexibility for staff to transfer between the two parent bodies.

85. Different terms and conditions also have the potential to lead to tensions in how health and social care partnerships manage and deploy their resources, particularly in relation to how councils and health boards work to prioritise front-line delivery. We would suggest that while councils may have greater local flexibility to re-shape or re-size their workforce, both organisations must develop and commit to an organisational development strategy for Health and Social Care Partnerships. This is hugely important, because if we are to shift the balance of care, it follows that local partnerships will need the tools to flex and redeploy the staffing resource over time.

86. We have profiled these workforce challenges not because we think they are impediments to change — but we do think that they will need to be addressed if we are to move to optimal integrated arrangements.

COSLA
Public Bodies (Joint Working) (Scotland) Bill

Aberdeenshire Council

Background

Aberdeenshire Council is pleased to submit written evidence on the above Bill to the committee.

Our response to the 6 prescribed questions are detailed below.

Do you agree with the general principles of the Bill and its provisions?

We recognise and support the general principles of the Bill and its provisions, however we have concerns over a number of important detailed elements of the Bill.

These are:

- The nature of the Bill is more prescriptive than we anticipated and is very mechanistic about the steps expected to be taken by Local Authorities and NHS Boards to achieve integrated services. We must ensure that we do not lose sight of the outcomes which will guide the work we need to do to improve frontline functions and activities for people who need them.
- The scope of integration and the fact that Scottish Ministers, without consultation or agreement with local authorities, will have powers, without recourse to primary legislation to extend integration to any function within the local authority.
- The power to further empower integration boards, again without recourse to primary legislation, which would give Ministers the power to establish new public bodies capable of holding a budget, employing staff, borrowing money and acquiring property.
- The balance of power, which seems to have moved from an equal partnership between Scottish Ministers and Local Authorities, to a sense that Scottish Ministers having the ultimate authority over the partnerships.
- Partnership autonomy seems to have increased in respect of the Strategic Plans not being subject to the agreement of the parent bodies, and thus the respective power of Councils and Health Boards are diminished, with an additional omission of the importance of community planning in these arrangements.
- Being too prescriptive of local approaches in respect of engagement.
- A sense that the Bill conveys a general sense of inequality between Scottish Ministers and the democratic sovereignty of elected members.
- Given the diversity of arrangements across health board and local authorities it is recognised that assessing the financial implication of the Bill is likely to have been challenging. The provision of information on the underlying assumptions, while certain aspects are challenged below, is helpful in understanding the initial assessment of additional
costs. The diversity of current arrangements will make distribution of any additional funds across Partnerships complex.

- focus of the financial memorandum is on the additional recurring and non-recurring costs likely to be incurred by health, with an incorrect underlying assumption that all additional local authority costs can be met from within existing resources.
- it is clear that there will be challenges in shifting resources from acute to prevention with the significance of any savings from the development of the Health and Social Care Partnership likely to be lost in the wider demographic challenge.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

Whilst Aberdeenshire Council is committed to further integration of health and care services it has never believed that legislation and inevitable structural change was necessarily the way to achieve it. There is some concern in these challenging times that attention will be diverted away from integrating frontline functions and activities to setting up new legal entities and the undoubted associated work load.

However, Aberdeenshire Council with its partners wishes to use the legislative intent to progress integration to deliver improved outcomes for its citizens and believes it can use the legislation constructively for that purpose.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The following we would consider to be the key strengths:

- focussing on improved health and wellbeing outcomes for all adult citizens as a minimum.
- utilising all parties in improving outcomes, that is partnership working beyond the statutory agencies including natural communities and citizens
- professionally led locality planning especially addressing inequalities with some delegation of commissioning powers to localities
- ensuring best use of available facilities, people and resources

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

- we believe that giving these new partnerships the authority to commission acute services would drive forward improved outcomes through further shifting the balance of care, including a minimum budget contribution by the acute sector to the new partnership.
- the full Council should have call-in powers as well as Scottish Ministers.
At this time we believe most key areas have been addressed, and appreciate that much will be in the guidance and regulations.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

At this early stage we are not certain, as there is no evidence of integration delivering recordable efficiencies.

However, against the three pressures of rising need, reducing budgets and demographic changes it is hoped that some of the benefits will build on current improvement activity and our desire to achieve our aspirations. Even though some of the financial impact of these pressures will be defrayed by imaginative approaches to supporting people, there remains a major funding gap that will require to be met.

Essential is intensive leadership development and this has already started in Aberdeenshire with Councillors and Health Board members and through tiers of officers.

In particular we are expecting to improve care pathways, improving the recipients experience being a central tenet; focus on strengthening staff relationships to achieve better joint working with reduced numbers of assessments and care plans; utilise integrated budgets more flexibly, making better use of all aspects of infrastructure, especially shared facilities and IT systems and consider integration of support functions.

We also intend to strengthen the role of localities particularly in terms of empowered professional staff engaging with communities to progress the preventative and early intervention agendas and increase targeted resources to address inequalities.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Aberdeenshire Council always strives to deliver the best outcomes for its citizens, so it intends to use its integration plans to ensure that the new arrangements are designed to meet these aspirations.

*Aberdeenshire Council*

*15 August 2013*
Public Bodies (Joint Working) (Scotland) Bill: Stage 1

09:48

The Convener: Agenda item 3 is on the Public Bodies (Joint Working) (Scotland) Bill. We continue our evidence taking at stage 1. Our first panel today consists of academic experts. I welcome Andrew Eccles from the Glasgow school of social work and Professor Alison Petch, who is director of the Institute for Research and Innovation in Social Services. Do you wish to make any introductory remarks or comments?

Andrew Eccles (Glasgow School of Social Work): No.

Alison Petch (Institute for Research and Innovation in Social Services): I am happy to move to questions.

The Convener: Fine—that is good. Nanette Milne has the committee’s first question.

Nanette Milne (North East Scotland) (Con): My question is initially for Mr Eccles, but if Professor Petch wants to say anything later, that is fine. You have had an interest in the role of interprofessional working in health and social care. I wonder if you would wish to make any comment on how important you view that to be with regard to securing the proposed legislation.

Andrew Eccles: First, it is very important to have interprofessional working. A lot of it goes on already, in a variety of forms. I have a concern about using a sledgehammer to crack a nut as regards organisational and major structural reform, and we should recognise that interprofessional working takes place in a variety of ways in different localities. It is absolutely crucial, and I do not think that anyone in the room would think otherwise. It is a question of how best to do things and how to learn from the experience of what has been attempted over the past decade or so.

Nanette Milne: I, too, am interested. I have a health background myself, and I am well aware that there can be issues between health professionals and social work professionals. For integration to work properly as far as the culture is concerned, they have to amalgamate.

Andrew Eccles: I agree with you. It is worth bearing in mind that there are also historical tensions between different health professionals: between acute and primary, and between allied health professionals and other practitioners. My experience, having done quite a bit of research on the front line with practitioners, indicates that the process is complex and uneven. I have worked with teams where the relationship between health and social work was, frankly, excellent but there were real tensions between different aspects of health on the same team. We could try to reduce the issue to divisions across different professions, but it can sometimes be a good deal more complex.

Nanette Milne: Has your research revealed any particular reasons for that? Is it down to personalities and local circumstances?

Andrew Eccles: It can be down to personalities. Some reasons that emerge involve other agendas that exist at the same time. When I was doing research some years ago, there was the whole agenda for change within the healthcare system, which preoccupied a lot of people. There was a sense in which people were being pulled in different directions at the same time with regard to where they might put their energies. That would be a long-standing issue with any form of organisational, structural or whatever change in interprofessional working. The context and the other agendas that might be around are pretty important for getting proposals to work.

There is a classic issue around value bases between social work and health. The British Medical Association’s submission to your committee last year raised a point about value bases, medical models and social models. Those are old arguments and it is not an insurmountable issue. One of the key issues is people being able to belong to organisations that are genuinely learning organisations, as opposed to training organisations.

When I look at the proposed legislation and consider organisational issues or issues of procedure, I think that the key issue, again, will be one of working cultures. It will be about spending time and effort getting people to understand where another is coming from and developing trust, which is key. That will be more important than organisational or procedural shifts.

Nanette Milne: Are you saying that that cannot be legislated for, or do you think that the bill will be effective in bringing it about?

Andrew Eccles: A recognition of the fact that the process is not easy is required—it requires time and space. If I mention resources, I mean not necessarily just money. For example, quite a bit of the teaching that I do is with social work managers and health managers. One of the things that becomes very apparent with their organisations is the lack of space. With the best will in the world, front-line practice takes up most of people’s time. The space to be a learning organisation is often at something of a premium.

Nanette Milne: Even with new legislation, presumably you foresee the process as being an evolutionary one.
Andrew Eccles: Yes. I do not think that the bill will guarantee; it would be folly to imagine that. More subtle and complex engagement with some of the issues is required, as is well rehearsed in the literature.

Alison Petch: I endorse a lot of what Andrew Eccles has said. There are some very good examples of the traditional barriers melting away when teams work together at the front line. However, we should not underestimate the large amount of ignorance among different professional groups about what their future partners do.

Increasing people’s knowledge and understanding will address some of that, but we also have a challenge because, in times of uncertainty and change, people tend to scuttle back to their tribes, as it were. We need to ensure that people look in the other direction and see that, through working together, they will better support the people whom all this is for.

The Convener: We have focused on the transition a lot, as do the submissions. If the new workforce is to develop and if more and more care is to be delivered in the community, what do we need to do in the long term to ensure that the new workforce grows, works and learns in the community rather than in acute or other traditional settings? A big shift is being made. What do we need to do now to make that permanent and to go beyond the transition?

Alison Petch: It is important to separate out each group’s unique skills and to determine where much more flexible overlap can occur at the boundaries. We have tended to have distinct professions.

We have talked for years about avoiding having four, five or six different professionals moving into someone’s home. To focus on the individual and the support that they need, we need to be clear about when more overlapping and more development of generic working can occur and when a distinct professional identity is needed, as for some distinct procedures.

We need to reshape the workforce and to ensure commonality in the workforce in focusing on the individual. We tend to have all sorts of disjunctures between the hospital, the community and professional groups in the community. That often gets in the way of the delivery that is needed.

Nanette Milne: Does the bill do enough to bring together all the relevant groups, particularly locally? How do you see the leadership that will be needed to make the bill work?

Alison Petch: You have put your finger on it. The bill per se will not make any of what is proposed happen. I hope that the fact that the bill is here will raise the profile and that the requirements will ensure a focus on trying to get the approach right, but it is not the bill that will deliver—that will come from leadership and having a vision of why on earth we are doing this. We are not moving chess pieces round the board; we are trying to facilitate the best delivery mechanisms.

I am absolutely certain that we must not get bogged down in the architecture and mechanisms. Although it is challenging, we must try to infect everyone with the enthusiasm for and vision of what the approach can do to give people a decent quality of life. We must identify the shared, communal leadership that I hope will move that forward.

Andrew Eccles: I agree entirely with Alison Petch about leadership, which has been inconsistent in the past decade. It is clear from doing research that some people have bought into the approach much more than others; some people regarded it as a process that they had to follow, whereas others were much more enthusiastic. The evidence of that is clear in different areas.

I agree with Alison Petch about generic working, but there are substantial areas in which social workers and people in the health service, for example, do fundamentally different things. People need to feel that their professional skills will not be impinged on. It was interesting that some people regarded even quite small shifts in their working patterns in respect of assessment, for example, as deskilling, whereas other people saw that as reskilling. There was no common denominator; it was a pretty sensitive issue.

It is probably more a question of not having people thinking that they are going to end up as generic workers. However, there is a gap or space in which we can do things in a more generic way while holding together what I think are quite important value bases that exist in health and social care.

10:00

Rhoda Grant: Both of you seem to be telling us that, although the bill will not hamper the process, it will not make it happen.

Andrew Eccles: I do not think that, axiomatically, the bill will make it happen. Some of that view is based on what I see as the merits of the bill, which suggests that there be—to use an overused phrase—some local ownership. Such an approach is useful and welcome, because people do things in different ways and there might be particular circumstances in different areas of Scotland where people want to do things differently.
However, although that is perfectly commendable and although the bill puts down a marker, the proposals with regard to structures, organisations, procedures and the ultimate outcomes will not in themselves shift the situation. Instead, leadership must buy into the process to a much larger extent.

Rhoda Grant: Will anything in the bill as drafted prevent the process from happening? For example, I believe that you said that things were a bit too top-down.

Andrew Eccles: I would advise caution about outcome measures. A wealth of literature and some very fine work on this matter—Toby Lowe from the University of Newcastle is particularly good on it—suggest that the use of such measures can be counterproductive, because people will seek to meet the outcomes and, if you like, measure the measurable, with the possibility that some interesting experimental work or different ways of working at a local level might start to get stifled. That has the potential to be problematic unless there is greater clarity about or better specification of the outcomes.

Alison Petch: The word “outcomes” has very much become the buzzword of the moment, but we need to be clear about what we mean by it and whether we are talking about outcomes for the individual or for communities, or of a particular policy. As far as integration is concerned, we must remember that, as well as the proposed national health and social care integration outcomes, which I think are pretty much going in the right direction with their emphasis on the individual, we have organisational outcomes such as the health improvement, efficiency, access and treatment, or HEAT, targets and single outcome agreements, along with the most important outcomes of all—the outcomes for the individual.

Over the past five or 10 years, there have been real developments in attempts to focus on outcome-based assessment and delivery with the introduction of self-directed support. Indeed, going back to the previous question about the workforce, we need to remember that that major initiative will overlay all of this.

As a result, when we talk about outcomes, we have to be clear about what we mean. If we are not, the danger is that we start to live in a land where everyone speaks the words without necessarily meaning the same thing.

Rhoda Grant: The challenge is that we know that there is an issue, because constituents and front-line workers, who are more often told what they cannot do rather than what they can do, have said so. If the outcome—or, if you like, the desired effect—is that people can live at home, healthier and more supported, and do not come to complain to us, how do we deliver what will amount to a cultural change? After all, we have been talking about the issue for years, but it seems that little has changed. How do we as politicians effect that change and make it happen?

Alison Petch: Perhaps I am just an eternal optimist, but I think that there has been quite a lot of movement on that over the past five or 10 years as a result of the joint improvement team’s work around personal outcomes and the talking points approach. I have to declare an interest, as some of my colleagues were involved in that work. At IRISS, we do quite a lot of work with local partnerships on the delivery of outcomes. The change will not happen overnight—none of these things will happen overnight—but there has been a shift from 20 years ago, when outcomes were never the focus. It is just about the pace of change.

To go back to your initial question about what the bill can do, for me, the most important aspect of the bill is that it states the integration principles, because those are good principles. The danger is that they get lost in all the discussion about different arrangements, the production of plans and who will be the chief officer. I do not know whether there is an opportunity to strengthen those principles, because I know that what can be done in legislation is limited. However, it is important to get across to people that it is not only about the mechanics but about trying to deliver on the key principles that are outlined in the bill.

Andrew Eccles: It strikes me that in this area language is pretty important. It might be interesting to think about what we understand by integration, because there are different models of integration and there is the move from collaboration to integration. I remember that, 10 years ago, when I did some work on collaborative working, I was slightly chided by someone who said, “We are now integrated.” However, that was clearly not the case on the ground, because they were not integrated. It would be useful, when we use such phrases, to explain to front-line workers what their application in practice might mean for their jobs and what they might be expected to do. Integration is quite a heavy phase of people working together or of joint working or collaboration—it is often regarded as one end of a scale or continuum.

Alison Petch says that she is perhaps an optimist. I am not a pessimist, but I am certainly a realist when it comes to the overambition or overoptimism in the past. The overoptimism has probably been about the ability of structural and organisational change to deliver results. One problem is that there has been some linear thinking that, if we do X, Y will follow. In fact, the interface between health and social care is often a complex area, so we cannot have linear thinking
whereby we take the approach that, if we do something organisationally or procedurally, something else will follow from it. The issues are too complex for that. Alison Petch and I have talked previously about the idea of wicked issues. Such issues are not always easily solvable, there are no standardised patterns for dealing with them and outcomes will often be variable. We have to allow space for such complexity.

We must be realistic about what is achievable. We should certainly have a greater degree of working between health and social care, where that is possible. The lesson that we can learn from the past is that there were big ideas that were highly optimistic and in relation to which a good deal more spade work probably had to be done to research what was likely to happen in practice. It is important to keep people on side so that they buy into the approach.

Alison Petch and I are both aware of good research that shows what it takes to get front-line workers to buy in to such changes. There is not much point in simply saying, “You will do this,” because the changes might not make sense to them and they have to see why they should buy into the new approach. Workers have to see that there will be a better outcome as a result of the change and not view them as just another set of procedural changes whereby they are told, “This is how we will now do things.” That cultural shift is important.

Rhoda Grant: I almost disagree with you, because the people who are coming to me saying that we need change and better integration are the front-line workers who go into somebody’s home and cannot, for example, give them a bath, because that is somebody else’s job, despite the fact that that is what they should be doing for the good of the person concerned.

That happens all the time to front-line workers, who must follow rules and regulations that tell them what they cannot do. They see where the need lies at first hand, but they do not have the scope to do anything about it. The bill aims to achieve a change in approach through integration, but how do we get that to happen at management level? To an extent, the issue might be that people are empire building and keeping their own responsibilities close to them. How do we free up people on the front line who want to work in such a way so that they can do so?

Andrew Eccles: Thinking back to the previous attempts, one of the problems for me was the outcome measures that were used. The JP1AF— or joint performance information and assessment framework—outcome measures were essentially around processes. That is the problem. Moreover, organisations might start to meet the organisational targets or objectives first, certainly in times of fiscal pressure. We have to get beyond that particular problem.

The early work that was done by Wilkinson and others back at the turn of the century on work in England involved interviewing chief executives in primary care trusts, who said that their primary concern was to meet the immediate targets of the organisation effectively and that, after that, they might start to look at other areas in which they could work. That is problematic in a target culture in which organisations might be inclined to meet their immediate targets rather than something that might be slightly more ambitious and involve thinking outside the box.

Alison Petch: That is critically dependent on having individuals who see a vision. I am sure that members have heard about the getting it right for Mrs Smith mantra, which led one of the developments south of the border. It permeated throughout the professional groups in the area. I lived down there at the time, and it was on signposts all over the place. It became a collective vision that we were all in this together to make a decent life for Mrs Smith. We could all be the Mrs Smiths of the future. We must have that transformation from delivering on particular targets and having boundaries around who can do what. There has to be a belief that things can be different and can be driven, and we must have leaders who can drive them. I sometimes wonder whether those leaders can be made or whether they are just born and are innate leaders. People must have belief and commitment. It is not just about working through processes.

Andrew Eccles: I agree. To go back to one issue, there will be some work to do to establish that sense of good will among front-line practitioners to make things work, given some of the experiences. I am thinking of the community healthcare partnership in Glasgow, which lasted for four and a half years, in effect. I did work with some of the CHPs in the early stages of setting them up. Enthusiasm certainly existed, but the tensions were clear. We need not rehearse them all here, but they were pretty apparent at the time. That has left front-line practitioners who are probably sceptical and who are likely to say, “Here we go again with another round. We’re going to start to have those structures and procedures.” There is good will, but it has been dented over the past decade. The way that we attempted things perhaps 10 years ago was probably too driven by organisational change and procedures.

Malcolm Chisholm: I read about getting it right for Mrs Smith, which Professor Petch talked about, and was impressed with it. It is not the only example of good practice, but what can we learn from the evidence of where there have been big improvements? I think that there was evidence on
fewer emergency admissions and delayed discharges, for example. We have got the message that it is not about structural change in itself. Leadership was mentioned; perhaps you can mention some other things.

I have a related question. Although structural change will not cause what is required, is it a necessary precondition? For example, with getting it right for Mrs Smith, there was a big organisational change to a care trust. That is not available in Scotland, but is organisational change part of what is required or is it totally irrelevant? If it is totally irrelevant, I suppose that we might ask whether we need the bill at all.

**Alison Petch:** My personal opinion is that the jury is still out on whether elements of structural change are needed. Knowsley is an example of where good outcomes for people were achieved without major structural change. In a sense, we have to look beyond structural change, given that it looks as though elements of it will happen, to focus on the things that are necessary.

It is also important to know that the process is not instant. The getting it right for Mrs Smith approach evolved over 10 years. I fear that the thinking is almost, “Right—the problem’s been around for so long that, this time, we’ll get it right and have it sorted 12 months down the road.” We must appreciate that it will take time.

**10:15**

We must focus on the individual and think about all aspects of their life. People need housing, which is a critical element that tends to be forgotten, and they need training, health support and social care support. If we start by thinking about the individual and all the bits around them, some of the boundaries fall away. I know that the word “holistic” is much misused, but the approach must really consider what is necessary to deliver what people need.

Experience provides key elements that can make the approach work. Boundary spanners—that is a dreadful expression—are leaders who facilitate working across organisations’ boundaries. A lot of attention must be paid to the local context. It is good that the bill refers to localities, but it is essential that people understand communities’ strengths as well as their needs.

What works in Orkney or the Highlands will not necessarily work in the middle of Glasgow. That makes the situation more difficult, because it puts the onus on local leaders to understand the position, engage with their communities and build on local good will, facilities and opportunities in order to deliver. That is more complex than saying simply that we will sort out the situation by re jigging boundaries and ordaining this, that and the other.

There is a pretty strong evidence base from 10 to 20 years’ experience of what can facilitate such working, almost regardless of the structures. That is why the energy should not go into the structures.

**Andrew Eccles:** When we hit problems, we tend to reorganise—that is an old phrase, which I think is wrongly attributed to Petronius. We take that approach because we are quite good at reorganising and we tend to play to our strengths.

Some of the skills that have developed in health and local authority management in the past 10 or 15 years relate to organisation, structures and meeting targets. People might fall back on that skill set when we ask them to integrate health and social care more. They will start to think about how to organise that and the procedures that they could use. We need fundamentally different thinking, which will be difficult, because the way in which we have organised public policy in the past couple of decades has not hugely encouraged thinking out of the box.

Alison Petch was absolutely right about leadership. The last time that such an approach was taken, many people viewed it instrumentally and as something that had to be done, but we are talking much more about purposely working back from a vision of what could be achieved. Doing that will take time.

**Malcolm Chisholm:** To be fair to Scotland, far less organisational change has been imposed here than in England. A lot of the changes that have taken place have involved local authorities and health boards working out their own arrangements. Another view might be that the bill will not make much difference, because it respects and builds on what has developed.

I hear everything that the witnesses are saying about not relying on structural change. I suppose that there are two questions to ask about the bill. First, is anything in it harmful? Let us do no harm. Secondly, can we introduce in legislation some of the more fundamental points that you made about leadership, culture and so on, or is all that not really the stuff of legislation?

**Andrew Eccles:** As I read the bill, I see that a large proportion of space is given to the options for structures and what structures might look like, compared with the proportion that is given to issues to do with training. Actually, the issue is not just about training, as I have been involved in training sessions that did not seem encouraging in the context of the need to think outside the box. I would like there to be more emphasis on the idea that people in organisations need the space to be able to engage in the integration agenda.
There are lots of interesting ways of doing that. Health workers, social care workers and people from other health professions could look at vignettes of patients, in an attempt to understand what a particular patient might need—that can be quite a long process. The approach might enable people to understand why others think differently. It might be that we need a little strengthening somewhere, so that rather than just say that there will be training we say what the training might look like and why it might not simply be done in the way that it was done in the past—it might be a good deal more innovative. There needs to be space for that to happen. That is crucial.

**Alison Petch:** I take Malcolm Chisholm’s point. We have been fairly modest about structural change in Scotland. When the proposals came out, I was pleased that earlier talk about wholesale structural change had been put aside. However, after a few months of optimism I became a little more despondent because, as far as I could see, people were getting bogged down in discussions about who would be the chief officer and how we would do this or that. Some of my initial enthusiasm faded away.

I would like us to recapture some of the vision of the original proposals. An area in which I wonder whether the bill could be much stronger is budgets, because budget pooling will be critical to much of what we are talking about. With the best will in the world, we know that budget pooling is what sends people back to their little territories to try to protect their boundaries. I noted that some of the submissions to the committee express concern that we might start to do this or that. Some of my initial enthusiasm faded away.

Unless we are dedicated to cracking the issues of shifting the balance of care and pooling the support that is needed to prevent unnecessary admissions to hospital, much of what we do will just be frills around the edges. If anything can be done to overcome some of the rather permissive and vague elements of the bill, particularly in relation to what comes from the acute health budget, that would strengthen the bill.

I would also like specific reference to be made to the housing function. I was always taught that delivery depended on equal inputs from health, social care and housing. We used to talk about the three-legged stool, which I fear is in dire danger of becoming a two-legged stool.

Those are the two elements that I think would strengthen the bill.

**Malcolm Chisholm:** I think that your final point will feature prominently in our discussions, as will the whole issue about acute budgets. However, I will not pursue that now, as other members have questions.

**Bob Doris (Glasgow) (SNP):** I think that Mr Eccles said that leadership on health and social care integration has been inconsistent over the past decade or so. I am sensitive to the need to respect local democracy in councils, but constituents regularly come to my surgery to talk about the malaise and the breakdown in relationships, for example when an elderly relative needed residential care or was in and out of hospital frequently. Work does not always seem to be joined up in the way that it should be—although there is some fantastic local practice on the ground in Glasgow.

As a member of Scotland’s Parliament, should I be considering whether there is a need for the bill? I know that the issue is one of outcomes for the individual, not structures. Is the time right to legislate, or should we wait for another 10, 15 or 20 years for some parts of Scotland to get on with the integration exercise that we hope would be happening without the need for legislation?

I will ask you, in a second, whether you think that the proposed legislation is proportionate, but can you comment first on the need for legislation, given the fact that it is not just about structures, although the structures are in there to enable things to happen? Is the time right for legislation in the first place?

**Andrew Eccles:** Yes. It puts down a marker, and it is important that the issue is not off the agenda. It is 12 years since the previous round of attempts to establish some of the issues, and there is a concern that they might start to disappear off the agenda. Having a bill puts down a marker, and there is no harm in that. The bill strikes me as open enough to interpretation regarding what localities might do, which is useful.

It is worth bearing in mind that integration is not a panacea. It will make things better on the ground, one imagines, if it is done well, but a whole range of issues exist alongside it, including unmet need and budgets. There has been some slightly wishful thinking in the past that if we get integration right, those issues will effectively disappear. I suspect, however, that your constituents will still be coming to you five years down the line, even if we get this right. Some of the other fiscal pressures are not going to disappear.

**Alison Petch:** If you had asked me the question 12 months ago, I would probably have said no. Now, the process has gone too far to stop. One therefore has to capitalise on the opportunities in the ways that we have been describing, and we should try to home in on elements such as the acute transition and the transition from hospital to community. The bill should be seen as a final attempt and a final opportunity to get things right. If people do not seize the opportunity, the cynicism
and scepticism will be very great in the future, and it will be difficult to revisit the matter, given the history. If you were now to withdraw from legislating—from viewing the bill as a catalyst for those areas that have perhaps not been at the forefront—some of the energy would be lost. It is too late to retreat from it.

**Andrew Eccles:** An important aspect is the expectation that Government may have of what can be achieved. That is not to say that we should not push the bill and that we should not hope for things to develop from it, but if we consider the history, we can see that one of the problems has been people being overambitious about what such proposals might achieve. That would scupper the bill. We need to think about it a bit more carefully, and more in relation to the longer term. We should be acutely aware that there are some areas of Scotland where there is truly excellent working between health and social care at the local level, and that there are other areas where, for whatever reason—it might be to do with previous attempts that have been made—there is a degree of scepticism. People are at different places. Expectations that do not necessarily match where the different areas are in terms of possible outcomes would kill things as regards the legislative process.

**Bob Doris:** On whether the bill is proportionate, many of the submissions have focused on structures. My reading of the bill and the political narrative around it is that this is not really about structures. Yes, structures must be established and signed off, and they have to be proportionate, but the point is that we must use those structures for the strategic commissioning of services and developing a more joined-up working approach, which is happening already in some parts of the country, but not in others. My hope is that the bill will ensure that that will happen in all parts of the country in a speedier and more strategic way. I do not want to draw you too much on the structures, but is the level of detail in the bill proportionate?

10:30

**Alison Petch:** I repeat what I said earlier: you can beef up some of the underpinning principles to the extent that you can introduce into the legislation some of the much more important areas that we have discussed. In people’s minds, it may well be that it is not about structures, but if we look at the bare bones of the bill, we will see that it inevitably tends to talk about the need to produce a plan. We have had community care plans, which people spent inordinate amounts of time producing. The critical thing is whether people go out and do something differently. You cannot legislate for implementation, but you can perhaps draft some phrasing—I am not an expert at all on this—that tries to reinforce the message that you have just given: that we recognise that it is not about structures. People can look at the bare bones of the bill and think, “Well, that may be what people are saying, but I don’t see much of that reflected in here.” The message tends to emerge more strongly in the policy memorandum, for example, but that is the danger of a bare-bone bill. In the past, there have been moves to have much more conversational introductions. I do not know whether that approach is a possibility.

**Andrew Eccles:** That is an interesting point. I suspect that there is that bareboneness precisely so that people do not get locked into a top-down, heavy approach that tells organisations how they will do things, especially given that different areas of Scotland are at quite different stages. However, the danger is that we will end up with something that is too light in terms of prescription. I would not necessarily prescribe procedures—again, I am cautious about what the outcome measures might be—but I would like to see more weight given to a recognition of learning from some of the research that has been done in the past 10 or 15 years. As Alison Petch said, that is in the policy memorandum to some extent. If the bill is light on structures and organisation—although they are certainly still in there—perhaps the idea of cultural change, which is missing but which needs to be in it, could be emphasised a little bit more. That is an important issue.

**Bob Doris:** Those comments lead me to think that the bill is probably proportionate. I refer in particular to what Professor Petch said. I think that she has said twice now that she would like to see more in the bill about the principles of integration. In our next evidence session, others, including the Convention of Scottish Local Authorities, will obviously have the opportunity to say more about their views. Some partners have said that they would like to see less about the principles and structures in the bill and have asked for that—they will have their own reasons for saying that. You have described the other side of the coin. You say, “Actually, you could say a little bit more about that, please, to beef it up.” and you call it a “bare-bone” bill. That gives me a little bit of assurance that the Government has perhaps steered a middle course to get the balance right.

I know that there is not a question in what I have said, but are there any comments on steering the middle course? I will not come back in with a supplementary question.

**Alison Petch:** At the end of the day, we must remember that the act would become the backcloth against which the activity would take place, but in respect of day-to-day relevance, whether on the front line or at more senior levels in organisations, legislation is not really what drives
day-to-day delivery. Therefore, as you have said, one perhaps has to steer a middle course. However, without repeating what I have said, there are one or two areas relating to budgets and the roles of housing and other partners in which you could be much more proactive.

Mark McDonald: You have given evidence that we cannot expect that just changing an organisation’s structure will enable it to deliver. We accept that; the culture is a huge element. On the other hand, you say that we cannot legislate for the culture in an organisation—we cannot legislate to make people enthusiastic, although it would be good if we could. Does simply having legislative underpinning increase the accountability of those whom we expect to deliver on the agenda?

Andrew Eccles: Yes—that will be the case by definition, given that organisations will have clear responsibilities.

Mark McDonald: A lot of the examples that have been cited of good intentions that failed to materialise in delivery in the past perhaps lacked the legislative underpinning. Such work was driven simply by the power of good intentions, whereas the bill mirrors the intention to deliver but also provides legislative underpinning. Might that make the current approach stronger than previous approaches, which did not have such underpinning?

Andrew Eccles: I am not sure that what you describe is my recollection. I was seconded into local government in 2001 and 2002, precisely at the time of the joint future work. I remember that a number of really quite directive circulars were issued about the expectation for organising protocols and who might have responsibilities.

You might be getting at the experience of community health and care partnerships in Glasgow, which perhaps provides an example of a lack of clarity about responsibility for decision making in the two organisations that were involved. Issues clearly arose there.

I am not sure that I read in the same way as you the comparison between what was expected for accountability last time and what is expected this time. I take your point that it is clear that there will be accountability, but I am not sure that that was problematic last time. It might be clearer this time because of the joint officer having sole responsibility, which CHCPs tried to do.

Alison Petch: We must avoid having false confidence that the bill will necessarily lead to a better solution. We must be cognisant of the experience in Northern Ireland, where structures did not necessarily deliver what was hoped for. I was a researcher and it is almost a searchable question to ask whether the bill will deliver better than a less mandated pattern for the future.

As I said, the fact that the bill has raised the profile might lead one to be optimistic, but it must be appreciated that hard work on all the other aspects that we have focused on is required. In itself, the bill will not create a magic solution.

Mark McDonald: I would not want to give the impression that I think that simply legislating will solve the problems that have existed. I merely suggest that increasing accountability might push the agenda forward more quickly.

Do we come down to the point that we are talking about the people in organisations? Do some organisations have people who are getting on and driving forward the agenda, while other organisations have people who are—for whatever reason—unable or unwilling to drive it forward?

Alison Petch: I would have thought that the former is about 80 per cent of the case. We must also bear in mind the question whether the proposed arrangements will have unintended consequences. What will be the impact on children’s services in some areas if they are not included in the partnership? As with any such development, there are gains and losses. We must have the people—the leaders—who can navigate that and deliver the solutions, regardless of what has been mandated in an area.

Mark McDonald: I take your point. COSLA says in its submission that it wants the bill to be tightly written to cover only adult health and social care. That would limit the ability to expand the model, if it proved successful. Perhaps we can touch on that in the next evidence session.

I think that I understand where you are coming from on the implication that outcomes can be counterproductive. However, I presume that the only two things that we can measure are the input and the outcomes. To me, the outcomes are more important—provided that we get the measures right, obviously—because that is what affects people at the sharp end. Can simply focusing on outcomes be counterproductive? Is how we select the outcomes that we measure the important point?

Andrew Eccles: Part of the general problem in public policy in the United Kingdom in the past 15 or 20 years has been importing what I would call context-free management, particularly into public sector agencies, as we broadly refer to health, social care and so on. The management processes and output processes probably work very well in particular organisations that manufacture motorcars or whatever, but importing ideas wholesale on an outcome basis seems problematic to me. I am not against the idea of outcomes per se, but the problem with emphasising them is that doing so can damage some very good, creative, interesting work.
Perhaps we need to start with the idea of doing something creative and positive with the facts as we see them on the ground, and then learn from that—and from mistakes made in doing it. You might be doing the right thing but doing it wrongly, but you can learn from that if you are doing it at the local level. If people are working towards a set of outcomes that do not make much sense or which have been transported in from another area, they are essentially always working on the wrong basis because they are working towards a series of outcomes that do not reflect the reality of what is happening on the ground.

**Alison Petch:** I think I need to make a fundamental clarification that will show where I might disagree with Andrew Eccles. We must distinguish between something being driven by the delivery of outcomes for the individual, which should be at the heart of the process that we are discussing, and perhaps the more traditional outcome-based accounting-type approach, which I think is the one that Andrew has questions about. The difficulty is that the word “outcomes” now means different things.

**Mark McDonald:** I entirely take on board that point. My concern is that in the past we have often measured the success of things by how much money gets thrown at them, rather than by results for individuals.

**Andrew Eccles:** In the past, we have measured the measurable, which is a process that often means avoiding dealing with complexity. A lot of managers might well be engaged precisely in the process of measuring the measurable as opposed to really getting to grips with complexity, which is sometimes not easily measured.

**Mark McDonald:** Do you think that we measure too much?

**Andrew Eccles:** Personally—certainly, given the sector that I come from—I think that we probably do and that we need to sit back. The interesting analysis of this area comes not from the UK but from people in continental Europe who do quite a lot of work on UK public policy. I would be happy to recommend some interesting studies that ask why Britain shapes its public policy as we do. Although the evidence base for the accounting approach to measuring the measurable shows that it is demonstrably problematic, we continue to do it. I think that that is partly because people have become very skilled at doing it in the past 15 or 20 years, so it is hard to retreat from that and think outside the box.

**Alison Petch:** The difference is perhaps epitomised in the distinction between measuring bed occupancy or delayed discharge, for example, and measuring the extent to which an individual who has been discharged from hospital arrives home having had a good experience and is not back in hospital two days later.

**Mark McDonald:** Is there not an inherent danger that if we say that we are not going to measure X, Y or Z, those of a cynical disposition will imply that we are not measuring that any more because we cannot meet the targets that we have set, or that we are trying to hide something from the general public? Is that not the inherent danger in reducing the number of measurements that take place?

**Andrew Eccles:** Maybe that is the cynicism that we need to get over.

The Convener: That did not sound like an endorsement, as was alluded to earlier, of the prescriptive nature of the bill.

HEAT targets and the use of outcomes have been criticised, but measurement must be a serious part of the bill. Measurement will be applied—some people think to a worrying degree, if it becomes prescriptive—because if people do not reach this, that or the other target, the minister will have the power to intervene.

10:45

**Alison Petch:** The proposed outcome measures for health and social care integration at the national level represent an attempt to grapple with the need for a more nuanced, sophisticated understanding of targets. The system is not perfect, by any means, but there has been an attempt to put greater emphasis on outcomes for the individual—not just where they are but how they experience care. That is a significant improvement, as far as I am concerned. There have been advances in trying to get more sophisticated measurement.

I absolutely agree with Mark McDonald about retreating completely from measuring outcomes. Measurement is much more about trying to get an understanding of the reality of the situation than it is about crude indicators.

**Andrew Eccles:** I agree; I also agree that there has been movement in that regard. My point was that attempts to set outcomes were historically very process driven. I am advising caution because different parts of Scotland are at quite different stages. I remember working with organisations a decade ago in which interesting and creative local practice quickly became usurped by the idea that people would be parachuted in to manage integration. There needs to be sensitivity around allowing things that are working reasonably well on the ground to flourish effectively.

Outcome measures are entirely useful in some cases, as Alison Petch said, but I am expressing
caution because they are often broadly based on accounting principles, which can be very counterproductive. The question is what the outcome measures will do and to what extent we take account of the fact that there are areas of Scotland that are in quite different places in relation to the point at which we might decide to intervene. That seems to me to be a pretty sensitive issue.

The Convener: Do you agree that outcomes partly change the culture and environment in which people work?

Andrew Eccles: It depends on the outcome. If the outcome is what is good for the individual, that might well change people, but a broader set of structural, organisational or procedural outcomes such as accompanied what we were doing 10 years ago can often be problematic and counterproductive.

The Convener: Outcomes are not necessarily bad in themselves, if they are defined and supported by the people who deliver and receive the service.

Alison Petch: That is key to the whole endeavour, and it brings us back to the new model of partnership working, which is about partnership not just among professionals but with individuals. If we are talking about how we motivate and provide opportunities to the workforce, particularly front-line workers, to work with individuals to consider how they can enable them to achieve the outcomes that they want and to have a better life, that is really what should be at the forefront of the approach—the panoply of mechanisms and structures should fall in behind that. That remains the vision that we must try to achieve; that is what should be driving the approach.

It is all about the cultural change that we have been talking about. We must not lose that in our discussions about the outcome-based accounting of the past and so on. From my reading of the bill and the policy memorandum, it seems to me that much of it is about making a difference for the individual.

The Convener: Whether or not the bill is proportionate, I think that everyone agrees that things could be better. We are all muddling towards a situation in which services are delivered better.

Perhaps one way to change culture is to stop thinking in terms of the armies of social workers, medics and so on—who are all human beings, after all, and everyone finds change difficult, wherever they work—and to think about giving people who receive care positive, enforceable rights. Would such an approach sufficiently change culture? Would starting from that point influence the targets, outcomes and so on? Rhoda Grant and Bob Doris talked about what MSPs deal with, such as how individuals are assessed, where they are placed, whether they get a 15-minute visit or a quality service and so on. Perhaps there should be enforceable rights for people at that point.

Alison Petch: There is a strong movement towards having a human rights focus in relation to care, which I absolutely endorse. However, just introducing such an approach will not change things overnight. We must recognise that there will be a long evolution.

During the past 30 or 40 years we have moved in the right direction. We throw up our hands in horror at things that happened 20 years ago, when people were still living in long-stay hospitals. Self-directed support is in place and we are starting to see heartening improvement. If endorsing such approaches can accelerate the move along that continuum, that is all to the good, but just putting the words in the bill will not make it happen.

Andrew Eccles: I agree. In effect, we already have a human rights approach. Article 8 of the European convention on human rights is about dignity, so in circumstances in which people’s health and social care is not safeguarding their dignity they have recourse on that basis. I am not sure that that helps us with the fundamental point about how we achieve integration of health and social care. Statutes might have their uses as motivators, triggers or whatever, but they will not fundamentally alter the most important issue, which is how we change the culture in relation to people’s ways of working.

The Convener: Do you expect the bill to be any more successful than previous bills that tried to address the issue?

Andrew Eccles: That is a big question. The attempt to be slightly less prescriptive about how people might achieve things at the local level is useful. The bill as it stands is a shell, into which much about leadership and changing attitudes must go. It is all in there—the bill talks about leadership and training—but I would like more emphasis on the sheer cultural shift that might be required to make things work.

The Convener: You just lost your academic status and slipped into giving a politician’s answer.

Andrew Eccles: In that case I will give you an academic’s answer: I do not know.

Alison Petch: I would like to think that professionals and the wider community in Scotland will build on the bill to move forward on integration. I am repeating myself when I say that I do not think that the bill will necessarily overcome challenges that have arisen in areas. It is not a magic bullet.
The Convener: We talked about the need for leadership and about attempts over a decade or more to address a situation that is well known to all of us. What have the learning institutions done in that decade to develop leaders and visionaries?

Andrew Eccles: The learning institutions have provided a very substantial research base on the whole area of integrated working. It is all out there—I brought with me a copy of stuff that Simon Caulkin has written on targets in public policy. There is a lot of material on that, and a lot of stuff has been written on integration.

I worked with integration managers in the past, and it struck me that people were so wrapped up in getting through the day-to-day business that they had no space to consider the research. I would say, “Precisely the area that you are talking about has been written about. You should have a look at the research.” The work is there, and it needs to be accessed. When I have worked with front-line managers, in particular, I have always been struck that they are under a lot of pressure and do not have much space to develop their knowledge of what is out there.

I am currently teaching social work managers, who have a powerful protected space of one day a week in which they can start to explore the stuff, a lot of which is new to them even though it has been out there for a while.

Alison Petch: I have a final anecdote for the committee. I used to be involved in a postgraduate course at the University of Glasgow, which brought together managers from a range of backgrounds, including statutory and independent agencies. They came in for a day a week, over a couple of years. The learning that they did together was incredibly powerful—it was not so much about what they heard from us. I remember a health board planner talking about the dreadful difficulties of people not emptying beds. Someone from social work said, “Imagine that that was your grandmother. Would you want her shifted overnight?”

We should make space and find finance for such interdisciplinary learning—I gather that finance is an issue—because it is a powerful experience.

The Convener: If there are no more questions from members, I thank the witnesses for their time and evidence.

10:57

Meeting suspended.

11:03

On resuming—

The Convener: We now move to our round-table session with local government representatives. As is the usual practice in such sessions, I invite everyone to introduce themselves.

Duncan Mackay (North Lanarkshire Council): I am the head of social work development in North Lanarkshire Council.

Bob Doris: I am an MSP for Glasgow and the committee’s deputy convener.

Soumen Sengupta (West Dunbartonshire Community Health and Care Partnership): Good morning. I am the head of strategy, planning and health improvement in West Dunbartonshire.

Nanette Milne: I am an MSP for North East Scotland.

Peter Gabbitas (City of Edinburgh Council): I am the director of health and social care in Edinburgh.

Gil Paterson (Clydebank and Milngavie) (SNP): I am the MSP for Clydebank and Milngavie.

Susanne Harrison (City of Edinburgh Council): I am the integration programme manager in Edinburgh.

Rhoda Grant: I am an MSP for the Highlands and Islands.

Aileen McLeod (South Scotland) (SNP): I am an MSP for South Scotland.

Ritchie Johnson (Aberdeenshire Council): I am the director of housing and social work in Aberdeenshire Council.

Malcolm Chisholm: I am the MSP for Edinburgh Northern and Leith.

Ron Culley (Convention of Scottish Local Authorities): I am the chief officer of health and social care for the Convention of Scottish Local Authorities.

Richard Lyle (Central Scotland) (SNP): I am an MSP for Central Scotland.

Councillor Peter Johnston (Convention of Scottish Local Authorities): I am the COSLA health and wellbeing spokesperson.

Mark McDonald: I am the MSP for Aberdeen Donside.

The Convener: I am Duncan McNeil, the MSP for Greenock and Inverclyde, and committee convener.

Bob Doris will begin the questioning.
Bob Doris: I have a general question. Some local authorities are further down the road to health and social care integration than others. The Public Bodies (Joint Working) (Scotland) Bill will put such integration on a statutory footing. For those witnesses who consider that they have already travelled far down that road, how does the bill dovetail with what you are doing?

Soumen Sengupta: I am not here to tell councils or others how to develop their business, particularly with regard to local democratic processes. I will therefore talk about the long track record of joint working between the council and the health board in West Dunbartonshire.

In October 2010, when we came to enact the community health and care partnership, there was a history of substantial joint working at all levels, particularly the front line, so it felt comfortable and right. That is not to say that staff did not have a lot of questions or that there were not concerns that had to be worked through; indeed, there were challenging issues, including the need to think about territory. However, we had a sound basis on which to do that and the partners involved were keen. Therefore, we, in common with a number of other areas, such as East Renfrewshire, have a much longer involvement in this work. In Inverclyde, which is in the convener’s constituency, integration at the structural level is well progressed.

We are probably in a position in which the bill will not make a substantive difference to how we do the day job. The day after the legislation is enacted, the world’s operational services will pretty much be the same as they were the day before.

The bill raises interesting opportunities on accountability. As we mentioned in our submission, we are keen to streamline accountabilities in the public sector arena that we work in. For all the opportunities that partnership working provides, and given each of the conditions we are trying to tackle, a person can find themselves trying to report to multiple stakeholders at different times. It needs to be clear who is accountable to whom and for what. A shared set of outcomes that relates to the spectrum of the health and social care agenda would also be powerful because it would provide a clarity of purpose for the organisation and the staff, and—we would hope—parity of expectations for our local community, and a clarity of fairness on what MSPs and other elected officials should expect from organisations and the leadership of those organisations.

The need to manage ambition was mentioned in the previous session. The bill is an ambitious step for Scotland, but we should not get overexcited about what a structural change or other changes in the bill will do. Those changes are only part of the solution; there is a lot more work to do.

I am sure that all areas—even those that are not as structurally integrated as we are—do similarly innovative work on the ground, that there is lots of joint working between staff, and that we all have examples of good practice that we could bring to the table.

The Convener: Panel members should come in when they want to.

Duncan Mackay: I caution the committee that there are partnerships that may appear to be more integrated than others, but those with integrated structures may not in practice, on the ground, be more integrated than those that do not have the same structures. The partnerships that have the same structures may or may not be achieving better outcomes than those that do not appear to have the same level of structural integration. By way of illustration, in North Lanarkshire, we have been working towards integration in many ways over many years. We have a suite of integrated services, such as day services for older people, as well as integrated equipment, and integrated adaptation and addiction teams. In fact, those services and the general partnership approach have been consistently well evaluated by external inspections—they were recognised as recently as 2011 by the Nuffield Trust as one of four worldwide exemplars of integrated working. It does not necessarily follow that the structural arrangements of a partnership—inevitably, there will be 32 variations across Scotland—lead to better outcomes for individuals. I caution the committee that, as members heard in the previous evidence session, there can be a somewhat tenuous connection between the structure and the intended outcomes.

Councillor Johnston: In answering the question, let me first put my remarks into context. From a COSLA perspective, we believe that the integration of health and social care is the cornerstone of public sector reform. We very much support the direction of travel. We recognise that an outcomes-based approach that uses resources flexibly, promotes co-production, early intervention and prevention and facilitates service integration is the way ahead.

Mr Doris is absolutely right that we start from a situation in which some local authorities and their NHS partners have already gone some way down this line. Those who know me will be aware that I am a member of West Lothian Council, which is one of the leading councils in this respect, as, likewise, is Highland Council, which has used a different model and has taken a lead agency approach. As my colleague Duncan Mackay has said, other councils have developed arrangements in a different way.
The experience of having all those different starting points leads COSLA strongly to take the view that the bill is in some parts too prescriptive, particularly on the issue of scope. As we argue strongly in our submission, the starting place for all partnerships should be adult social services, but the bill should provide local flexibility to allow the integration to evolve and develop not on the basis of structures imposed by ministers but through local flexibility, local knowledge and local leadership. As we heard earlier, joint working comes not through structures but through local leadership and local cultures developing. That is fundamental to the success of this project of further integrating health and social care.

Peter Gabbitas: In a way, I agree with my colleague from North Lanarkshire Council. I hesitated to respond to that first question on what progress we have made because, in terms of the bill, Edinburgh might seem to be very far forward on integration: I have been the joint director for eight years, West Lothian has had a joint director for a similar time period and, more recently, joint directors have been appointed in East Lothian and Midlothian, which are the other parts of the area that is coterminous with the NHS Lothian area, so we have joint directors in place. At the end of this month, we will have completed a whole year as a shadow health and social care partnership. In terms of what the bill is signalling as the direction of travel, we might seem to be very far forward.

However, I feel that we still have an awful long way to go on integration. There are examples across the country of really well integrated services, whereas in those areas that appear to be fairly well advanced in structural terms the position is very mixed. What counts, I think, is not so much the governance arrangements, although those are important. What I am interested in and passionate about is whether we are making a difference to the lives of the people whom we serve. Are we making our services more seamless? Are the people whom we serve able to see the cracks between the statutory services? Those are the things that I am passionate about.

Ritchie Johnson: I agree with the comments that both Duncan Mackay and Peter Johnston have made.

To give an illustration, in Aberdeenshire we do not have the same formal structural integration that has been described in areas such as Edinburgh. However, like many other councils, we can point to a lot of good joint working practices by joint working teams—particularly in a rural area, where it is essential in order to reflect rurality—and we are doing a whole lot of work around the issue.

Although we believe that, ultimately, legislation would not have been required to move us on, nonetheless the bill has been introduced and, from our perspective, we want to push on. As well as the structural elements, which are inevitably needed, it is even more important to backfill and to support the change with a series of initiatives on leadership, communication and culture, as the committee has already heard this morning. We need not just one approach but a series of things to make the change work and to make a difference. I keep challenging my team and my colleagues with questions about why we are doing this. We need to make a difference to the people who receive our services. If that is not what the change is about, we are missing something. I am not saying that anyone is suggesting that that is not what the bill is about, but we need to keep coming back to that question or we will get drawn into a lengthy debate about structures and principles. Although that might be interesting and of some importance, it is not the key tenet of the agenda. We have to focus on why we are doing this and challenge our teams regularly on that basis.

11:15

The Convener: If integration is going along swimmingly, why do we need the bill?

Ron Culley: I suppose that we could answer that question in a number of ways. In one sense, legislation is an admission of failure; we are saying that we have not been able to do something of our own volition and that we still have to overcome some barriers.

The committee has heard from my colleagues today that a lot of good work is being done locally that is knitting together practice between social work and health, and that will continue irrespective of the bill. However, the bill can address some barriers that still exist in the way in which the health service works with local government. I am thinking specifically of the situation in relation to integrated resources and the extent to which we can start to plan with a total resource for an entire population, particularly the way in which we can integrate the acute sector into that environment. After all, the non-integration of acute care not just with social work but with primary care has probably been the biggest failure of the past decade. Acute care has sat out on its own. One of the fundamental strengths of the integration agenda that the Government has advanced is that it is not prepared to see that happen any longer.

The reality is that, as we move forward in demanding financial circumstances, in what is likely to be a flat-cash situation for the next few years, we need to be smarter about how we use our total resource. Historically, we have probably invested too much in secondary care at the expense of social and primary care. If the bill allows us to be more imaginative in how we use
our total resource, and if we can begin to deploy our collective resources more effectively over time, that will be a success and it will justify the legislation, but there are a number of big caveats that relate to our capacity to do that.

Peter Gabbitas: A few reasons stand out as to why the bill is important and necessary. In terms of governance, as it has been described to me by council lawyers, the Local Government (Scotland) Act 1973 suggests that any committee that has been formed by the council has to be made up of two thirds of elected members and only one third of the alternatives. Different councils have interpreted that in different ways, but my council’s solicitors are quite clear about that. If we create a committee and try to establish a partnership body, we cannot do that if another organisation has two thirds of the votes on it. That is not an equitable distribution. There is therefore a governance issue.

There are also issues to do with assets and different accounting regimes, which arise not so much with the bill but with the regulations that will follow in due course. There are issues with the budgets that will, again, be addressed by regulations and the work that is being done on the back of the legislation.

The bill is therefore required for a number of reasons, but the biggest one for me is to do with community health partnerships. If we look at what they were asked to do by the original legislation, we see that one of their responsibilities was for commissioning and influencing acute services. However, community health partnerships were not established in a way that allowed them to do that effectively. How health and social care partnerships have been positioned and the responsibilities and power that are given to them could fundamentally change the relationship and power balance between primary and social care and the acute sector, and make that a much more equitable relationship than it ever was in community health partnerships. The bill is therefore very important from all those perspectives.

Malcolm Chisholm: There is a kind of continuity between the opening comments and those of the previous panel. We all agree that structural change is not going to deliver what we want, but we are probably going to end up talking about it a lot because a lot of the concerns of local authorities are in that area.

I am interested in what people like and do not like in the bill. My question is really for Peter Gabbitas. I was struck by the City of Edinburgh Council submission. Peter Gabbitas has told the committee some things that he likes about the bill, but the City of Edinburgh Council says —and I do not know whether this is true or not; it is an open question—that there is a gap between the original proposals and what is in the bill and that it has concerns about the position of the corporate bodies and the chief officers. That might move us into talking about structures and technicalities, but it is an important point. I wonder whether Peter Gabbitas could explain that and whether any other council has a similar concern. We all get the message that local authorities do not like the degree of prescription in the bill when it comes to local authorities, but I am interested in hearing any other concerns that councils might have. That is one that I picked out from the City of Edinburgh Council submission.

Peter Gabbitas: When we introduced ourselves at the beginning of this witness session, the convener described it as a session with people from local government, such as Councillor Johnston from COSLA. I am actually from the NHS and local government because I am already jointly accountable officer, and I see the issue through the lens of the NHS and the council.

We put before the committee an NHS Lothian submission, which contains issues and concerns that I will happily summarise, and I also put in front of the committee the corporate response from the council that took into account all the departments in the council, including people in corporate governance, legal, housing, and all sorts of other areas of the council. The response is a composite reflection of corporate concerns.

As the director of health and social care, I have a more narrow view, but I will try to summarise the concerns that are in the submission about how the bill is drafted. The first issue is about scope, which was touched on during the first discussion. The bill is not particularly prescriptive about acute services. That might well follow in the regulations, but there needs to be at least a minimum requirement around acute services. My colleagues in the NHS are more hesitant about that, and they are right to be concerned about it, but colleagues in local government would like the bill to be more specific about what acute services should be in it.

The NHS’s main concern is about the body corporate, its legal status, and its relationship with the parent body. At times, the bill is a bit confusing and unclear about the relationship with the parent body, and I think that that is because it is trying to empower and give a status to the health and social care partnership. In doing so, however, it does not make it clear what the relationship of the body corporate is to the parent body and, as a consequence, both parent bodies in Lothian are concerned about that. Some things do not require the parent bodies’ approval and it does not actually say in the legislation that the plan for which it is responsible has to be signed off by the two parent bodies. We can assume that that might
be what is required implicitly, but the bill does not say that explicitly.

Also, in relation to that, the bill does not say that the parent bodies are to appoint the jointly accountable officer. How the bill is written implies that the health and social care partnership is established and then it appoints the jointly accountable officer. In my case, it is kind of academic because the two parent bodies, NHS Lothian and the City of Edinburgh Council, already have a jointly accountable officer and it is me, but it is more about the principle and what the bill is saying about the power balance between the parent bodies and the organisation.

On delegation, it is not clear whether the parent bodies will retain ultimate responsibility. One of the tests for me would be that, if the health and social care partnership did something really awful to a patient, who would be legally accountable for that? Would it be the health and social care partnership or, in some way, would it be the two parent bodies, or would it be all three? That is not terribly clear from the bill.

There are other concerns about that power and authority, specifically from the NHS viewpoint. For example, the bill says that ministers may appoint people to the integration board directly. There is concern about that power because the policy memorandum implies that it is the two parent bodies that will appoint people to the board, whereas the bill says that ministers may appoint people to the integration board. That implies that, at some stage, down the line a minister could just arbitrarily decide to appoint people who are not members of the health board or the local authority. I am sure that that is not the intention, but at present the bill gives ministers that power.

I think that that is a fair summary of the issues. Well, it is a summary—I do not know whether it is fair; that is for you to judge.

The Convener: Was Malcolm Chisholm alluding to the original consultation? I think that some of the written submissions claim that there has been a departure from the original consultation. Is that the point?

Malcolm Chisholm: That seems to be what some people are saying, but I do not have a view on that. However, it would be interesting to know what the witnesses think.

The Convener: Can Ron Culley address that aspect?

Ron Culley: Yes. I do not think that there has been a departure in terms of the policy intention, but there is a very clear departure in terms of what the bill allows. That is why we are fundamentally concerned about the current articulation of the integration project in the bill, particularly in respect of its scope. All local government functions are within the scope of the bill as it is written. Through regulation, a Scottish Government minister could bring any local government function within the scope of the legislation—not just social care but education, housing or whatever. We are fundamentally opposed to that.

We think that there must be a bill that represents the policy intention and that this bill does not do that. That is why we have strongly advocated an amendment that would provide a much tighter definition of the local government functions that may or may not be delegated. The policy intention is all about adult social care, so we want a bill that carries out that intention. That is our fundamental concern.

Peter Gabbitas went on to talk about many other areas in which the bill offers up powers to ministers. Again, we are concerned about that. We can look at the issue on two axes. One is the relationship between the NHS and local government. We were comfortable with that discussion and wanted to see reform advanced in that area. The other axis is the central/local dimension. We think that the bill will give far too much power to the centre. We want partnerships to be given more authority and responsibility to get on with the job. Our objection is not to legislation as such but to the way in which the bill has been framed.

Gil Paterson: My point is similar to what has just been said about the legislation. When thinking about issues like this, I always try to place myself in a context that I am comfortable with, which is the business community. If customers at the sharp end say that something needs to be changed, and the business representatives, middle management and upper management say the same, what are the directors going to do about it?

It has been said that legislation is sometimes like using a sledgehammer to crack a nut, but it can be used as a hammer to knock down a door or barrier in order to achieve ends that everyone is crying out for. However, I have not heard a single person say in evidence that there is a need for change and for integration to take place. Is legislation the only way for integration to take place? Let us be fair about it and not kid ourselves. Some people say that everybody is moving ahead on the issue. Why, all of a sudden, is everybody moving ahead on it? If integration is such a good idea and everybody thinks that it is needed, why has it taken so long to do it and why is the only way to make that happen legislation?
11:30

Soumen Sengupta: I will try to give part of an answer to that question. I suspect that colleagues will be able to chip in and flesh it out.

My understanding is that, across most of western Europe and in other countries, health and social care integration has been talked about over many years almost as the mother-lode solution to a wide range of problems. I think that, for all of us around the table, it is clearly not the magic bullet or panacea: that will have come across to members. Nonetheless, it is talked about as being a good thing if we could create a structure to get the public sector working that way.

In my thinking about that in our work I ask—as do my colleagues—the question that Peter Gabbitas talked eloquently about. What does integration mean for the end user? How will it make things better for the end user in the way that Ritchie Johnson talked about? It is not just about the acute side, although that is a big issue that we need to look at; it is as much about home care in district nursing, for example. What opportunities are there to provide seamless care to the same clients—patients and so on—such that multiple staff are not being used and we make the best use of resources? Those are the strategic commissioning decisions that we can talk about and which Ron Culley talked about earlier. There is a wide range of enabling elements in the bill, and it strikes me that it is about encouraging integration.

We have also talked about the undercooked aspects of the bill—the bits in which it seems to have not quite got its head round the ambition behind what it is talking about. Peter Gabbitas also eloquently covered that. It strikes me that that is down to the fact that, at the heart of the matter, we are talking about creating an instrument that allows serious commissioning—it is no longer about joint commissioning; it is just about commissioning—between two different types of public sector bodies: NHS territorial health boards and local authorities. Those bodies are set up to operate in different ways with different accountabilities and different scopes, which Ron Culley pointed out.

We know that local authorities organise their services and function in a range of ways—social work and education services, and social work and housing services. Sometimes services work together and sometimes they work apart. We get a bit hung up on trying to create connectivity between public sector bodies, which I think is because of the issues that Peter Gabbitas talked about.

The bill is trying to do something noble and progressive, but that comes a bit unstuck when we ask how we will do that and what the governance and accountability issues are. To some extent, the bill compensates for that by providing far too much detail on, for example, how to put together an integration plan, which seems to be very bureaucratic and procedural. The bill has not quite got its head around some of the big macro structural elements.

Ritchie Johnson: On the challenge around why legislation is needed if everything is already going swimmingly, I said earlier that our council's position is that we do not favour legislation, but that is not to say that we do not recognise that we need to do more collectively with health colleagues and other partners. It is about trying to unpick how we can get a better set of integrated services.

We have deliberately started talking about "integrated service delivery" rather than just "integration" as shorthand; "integration" sometimes implies structural discussions, and we do not want to focus too heavily on that. We come back to using "integrated service delivery".

We have taken that through our councillors, stakeholders and staff; we are looking at layers of issues. There is the macro element, which we have reflected on today and which involves national central Government and local government, and there are regional issues—for example, with NHS Grampian and the three local authorities in NHS Grampian's area. There are also CHP-level, council, service and locality issues. All that needs to be pulled together coherently if we are really going to really push the agenda forward. I think that most people would say that they are up for that, as is absolutely right, but it is about understanding that the landscape is fairly complex.

On governance, to pursue Peter Gabbitas's reference to the body corporate, the chief officer and their responsibilities, we have not fully got our heads around that, either. In Aberdeenshire, we are very close to confirming our position on the model, the scope and how to take matters forward, but we accept that we need to bottom out details on how things will work.

On Peter Gabbitas's example relating to something going wrong, scenario planning or scenario setting might be a helpful tool for asking, "What if ... ?" We could imagine a circumstance and ask how the body corporate would work in that circumstance. What would be the actual responsibility of the chief officer versus, potentially, a director of housing or social work, the council or the chief executive? It is about teasing out those relationships and understanding who ultimately makes the decision, how that works, and whether we have the balance right between empowering the local partnership and the
democratic accountability that some members will wish to retain.

Duncan Mackay: This is an interesting dilemma for parliamentarians. I think that we are hearing widespread support for the policy aspirations for integration, but I think that I am right in saying also that we have a piece of legislation that does not mention adult social care at any point. When Parliament is trying to legislate in that area, there is a dilemma: many of the aspirations could be achieved without legislation, but many might not be achieved with legislation. Officers in local authorities will need to know how to pick their way through the ambiguities in the bill, as it is currently framed, and in the aspirations to achieve the best possible outcomes for the citizens whom we serve.

Colleagues have touched briefly on acute care. My understanding is that it is a ministerial intention that significant elements of the acute sector need to be part of the integration arrangements if they are to work. Certainly, the policy memorandum for the bill is explicit that it sees two disconnects, one of which is the disconnect between acute and primary care. As it stands, the bill does not actually address that. I know that a national working group has been looking at the subject and that the views of some people on this panel will differ from those of NHS chief executives. However, from an operational perspective, fixing that disconnect is absolutely fundamental to realisation of the policy aspirations.

My local authority, North Lanarkshire Council, has three acute general hospitals, but because of the geography of the local authority, people are admitted to and discharged from seven hospitals in four different health board areas. Integration will not help us to manage those complexities. It would help us if part of the required arrangements recognised that people’s experience is so contingent on the acute sector working well and on building strong filters that prevent people from coming into the acute hospital environment when they do not need to. If the bill does not facilitate those things, it will not achieve the aspirations that we all share.

Mark McDonald: I have a question on the ministerial power. I understand the concerns that are being expressed, but there is a flip side to that. When the bill is rolled out and proves to be successful, if there is a desire to roll it out to include children’s services, for example, and the bill defines too narrowly a specific element of social care function that refers only to adult health and social care, we will find ourselves around this table again discussing more primary legislation to include children’s services. That will be like taking a sledgehammer to crack a nut, if the legislation works when we roll it out. How could the bill include that expansive element while retaining a focus that would assuage the concerns of local government?

I take the point about wanting the arrangements to develop organically at local level, but does not that leave us running the risk of finding ourselves in the same position as we found ourselves in at the outset of the current process, when we were sat around a table discussing why local authority A and health board A were pressing ahead with the agenda, but local authority B and health board B were not? Do we run the risk that some will press ahead with the agenda while others will need a bit of a legislative kick up the bum?

Ron Culley: I suppose that there are a few things to say. I will be clear about the COSLA position. We are in favour of local partnerships being able to secure additional service areas coming into the integrated partnership—there are too many of our councils that have already integrated children’s services in their arrangements.

Our objection is not to the type of expansion that is done in the context of local circumstances; we object to the potential for a Scottish minister to say, “We require you to integrate children’s services.” The reason for our objection is that such integration was never a part of our discussion with the Scottish Government over the past two years in advance of the bill, nor is it a part of the policy memorandum. The policy memorandum is clear that the bill’s focus is on adult social care and health services.

We welcome the opportunity that Mark McDonald speaks of, but we do not want the minister—or any future minister—to have the potential ability to force people down that line when it was not consulted on and is not part of the policy memorandum.

In terms of local arrangements, we are comfortable with the legislative framework guiding activity over the next period, but we want an enabling legislative framework in which local partnerships are empowered to use that total resource imaginatively. We think that there are benefits to the bill, but a directive approach will not work.

We want to invest our time and energy in the commissioning agenda, and we want to make local partnerships the bedrock of that agenda in order to ensure that we can use the resource differently in a very difficult financial context. The way we will get there is by writing enabling legislation. It is not about taking powers to the centre, but the opposite: giving powers to localities and saying, “That’s your total resource—use it imaginatively in order to meet the outcomes of
your local population.” That is how we will get success.

Councillor Johnston: Mark McDonald has clearly hit on a live and difficult issue. I am glad to hear that he recognises the importance of allowing these things, in his words, “to develop organically”. It is interesting that the bill requires that the integration plan be underpinned by substantial locality involvement and consultation. That makes it clear that it is local communities, from the bottom up, that are going to drive the changes.

I am here wearing my COSLA hat, not my West Lothian Council hat; our council has integrated children’s services. I emphasise again that integration in West Lothian evolved over time, through people building up relationships and working together, which is the only way we will do this. Imposing a structure centrally will not work—in fact, it will hinder genuine cultural change, and the ability to integrate services locally and deliver joined-up services, which is what we all want.

That is where COSLA is coming from. We want flexibility to allow local communities, working in partnership, to shape the future.

Bob Doris: Mark McDonald was quite right to tease out more of the dynamics regarding the scope of the bill and the policy intention, and I am sure that the committee will reflect on that. Mr Culley and Mr Johnston talked about the need for “enabling” legislation, but such integration has been enabled for a long time—some places just have not done it. Mr Johnston rightly said that the bill is structured in such a way that the requirements on local authorities and health board partners are that the dynamic involve a bottom-up approach with huge consultation at local level.

The point of the bill is to give direction where there has been no change at local level, otherwise there is no point in having legislation in the first place. We could pass a bill that says, “Here’s what we’d like you to do, but if you don’t do any of it, the minister cannot step in.” What would be the point of that?

11:45

I refer you to section 39, “Default power of Scottish Ministers”; where a lot of the issues may emerge. If local authorities and health board partners cannot get around the table and agree a plan—I think that they will; I do not think that the power will ever have to be used—at some point the Scottish ministers should, surely to goodness, have the power to step in and make it happen. Maybe we can have a debate about whether—

The Convener: Can we just get a response? There are four people waiting to speak, including your colleagues. You have made the point quite well. Let us get a response to that.

Ron Culley: We do not disagree with that. Should Scottish ministers have the capacity to ensure that the legislation is followed? Of course they should—absolutely. We disagree with how the policy intention is articulated in the bill. We think that there is a drift, and we want to work with the Government and Parliament to correct that.

Bob Doris: Okay.

The Convener: Is there a clash of two cultures? We have 32 local authorities and a more centralised set-up for health through the minister. Is there a drift because of that? I do not mean a conflict of interests, but the cabinet secretary’s interest is in defending his portfolio’s budget, and he is more susceptible, on a daily basis, to being lobbied and to hearing anxieties from the acute sector. Many of us politicians chase after that and put a lot of pressure on the cabinet secretary to deliver. Does some of the drift come about through that?

Ron Culley: The NHS is a managed service and local governments are democratic institutions, so your observation probably has some weight. Ultimately, we want to ensure simply that the bill does what it says on the tin. The amendments that we would like to lodge, or see others lodge, would result in a bill that we would be more comfortable with—a bill that is in parts more empowering, less directive and less prescriptive.

Use of authority at national level is clearly important in underpinning any legislation—we absolutely accept that. What gives us serious concern is the introduction of discretionary powers, which we think are absolutely not necessary. There needs to be a legislative framework that we can all work within, but partnerships must be allowed to get on with the job. That is all that we are asking for.

Rhoda Grant: The discussion has moved on and we are getting to the nub of the issue, which is about having a bill to facilitate joint working rather than to dictate how it happens. That takes us back to the aim of the bill. We have been talking about shifting the balance of care from the acute sector to primary and home care. If we are going to do more of that, we can do a huge amount using telemedicine and the like, which home carers could help to facilitate. There could be a real opportunity to shift the balance in that way.

How can we do that? Some local authorities have undertaken an awful lot of work to push that forward, and there may be things in the bill that you think are blocking that, and which we need to look at. How can we take along with that move and change those who are more reticent, who perhaps do not have good working relationships
on the ground? How can the Government ensure that the same standard of care is available to Joe Bloggs regardless of which local authority or health board area he is in?

**Peter Gabbitas:** On that last point, my chief executive in health made me jointly accountable, with the director of nursing services, for unscheduled, or emergency, care. She manages the acute component of that and I manage the primary care, social care and community health component.

I will give an example of the things that we are doing to shift the balance. We are about to introduce step-down beds. Many other authorities have also done that, but what might be different about Lothian is that funding for that is coming from the acute sector. We have done the detailed calculations that say that we can manage with fewer acute beds if we have the step-down facility and the correct flow through. In social care, we are commissioning that. It is partly being commissioned by the private sector and partly being provided internally, but the funding ultimately comes from the acute sector. That is all happening without legislation; we are just doing it anyway.

**Soumen Sengupta:** I was going to pick up on a variation of that. Part of the way that we address the matter is by having a smaller number of individuals who are accountable for the totality of the work, as in the example that Peter Gabbitas talked about, where two extremely senior managers are responsible for the totality of the activity rather than three, four or five being responsible.

In our neck of the woods, at a much more local level, if someone has an issue with residential care and someone has an issue about the district nursing input, the same head of service—let alone the same director—will have responsibility for that, can be contacted about it and is empowered to deal with it because they have responsibility for the relevant budget, albeit that, at the moment, they are not pooled budgets but aligned budgets.

That provides a facility whereby, rather than there being 20 people to deal with an issue, there is one director—a single officer—and their team. That should create synergies and efficiencies in driving through change.

However, at the same time, that requires a marriage of solutions. As everyone has said, these are wicked issues. That has come through repeatedly from all our submissions. It is a case of, “How do you eat an elephant? One bite at a time.” The bill is an important bite, but it is only one part of the process and there are lots of other things that have to go on at the same time.

**Ron Culley:** The debate about shifting the balance of care is pivotal. One of the reasons why we have come down so hard in favour of the introduction of acute budgets to the integrated resource is that without that, it will be difficult to redesign services.

I will make a slightly wider point. Across the NHS and local government and, indeed, into the third and private sectors, there is a fairly widely shared view that, into the future, there will simply not be enough money to cope with the change in structure of our population and increasing levels of demand. Investing in prevention and reconfiguring how we provide services will all help, but will never eliminate the basic problem, which we will need to address in time. That is not necessarily something that can be solved through the bill, but we want the Parliament to be aware that, over the next decade, we need a solution that is not only about how we optimise the provision of care.

There has to be a fundamental discussion about our expectations as a society, what the relationship between the citizen and the state should be in the future and how we pay for our care. Let us not lose sight of that as we move forward.

**The Convener:** We heard half an hour ago that the cultural change that is necessary can take a decade or 20 years.

**Ron Culley:** Yes.

**The Convener:** How do you square that with what you just said?

**Ron Culley:** We have always said that we need both. We need to change the way in which we deliver services. That is why we are in favour of integration to ensure that there is closer working between the NHS, local government and our partners in the third sector and the private sector. However, although that is necessary, it is not a sufficient guarantee of change. Alongside that, we need a more fundamental debate about how we fund care in the future, because it is just not sustainable.

**The Convener:** Does that not play back to Bob Doris’s point that the imperative has existed for the past 10 years but the pace did not match the necessity to go forward?

**Ron Culley:** We accept that half of the argument. We accept that there is an opportunity in the bill to achieve a step change. That is fine, but there is another half of the argument that is not being heard and is being buried. That is, to put it straightforwardly, that there is not enough money in the pot for the future.

**The Convener:** Does anyone else have a comment? I will take witnesses first, but a couple of members are waiting, too.
Duncan Mackay: In relation to reshaping care and the balance of care of older people, it is important that the committee recognises that the proportion of older people in Scotland who are in care homes is significantly lower than it was 10 years ago. Some partnerships have performed successfully in reducing that proportion to a substantially lower level through commissioning a series of intensive alternatives, or intensive alternatives along with preventive measures—that responds directly to Rhoda Grant’s question.

Those partnerships that have pushed the level of older people in care homes down to perhaps 25 people per 1,000—the Scottish average is 35 per 1,000—have reached the position that some activities are beyond our influence. Generally, they lie not in primary care—there is often good, strong partnership working between primary care and community social work services—but in the acute sector. That merits further analysis in the context of the bill.

Typically, people arrive at an acute hospital by one of four routes. One route is to arrive at the door, which raises the question whether they arrived there just because the lights were on, as one report put it, and whether they could have had better access to a general practitioner or other support, advice and treatment that would have prevented their arrival at the door.

Another route is through GPs, who are, as the committee knows, self-employed contractors under the national contract, over which there is limited local influence and no influence at all from a purely local authority perspective. Other routes are through NHS 24, over which local integrated arrangements have limited influence, and through the Scottish Ambulance Service, over which there is also limited local influence. The bill must address how to realise the policy aspirations in the context of those routes into hospital, instead of being silent on that.

Peter Gabbitas: I return to what Ron Culley said. If it is not already obvious, I say that I am passionate about integration and about shifting the balance of care, not least because our clients—or service users or patients—tell us that they do not want care in an institutional setting. If it is possible for them to have care in their home, that is their strongly expressed preference.

I am passionate about integration—I believe firmly in it—but it will not solve some of our fundamental challenges, given the amount of resources that we have and the demographic change that is coming. Integration can make a positive contribution, but it will not solve those fundamental problems. I am keen for us to remain sighted on that.

Ritchie Johnson: I will expand on what Ron Culley said, although I will not revisit the points that he made. A wider question concerns community planning as an approach and the focus on prevention to support shifting the balance of care. I agree with Peter Gabbitas that integration can help us to get in and about some of the challenges more directly, but it will not necessarily automatically solve them.

The change plans are examples of efforts to shift the balance of care. The sustainability of some projects that have been set up as part of that and which are intended to tackle earlier intervention work is still uncertain.

The focus of integration is on adult health and social care, but a range of partners, such as housing, parts of children’s services and criminal justice services, which Duncan Mackay mentioned, can contribute to delivering the outcomes. Partnerships will have a formal set of responsibilities, but we must not lose sight of the wider world, which can influence and shape matters. That might come through joint commissioning strategies. Housing is an important element.

12:00

Nanette Milne: I am not sure how relevant my question is to the panel. Peter Gabbitas mentioned community health partnerships. One reason why they failed fairly early was that they failed to engage with GPs. The hope is that that will be improved this time round. We have not heard much about that in evidence so far. The other groups that we have not heard much about so far are carers and the people on the receiving end, who are the reason for the bill being introduced.

What do people round the table think will happen locally? Will the bill help to facilitate an improvement?

Soumen Sengupta: I will try to answer both questions. On the first one, colleagues round the table might have a different view—my position is different from that of Peter Gabbitas, as I am also an NHS officer. Many of the issues come down to looking at the relationship with general practice with regard to the model that Duncan Mackay spoke about. The leadership and management of the current and future partnerships have a responsibility to engage with professionals of all stripes and persuasions, including clinical professionals and GPs.

An interesting conversation is also to be had with the BMA and others about the GP contract nationally and how we create a set-up that obliges all GPs to be part of the discussion, so that it does not include only the ones who are interested in a particular area. That poses certain challenges,
because those staff are colleagues who provide services, so the more involved they are in the “management” of the service, the less time they have available to be part of service delivery.

There are a range of tensions and those are difficult conversations, but it is terribly easy for some of our clinical colleagues to say, “We have not been sufficiently engaged, because something was done that we did not like.” There is an onus on all of us to do all this better.

In terms of patients, carers, and service users more generally, I am aware that to an extent the bill is one of a number of pieces of legislation that relate to the partnerships. Another one is the proposed community empowerment and renewal bill, which gives some powers to all public bodies. In effect, it just clarifies powers or obligations that are already in place for everybody in how we work and engage with our local communities. I am sure that everyone round the table will be able to give lots of examples of us working hard to do that, but complaints that we get and complaints that your constituents bring to you show that there are always instances when we could do better.

However, in addition to there not being enough financial resource across the public service, there are a range of different and increasing expectations. That ties in with Ron Culley’s point. The issue is how we have a conversation with communities at large about what people are entitled to and should be expected to get from within the total available resources, so that those who need it the most get it, which means that, frankly, other people who are not in as much need might have to wait a bit longer or do not get something to the same extent. We will not be able to avoid difficult conversations, irrespective of whether the new arrangements are introduced.

Peter Gabbitas: Nanette Milne’s observation about CHPs and primary care is right. I have recently talked to a lot of GPs about what the integration agenda might offer. As somebody who was responsible for Edinburgh’s CHP for many years, I do not think that we effectively harnessed the hearts and minds of GPs in Edinburgh. I recognise that failing and we need to address it. We are doing specific things locally to try to do that, not least of which is the move back to a locality infrastructure with clearly identified managers to whom GPs can relate in a geographical area that makes sense to them. That builds on what we used to have, going back a while, when there were local health care cooperatives.

Also, we have not fundamentally addressed some policy issues. We have recently moved from a national contract to a Scottish contract, but the change is around the margins, because it is still a national Scottish contract and the number of things that we can determine locally is minimal. If we swapped the balance between what is determined nationally and what is up for local negotiation, that would put health and social care partnerships into a much stronger relationship with primary care, because we could pull a lot of levers that we do not currently control.

Having said that, I am sure that, if you took evidence from the BMA, you would find that it was horrified at the thought of moving away from a national contract. It took a lot of persuasion to get the GPs into a Scottish contract, let alone a more local one. However, that would make an enormous difference. Even a bit of change in the balance between the money that is determined at national level in the contract and what can be determined locally—there could be an 80:20 split, for example, with 20 per cent determined locally—would create a reason to get very active with primary care.

I talked a little about end users, but we have not talked about carers. Carers are fundamental. Everyone here knows the numbers as well as I do but, as I have often said, if carers just decided tonight to stop caring, the entire system would crash. We can never do enough to support carers. We are trying to do a lot more, and I am sure that every authority is doing the same. In the past few years my authority has dedicated extra money for carers, on top of any of the national things.

There is another area that we have not talked about and which was not talked about in the previous evidence session, either. So far, the conversation has largely been about two sets of employers: the NHS and local government. We have not talked about the role that the private and voluntary sectors play, which is fundamental. Some 55 per cent of my social care budget relates to external provision. In social care, 55 per cent of the service is externally commissioned whereas, in the health service, about 100 per cent is internally commissioned. That creates issues in relation to how we will develop integration plans. That is an important dimension, which we have not touched on at all.

Ron Culley: I agree with all of that.

We have been critical of elements of the bill, but it promotes a positive idea in respect of locality planning and it will put legislative force behind the approach. That will require health and social care partnerships to give thought to how they organise themselves locally—it is clear that they already do that.

In relation to something that Ritchie Johnson said, we are at a pivotal moment, as we have the bill that we are considering, and the forthcoming community empowerment and renewal bill, which will renew community planning. At the heart of that is not just the superstructure and how we plan
more effectively for localities using the total resource, but how we engage with communities and give life to the principles that Christie set out in his report.

When we engage with communities, whether we are involving general practitioners, carers or others, we must ensure that we do so consistently across localities, to ensure that we do not have a situation in which the health and care people come to talk to the community on Monday, the leisure people come on Tuesday, someone else comes on Wednesday and so on. Community planning has the potential to achieve that. We have always argued that the areas need to be strongly linked. At locality level, we can begin to make inroads into that and see arrangements develop.

Ritchie Johnson: We were asked about the part of service users and patients in all this. National outcome measures will be confirmed, but locally we have asked how we will know that our investment has made a difference, if we have invested in a different set of cultures, with a different set of expectations about services. We are considering how we can ask the people who directly use services what their experience is now, so that we can compare it with their experience in one, two or five years’ time—so that we have before-and-after scenarios. For us, anyway, we need to get local intelligence so that we can understand the impact of the investment that we are about to make in the new partnership arrangements.

The Convener: What is in the bill for carers? How will it change their lives?

Peter Gabbitas: I am not aware that there is anything specific about carers. I go back to my starting point, which was on our aspirations for integration. We want to create more joined-up services. Quite often, the carer or the person who receives care has to co-ordinate services in their home. I hope that, as a result of the work that we are undertaking in Edinburgh, we can change that fundamentally, so that we are the ones who co-ordinate care, and we do it far more effectively. I often think about the person who is juggling home care and district nursing appointments, and the variety of people who might go into a person’s home. Individual carers should not have to do that, and it is our responsibility to make that more effective and seamless. The bill’s aspiration and its policy intent is to try to make that much more joined up and effective.

The Convener: Should the bill therefore say more about carers’ and patients’ rights? Should there be more positive enforceable rights in the bill to help to change that culture? If we accept that legislation, shifting budgets and working together can do it in part, why not have greater enforceable rights for patients? We had an answer to that in the private session. It was not a very good one.

Ron Culley: You have put me under pressure now. I think that the answer lies in good commissioning practice. Rather than identifying somewhat rigidly what people can expect, we should put our energy into good commissioning practice. As committee members know, that is developing throughout Scotland.

The committee has heard reports in the past that have been critical of commissioning capacity in social work and health, and we recognise that that is an area for improvement. Support for carers must be articulated through the creative use of resources. The idea of disinvesting to reinvest has been mentioned a couple of times. That is about trying to get more money upstream to support carers and the people in their lives and to ensure that carers do not have to draw on formal services, especially the more expensive ones in secondary care.

Good commissioning plans will be able to take us in that direction. Crucially, that will be based on an analysis of local population need and will be able to engage with local groups of carers and other populations. That is where the answer lies, rather than in a fairly rigid articulation of entitlement.

The Convener: That interests me because, when I speak to the people who are involved, they do not like the idea of enforceable patients’ rights. That is what encourages me to keep asking the question. We know about the importance of continuity of care in health—that is well established. However, it does not apply in the community, where people can have several carers in and out of their home, including strangers, and different people at the weekends. Why does it not apply? We are talking about the right to be treated by an appropriately qualified person and not somebody who has just been recruited at the weekend.

A number of issues come to us through casework that would not arise in a hospital or other national health service setting, although sometimes such cases do occur. If more people are to be treated in the community and if those people are not protected by the rights that they would have had in a hospital setting, there is an inequity and a worry there. There is a perception that they will get something less valuable and not of the same quality. Unfortunately, in some cases, commissioning and procurement have worked to people’s detriment.

Soumen Sengupta is up next, but I am glad to see that Ron Culley wants back in again.

Soumen Sengupta: I just have an observation. There is the Patient Rights (Scotland) Act 2011, so
there are other legal instruments that address that kind of issue.

Picking up on Ron Culley’s point about the commissioning plan, that comes down to the quality of leadership and management in a particular area, irrespective of the management structure around the provision of services. Again, the issue is whether we would want that in legislation and whether that is the policy intent. That issue is really down to the calibre of the people who are on the ground providing the service, and how they provide it.

Everyone says that they know the value of continuity of care. At the same time, everyone has talked about scope for innovation. One downside and unintended consequence of being too prescriptive about entitlements is that it negates the scope for innovation in service models, particularly over time and given that needs and resources will vary between areas.

12:15

Ron Culley: I agree absolutely. I understand why people search for guarantees and why it is attractive for parliamentarians and other politicians to discuss the language of guarantees. The challenge is that guarantees create rigidity in the use of public sector resources, whereas the bill’s major strength is that it creates flexibility in the use of those resources.

We can look at the total pot and use the money differently, but that is hard if everything is nailed down. That is why I think that, if we ensure that we have flexibility and if we build the capacity to improve in the commissioning agenda—I agree that we have more to do on that—support will gradually improve for carers and other population groups who absolutely require it.

The Convener: We have a focus on what care recipients get. Two years ago, the committee completed a very good report on the care of elderly people, in which we identified issues with commissioning, procurement, the quality of the workforce, what should be expected and how we train and pay the workforce. That is a good read for the holidays.

Malcolm Chisholm: One of the strongest themes in all today’s submissions and statements is that acute care and particularly its resources must be centrally involved. That is one of the most interesting aspects of the bill, so I am interested in the model that will be used.

Acute care could be involved in a good way or a bad way. It must be involved, but I know that some in the health service fear that, if we went for the body corporate model and acute care was not part of that, we would be almost in danger of reintroducing a commissioner-provider split in Scotland, whereby 32 bodies corporate would have to negotiate with health boards. We do not want that in Scotland, but we want the acute sector and its resources to be involved. What model do people have in their heads?

The most important thing in health is to shift the balance of care but, if we add up shifting the balance of care and the demography, that shows that we will not be able to reduce in absolute terms acute health service budgets. That applies particularly strongly in Lothian, whose elderly population is to increase massively more than that elsewhere—it is to double in the next few decades.

Peter Gabbitas says that we have step-down beds that the NHS has paid for, but we also have extra acute beds that the NHS has paid for. As we shift the balance of care, we will not be able to reduce acute budgets, because of the demography. That must be taken into account. Some of the submissions suggest that people think that the acute sector will be able to reduce its resources, but I do not see that happening in this part of the world, although it might be able to happen in other parts of Scotland.

In view of those factors, what model do people have in mind for the acute sector’s involvement?

Peter Gabbitas: I agree absolutely that we very much aspire to shift the balance of care so that fewer of our resources are used in the acute sector and in institutional settings. There is clear evidence that we are doing that from the national performance indicators. However, given the overall challenges and the demography that we face, it will be incredibly challenging to maintain the acute sector with the number of beds right now.

We have looked at that strategically in our work on a whole-system comprehensive plan. That plan shows that, if the currently rising trend in emergency medical admissions continues unabated—clearly, we do not want that to happen—we will require 800 more beds within the system. The issue is about the extent to which we might be able to affect that gradient, given that it would be an heroic and foolish assumption to think that we could reduce it to zero. Whatever the extent to which all our work on integration, on better unscheduled care, on providing alternatives to admission and on getting people through the system faster reduces that gradient, the gradient will still be there. Therefore, no one should have the notion that massive sums of money could be saved in the acute sector and shifted over into health and social care. Certainly, from all the analysis that we have done within Lothian, that is not the case. However, we want to work collectively to see how we can cope with the
pressures that are already in the system and that will continue over the next 10 to 15 years.

On the question which would be the best model, I do not have the model in my head and I have yet to meet the person who does—it may be that there are such people. I feel that we need to look at the issues in a whole-system way, so the acute sector certainly needs to be around the table and the health and social care partnerships need to have much more influence over acute spending than the community health partnerships had. However, at present I could not move away from that statement to say how we actually do that. We make it work in Lothian, but I could not say prescriptively what the model looks like right now.

Another issue, as Duncan Mackay said in respect of North Lanarkshire, is that whereas matters are relatively straightforward in relation to Edinburgh residents—the vast majority, if not all, of whom are cared for in Edinburgh—our Edinburgh hospitals also support people from East Lothian, Midlothian and West Lothian and, in addition, provide some services for south-east Scotland and certain services for the whole of Scotland. Acute care really has three different dimensions: tertiary specialist care, which health and social care partnerships are not involved in; scheduled care, which we are involved in in trying to influence demand, so the primary care component is important, because it makes the referrals; and thirdly—the three dimensions split into roughly equal thirds—unscheduled care or emergency medical admissions, which is the most important dimension for the health and social care partnerships to be getting in about. I gave an example of such involvement earlier today.

The Convener: Ron Culley wants a minimum share of the acute budget to go to the integrated budget. Is that not the case, Ron?

Ron Culley: Absolutely.

The Convener: Let us hear it then.

Ron Culley: This is a pivotal question, so I will make a number of observations about it.

First, under the body corporate model as that is constructed in the bill, the joint board will be relatively insulated from the two parent bodies. In other words, the bill invests power and authority in the joint board to design a commissioning plan and to see it being implemented. My NHS colleagues are slightly nervous about that because it will be within the gift of the joint board to say that it wants to use the acute sector differently—for example, it might not want to use the acute sector as much. The bill brings together all those collective resources into a single place and allows the joint board to make that type of decision. The fears emerge because the health board will not need to sign off on the commissioning plan.

In other words, the worry is that the budget for the acute sector will be disaggregated—after all, most health boards have more than one partnership within their territory—among a number of partnerships and then reaggregated based on the partnerships’ preferred commissioning model and consumption patterns. All of that might not add up to the amount of money that is needed to run the hospitals. That is a genuine issue that we need to get past, but we have been working on it and I think that there will be a solution to it. However, I am also confident that the solution will not be that the acute sector retreats into something else and sits aside from all this. I think that how we use acute resources has to be at the heart of this.

Over the past few years, the work that has been undertaken on the integrated resource framework demonstrates that there is huge variation among GP practices in their patterns of consumption, including in their referrals to the acute sector. The argument is that reducing such variation will free up some capacity to use resources differently.

However, the bigger point—and I think that on this matter Mr Chisholm has come to the same logical conclusion that we have come to—is that because of the population’s changing structure, integration in and of itself will not solve this problem. Over time, therefore, we will need to have a conversation about people’s willingness to pay for care into their older age.

The Convener: But you are sticking to your argument that we need to take a minimum amount of money out of the acute budget for the redesign to happen.

Ron Culley: Absolutely. We will probably want to look at unscheduled care, or what is known as the emergency pathway, because it eats up about a third of the total resource. That will be pivotal, and we need to explore what that pathway involves. It is not just about front-door and accident and emergency services, but about all the elements of our acute general hospitals that become involved, such as general medicine, psychiatry and so on. Once we begin to think about the issue in those terms, we start to see that a substantial part of the acute budget is in scope.

It needs to be that way, however, because otherwise nothing will change. If we go through the pain of integration and nothing changes, I do not know what we will have done it for.

The Convener: What would a minimum figure be, and who would work it out?

Ron Culley: Peter Gabbitas and I would do it. [Laughter.]
The Convener: I am sure you would, but I am also sure that people in the acute sector would not agree with you.

Duncan Mackay: This is such a difficult question to answer and we are all wrestling with solutions. However, any analysis of the problem must start with an examination of the things that can happen only in an acute hospital environment and the things that happen in such an environment that could happen elsewhere. There will be points of clarity at both ends of the spectrum and points of debate and grey areas in the middle. However, if we do not do that, we will start from the quite pessimistic position that we cannot do anything that happens in an acute hospital anywhere else. If we assume that, we will not be able to explore, say, telehealth, the potential of which is untapped in large parts of Scotland and better developed in others. We have to start from the position that I have outlined before we can reach any meaningful conclusion about the organisation of services, and we also have to look at this as part of a whole system of which the acute sector is a critical element.

One of the issues in the acute and primary care sector is that often old-age psychiatry sits in one area and geriatric medicine in another. Many of the people who are supported and treated through the geriatric strand of activity will have significant cognitive problems, dementia and so on and I suspect that, if we got a group of them in a room and tried to guess which side of the house they were being treated through, that would not always be a straightforward task. That quite significant—and certainly challenging—area of potential integration and development has probably been explored more in some health board areas than in others.

In response to the convener’s question about what would be a minimum, one could say that it is just geriatric specialties and care of the elderly medicine, but that is a very small part of the service provided by hospitals and, indeed, a very small part of most older people’s experiences. Most older people will not go near the specialty—and nor should they. However, things will happen elsewhere in the acute system. Typically, someone with dementia who has been living well at home, often with support from family members or with statutory support, will fall and break their hip. The orthopaedic surgeon who treats them—and who will not necessarily have expertise in and knowledge of dementia—will identify the person as having dementia and will say to the family, “Your mother’s got significant dementia. I don’t think that she should be living at home.” That starts off a whole journey, because no dementia specialist might have been anywhere near that person.

When we start to talk about minimums, therefore, things get difficult. I know that it is easy to set out a general anecdotal position, but such experiences will be familiar to many people who rely on health and social work services. That is the kind of interrogation that we need before we can reach a meaningful conclusion about which parts of the acute system should be included, but I think that if no part of the acute system is included we will struggle to achieve the policy’s goals.

12:30

Soumen Sengupta: I very much echo other people’s comments, but I think that three other points are worth mentioning. First, I am fairly confident that my NHS acute colleagues recognise such issues; they are not walking away from them and, indeed, are spending a lot of time thinking about them. Certainly in my health board area NHS Greater Glasgow and Clyde has undertaken a substantial clinical services review in order to quantify and grapple with these very issues with a view to reporting later in the year. After all, there are no easy answers to these questions.

Secondly, with regard to existing arrangements or indeed the new partnerships, I cannot imagine any senior management or leadership team having any vested interest in, in effect, fracturing acute service provision. I believe that everyone is acutely—no pun intended—aware of the need to think about not only how these changes are made but how they might work with other colleagues on making those changes. Preliminary scoping work has been undertaken in Inverclyde’s community health and care partnership on its relationship with the local hospital and whether there are any opportunities to put things on a positive footing.

Thirdly, I know from work that we have been doing and conversations that I have had with clinical colleagues that an issue that keeps emerging is the relationship between GPs, acting in effect as gatekeepers, and their acute consultant counterparts in other services. To some extent, that ties into Duncan Mackay’s comments. If locality planning promises anything, it is the ability to facilitate and strengthen, through the use of information technology and other means, direct relationships and communication between clinical staff working in primary care, including GPs, and our acute clinical colleagues across the board, to ensure that patients are not only supported properly on a seamless pathway but on the right pathway. Of course, that will involve understanding that these people are highly skilled and technically capable individuals who are able to work outwith their own narrow specialties and can exercise quite proper clinical judgments on some of these matters. We simply need to facilitate that.
Ritchie Johnson: It is difficult to define a minimum level of acute service and no one has an easy answer to that question. However, as I said earlier, we need to concentrate on the basic question of what we are doing this for, what we are seeking to integrate and what we want to improve; that might be a way forward and help to inform the debate about which components of the acute service might be better in scope than out of scope. Instead of focusing on the territorial or budgetary components of the issue, we need to come back to outcomes, what will make a difference to people receiving our services jointly, what should be brought into scope and which parts of the acute service would fall into that sector.

The Convener: We have come to the end of the session and I thank everyone for their attendance, participation, views and written evidence. I would like to think that, as far as the evidence is concerned, this is an on-going situation and if you read anything that you strongly agree or—as is more likely—strongly disagree with, we would be keen to hear your comments via the clerks.

Meeting closed at 12:34.
Do you agree with the general principles of the Bill and its provision?

Yes. The general principles and provision are welcomed and follow on from the previous consultation on the Scottish Government’s proposals, responses made, and the Scottish Government’s subsequent response to these.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill sets out a coherent framework within which integration can be progressed but leaves room for local partnerships to develop “best fit” solutions within statutory boundaries. It is felt that this strikes a good balance and it is believed will help to achieve the stated policy objectives.

The extent to which the stated policy objectives will be achieved will be largely determined by two factors: (1) moving from a focus on outcomes at a high strategic level to personal outcomes for individuals to ensure seamlessness at point of service delivery (2) effective locality plans which link to, and heavily influence the Integration Authority strategic plans.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

The coherence of the policy objectives is a key strength. They will have to be followed through at a personal and locality level supported by an approach which values enablement and coproduction.

Aspects of the policy memorandum are welcome reminders:

- “Integration is not an end in itself – it will only improve the experience of people using services when partner organisations work together to ensure that services are being integrated as an effective means for achieving better outcomes”;

- “legislation alone will not achieve the scale or improvement that is required . . . Leadership is key, locally and nationally . . .”

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

It may be that the following will be picked up in regulations etc but as it stands, the Bill could be strengthened in the following areas:

a) public accountability arrangements – section 33 mentions a performance report. It may be helpful to link this to a focus on outcomes for avoidance of doubt;
b) Statutory public engagement responsibilities – for instance it would be helpful to clarify the position of Public Partnership Forums (PPFs). In Ayrshire, the PPFs have proven to be very effective support to public engagement arrangements across the totality of health provision;

c) Consultation arrangements – various references are made to issues such as the preparation of the integration plan but there is a substantive issue to be addressed concerning any implications for consultation arrangements in relation to proposals for service change made by the Integration Authority;

d) Following on from this, it may be helpful to clarify approval processes in instances where a strategic plan proposes major service change. In particular whether the Cabinet Secretary will continue to hold what would effectively be veto powers over the Integration Authority’s plans;

e) Whilst it is helpful that the Bill makes consistent reference to integration planning principles these are silent on the need to ensure effective clinical / care governance;

f) Staff governance is a statutory requirement of NHS Boards and the Bill is fairly silent on what arrangements (if any) Integration Authorities will be required to put in place.

g) There is a need to be more explicit about how the Integration Authority will be scrutinised jointly, by external scrutiny agencies;

h) In terms of analytical review of the Bill as a whole, there may be a case for considering whether the balance between what is on the face of the Bill and what will be in regulations could be improved. For instance while regulations will define the scope of integration, it is on the face of the Bill that the responsibilities of a Chief Officer are subject to the agreement of Scottish Ministers.

What are the efficiencies and benefits that you anticipate will arise from your organisation from the delivery of integration plans?

Efficiencies and benefits are anticipated to arise as follows:

a) The focus on outcomes (providing this is reflected in performance regimes);

b) The introduction of locality planning – this should streamline community engagement across the four sectors and maximise the opportunities for an assets based approach while engaging local users, carers and professionals in an agenda which is real for them. It should also bring a sharper focus on tackling health inequalities;

c) The principle of joint and equal responsibility – this should help reduce “hand offs” between the statutory agencies;
d) the engagement of the third and independent sectors as strategic partners – this is already helping to shape effective plans in services for older people;

e) a logical framework reflected in the flow of the Bill from the model of integration to the integration plan to the strategic plan with consistent integration planning principles throughout – this will bring a much higher level of consistency and focus to joint endeavours;

f) an improved approach to making investment and disinvestment decisions based on a clear process and evidence base and best use of integrated resources;

g) greater potential for a joint strategic commissioning process which is based on improving outcomes at both a strategic and individual level, supports effective service change and views issues from a user’s perspective.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integration plans will bring a rigour to setting out what the Partnership is responsible for and how it will be funded. Coupled with the strategic plan setting out how the Partnership will deliver its responsibilities it will give greater transparency to how all of this directly relates to improving outcomes. Crucially, however, it must also link to effective locality plans which should capture how refreshed relationships between the statutory, third and independent sectors and local communities can also improve outcomes.

Other Comments
There will be a need to ensure that there is sufficient Non-Executive Director capacity within NHS Boards to support the effective running of the Integration Authorities. This may be a particular challenge for NHS Boards with several Local Authorities within their Board area.

NHS Ayrshire and Arran
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

NHS Dumfries and Galloway

Introduction
NHS Dumfries and Galloway has a good history of joint working with its Council partners in the provision of health and social care services. For over 10 years this joint working has seen our partnership make significant progress in driving forward care and support in the community and ensuring the development of services that supported adults, including those with a Learning Disability, Mental Health problem as well as Older Adults, in having access to a range of community services and support.

We recognise the significant opportunities challenges that face our society that result from the changing demographics and we have agreed key principles with our partners in addressing these through significant change programmes in this region. Our principles include the development of locality planning and delivery, delivery as close to home as possible, underpinned by technology where appropriate and by person-centredness. Our change programmes which are driving these principles forward include the development of our Reshaping Care for Older People programme – Putting You First, the development of care and treatment pathways that will underpin our planned new District General Hospital and ongoing partnerships with the Council to provide re-ablement, anticipatory care and early intervention support.

This response builds on our joint submission to the Scottish Government’s consultation on their proposals to integrate adult health and social care and on the principles for integration agreed with our council partners.

Do you agree with the general principles of the Bill and its provisions?

As a result of both our joint working in the past and the current range of work taking place now, we have, as a partnership, delivered good outcomes against national standards and benchmarks. This includes our partnership providing among the highest level of intensive homecare for the over 65s in Scotland – enabling more older people to remain at home with the care and support they need and maintenance of generally low levels of delayed discharge from an acute setting – demonstrating joint working to enable people home from hospital when they no longer need to be there.

We recognise that there are inconsistencies of provision and outcomes for people across Scotland and one of the principles of the Bill is to reduce this level of variation through legislation and to use legislative levers to improve the quality and consistency of health and social care across the country. To this extent we are in broad agreement with the principles and scope of the Bill. However, in our joint response to the consultation, our view was that any legislation should be
permissive rather than prescriptive in setting out the models for integration – recognising the real differences in the configuration of partnerships across Scotland and the opportunities for innovation and local responses. We note however that the Bill, as it stands, sets out only 2 permissible models under the proposed legislation.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill has been developed against a context of unprecedented demographic and financial challenge. While we agree that there is scope across Scotland to improve outcomes for people through an integrated approach a concern is that the structural changes demanded by this legislation, which will potentially put in place new layers of decision making and governance, will prove a distraction in relation to the pressing need to deliver transformation on the ground, at pace and in a short timescale and in the context of ongoing financial efficiencies. Every support should be provided to partnerships to ensure the focus on outcomes and transformation rather than transactional and structural change.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

We consider the following to be the key strengths of the Bill:

- Opportunity within its current structure and permissions to enable a ‘life-course’ approach and through that address the significant challenge of health inequalities in Scotland;
- The focus on outcomes rather than outputs;
- The focus on developing transparent and trusting relationships between Council and NHS Partners;
- The clear direction of travel in regard to supporting shifts toward prevention, early intervention and in the balance of care;
- The focus on an agreed strategic plan that sets out how the partnership will deliver agreed outcomes, and ensuring accountability for delivery, coupled with local reporting;
- The locality focus that delivers the agreed strategic aims in a way that makes sense locally and which takes account of different local contexts;
- The strong ethos on partnership, personalised and person centred approaches and on consultation and involvement at every level.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

In a number of ways we have been here before and we should celebrate the real progress made under Joint Future as well as learning from its shortcomings. One aspect of this has to be the consideration of both harmonised terms and
conditions for staff and the development of genuinely joint IT systems that are focussed on the individual, rather than the needs of the system or a single organisation. Maintaining current systems may reinforce current cultures rather than supporting the real cultural change and transformation that we require to address the challenges and opportunities ahead.

Further challenges arise from some lack of clarity on the reporting role of the structures set out in the Bill and while more guidance has been flagged this should be made available to keep pace with the work partnerships are already undertaking on the ground.

- **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

In common with other Health Boards and partnerships, NHS Dumfries and Galloway has a well developed efficiencies programme that supports us in setting and delivering efficiencies targets year on year. In this context it is difficult to identify immediate efficiencies and benefits over and above those that we have already identified through effective joint working across our *Putting You First* programme and through our joint finance group agenda with the local authority.

We recognise a number of significant challenges and pressures that may arise in the implementation of this work in relation to programme management, management re-structuring and in delivering the depth of engagement and involvement commensurate with the provisions of the Bill.

It should also be recognised that while efficiencies are anticipated in the Bill and its accompanying papers, that this is essentially an approach to delivery of improved outcomes and better quality. That notwithstanding, in the longer term we would anticipate efficiencies and benefits being sought and developed in areas suggested in the financial memorandum e.g.:

- Efficiencies through a focussed approach to anticipatory care, prevention, avoidance of unplanned admissions to acute care and early intervention;
- Efficiencies through shared services, rationalisation of the shared estate and shared/joint management opportunities being sought;
- Locality focussed efficiencies through a geographic approach to commissioning and service provision;
- Partnerships and service development with the 3rd and Independent sectors in delivering innovative approaches to care and support; and
- A focus on de-commissioning through the strategic planning process.
**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Our ambitions in developing locally integrated services are aligned to those set out in the Bill. We anticipate being able to develop seamless pathways of care and support that minimise delays and duplications in care and support and which are safe, person-centred and of a high quality. We anticipate an integration plan that sets out how we as a partnership will maintain good outcomes in relation to prevention of unplanned admission, maintaining low levels or no delayed discharges and which support our targets in reducing length of stay.

We are already underway in evaluating people’s experience and views of care and support through our *Putting You First* programme and this evaluation will support our understanding of the effect that integration will have on the people that use services, enabling us to adapt and change as necessary in light of these findings. We anticipate an increasingly personalise and person centred approach that is locally delivered wherever possible and where people experience a system that is built around their needs and therefore easier and smoother to navigate.

**NHS Dumfries and Galloway**  
2 August 2013
Introduction and General Points

1. Scottish Care welcomes this opportunity to contribute to the Health and Sport Committee’s scrutiny of the draft Public Bodies (Joint Working) (Scotland) Bill. Please find below some points of general comment together with our response to the specific questions as requested. We would also be happy to provide any supplementary information the Committee might wish or to participate in any evidence sessions the Committee might hold.

2. Scottish Care is the representative body for private and voluntary sector providers of Care Home and Care at Home Services across the country. In relation to older people’s care, this sector provides 85% of the care home places in Scotland and over 50% of care at home. There are more older people in care homes any night of the week than in hospitals, and more social care workers employed in the private and voluntary sectors than in the public sector (See attached for more detail). The thrust of integration has to reflect this and focus on the joint working of all service provision and not just of the public bodies. In our view the title of the Bill could more usefully be *The Public Services (Joint Working) (Scotland) Bill*, embodying from the outset that the non-statutory (private and voluntary sector) organisations are an integral part of service delivery and essential parties to the new arrangements. Without this being signalled on the face of the Bill, the danger is that some of the progress, ownership and momentum made under the Change Fund, which has been premised on a 4-way partnership, may be lost.

3. The mundane title of the Bill might also tend to obscure the fact that its impact is potentially transformational in terms of the Health and Social Care landscape in Scotland. Although its reach is initially confined to Adult Services, it is hard to see how this can happen without corresponding changes in other areas of provision, and this is borne out with the initial experience of change in Highland. Accordingly, it is crucially important that the Bill is fit for purpose and does all that it needs to do at this stage. We need to get it right. It also has to progress in a way which maintains the broad-based political, professional and public consensus around the need for change and the merits of greater integration.

4. In our view the Public Bodies Bill cannot be seen in isolation - it is one plank, albeit a very central one, of the Government's wider strategy for Health and Social Care reform. It therefore has to clearly articulate with the other key elements of Reshaping Care, Self-Directed Support, Strategic Joint Commissioning, the Change Fund, the National Dementia Strategy, Housing, etc. The chances of joined-up working are
likely to be significantly enhanced if we start from a position of joined-up policy. Some reference to this connectedness within the Bill would therefore be desirable.

5. From a provider perspective, we are concerned that the Bill contains some inconsistent and possibly injudicious use of language in referring to the private and voluntary sectors as commercial and non-commercial providers of social care. In relation to Reshaping Care the terminology used has been the Independent and Third sectors, and it would at least be consistent to continue that usage. Given they are all providing public care, the most neutral distinction would be between statutory and non-statutory and then to use private and voluntary if there is a particular need to distinguish further within the non-statutory category. To the extent that the term commercial is useful it would apply to all care providers, given their need to operate effectively as businesses, to cover cost, and to achieve some element of return for reinvestment.

6. Much of the success of integration and the delivery of improved outcomes will depend on the on-going development of the workforce and again, this needs to be carried out on a cross-sectoral basis, looking at the overall staffing requirement, recruitment and retention, the harmonisation of roles, greater flexibility, and clarity of terms and conditions. We recognise that this may well feature in subsequent guidance, but feel that some requirement to have a comprehensive Workforce Plan as part of the Integration Plan could be referred to in the Bill itself.

7. The non-statutory providers of social care services believe that greater integration is the way forward, although as highlighted they feel dangerously left out of the Bill. The required integration cannot simply be between the public bodies. We also believe that integration, if done properly, can deliver improved outcomes for service users, and although in itself not a complete answer to the emerging care gap could at least allow us to make more rational and efficient use of the existing resource pot. We do not want this to be seen down the line as a missed opportunity.

Scottish Care’s Response to Questions Posed by the Health and Sport Committee

1. Do you agree with the general principles of the Bill and its provisions?
Scottish Care supports the policy ambition to improve the quality and consistency of health and social care and believes that to give people the best possible access to and experience of services they require, we must all be working together. We agree with elements of the current Integration Planning Principles, including a need for service user-focused integration and anticipatory and preventative care. However, Scottish Care believes that these alone are weak as a set of guiding principles.
The principles of the Bill need to be expanded in order to strengthen the roles of non-statutory partners. An explicit principle of the Bill must be the full involvement of non-statutory partners in the planning and delivery of services. The private and voluntary sectors are significant providers of social care - in 2012, these sectors provided 88% of care home places and 51% of home care hours for older people (Commissioning Social Care, Audit Scotland, 2012) – and must be recognised as such for meaningful integration of health and social care services to take place.

The Bill’s principles need a stronger emphasis on quality. Whilst improvement in the quality of health and social care services is a prominent theme in the Policy Memorandum, this fails to resonate in the Bill and must be corrected. Otherwise, the ambitions for integration risk getting lost amongst the specific functions involved in making joint working a reality. As Scottish Care continues to argue, quality must be positioned at the forefront of all decisions around health and social care delivery but is often lost, particularly in commissioning, to the issues of cost, time and task. The Bill provides an opportunity to direct future planning and delivery in the right way, but only if quality is embedded as a key principle.

Similarly, Scottish Care recommends that the principles of the Bill are amended to incorporate a human-rights based approach. The Integration Planning Principles and the Policy Memorandum strongly advocate integration based on the needs and outcomes of individuals. By embedding the human rights principles of participation, accountability, equality, empowerment and legality into the Bill, the legislation would more readily articulate with other initiatives such as Scotland’s National Dementia Strategy and would align itself more effectively with the national drive to better recognise the rights of individuals.

Finally, the principles of the Bill need to be explicitly aligned with those of the Change Fund and Reshaping Care for Older People. These include:

- Commitment to working in partnership to find positive solutions to local challenges
- Commitment to pursuing best value and added-value service developments, with flexible responses to changing patterns of need
- Commitment to working with all sectors in local and regional capacity planning
- Commitment to ensuring that the drive for quality and the centrality of people who use services remains the top priority within a focus on delivering national, local and personalised outcomes
- Commitment to developing preventative approaches and anticipatory care planning, together with community capacity building.

Given that the Change Fund and Reshaping Care for Older People initiatives have, to an extent, functioned as a testing ground for much of the joint working agenda, it seems logical and important that this legislation builds on what has already been established.
2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
Scottish Care recognises the importance of correctly legislating for joint working of the statutory agencies as a means of driving this new model for service planning and delivery. However, the Public Bodies Bill will only go so far in achieving its policy objectives if it maintains its narrow focus on the joint working of public bodies and fails to recognise the role of non-statutory partners. Whilst the Policy Memorandum is clear that joint working needs to take place with these partners, they are entirely unlegislated for in the Bill. Scottish Care feels there must be more read-across between the policy and legislation.

Whilst we recognise that forthcoming statutory guidance and regulations will most likely strengthen the roles of non-statutory partners and that not everything must or should be built into legislation, the total lack of reference to them is an obvious weakness here. Having felt encouraged by their involvement in Reshaping Care for Older People and the Change Fund, providers are likely to feel that the shape of the Bill itself is a retrograde step for real partnership working across all sectors.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
As afore mentioned, Scottish Care believes that the Policy Memorandum for the Public Bodies (Joint Working) (Scotland) Bill is actually relatively positive in its ambitions. Scottish Care welcomes its intentions to improve services and outcomes for people, and is encouraged that the need for integration outlined is not based primarily on financial drivers. It is important to recognise that the priority for integration is the people whose quality of life depends on the services that are provided for them, and is not solely about attempting to address a diminished resource pot. The Policy Memorandum is also progressive in its acknowledgement of the importance of partnership working beyond local authorities and Health Boards.

Scottish Care also welcomes the options afforded to local areas in choosing a model for integration, whether that is the body corporate model or delegation of functions. Whilst the choice of model at a local level is not of principle concern to us, we would want to emphasise that our core concern of establishing the full representation and participation of non-statutory partners is applicable to all models.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
There are a number of areas in the Bill that must be strengthened if joint working is to be effective and meaningful:

**Governance, Planning and Delivery Structure**
- There needs to be more clarity on the position of non-statutory partners on integration joint boards, and this area of the Bill ought to be more explicit. Further consideration must be given to membership on integration joint boards, and there must be explicit listing of who Scottish Ministers see fit to joint them. This is currently too vague.
• Consideration must be given to who holds voting and veto rights on integration joint boards. At present, Scottish Care is concerned that the lack of these rights out-with statutory partners represents a regressive step in meaningful joint working.

Consultation and Engagement
• There must be a stronger guarantee that non-statutory partners will have a significant voice and contribution in the planning and delivery of integrated health and social care.
• A clear area of concern within the Bill is the ability of local authorities and Health Boards to make changes to an approved integration plan without consultation – this must be amended to ensure that consultation on changes is compulsory.
• As significant providers of social care in most local authority areas, non-statutory partners need to be included as guaranteed members of strategic planning consultation groups rather than leaving their inclusion uncertain.

Regulation and Commissioning
• Regulation and commissioning will be key to the success of integration and its ambition to improve outcomes for people who use health and social care services.
• Scottish Care welcomes the section in the Policy Memorandum covering the joint scrutiny roles of Healthcare Improvement Scotland and the Care Inspectorate. However, due to the importance of this scrutiny, we would want to see mention made of it on the face of the Bill.
• A more explicit link with Joint Strategic Commissioning needs to be made, along with the development of clear national standards and a regulatory framework. Scottish Care continues to advocate the need for this, as we have expressed previously to the Committee.

Performance Reports
• Scottish Care welcomes the requirement to review and reflect on the delivery of integration on a regular basis. However, we feel that the required reporting needs to go beyond an assessment of specific integration functions and instead needs to evidence on an on-going basis how integration is improving outcomes for people. As the Bill itself indicates, further decisions need to be taken around the form, content and publishing time of performance reports rather than leaving this to political decision making at a local or national level.

Integrated Budgets
• Services need to be underpinned by flexible and sustainable finance, which prioritises the needs and outcomes of service users over the organisations which deliver them. There must be a guarantee that integrated budgets will reflect what is required to meet outcomes for people effectively and to encourage a diverse local market for choice, rather than sustaining vested interests.
• The Bill requires greater clarity and tie-in with the Self Directed Support Act around integrated budgets. The section of the SDS Act on Joint Approaches and Pooled Budgets (Section 8) is strong and progressive, and should be drawn on to inform this Bill.

• The Policy Memorandum makes mention of the need to focus on unplanned admissions. Unless a model for shifting resources from the acute sector to the community is sought and detailed, integration will not achieve effective change for people who use services. Evidence from Reshaping Care for Older People and the Change Fund shows a limited shift in resources from the acute sector so far. At present, the total budget for social care in Scotland is less than what is spent on unplanned admissions to hospital. Most partnerships will need to increase spend on social care, but this will require effective mechanisms for a shift in resource. Local partnerships must therefore have total control over expenditure decisions covering both investment and disinvestment.

Decision-Making

• ‘Significant decisions’ is an area of concern for Scottish Care. At present, the Bill states that “a significant decision means a decision which the integration authority considers might significantly affect the provision of a service provided in pursuance of the integration functions in the area of the local authority” (Section 30(2)). This raises questions of who makes these decisions within the integration authority and what is considered significant. We know from experience that changes or decisions that might seem minor to those planning or delivering a service can have huge consequences for an individual and the achievement of their outcomes. Further clarity is needed around whether ‘significant decisions’ would include tendering exercises, which again can massively affect the experience of care and support for an individual. The Bill must strengthen the right of people, including providers and service users, to be consulted on when ‘significant decisions’ are to be made. However, Scottish Care would argue that the best solution to this problem would be if non-statutory partners were guaranteed places on integration joint boards, where these decisions would be made.

• More clarity on what grounds an integration plan will be approved or refused by Scottish Ministers is required. In our view, evidencing clear involvement and engagement with non-statutory partners should form part of the criteria for making this decision.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Scottish Care cannot say at this time what efficiencies and benefits may arise from integration plans for non-statutory partners. This is because the Bill as proposed leaves us unsure as to whether these partners will hold a stronger or weaker position locally than they have in recent times. Through Reshaping Care for Older People and the creation of Joint Strategic Commissioning Plans, the
Independent and Third sectors have experienced progress in true partnership working, even if this has not been without its challenges.

Acting as sign-off partners for joint commissioning plans and having direct involvement in local decisions in Reshaping Care for Older People and the Change Fund is positive recognition of the non-statutory partners’ crucial roles in the strategic planning and delivery of services. However, the Public Bodies Bill as it stands suggests that the non-statutory partners may be reduced to ‘consultees’ which, instead of building on recent progress, would be a backward step.

If not amended, the opportunity to build on the lessons learned from Reshaping Care for Older People thus far would be lost and we would find this hugely disappointing. Should the necessary changes be enacted and the position of the sectors strengthened, non-statutory partners could be fully involved in local partnerships meaning the potential for integration to truly improve services and outcomes for people who use services would be optimised. This would reap benefits for all partners.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

Again, if the necessary changes are made to the Bill to reflect the roles of non-statutory organisations, integration plans have the potential to improve services in terms of choice, quality, delivery and journeys through health and social care. Effective integration legislation, planning, principles, delivery and commissioning must be effective in creating a more level playing field for services across all sectors, allowing for true market diversity and choice for individuals. This will be especially important as Self-Directed Support is enacted in 2014. Services must also be made more sustainable, with investment in staff, training, facilities and new models of care in order to reflect the changing requirements from health and social care as the population ages and complex needs become more prominent.

If the necessary changes are made to the Public Bodies (Joint Working) (Scotland) Bill to ensure it progresses health and social care integration in a holistic and positive manner, Scottish Care would be confident that it will demonstrably improve services, outcomes and sustainability. However, this will only happen in the Bill focuses broadly on the delivery of public services by all partners and not narrowly on the role of public bodies.

Scottish Care
2 August 2013
Public Bodies (Joint Working) Scotland Bill

Coalition of Care and Support Providers in Scotland

CCPS welcomes the opportunity to contribute to the Committee’s stage 1 scrutiny of the Public Bodies (Joint Working) Scotland Bill (the ‘Bill’) and is pleased to submit this short paper. We take each of the committee’s questions in turn.

**Do you agree with the general principles of the Bill and its provisions?**

The consultation document on the integration of health and social care issued in May 2012 set out four key principles of integration, all of which we support and all of which are given expression in the Bill; the Bill itself sets out a further suite of principles (in ss.4 and 25) to guide integration planning and delivery respectively, and again we would support these.

We would however want to highlight a significant omission, which relates to the quality of care and support. The policy memorandum is clear (at para 9) that the legislation aims to tackle the variations in quality of care across Scotland, yet quality is not included in any of the principles relating to the Bill (nor indeed, to our reading, does the word appear anywhere in the document). We are aware that the Bill contains provisions relating to the prescribing of national outcomes, however we believe that these should stand alongside, and be supported by, requirements in respect of service quality. In particular, the National Care Standards for social care (and parallel health care quality standards) should be clearly referenced in the Bill, with a duty on integration authorities to ensure that they are met.

Meanwhile it has long been our view that involving people in the design of their care and support, and enabling them to exercise appropriate control over how it is delivered, must be at the heart of integration in order to drive change and achieve better outcomes. In our view, the principles for integration and delivery (in ss. 4 and 25, as above) do not adequately reflect the importance of such involvement.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

In our consultation response, and in our previous evidence to committee, we expressed the view that integration should be seen as a means to an end, and not an end in itself. Similarly, we believe that whilst the ‘technical’ aspects of integration with which the Bill is primarily concerned will contribute to the policy objectives, they will not be sufficient in themselves to bring them about, not least because (as noted above) the Bill is silent on the matter of quality; and also because a great deal of the change that is required is ‘cultural’ rather than...
technical. As we have stated in earlier evidence, we have some concerns that the objective of transformational change resulting in improved outcomes for people with care and support needs may become lost, as the statutory authorities become immersed in the detail of agreeing new arrangements around structures, accountabilities, budgets, workforce, and so on, all of which constitute the primary focus of the Bill.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

- The requirement for statutory health and social care partners to work together; to engage in joint strategic commissioning; and to integrate their budgets (as opposed to previous legislative instruments which enabled partners to do these things, but did not require them to be done).

- National outcomes as the key focus for integration authorities (although see our further comments below).

- The emphasis on joint strategic commissioning – referred to in the Bill as ‘strategic planning’ – as a driver for change (although we believe that requirements for authorities to involve non-statutory partners need to be significantly strengthened, as we note below).

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

- The Bill ought clearly to establish as key principles for integration authorities both quality of care and support and the involvement of individuals in the design and delivery of that care and support, as noted above.

- The Bill makes no reference to any requirement for independent scrutiny of integration authorities in respect of quality, performance or the achievement of national outcomes. The Health and Sport Committee has supported CCPS in promoting the view that poorly commissioned care poses as much of a risk as poorly delivered care: it is therefore a major disappointment that whilst the policy memorandum is specific on the need for independent scrutiny of strategic commissioning, the Bill itself makes no reference to it.

- Linked to the above, the Bill should make it clear that integration authorities will be held accountable for the agreed national outcomes: as it stands, the Bill makes provision for such outcomes to be prescribed by Ministers, but does not require integration authorities to achieve them (only to ‘have regard’ to them in integration and strategic planning processes).

- The Bill places duties on integration authorities to consult the third sector (and, in certain sections, to consult third sector service providers specifically);
in our view this duty is not strong enough. The third sector, and providers specifically, should be treated not as consultees, but as full partners in the planning and delivery of care and support. Otherwise, the effect of the Bill will be to ‘downgrade’ the third sector (and indeed the private sector) from the status it has already been accorded in respect of similar processes for Reshaping Care for Older People and the Change Fund, where relevant plans must be signed off by four partners equally: the NHS Board, the local authority, the third and the private sectors. To underline this point, we note that the Financial Memorandum identifies the costs of clinical involvement in locality planning (estimated at £3 million, points 88 and 89) but no cost is identified for involvement of the third sector in either locality or strategic planning, which perhaps tells its own story.

- It remains a matter of concern for CCPS, whose members cover the full range of care and support services, that the policy objectives set out in the memorandum are almost wholly based on issues relating to health and care services for older people, whilst the Bill applies to services for all adults and, at an authority’s discretion, children and families (and other groups) as well as linked areas of activity such as housing and education. We remain concerned that the proposals for integration have not been clearly ‘proofed’ to ensure that they are fit for purpose in relation to the challenges and issues for service provision in respect of these other groups and areas of activity.

- Linked to the above point, the Bill’s requirements for integration and strategic planning do not appear to be sufficiently co-ordinated with related legislative instruments (both existing and proposed). We are aware, for example, that the Joint Improvement Team (JIT)’s recent survey of progress on integration indicated that a fair number of partnerships are considering including children’s services in their integration plans. This raises a question about how integration plans in these areas should interact with the requirements set out in the Children and Young People (Scotland) Bill with respect to children’s services planning, and/or to requirements regarding community planning more generally. There is a risk that these various pieces of legislation will lead to a multi-layered, yet unco-ordinated, set of planning requirements for public authorities.

- There appears to be a great deal of discretion accorded to the statutory partners in respect of the elements of their respective budgets that will be put into the integrated ‘pot’. As we have said previously in our evidence to committee on the Scottish Budget, we remain concerned that at Scottish Government level, the ‘health’ budget and the ‘care’ budget are treated entirely separately, with the former relatively well protected and the latter (included within the local government settlement) more vulnerable. It is not entirely clear to us, given the policy objectives of the Bill, why the Scottish Government is not prepared to be more prescriptive about which elements of
each budget should be integrated (nor indeed why it does not itself integrate these budgets at a strategic level, before disbursing them to local partners).

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

It is difficult at this stage to predict the impact of integration on third sector providers.

If joint strategic commissioning is effective and successful at (a) prioritising more ‘upstream’ and preventive support that helps people to stay well and out of the care ‘system’, and (b) embracing the sector as a key partner in the achievement of the national outcomes, then we might anticipate a greater volume of investment and activity. If, on the other hand, a combined (and thus even more powerful) health and care public sector treats the third sector purely as a supplier of pre-specified services, and continues to apply downward pressure to contract prices through competitive tendering, then the picture is likely to be very different.

In this regard, it is interesting to note that neither the Bill nor the policy memorandum make any reference at all to one of the key issues raised in our earlier consultation response, namely that the integration project brings together two fundamentally different environments — an NHS free at the point of use and delivered directly by public bodies, and a social care system that charges individuals for services which are delivered by a range of providers according to market principles — without adequately addressing the implications.

If the NHS budget is (as Ministers have said) to ‘lose its identity’ within an integrated pot, then it is entirely possible that that budget may be spent purchasing care services from third or private sector organisations operating in the social care market. This being the case, it is not clear why the same budget should not also be used to purchase health services from these sectors also. Similarly, parts of the ‘NHS’ budget may be used to commission social care services, for which individuals may be charged, with implications for the principle of an NHS free at the point of use.

We are not convinced that the Scottish Government has adequately addressed these possibilities or their ramifications for social policy.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

As we have previously stated, we are enthusiastic about the potential of joint strategic commissioning to begin to reorient investment and activity towards the achievement of outcomes for communities and individuals (although at the risk of repeating ourselves, we believe that integration authorities should also be given clear duties in respect of quality, as well as the achievement of outcomes; and
again, that independent scrutiny, as well as self-reporting, is crucial in this respect).

In addition, as stated above, we believe that the involvement of individuals in the design and delivery of their care and support is crucial to better outcomes, and that this principle should be reflected in the Bill and consequently in integration plans.

In this respect, we would repeat our view expressed in previous evidence to committee and in our consultation response, that there needs to be much greater clarity about the extent to which joint working arrangements will ensure that where appropriate, integrated functions are not excluded from the provisions of the Social Care (Self Directed Support) (Scotland) Act; and that strategic planning promotes market diversity in accordance with s.19 of that legislation.

CCPS August 2013

About CCPS
CCPS is the coalition of care and support providers in Scotland. Its membership comprises more than 70 of the most substantial third sector providers of care and support, supporting approximately 270,000 people and their families, employing over 45,000 staff, and managing a combined total annual income in 2009-2010 of over £1.2 billion, of which an average of 73% per member organisation relates to publicly funded service provision.

Care and support in the third sector
The third sector is at the forefront of quality care and support in Scotland. More than a third of all care and support services registered with the Care Inspectorate are provided by third sector organisations. In many areas of care and support for adults and older people – including care home provision, care at home and housing support – third sector services receive a higher proportion of ‘very good’ and ‘excellent’ quality gradings from the Care Inspectorate than their counterparts in either the public or the private sector.

Coalition of Care and Support Providers in Scotland
2 August 2013
Public Bodies (Joint Working) Scotland bill

Scottish Council for Voluntary Organisations

Summary
The response from the Scottish Council for Voluntary Organisations (SCVO) reflects perspectives from a range of SCVO members. Many of us highlight similar points, namely:

- The role and contribution of the third sector in the creation of more integrated services has not been adequately recognised in the Bill or associated deliberations.
- The risk that the third sector’s expertise and strategic contribution to reshaping care and joint commissioning could be lost.
- The role of the sector in facilitating high level representation for people with disabilities, carers and families in the services designed for them.
- The need for effective co-production – with disabled people, carers and communities at the heart of creating integration plans and the kinds of services which help people to live the fullest lives possible.
- Plans to integrate health and social care do not tackle existing challenges arising from squeezed public finances – e.g. increased use of charging and tightening eligibility criteria in social care;
- The operating environment for the third sector remains challenging, stretched further by welfare reform. This will impact on the sector’s ability to contribute to the development of more holistic and integrated services, when it has much to offer.

We call on the Health and Sport Committee and the wider Parliament to consider what the Bill is trying to achieve. Is the Bill in its current format enough? Are there other ways in which the policy intentions might be achieved? And how do we drive the shift in power needed to truly reform and create public services which are “...built around people and communities, their... aspirations, capacities and skills”?

Any policy intentions which seek to kick start the momentum needed to bring about a real shift from top-down services towards investment in communities, which help to nurture self-help, resilience and the approach outlined by the Christie Commission would be welcomed by the third sector. Yet, from a third sector perspective, the Bill as it stands - and indeed legislation alone - may not be sufficient to bring about the scale and nature of change required.

Introduction
SCVO welcomes the opportunity to make a written submission to the Health and Sport Committee as it begins to consider the Public Bodies Bill.

Major change is required in the way Scotland approaches the health and wellbeing of its population if we are, as a nation, to improve and flourish.

The current public service environment with the ageing demographic, shrinking public expenditure, an assault on social security, constitutional

---

1 http://www.scotland.gov.uk/Publications/2011/06/27154527/10
uncertainty and institutional ‘territorialism’ presents a major challenge that should not be shirked. Guidance on how to approach the challenge exists in the form of the recommendations from the Christie Commission, which the third sector fully supports. Nothing should be used as an excuse to detract from putting people at the centre of public services, and enabling communities, themselves, to achieve their aspirations. This should underpin the Public Bodies Bill.

SCVO will address each of the questions posed by the Health and Sport Committee in the scrutiny of the Bill and, in addition, wider issues arising from the Business Regulatory Impact assessment and the impact of the UK welfare reform agenda.

Question 1: Do you agree with the general principles of the Bill and its provisions?

Outcomes and assets

By its very nature, the third sector will focus on ensuring that services are person-centred, asset based and sustainable. This focus is not well reflected in the Bill e.g. in terms of guiding principles. We support the Christie Commission proposition that what happens on the front line is more important than any changes to the infrastructure.

The draft principles allude to the vision for public services envisaged by the Christie Commission but don’t go far enough to take forward that vision, specifically:

- public services that are built around people and communities, their needs, aspirations, capacities and skills, and which work to build up their autonomy and resilience;
- public service organisations prioritise prevention, reduce inequalities and promote equality; and
- public services which are open, transparent and accountable.

The first point above highlights the shortcomings in the Bill, where its draft principles focus on needs, and not outcomes or the assets that people and communities bring, and how health and care interventions can help people to live independently, achieve their goals and live well. The fact that the Bill is called “the Public Bodies Bill” also sends the wrong message about the aspirations underpinning it.

We would also argue that the final Bill principles should sit at the beginning of the Bill – shaping how partners read and take forward its provisions.

The principles as they stand set a negative tone, and one which endorses the current systems of eligibility, risk aversion, ‘medical’ models and views of disability and long term conditions. We would argue strongly for the draft principles to reflect the Christie principles more clearly. One of the key policy intentions behind the Bill is improved quality of services – yet this is missing as a bill principle. A stronger reflection of key human rights would provide a positive focus on the key things which matter in achieving better health and wellbeing for people.

---

2 Ibid.
Shifting power - third sector, service user and carer involvement
As a matter of principle the sector, alongside disabled people, carers families and others with an interest, should be represented at the highest levels in developing and monitoring integration plans, directing resources, and filtering through to delivery. From a third sector perspective there are a number of avenues of involvement: – a voice for people who are vulnerable, disadvantaged or marginalised; a bringer of knowledge and expertise and a provider of a wide range of services and supports.

Successful implementation of the policy intentions behind this Bill can be facilitated by ensuring that disabled people, older people, unpaid carers, families and relevant support organisations have a clear role in developing and shaping integrated services. That involvement cannot be tokenistic - this is about bringing the principle of co-production to life.

Therefore there should be third sector, service user and carer representatives at the table, with links to wider constituencies who can support them in this role. Third sector colleagues will call for sector voting rights and the ability to ‘sign off’ integration plans. Arguments made by statutory partners that this risks the delivery of statutory services do not give the sector and disabled people/carers the parity of esteem or respect that they deserve as we seek to achieve the goal of holistic, integrated services.

However, we must consider what would happen in the event of these representatives being unable to support integration plans or specific decisions about services. There are a number of options in this context:

- A wider consultation on a decision or plan which is ‘in dispute’ – if duties to consult in the Bill are adhered to, then these processes and time/support for wider constituent involvement should already be in place.
- The ability of statutory partners to refer the plan or decision to their own lines of accountability or for non-statutory partners, such as the third sector, to refer to Ministers.
- A right of veto which would effectively mean that the integration plan needs to be revised to enable non-statutory partners such as the third sector to ‘sign off’.

It is important that we learn from the Reshaping Care change fund process where on a number of occasions, third sector partners found themselves unable to support local change plans.

Third sector organisations will also argue for a principle of engagement within the Bill which focuses on involvement in planning, delivery and monitoring of integration – this would seem to be a sensible and worthwhile proposal.

A major shift to bottom-up, asset and rights based approaches in planning and delivery is required. The Bill must set the tone – alongside other policy/legislation, it must facilitate a shift of power back to people at the receiving end of the services to be ‘integrated’. The focus on independent living and participation encouraged within the self-directed support legislation would sit well the intentions behind the Public Bodies Bill.
There is however, real ambiguity around where, how and how much resources will be transferred to achieve this shift. As highlighted by CCPS in its response, leadership from Scottish Government is lacking – it could have sought to integrate key budgets at strategic level before they are directed to local partnerships.

There is still an opportunity to consider this. There is also a potential opportunity to find ways to bring together Community Care Grants and potentially a ‘devolved’ Independent Living Fund along with other investments in integration and self-directed support. This would ensure a more connected pot of money which supports the goals of wellbeing and independent living – helping to achieve the upstream shift intended through Reshaping Care.\(^3\).

In any case, restatement of the principles underpinning the self-directed support legislation at the front of the Public Bodies Bill could be a positive starting point.

**A wider view of health and social care - Prevention and communities**

Prevention and creating stronger communities must be central components in achieving integrated and effective health and social care services. A public service approach which puts people at the centre can be more efficient, and support lasting outcomes. This is because it reduces duplication in provision, and allows better availability of the right services at an earlier, more cost-effective stage.

Putting people at the centre therefore sits at the heart of a preventative approach. If this is coupled with a community-based approach to prevention, it will unlock a much wider range of community-based activities. These activities include lunch clubs, self-help groups, art and sport therapy, community transport, care and repair, befriending etc. All of these activities support people and help them to achieve their aspirations and quality of life, long before they get to the stage of needing formal health or social care. A strong example is the economic and social value of support to unpaid carers – there is an increasing evidence base that shows how this can prevent/delay statutory intervention and admission to emergency and institutional care, both for the carer and for the disabled person\(^4\).

There are many examples from the work of the third sector which illustrate the value of strong communities and preventative approaches. One such example is the Foodtrain ‘shopping plus’ service for older people and their carers. An evaluation of this highlighted that it was “…a well targeted, effective and flexible service that ... generates high value outcomes for customers and fulfils a critical role in supporting them in their desire to retain their independence… Its economic value in delaying the onset of higher-cost packages of care is highly significant…”\(^5\)

---

\(^5\) Co production – What it is and how to do it (Governance International/JIT, 2012)
We urgently need to develop and invest in community infrastructure of this sort to reduce the need for formal services or to facilitate a swift return to the community. Public sector procurement should be supporting and nurturing such initiatives instead of creating a more challenging environment for them.

It is not clear how the provisions in the Bill will, of themselves, accelerate investment in community capacity, prevention, and sustainability or provide a more joined-up approach between health and care services at the front line. This is a major omission which risks seeing effort and critical time being wasted on an institutional reconfiguration with no purpose and no real change of approach or outcome.

Question 2: To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill might perhaps encourage the conditions and possible structures and infrastructures which facilitate a redirection of investment into communities and the provision of seamless services but this is not guaranteed. There is a real sense of complexity emerging in this bill, alongside already complex structures being set up in anticipation of it coming into force. Local statutory partners continue to set up ‘shadow’ partnerships in anticipation of what might be “in scope” for integrated services. We are in danger of replacing a mire of bureaucracy for funding and service arrangements with a newer and more convoluted version of the same.

With the potential to create greater confusion, worry and stress for families and carers, there is a real risk that the policy intention to “support improvement of the quality and consistency of health and social care services”⁶ may not be achieved. In turn this could create further demand on already stretched third sector services such as independent advocacy.

There are no provisions in the Bill which will ensure that resources are used effectively or efficiently - only an assumption that joint working will make this possible. It is also worrying that, as outlined above, the amount and direction of resource shift is not detailed.

A particular concern is that despite the positive contribution of the third sector to Reshaping Care – and its considerable role in health and social care - it will have no say in decisions around those resources and perhaps a limited role in planning service delivery. Ministers have frequently, in recent months, expressed their admiration for the creative and transformative approaches taken by voluntary organisations to meeting the health and wellbeing needs of people and communities. Yet, the Bill does not channel this much needed expertise into the planning process with anywhere near sufficient authority or centrality. We are in danger of being left with a new version of the old planning system built around existing institutional interests, where any positive developments which brought the third sector to the table could potentially be lost.

---

⁶ http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20(Joint%20Working)%20(Scotland)%20Bill/b32s4-introd-en.pdf
Meeting the demographic challenge and dealing with the increasing number of people with longer term and often complex needs requires a whole suite of changes to policy, practice and service configuration – the Bill could have provided a starting point for this, beginning with a strong understanding of how the Reshaping Care for Older People Change Fund has – or has not – made any difference in terms of moving more towards prevention and capacity building.

Question 3: Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths?

Question 4: Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

We have provided responses to these questions above.

The question we should be asking ourselves is what cannot be achieved without this legislation? We have to ask whether the legislation in its current state will make any real difference to the quality and consistency of care for people given the points outlined in this response: the lack of recognition of the contribution of the third sector (above); the current state of social care (below); and the increasing sense that services are “done to” and not “with” people.

The Local Government Committee’s recent report on public service reform would certainly back this assertion:

“The best examples of PSR arise when local communities and front-line staff are fully engaged in the process of designing and procuring services. We are sceptical of the value of top-down or centrally driven changes to services.”

The Local Government Committee also highlighted a number of challenges and practices which prevent real reform of public services and which must be considered in the context of health and social care integration, namely:

- Public investment in earlier attempts at partnership working has meant little real improvement in services or prospects for some of our most disadvantaged communities.
- Very deep-seated attitudes and behaviours that will take time to change.
- There is little evidence of significant real progress in PSR being delivered (e.g. through Community Planning Partnerships).
- The need for improvements in communication at all levels – an issue raised consistently by communities and front line staff.

It is clear that the Public Bodies Bill has a lot to do. We need to ask if the Bill in its current form will tackle a culture where resources in one sector or service are ‘protected’ sometimes to the detriment of an individual or family’s wellbeing. Ministerial intention may be strong, but it is not carried through in this draft Bill, and that may not be enough.

---

7 [http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Reports/lgr-13-09w.pdf](http://www.scottish.parliament.uk/S4_LocalGovernmentandRegenerationCommittee/Reports/lgr-13-09w.pdf)

8 Ibid.
Question 5: What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

The question should be “how do we secure sustainable health and care provision?” We can only do this by reducing demand for formal services through a much greater appreciation of the role of strong communities, self and mutual help and high quality social and housing infrastructure. Integration plans which focus on providing services to people in need and only on traditional views of health social care will not be enough. We must see the wellbeing of people more widely e.g. as cuts to local transport services bite, people will become more isolated.

If the Bill is to achieve its goals, then it is essential that the make-up of local partnerships takes us beyond the planned split between health and local authority representation. This approach sends inauspicious messages about power, responsibility and control which are the very opposite of the intentions behind integration. What matters in the future provision of health and care services is that local, user and carer groups and public interests have much greater involvement and shared ownership of plans and services – and not just at local level.

We are particularly aware of the emergence of an inconsistent narrative surrounding the involvement of the third sector - a full and necessary partner at the top table of Community Planning - yet it is viewed only as a set of interests to be consulted and engaged in the development of local health and care plans in a process which is dominated by statutory interests. The sector and stands ready to do so despite the challenges it faces.

In terms of efficiencies, as things stand, the sector risks having a marginal, yet resource intensive involvement in complex bureaucratic structures. Where health and social care structures do not mesh with community planning structures we will see duplication of time and effort and the diversion of resource from the main purposes of the third sector. With significant improvement - including clarity about the relationship with community planning, full involvement of the third sector at strategic levels and a structural facility and willingness to redirect investment - efficiencies are possible.

Question 6: What effect do you anticipate integration plans will have on outcomes for those receiving services?

This really depends on the quality of the plans and the willingness of local statutory partners to work inclusively and strategically with the third sector and the people affected by these planned changes, and to make determined shifts in how public resources are invested. It will also depend on how involved the third sector and service users and carers are in determining the national health and wellbeing outcomes which will be the goals that partnerships will strive to achieve.

Experiences from the Change Fund and Change Plan processes have been mixed whilst early development of strategic commissioning plans illustrates how far there is to travel in developing sustainable approaches to health and
care provision in the future. But we mustn’t lose any positive achievements within this context.

If the integration plans mean more of the same and a refusal to tackle tightening eligibility criteria, charging and the loss/reduction of services which are essential to enabling people to live independently then we have lost an important opportunity. This is not about delayed discharge or bed blocking – we must remember the assets, ability and contributions of people receiving support through health and social care. That should be the starting point for this legislation.

We need also to consider the potentially strong clash of cultures that could occur in the move towards more integrated services - one service is free at the point of use (NHS) and another has charging inherent to it coming together.

Wider feedback

Business Regulatory Impact Assessment

Read across to other legislation:
The linkages between this and other legislation e.g. Children’s Bill, self-directed support, and welfare reform policy and legislation are not clear or missing.

There is a risk that the focus on structures, finance and process inherent in the Public Bodies Bill could divert attention away from implementing the self-directed support legislation. On the other hand, integration could potentially provide opportunities to consider how self-directed support could operate in a health context e.g. purchase of more ‘personalised’ equipment and adaptations, therapies etc.

Welfare reform:
The impact of welfare reform on the Bill and subsequently on services which will be delivered under new arrangements is largely absent. There is the likely impact of welfare cuts on income from charging, but, more importantly, the effect of recent benefit changes on the health and wellbeing of people and communities – many of who are already vulnerable and face challenges to their own wellbeing.

Guidance issued to health boards via the Scottish Public Health Network (ScotPHN) provides some sense of what this impact could look like.9 The transfer to Personal Independence Payment (PIP) and the potential devolution of the Independent Living Fund are ‘ones to watch’ in terms of increased demand on already stretched services across the third and public sector.

As such, we would suggest that it would be worth revisiting the linked Equality Impact Assessment in light of our understanding of how welfare reform will affect people receiving services and their families. The Deep End report which engaged GP perspectives on austerity and welfare reform10 remains a powerful summary of the impact on health and

---

10 http://www.gla.ac.uk/media/media_232766_en.pdf
social care services – but it also highlighted how demand for support from the third sector is increasing as statutory services struggle. Recent work carried out by SCVO\textsuperscript{11} suggests that almost 90% of respondents in a recent mapping exercise expect demand for support to increase because of the welfare reform programme.

Welfare reform creates a perfect storm for third sector organisations – not only are some being diverted from their core purpose, but the potential changes which the Public Bodies Bill will bring present yet another challenge for the third sector in a difficult operating environment.

\textit{Challenges to engaging in integration:}

Involvement of the third sector in development and scrutiny of strategic and locality plans and delivery is critical to success given the experience, knowledge and skills it brings in the wider field of health and social care. Other responses to the call for evidence e.g. Voluntary Health Scotland, Health and Social Care Alliance will emphasise this important point.

The sector will also need to change how it works, and any changes to commissioning and procurement that result from integration developments could have a substantial and potentially negative impact.

Yet the sector continues to face significant financial challenges. SCVO and CCPS research to examine these will be published soon and some early findings highlight that:

\begin{itemize}
  \item Funding packages rarely make provision for annual inflation.
  \item The overwhelming majority of respondents (83%) said that they did not receive an annual inflationary increase – many report that budgets have been static for many years, with many experiencing often significant budget cuts.
\end{itemize}

In addition, procurement practice in Scotland presents significant challenges to funding and the day to day operation for many organisations across the sector.\textsuperscript{12} The fact that many may face extensive procurement exercises for short term contracts is one specific challenge highlighted by our members in the research outlined above.

Given the context described above, the capacity of third sector organisations to engage effectively in the journey towards more integrated services could be reduced. With less room for manoeuvre, it is therefore worrying that the Financial Memorandum says that:

“Third sector partners will also be expected to consider efficient and effective use of current resources and funding streams to enhance their own capability.”\textsuperscript{13}

\textsuperscript{12} E.g. http://www.ccpscotland.org/assets/files/ccps/publications/FOImainreportCCPS2%20%284%29.pdf

\textsuperscript{13} Para 64, page 34
Whilst the pot of money directed at the sector within the Financial Memorandum to tackle these issues is welcome (£360,000) it’s worth comparing this to the £3 million set aside for clinicians’ involvement in locality planning.

More positively, the bill and the development of integration plans present an important opportunity to realign how we commission and procure a wide range of services and interventions which drive a more preventative approach and focus on wider outcomes and wellbeing - not a narrowly constructed review of health. As CCPS outlines in its response to the call for evidence: “If joint commissioning is effective and successful at a) prioritising more ‘upstream’ and preventative support that helps people to stay well and out of the care ‘system, and b) embracing the (third) sector as a key partner in the achievement of the national outcomes, then we might see a greater involvement in investment and activity” – i.e. the sector could play a significant role in achieving the outcomes.

We need further discussion about how we support that role.

**Conclusion**

A strengthened bill could provide a framework for reshaping how health and social care operate. However, we will also need better investment in preventative support, community interventions and local infrastructure and services which actually make a concrete difference in people’s lives. This means that we need to see health and social care more widely – where do housing, local environment/planning systems, transport and so on play a role in helping people to remain independent and to stay connected to their communities, jobs and each other? This is where the third sector has much to contribute.

Achieving any nationally agreed outcomes relating to health and wellbeing must recognise the wide range of enabling support which can be accessed via self-directed support and non-traditional approaches and interventions – these equally have tangible benefits and outcomes relating to health and wellbeing and must feature strongly in integration planning and delivery.

Activity to bring health and social care together, to improve quality and outcomes of support will fail unless all key partners are around the table. This includes voluntary, charitable and other supports as outlined above.

Real change in the experience of all who use health and social care services will not come from legislation or restructuring alone. Cultural change is needed; we need less risk aversion in service provision and more effective communication across sectors and between professionals, individuals and families. Involving the people who matter most in planning and shaping integrated services – disabled people, older people, unpaid carers, families and local communities – strategically and in delivery and monitoring is key to success. Their own aspirations to live well, to work, to take part in their local communities must be the starting point and main driver of this legislation.
Across the third sector, many of us feel that the Bill’s provisions need to be stronger in order to achieve this shift in focus in policy and in practice. We will work with colleagues across the third sector and the Scottish Government and the Parliament to make this happen.

Scottish Council for Voluntary Organisations, 2 August 2013

About us
The Scottish Council for Voluntary Organisations (SCVO) is the national body representing the third sector. There are over 45,000 voluntary organisations in Scotland involving around 137,000 paid staff and approximately 1.2 million volunteers. The sector manages an income of £4.4 billion. SCVO works in partnership with the third sector in Scotland to advance our shared values and interests. We have over 1300 members who range from individuals and grassroots groups, to Scotland-wide organisations and intermediary bodies.

As the only inclusive representative umbrella organisation for the sector SCVO:
- has the largest Scotland-wide membership from the sector – our 1300 members include charities, community groups, social enterprises and voluntary organisations of all shapes and sizes
- our governance and membership structures are democratic and accountable - with an elected board and policy committee from the sector, we are managed by the sector, for the sector
- brings together organisations and networks connecting across the whole of Scotland

SCVO works to support people to take voluntary action to help themselves and others, and to bring about social change. Our policy is determined by a policy committee elected by our members.14

Further details about SCVO can be found at www.scvo.org.uk.

14 SCVO’s Policy Committee has 24 members elected by SCVO’s member organisations who then co-opt up to eight more members primarily to reflect fields of interest which are not otherwise represented. It also includes two ex officio members, the SCVO Convener and Vice Convener.
Public Bodies (Joint Working) (Scotland) Bill: Stage 1

09:45

The Deputy Convener: Under item 2, the committee will take evidence on the Public Bodies (Joint Working) (Scotland) Bill. I welcome our first panel of witnesses. We have with us Dr Allan Gunning, who is the executive director of policy, planning and performance at NHS Ayrshire and Arran; Jeff Ace, who is the chief executive of NHS Dumfries and Galloway; Susan Manion, who is the chair of the Association of Community Health Partnerships; and Alan Gray, who is the director of finance at NHS Grampian. I thank the witnesses for agreeing to go straight to questions from members. Richard Lyle has intimated a desire to ask the first question.

Richard Lyle (Central Scotland) (SNP): Thank you, convener, and good morning, lady and gentlemen. I start the question session by asking you about the models that are suggested in the bill. I understand that there are two such models: the lead agency model and the body corporate model. You might have another suggestion, and I would welcome any direction on that. What is your opinion of the models that have been suggested?

Dr Allan Gunning (NHS Ayrshire and Arran): NHS Ayrshire and Arran and the three councils carried out an options appraisal of the two options that are available to us, and decided that the balance of advantage lay with the body corporate model. In Ayrshire, therefore, we will form three partnerships that cover each of the council areas, and they will all be bodies corporate.

The body corporate model provides the greatest opportunity for close integration. The only advantage that we could see in the lead agency model was that it might make support services more straightforward to provide, but the changes are not about support services; they are about supporting the better and more seamless delivery of front-line services.

Jeff Ace (NHS Dumfries and Galloway): Similarly, NHS Dumfries and Galloway is most likely to go for the body corporate model. That is our current working assumption. Unlike NHS Ayrshire and Arran, we have not progressed to the point of making a formal decision in front of the NHS board and the council, but that is the assumption on which we will base our work going forward. As Allan Gunning said, the body corporate model seems to offer a good degree of flexibility and the ability to influence change locally, on the ground.
Susan Manion (Association of Community Health Partnerships): At the moment, what is coming back from my colleagues across Scotland is that a number of discussions are still taking place about the models. However, it appears that most areas are moving towards the body corporate model for the reasons that have just been described.

That said, the intent and purpose of both models are the same and are around developing integration. Deciding on the best delivery model depends on historical positions and local preferences.

When it comes to alternatives, I am not sure that we are considering any in any significant detail. Many of the alternatives exist under existing legislation, and there is enough flexibility in the bill to allow for local flexibility in the two models that are suggested.

Alan Gray (NHS Grampian): NHS Grampian has adopted the same position as NHS Dumfries and Galloway. We will take a decision to the board in October and we are likely to support the body corporate model. The indications are that local authority partners are likely to follow suit and support that decision in the next few months. However, that is within the remit of the councils.

Richard Lyle: I take it from what you have said that the consensus is that the body corporate model is the one that most organisations will adopt. However, do you share the concerns of some local authorities about governance and accountability in the body corporate model?

Dr Gunning: That is one of the areas that need to be clarified and nailed down. There are some uncertainties that I am sure are still being worked through. The governance and accountability arrangements will be clarified, which is important because we do not want to set up the new bodies when there are uncertainties that will dominate the agenda; instead, we want the bodies to deliver the policy changes that are envisaged in the bill. There is still some work in progress there, but I am sure that it will be sorted out in due course.

Susan Manion: A significant amount of clarification is required on governance and accountability. Both health boards and councils are concerned to ensure that the issues are clarified. Existing accountability issues cause difficulties between councils and health boards, and it will be absolutely central to get that aspect sorted.

When we deal with issues around service change, when we seek to create change and when we consider performance management, we must be absolutely clear: we must have a single performance management structure, with clarity about what we need to achieve and about accountability, so that we can achieve the organisation’s objectives. At the minute, I am not sure that the bill is clear enough on that.

Alan Gray: Our point regarding the clarity around governance is that it is very important to make a success of the integrated arrangements. The planning arrangements are very important, as is having absolute clarity around how they will work and how they will be approved. We need to set off in the right direction in that regard, and we need to have the support of all the organisations concerned as well as a clear plan, particularly as we have multiple local authorities across the health board area.

Richard Lyle: You said that there needs to be clarity. What further clarity would you suggest? I am sure that you have looked through the bill. Perhaps I am taking away questions from other members, but what other suggestions or concerns do you have?

The Deputy Convener: Before the witnesses start to answer, I should point out that, although we did not take any evidence from you there, Mr Ace, all four of you should not feel obliged to answer the same question if you are going to make the same comments.

Does anyone wish to talk about specific examples regarding more clarity?

Dr Gunning: The issue applies to areas such as the chief officer’s accountability, both to the integrated joint board and to the statutory agencies. There are a number of things that flow from that in relation to the financial governance of the integrated budget.

The bill is not particularly explicit in areas such as clinical and care governance. Staff governance is a statutory responsibility for us in the NHS. That is another area that needs to be thought through in a wee bit more detail.

I hope that those examples are helpful.

Jeff Ace: We have a beautifully simple system in health in Scotland at the moment, and when we look at the new models, there is some nervousness that they are more complex. The key thing is that we should not establish a governance structure that gets in the way of the change that we want to make. I am reasonably confident that, certainly in a simple system such as that in my health board, which is coterminous with the local authority, we can work through a governance structure that does not get in the way of people undertaking the radical service changes that are needed.

Nonetheless, as a chief executive who has signed the accountability letter that singles me out as the accountable officer, it is clear to me that our beautiful simplicity of line, from cabinet secretary
through the board and the chief executive, will become slightly cloudier as we go lower than that if we have a body corporate model or a lead agency model—it does not make a lot of difference which we choose.

We just have to be careful that, in creating this vehicle for more interagency change and perhaps more dispersed decision making than we have at the moment, we do not lose some of the current system’s simplicity and clarity.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I mainly want to ask about the acute side of things but, following up Richard Lyle’s comments, I think that all your submissions agree that structural change in itself is not going to deliver the changes that you want. However, we end up talking about the issue a lot because that is what is in the bill. I find it interesting that most of the questions are about the body corporate model and that that is the model that most people seem to want. As a result, that is the issue about which we will probably ask you and others quite a lot of questions.

Some—albeit not many—people have argued that, in a way, we do not need legislation because a lot of this can be done without it; indeed, a lot of what is proposed is already happening. I know that many of you have already gone down the route of closer working relations, if not integration, with local authorities but, from a health point of view, what changes or further steps will you have to take as a result of the bill that you have not already taken?

Susan Manion: The changes represent a significant step up from the current local arrangements across Scotland. Integrated financial and service planning will be absolutely crucial. The bill gives us the opportunity to take that approach through integration and strategic plans. However, the major issue is how we bring the financial resource together, which will require a system to support operational delivery, and how we plan to deliver significant service change and ensure that resources are shifted around the system to do that effectively. You can do a lot of that with pooled or aligned budgets, but the bill takes things to a whole new level and it is crucial that we have the right infrastructure in place to support that.

Dr Gunning: I highlight some points of principle, the first of which relates to joint and equal responsibility and accountability between the statutory authorities. That is important because targets for health-specific issues such as delayed discharge and emergency admissions to acute hospitals have been very much seen as health targets. Although we have worked very well with local authorities and other partners, statutory provision will help to clarify and strengthen things.

The second point of principle is the more formalised role of the third and independent sectors and of users and carers in local communities, which will build very well on the good work that has been done through reshaping care for older people.

Finally, the third point of principle relates to the statutory underpinning for locality planning, which I think will be particularly important for health. Planning for place has not always been deeply embedded in the NHS planning process—we tend to look at disease classification, age or whatever. As we know, however, many of the challenges that face us relate to people with co-morbidities and complex needs who do not fall into the neat planning categories that we might have used in the past. I see a powerful model for locality planning that will build up a picture of and assess local needs and which will create the opportunity for a different type of relationship between public services, the other partners that I have mentioned and the communities that they serve. That will in turn flow into a coherent strategic plan that will spell out the intended changes and a performance regime that will monitor whether those changes are actually being delivered.

10:00

Jeff Ace: To follow up on Allan Gunning’s point, the key advantage for my local system concerns locality planning and the local delivery of change.

In health, we have centralised our decision making a little bit over the past five years or so, and integration gives us a critical mass back at the locality and community level so that we can start to reverse some of that decision-making power and bring our general practitioner community in particular strongly into the process. Suddenly, in my system, we will get four natural localities across the region and a critical mass of devolved decision making that we are optimistic will be a game changer for us.

Although there has rightly been a lot of focus on the top end of corporate governance and the body corporate model, we need to flip that on its head to see the impact of the bill. It is about localism, and we need a far greater critical mass of decision making at a community level if it is to work. That is the bit about which we can get our clinicians and partners exited in a way that they are not excited by the machinations of the body corporate.

Malcolm Chisholm: That is really interesting. That was the intention of community health partnerships, but it has not happened to the extent that it should have done.

As I said, I will mainly ask about the acute sector. The worry that people have about any integration is that it will reinforce horizontal
integration but weaken vertical integration within the health service. I am interested in how the acute sector relates to that.

One health board has expressed concerns that integration may lead to the separation of the body corporate from the acute sector and almost lead to a purchaser-provider or commissioner-provider relationship between the two. I would be worried about that. How do you see the acute sector relating to the proposed model? The key question is: how do you envisage the financial power of the acute sector relating to it?

**Jeff Ace:** I am in a lucky position because I have one council, which is coterminous with my boundaries, and a relatively small acute service—I have one district general hospital and one large community hospital that provide acute care. My plan is to bring the whole thing into the body corporate model so that we do not lose the integration between primary, community and acute care. We will put the whole £250 million-worth of health services we have into that partnership.

It is a function of luck—the size of my system—that I am able to do that. It is a great solution locally, but I am not sure that it transposes across Scotland, given the far greater complexity and size of organisations in the rest of the country.

**Susan Manion:** My response is linked to the point that Mr Chisholm made about CHPs and localities. The intention of the original CHP legislation was to improve the quality of what was provided locally. It was about engaging with patients and service users as well as communities.

There are significant areas in which CHPs have been successful and I am anxious that the integrated partnerships build on those successes. CHPs were less successful in leading change across the system. Although that is a fair criticism, they perhaps had a lack of leverage to do that. The bill allows us to consider the partnership’s commissioning responsibilities, which will allow us to create change.

The argument—it is sometimes an argument—about what is in and what is out when it comes to acute services has sometimes detracted from the reality of what we are trying to create.

It is essential that we get the links right between acute, community and primary care services, so that we engage clinicians at the local level as well as specialist clinicians. However, the argument about acute services has become a distraction that has impeded progress on many of the issues that we face across the country in the context of organisational change. Some clarity on that might help.

**Dr Gunning:** Mr Chisholm asked an important question. I think that it is useful to clarify the situation. Joint strategic commissioning—the strategic plan—has echoes of a return to the internal market for the NHS. People ask whether we will have the purchaser-provider split and something equivalent to NHS trusts, with all the bureaucracy that goes with them. However, joint strategic commissioning is really designed to bring about improvement by assessing needs, determining the best way to meet them and ensuring that the required services are delivered.

In Ayrshire we have two district hospitals, each of which provides services to residents in all three partnerships areas in Ayrshire. As Jeff Ace said, in some places the Dumfries and Galloway model is not supported. The important issue is the patient’s pathway, which is what binds the partnerships and acute services together. There needs to be a seamless flow for patients, users and carers between the community setting, primary care, hospital—when that is appropriate—and then discharge, re-enablement and rehabilitation.

I think that everyone knows that, but maybe what is missing is a process that binds everything together, which, for me, is about being clear about the changes that we want to make to shift the balance of care. The strategic planning process should make that transparent and spell out what the partners are committed to doing to bring about change, and the resources should follow.

In the context of shifting the balance of care, the change agenda in acute services should not, in principle, be any different from other major service change that has occurred in the NHS over the past 20 years. For example, in mental health services there was a clear policy of no longer having continuing care beds in the NHS for people with a learning disability. Partners then got on with bringing about the changes that would support that policy outcome. Partnerships and acute services will have to work through the same process.

In principle, the relationship between partnerships and acute services should not be any different from the relationship between partnerships and the many major local authority services that are extremely relevant to the partnership agenda but which are unlikely to be managed within it. Education is probably the best example of that.

**The Deputy Convener:** Does Malcolm Chisholm want to come back in at this point?

**Malcolm Chisholm:** No, I think that the responses were helpful. I just wonder whether things will be different in the large health boards. I was quite interested in a comment at the end of NHS Ayrshire and Arran’s submission, where you asked how the arrangements will work if non-executive directors in health boards have to sit on lots of local authority partnerships. That might be a
slight problem for Ayrshire; it will be a much bigger problem for local authorities in the old NHS Argyll and Clyde area. I am interested in how that will work in practice.

The current process is not really analogous with the changes in mental health and learning disability services, because the acute sector cannot be run down in any comparable way, not least because of the demographics. I suppose that is why I am still struggling to understand how the budgets will work. Indeed, one of the witnesses on the next panel will argue that the budget should be centrally determined because there will be such difficulty in deciding, first, how much goes in and, secondly, what services are covered.

**Alan Gray:** That is one thing that we must tackle up front, so that we do not get too focused on the money. How we move resources is clearly an issue that we must resolve. I echo what Allan Gunning and Jeff Ace said about the importance of spending time on getting the planning right. It is about integration of services, not just in the partnerships but between the partnerships and the acute sector.

It will take time to work through. The plan is strategic and it will have to have a horizon of five to 10 years. The important thing is that we do not rush into making short-term decisions but, instead, take the time to work out how to redesign our current healthcare system to meet the future demands that we are all facing. We need to change the way in which hospital services are organised.

The most important decision that we will make is about spending time up front in the early years of the partnerships on building confidence in one another and building the strategic plans that will allow us to see how we can move resources over time. It takes time to move resources that are currently invested in staff and services, but we need vision in the strategic plan along with the leadership that will allow us to make the changes that we need to make to build a sustainable healthcare system in Scotland for the foreseeable future.

**Dr Gunning:** I agree with Mr Chisholm that the detail of the analogy does not always hold. The point that I was getting at is that, essentially, we are shifting the balance of care in learning disability and mental health services. One of the policy objectives is to provide seamless services in the home or in as homely a setting as possible. In principle, the same proposition is before us and all the partners will have to be very clear about how that will be delivered. That is really the point that I was trying to make.

Secondly, there is a distinction between total resource and the operational management of budgets. I would certainly not be in favour of splitting up the operational management of budgets within district general hospitals. From my experience, I do not think that that would work; it would become tremendously confusing.

We have to bear in mind the fact that the majority of resources that are consumed by acute services are the consequence of decisions that are made by colleagues in primary care. We have to strengthen the link, and I think that we have the opportunity to do that.

**Rhoda Grant (Highlands and Islands) (Lab):**
In listening to what you are saying, it occurs to me that the body corporate model means setting up a whole new bureaucracy in times of tight restrictions on spending. I can see how savings can be made by better incorporation and sharing at ground level, but setting up a whole new bureaucracy must have a cost associated with it. Is that the case?

**Dr Gunning:** I would not describe it as a whole new bureaucracy but support for a new way of working. We have to look at the bigger picture and find opportunities to share services.

I can show how structural change can support changes without organisational change, and I will step outside the current discussion to talk about procurement as a function within the NHS. All the NHS boards in the west of Scotland have got together to procure things as a single body, so instead of doing something five times we do it once. We have been able to make substantial savings as a consequence, but there has been no structural change in line management reporting. That model can be transported and the body corporate model can support real change and improvement without leading to a big increase in bureaucracy. The bureaucracy does not automatically follow.

Clearly, the setting up of the integration joint boards and the non-executive input will all have to be thought through. My view is that we should keep those things that need to be put in place to the absolute minimum that is required to support the change on the ground. That is where all the things that we have been talking about in relation to locality planning become important.

**Jeff Ace:** The challenge is a powerful one. We need to demonstrate to our local communities that the structures that we put in place do not create a bureaucratic cost. It would be a very hard sell if we had to say to our population that the services that we were providing separately will now be provided together and that that will cost us more in bureaucracy. I would not like to have that conversation, so the onus is on us to make the systems work within our existing financial, management and leadership resources. It is a
strong challenge because, on paper, the set-up is now more complex than it was. We have to find a simple way through the potential complexity that does not cost us more suits on seats.

10:15

Rhoda Grant: That is certainly a concern.

I will move on. We had evidence last week from councils that are concerned about the breadth of the bill, because it does not focus only on health and social care but includes any services that are offered. Is it right for the bill to have that wider scope? Alternatively, do you agree with the councils that it should be amended to focus only on health and social care?

Susan Manion: That is a good point, because you can read quite a lot into the bill in its existing form about the shape of the organisational arrangements and about what is in and what is out.

Briefly, we would seek clarity—it will come either centrally or locally—about what is meant by the proposal on acute services, what is meant by the inclusion of unscheduled care, and whether that is part of a commissioning budget or a provision budget, because the proposals broaden it out.

The discussion about the body corporate model indicates that it is very difficult to draw lines around older people’s services as such. The bill therefore has to be broader because, from an NHS point of view, when it comes to primary care and community services it is very difficult to separate out different chunks of how we deliver. We have to think about how we work together locally around GP practices to link into patient pathways of care. It is a crucial issue.

Dr Gunning: There are some specifics towards the end of the bill on the role of agencies that currently provide services only to the NHS but under the provisions in the bill can provide services to wider stakeholders. The spirit of the bill is to ensure that any potential barriers to integrated working are removed, and its provisions are designed to support integration. The important point is that there is an appropriate balance between providing the necessary statutory framework and allowing enough flexibility for local partnerships to operate in the way that best suits local circumstances. That is always a difficult balance to strike.

As was said previously, when you look at some aspects of the bill in isolation, you see that it contains residual powers that could be quite considerable if enacted. Those are the important issues that are before us.

Rhoda Grant: Do you have concerns about that? Or, from a health perspective, is that okay?

Local government covers a spectrum of services including not just social care but transport, housing and education—the whole lot. In your role, do you have a concern about the breadth of the bill?

Dr Gunning: I do not think that we have such a concern in Ayrshire. We feel that, on the health side, the bill gives enough flexibility for us to organise in a way that we think is appropriate to support service delivery. For example, it is welcome that services beyond services for adults can be included if local partnerships feel that they would benefit.

We would clearly like to see clarification about the services that must be included, those that might be included and those that will not be included. To be fair, some further detail that has still to come out—probably in regulations—will give us more information about the position.

Susan Manion: Active participation from integrated partnerships with local community planning arrangements and strategic community planning arrangements will be absolutely crucial. The bill does not touch enough on health inequalities and how we are going to look at the whole shift towards prevention and dealing with inequalities. There is a real opportunity for partnerships to be key to part of that work.

Through the commissioning arrangements or through the existing planning arrangements, we need to be able to work much more closely with colleagues outside social work and across the council because we need to be able to influence our colleagues in transport, housing and the environment because those issues all impact on inequalities. The fact that the bill has a broader look at where the partnership would sit in relation to its planning partners is crucial.

Nanette Milne (North East Scotland) (Con): I want to follow up what has already been said about stakeholder involvement. Concerns have been expressed to us, particularly by the third and independent sectors, that there is limited detail in the bill about the involvement of stakeholders. What are the panel’s thoughts on that?

Also, last week we had some discussion about the role of GPs. It is crucial that they are involved. I well remember when CHPs were set up because my husband was a GP at the time and there was disillusionment because they had lost their local area. Suddenly, instead of looking after a small area, the whole of Aberdeen as it was became a CHP. The profession is fairly disillusioned, so how will the bill enthuse them and help you to get their involvement? Without that, it is not going to work.

The Deputy Convener: How will the bill motivate GPs? Who wants to come in on that?
Jeff Ace: GPs do disillusion very well. It goes back to an earlier argument about localities and communities, and I think that I can wrap in all stakeholders as well as GPs.

Clinical professionals and a lot of third sector bodies find it difficult to engage with us on a regional basis. Their ability to act and to mobilise resources does not work in that way. They can put different solutions in place in different areas.

The focus of our integration locally is on a decentralising integration in which we achieve critical mass in a locality area that is far smaller than a traditional CHP area. That allows us to bring in GPs—we will have a GP clinical lead for each of the localities—and to bring in the third sector and other organisations that are active in that locality. They might not be the same organisations in other localities. The flexibility to create solutions that are tailored to a relatively small area and a small number of communities is a real strength. That seems to be raising enthusiasm among clinicians and other partners.

Dr Gunning: I support Jeff Ace's comments about locality planning. If we go back far enough to local healthcare co-operatives, there is almost a nostalgic look in the rear-view mirror at how they worked.

I have a practical example that I heard one GP talk about. The agendas need to be locally relevant to practice populations. For example, this particular GP said that they know that there is necessary bureaucracy in the running of public services, and all of that can go on. However, what they want to see on the agenda is a debate about issues such as the quality of the incontinence service. That GP said that such things are real to them and that, if they can spend their time shaping that agenda, it will be worth engaging.

One of the successes in the community health partnerships has been the role of the public partnership forums, not only in CHP-related service change but in the wider landscape of service change. This is another point of clarification, which goes back to the point that Susan Manion made. We want to build on what has worked well in CHPs, through such mechanisms. In Ayrshire, some of the forums that support the CHP committees have wider stakeholder engagement and have worked well.

We have a model for engagement of the third and independent sectors, in the joint strategic commissioning process for services for older people, which seems to have worked well. I think that those sectors want to build on such strategic input. We can build on what is already working.

Susan Manion: The discussion about the whole clinical and care pathway for individual patients is crucial, because GPs and clinicians are most interested in what they can do to make life better for the patients who are in front of them. Much of that is about having some influence over how to change things, whether we are talking about incontinence services or patterns of referral to more specialist services.

That is what GPs are interested in. Links with other clinicians locally, through the models that are starting to emerge, are helpful and will, I hope, help GPs to become more engaged in what we are trying to do.

Nanette Milne: Do the witnesses think that there should be more detail in the bill, particularly about the third and independent sectors? The sectors have provided a significant amount of evidence to argue that they should be in the bill.

Jeff Ace: I would not want there to be a requirement for third and independent sector bodies to be represented on committee X, Y or Z or board A, B or C. That could require a lot of commitment from the sectors, for relatively little advantage. Where we need the sectors to work with us is on actual service provision and the local solutions that we can put in place—that would be preferable to their having what might be a tokenistic presence at a region-wide committee, which would not play to their strengths.

The Deputy Convener: We will put that point to the third sector in the next part of the meeting.

Dr Gunning: It is important that there is positive engagement with the sector and, as I said, we have a model in that regard. However, the arrangements must follow the governance and accountability arrangements. We must be very clear about the distinction between strategic involvement and where the responsibility lies at the end of the day, which will be with the statutory partners. It is important that we draw that distinction, to be fair to colleagues in the third and independent sectors.

Gil Paterson (Clydebank and Milngavie) (SNP): It is clear that there is a status issue. The bringing together of health boards and local authorities and their budgets gives status to the two big organisations. However, the third sector delivers a lot on the ground. How do we give the third sector status and a voice, so that we get the best out of it?

We will hear from the third sector, as the convener said, so my question might be more appropriately put to those witnesses. I am sure that they will have something to say about the matter.

The Deputy Convener: I think that our next witnesses are in the public seats, just behind the current panel. Their ears are probably burning. [Laughter.]
Alan Gray: Mr Paterson’s question takes us back to the point that Jeff Ace made at the start of the meeting. We are turning the issue on its head by putting locality planning at the forefront, supported by strategic frameworks.

We have to make that approach a success and we need to engage with the third sector. We also need to engage with the public on looking after their own health. We need to empower communities to be involved in decisions that affect them. There are assets dotted all over our health board areas, which could be better used by communities. It is for us, as leaders of the health service, to ensure that we engage meaningfully at locality level.

GPs’ biggest frustrations are about making connections, even within the health system. We must make it easier for them to make connections with the public and ensure that when they want people to be admitted to acute services they have a known point of contact—a face, a person. A range of work has been done around trying to integrate GPs into the whole health system and integrated health and care partnerships.

10:30

The Deputy Convener: With our witnesses’ indulgence, because of time constraints, we will move on to the next question from members.

Mark McDonald (Aberdeen Donside) (SNP): I will be shamelessly parochial, but I think that it will nonetheless be relevant to the bill. Mr Gray possibly knows where I am going to go.

Concerns have been expressed about Aberdeen City Council’s decision to establish an arm’s-length company—a local authority trading company—for the delivery of some of its social care services. The chief executive of NHS Grampian is on the record as saying that, although that does not prevent integration, it could restrict the range and nature of the partnership that is established in the Aberdeen area. Given that things have moved on and the council has established such a company, what discussions have taken place? Are you confident that the partnership will be able to provide the maximum benefit?

Alan Gray: Without going into the details, we have to recognise that the local trading company has been set up. I view it as a service delivery vehicle, as it will deliver services and will be commissioned by the integrated authority. It will not not make things any more difficult. It is different from what we have in the other two local authority areas with which we work but, if we take a sensible approach with the city council, the vehicle will not be an inhibitor to progress on the integration agenda. We just have to understand what the vehicle is there to do. It is there to achieve a range of objectives for the council, but it will not necessarily get in the way of effective partnership working in the city of Aberdeen.

The discussion has moved on from when correspondence was exchanged on the issue, and we now recognise what the vehicle is there to do. There has been positive engagement between health board and council officials. We now have to spend time on strategic plans, and the trading company will be part of that, because it will deliver part of the service that we commission, in the same way that some of our operational services in the community health partnership currently provide services. I do not see the trading company as an inhibitor and I do not think that the bill needs to address the issue specifically. It is for us to work through the detail of that as part of the joint commissioning arrangements.

The Deputy Convener: Mr McDonald, it is valid to follow up on that specific issue, but, if you want to do so, could you be brief, because there is a wider issue about structures?

Mark McDonald: That is the point that I am coming to. Previous legislation has often been found not to capture local authorities’ arm’s length organisations. Is that approach captured by the framework in the bill?

Alan Gray: The governance remains with the integrated authority. That is where the responsibility lies for governance and for the decisions on the planning and provision of services. It will be for that group of individuals, when they come together, to determine how the trading company forms part of that and what services will be commissioned through it. That decision is still to be worked through, but it should not prevent that approach.

Mark McDonald: Obviously, we are focused on the governance and accountability issues in the bill, but the driver behind the bill is to improve service delivery to individuals in receipt of care. I am aware that there are long-standing issues in some areas, in relation to the recruitment of carers, for example. Do you envisage that the closer working and the potential to look at issues such as workforce will have a positive impact on the situation in areas where there is a difficulty in recruiting appropriate care professionals?

The Deputy Convener: I do not think that that is specifically directed at Mr Gray, although he is welcome to answer it. I will come back to the other witnesses.

Alan Gray: That comes back to the point that I made earlier about looking ahead. We now have to design a health system that can be delivered within the constraints of various local markets. Each of us faces different difficulties. It is for us to
design a system that recognises where the challenges are and then to work together to find a way forward. There will be challenges on issues such as recruitment, but we need to find a way of working through them to come up with a system that is sustainable and attractive for people to work in and that recognises the challenges in local areas.

Dr Gunning: From the perspective of carers, one potential advantage of workforce change is fewer handoffs between services, because health and social care staff will be working as part of a single team. People talk about conversations over the kettle, but the fact is that co-locating those teams in a single area enhances teamwork, outcomes and the involvement of carers. There is a big human resources and organisational development strategic agenda here, but we must build on things that have already been successful, such as joint training in child protection, to ensure that we are developing the workforce in a coherent, consistent and appropriate way.

Susan Manion: Dr Gunning has highlighted a point that I think was missed earlier in response to the question about the potential added value of the new legislation. Workforce planning must be linked to the resource change that needs to happen because under the current arrangements we still have different care workers—care home and healthcare workers, for example—going into people’s homes and there are sometimes still gaps and overlaps in provision. Planning and delivering that service more effectively while taking HR issues into account will provide significant added value. Indeed, that is what excites us about the new legislation.

Jeff Ace: Linking back to a previous question, I think that it is important to realise that the bulk of carers come not from the statutory agencies but from families and third sector organisations. That is the sort of area where each system has to demonstrate its effective working with other partners at a very low—say, community or family—level. That quality of engagement with the third sector and other partners is what will determine whether this bill makes any improvement.

Carers provide a really useful example of how not all of the solution lies within the statutory agencies. In fact, most of the solution might not lie with those agencies; it might well be that a lot of our success will be driven by the quality of our engagement with our non-statutory partners.

Dr Gunning: I think that there is a wider strategic agenda that links back to the Christie commission and particularly to the question of how public services reshape their relationships with local communities. That is a central issue for us all; indeed, in East Ayrshire, a vibrant and very structured communities programme has been set up through community councils to address that very matter.

If we in Ayrshire have a concern, it is about some of the links between this bill, the community empowerment and renewal bill and the Children and Young People (Scotland) Bill that is currently going through the Parliament. There is a responsibility to ensure that those specific examples are consistent with each other and lead to the same outcome that we all want. There will be quite legitimate overlaps, but we must ensure that they are positive and that we are not duplicating things or, worse still, pulling things in different directions.

Aileen McLeod (South Scotland) (SNP): The only questions that I had been hoping to ask have been asked and indeed answered, particularly on the issue of encouraging the meaningful involvement of our third and independent sectors or users and carers in the design, development and implementation of our services. However, if you wish to put anything that you have not already said on the record, feel free to do so. For example, I am aware that the community health and social care partnership board in Dumfries and Galloway includes representatives from the third and independent sectors and there is also, of course, the putting you first programme.

My safety net question was going to be about workforce planning and training to build capacity in the community but that, too, has been asked and answered.

The question that I will ask, coming back to the bill, concerns complaints and patients’ rights. I understand that, at present, our health boards and local authorities operate entirely separate complaints procedures. In addition, health boards have to comply with the Patient Rights (Scotland) Act 2011, which sets out the rights and responsibilities of patients who use NHS services.

How do you envisage the complaints systems and the 2011 act working with integrated services that are meant to appear seamless from the perspective of the users?

The Deputy Convener: For the moment, the witnesses thought that they were getting a blank sheet of paper and could say whatever they liked. However, we now have a very focused question. Any takers?

Jeff Ace: For the bulk of the pathways, the means by which a patient’s complaint will be dealt with will be clear. In perhaps four or five years’ time, there will be a blurring in community care at the home level between what is health provision and what is social care provision. At that point, the question of which of the discrete processes we will use will become difficult to answer, and we may
need to come up with some sort of different landscape around complaints management.

**Dr Gunning:** I think that that is right. Already, some complaints cross boundaries between agencies, just because of the nature of things, and the agencies have to work together to address those issues. There may be a need to formalise those arrangements a wee bit more.

I would like to use the question to cover another point that we have not dealt with yet. The issue of complaints leads to the issue of ombudsmen and so on. It is important that the scrutiny agencies go with the grain in terms of the policy objectives of the bill. I know that thought has been given to joint scrutiny arrangements, but the last thing that we want—going back to the earlier point about bureaucracy—is for scrutiny to take place individually and then collectively, because, before we know where we are, the burden of bureaucracy on frontline services will increase, which is the last thing that we would want.

**Aileen McLeod:** At the moment, the 2011 act is primarily aimed at patients using NHS services. Should that be extended to cover social care services also?

**Jeff Ace:** A client in the social care framework and a patient in the NHS framework both have a framework of rights-guaranteeing legislation, so I do not think that there is a gap at the moment. I think that you are asking whether we should blur the line between the two frameworks and make one the dominant structure, as it were. I do not think that there is an urgency around that. At the moment, I think that people understand clearly where the Care Inspectorate’s responsibilities lie and where the responsibilities of Healthcare Improvement Scotland lie. I think that we have clarity at the moment. It might be an issue that needs to be dealt with in the future, but I do not think that there is an urgent problem there.

**Dr Gunning:** The focus of some of the provisions in the current patients’ rights legislation is very much on treatment times in acute services, such as the 12-week treatment time guarantee. Whether there will need to be a statutory underpinning around access times in future is a major policy issue. Certainly, however, I see many of the challenges within the current legislation being to do with the issue of guaranteed access times, which is really important.

10:45

**Gil Paterson:** Most of the questions that I wanted to raise have already been covered. Dr Gunning said that he likes conversations over a kettle. I was born and raised in Springburn where we used to try to have conversations over a barrow. I think that his way is much better than the way I was brought up.

**The Deputy Convener:** Can I just say, as a representative of Springburn, that things have moved on a lot there?

**Gil Paterson:** That is right. I no longer live there.

Ms McLeod raised the idea of two different systems for people to make complaints, which is a serious question. I suspect that you are saying that it should change organically and that in the future they will come together, and that putting in effort and resources now may make it fail. A comment on that point would be fine.

**Jeff Ace:** We will always be able to answer a complaint. Between us and the council we will find a mechanism, as we do now, when an individual crosses our organisations, so there is no urgent necessity for legislation on the complaints mechanism.

**The Deputy Convener:** Do any other witnesses want to comment on that point? Mr Paterson, do you want to comment?

**Gil Paterson:** No thank you. That is fine. I have heard enough.

**The Deputy Convener:** It is not often that members have no comment to make at this stage.

May I take the opportunity to say briefly, because time is starting to get ahead of us, that if other witnesses want to put something on the record that you have not been asked about, now is your opportunity to do so. Is there anything that you would like to add?

**Susan Manion:** Speaking for the CHP association—saying this might seem like turkeys voting for Christmas—we are delighted with the opportunities that integrated partnership presents. When one is called to give evidence one considers the issues that are missing or the bits that we want to emphasise.

We appreciate the thrust of the change. We recognise that it is coming off the requirement for us to be bold and to use the opportunities. Locally, we are keen to be bold and to use the opportunities. We need to make sure that we make some step changes now to build on what has been successful, because there is so much more that we can do together, but we need the legislation to help us to be able to do that, otherwise we would have done a lot of it before now.

**Jeff Ace:** I will pick up on the point about the third sector that was raised earlier. It is important to re-emphasise that every system will need to make its engagement with the local third sector work in a way that is dramatically different from the
way in which it has worked so far. We need to be assessed on the quality of how well that works.

I and some of my health service colleagues are thinking about how to legislate effectively for that engagement in a way that works for Glasgow or for rural Dumfries and Galloway. That is the bit we are thinking about, not the realisation that we will have to change radically the level and quality of our engagement with third sector and other partners.

The Deputy Convener: Thank you Mr Ace. Does Dr Gunning or Mr Gray want to add anything to that comment?

Dr Gunning: I will make two brief points. Although we are talking about structures, governance and accountability, integration is not an end in itself, it is just a mechanism for improving outcomes for the people and the local communities that we serve. Integration cannot be achieved by legislation alone. There are big leadership challenges at all levels, national and local, within and outwith the statutory agencies. We need to be aware of the organisational development and wider change agenda, and the leadership that will be required at all levels to make integration a success.

Alan Gray: It is important to understand the relationships between the strategic plans that the councils and the health boards will undertake and the integrated plans that each of the partnerships produced and how they will work together. Our board serves more than one council area and it must be recognised that a lot of our services are organised across a region, indeed, across the north of Scotland.

It is important to get the right balance between planning decisions at a strategic level across a board area and the strategic planning decisions taken at an integrated authority level. If the legislation can simplify that, as Mr Ace said, in terms of governance and accountability, that would be ever so helpful to ensure that we achieve the right outcomes and deliver what we are required to deliver under the new arrangements.

The Deputy Convener: Thank you very much. I remind witnesses that our scrutiny of this bill will be on-going and if there is anything that you want to add in writing please do so, as the committee continues to take evidence. We would find that helpful and welcome it. All that remains is to thank all four of you for giving us your time.

The meeting will suspend for five minutes while the next set of witnesses comes in.

10:55

Meeting suspended.
third sector representation. We would like to see the third sector represented at all levels in the new structures. If we are going to have the new structures, it is important that the third sector have a seat at the strategic tables because it has a strategic contribution to make to the bill, and not just to its objectives.

If only the statutory agencies are to vote—based on the rather odd reasoning that we have heard so far, which is that they are statutorily responsible for public money—the third sector and other interests should have some power of veto over the plans and how they are developed. It should certainly have a right to contribute to those plans.

I know that Mr Paterson said that it is not a question of money, but there needs to be a modest investment in the third sector’s capacity to engage with all the structures, otherwise you are simply asking hard-pressed volunteers in voluntary organisations to stop doing something else in order that they can engage in statutory planning. There needs to be investment.

Most of all we argue that it is not a question of structures; it is about building stronger communities, which will take the strain and the pressure away from all the focus on delivery of care services to people. If we do not do things that reduce demand on formal services, we are kind of missing the point.

11:00

Ranald Mair (Scottish Care): I was not sure whether the reference to “two big beasts” was a reference to Mr Sime and Mr Henderson. [Laughter] As you know from the written evidence that we have submitted, Scottish Care is clear that it will be a missed opportunity if the third and independent sectors are not fully included in the governance arrangements in the future. That is the position that we have to date enjoyed and discharged responsibly within the work of the change fund and the reshaping care for older people programme. Those are four-way partnerships within which the third and independent sectors have sign-off responsibilities, and which have created a sense of joint ownership of delivery of care and of development of new models of care.

Rather than capture the progress that has been made, the bill sets us back dangerously to a point where the third and independent sectors become “consultees”, and not full partners in a process. Despite the optimism that was expressed by Dr. Gunning and others, there is a real danger of our losing ground rather than gaining it. The evidence that we submitted makes it clear that the third and independent sectors deliver more social care than the statutory sector delivers. One has only to look at care homes and care at home, in which the bulk of services are delivered by third and independent sector organisations.

How can there be integration of services? In a sense, and in an honest way, the title of the bill states that it concerns the “Joint Working” of statutory bodies. That is it. We have given up on “integration”.

As you know from our written evidence, we would have preferred that this was a public services bill in which everybody who is part of the delivery of public care was brought together, and that the focus was on that level of integration. We feel very strongly that the third and independent sectors have to be represented at all levels of governance and planning in order that we are not just at the commissioned end of service delivery but are wholly part of the process from the outset.

Nigel Henderson (Coalition of Care and Support Providers in Scotland): I echo much of what has been said. It is particularly interesting to note where we are today and the part the third sector has played in achieving that. An awful lot of what is delivered across the country was pioneered, innovated and created by third sector organisations and is now part of the mainstream.

It is also interesting to see the push within the health service now to move to a person-centred way of working; the health service is playing catch-up with the voluntary sector, which has been person-centred for the past 20 years. We have a significant contribution to make—not just as providers, but as equal partners. It is interesting to reflect that we are trusted to provide care and support to some of the most vulnerable people in Scotland but are not trusted or respected as equal partners.

I absolutely echo what Mr Sime and Mr Mair have said: we need to be involved at all levels. We can deal with the mechanics and how we sort it out later, but the basic premise has to be involvement. The third sector does not always speak with one voice; it includes a diverse range of organisations. We have diverse interests, but our range of interests crosses the whole community in Scotland, at different levels. It is very important that we do not leave the two big statutory authorities to do this by themselves. They need people like us to help to shape, to create and to innovate for the desired outcomes.

Gil Paterson: I hear what you are saying and how you are delivering your message. Are there any practical items that you can bring to the table that encapsulate what you are trying to achieve, bearing it in mind that you have just said that the range of voluntary and third sector organisations and where and how they deliver is very wide? How
do you bring all that together before you can impart power to act to maybe one individual?

Ranald Mair: I have an example that relates to Nanette Milne’s questions in the earlier evidence session, about the decisions that GPs make and why people end up in hospital. The GP can pick up the phone and get access to a hospital place if they are worried about Mrs Smith, but they cannot get immediate access to an intensive care-at-home package or to a care home place. The purpose of integration is to bring all the options to the fore so that when GPs are making such decisions they have immediate access to all the options.

If we leave the provider sector in a situation in which commissioning must be through the social work department, there is not immediate access, not all the options are brought to bear and the systems are not redesigned. It seems to me that there are practical ways in which the provider sector—private and voluntary—must be part of the planning and the bringing together of options at the front line.

Martin Sime: There is a track record in this. The Government makes a significant investment in what is called the third sector interface—none of us likes the name very much, but the intent is very clear—which consists of local umbrella bodies that are designed to provide a framework through which the third sector can co-operate. In health and care, we have heard examples of the different roles that the third sector can play as a vehicle for user, carer and community groups, as an advocate for special interests and people with disabilities, and as a service provider.

It is clearly quite difficult for any one organisation to represent in a traditional sense all that diversity in statutory planning processes. However, we are working towards that in the community planning world and we are making real progress with the TSIs. The representative role is to enable messages from the diversity of interests in the sector to be represented at the table and reflected in the discussions. However, it is just as important for the messages from the community planning table to come back to the diverse constituency in the community. In other words, the role is not to represent a bloc of interest, but to act as an interlocutor and take messages back and forth from what are really quite diverse sets of interests.

We could undertake that role in health and care, but we cannot do it from a standing start with no resources. That is my message to the committee. Also required is a very clear message to the statutory partners that this is not an optional extra or something that should be left to local decision making. We know what happens when such things are left to local decision making: in large parts of the country, they do not happen.

Nigel Henderson: I think that the question was specifically about how we do integration. I do not have a snappy answer, but I would reflect what Martin Sime said. We already have community planning structures, although getting involvement is sometimes difficult. Certainly, as a service provider, I sometimes find engagement difficult; equally, though, I understand that we have third sector representation.

However, there must be discussion of how integration and community planning link up. We could set up lots of committees, structures and all the rest of it, but I would then worry about how we as a sector would ensure that we were represented. We think that we are entitled to be represented and to be part of things, but as Martin Sime said, the question is about how we would resource that. There are already frameworks in community planning that could feed into health and social care integration so that there is awareness of what is happening from the ground up.

Gil Paterson: So, to make integration happen, must there be a reference to it on the face of the bill, or would it work through guidance?

Nigel Henderson: I think that it is a strongly held principle within the policy memorandum, so I do not see why it should not be on the face of the bill.

Ranald Mair: To strengthen that point, anyone reading the bill as it stands would not know that the third and independent sectors existed or contributed anything. There is a disconnect between the policy memorandum and the bill in that regard. We are already core partners and need to continue to be. Reference to that in the bill would mean that the matter cannot be left to any local opt-out or whatever; our inclusion would become a formal requirement.

There are partnerships in which that would happen anyway, as was reflected by Dr Gunning earlier in the meeting. He said, “In Ayrshire, we would do that.” That is fine, but there might be other parts of the country where the choice would be not to do it, or not to do it well enough. Therefore, it has to be in the bill.

The Deputy Convener: I have a supplementary question, if members will indulge me. Mr Sime, I think that you said to challenge our views that, if it is about equal partners, we have local authorities, health boards and the voluntary sector, which could hold the balance in a strategic board. What should be the balance of influence in voting rights and input for the third sector on a strategic board? More important, if you believe that there should be something on that in the bill, the bill has a great
deal of flexibility on what the body corporate may look like, for example. I do not mean this glibly at
downstream deliverer of public sector priorities. If we do not
table, the tent will become very uncomfortable
institutional arrangement is necessarily limited.
I do not have an answer to the dilemma that the
that third domain above the first domain, we will
have lost the plot.
big lesson an object lesson in 14 public bodies
communities, and the need for all public
locality planning level. We should be involved at all
that allows for consensus to arise and in which we
strategic planning at the earliest phase. That is about meeting outcomes for individuals in
in delivery of health and care services and the promotion of initiatives in the
community, which might obviate the need to use
my colleagues have reiterated, the third
sector’s engagement in delivery of health and care
service infrastructure. If the message is that you
can have all this public sector infrastructure
without the engagement of the third sector, I would
of course have to say, that you cannot.
My argument is that the third sector needs to be
seen as an established partner, not as a
downstream deliverer of public sector priorities. If we are not an established partner and are outside
the tent, the tent will become very uncomfortable
to be in altogether, because the third sector will
make its voices and interests known in other ways.
I do not have an answer to the dilemma that the
committee faces. I understand why local
government and the health service are equally
unwilling to cede a voting seat at the table: it is
because of the power that that would give the third
sector. The third sector would be ill advised to
do a strategic needs assessment in an area, to
develop a locality plan and to appraise the options
for how services can best be delivered without the
inclusion of the third and independent sectors. It is
not beyond us to come up with a governance
model that would allow that strategic inclusion,
while accepting that the statutory agencies have
particular lines of accountability in relation to
public moneys and so on.

11:15

The Deputy Convener: That is helpful.

Nigel Henderson: There are three potential
levels of involvement. One is at the health and
social care board level, one is at the level of the
strategic commissioning process and one is at the
locality planning level. We should be involved at all
levels. Being involved early in any strategic
planning is crucial. We would like the bill to be
changed to reflect that and say that the third and
independent sectors must be involved at those
points.

In an ideal world, it might be useful for us to
have voting rights at board level. However, as
Martin Sime said, hopefully we have a process
that allows for consensus to arise and in which we
do not have to wave votes around because people
share the same vision and agenda on integrating
health and social care.

The Deputy Convener: There are two
supplementary questions on that, from Aileen
McLeod and Richard Lyle.

Aileen McLeod: Martin Sime said earlier that
the issue was not about the structures but about
building stronger communities. In his written
submission, he mentioned the capacity
implications for the third and independent sectors
and the fact that
“the operating environment for the third sector remains challenging”.
A key challenge within that for the way forward is
how we rebuild capacity in communities to deliver
health and social care services effectively. How
should that be done?
Martin Sime: You put that question in an interesting way. I am not sure that the top priority in my book is to build capacity to deliver services. The top priority is to build capacity to reduce the demand for services. The third sector does a range of things, or is a vehicle for them, in communities, such as befriending, lunch clubs, care-and-repair initiatives and the Food Train. There is a raft of third sector interventions that enable people to sustain themselves in communities and be independent. Community transport is a classic example of that.

Those are not commissioned care services; they are voluntary organisations doing things with communities that enable older people to be independent. We need much more of that, but it is precisely those services that are most under threat from the reductions in public expenditure. As budgets tighten, the statutory or formal services retain an element of priority and anything else is seen as marginal. That is exactly the wrong way round. An investment in services that enable older people to sustain their independence and good health in the community would be genuine prevention.

My worry is that we all run after this word “prevention”, but it is interpreted in much the same way as the change fund was interpreted, which is to mean that new ways of intervening in people’s lives and providing services have priority over ways in which people can make decisions for themselves.

I want to open up one area that has not had enough priority. We are having conversations about the bill and the delivery of services without sufficient reference to the Social Care (Self-directed Support) (Scotland) Bill. It seems to me that the two bills are ships passing in the night. Self-directed support ought to enable people to make decisions for themselves about the kind of support and infrastructure that they need to meet their needs. That is fundamental to the canvas of services going forward.

The Deputy Convener: Mr Mair wishes to speak, but I ask him to hold on to his thoughts for a second. If he and Mr Henderson want to answer Aileen McLeod’s question, they can do so, but two members want to ask supplementaries. We will take Richard Lyle’s supplementary now, so that the witnesses can reflect on both questions. That will allow us to get through questions more speedily.

Richard Lyle: In some ways, your submissions are quite critical. I agree when you say:

“This sector provides 85% of the care home places in Scotland and over 50% of care at home. There are more older people in care homes any night of the week than in hospitals, and more … care workers employed in the private and voluntary sectors than in the public sector”.

I love the bit from Ranald Mair that says:

“The mundane title of the Bill might also tend to obscure the fact”

of “its impact”.

A number of critical points are made.

I come from a local authority background and I have been involved with many local organisations and many sectors. In a partnership, who will speak for all those involved? Who will be at the table? If you were included, would you really need a vote?

The Deputy Convener: I think that some committee members have jumped the queue for asking questions. A very patient Rhoda Grant was meant to be next.

Aileen McLeod asked about building capacity; Mr Lyle asked who would represent the third and independent sectors should a vote ever have to be taken.

Ranald Mair: I will try to respond to both points. We have good experience to draw on from the change fund and reshaping care partnerships. We have tested the ground on some of the issues. We have representation—we have worked out how to do that. There are representative bodies. I sit on the Glasgow reshaping care partnership steering group, on which the third sector is represented through the Glasgow Council for the Voluntary Sector and the independent sector is represented through Scottish Care. We have worked out who will represent us, which has been important.

One of my disappointments with the bill is that it does not seem to say what is working. Some of that ground has been painfully gained over the past period; that did not happen automatically. Initially, the involvement of the third and independent sectors in some aspects felt tokenistic, but that has improved as we have demonstrated that we bring something to the table.

On capacity, we have had a dual model to enable our sectors to be full partners. Money has been channelled from the Government to support the sectors and their engagement, and local partnerships have invested money because they recognise that, if we want the third and independent sectors to be full partners and deliver new models of care, they have to put resource into that.

We have good experience that we could draw on, but we are not doing that. We do not have to say how the sectors will be represented, how to create joint structures and how to develop capacity, because we have done that for the past two or three years—we have been on that journey with reshaping care. We should capture and build
on that, rather than start again, but the bill has the danger of pushing us in that direction.

Nigel Henderson: The bill refers to the third sector—the voluntary sector—as well as the for-profit independent sector and the not-for-profit service-providing sector. Those distinctions are important. No one single body will represent the totality of third sector views. Service providers, which I represent, have a view about the contribution that we can make, which might differ from the view of community and volunteering groups. It should not be beyond the imagination of partnerships to look at how such voices are heard and at how to enable them to be heard.

In the past, a lot of change has been miscommunicated. For example, when a hospital is to be closed, we hear only the headline that the hospital is to close, and we do not hear the headline that better services will sometimes be developed in the community. Why are we not communicating and engaging with communities? There might be capacity issues, but there is a willingness, a creativeness and an inventiveness in the sector and we will find ways in which to participate. It will be much better if we are invited to be there as equal partners instead of having to barge the door down.

There needs to be something in the bill that says that the third sector must be involved, although how that happens could be left to local discretion. We already have the model of third sector interfaces in community planning, so it will then become our job to ensure that our views are being represented through those third sector interfaces. I do not think that there is a one-size-fits-all solution whereby we can simply say, “That will be the body.”

Rhoda Grant: Let me reel back the discussion a little to the plea to be involved in governance and commissioning. How would you deal with that, given the rules and regulations about governance and financial interests in the public sector? There is strict guidance about how people can use their influence in decision making. If you were on the board, you would be commissioning services in which your organisations, as contractors, would have a financial interest. That would be a huge conflict of interests that would be difficult to manage because there is no statutory control of your organisations. How would that work?

Nigel Henderson: If we have a conflict of interests, that will be shared by the other partners, as they, too, provide services.

Rhoda Grant: But that is their role—they have been set up as public organisations to provide those services.

Nigel Henderson: In terms of statutory control, the scrutiny to which we are subjected is as intense as, if not more intense than, the scrutiny of some areas of the national health service. We must be registered providers and must go through all sorts of processes. We are inspected regularly and we are held accountable. We are also, in the main, charities and we are held accountable by the Office of the Scottish Charity Regulator. What we can do is very much subject to controls and limits.

Your starting point is to jump to the point at which we might get into arguments about who does what and all the rest of it. If the bill is about fundamentally shifting the landscape of health and social care—if it is about considering the Christie commission principles, moving things upstream and beginning to think about prevention—we need to be involved in the discussion to ensure that we help to shift the agenda. As I said, we have a long history of being creative and innovative and finding different solutions, and all the people who contribute to what happens in health and social care must be involved on an equal basis. The governance issues are important, but we should not lose sight of what we are trying to achieve.

Ranald Mair: It is an important issue that we must address. Scottish Care is not a service delivery organisation; it is a not-for-profit representative body. Therefore, I think that we can represent the potential contribution of the sector as a whole without feeling compromised or having a conflict of interests—possibly better than local authorities, which may want to protect in-house services while supposedly adopting an open options-appraisal process. I do not necessarily agree that the conflict of interests would apply to us and not to the statutory partners.

The important point, which is one that I have made to the committee in previous discussions, concerns the regulation of commissioning processes. We need clear national standards. The process needs to be regulated to ensure transparency and to ensure that our involvement at a strategic level in commissioning focuses on the volume and range of services that we require and how we shape the models of care to deliver what is needed in the future.

11:30

If we are not at the table, time will be wasted. I am in discussion with one health board and local authority at the moment about the development of intermediate care to prevent people from going into hospital. Traditionally, the local authority commissioning staff went into a darkened room and came out with a spec of what they wanted but, when that was presented to providers, it became clear that it could not be delivered in the way that was wanted. In other words, we must be involved...
at an earlier stage to shape the models of care that will deliver what is needed.

I do not think that there is a conflict of interests that cannot be overcome. If we are involved in the commissioning process from the outset, the gains will far outweigh the concerns that we might be partisan in how we go about the process.

Martin Sime: Having read the evidence that was given by local government representatives last week, it is difficult not to conclude that here was the promotion of self-interest on a grand scale, so to be accused of somehow promoting our interests in the commissioning and governance arrangements seems rather rich. For our sins, Ranald Mair and I sit on the national delivery group for health and care, and we have had two special meetings over the summer to consider the bill and its implications. Those discussions—although that is a polite word for them—have been absolutely dominated by the pursuit of the institutional self-interest of health services and local government to the point where the purpose of the bill and the interest of people who might need access to services was almost completely absent.

One thing that the third sector might bring to the top tables is a continual focus on those needs, on the purpose or object of the exercise and on what we are trying to achieve. If one takes a top-down approach to public authorities delivering things to people, either directly or indirectly, one gets into the business of thinking about conflicts of interest.

If the bill was somehow turned on its head and we thought about how to build a system of health and care support from the bottom up, based on the needs and interests of communities and underpinned by the rights of individuals to make choices about the services that they felt were appropriate to their needs, one would come to a completely different set of conclusions whereby health and care institutions are the servants rather than the masters of those processes. The problem is that the bill, in a traditional Scottish public service top-down way, is paternalistic at its heart and is the exact antithesis of the recipe as set out in the report of the Christie commission on the future delivery of public services for building services around communities and their needs. In the bill, we are building structures around institutional interests.

Rhoda Grant: There is nothing to prevent other organisations from being involved in community planning.

None of you has answered my question about how to set up governance structures that are not only fair but seen to be fair, and that ensure that Joe Public does not think that private contractors and third sector organisations who will make a profit are involved in making decisions about how the care is delivered. How do you prove to him that you are not doing it out of self-interest for your organisation and that his interest is at the heart of it?

People in health boards do not have a financial interest and neither does local government. Local government has a democratic interest in serving its public, because its members are elected on and off to do that— they are public representatives. How do you square that circle and ensure that you are seen to be making that decision not only properly but transparently and in a way that fits with standards in public life?

Martin Sime: Voluntary organisations that deliver care are almost universally charitable. They do not distribute profit and there is no personal gain or private advantage. Any resources that they generate go straight back into their cause or mission. They are a public good, so if a charity sits at a top table articulating a view on behalf of the community that it seeks to represent, I am not sure that the public would have much of a problem with that. The public seem to support the idea that charities can play a bigger role in the community and have significant confidence in them.

Of course, charities are subject to adequate and proper regulatory frameworks, thanks to the sterling work of the Parliament to pass Scottish charities legislation for the first time and to establish OSCR to ensure that charities keep to their bona fides. It seems to me, however, that we are kind of missing the point. Not all charities have a service delivery interest; some have a representational interest. The third sector interfaces, for example, do not deliver health and care; they deliver support to the third sector organisations that deliver health and care. It is therefore perfectly reasonable for us to be represented at the top table without any conflict of interest.

We see the problem manifested in adult care services. Local government thinks that the best way of getting the best value—a term that local government does not apply to itself, incidentally—from working with the third sector is through competitive commissioning processes and offering contracts to what is usually the cheapest provider of services. There is lots of evidence, particularly from some pretty innovative work that the Scottish Government health department is doing with the third sector, that that does not get the best out of the third sector, because all that the buyer gets is what is written in the contract. They do not get the third sector using its development expertise or volunteers engaged in the service or a developmental approach that might find other resources to bring to the table. There is none of that if the service is on a commissioned and
contracted basis. That is not the way forward for health and care services being delivered by the third sector. We need to find new ways to generate proper partnerships between the third sector and the state to get the best of both worlds.

The Deputy Convener: Mr Mair, how do you address the conflict that Rhoda Grant suggests?

Ranald Mair: I have a couple of things to add. As has been said by others, I do not necessarily think that we are caught in that trap. We have the evidence base from the reshaping care programme and the change fund that we have discharged that involvement in an even-handed and non-partisan way, but that has to be open to scrutiny. People should have the option to withdraw from certain decisions and they can declare their interest if there is a perceived conflict.

Within commissioning, we can separate off the strategic planning element and the broad options-appraisal element from procurement. I do not expect to be involved in any decisions about how services are procured. The procurement process should be transparent, whether it uses a tendering model or another model. We can separate the planning function and the options-appraisal function from the mechanics that are involved in procuring services. It would be inappropriate for sector representatives to be involved at that level.

Again, I do not think that the one cancels out the other. We need to be clear about the level of involvement and the range of decision making in which we are engaged. Processes need to be clear and transparent so that there is no conflict of interest when it comes to the procurement of services. However, as I said, I would equally apply that rigour to local authorities. They should not be able to allocate contracts to in-house public bodies while insisting on tendering and retendering processes for the third and independent sectors. Let us have one set of rules for everybody, as well as transparency for everyone.

The Deputy Convener: Would you like to add anything, Mr Henderson?

Nigel Henderson: I just reiterate that we are a not-for-profit sector. We are charities, so there is no profit motive and, as Martin Sime said, everything goes back into the work that we do. Within CCPS there are about 73 organisations, which are all social care providers. About 75 per cent of our income comes from public bodies through contracts, service-level agreements and grants, and we generate the other 25 per cent ourselves from individuals, charitable trusts and other pots of money. That money goes back into the public good as well, so we already add considerable benefit. We are not in it to build empires and deliver simply for the organisations; we are there because we believe passionately in delivering better outcomes for people in the community. As Martin Sime said, the public can have confidence in charities through some of the structures that already exist.

I echo the point about commissioning and contracting. Local authorities now put out tenders in which they cap the rate at about £14 or £15 and say that no one will get more than that. However, we know that their in-house services cost at least £10 an hour more than that. It is therefore not a level playing field. There is already a lot of self-interest evident in the public sector. We need to be able to get to grips with that. If we simply move the structure but have the same behaviour, we will not achieve the bill’s goal.

The Deputy Convener: Would you like to add anything, Rhoda?

Rhoda Grant: No. I have not really had an answer to my question, but I do not think that I will get one, so I will just leave it there.

Mark McDonald: I understand entirely the need for the third sector to be confident that the bill will not exclude some of the good work that is currently being done. However, do the witnesses believe that the issue of third sector engagement needs to be on the face of the bill? Could guidance be developed to ensure that the role of the third sector is taken into consideration, which might give some comfort to you?

Martin Sime: We seem to be going over the same ground. Let us see whether we can look at the issue in a slightly different way. I am a bit of a sceptic about whether the bill will achieve its intended purposes. I am not sure that all the discussions that we are having about the role of the third sector should be solely in relation to the bill; they ought to be more in relation to how the third sector engages with public authorities more generally and how the third sector engages locally.

I believe that the third sector’s engagement in the delivery of health and care services and the support of communities is critical for the future, because there is no plan B that involves not using or working with the third sector, or not building strong communities. It therefore seems incredibly unfortunate to have a bill such as this that completely marginalises the third sector to some kind of downstream deliverer of public sector priorities—that simply does not work.

I think that a lot of the bill is totemic anyway, so let us have the totemic engagement of the third sector recognised on the front page of the bill to send a very clear message to public authorities. The previous panel of witnesses reflected the view that they did not need the third sector at the strategic level but just needed it for delivery. That sort of message is incredibly damaging in the long
run to the interests of people who use health and care services. We need more third sector engagement at the strategic level, but the bill does not get there in its current form.

**The Deputy Convener:** Mr Henderson, do you want to add anything?

**Nigel Henderson:** It feels like we are going over this issue in great detail. The Parliament has a history of putting principles right up front in bills, but with this legislation, many of the principles and aims are in the policy memorandum. We would like more of those to appear in the text of the bill, particularly in respect of the inclusion and equal status of the third sector. That is a principled argument, to some extent. Martin Sime is right to say that there are some areas of tokenism, but it is an important token to ensure that we are an accepted and credible part of what happens in the public service world in Scotland.

11:45

**The Deputy Convener:** I assume that Mr Mair agrees with that.

**Ranald Mair:** No, I am going to disagree wildly. [Laughter.]

I listened to the cabinet secretary last week as he emphasised once more that the move towards integration was not about structures but about culture and vision. I agree with that in one sense, but the structures that we develop must reflect the culture and vision that we want to have, and if that is about partnership, the structures must embody that partnership.

The text of the bill does not need to go into huge detail about the involvement of the third and independent sector, but it should contain the requirement for the sector to be fully included. The detail can be in the guidance, and it will be for local partners to work out some of the mechanics that we have discussed this morning and come up with the working answers. If we have not managed to provide those answers now, we can—I hope—find them at local level as we try to move things forward.

The issue is the absence of any reference to us. We do not need a lot of comfort built into the text of the bill, but some acknowledgement that we exist would be marginally helpful.

**Mark McDonald:** That comes back to a particular difficulty with the sector. In a local authority or a health board, it is easy to define who is responsible or accountable. However, it is difficult to define who is accountable or responsible in the third sector, given that it ranges from prominent national organisations to local organisations that are often much less prominent. How do you ensure that, rather than having 100 different voices at the table, you have one voice that will represent adequately that range of interests?

**Martin Sime:** In a sense, we have covered that. In reshaping care for older people, it was agreed at national level that the third sector interfaces would take on the responsibility of enabling the third sector to be represented. Those third sector interfaces had, written into their funding agreement with the Scottish Government, a responsibility to engage with all parts of the third sector and to enable the sector to represent itself to public authorities.

You will not get a corporate view, because we do not have a single view on these matters—you will get a lot of different views, and that diversity is a critical strength of the third sector. We therefore need an enabling mechanism, which must be the interfaces, as there is no other mechanism. It is their core business, and they must reconcile the needs of small local and community organisations with the needs of big national care providers, housing associations and many other interests in the third sector, including those organisations—on which we do not seem to be spending enough time—that give voice to particular needs and interests in communities. Carers groups, for example, must be represented and have a role to play in integration. Where will the voice of people with disabilities be heard amid all these structures and infrastructures?

The third sector interfaces are the starting point for that consideration. The interfaces receive modest central funding to enable them to be independent from local government, the health service and other public authorities. The third sector already plays that role in community planning in every part of the country and there is no reason why, with a modest investment, it cannot play that role in the arrangements in future, as it has done with the change fund for older people. My preference would be for that to be recognised in the bill.

**The Deputy Convener:** Mr Mair, I am not sure whether you want to answer that but, because of time constraints, if you could let it pass, I would be grateful.

**Ranald Mair:** I am happy to leave it. The focus should be on what has worked within the change fund arrangements, because we are already doing that, so we do not need to reinvent it.

**The Deputy Convener:** I have three colleagues who still wish to ask questions.

**Mark McDonald:** I have one further question, convener, if you will allow me.

**The Deputy Convener:** Of course, but it will be brief, I hope.
Mark McDonald: It was on Mr Mair’s response to Rhoda Grant. I do not want the panel to think that I am in any way trying to downplay the importance of third sector partners, but we have to look carefully at how the interaction will work under the bill. Mr Mair suggested that there could be third sector involvement in things such as strategic planning but that the involvement would be removed at the point of commissioning and procurement. Could the system be disaggregated to that level, given that strategic planning will by definition inform the commissioning and procurement approach?

Ranald Mair: I see it all as part of strategic joint commissioning, the principles of which are being shaped. Within an overarching commissioning approach, one could separate off the strategic planning and options appraisal aspect from the procurement aspect. I am saying that third sector representatives would not need to be—and arguably should not be—involved at the procurement end. I would not want to be involved in evaluating tender bids that come in from provider organisations, as that would be wholly inappropriate. However, as a sector representative, I should be involved in the design stage, the strategic planning stage and the weighing up of how we best secure the provision going forward. In all those areas, we can add value to the discussions. Indeed, we can make the procurement exercise more productive when it happens and ensure that it achieves its purpose.

If we use the principles of strategic joint commissioning and allow third and independent sector representatives to be involved at that level but leave the procurement to the statutory agencies, there will be separation and an avoidance of conflict.

Nigel Henderson: Again, the issue goes back to the diversity of the sector. I hope that people who use services and people who care for those who use services will be heavily involved in the decisions about what services are procured. They have their own structures and representative groups and bodies. Are we talking about third sector representatives or third sector advocates? It might be a clearer role if people are given a voice at local level to contribute not just to the big picture but to the local picture. It will be different horses for different courses within what is a diverse sector.

Mark McDonald: Could the issue be dealt with through, for example, a requirement to have meaningful consultation with the third sector, rather than the third sector being involved? The issues of lines of accountability and conflicts of interest that have been raised would thereby perhaps be removed.

Martin Sime: Personally, I would not recommend that way forward. It seems to me that we are talking about a paradigm in which the public sector does things such as procurement to us in the third sector. That is already a move away from the policy intention of the bill, which is to create partnerships to enable us all to play to our strengths. With the bill as it stands and the intentions as you describe them, as well as the discussion about conflicts of interest applying solely to the third sector rather than equally across the public sector, we are already in a hierarchical relationship in which the third sector is seen as the deliverer of public sector priorities. That is not the way to get the best out of us, and it is certainly not the way to create a partnership. It would not go down well among organisations working at the front line if public authorities told us what to do. Why is procurement a process that is applied only externally and not something that is applied to public authority delivery of services, too? We need to move on from that.

The Deputy Convener: I hate to say this, Mr Mair, but please be brief, as we have two further questions to ask before we close.

Ranald Mair: Okay. The model that we are advocating is the one that Audit Scotland advocated last year in its report on social care commissioning, which said that providers need to be involved at a much earlier stage in the process and not just at the procurement end, because that leads to poorer results. The argument is not about some sort of empire building on our part but about how we get better outcomes for people. The drive on self-directed support will mean that individuals are increasingly empowered to make choices about the services that they get, so we will have to change the emphasis on local authorities controlling the commissioning process.

The Deputy Convener: Thank you. We have to move on. I call Nanette Milne, who has been very patient.

Nanette Milne: I am pleased that Mr Sime mentioned the SDS bill, which is now the Social Care (Self-directed Support) (Scotland) Act 2013. I have long felt—and I think that I am on the record as saying—that it will not work properly until we achieve the cultural shift that the integration of adult health and social care should bring us. Do you believe that the bill will facilitate the implementation of SDS in the integrated arrangements? How could it best do that?

Martin Sime: I would like to say that it will but, unfortunately, my view is that there is not strong enough evidence that the bill will lead to the changes that we need in order to make self-directed support the norm. We need a bit of history. We need to look back over the past 10 years to successive failures to drive integration...
and join up services, budgets and processes, and we need to ask ourselves whether the bill will somehow overcome all those difficulties. I have not seen the evidence, so I am not convinced.

The best example that I can give on the potential for self-directed support and the work of the third sector to change people’s lives for the better is around Alzheimer’s. The Government has made a welcome commitment that individuals who are diagnosed with Alzheimer’s have a right—that word is important—to a year of post-diagnostic support. That is a huge advance, and people around Europe are looking at how it could be implemented elsewhere. It is a great credit to the Parliament and the Government that that is being instituted.

I understand that there are voluntary organisations that feel that, at the end of that year, they will be able to go in and work with people and their families to deliver a package of care that is based on what they want, using the right to self-directed support. Over the next few years, we are going to see a huge change in the quality of services and their relevance to individuals, and all the evidence suggests that that will reduce demand on formal public services in the long term, that it will be cost effective and that it will deliver for families.

Those changes are possible because of the self-directed support legislation, but they have nothing to do with the bill that we are discussing. The bill is irrelevant to those changes. We are able to change things on the ground because of self-directed support and the work of the third sector in a way that was unimaginable in the past. We need to pause and reflect on that experience and think about how we can get more of the benefits of the self-directed support and the work of the third sector in a way that is closer to what we are trying to achieve with self-directed support. It is to be hoped that there is a point at which the two have to come together—on the ground, if not in terms of legislation. However, I do not think that the bill does enough to capture the connectedness between the different strands.

Nigel Henderson: There are a number of issues. The bill does not capture the self-directed support stuff at all. Also, the Social Care (Self-directed Support) (Scotland) Act 2013 is largely about local authority spend, not about health spend. Our concern about the new integrated budgets is that, if money loses its identity—if there is no longer a health pound or a social care pound, just a pound for health and social care—what are the implications for charging and eligibility? How does the health authority view the money being used for social care purposes? A lot of things need to be bottomed out there.

The culture that we want at the core of this is reflected in the self-directed support act. It is a culture in which citizens are empowered, in which they have choice and control and are no longer simply passive recipients but active participants in their care pathway or in their care journey. It would be interesting to see much more about how SDS can help to shape the future of health and social care integration rather than it simply being seen as a subset of what already exists.

Nanette Milne: I find that very interesting. I was concerned during the evidence taking for the self-directed support bill that there seemed to be a sort of disconnect between the statutory bodies. How to get the culture change—to properly bring them together, hearts as well as minds—concerned me and that is why I thought that the 2013 SDS act would not really work properly unless what we are discussing now was effective in bringing about that culture change. That is why I was interested to hear what you said.

The Deputy Convener: We want answers to this question, of course we do, but we have one further question and time is almost upon us, so brevity would be good. I know that it is an important question.

Nigel Henderson: I will just throw in a word: trust. Part of it is about trust. We have talked a lot about whether the third sector can be trusted as partners. That has been a major theme of the discussion this morning.

Do we trust citizens to make the right choices and decisions for themselves? It seems to me that
the secret of the SDS act will be whether we actually trust and empower people to make choices and take control. At the moment, I have to say that there is a bit of foot dragging on some of that. The SDS act becomes law next April. I think that it will take a few years to bed in, but trust is at the heart of a lot of what we are talking about here.

Ronald Mair: There is a parallel bit within the bill that I think is relevant—there is some emphasis on locality and local planning and there is a similar point to make about what we are prepared to devolve to localities. Will we give them control of budgets? Will we empower localities in the same way as we are talking about empowering people in relation to self-directed support? Will we trust individuals? Will we trust local communities? That, for me, would be the strongest potential connection—if we get the locality planning aspect of things right in the bill.

Martin Sime: I will simply add that this is a debate about institutions and I am not convinced that rearranging the institutional furniture will get us to the point that we need to be at. We should be having a debate about how to face the demographics. If we do not have that debate—if it is postponed because we are all busy shuffling the deckchairs—the ship will sink.

The Deputy Convener: I will move to our last question shortly. If I did not make a brief comment on self-directed support, carers and adults with learning disabilities in Glasgow would think that I was not adequately representing them. I think that there is a feeling that in Glasgow self-directed support has been used—this may link in to other decisions—to mask budget decisions by a local authority rather than in the spirit of the Social Care (Self-directed Support) (Scotland) Act 2013 and that it has been used to pursue a local authority agenda rather than to ask individuals what they really want.

I will leave that comment sitting there. Constituents have written to me and asked why I did not mention that when self-directed support was mentioned, so I felt that I had an obligation to do so.

Martin Sime: I will respond briefly, because we are having a debate in the third sector about our attitude to self-directed support being influenced by its inappropriate application as a means of rationing by local government. We stand by the principle of self-directed support and the empowerment and user choice that it offers, but it asks a much more fundamental question of us all: why is the application or delivery of self-directed support a responsibility of local government and therefore subject to variability? Why can the Parliament not just say, “Everybody has a right to this,” and establish what that right involves in terms of resources. After all, we are talking about a population of only 5 million people.

It seems to me that we could cut the resources a different way and that to have 32 separate discussions about what self-directed supported means for people with Alzheimer’s does not do justice to the interests of those people.

The Deputy Convener: We will have to leave both my comment and Mr Sime’s comment sitting on the public record. Malcolm Chisholm has the final question.

Malcolm Chisholm: I will try to move us on to one final new area, although I have enjoyed the discussion and we could say a lot more about connecting the bill with other areas of policy. I agree with what you have said about the gap that there is, in several ways, between the policy memorandum and the bill—the third sector is one of those issues; quality is another that some of you mentioned in your submissions. We do not have time to talk about that, but clearly it is also very important.

I will talk about budgets—the issue is not unrelated to Martin Sime’s comments about demography. Nigel Henderson’s comment about budgets in his submission was extremely interesting. Although I have not read all the submissions, I think that it was quite an unusual comment. A lot of the direction of travel is towards more local flexibility but, as I understand it, Nigel Henderson’s group is saying, “Look, particularly around the acute budgets, you will have so much trouble working out how much money will come in, how much will come from health in general and how much will come from local authorities.” In a sense, that organisation’s view is that budgets should be centrally set. Given that budgets are such a key aspect of all this, it is important to ask Nigel Henderson what the thinking behind that suggestion is, but it would obviously also be interesting to hear the views of the other witnesses.

Since I am asking only one question, my final comment is that, although I am quite attracted to Nigel Henderson’s idea, it probably means that there would be a greater degree of prescription around the services that are attached to that budget.

Nigel Henderson: Absolutely. Martin Sime has described this as a very institution-focused discussion. One of our concerns after the bill was launched was that we already sensed that local authorities and health boards were looking to minimise what they might have to put into the integrated pot. We worry that we could create this whole new infrastructure and it might have very little control over very little money. We think that there needs to be more prescription about what
money should be allocated to the joint health and social care partnership fund.

Somewhat tongue in cheek, we put forward the notion that the Government should surely practice what it preaches. It currently has an NHS budget and a local government budget. Should it not start out with an integrated budget? You therefore do an element of top-slicing and say, “This is the budget for health and social care partnerships. This is the budget for the health service. This is the budget for local authorities.” You therefore have a new budget line in the Scottish Parliament budget.

I understand that that could be very controversial, as it would be seen to take away local control and accountability and perhaps to go back to the days of ring fencing. There are dangers, because we know that if money is ring fenced that is as much as will be spent. However, to start the process off in the way that it needs to continue, it might be a possibility to start for a period of time with an integrated budget right at the centre.

Ranald Mair: I agree with Nigel Henderson that, interestingly, in the past months there has been a retreat from the enthusiasm for pooled budgets. Both local authorities and health boards seem to be looking to hold on to more resource within each of their separate areas rather than put money into a shared pot. There are some issues about what is put into the budget and what decisions are made about it.

Two other difficulties should also be touched on. We talk a lot about the shift in the balance of care, but through the three years of the change fund to date we have seen very limited shift in the balance of resource. Keeping Mrs Smith out of hospital saves money on paper, but there is no corresponding shift of resource—the money does not follow Mrs Smith. That creates a difficulty because there is an increased spending requirement to maintain Mrs Smith in the community, while the spend within the hospital sector is also maintained. We have not actually seen the big shift that was to be one of the things that would create sustainability going forward. I think that we have yet to come up with a workable model on that.

A final budgeting issue is that the overall requirement for a realistic budget for delivering older people’s care continues to be, as the delivery group suggested, the elephant in the room. There will be a shortfall. Between now and 2020, we will run into difficulties. As a society, we will need to find ways of spending more money on that. We need to spend the existing pot better and more effectively and, yes, we need to seek to control and reduce demand, but even if we do all that and become more efficient, there will still be a shortfall.

Martin Sime: Welfare changes, demography and public expenditure cuts are all heading us down a really difficult route. There was an expectation that integrating health and care would help us to get all our ducks in a row so that we could create efficiencies. For those of us who have been engaged in this process for many years, it is a huge disappointment to discover right at the last minute that there is no prospect of significant agreement between health and local government on how much money goes into the pot. Without that agreement, the purpose of the bill simply defeats me.

We are at a critical point. It could be that a whole lot of backstairs arm twisting will get some level of agreement. As I understand it, the latest is that the stand-off position that is acceptable for health is that how much health money goes into the budget should be a matter for local agreement. That could mean a lot or it could mean a little. It could mean that local variation wins out—so the Convention of Scottish Local Authorities will be happy—but it will not drive any of the changes that are necessary in order for us to meet these challenges.

I think that we need to ask ourselves some pretty uncomfortable questions. Is the current standard of anonymous 15-minute hurried care visits the kind of future that we want for our care services? Is having a voluntary sector workforce on minimum-wage zero-hours contracts and without pensions the kind of future that we want for our care workers? What is the case against national rates for care and self-directed support?

If any of those things were done and if the centre said, “This is how much money is going into our future health”, that would take a lot of the heat out of the institutional battles about power and responsibility. The third sector has no interest in taking sides in that institutional battle. It is a very unedifying sight that is not getting us to the point that we need to get to, where we are all perfectly aligned so that we can use our limited resources to meet what are quite substantial and growing demands in our communities.

The Deputy Convener: Does Malcolm Chisholm want to pick up on any of those points?

Malcolm Chisholm: No.

The Deputy Convener: Due to time constraints, I will not ask, as I did with the first panel, whether you wish to make any additional comments, but I am sure that you are vocal enough that you will write to us and follow up matters very closely, as you have done already. Please do that, as it helps us to form an opinion as we continue to scrutinise the bill.
I thank the three witnesses who have appeared before us in this second evidence session as well as those who appeared in the first panel. As previously agreed, we will now move into private session.
Public Bodies (Joint Working) (Scotland) Bill

The Coalition of Carers in Scotland

Do you agree with the general principles of the Bill and its provisions?

Last year we held a series of consultation events with carers and staff from local carer support organisations to ascertain their views on the Integration of Health and Social Care and the likely impact this would have for unpaid carers. (The full report has also been submitted)

Carers cautiously welcomed the integration and increased joint working between different sectors. 33% indicated that it would result in ‘a bit of an improvement’ in the recognition and support of unpaid carers. However, 52% of respondents indicated they felt ‘Things will stay the same’ and 14% felt ‘Things will get worse’

Carers identified many positive outcomes from increased integration/joint working, including:

- More resources directed towards preventative community services
- People able to live independently at home with support for longer
- Better recognition and services for unpaid carers
- Better communication and shared outcomes between health and social care
- Increased role for the voluntary sector
- Potential for better engagement with carers in relation to decision making
- A better experience for service users and carers at critical times, such as hospital discharge.

However, they also identified the following concerns, which they felt had the potential to lead to a negative impact on carers

- Shifting the balance of care leading to a greater burden on carers.
- Less investment in acute services leading to problems at times of crisis.
- A step back in terms of carer engagement with a failure to recognise carers as equal partners in care and a failure to include carers at the highest level of decision making within the new structures.
- Reorganisation taking the focus away from frontline services, resulting in carers needs being left behind
- The new structures being equally bureaucratic, with resources being wasted in setting them up thereby widening the gap between policy and the reality of carers’ lives

In general carers agreed with the principle of integration/joint working, provided:
a) The central premise is to improve outcomes for service users and carers

b) Carers are able to participate in the new structures as equal partners in care.

At the moment we feel that these key principles are not sufficiently represented in the Bill.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

We understand that the Bill is mainly focused on the underlying structures and processes which are required to facilitate joint working and that much of the detail will be provided through secondary legislation.

However, we feel it is essential to establish the role of carers as equal partners at the outset and ensure the mechanisms for carer engagement are embedded within the emerging structures.

The role of the third sector is highlighted in the explanatory notes accompanying the Bill

62. **It is intended, through secondary legislation, that integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. The Scottish Government recognise the key role non-statutory, not-for profit providers of health and social care services play in the provision of care, working in partnership with statutory partners. It is expected that there will be a degree of overlap between these activities and those currently required for third sector participation in community planning and in developing change fund commissioning plans.**

63. However, initial scoping work with third sector partners has identified a number of levels at which additional resources might be required to ensure sufficient knowledge and capacity to enable third sector partners to fully participate.

There is no corresponding commitment outlined in relation to fully involving carers as equal partners in strategic commissioning, locality planning and service delivery activity. Yet as service providers, unpaid carers are the greatest contributors to health and social care provision in Scotland and these reforms will have a significant impact on the provision of services which support them in their caring role.
In addition, while there has been a commitment to provide additional resources to the third sector to ensure they have the capacity to fully participate in the new structures, there has been no such commitment to providing resources to enable carers to participate. For carers to be fully engaged they require structures to enable them to come together and share their views, either through local forums or social networking. It is also necessary to provide training and support for carer representatives on planning groups. Local carer organisations have the expertise to undertake this role, but they require resources to enable them to do so.

The Coalition undertook a project in the Highlands in 2011/2013 looking at carer engagement in the emerging integrated structures. It found that the community planning structures were confusing and cluttered and that integration had only added to their complexity. While there was a willingness to engage with carers, this stopped short of including them at governance level and giving them a place on the new health and social care partnership. It also recognised that further investment was required to support carer engagement in community planning.

It is important that we learn from the experience of carers in the Highlands and ensure that the new joint structures involve carers as equal partners at all levels of decision making and that carers are supported to have a voice in a meaningful way. If the new structures merely replace one bureaucracy with another, with the emphasis on the contribution of statutory agencies, they cannot hope to achieve their primary objective of improving outcomes for service users and carers. This view was reflected strongly in our consultation with carers and other stakeholders with 100% of participants indicating that they believed carers should have a guaranteed place around the table in the new integrated structures, with one carer commenting:

‘For carer involvement to work at all in an integrated structure there has to be a basis of supported, informed carers contributing to local support organisations, which in turn feed into higher level governance and decision making bodies. This is undermined when funding is withdrawn from carer organisations.’

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

We welcome the adoption of an outcomes approach to joint working/integration and support the government’s intention to consult carers on the proposed outcomes.

As previously mentioned, we welcome the objective of improving outcomes for service users and carers, involving carers in the design and delivery of services and improving the transition between health and social care provision.
Please provide details of any areas in which you feel the Bill's provisions could be strengthened

We are disappointed that the name of the Bill has changed from Integration to Joint Working. We feel that this conveys a weakening of the Bill’s intentions and the impression of organisations retaining their separate identities, rather than working as a partnership.

As previously outlined, we feel the Bill needs to be strengthened in relation to carer engagement and the recognition of carers as equal partners in care. We hope that this will be clarified in secondary legislation with carers being recognised as equal partners with a guaranteed place on partnership boards. We seek reassurance about this and ask that carers are recognised in the way the third sector has been in accompanying explanatory notes, with a commitment, not just to include carers, but also to adequately resource them to fully participate.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Integration has the potential to result in significant benefits to our member organisations, who provide local support to carers across Scotland.

With a greater focus on shifting the balance of care to supporting people at home and in the community, we would anticipate more resources being directed towards carers through carer support organisations.

If this is not achieved, then there can be no doubt that integration will result in an increased strain on carers and the organisations that support them.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

We refer back to the messages from our consultation sessions outlined in question one. In this carers identified both positive and negative outcomes arising from integration, which could significantly impact on their lives.

If integration is successfully implemented it has the potential to greatly improve people’s experience of using health and social care services, particularly at times of transition. It also provides the foundation for more personalised preventative services and improved carer engagement leading to better planning and use of resources.

However, this is dependent on strong leadership at a local level and partnerships embracing a new more open way of working which is inclusive of other
stakeholders such as carers, service users and the third sector. One respondent to our consultation pointed out that what is needed is:

‘Trust, openness and mutual respect for other people’s issues. But beware that integration sets up new barriers somewhere else.’

The Coalition of Carers in Scotland
August 2013
Consultation on The Integration of Health and Social Care Messages from Carers - Summary Paper

Background to our Consultation Process

In partnership with Carers Scotland, the Coalition produced a briefing paper on the Government’s proposals, which was circulated to carers and local carer organisations through our membership. In addition, we facilitated several consultation events with carers and stakeholders at both a national and local level.

At each of these consultation meetings the proposals were outlined and views from participants were sought on the implications of the proposals for carers.

These events included:
- A national meeting of our members on the 29th of February
- A joint meeting on the 26th of June with the Scottish Health Council and Highland Community Care Forum. This event brought together health and local authority practitioners and carers from across Scotland
- A local meeting of carers in Edinburgh on the 13th of August
- A local meeting of carers in Renfrewshire on the 24th of August
- A discussion group with our members on the 29th of August

At each of the meetings a series of questions were posed, both through open discussion, workshops and also through carers writing their views on message boards. The responses are detailed below:

1. Do you think the greater integration of health and social care services will lead to an improvement in the recognition and support of unpaid carers?

   Yes a big improvement: 0%
   A bit of an improvement: 33%
   Things will stay the same: 52%
   Things will get worse: 14%

2. How will integrating health and social care change things for the better, or for the worse for unpaid carers?

   - Great need to stop layer after layer of bureaucracy / ladder to climb when wanting help.
   - Simplify processes, communication with carers to take part.
   - Be open about what councils do with their budget.
   - Changes are finance based and have little or nothing to do with quality provision for carers. The service user is left behind in all of this.
   - If it is done properly it could make a huge difference – with a focus on early intervention rather than crisis management. However, partnerships
must not be allowed to create new bloated management structures in order to save their own jobs.

- If integration embraces carers it should get better but it won’t if it is an afterthought.
- It will only make things better if they listen to and implement carers issues whether integrated or separate health and social care.
- If you live in Glasgow I feel we will be left behind because of politics.
- Should be one door approach – one assessment.
- At the beginning I doubt the two bodies will be capable of integrating working practice. However, new staff brought up in the new ways might.
- If the powers that be listen to service users and carers and process the information this could lead to better services.
- Integrated services will lead to more people supported in their own homes which will require greater input from unpaid carers. They must be properly supported!
- Things should change for the better
- Hopefully for the better, by working with one another and alleviating stress on carers Working together towards the same outcomes should improve services, no doubling up
- It must not result in higher charging for services. Carers should not be charged for any services as they are providing a service. If charges increase, people will stop using services’

3. Should carers have a guaranteed place around the table in the new integrated structures?

**YES** 100%

**NO** 0%

- YES, YES, YES, YES, YES.
- YES, YES, YES.
- Yes and be recognised and treated as an expert.
- Consult before legislation.
- Good to talk but more important to be listened to.
- Decisions made behind closed door are no use or telling carers what is to be, after decisions are made.
- Edinburgh had a Strategic development Group for Carers which included carers, it has now disbanded. The new group is the Scottish Planning Group for Carers which has no seats for carers.
- Unpaid carers are saving the government millions why aren’t they recognised for this.
- Listening to carers who are supposed to be ‘equal’ providing the care. Often they know the most practical solutions
- When carers sit on panels it tends to always be the same ones who may be confidant speakers but don’t always have the best things to say.
Should consider use of advocacy services to give the views of other carers.

- Carers should have a guaranteed place but only if it a fully supported place so that it can be meaningful.
- Different types of carers (rural/mental health/learning disability/dementia/young carers etc) all have different experiences/needs specific to them. A balance of ‘types’ of carers is needed on all consultation groups/committees.
- Carers are key partners in care!
- Carers are indispensable. I know – I am one.
- Use of independent advocates for carers to express the views of several ‘types’ of carer at one meeting.
- Yes supported by Secondary legislation (Guidance, directions etc to NHS Boards and councils) The omission of carers in membership of Health and Social Care Partnerships etc – if explained in terms of ‘not having caught up with CEL6’ – would demonstrate carers are not really being valued. Behavior reflects beliefs!
- This does happen in my region but some officers treat you as an individual and not as a representative.
- Carers being on commissioning and planning (strategic) groups either ‘on their own account’ or ‘as a representative’ is a key issue, but so too is the process of identifying and selecting a carer to fulfill the role. To often its simply down to who is ‘willing and able’ and this is often the ‘well kent face’.
- Carers should have a voting right at board level
- Carers often know more than the professionals and should be treated as such
- Carers need to be recognised, valued + heard
- Carers should have a guaranteed place around the table in the new integrated structure
- Must be carer rep in committee national as well as local

4. What are the barriers to integration working well and producing improvements in health and social care?

- Ignorance, bad attitudes, carers experiences being disregarded.
- Not taking carers seriously – Tokenism.
- The independent sector often provides what the NHS and local authorities don’t want. Usually it’s the staff that cost ‘too much’ It’s not a level playing field. Often it’s the independent provide that can provide integrated health and social care.
- Lack of training, loss of identity, loss of specialism, lack of knowledge as NHS takes a lead and stamps over social work, paranoia over stats, rather than qualifying quality service provision for carers.
- I think that there is a danger that as the paid workers jostle for recognition of their role, the role of carers may be overlooked.
• Ignorance of the consequences of caring for someone leads to carers becoming service users – anxiety, stress, depression, lack of resources.
• Workers are bogged down with change and recent loss of specialist identity and carers needs are left behind.
• It is people not systems which will make or break integration.
• An attitude of mind.
• Communication pathways between health and social care must be clear and simple, especially between departments and specialist areas within both.
• Thoughtlessness on the part of statutory bodies.
• Too many patients/people are ‘defaulting’ to NHS continuing care eg/spinal injury and head injury. Patients who have completed specialist rehab and are medically stable, simply because statutory authorities can’t fund care packages.
• Budgets – Managers not wanting to share in delegation of responsibility.
• Providers of services – talking down, not listening.
• Health and Social Work still looking after their own corners and no one looking after the cross over areas and grey areas in the middle.
• Neither one taking a holistic view of an individual
• Budgets are the barriers. Each organisation wanting to hold in to their own budget and not wishing to share.
• The detail of services needs to be regarded with the highest importance. The outcome for carers support has to include the efficiency and effectiveness of services from a carers perspective
• Too much bureaucracy
• Aimed at older people, lack of focus on learning disabilities etc – others could lose out
• If Social Work and Health are joined; will it lead to more bureaucracy, fighting amongst each other?
• Will this result in job losses at a time when we need more?
• Could be conflict due to resistance to change information, communication must be bottom-up

5. What contributes to services working better together?

• Constructive dialogue, lack of suspicion.
• Carers must have rights. The right to be listened to, the right for good services, the right for help.
• A genuine understanding of each others roles and responsibilities, including carers. To work this needs to be invested in.
• Communication.
• Willingness of doctors/nurses to engage fully with families/carers of patients and work on collaboration with carer’s groups.
• The right people in the right jobs should not be lost – keep what is already good.
Trust, openness and mutual respect for other people’s issues. But beware that integration sets up new barriers somewhere else.

There is frustration about over/underspend of NHS/LA budgets and how these are distributed as a result. Underspend doesn’t necessarily mean lack of need for services, often lack of awareness.

Please find a way to get G.P.’s involved directly, not Practice Managers who don’t pass things on.

Need consultations to be done locally and specific carer consultation events

Open and honest dialogue.

Outcomes for carers are: To be recognised as an important component to after/long-term care. To be able to get services when needed.

Money – budgets for carers must be ring fenced. Monitoring is a must for any new developments to social care.

It would (lead to improvement) if service managers support it and make it happen.

If important carer pathways are identified early within new structures.

There should be a better understanding of needs of carers, more equality of funding

Listening, communicating and taking on board the needs of care in the community and providing a good service

Carers must be respected as equal partners – legality and parity

Improve G.P /Community nurse focus on carers

Both NHS and social work services need major culture shifts to make integration work

Needs to be a joined up I.T system inclusive of all services to improve information sharing

Making and strengthening - outcomes all carers being involved

6. The government is asking ‘How can you help us make it work?’ What can carers and local carer organisations do to help achieve better integration between the different sectors?

Help to facilitate carer awareness training for all professionals who come into contact with carers.

Why do we always look to creating incentives for GPs within their contracts to endure their participation? We could instead impose financial penalties if they fail to demonstrate participation.

For it to be make clear to professionals that carers are equal partners.

On the closure of hospitals or wards – the staff released must be fully trained for local community work. I believe that hospital and community nurses are on different wavelengths.

As a unpaid carer I provide over 138 hours of free care a week. What else am I expected to do.
Basically the movement of carer from hospital to the community means that information from the hospital and G.P must be perfect and complete.

For carer involvement to work at all in an integrated structure there has to be a basis of supported, informed carers contributing to local support organisations, which in turn feed into higher level governance and decision making bodies. This is undermined when funding is withdrawn from carer organisations.

GP practices have to be on board. GPs are the first port of call, or should be, for carers. They must be pulled into the system.

Monitoring of services is key.

Carer representatives should be limited to 4 years, to ensure other views are heard.

Everyone on planning and commissioning groups need to be empowered to take decisions. It is not just carers who currently lack decision-making authority. Often the real decision makers sit behind the scenes where the real decisions are taken.

Day care centres play a vital part for carers, respite care and well run agency care services.

It is vital that 24hour a day carers have a voice in helping to make change.

Looking better at the circumstances of individuals.

Communication with various groups. Important that they all reach the same conclusions.
1 Introduction

1.1 Inclusion Scotland is a network of disabled peoples' organisations and individual disabled people. Our main aim is to draw attention to the physical, social, economic, cultural and attitudinal barriers that affect disabled people's everyday lives and to encourage a wider understanding of those issues throughout Scotland.

1.2 The Independent Living in Scotland project aims to support disabled people in Scotland to have their voices heard and to build the disabled people's Independent Living Movement. It is funded by the Scottish Government Equality Unit to make the strategic interventions that will help to make independent living the reality for disabled people in Scotland.

1.3 We welcome the opportunity to submit written evidence to the Health & Sport Committee on the Public Bodies (Joint Working) Scotland Bill.

2 Health and Social Care Integration

2.1 Inclusion Scotland and the Scottish Disabled Equality Forum (SDEF) held a series of workshops earlier this year to consult with disabled people in Scotland to have their voices heard and to build the disabled people's Independent Living Movement. It is funded by the Scottish Government Equality Unit to make the strategic interventions that will help to make independent living the reality for disabled people in Scotland.

2.2 This evidence draws on the responses received from disabled people at these workshops. It also builds on 'It's our world too: 5 asks for a better Public Services (Joint Working) Bill' produced by Independent Living Movement, which can be found at www.ilis.co.uk.

3 Do you agree with the general principles of the Bill and its provisions?

3.1 We believe that the principles and outcomes of health and social care integration should include; independent living, co-production, equality and human rights. These principles should apply to all sections of the Bill, including the development and revision of integration and strategic plans and local planning and delivery of services, as much as they apply to the end product of integration itself.

3.2 Whilst we recognise the policy intentions, the Bill as presently worded fails to meet this aspiration, and may facilitate a move back towards the medical model of care rather than the development of a human rights based social model of care.
3.3 We are concerned that the “policy ambition for integrating health and social care” (Policy Memorandum, paragraph 2) is too focussed on the provision of care services for people in their homes – i.e. how and where care is provided, rather than on promoting independent living – i.e. the outcome of care.

3.4 We would like to see the Bill amended to;
• include a general principle that integration of health and social care services will follow a human rights approach, similar to the amendment to the Social Care (Self-directed Support) (Scotland) Act (s2), and
• to use the definition of 'independent living', developed by the Disabled People’s Independent Living Movement, in the Bill (the first ask):

Independent living means; “disabled people of all ages having the same freedom, choice, dignity and control as other citizens at home, at work, and in the community. It does not mean living by yourself, or fending for yourself. It means rights to practical assistance and support to participate in society and live an ordinary life”

3.5 We endorse the principle of integration of health and social care. It has the potential to create better joined-up services and bring positive benefits to those requiring support. In particular we welcome the planning and delivery principles where they emphasise the importance of wellbeing and that services should be integrated from the point of view of “recipients”. However we question the use of the term “recipients”, which implies passive receivers of services rather than active partners with providers.

3.6 It is unclear why these principles are stated separately (at s4 and again at s25) rather than as a single set of principles at the start of the Bill.

3.7 The principles, as stated, are too needs-focussed. Services should be delivered in a way that takes into account people’s aspirations in line with a social model of care. The principles should be strengthened by a clear statement of what is meant by wellbeing, to make clear that this goes beyond health and physical wellbeing to include independent living, social life and participation in the community.

4 To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

4.1 We believe that it is essential that disabled people are fully engaged in all aspects of the integration of health and social care services: national outcomes; integration plans; strategic plans; and local planning and delivery of services. This can best be achieved through co-production, an approach that recognises the value of partnership between disabled people and public authorities in developing services, policies and strategies (the second ask). We suggest that reference be made to ‘All Together Now – a guide to co-production with disabled people’(
http://www.ilis.co.uk/get-active/publications/co-production-toolkit) as a means to support this way of working.

4.2 We are concerned that the proposals in the Bill are too focussed on the health and organisational outcomes rather than those of the end user. The change of the title of the Bill, from Health and Social Care Integration to Public Bodies (Joint Working) may reflect this apparent focus on process rather than outcomes.

4.3 There is a risk that the Integration Plan and the Strategic Plan will become ends in themselves rather than as means for real change in service delivery. As one workshop participant said: “It’s not structural change that’s needed, it’s cultural change”.

5 Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

5.1 It is important that disabled people, other service users and the third sector are involved in leading not just on the principles of integration but on how money within it is spent, including eligibility criteria, assessment, and principles for its use (the third ask).

5.2 Whilst the Bill and Policy Memorandum expresses a policy intention to involve representatives of users and carers of users, other than in respect of the power to prescribe national outcomes (s5), this is not specified and left to secondary legislation. Inclusion Scotland believes that the involvement of disabled people and their directly accountable organisations, is central to ensuring that integration supports independent living. The Bill should place a direct requirement on Scottish Ministers to include disabled people as “persons or groups of persons appearing to the Scottish Ministers to have an interest”.

5.3 A common concern raised at our workshops was that past experience suggested that when disabled people respond to consultations or invitations to events, no-one listens and nothing changes. Effective engagement requires disabled people to be involved before the process starts to help design how engagement will be conducted. Integration authorities should be required to provide robust evidence that they have engaged meaningfully with disabled people and other service users, including how they have addressed access and inclusion.

5.4 The Bill would be further strengthened by including the principles of independent living, equality, human rights and co-production in the development and revision of integration and strategic plans, and the local planning and delivery of services.

5.5 There should be more clarity on the membership of integration joint boards or joint monitoring committees. Inclusion Scotland remains of the view that disabled people should have representation and full voting rights on these committees. Statutory authorities would retain a voting
majority and Scottish Ministers the right to intervene in the event of a failure of an integration authority to fulfil its statutory duties.

5.6 The Social Care (Self-directed Support) Scotland Act and the Public Bodies (Joint Working) (Scotland) Bill must work together to promote seamless care provision. Health and social care systems should support and promote self-directed support in the community for the service user when they exit hospital based services (the fourth ask).

5.7 It is important that the principles of independent living and the social model are applied equally to health care as social care. On admission to hospital, social care packages, including self-directed support and employment of personal assistants, can be terminated requiring these to be re-established from scratch before discharge. Disabled people are not allowed to use their personal assistant when in hospital. This leads to discontinuity of care not integration.

5.8 We do not believe that disabled people should be charged for services they require for independent living, whether these are defined as health or social care. Full integration of health and social care is unlikely to be achieved whilst different charging regimes apply to health and social care services. Integration of budgets and delegation of functions makes the existing arbitrary distinctions of what is a free health service and what is a chargeable social care service untenable.

5.9 Participants at the Inclusion Scotland workshops highlighted concerns about whether and to what extent mental health services will be included in the bill. The Policy Memorandum indicates that regulations will set out functions that may not be delegated, including certain mental health social work functions, but gives no further details.

5.10 Workshop participants pointed out that there is an increased likelihood of mental health problems amongst disabled people and their carers when there is inadequate provision and barriers to independent living. It is of concern to us that mental health service users may not benefit fully from the benefits of integration if mental health services are excluded. The Committee may wish to seek clarification on this issue.

5.11 Further clarity is needed on the transition from children’s services to adult services. This transition can already be difficult, with children and families having to fight to secure the continuation of support as they move from one service to the other.

5.12 There also needs to be clarity on the portability of support as different integration authorities, even within the same health authority area, may have different delegated functions. We believe that disabled people should be able to ‘port’ their package of support when they move, in order that they can enjoy the same freedom of movement as other people.
5.13 We know there are currently significant levels of unmet need within the social care system in Scotland, and we know disabled people are subject to significant health inequalities. We think an integrated system of health and social care should set out clearly the minimum level of entitlement for all users, that integration authorities should record all unmet need that falls below this, as well as the level of unmet need that is set against outcomes of equality and human rights (the fifth ask).

5.14 There may be some confusion between the Integration Plan, which establishes the structure for integration, and the Strategic Plan which sets out how integration will be delivered. Perhaps the first could be called the Integration Scheme and the second the Integration Delivery Plan?

6 What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

6.1 If disabled people and Disabled People’s Organisations (DPOs) are to be able to play a full part in developing health and social care integration, then they will require resources to enable them to do so. One key issue is the provision of advocacy services to support disabled people, if and when required, to participate meaningfully in the process.

7 What effect do you anticipate integration plans will have on outcomes for those receiving services?

7.1 It is essential that integration of health and social care is developed in a way that is person centred and promotes independent living. Performance should be measured in terms of the extent to which disabled people are supported to participate in society and lead an ordinary life. It should be based on outcomes that are co-produced and driven by disabled people’s own choices.

7.2 The concern is that the Bill concentrates on structures and procedures which could lead to a top-down approach that is target driven rather than outcome driven. This could lead to a professional/institutional led approach to integration rather than one that is driven locally by users, professionals and the wider community. This could see a reverse of the progress towards the social model of care and the re-emergence of the domination of the medical model, as has been the experience in other areas such as Northern Ireland.

7.3 Legislation and structural change alone will not deliver the change that is needed, but if done well can help contribute to the cultural change that disabled people want to see.

Inclusion Scotland
Independent Living in Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Health and Social Care Alliance Scotland

Do you agree with the general principles of the Bill and its provisions?

The ALLIANCE welcomes the Scottish Government’s commitment to integrating health and social care to improve outcomes. The third sector has long argued for – and delivered – integrated, high quality support that enables people to access their right to good health and independent living. We would, however, question whether the provisions go far enough to achieving the radical and transformational change advocated in the Christie Commission’s report on the future of public services1.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill has the potential to improve the quality and consistency of health and social care services, however if integration is to succeed then strategic commissioning – and the involvement of service users, unpaid carers and the third sector within this – must be made more effective.

It is a well-established principle that people – at an individual and strategic level – should be active and equal partners alongside the providers of support and services. Audit Scotland2 recommends that local authorities and the NHS work effectively with the third sector to analyse local needs and plan, develop and deliver services to meet this need. Such principles are also acknowledged within Scottish Government guidance on procurement for social care and support3.

The third sector can play a number of roles in ensuring the policy objectives of the Bill are achieved; as a key strategic partner in its own right, helping to reshape support and services; a major provider of support and services (including over a third of registered social care); and an essential mechanism through which people who use support and services can be involved and their voices heard. The sector can play a key function in providing insight and intelligence in the joint commissioning process, and in enabling the direct involvement of people who use support and services.

Without a strong, effective role for the third sector and for people who use support and services, the ALLIANCE fears that the Bill is in danger of focussing too strongly on structural change, rather than acting as a driver of the radical culture shift required across health and social care. There is a risk that the focus on outcomes for people is lost as local partnerships grapple with the complexities of structural, budgetary and cultural aspects of the move to integration. The ALLIANCE believes Section 4, Subsection 1 (b) (iv) should be amended to “is planned and led locally in a way which is

2 Audit Scotland, Commissioning Social Care, (2012)
engaged with the community and local professionals from across different sectors”.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The legislative duty placed on local authorities and health boards to integrate their services is welcome alongside the emphasis of integration as a major plank of the Scottish Government’s Public Service Reform programme. The Bill as presented, however, risks missing a significant opportunity to deliver support and services differently unless a partnership approach with users, carers and the third sector is taken to policy, design and delivery in the future. The Bill currently reflects a desire to improve services but to do so within broadly the existing paradigm.

The ALLIANCE also supports the emphasis on an outcomes approach, as integration should not only be about trying to ‘fix problems’ within a system, it should be about ensuring people have the support they need to lead fulfilling lives.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

A stronger voice for people who use health and social care support and services is required. Part 1 Section 6 (Consultation) is not sufficiently robust to ensure effective partnership between the third sector and statutory services in developing integration plans. We are particularly concerned that the third sector may not have a role in signing off the local strategic plans. The Bill suggests that Integration Plans are signed off by only the two statutory partners. We presume that the third sector will be among those that Scottish Ministers will be required to consult; however this is a far weaker provision than requiring joint sign off.

Evidence gathered from the Change Fund: Enhancing the Role of the Third Sector Programme suggests a barrier to effective partnership working experienced by some Reshaping Care for Older People partnerships, stemming from the lack of a shared understanding of the role and remit of each of the different partners. The four-way sign-off of local Change Plans has enabled local partnerships to push this agenda forward and provided a framework allowing partnerships to get through some of tensions of working in partnership.

The ALLIANCE is concerned that voting rights will not be afforded to third sector representatives on joint boards, or to representatives of people who use services. The Scottish Government has concerns that such a right would enable the third sector to prevent health boards and local authorities from discharging the duties they’re legally obliged to discharge, i.e. providing services. We believe such risks could be mitigated by the provision of clear responsibilities and terms of reference for board members, including the need to adhere to statutory requirements. The sector, and people who use services,
may lack the same accountability mechanisms as statutory partners, however robust mechanisms exist, and can be built upon, to enable them to play a legitimate role. If the third sector and users of services have little power or influence within partnerships it is unlikely that we will see the kind of transformational change that is widely advocated.

Initial research by the ALLIANCE has found that the composition of shadow integration boards across Scotland contain an alarming lack of third sector involvement and the representation of the third sector in the future remains unclear. Some shadow boards, for instance in Fife and Edinburgh, appear to have taken a clearer approach to public involvement. We are concerned that this variable approach may set a marker for future involvement in joint boards.

As proposed, Health and Social Care Partnerships will only be accountable to health boards and local authorities. There is a risk that the proposals for integration, particularly with the third sector as a non-voting member of the HSCP Committees, will represent a backwards step. The third sector and people who use support/services should be included within membership of Integration Boards at section 12 and strategic plan consultation groups at section 26 of the Bill

We welcome the reference made in the Policy Memorandum to Public Participation Forums (PPFs) as an example of “a successful means of engaging with the public and building the views of unpaid carers and services users” (Page 8, Para 40). PPFs play a significant role in enabling Community Health Partnerships; to engage with local communities; support wider public involvement in planning and making decisions about the health service; discuss how to improve services and support the vision of co-production, as embedded in the National Person Centred Health and Care Programme. There is, however, a real lack of clarity in the Bill and the Policy Memorandum as to what will happen to PPFs in an integrated landscape.

The ALLIANCE welcomes the inclusion of integration planning and delivery principles on the face of the Bill. As they are drafted, however, we are concerned that they do not sufficiently reflect a human rights based approach or wider Scottish Government policy on stronger engagement between the statutory and third sectors, and co-production between those designing/providing and those receiving services.

We would strongly advocate a set of human rights based principles at the start of the bill, or amendments to the existing principles so that they more strongly reflect an outcomes approach, rather than a needs-based approach and co-production/asset-based approaches rather than a professional/provider-led agenda. In their content and language the principles reflect the traditional ‘deficit/needs’ based paradigm with professionals framed as holding the balance of expertise and power. This seems at odds with the Christie agenda and wider drives for personalisation, person-centred care and

---

5 [http://goo.gl/F1lJa](http://goo.gl/F1lJa)
the desire to ‘shift the balance of power’\textsuperscript{6}. It also risks undermining the drive for prevention by focusing narrowly on current needs, rather than emerging needs and aspirations of local populations. It is also unclear that the principles encompass unpaid carers and future users of services.

The National Health and Wellbeing Outcomes, Section 5 of the Bill, and requirement for Scottish Ministers to consult on these outcomes are welcomed, with some third sector organisations implicitly included within ‘non-commercial providers of health/social care’. To be an effective consultation process, it will be essential to include strategic third sector organisations, particularly national strategic intermediaries and the local Third Sector Interfaces. It will also be critical to include organisations that may not consider themselves as ‘providers of health/social care’ but who contribute considerably to health and wellbeing through community-based activity. An additional category should be added in Part 1, Section 5, subsection 4 to read: ‘(k) third sector organisations contributing to health and wellbeing’.

Engagement between the Joint Improvement Team and shadow partnerships, facilitated through the Bill’s Advisory Group, has established that a significant number of partnerships intend to include children’s and criminal justice services, or at least some aspects of each, within their integrated arrangements\textsuperscript{7}. There is, however, little emphasis placed on these elements in either the Bill or the Policy memorandum. Clarification is required on how these elements will connect with the community planning partnership process.

The ALLIANCE is concerned integration could lead to an increased complexity in complaints handling arrangements, however, the Bill makes no reference to the complaints process. Integrated partnerships should be required to align their complaints processes to allow for a single point of initial contact.

The Bill does not specify the grounds on which Scottish Ministers would not approve an integration plan. Plans should only be approved if developed with the involvement of the third sector and people who use support and services. There may be some scope in adopting a similar Quality Assurance procedure to the Single Outcome Agreements (SOAs) as set out in a joint letter to community planning partners from COSLA and the Scottish Government\textsuperscript{8}. This approach to quality assurance allows for feedback and constructive challenge to help a CPP develop, improve and agree an SOA.

In the light of the Scottish Government’s review of Continuing Health Care, the ALLIANCE also believes that the Health and Sport Committee should consider the implications of charging for services and the wider relevance this has in the context of integration. Whilst NHS Continuing

\textsuperscript{6} NHS Scotland, A Route Map to the 2020 Vision for Health and Social Care, 2013  
\textsuperscript{7} “Four partnerships are definitely intending to include, at least some aspects of, children’s services and a further six are still actively considering their inclusion… Four partnerships intend to include criminal justice in their integrated arrangements…”  
\textsuperscript{8} SOA Assurance Process – General Letter to CE’s, http://tinyurl.com/l6mlksq
Health Care affects relatively small numbers of people with very complex care needs, it appears that – over time – many families may have been charged for care that ought to have been provided free by the NHS. The ALLIANCE would echo concerns raised by Parkinson’s UK that people with progressive neurological conditions like Parkinson’s could be at high risk of “cost creep” when means tested, chargeable social care services are merged with NHS services that are free of charge.

The ALLIANCE also echoes the concerns of the independent living movement that a health/medical model may be allowed to dominate where the NHS becomes responsible for social care, potentially undermining the moves towards personalisation and self-directed support. Northern Ireland is often cited as an example where this fear has been realised.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As the national third sector intermediary for a range of health and social care organisations with over 300 members including large, national support providers as well as small, local volunteer-led groups, the ALLIANCE believes that, integration should have the effect of improving engagement between third sector organisations and statutory bodies.

The Policy Memorandum (Page 2, Para 7) describes two disconnects within the health service, between primary and secondary care, and between health and social care. The ALLIANCE would argue, however, that the crucial disconnect within this agenda is between statutory and non-statutory support and services. This must be addressed and recognised if the needs of Scotland’s population are to be met effectively. There is a substantial risk that without such recognition the integration agenda becomes centred on trying to improve partnership working between health boards and local authorities, rather than being about truly integrated health and social care.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integrated health and social care has the potential of promoting good health and facilitating independent living for people who use support and services. Integration plans have the potential to significantly improve outcomes for people if this is used as an opportunity to help drive the transformational change advocated by the Christie Commission, but there are big risks that threaten to undermine the difference it will make e.g. focus on structures, an exercise only involving the statutory partners, a health model dominating, people not being involved effectively as partners.

Health and Social Care Alliance Scotland
2 August 2013
About the ALLIANCE

The ALLIANCE’s vision is for a Scotland where people of all ages who are disabled or living with long term conditions, and unpaid carers, have a strong voice and enjoy their right to live well, as equal and active citizens, free from discrimination, with support and services that put them at the centre.

The ALLIANCE has three core aims; we seek to:

- Ensure people are at the centre, that their voices, expertise and rights drive policy and sit at the heart of design, delivery and improvement of support and services.
- Support transformational change, towards approaches that work with individual and community assets, helping people to stay well, supporting human rights, self management, co-production and independent living.
- Champion and support the third sector as a vital strategic and delivery partner and foster better cross-sector understanding and partnership.
Scottish Borders Partnership

Scottish Borders Council and NHS Borders welcome the opportunity to comment on the Public bodies (Joint Working) (Scotland) Bill.

- The partnership fully supports the integration of Health & Social Care and we agree that this should form a cornerstone of the public service reform agenda and we welcome the linkages being made to community planning.

- The focus on the importance of delivering positive outcomes for people using services is supported along with the principles of outcome-based service planning.

- Areas of the Bill are covered in detail (e.g., the process for completion of the integration plan) and may be seen to be overly prescriptive when considered in conjunction with the principles of localised planning.

- The partnership supports the move towards whole-system commissioning: one key area for debate is clarity around acute services and it is hoped this will be clarified in the regulations and guidance that is due to be issued.

Specific Questions:

1. **Do you agree with the general principles the Bill and its provisions?**

   The partnership supports the principle of improving outcomes based on individual needs, and of locality planning focusing on engaging with the community and local professionals.

   We note a general theme around the potential conflict between central accountability and local democratic control.

2. **To what extent do you believe the approach being proposed in the Bill will achieve its stated policy objectives?**

   Overall we believe the approach being proposed will achieve its stated policy objective, particularly in relation to the following:

   We support the broader focus on health improvement and public health in the Bill and the recognition of working with housing as being important.

   The focus on outcomes for recipients is welcome and the need to make best use of resources is an important principle for both the Council and for NHS Borders in terms of best value.

   The requirement to consult with users is welcome but detail of what level or type of consultation or the definition of users is limited.
We note the emphasis on investing in Strategic Commissioning and Voluntary Sector capacity and skills.

3. **Strengths of the Bill**

There are many strengths identified in the Bill. As a partnership we very much support the focus on outcomes and the approach to strategic planning and focus on locality planning. There is a strong commitment to consultation with local communities and professionals which is fully endorsed.

The ability to legally delegate functions from the Council to the NHS and from the NHS to the Council will provide greater flexibility to work together and thereby improve outcomes. However we will be keen to comment on the detail of this when published in the regulations.

The Bill allows the development of potential opportunities for shared services linked to NSS. The extension of the CNORIS supports integrated working.

4. **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened**?

It is recognised that much of the detail is to be left to guidance / regulations and the detail of this will be important so it is difficult to comment on all issues. This includes the make up of the Integration Board, however a number of issues have been highlighted which could strengthen or clarify the Bill.

Chief Officer responsibilities – these are laid out in the Bill and it proposes that the responsibilities subject to the agreement of the Scottish Ministers but it needs to be recognised that local flexibility will be required to reflect local circumstances.

It would be useful to have further clarity on the services within the acute sector that should be included in the partnership.

The powers offered in the Bill to ministers are wide ranging and may be seen to cut across the principles of local democratic control in particular the power to intervene and determine functions that could be delegated into the partnership. The wording of the Bill will need to ensure it does not conflict with relevant local government legislation.

The title of the Bill does not reflect the main content relating to integration albeit Part 2 does cover other functions.

We note the requirement for separate individual locality plans that reflect the needs of local communities. However these will need to be set within a clear strategic context to ensure there is a degree of consistency and a strategic approach across localities.
It would be helpful if the section regarding consultations was more robust with more clarity to include linkages to community planning partnership organisations and community councils as key stakeholders.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Integration plans will provide transparency about the expectations of the partnership. By working together we would expect a reduction in duplication and closer joint working.

A clear single assessment process – will be of benefit for staff and recipients of service.

Clarity around joint accountability and governance will assist partnerships to move forward in an, open transparent culture.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

Joint integration plans which have clear agreed joint outcomes for those receiving services and their carers will ensure that all organisations are working together to this end. The arrangements should provide greater ease for people to access services and avoid potential duplication. Performance management which focuses on qualitative feedback from those receiving services as well as effective joint performance data will enable the partnership to take effective robust remedial action should improvements require to be made.

Scottish Borders Partnership
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill
Royal College of Nursing Scotland

Key points

1. The RCN supports the general principle of a Bill intended to improve provision of swift, seamless access to safe, quality care.

2. However, for the Public Bodies (Joint Working) (Scotland) Bill to meet its aims as set out in the policy memorandum, the RCN believes a key amendment is required to embed the quality and safety of care clearly in the core principles of both planning and delivering integrated services. In the wake of the Francis Report, the Scottish Government and Parliament now have the opportunity to take a clear lead in embedding a legacy of effective, safe, dignified care in the heart of this legislative reform.

3. The current absence of this key principle has resulted in the assurance of quality and safety being excluded from core planning, governance and reporting functions on the face of the Bill. The RCN believes this is a serious omission.

4. We had expected to see the co-production of future care services written more clearly into the Bill. We anticipated minimum requirements to involve and engage named professionals, staff representatives, non-statutory partners, patients/service users and carers in primary legislation, with additional flexibility available through regulation. However, this is not reflected in the published Bill.

5. We would note a general concern that, throughout, significant issues on the future governance and operation of integrated care are being left to secondary legislation, leaving many questions which have been raised during the development of this Bill as yet unanswered.

6. We welcome this Bill opening the door to a wider range of ages and services than were proposed in the original consultation. However, we question whether frontline staff will be well supported to integrate services across families and communities when two different planning processes are proposed in this Bill and in the Children and Young People (Scotland) Bill.

The RCN represents around 400,000 nurses, nursing students and health care assistants across the UK, as both a professional body and trade union. Over 39,000 of these members are in Scotland. We are delighted to have the opportunity to provide written evidence on the Public Bodies (Joint Working) (Scotland) Bill. The RCN is a member of the Scottish Government’s Bill Advisory Group, as well as a number of key working groups, and we continue to use these fora to raise issues and constructive solutions to this agenda. We do not underestimate the scale of reform focused through this Bill.

As noted above, the RCN supports the general principle of legislation intended to improve provision of swift, seamless access to safe, quality care. With this in mind, we have focused our short initial response to this complex legislation on two of the committee’s areas of interest:
• To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
• Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

Assurance of safe and high-quality integrated care
The RCN has been clear in its support for integrating care where, within a clear shared vision, processes are designed to promote respectful relationships; local plans are designed in partnership to improve outcomes; the quality and safety of integrated care is secured; and national bodies set coherent foundations for reform¹. The Public Bodies (Joint Working) (Scotland) Bill is now our chance to get the core legislative framework right for a wide-scale programme of health and care reform.

Clearly, the public should expect to be able navigate care services seamlessly when they need them. No-one should have to face the stress, frustration and poor, inefficient care that can arise from fragmented service design between, and within, agencies. The RCN agrees that reforms to our health and care sector must address these issues. However, ensuring that an individual’s journey through services is smooth should be only part of our aspiration for the future of care.

When anyone is in need of formal care they, and their family and friends, should also be assured that they are easily accessing high quality services offering safe and appropriate care, delivered by people with the right expertise, with compassion, dignity and genuine involvement. The more our population changes, particularly with more people ageing with multiple needs and complex clinical conditions, the more important it is that we focus on both parts of the equation: swift, seamless access on the one hand; safe, quality care on the other.

The Scottish Government opens the Bill’s policy memorandum by reflecting this balance:

*The policy ambition for integrating health and social care services is to improve the quality and consistency of services for patients, carers, services users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so; and to ensure resources are used effectively and efficiently to delivery services that meet the increasing number of people with longer term and often complex needs, many of whom are older.*

Nevertheless the RCN is concerned that, despite this welcomed emphasis in the accompanying narrative, the actual Bill itself is focused too heavily towards resolving difficulties in delivering seamless care, and too lightly towards ensuring robust assurances of care quality and safety in this new landscape. Primary legislation should set the core foundations of reform,

¹ See: The RCN in Scotland: Principles for Delivering the Integration of Care at [www.rcn.org.uk/scotlandintegration](http://www.rcn.org.uk/scotlandintegration)
which secondary legislation, guidance and practice can build upon. **However, quality in care services is not included in the key principles of integration in the published Bill.**

The RCN believes that this omission may well set the Bill, and future integrated partnerships, off on the wrong track. The Bill provides us all with the opportunity to ensure that we focus firmly on improving services and dealing coherently with the instances of poor care that have hit the headlines repeatedly in recent times. In the wake of the Francis Report, the Scottish Government and Parliament now have the opportunity to take a clear lead in embedding a legacy of effective, safe, dignified care in the heart of this legislative reform.

Including a commitment to service quality and safety within the core principles of integrated service planning and delivery would, for example:

- Ensure that the primary policy intention and aspirations of the Scottish Government and - if the Bill is passed – the Scottish Parliament, are totally clear to the public, service users, carers, staff and to the partnerships responsible for planning, delivering and overseeing services. Quality and safety should be paramount, and deserve to be embedded in the heart of the primary legislation, not left to regulation or guidance alone.
- Provide an essential benchmark to ensure that governance structures and decision-making processes established through the Bill focus as much on the robust assurance of safe, high quality care as they do, for example, on strong financial management.
- Support those with responsibility for the governance of service planning and delivery – which we understand is likely to be local councillors and non-executive NHS board directors in the ‘body corporate’ model, for example – with clear authority to take expert advice on issues of care quality and safety. This will help them to make difficult decisions with regard to service provision or plans where quality and safety cannot be robustly assured - even when those decisions may be unpopular.
- Emphasise the importance of establishing clear lines of professional accountability to support frontline practitioners to speak up when concerns arise, giving them confidence that the delivery of safe, high quality services has been prioritised by those in power, locally and nationally.
- Provide a safeguard for the third and independent sectors - given the likelihood of increased procurement of services from these sectors - by supporting non-statutory agencies to negotiate terms which contract care on quality and not just on price. Quality care should be guaranteed to the public, whoever is commissioned to deliver it.

We acknowledge that the draft integrated health and wellbeing outcomes, which will be set through secondary legislation, do include an outcome around
safety. However, these outcomes have rightly been designed to be flexible and easily amended as integration matures. Quality should be a constant at the heart of care and on the face of the Bill.

We also note that the draft outcomes were developed with partners before the integration principles were set out in the published Bill. This has led to some inconsistency. Whilst the safety outcome is not mirrored in a core principle of quality, the draft outcome on effective resource use, for example, is reflected in a “best use” principle. Now that the Government has taken the welcome step to set core principles for integration in the draft Bill, it may be necessary to undertake a wider review of the relationship between these and the improvement outcomes.

For the Bill to meet its aims as set out in the policy memorandum, the RCN believes an amendment should be tabled at Stage 2 to embed quality of care as a core principle of both planning and delivering integrated services. There is legislative precedent for this in Scotland. For example, the general principles at section 59 of the Regulation of Care (Scotland) Act 2001 include the “safety and welfare” of persons using services being “protected and enhanced”.

In light of such an amendment being agreed, we believe that other additions to the primary legislation may be necessary for quality assurance to be a core function of the planning, decision-making, commissioning and reporting undertaken by future partnerships. The RCN is currently discussing how this could be framed within primary legislation with partners and we would be happy to share our early thinking in this area with members of the Health and Sport Committee.

The co-production of plans and services

The RCN supports the Scottish Government’s commitment to ensuring that care services are co-produced in genuine partnership between service users, carers and staff, bringing together the assets of both traditional services and the wider community to improve wellbeing.

Locality planning has been explained to us as one of the key ways for staff and the public to get involved in setting the agenda of local integration. We accept that the finer details of locality planning will be contained in secondary legislation and guidance, but far too little is set out in the primary legislation for such a central facet of the actual delivery of integrated care. Detail is limited to: a) the establishment of localities and their delivery arrangements in the preparation of strategic plans (section 23); and b) a high-threshold consultation and involvement trigger for changes which “might significantly affect the provision in a locality…”(section 32). We are also concerned that the minimum membership of those to be involved in locality processes is also not set out in primary legislation. Furthermore, we would expect local people and professionals to be engaged fully and proactively in the development and delivery of the strategic plan and any amendments to that plan. We note that section 5(4) does set precedent for including reference to key groups on the
face of the Bill and we are unclear why this is not replicated throughout where advice, consultation and involvement is required by integration authorities.

We had anticipated that the Bill would set out far more clearly how locality planning will dovetail with the development of the all-important strategic commissioning process for the entire integration authority. It is essential that there is a clear line of sight in service planning decisions, and the assurance of those decisions, from the very frontline to the governance bodies within an integration authority area. We believe amendments could usefully be brought forward at stage 2 to address these issues.

Within the NHS, the right of staff to be involved in key decision-making is long-established in both statute and clear guidance to NHS boards. This was recently evaluated as “the most ambitious and important contemporary innovation in British public sector industrial relations”\(^2\). Scotland has much to be proud of in its approach to partnership working between employers, employees and the Scottish Government in the health service. However, this is not clearly reflected in the legislation at this time. Indeed, section 11 of the Bill risks undermining current arrangements by permitting Integration Joint Boards to employ staff directly, through future secondary legislation, on varying terms and conditions. This addition was a surprise to the RCN, despite our membership of key groups involved in developing the Bill and our membership of the Scottish Partnership Forum. There is a far greater, open discussion required to understand the consequences of this section on the sustainability and the principles of the NHS in Scotland.

The risks of fragmented planning across families and communities

Quite rightly, we all expect frontline practitioners to ensure that those using public services experience seamless, quality care and support - whatever their age, wherever they live and however complex their needs. We should, therefore, expect that the laws and systems staff must work within to plan and deliver those services are joined-up too. Anything else sets up nurses, social workers, doctors and care staff to fail the people they serve.

Audit Scotland recently noted the “clutter” of partnership arrangements in Scotland\(^3\). With this in mind, the RCN continues to question why two Bills going through Parliament at the same time set out two parallel, but different, systems of planning services for adults and children who live in the same families and communities. We ask the Convenors of all the Parliamentary Committees considering the Children and Young People and the Public Bodies (Joint Working) Bills to consider together whether Scotland will indeed be best served by separate legislation on the planning of joint services.

Royal College of Nursing Scotland
2 August 2013

The stated policy objective of the Bill is:

“to improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older.”

Introduction

The Scottish Association of Social Work represents social workers, many offering frontline services throughout Scotland for people adjusting to change in their lives that not only impact on themselves individually but on their families, friends and communities. We have to assess and meet the need, we have to assess and help manage risk and we have to do this in the context of often competing human rights. We work in both rural and urban communities, local government, private and voluntary sector services. We are often are the gateway to local government and third sector services. SASW members are daily involved in the direct decision making process with people about concerns about their well-being and finding solutions. Assessing such situations is a highly complex task and. Critical to the work is the trust that can be established between all parties to ensure positive outcomes.

Do you agree with the general principles of the Bill and its provisions?

SASW fully supports any reform that will help people find a simple path through the complexity of health and social care services. Our members have three overall concerns about this particular proposed legislation.

Structural change rarely produces the anticipated improvement that policy makers and managers seek. It is often expensive and reduces morale at the front line. One of the observations from the Changing Lives Review (2006) was that community capacity building is essential to meet the needs of our communities. The Christie Report stated that need to empower front line staff. These are cultural changes rather than structural and are more likely to achieve the desired outcome of better access to appropriate services that meet people’s needs. Both these recommendations speak to the importance of locally developed and locally based services that meet the needs of our diverse communities. We suggest that resourcing and supporting that cultural change would be as important as legislative change in achieving the objectives.

SASW has already, in giving evidence to the Committee about the Social Care Self Directed Support (Scotland) Act 2013, stated that there is a potential contradiction in direction of these two pieces of legislation in defining
who is in the driving seat to identifying how needs may best be met. The mechanisms of moving budgets from acute health services into supporting complex chronic health and social care will be key to achieving the objectives of this legislation. SASW members are very clear that the people who are experts in what is happening to them are the people who use services, the rest of us are there to help them find resolution to some complex issues. We also believe that people should have choice about what works for them and that any change in the systems must enhance people’s control over their own lives.

The third concern is in ensuring that there are no unintentional consequences on other services, particularly in social work services. We have already seen carefully worked out regulation that provided checks and balances in the jigsaw of mental health legislation to people’s rights when their liberty is at stake amended through statutory instrument to accommodate the changes needed in Highland Council when they moved staff between health and the council. This expediency is in contrast to the developments since 1968 in building up one of the most sophisticated social work services in the world that take account of meeting complex needs and ensuring rights.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The difficulty in answering this question is that the detail of implementation will address whether the stated policy objectives will be achieved and this is not in the primary legislation. Specifically we are concerned about how decision making will take place at the point where health and social work services meet in terms of the allocation of resources and how priorities will be set. How will these affect the decisions people who use services will want to make in terms of self-directed support? How will their opportunities be protected?

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

In answering the previous question about the allocation of resources and the setting of priorities lies the answer to this question. If there can be changes in the long established practice of investing in acute health services and diverting monies into complex chronic health and social care services then there could be a key strength in this bill.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

One of the key issues for social workers is continuous support for professional practice. The Practice Governance Framework developed after the Changing Lives Review that covers the role of the Chief Social Work Officer and the role of the social worker in carrying out their statutory responsibilities is the structure in which we carry out daily recommendations and decision making that often affect such human rights as people’s right to be at liberty in the community and where they live. In this legislation it is critical that this
framework is respected and that practitioners continue to operate within this framework to ensure that those making these decisions do so with the appropriate level of support and responsibility. There are concerns that in new line management hierarchies professional supervision and consultation could be diluted or ignored and that this would not provide the necessary checks and balances in complex decisions making that could affect people with whom we are working.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

A major issue is establishing a cultural and practical change in the use of A&E services as we approach the weekend. This comes in part from people not seeking help until a crisis has arisen, ‘I didn’t want to bother anyone’. In part it comes from a lack of focus in identifying issues much earlier in the process and working in more proactive, preventative practices. This needs public education about how we can make our own plans earlier in our lives by making appropriate changes in our homes and talking with our family and friends about our plans for how we would want to live as we get older. It will also challenge traditional 9-5 working practices for some public services and these will need to be addressed with the workforce. However caring can be challenging, for example as a relative or person being looked after progresses through stages of dementia, so work life balance has to be respected. This should lead to important investment in services like respite care.

For the practising social worker the important factors will be that they can continue to listen to how people want to make the changes that they are faced with in their lives and then to work with them to find out how best to achieve that change. Sometimes these changes may be relatively small but sometimes they mean major change like where and with whom they live. People need time to make and adjust to major life change. Whilst one driver may be to free up a hospital bed people need to be treated with respect with dignity and respect in making adjustments in their lives. The structure needs to support them in this process.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

The delivery of integrated services lies in good practice at local level. It can be achieved in the current structures when people understand the skills, knowledge and expertise of the people coming together to find solutions to complex issues, including the person and their family and community, then turn them into a workable plan of action. This needs good coordination, often a role taken by the social worker. The issue for the legislation is making sure that resources are available in the right places to enable creative solutions to improving quality of life.

There are many challenges in this proposed legislation, there needs to be care in making sure there are no unintended adverse consequences, there
are opportunities to address how public monies are spent but the outcomes will mainly be achieved through cultural change in working practices. Any changes made in this legislation must strengthen the concepts and practices of Self Directed Support so that the people in the driving seat are the people using the various health and social work services that this bill seeks to improve.

British Association of Social Workers
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill
NHS Ayrshire and Arran

Do you agree with the general principles of the Bill and its provision?

Yes. The general principles and provision are welcomed and follow on from the previous consultation on the Scottish Government’s proposals, responses made, and the Scottish Government’s subsequent response to these.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill sets out a coherent framework within which integration can be progressed but leaves room for local partnerships to develop “best fit” solutions within statutory boundaries. It is felt that this strikes a good balance and it is believed will help to achieve the stated policy objectives.

The extent to which the stated policy objectives will be achieved will be largely determined by two factors: (1) moving from a focus on outcomes at a high strategic level to personal outcomes for individuals to ensure seamlessness at point of service delivery (2) effective locality plans which link to, and heavily influence the Integration Authority strategic plans.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

The coherence of the policy objectives is a key strength. They will have to be followed through at a personal and locality level supported by an approach which values enablement and coproduction.

Aspects of the policy memorandum are welcome reminders:

- “Integration is not an end in itself – it will only improve the experience of people using services when partner organisations work together to ensure that services are being integrated as an effective means for achieving better outcomes”;
- “legislation alone will not achieve the scale or improvement that is required . . . Leadership is key, locally and nationally . . .”

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

It may be that the following will be picked up in regulations etc but as it stands, the Bill could be strengthened in the following areas:

a) public accountability arrangements – section 33 mentions a performance report. It may be helpful to link this to a focus on outcomes for avoidance of doubt;
b) statutory public engagement responsibilities – for instance it would be helpful to clarify the position of Public Partnership Forums (PPFs). In Ayrshire, the PPFs have proven to be very effective support to public engagement arrangements across the totality of health provision;

c) consultation arrangements – various references are made to issues such as the preparation of the integration plan but there is a substantive issue to be addressed concerning any implications for consultation arrangements in relation to proposals for service change made by the Integration Authority;

d) following on from this, it may be helpful to clarify approval processes in instances where a strategic plan proposes major service change. In particular whether the Cabinet Secretary will continue to hold what would effectively be veto powers over the Integration Authority’s plans;

e) whilst it is helpful that the Bill makes consistent reference to integration planning principles these are silent on the need to ensure effective clinical / care governance;

f) staff governance is a statutory requirement of NHS Boards and the Bill is fairly silent on what arrangements (if any) Integration Authorities will be required to put in place.

g) there is a need to be more explicit about how the Integration Authority will be scrutinised jointly, by external scrutiny agencies;

h) in terms of analytical review of the Bill as a whole, there may be a case for considering whether the balance between what is on the face of the Bill and what will be in regulations could be improved. For instance while regulations will define the scope of integration, it is on the face of the Bill that the responsibilities of a Chief Officer are subject to the agreement of Scottish Ministers.

What are the efficiencies and benefits that you anticipate will arise from your organisation from the delivery of integration plans?

Efficiencies and benefits are anticipated to arise as follows:

a) the focus on outcomes (providing this is reflected in performance regimes);

b) the introduction of locality planning – this should streamline community engagement across the four sectors and maximise the opportunities for an assets based approach while engaging local users, carers and professionals in an agenda which is real for them. It should also bring a sharper focus on tackling health inequalities;

c) the principle of joint and equal responsibility – this should help reduce “hand offs” between the statutory agencies;
d) the engagement of the third and independent sectors as strategic partners – this is already helping to shape effective plans in services for older people;

e) a logical framework reflected in the flow of the Bill from the model of integration to the integration plan to the strategic plan with consistent integration planning principles throughout – this will bring a much higher level of consistency and focus to joint endeavours;

f) an improved approach to making investment and disinvestment decisions based on a clear process and evidence base and best use of integrated resources;

g) greater potential for a joint strategic commissioning process which is based on improving outcomes at both a strategic and individual level, supports effective service change and views issues from a user’s perspective.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integration plans will bring a rigour to setting out what the Partnership is responsible for and how it will be funded. Coupled with the strategic plan setting out how the Partnership will deliver its responsibilities it will give greater transparency to how all of this directly relates to improving outcomes. Crucially, however, it must also link to effective locality plans which should capture how refreshed relationships between the statutory, third and independent sectors and local communities can also improve outcomes.

Other Comments
There will be a need to ensure that there is sufficient Non-Executive Director capacity within NHS Boards to support the effective running of the Integration Authorities. This may be a particular challenge for NHS Boards with several Local Authorities within their Board area.

NHS Ayrshire and Arran
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

UNISON Scotland

Introduction
UNISON Scotland welcomes the opportunity to respond to the call for evidence from the Health & Sport Committee regarding the Public Bodies (Joint Working) (Scotland) Bill. UNISON Scotland has almost 160,000 members, over 90,000 of whom work in local government and 50,000 in the health service. We represent community health staff as well as social workers and social care staff who are all part of the adult health and social care workforce, most of whom will be affected by this Bill.

General Comments
UNISON members in Scotland have been involved in various proposals to improve joint working between health and social care workers over many years and we accept that joint working has not worked well in all parts of the country. This is despite improvements that have been achieved during this time with reductions in the number of elderly people kept in hospital due to lack of care plans which would allow them to return home. We also accept the current emphasis on the potential increase in the number of elderly people which will drive up demand for care services in the future. We are aware of the excellent initiatives that have arisen from the Change Fund programme which have introduced preventative and personalised services in community settings, rather than in acute hospitals and we supported its inclusion of housing and leisure services.

When we responded to the consultation on Health & Social Care Integration in September 2012 we expressed several concerns about the Scottish Government’s proposals and we are pleased that some of our concerns have been addressed in the Bill. In particular we welcome the intention to focus on local implementation of joint outcomes for care integration, rather than top down structural reorganisation, which studies have shown, does not achieve the required aims of service improvement.

For these reasons we were quite clear that we did not favour models that involved the wholesale transfer of staff across councils and health boards, as in the Highland Model. Our members in Highland have experienced many difficulties with terms and conditions of staff, pension arrangements, etc., and we believe that major issues, such as the status and situation of Mental Health Officers, still remain to be resolved.

We remain concerned at the transfer of local authority democratically controlled services to the NHS as well as at the potential for privatisation of health service functions as outlined in Part 3 of the Bill. This will allow health boards to form companies and to act on behalf of other health boards to allow, for example the management and disposal of property and assets and
to form other “corporate structures” under the Joint Ventures initiatives, led by the Scottish Futures Trust.

Questions:
UNISON does support several of the general principles of the Bill as it is set out so far. However, we believe there is still more detail needed on the nationally agreed outcomes which will be set out by the Scottish Government and the scope and arrangements for local implementation of the outcomes. However, the Bill will only achieve its desired objectives if it allows genuine involvement of all parties, including staff and service users in locality planning and implementation of the strategic plans.

The Bill is being introduced at a time of reduced resources being allocated to local authorities in particular, leading to reduced staffing levels, which is affecting social care services. In addition, the Self Directed Support (Scotland) Act recently passed in the Scottish Parliament will be coming on-stream at the same time as it is proposed to implement this Bill, both of which could have an adverse effect on how well integration can be progressed. Joint budgets will need to be sufficient to deliver the services that are needed, despite these restrictions.

Lack of resources is currently causing fragmentation of care, where many care staff are being employed on zero hours contracts. This causes problems for the care worker, who does not know from one week to the next whether or where they will be working. However, it also makes it more difficult for the service user to receive a continuous service they can rely on with the same carer that they get to know. It can be confusing for many to have different staff arriving to care for them at different times. We also believe that the 15 minute visit appears to be becoming the norm which is a totally insufficient amount of time for a carer to perform the tasks that are needed for vulnerable people, often with complex needs, before they rush off to their next client, often not being paid for the travelling time between visits. This practice does not deliver a proper service to people who need to be cared for at home and should be addressed further in the Bill’s progress through Parliament.

Staffing Issues
In our response to the September 2012 consultation, we expressed our disappointment that workplace issues had been given scant consideration in the proposals. We believe that one of the greatest challenges for implementation of the proposals will be the difficulties of bringing together two large groups of staff who have their own cultures, systems of governance, terms and conditions, all of which have the potential to create massive problems when implementing the plans. We continue to be disappointed that these issues have not been addressed and would strongly urge that a provision for staff and their trade unions to be involved in the integration and planning process should be included in the Bill.

Some of the following issues were highlighted in our response to the initial consultation and still need to be addressed:
Staff transfer: There is an urgent need for a legislative framework for staff transfer. Statutory reorganisations are not treated in a consistent manner in legislation. Local reorganisations operate without consistent guidance leaving management and unions to reinvent best practice in a complex legal context. A legislative framework should include a standard staff transfer order that covers the essential TUPE+ issues. In the model proposed for Health and Social Care Partnerships the employment relationships are unclear and this could lead to complex legal issues including defining the employer.

Pensions: While the public sector transfer club operates for individuals, large scale staff transfer requires regulations for block transfers. The NHS and LGPS pension schemes in Scotland have many different elements and while service is protected on a year for year basis other factors may be important to individual staff. Again a consistent approach is required.

Secondment: Not all options in the Bill require the permanent transfer of staff. A short term transfer may be a more flexible option. This approach has also been used in circumstances involving a non public sector provider. A secondment framework for temporary or short term transfers would again ensure some consistency and guidance.

Staff employed by different employers: The Joint Future initiative introduced working arrangements where staff from different employers work together. In addition a worker can be managed by someone from a separate employer on different terms and conditions and with different professional codes of conduct. For example, a nurse being line-managed by a social worker, or vice versa, where the person from the other discipline may not understand the other's professional codes can cause misunderstandings and friction. There have been problems with different procedures such as discipline, grievance, training and development review. Professional boundaries, ethics and codes of conduct can also be an issue. Recent legal decisions (Weeks) have highlighted employer responsibilities in these circumstances. Some agreed national protocols to cover these issues would be helpful.

Procurement: There is little consistency in approaches to public service reform that involve procurement. The Two-Tier workforce provisions including the PPP Protocol and s52 have been under review for years with no real progress. Existing provisions are not well understood and certainly not consistently applied. A common procurement framework agreement would assist everyone involved in organisational change.

Equality duties: Organisational change almost always requires an equality impact assessment. Our experience is that this process is often not understood and inadequately implemented.

Governance: Different governance arrangements can be complex and confusing. This also applies to the governance of workforce issues. Christie therefore recommended the development of "an appropriate set of common powers and duties". We believe there should be a single statutory staff
governance framework. There are also different approaches to, for example, health and safety, asset management between health and local authorities, and we believe a staff governance framework that offers a system of industrial democracy ensuring the opportunity for staff and their trade unions to be fully involved, from an early stage, will assist with the formulation and implementation of change between the different groups of staff. The perceived problems of the different systems of industrial relations currently in place cannot be over-emphasised.

Statutory Roles: We are pleased that the Bill confirms that the status of statutory roles, such as the Chief Social Work Officer, Chief Financial Officer, Chief Public Health Officer, etc. will remain but their position alongside that of the new Board Chief Officers needs to be clarified. In addition, the status of Mental Health Officers needs to be recognised, as the need for impartiality is of paramount importance.

Conclusion
UNISON accepts that care services face major challenges and we believe strongly that service users must be able to easily access services which will enhance their lives and enable them to live safely in their own homes and we believe the some of the principles of this Bill will assist this aim.

Our members have participated in many instances of organisational change over the years and many may be sceptical about the merits of any further major structural change. The body corporate model may lessen some of the difficulties experienced through structural reorganisations; nevertheless, significant questions still remain over how this will operate in practice.

The 15 minute visit by home carers and the practice of zero hour contracts for low paid staff must be addressed to ensure that high quality care is available to vulnerable people who rely on these services.

We have emphasised our concerns at the questions that also remain over the workforce issues outlined above which we believe are crucial to ensuring that the aims of the Bill are able to be implemented satisfactorily to the benefit of both service users and the staff involved.

UNISON Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill: Stage 1

09:49

The Convener: Agenda item 2 is continuation of our evidence taking for stage 1 of the Public Bodies (Joint Working) (Scotland) Bill. I warmly welcome our first panel: Claire Cairns, network co-ordinator, the Coalition of Carers in Scotland; Pam Duncan, policy officer, Independent Living in Scotland; Ian Welsh, chief executive of the Health and Social Care Alliance Scotland; and Karen Hamilton from the Borders public partnership forum.

In the interests of time, we will go directly to Rhoda Grant for the first question.

Rhoda Grant (Highlands and Islands) (Lab): One of the criticisms of the bill is that it concentrates on bureaucracy instead of principles and outcomes. Is the bill sufficiently well drafted to allow the meaningful involvement of carers and service users and, if not, what could be added to make that happen?

Pam Duncan (Independent Living in Scotland): First of all, thank you for the invitation to give evidence—we very much appreciate it. I also want to say at the top of this evidence session that disabled people welcome the integration of social care and health services, in the hope that it will result in seamless service provision.

The bill’s principles are good but could be strengthened to make a clear statement that integration is about the delivery of services for people and those people’s experiences. As a result, we suggest the inclusion of something akin to the independent living principles that were added earlier this year to the Social Care (Self-directed Support) (Scotland) Act 2013. Health and social care are absolutely essential material supports for disabled people to participate in society and lead an ordinary life, as without them many disabled people simply cannot participate in society. I could not have got out of bed this morning, never mind come here to give evidence, without good social care that is accessible and which I can control. Equally, the health services that I access as a disabled person are essential for me to live and cope with my condition.

In short, given that these matters need to be considered in the context of equality and human rights, and given our fundamental belief that health and social care infrastructure is essential to the delivery of equality and human rights for disabled people, we think that the Scottish Government could really put its head above the parapet and lead the way in Europe by including in the bill a provision that specifically related health and social care to disabled people’s right to participate in society and lead an ordinary life.

Ian Welsh (Health and Social Care Alliance Scotland): As the committee knows, the bill will be a piece of enabling legislation, which means that there is much that is not in it. One thing that ought to be in it, however, is the determination to apply human rights principles, and we and our partners will certainly bring forward an amendment to that effect. The legislation setting up the Scottish Parliament enshrines human rights legislation, but we believe that our proposal will embed that even more in the Scottish context.

The commitment to health and social care integration as described in the bill is absolutely the right thing, and the Cabinet Secretary for Health and Wellbeing has shown exemplary commitment to it. In saying that, I should add that we are not members of the same party. However, to come back to Rhoda Grant’s question, I think that the challenge will emerge back in the places where action is going to take place—in other words, the health boards and the nascent health and social care partnerships.

There will be a default position in which structures and budgets take prominence, but the jury is out on whether the new health and social care partnerships will get to the point of putting in place the vast array of supporting guidelines that pay significant attention to the rights of carers, disabled people, people with long-term conditions and the principles of co-production, putting people at the centre of services and indeed fundamentally redesigning services in the context of public service reform. The bill’s strength is that it offers the local partnerships the flexibility to get on with integration but, in my view, its weakness is that the health and social care partnerships might simply default to a bureaucratic transition.

Pam Duncan talked about seamless transition. When I was in local government, we always used to talk about seamless transitions. The danger is that we get a seamless transition and do not get a fully thought-out approach to the philosophy of delivering services locally in a new way—not just a cheaper way, but a much more inclusive way. In my view, that opportunity will be lost if the new health and social care partnerships do not go beyond the words in the bill and are not encouraged by the supporting guidelines to make the third sector, in particular, and the individual full partners in the process.

Does that help to answer your question?

Rhoda Grant: We will have to amend the bill to make it work properly. You say that the guidelines and, I suppose, the sentiment behind the bill are
moving in the right direction. How can we amend the bill to make it focus on the things that you say are important? That is the challenge for us.

**The Convener:** It would be helpful if witnesses could go through the chair, because Claire Cairns and Karen Hamilton may wish to respond to the first question. I do not know whether you do—do not feel any pressure to do so if that is not the case—but it would be helpful for the committee if you could respond to Rhoda Grant's first question.

**Claire Cairns (Coalition of Carers in Scotland):** That is great—thanks.

We, too, welcome the bill’s focus on outcomes and the principle of strengthening the involvement of carers, but we think that it could be strengthened in various ways. When the first proposals on integration came out, we held quite a lot of consultation with carers. They felt that, for integration to be successful, it was absolutely essential to have not just carer engagement but meaningful carer engagement, and a move beyond involvement towards co-production. There are several ways in which that could be strengthened, perhaps not through changes to the bill but in the development of the guidance and regulations.

One suggestion that carers made was that carers should be recognised as equal partners. They are recognised as equal partners in the carers strategy and as partners in care in the Community Care and Health (Scotland) Act 2002. It is important that reference is made to that in legislation, or certainly in guidance and regulations. It is important to realise that carers are recognised as equal partners.

One comment that was made in our consultation was:

“If integration embraces carers it should get better but it won’t if it is an afterthought.”

It is all about ensuring that carers are involved in all the structures from the top down. At the moment, there is a question mark over whether carers will be represented on partnership boards and whether they will have voting rights. I know that that has been discussed. Carers overwhelmingly want that, but it requires to be resourced. There is a lot of talk about resourcing the third sector to get involved, but there is little mention of resourcing the involvement of carers and service users, which is essential if engagement is to be meaningful, as carers keep saying that it needs to be.

When we talk about carers, we are talking about a wide community of people. A carer could be a young person or an older person who is looking after a partner, and they could be dealing with a range of illnesses, disabilities or other conditions. It is quite difficult to capture their views and to feed that information into the process, and that needs to be resourced. We have put together best practice engagement standards. Our way forward would be to use the expertise that already exists in carer centres and to have a network of forums that representatives can go back to as a community of carers and feed their views through. However, as I said, that will need to be resourced.

There are other ways to strengthen things. Ian Welsh mentioned co-production rather than consultation. It is extremely important that, like other key stakeholders, carers feel that they have ownership of the process and that they are at the table from the beginning and not just as an afterthought. We also recommend that they should have a role in signing off the plans, for example through a local carer organisation. There has been talk of interface organisations signing off the plans, but we also see carer organisations having that role.

Another quote from our consultation was:

“Good to talk but more important to be listened to.”

We heard that a lot. I know that, as integration goes through in the bill, a lot of the process will be about looking at the guidance and regulations, but I think that it is important to have this discussion and to give thought to such matters from the beginning.

**The Convener:** I ask Karen Hamilton whether she wishes to respond.

10:00

**Karen Hamilton (Borders Public Partnership Forum):** I do not think that I have anything to add to what my colleagues have said.

Rhoda Grant mentioned bureaucracy in her first question. I can appreciate that a bureaucratic framework is part of the process. I do not want to support that, but if we do not put the relevant structures in place and people do not know, for example, who they are responsible to, who they are accountable to and how the chain of command works, I do not think that the process will succeed. One of the issues with previous attempts has been that issues such as who holds the resources and how funds are transferred have been a bit muddy. It is bureaucratic, but up to a point it probably needs to be to make the system work.

**Ian Welsh:** We will all bring forward a range of amendments. We would suggest, for example, that insufficient engagement should be grounds for ministers not to approve the integration plan. That would be a mechanistic way for ministers to
ensure that the local partnerships—many of which have first-class engagement plans—are held to account for lack of engagement. We will bring forward an amendment on that issue as well as on others.

The Convener: I ask Pam Duncan whether she wishes to comment.

Pam Duncan: Thank you for giving me a second opportunity on the same question. As members can probably imagine, we have a few suggestions on how the bill could be amended. One is specifically to lift text from the United Nations Convention on the Rights of Persons with Disabilities and include it in the considerations in preparing integration plans in section 3 of the bill. We have given a bit of thought to how that could fit in nicely. As I said, that would be a good step for Scotland to take to show that it takes human rights seriously and puts people rather than bureaucracy at the front of health and social care.

I will make two other points. The first is on portability and the principles of the bill. If the bill is about the individual, it would seem odd if there were any barriers to people moving around between local authority areas, particularly given that, in the new integrated systems, we could have 32 different systems with, for example, one health board covering two or three different social care areas or local authorities. There is an opportunity to iron out some concerns that disabled people have quite frequently raised about the impact of moving from one local authority to another. Unless we take the opportunity to address the issue, there is the potential for quite a lot of confusion. We have ideas about how we could strengthen the bill in that area.

We have recently published a toolkit called “All together now”, which is about working in co-production with disabled people and which has been endorsed by the Cabinet Secretary for Health and Wellbeing as a useful tool to have in the box to make the integration plans work. As Ian Welsh said, we want that to become an integral part of whether the plans are signed off. We think that the toolkit could help people to get it right and to engage with the process.

The Convener: We are familiar with many of those themes, but the hard question for us is: what is there in the bill that will deliver on the recurring themes that we have heard from you in the past? How will the bill deliver the outcomes that you want? How will it bring about a shift in power from local government and health boards?

Ian Welsh: That is a big question. I speak as a seasoned campaigner who has worked locally—I sit on the health board and, as you may know, I used to lead a local council. Some of you sitting round the table will have seen successive initiatives over the past 14 years from local health care co-operatives onwards. As Karen Hamilton said, the difference is that there will be a consolidated budget. There will be a real pool of money—it will not be kid-on money—and there will be a statutory responsibility.

The words in this enabling bill reflect the Christie principles. They reflect the requirement for public service reform, they insist on personal outcomes for people and they insist on co-productive techniques.

The challenge is that, when we move from the centre to the periphery—although that is not the periphery but the centre to those who serve such communities—there is an overwhelming requirement for culture change, which can happen only through action. For example, health boards and local authorities are briding a bit about the third sector’s requirements for plan sign-off, and I know that MSPs will be concerned about that as well, because there is a statutory responsibility. Where we have had collective sign-off for change fund plans over the past three years, we have had quite a significant change in the culture of how local officials work with their partners. The sign-off of plans is not a power thing for the third sector; it is a mechanism to get collaboration and culture change in services.

I have referred to the supporting guidelines. I take Karen Hamilton’s point that we need a bureaucratic structure. The problem with structural reorganisation is that, although it provides a chance for a year or perhaps two years to change how we operate, if we seamlessly continue to do what was done before, we never get the engagement with change. However, there is loads of good practice across the country in different pockets. East Renfrewshire provides a good example, as it already has inclusive working and co-productive working, with carers at the table and disabled people discussing their services. East Renfrewshire is also looking at moving from downstream investment to upstream preventative action.

I am sure that there will be loads of amendments to the bill to produce a good piece of legislation, but the challenge for all of us will be to ensure that the local partnerships do not become enmeshed in simply meeting the budget. If that happens, we will not get the transformative change that is required.

Claire Cairns: As I said, we consulted carers on integration. It was interesting to get their views about integration in general and whether it would improve their lives or have a negative impact on them. There were positive and negative views about the impact of integration. About 52 per cent thought that things would stay the same; 33 per cent thought that there would be an improvement;
and 14 per cent thought that things would get worse, for a variety of reasons.

When we looked at what carers thought would make integration successful, a few key points emerged. We have said that engaging carers in the new structures was the number 1 point. Another issue was co-producing plans and ensuring that people have ownership of any decisions that are made. As Ian Welsh said, another point was ensuring that people are at the table for signing off plans.

A very big issue was ensuring that resources are directed towards carer support. A lot of the policy integration—in reshaping care for older people and so on—is looking at shifting the balance of care, shifting resources from acute services to the community and having people stay at home longer, living independently. That really requires the involvement of carers. If we do not provide resources for carer support, that will have a hugely negative impact on carers’ health and wellbeing. If we are saying that more care needs to happen at home, in the community, it makes sense to direct resources towards that.

As Ian Welsh said, there have been really good examples through the change fund. As members probably know, 20 per cent of the change fund had to go towards carer support. That acted as an excellent catalyst for developing new services and ensuring that carers were integrated into the process and that developments took their needs into account. We would like something similar to happen with integration, to ensure that carer support remains a priority.

The big one that a lot of carers mentioned was culture change and leadership. A lot of people said that whether integration would work would be down to not processes but individuals. That is about all the partners working together and being committed not only to the process but to making the engagement and co-production meaningful. That means embracing people coming into what some might see as their territory and being prepared to listen to and involve those people.

Karen Hamilton: We have talked about third sector involvement. I will highlight a risk that might exist. A few weeks back, I attended a third sector involvement session down in Melrose. It was well attended, with people from probably 60 or 70 organisations coming together. The feedback from that was that it is difficult to integrate the third sector and have people speak with one voice. People articulated that themselves. There are sometimes commercial conflicts and different principles.

Although I welcome the fact that we are involving the third sector in the process, I note that there is a risk—it is a watch point for the committee—in that we should not assume that the sector has a single voice or is a single body. There are a lot of people with conflicting views and we should not gloss over that.

The Convener: They have all been here to give evidence as well.

Pam Duncan: I will make a similar point. Disabled people sometimes suffer from what we call majoritism. It is difficult for seldom-heard voices to make their point through things such as the third sector interface, because it attempts to represent a large group of local people. Throughout our engagement exercises, disabled people told us that they and their directly accountable organisations must play a key part in looking not just at the outcomes but at how money is spent and how policies are developed from the start of integration right through to monitoring and evaluation.

Many disabled people’s organisations are operating at below a critical mass. We are saying that we really need to be engaged, and disabled people are innovative because they have to be. When I get out of bed in the morning, I need to think of solutions to a lot of problems. Health boards, local authorities and others in our society could draw on that. However, that needs to be resourced and supported, and many disabled people’s organisations are struggling with that.

Section 26 of the bill contains a commitment to reimburse expenses for people’s involvement, which is important, but it should also be recognised that something extra is needed in the resourcing of community-based organisations, and not just the wider third sector, for them to become accountable and give input on plans. We go further and suggest that ministers should recognise disabled people’s organisations. The bill states that ministers will recognise organisations that they think are representative. We argue that DPOs, as directly accountable organisations of disabled people, should be considered throughout the bill in that respect.

Richard Lyle (Central Scotland) (SNP): Good morning. It is nice to see you again, Pam. Sorry—I am not singling you out.

I return to the point that Claire Cairns made about the percentages. It was interesting to read all the submissions, and the issue that I will raise runs through all of them. The Coalition of Carers in Scotland’s survey asked:

“Should carers have a guaranteed place around the table in the new integrated structures?”

and 100 per cent of respondents said yes. In fact, there are eight yeses in the response—it sounds like “The Vicar of Dibley”.

Ian Welsh stated:
"As proposed, Health and Social Care Partnerships will only be accountable to health boards and local authorities. There is a risk that the proposals for integration will represent a backwards step. The third sector and people who use support/services should be included within membership of Integration Boards”.

Do you feel that you should all have a seat at the table and be involved under the bill to ensure that you have what Pam Duncan called for earlier—a voice?

**Ian Welsh:** Absolutely. To take Karen Hamilton’s point, I note that, as a collective, the third sector in Scotland is massive. It is fair to say that it is hugely misunderstood. When you all go back to your constituencies, I bet that you find a different third sector organisation every week. The sector has a massive reach.

The sector is not unorganised. In the evidence that the committee took from the Scottish Council for Voluntary Organisations and the Coalition of Care and Support Providers in Scotland last week and in the evidence that it will take from other strategic intermediaries, such as us, it will find a significant common thread on the requirements for giving a voice to carers, disabled people and third sector organisations that aim to put people at the centre of services. In that regard, I disagree with Karen Hamilton.

10:15

Emerging from the chaos or the maelstrom of activity that sometimes happens in Scottish public life is a requirement for every local partnership to have a third sector interface that is tasked with providing some kind of voice. There is a mechanism locally and nationally to give a much more unified voice to the third sector and carers.

Integrated boards are required to take care of business such as the transfer of staff and the structures quite quickly. However, when we move beyond Christmas and head towards April, local healthcare and social care partnerships will be required to walk the walk. It would be a poor thing if they did not.

There should be a disabled person presence and a carer presence. The concerns about that in statutory terms—in sign-off terms—are vastly overstated. I do not recall many occasions, even in my local authority life, when we have been divided significantly over budgets in health and social care. It would be a huge signal of inclusiveness for health and social care partnerships if those people were given a voice. Having one representative of the care in the community sector, one representative of the disabled population and one third sector representative against maybe eight statutory sector representatives seems reasonable to me.

**The Convener:** What is more important to securing an improved outcome for individuals—having those individuals on boards or having a human rights focus to every decision that is made? Is one option exclusive of the other?

**Ian Welsh:** Pam Duncan can answer first.

**Pam Duncan:** Thank you for deferring to me—I appreciate that, as I was eager to get in.

I do not think that the two aspects are mutually exclusive; I think that one is needed to guarantee the other. Under the Scottish Human Rights Commission’s approach to human rights principles—the PANEL approach—the first word is “participation”. We cannot have one without the other. It is really important to include the representatives whom Ian Welsh described as key partners in order to deliver on the human rights aspirations.

**Rhoda Grant:** Are you saying that, rather than have someone from the third sector interface on a board, you want carers, service users and service providers separated out, so that each can express their voice individually on behalf of the group that they represent?

**Claire Cairns:** Yes.

**Karen Hamilton:** Yes.

**Pam Duncan:** Yes.

**Nanette Milne (North East Scotland) (Con):** I will touch on the Social Care (Self-directed Support) (Scotland) Act 2013. People who have spoken to us have wondered how self-directed support will work once the services have been integrated and budgets have been pooled. The SCVO has said that self-directed support is probably vital to the working of integration. What effect will the proposed new arrangements have on self-directed support? Will they help it or hinder it?

**Pam Duncan:** We have asked similar questions, because we are not 100 per cent clear—I am not sure that the bill is 100 per cent clear—about how those things will work. We have always said that people should be able to apply the principles and practices of self-directed support when they exit hospital to access services in the community, and that should continue throughout.

We are integrating two systems. One is based on eligibility and is free at the point of delivery—the national health service—and one is based on eligibility criteria that are broadly outlined nationally but are, in effect, determined locally. Most cash-strapped local authorities are delivering according to high-level criteria, so that is literally life-and-limb provision. That, too, will have a huge
impact on the provision of more care in the community.

If there is to be more care in the community— which we support—the situation needs to be looked at, because we do not want to unblock a bed in hospital and allow someone to go into the community if they are only going to get up in the morning, get fed, have their bum wiped and go to bed at night. We want social care that is much more than that. There are many questions about how SDS will work with that and, more broadly, how social care will be delivered in the future, given the funding crisis that local authorities and social care services are experiencing.

Throughout the engagement events that we held, we heard from disabled people that there is a large amount of unmet local need for social care. One way to make SDS work well as part of an integrated system—there is a vision and we can see that it can work—would be to start recording unmet need so that we know what is missing. Until we do that, I do not think that the local partnerships that come together will be able to determine how much money is needed for social care or for healthcare. To get to that point, we need to start recording unmet need.

That was a slight diversion from Nanette Milne’s question, but there are a number of questions about how SDS will work.

Ian Welsh: I agree with everything that Pam Duncan said. However, there is no indication that the situation will worsen; the question is how quickly SDS needs to be accelerated. That is partly down to resources, but it is also partly about answering a larger question. SDS is focused almost exclusively on social care, but there is a developing argument about applying SDS in health settings as well.

Some good work is being done in Scotland, and my organisation has an officer who is looking at self-directed support in health settings. I nearly said that the challenge is to take the fell hand of accountants off health budgets, but I do not quite mean that. At the moment, health budgets are locked in a particular paradigm, but come the day, come the hour, maybe a third of a health board’s budget will be located in health and social care partnerships. In that setting, there will be the opportunity to look at SDS in a different way.

I hark back to my original point. Health and social care partnerships and the statutory agencies need to look at integration as an opportunity to refresh and reform the way in which they think about things. They are locked into crisis management of budgets and timetables for delivery, and they need a bit of space to do fresh thinking about what policy and practice mean in the 21st century. If they do not get that, we will not see an acceleration in SDS for social care or any innovative approaches to SDS in health settings. My plea is for the new health and social care partnerships to look at health and social care services through a new prism.

Nanette Milne: Both those responses are helpful. Since care in the community was introduced, it has been recognised that it is not a cheap option and that, to work properly, it requires resources. I agree with Ian Welsh’s point about the need for a culture change in how things are looked at. That is perhaps the only way in which SDS will work. It is helpful to have that on the record.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): The discussion has probably moved on a bit since I first indicated that I wanted to come in, because I was interested in the mechanisms for embodying the bill’s principles. I completely agree that the principle of co-production should be in the bill, but I was wondering about the mechanism for ensuring that that happens. In that respect, Ian Welsh’s comments about who should be on the board were helpful.

I was also wondering about the current mechanisms, one of which is the public partnership forum, which has not been asked about. You want the principles in the bill and people on the board—which is fine—but will those other mechanisms still exist? I presume that the third sector interfaces will remain, but do you still find the public partnership forum, which I note has been commended in two of the submissions, to be useful? How will all that fit together? Do we simply need a multiplicity of forums and mechanisms to ensure that this happens?

Karen Hamilton: At the moment, PPFs are a bit at sea because there is some confusion about where they fit in and, indeed, about how representative of the public’s views they are. As they tend to be made up of people with vested interests, one might argue that their views are skewed. The PPF that I represent really does not know what the situation will be and has not been able to identify in the legislation as drafted any guidance or information on where it will fit into the new health and social care partnerships.

Moreover, although the PPF has various subgroups such as patient reference groups, we are concerned that we do not have reasonable representation from the carer population or particularly good representation from young people. There is an opportunity to look again at the formulation of PPFs and the role that they might play in the new partnership set-up.

Claire Cairns: We undertook a project in the Highland pilot area, when it was moving towards integration, on how carer engagement and structures for such engagement worked there.
What we found—and I think that this is typical of most areas—is that the environment can often be confusing and cluttered. As well as public partnership forums, there are often quite a lot of specialist forums or groups and it is difficult to discern where decisions are made, where information is going, where the flow is and whether discussions on particular subjects make it to meetings at which decisions are made about budgets or service development.

Whatever the new structures are, they must be meaningful and we must not ask too many carers to be involved in too many groups. Carers want to be involved in meaningful groups that make the decisions; they want to be listened to; and they want to be resourced so that they can attend not only those meetings but meetings of their carer forum or group to allow them to bring forward information from that reference body of carers.

Those are the lessons from the Highland experience. They kept a lot of structures and just added new ones on top of them, which put quite a lot of strain on people’s involvement. People want to be involved in the decision-making process but, as I have said, they want to ensure that their time is well used.

Ian Welsh: We talk about moving to new structures but the fact is that the world is messy. Going back for a moment to the archaeology of all of this, I note that the Scottish health council was tasked with setting up public partnership forums for the health service and did so diligently; it is also responsible for monitoring how well health boards deliver that mechanism. Although Karen Hamilton’s points about representation on the forums are properly made, I have to say that the NHS still has an active participation network that serves its purpose relatively well and which in some areas is excellent—although in others perhaps less excellent. Moving to a new structure that brings another tranche of services to the fore and which contains a different participation network will be a challenge.

10:30

To answer Malcolm Chisholm’s question, I think that what will happen, practically, is that the existing structures will be mapped on to the new partnerships for a while and something will emerge. I know that the Scottish health council has designed an inclusive new model, but I think that, in the first instance, the public partnership forums will be mapped on to the new health and social care partnerships.

I go back to my first point—there will be a requirement on the new health boards to look at engagement. There are engagement guidelines; Pam Duncan referred to them. The Scottish Community Development Centre has developed national standards on community engagement, which are applicable here, but it is not a tidy world. Over the next year and a half, work will have to be done to build new participation methods. As I said earlier, in the first two years there will be a focus on building something new and much more inclusive.

Pam Duncan: In the same way that we would not ask a men’s organisation to represent women, we believe that it is fundamental that disabled people’s organisations can represent disabled people. On that basis, we think that it is extremely important that their ability to engage with the structures that you have described or the third sector interface is strengthened because, in times such as these, it is difficult for organisations to grow their capacity to do that.

We believe that, by taking a social model approach to health and social care—as we do—disabled people’s organisations will be able to offer a broad view of the real impact that health and social care can have on people’s lives, the difference that it can make to their participation and the crucial role that it plays in relation to their human rights and their being equal in society. It is important that such a broad view is taken, particularly when we are looking at the preventative agenda, which, as well as being about treating conditions and providing care and support, is about enabling disabled people and other service users in health and social care to lead an ordinary life and to play their full part in the community. I think that DPOs have a unique lens through which to provide key invaluable information and engagement.

Malcolm Chisholm: Thank you—that is helpful.

I have one more question, which I think goes to the heart of the matter in a slightly different way. Ian Welsh said that one third of the health board budget would go into the health and social care integration arrangements, but he also said that there was a significant common thread between his evidence and that of the organisations that we heard from last week.

I do not know whether you followed last week’s proceedings, but I think that at least two out of the three organisations on the panel to which you refer were very concerned that minimal amounts of money would be put in by health and, possibly, local government, and they suggested that there should be more national direction on that. In fact, I think that at least one of them, if not two of them, suggested that budgets for the bodies should be set nationally. What do you think of that suggestion? If you do not support it, how can you ensure that the appropriate sum is put in, given that some people are concerned that the acute sector in health, for example, will put in very little?
Ian Welsh: I do not always agree with SCVO or CCPS. Sometimes, that is partly because I am still involved locally. The approach that is taken will vary. There is a tension between central direction and local control. MSPs will be more aware of that than any of us. My view is that health and social care budgets should be decided locally. As a former elected member, perhaps I would say that. There is also a tension to do with the extent to which acute care money is allocated to the budgets; the approach to that will vary across the board, too.

To put that in context, the bill is enabling legislation; it is a piece of partnership legislation. Therefore, the budgets that go in will depend on how good and trusting the local partnerships are. Already, the approaches vary. For example, at least one of the local authorities in Ayrshire is putting in some of its children’s services, while other authorities are not. I do not agree with my colleagues that it is all about packing in additional resources. It is about maximising the best outcomes for the local population.

Pam Duncan talked about unmet need. Sometimes, scant regard has been given to trying to meet population need in the localities. To me, that is an important part of the process. My son is disabled and I am a carer but, to be honest, my interaction with the health and social care systems is minimal. My son is 30 years old and he kind of strolls through without making an impact. For Ian Welsh, putting in some of its children’s services, while other authorities are not, I do not always agree with SCVO or CCPS. Sometimes, that is partly because I am still involved locally. The approach that is taken will vary. There is a tension between central direction and local control. MSPs will be more aware of that than any of us. My view is that health and social care budgets should be decided locally. As a former elected member, perhaps I would say that. There is also a tension to do with the extent to which acute care money is allocated to the budgets; the approach to that will vary across the board, too.

To put that in context, the bill is enabling legislation; it is a piece of partnership legislation. Therefore, the budgets that go in will depend on how good and trusting the local partnerships are. Already, the approaches vary. For example, at least one of the local authorities in Ayrshire is putting in some of its children’s services, while other authorities are not. I do not agree with my colleagues that it is all about packing in additional resources. It is about maximising the best outcomes for the local population.

Pam Duncan talked about unmet need. Sometimes, scant regard has been given to trying to meet population need in the localities. To me, that is an important part of the process. My son is disabled and I am a carer but, to be honest, my interaction with the health and social care systems is minimal. My son is 30 years old and he kind of strolls through without making an impact or getting any significant support in any shape or form. So a local response to circumstances is needed.

It is not all about resources, but it is about partnership. Another dimension that we have not even talked about is the issue of locality planning and how general practitioners face their communities. I see that John Gillies, who is on the next panel, is sitting behind me in the public gallery. Fantastic work is being done in localities to link the community to GP practices in a much more significant way, and that needs to be part of the landscape. My view is that it ain’t all about money, but it is all about how people work in partnership locally.

Pam Duncan: I agree that it is about using resources differently as well as how we address some of the unmet need. That might involve new resource, or it might be solely about how we use the existing resource differently. Ian Welsh’s point about variability in local partnerships’ approach takes me back to my earlier point about having the principle of portability in the bill. Although variability and local decision making are important—I could not possibly sit here today and advocate, as I have done, that disabled people need to be so deeply involved without recognising that decisions need to be made at community level—that should never come face to face with someone’s human rights.

For example, the system should not make it almost impossible for someone to move from one area to another or, as could end up being the case, from one street to another. That is why I again make the point strongly that the bill should include a provision on portability so that end users do not experience significant disadvantage if they choose to move around for education or employment or just because they fancy a different area. It is important to put that in the bill, particularly given the issues that Ian Welsh has described.

Claire Cairns: When we look at the issue, it is useful to look at the initiative on reshaping care for older people—obviously, it is a front-runner on integration—and some of the lessons that we can learn from the change fund and the move towards joint strategic commissioning. In some ways, decisions were a bit easier with the change fund, because it was additional money and it was all about pilots to start to deliver some of the principles behind integration and preventative services. However, when we start joint strategic commissioning, we are asking people to be incredibly brave, because we are asking them to look at money in a different way and to start to consider where to disinvest in services. Currently, partnerships really struggle with that.

I was involved with a joint improvement team in a review of joint strategic commissioning plans to see where carers fitted in. Across the board, the review found that the plans could have been braver on disinvestment. There was little mention of that and very few solutions had been suggested on shifting money from acute services into the community. That is where areas will struggle. Decisions will have to be made on how directive to be and on whether to say how much money needs to go into the pot or whether decisions can be made locally. From the experience of the reshaping care for older people initiative, it seems that there will definitely need to be encouragement for partnerships to be brave. It is difficult for them, because the decisions have to go through local authority decision-making processes that involve accountability to councillors and so on. Those things quite often hold people back from making brave decisions.

Karen Hamilton: I was going to talk about the different structures and accountability processes, but I will go back briefly to where PPFs fit in. Ian Welsh mentioned that, for a couple of years or so, they would be mapped into the new system. A watch point is that we do not lose that golden opportunity to improve them, make changes, make them more effective and broader, and so on. If we
do not do that in the early days, there is a danger that they will get lost and wither on the vine.

Some of the submissions mention guidelines, which are missing at the moment, as are overarching principles. Many things that we have talked about today could be fed into overall guidelines and principles, and I make a plea not to forget that as a principle in terms of public representation in the new bill.

Mark McDonald (Aberdeen Donside) (SNP): I note the comments about who should be around the table. The more people who come to the committee and say that they want a seat at the table, the more I think that some of those integration joint boards will need pretty big tables. However, I take on board the points that have been raised.

At our previous committee meeting, the representatives from the third sector were quite clear that they saw their role as being part of the strategic planning side of things and that they would take a step back when it came to the commissioning of services. Where do you see the organisations that are relevant to your interests fitting into their role if a seat around the table was to be afforded to them? Would they fit with the strategic planning, the commissioning, or both? How do you see that working?

Ian Welsh: I am not sure that Annie Gunner Logan would agree that CCPS, for example, would simply be involved in the strategic dimension and that it would then step back. A significant piece of work is being done by the joint strategic commissioning committee and I am sure that the evidence from that will be fed into the guidelines.

Beyond that, there is a tension between the definition of commissioning and the definition of procurement. For those of us who have been around quite a while, the move in the early 1990s—I cannot remember the date—to compulsory competitive tendering led to a public procurement regime. What happened then, certainly in social care, meant that much of the social value of procuring a service lost out to cost. I cannot speak for Pam Duncan but I speak for myself when I say that we ended up with the obscenity of e-auctions for domiciliary care, for example. Local authorities were constrained by that regime.

A much more sympathetic response to commissioning would be to design a service with service users and private sector and third sector organisations that have developed expertise in the work against a background of the public health requirements for a locality. A much more nuanced approach is coming. If we go back to local authorities or health boards now, we see people who procure services rather than people who commission services. Reshaping culture and values when we design services will involve bringing organisations in, rather than having them compete across a table.

Mark McDonald: I would be interested in hearing any other views before I ask the follow-up questions that arise from that.

10:45

Pam Duncan: We need to be clear that it is not just about saying, “We would like to have a seat around the table, too.” It is about understanding the value of listening and engaging with different people in order to get it right, which is really important. That is probably why everybody is saying that they want to be at the table. There is also a nervousness about who will represent people at the table and put their views across. It is not so much about the size of the table as about how representative the table is. We need to get the representation on the table right and convince local people—I mean communities as well as communities of interest such as the LGBT community and so on—that the mechanisms for engagement with that table are strong. It is less about the size of the table than about how we resource the representation around it.

Karen Hamilton: A third element, in addition to the planning and commissioning of care, is scrutiny. I think that that is what we are talking about. The people around the table do not need to be the planners or commissioners, but they certainly need to be the scrutineers who ensure that the services are being delivered effectively and economically. It is important that we recognise the scrutiny role of those around the table.

Mark McDonald: I come to this from a similar perspective to Ian Welsh’s in that I, too, am a parent carer and understand the interactions that take place. I have two follow-up questions. First, does the role that you envisage necessarily require a seat at the table? Is there another way in which the function that you seek can be carried out without there needing to be something in the bill about it? Reference has been made to having something enshrined in the guidance and the regulations.

Secondly, how would you ensure that, as you put it, the right organisation represents people? In my constituency, a range of organisations provide similar services in different localities. How can we ensure that we have the right voice at the table, so that people do not feel that they have been unnecessarily excluded?

Ian Welsh: In every health and social care partnership, there is a third sector interface that is charged, in part, with signing off the change fund,
for example. That would be the logical third sector representative.

A secondary issue that is implicit in your question concerns the cluster organisations that are out there. In my view—I am speaking from a practical point of view—every health and social care partnership should fund an engagement officer who sits within the third sector interface and is tasked with working with the partnership’s officers to ensure that there is coherent and consistent representation through the various working groups that are set up to look at services. The cost of that person’s salary and the on-costs would be, say, £50,000 out of a potential health and social care partnership budget of about £150 million. That would be one way of getting coherent and consistent activity. Pam Duncan and Claire Cairns may have another view, from a carer’s perspective.

Pam Duncan: At all the consultation events that we held, our members said consistently that they feel that they need to be represented around the table. That is partly a response to the historical oppression that disabled people have faced in society and a fear that—to use a phrase that I heard recently—if you are not at the table, you are on the menu. That may sound controversial and antagonistic, but I do not mean it to be.

It is important that disabled people who use the services on a daily basis are able to bring the unmitigated voice of that experience to the table. That is why I would advocate strongly for having disabled people’s organisations around the table. They are directly accountable to their members locally and can bring the unmitigated voice of experience to the table.

The fact that they are disabled people means that they have to navigate barriers and problems in society and find solutions on a daily basis. Health and social care partnerships should want to bring those factors on board, but not just to tick a box and say that they are including disabled people; they should embrace them so that they do exactly what the bill’s policy memorandum suggests in terms of health and social care integration.

Mark McDonald: On the second point that I raised, I am interested—

The Convener: Does Claire Cairns want to come in?

Claire Cairns: Yes. My point is similar to Pam Duncan’s. We have already referred to the focus groups and the consultation that we did with carers, so members will know that 100 per cent of carers felt that they should have a guaranteed place around the table. Richard Lyle referred to the number of yeses, and I want to clarify that on our carers message board we directly quoted their responses, and one person wrote eight yeses.

Carers felt that one of the potential negative impacts of integration was that they would lose some of what they have already gained in having a place around the table. Members might know that in 2011 carers were given a guaranteed place around the table with community health partnerships. If that does not happen when we move to integration, carers will see that as a massive step backwards.

The point about how to get the right person at the table is a good one. I have already said that carers cover so many different age groups and conditions that it is quite difficult to get one person to represent that range. There is already a very strong network of local care organisations, which I see as being very much the experts. It would not be too difficult for partnerships to go to their local care organisation and devolve that representative function to it. In terms of supporting representation, provided that they were resourced to do it, local care organisations would do that work very well.

Mark McDonald: I think that that deals with my second point.

I have a final question. We have had evidence from the Convention of Scottish Local Authorities on the bill’s scope and the potential for widening it in future. COSLA wants it to be very narrow and to deal with adult services only. That would mean that further legislation would be required if, for example, we wanted to roll out integration to children’s services. Obviously, most of your organisations deal not only with adults but with a range of individuals who come into contact with social care and health services. What are your views about the ability of ministers to widen the scope of the bill, should the approach prove successful? My view is that if we simply say that widening the scope to children’s services can be done locally but that we will not have a wider roll-out, we will end up in the same situation. In other words, we have a couple of areas that serve as pioneers and just crack on, but there are other areas for which legislation is absolutely necessary to get the change that we want to see. I am interested in your views on future widening of the bill’s scope.

Ian Welsh: Our organisation has not taken a view on that. Personall y, I do not support COSLA’s view on the issue, but that would not surprise COSLA. I think that when the 32 health and social care partnerships shape up, there will be an interesting mix, and not all of them will opt simply to have older people’s services. There will be other services in the mix, such as community health and mental health teams. In fact, there will be the full panoply of services. The notion that in
the near future we would return to produce additional legislation would be mind blowing for us.

We are much more interested in seeing the health and social care partnerships as a conduit for change locally. There is a very significant agenda for change to be delivered. The legislative context will allow the proposal for integration to be delivered, and I think that that is enough to be going on with.

Claire Cairns talked about the change fund being new money, but health boards would say that it was not new money but their money. However, it was money directed at the point of change, and my understanding is that at the end of the change fund there will be a similar, potentially enhanced, sum of money that can be utilised for health and social care innovation. I commend that approach. For health and social care partnerships that would be an opportunity to do things differently. You do not need a lot of discretionary money to do things differently at the local level, but you do need some money. To tie that into your question, it would also provide an opportunity to test new approaches and new client groups within health and social care partnerships. I disagree with COSLA on the issue.

Karen Hamilton: We have to allow for the legislation covering all age groups, not least because of the point of transition for younger people—certainly younger people with disabilities—moving through services. The system is already complicated enough; if someone had to transfer from one structure to another, it would become even more so. That is an absolutely critical point.

The local authorities and the health boards need to be able to make those decisions themselves. I know that some already have. I believe that Highland has gone down that route, with the lead agency model. We are already there in some ways so I think that we need to stick with that.

Aileen McLeod (South Scotland) (SNP): I want to pick up on some of the points that Ian Welsh made around locality planning. This comes from an issue that arose at last week’s evidence session with a number of organisations, including SCVO, when we discussed the capacity implications for the third and independent sectors for which the operating environment remains quite challenging. How do we build capacity in communities when more acute care is coming back into our communities? Obviously, there is a key role to be played by our GPs, who are central to much of the roll-out of integration. I am conscious that we will take evidence from Dr John Gillies, from the Royal College of General Practitioners, in the next panel.

What do you think is the best way for us to build that capacity in communities? Proposals came from the general practitioners at the deep end group in March, which talked about health hubs built around GP services involving, integrating and innovating in relation to progressive health and social care initiatives and approaches to the health and social care partnerships.

Ian Welsh: That is a great question. My organisation and the RCGP—I am sure that John Gillies will say more about this—are working on a good project called improving links in primary care, which involves working with GPs to build greater cohesion and provide more information in localities. My organisation is about to work with the deep end group on a related Scottish Government-funded project that will try to establish the efficacy of link workers in deprived areas working around a series of deep end practices. The long-term objective is to prevent people from requiring medical services. If the evidence shapes up after a couple of years, I believe that that will be a practical model that could be implemented in all deep end practice areas.

The wider question of building capacity is challenging. There is already a programme of building capacity through the joint improvement team. I do not know whether the committee will take evidence from the joint improvement team, which is a Scottish Government vehicle that delivers fantastic work in localities, building capacity around co-production, for which it has a very good toolkit. The programme will build an improvement network in the third sector interfaces. In effect, such capacity building is a skill-up exercise. However, in my view the third sector interfaces, which have a change fund sign-off function, really require a bit of additional human resource investment to allow them to step up to the plate.

11:00

As a national resource, the change fund support team, which, as Aileen McLeod will know, is currently hosted by the alliance, will be given a bit of additional resource so that it can become a health and social care support team. That team, which is governed by the third sector but involves the Scottish Government and the joint improvement team, will also help to skill up the third sector interfaces. Therefore, there will be a bit of national support and a bit of other support—although a bit more is certainly needed—for the third sector interfaces.

However, there is a larger question about the extent to which DPOs and carer organisations are resourced to deal with the change. Claire Cairns represents a whole coalition of carers, but she is
only one person so she will not be able to attend
every health and social care partnership. There is
a requirement there, but that requirement is
quantifiable and realisable.

If I was speaking from a sectarian interest point
of view, I would say that the amount of money
required is infinitesimal compared with the £12
billion that sits in the statutory health board
budget. Now, I do not have the political capital or
authority to be able to cull resource from that, but I
suggest that such practical requirements need to
be addressed. The financial memorandum to the
bill provides some scope to build a bit of support
there. For example, the alliance will start to build a
small—but we hope influential—initiative called the
health and social care academy, and SCVO will be
undertaking some pathfinder projects along with
Voluntary Action Scotland. However, we could do
with more money to tool up the interfaces so that
they are prepared for health and social care
integration locally.

Claire Cairns: The change fund already
provides some good examples of capacity
building. In a few areas in Scotland, it has funded
the development of carer forums and the training
and support of carer representatives. That has
been very successful in improving carer
engagement and making that more meaningful,
so that carers feel supported and that they are being
listened to. Those developments have made the
experience a lot more valuable for carers and
have ensured that carers are connected to other
carers in the local area. That could easily be
replicated across Scotland.

The change fund has also funded some really
good examples of increasing the capacity of carer
organisations to provide support to carers. Over
the years, with more older people and more
carers, more people are coming forward who need
support—that has been an issue for quite a long
time. For example, in Stirling funding has been
provided for two hospital discharge workers. They
are based in the hospital setting and identify
carers at an early stage and help them with the
transition back into the home to ensure that the
carer’s needs are considered alongside those of
the person being cared for. There is good
evidence to demonstrate that such interventions,
as a good example of joint working, help to avoid
future crises for carers and future readmission to
hospital.

Another example is in West Lothian, where
there is an older carers worker who works closely
with the local authority’s reablement team.
Whenever a reablement package is being
arranged for someone, the older carers worker
ensures that the carer is trained alongside that.
Reablement is excellent—as I am sure you will
know, it can help people to regain their
independence—but if the carer is not also trained
and supported, it is very easy for people to go
back to their old ways of having things done for
them.

Such things increase the capacity both of carers
to engage and of local carer organisations to
provide the support that is needed to assist
integration.

Aileen McLeod: Thank you. That is very useful.

The Convener: There are a few issues that we
have not covered yet. One is charging and the
concern that has been expressed about cost
creep. We know from previous evidence how
emotive that issue can be. Perhaps we can roll
that up with the broader outcomes, the inspection
and complaints procedures and how people will be
able to exercise the rights that we spoke about
earlier. I ask for some brief responses on those
issues, as we have written evidence from you as
well.

Pam Duncan: I have said this to the committee
in the past, so it will come as no surprise to you to
hear me say that disabled people and their
organisations believe that to charge people for a
service such as community care, which is so
crucial to their independence and their human
rights, is unfair and unparalleled. We do not
charge anyone else for the privilege of enjoying
their human rights in the same sense.

We state in our written submission that we
believe that the issue needs to be addressed in
the bill, not least because of that unfairness, but
also because of the bureaucracy and the
difficulties around how we are going to tell which
parts of the budget are chargeable and which are
not. None of us wants people to start charging for
services that people would ordinarily have got
from the NHS for free; equally, we do not want
people to continue to have to pay for social care
when, without it, they could not possibly participate
in society.

We have done some work on the matter and we
believe that the cost is approximately £50 million
across Scotland. That is the amount that is
collected in charges for social care. In the grand
scheme of things, that is not a huge amount of
money, but the charges can represent up to 100
per cent of a disabled person’s income. When we
look at it from that point of view and consider that
many of the people who pay the charges live in
poverty, it seems unfair. I believe that we need to
address that as a society.

On complaints and reviews, we were surprised
to see that the bill is quite silent on complaints
processes, particularly given that there are
different processes for health complaints and
social care complaints. We note that the duties in
the bill follow the delegated function. In a situation
where a health board delegates a function to a local authority, where would someone complain to and which process would they use? We accept the Scottish Public Services Ombudsman’s recommendation that the processes be aligned as closely as possible, but we would go slightly further—this might not surprise you—and suggest that there probably needs to be an independent mechanism for people to make complaints.

We have raised some concerns about the complexity of the system. This is not a slight on the ombudsman in any way, but the issues are so detailed that it will be extremely difficult to deal with them at a national level in the depth that is required. We recommend that there should be locally independent mechanisms, perhaps in the form of tribunals.

The Convener: Does anyone else want to comment?

Ian Welsh: That was a comprehensive response on the costs.

The Convener: I thought that it was pretty comprehensive, I must say.

Ian Welsh: Maybe I could just say a bit about the outcomes. Again, I congratulate the cabinet secretary and his team, as there has been a comprehensive and inclusive consultative process. There was a working group on outcomes, and I am pleased to see outcomes enshrined in the bill.

However, there is a larger issue. There is a shift towards trying to focus on personal outcomes for individuals—again, that is part of the culture change. My son will be quite different from another young man who has cerebral palsy, and that young man will be different from another young man who has Down’s syndrome, so personal outcomes are really important. We have a series of reports coming out called “We’ve got to talk about outcomes”, which I think will be informative for the committee, and I will be happy to furnish you with them.

Finally, Pam Duncan talked about human rights, and we have a document called “Being Human”, which will give the committee some more background on the issues. It describes the rights-based approach to health and social care integration.

The Convener: Thanks, Ian. We look forward to receiving that additional information.

We appreciate both your written evidence and your oral evidence today. Thank you all very much for your attendance.

I suspend the meeting to allow us to set up for the round table.
panellists’ contributions will take priority over those of politicians. We will try to listen.

Bob Doris: Listening is not something that politicians are always good at doing. I will try to keep my question as brief as possible. The round-table introduction is probably a good starting point, because the question is about stakeholder involvement and which stakeholders—all the witnesses are stakeholders—should be specified in the bill.

We would have to build a new, larger committee table if we were to involve all the stakeholders who would wish to have a formal input into health and social care integration. How do we ensure that all relevant stakeholders have an input into that integration? To what degree does that have to be specified in the bill?

I am aware that there is a nervousness around the fact that, as soon as we start to specify stakeholders in the bill, if an organisation is not represented, we get a two-tier system in stakeholders. I am also aware of how unwieldy it could be, depending on the strategic implementation.

What are the witnesses’ views—not only those of their organisations—on stakeholder involvement? What should be in the bill? How do we ensure that it is dynamic and focused but not unwieldy? How do we ensure that it is important?

Rachel Cackett: One of the important points that we must take into account to begin with is what the involvement is for. Many people have a justifiable desire and need to be around the table in different ways.

One issue for us—which will not surprise you, given the RCN’s submission—is that, although the policy memorandum to the bill is very clear on what the bill is trying to achieve, that is not always translated into the wording of what is on the face of the bill. I know that our organisation is not alone in saying that.

One of the key issues for us is the fact that the bill does not address what we think should be fundamental to any care service: the issues of quality and safety. With those issues missing from the principles of the bill, other issues that follow on from them are also therefore missing. Those issues include the really important issue of how we give assurance—to you as MSPs, to the governance committees of the different organisations, to local councillors and to the general public—that the services that we are commissioning and the services that are being delivered in an integrated way are genuinely safe.

I was very interested in the discussions in your first evidence session this morning because of the issue around the acute sector that came up. I have been working on these issues for the past 18 months to two years, and I have noticed how often the issue of the acute sector becomes about acute sector moneys rather than the quality of care that is delivered—care that may now be in the community rather than in the acute sector.

On the basis of that, it will probably not surprise you that, speaking from the point of view of nurses as part of the clinician community, I think that we have a fundamental role in ensuring and giving assurance that the quality and safety of care that is delivered is absolutely top notch.

It strikes me as somewhat surprising, given that we are debating the bill post the Francis report, that that point is not clearer on the face of the bill. There should be ways of writing it in. I think that there are many ways that we can do it, but there should be ways of ensuring that the primary legislation makes that quality and safety of care a key point and that those who are responsible for assuring it at a local level—whether that is the director of social work or the director of nursing—have a clear route to give that assurance to those who are governing.

Dave Watson: Bob Doris’s question raises the issue of governance of the joint bodies, and I think that there is some confusion, in particular with regard to the body corporate option.

From our perspective, the staffing governance is particularly unclear. As you will know, in the health service we have a strong, internationally renowned staff governance framework. It is slightly different in local government, but nonetheless there are statutory and non-statutory provisions there. Our concern is that there are a lot of big decisions that the bodies could make if the budgets are allocated to them and that those decisions will impact not just them—because in most cases, they will not be the employer—but other employers. The staff governance arrangements around that seem to be somewhat muddled and confused.

An example of the issue would be the mess that we got into with the Police and Fire Reform (Scotland) Bill. We pointed out when the bill was going through the Parliament that staffing governance was not clear, and the Justice Committee spent six months dragging in the players to try to sort it out afterwards, so there is a lesson to be learned there.

The risk of leaving staffing governance muddled is that, as the Convention of Scottish Local Authorities and others have rightly pointed out, the bill has a massive barrage of powers for ministers. Reserved powers are fine—you would expect that in the bill—but the powers of direction are immense. In my experience, they are the most immense that I have seen at any time.
The risk is that, if the bill does not deliver the outcomes that ministers want, the approach might lead to top-down integration models. As we have seen from the work that the Scottish Parliament information centre has done and the work that the Association of Directors of Social Work has done on the international studies, top-down integration simply does not work.

Gabrielle Stewart: The Allied Health Professions Federation Scotland represents 12 professional groups and we are about the same size as the number of medics within Scotland. The previous witnesses talked about inclusion within the bill team when the bill was being created—we have not been included, but we definitely want a seat at the table. We are involved at the rock face, getting people home or helping them to remain in the community, and we think that, if we are not included within the decision-making joint boards, there will be a real loss of experience and of the positive contributions that allied health professionals can make.

Dr Gillies: The issue of stakeholders is difficult, but I tend to agree with Rachel Cackett that being a stakeholder depends on what you bring to the table.

What we do not want to do is embark on considerable legislation with all the costs and upheaval that that will entail and end up with something not very different from what we have at the moment. Many of us are concerned about that and, in my view and the RCGP’s view, we need to ensure that by April 2015 we have a system that has the capacity to innovate, do things differently, and release the talents and capabilities of all the professionals and service users who are stakeholders.

We feel that there should be general practice representation on the partnership boards because we are responsible for making often crucial decisions on whether someone stays at home or in a homely setting or goes into hospital. Given that we make such high-impact decisions with regard to the system’s operation, we should be able to bring our views to the table.

I hope that I will have an opportunity to talk about how locality planning will function in the new system because I think that it is a really crucial element of the bill. The bill needs to make a difference to what happens to individuals, whether one calls them clients, patients or service users. In that respect, what happens at locality level is probably as important as what happens at partnership level, and general practitioners—and, indeed, social workers, AHPs and community nurses—could play a major role in shaping local services.

I will have more to say on that matter, but I think that that will do for now.

Dr McAlpine: As an acute clinician, I think that I have a reasonable awareness of the issues on the acute side of things. I was therefore slightly concerned about one or two comments in the previous evidence session.

It was suggested, for example, that the acute sector could be a source of money that could be moved into the community. We must be aware that older people in particular are very big users of acute care, and in this discussion we should remember that an unplanned admission is not necessarily a bad thing. The term “avoidable” needs to come in somewhere. There is a lot of discussion about the cost of unplanned admissions, but many of the people involved have had acute strokes, heart attacks or pneumonia. Those things will continue to happen and are expensive, because hospital care itself is expensive.

I think that geriatricians welcome integration, but we need to look at smoother pathways. Older people are concerned about the extent to which they have to hang about for treatment and the fact that they do not know how to get things, and we should look at how systems can be made better. The role of AHPs is absolutely key to that.

As for stakeholders, if you asking about who should be at the table and why they are there, I have to say that health and social care are both a bit bedevilled by lobbying groups, who are, of course, there for a purpose. We need to examine how we make the care of older people and indeed all patient groups most efficient and effective, because that is what consumers are looking for.

Ruth Stark: I want to approach the question by considering the actual interface between health and social care. For the social worker getting involved in integration, it is all about working with people who are facing change in their lives, and that should be our starting point when we are trying to measure where we are going with this legislation.

Social workers are interested in three issues—three Ps. The first is preventing people from going into acute services. We are also interested in social protection, which is, after all, a key part of our role, and I have consistently made it clear that one of the bill’s unintended consequences might be its effect on our responsibilities in that respect. I am thinking, for example, of child protection, of children whose parents are detained under the Mental Health (Care and Treatment) (Scotland) Act 2003, of human rights issues for those so detained, such as their right to live in the community, and so on. The third P that I am concerned about is participation. The people in the
driving seat must be those who are using our services.

11:30

I was very struck by recent evidence from the Mental Welfare Commission for Scotland about the development of the Edinburgh crisis centre, which has helped people subject to the necessary intervention of a compulsory treatment order to stay in the community. That has resulted in fewer hospital admissions in the Edinburgh area, as people are now being treated in the community. The centre is a really good example of how people are addressing the issues of prevention, protection and participation.

The question is whether the stakeholder body that you are asking about will address such issues. The important point that emerged from the evidence from the previous panel of service users is that they need to be in the driving seat with regard to what is happening to them. Anything that happens in our services must feed into that message.

Dr Taylor: Before I answer the question, I should point out that I am representing mental health services this morning.

The health and social care partnership board must represent the partnership, and we need corporate governance and a clear understanding that the responsibility of every board member is to represent everyone, not just special interest groups. That is what I expect from health boards, and I assume that the same will apply to local authorities.

There is a need for wider consultation of stakeholders, because we need to involve everyone. The groups in question cover a wide range of people; I know, for example, that my local patient and service user group would like to be represented on each of the health and social care partnerships. We certainly need mechanisms to allow that to happen.

Mental health groups are concerned that they will not be represented because the fact is that not everyone can be represented. However, if your group is not represented, it will become non-functional. I have attended meetings with large groups comprising chiropodists, podiatrists, dentists, mental health professionals and people involved in older people's services. The problem is that things do not function if too many people are present, but I think that those are practical organisational issues that will be sorted out at a more local level.

Bob Doris: I just have another brief question, convener, because I know that we have a lot to get through.

I am struck by the fact that most of the witnesses focused not on structures but on how their own stakeholder group can be actively involved in improving and changing services. Interestingly, Dr Gillies suggested that most stakeholders are interested in locality planning and Dr Taylor mentioned the need to distinguish between the strategic board's corporate governance and the involvement of interest groups in locality planning.

Do the witnesses think that the majority of stakeholder involvement should be focused at a local level and that we should get locality planning correct and then signed off by the strategic board? Going round all the witnesses again will be time-consuming, which perhaps backs up the point about whether a strategic board can comprise everyone and still achieve focused decision making. Is locality planning the issue for most stakeholders?

The Convener: You have asked the question, Bob, so we will just have to take a risk about who comes in. Rachel Cackett and Dr Gillies have already made bids.

Rachel Cackett: Locality planning is a key issue, but the bill is fairly sketchy about it and at the moment we do not entirely understand how it will work in practice. We have been told that it is the way for professions to get involved, but we would disagree. Although it is very important that those with local knowledge on the ground—the service providers and those who are using the service—are engaged in development, we must understand how the process fits in with the joint strategic commissioning process.

Strategic commissioning is a powerful process that will involve making decisions about investment and disinvestment, and assurance will be needed that any care that is commissioned is safe and of good quality. The link from that to the governance boards and back up to the partner agencies will ensure, similarly, that we have good-quality care that is delivered by the right people in the right place in accordance with the needs that have been identified.

Locality planning is key, and especially important in ensuring that there is wide involvement, but if it becomes the only focus for involvement we will start to miss out on assurance mechanisms and the important strategic oversight of professionals and others in supporting the governance of the new bodies.

Dave Watson: We have argued in our submission and elsewhere that services should be designed from the bottom up in conjunction with users and staff, which was a key element of the Christie commission's report. It is not easy to put that into practice, and there is a tendency to look
for top-down solutions, which we would not support.

On locality planning, we need to see the detail. Part of the problem with locality planning in Scotland has often been that it has not been very local. In other words, there are genuine localities, but services have not drilled down to those levels, largely because local authorities and health boards are very large—there are those who argue that there should be fewer such bodies, but we are not among them; we have the largest such organisations in Europe.

I agree with Rachel Cackett. My concern is that, given the powers and the strategic role that the bill assigns to ministers, the scope of localities to design services could be prescribed by that top-down driver. We need to have a reasonable input into the strategic as well as the local side.

Dr Gillies: I would not disagree with anything that Rachel Cackett has said. We are talking about “and also” rather than “either/or”—of course, we will need some professional involvement at the quality assurance and strategic commissioning level. However, the things that will make a difference to individual patients and clients will happen in localities. We will need effective partnership and co-ordination between the professionals, the public and the service users at a locality level, and it is very important that the bill allows for the type of subsidiarity that will enable that to happen.

The Francis report in response to the Mid Staffordshire tragedy has been mentioned. Since the report’s publication, we have had two more interesting reviews from England: the Berwick report and Sir Bruce Keogh’s report on hospital services in England. What came through in both those reports was that quality and regulation is determined not only by structures but by the culture and working relationships on the ground.

Determining what happens and building good relationships at a locality level will be the deciding factor in whether or not the bill is a success. That means having the right sort of professional involvement—including from the groups that are represented round the table today—and some involvement with communities and the community planning process.

As Ian Welsh mentioned, we have models for engaging communities and providing access to local services—through the search engine for the access to local information to support self-management, or ALISS, project, for example—which could contribute to the process.

Dr McAlpine: I agree with what has been said. Our view is that there should be some sort of strategic overview and key goals. From a locality point of view, we must acknowledge that, even if we look only at the older population, some parts of Scotland have a very elderly population while others have a younger or a prematurely aged older population. In parts of Glasgow and in other areas of Scotland, locality planning is key to deciding what the particular local needs are for the population.

One thing that could be done is to look at what was funded through the change fund, which has been mentioned this morning. Most people would acknowledge that some of the things that were funded have worked extremely well, while others have worked less well, which has usually been associated with a reluctance to share things.

Our view is that the key to the integration will be trust. The people—service users, carers, professionals and so on—in the locality planning groups have to trust one another so that they are able to work together, reach an agreement and proceed on that basis.

Gabrielle Stewart: There needs to be a local and a strategic element for allied health professionals. Local planning is really important, but in order to have good strategies you need to understand the workforce. We now have one allied health professional director in each health board, and they will be a useful mechanism as there is one person for 12 professions.

We need to understand the potential of the workforce. We already work across health and social care, in housing and education, and with the third sector, so we have quite an integrated professional body that could really help to shift the balance.

Dr Taylor: To support what I said earlier, I answered the question about locality planning, but I took it for granted that we would have robust clinical governance structures that involve all clinicians. Those structures need to be widened to include particular local authority responsibilities, such as the governance of purchasing services and legislation at that level. The structures need to be expanded in order to develop a concept of care governance—that will be key. Any health board would expect that robust clinical governance structures would be developed for any service in which it is involved.

The Convener: I thank Gil Paterson for his patience.

Gil Paterson: My question is on the same theme, convener.

Dr John Taylor, in his first comments, came closest to saying who he thinks should not be on the joint boards. Almost every submission that we have had has mentioned that integration is not about bureaucracy or structures, yet we are
hearing that practically everyone wants to be on the joint board.

The health service is diverse and contains many functions, as is social work, which contains many different sectors. However, it appears that the board will consist of only two sectors, which are the two big vested-interest groups.

Since the private sector and the voluntary sector make up the third leg of the partnership, is there enough room on the board for even just one person to represent everyone else, as well as the two big vested interests that we are trying to bring together, in order to deliver better services?

Does anyone else have any opinion on who should not be on the board, rather than who should be on it?

The Convener: I do not know whether that is a fair question, but the witnesses can go ahead anyway. I see that Rhoda Grant wants to come in. Are you going to answer that question?

Rhoda Grant: No—I just wanted to add something. It is a good question, but do we need everybody on the board if we have the mechanisms right so that people are empowered to make decisions, right down to the service user at ground level? Is the issue who is on the board, or whether we have the structures right with regard to where the decisions that affect individuals are made?

The Convener: Does that bring us back to the comparison between the lead agency model and the body corporate model?

Dave Watson: The obvious answer to the question of who should not be on the board is, of course, “Everyone other than the people we want on the board.” That is a very easy judgment.

More seriously, though, Gil Paterson has made a fair point: there are an awful lot of diverse interests. The problem is partly down to the governance structure, if we go for the body corporate option. If we go for the lead authority model, the structures are already established—although they would perhaps need to be developed, as others have said.

The difficulty in the body corporate option is that putting in another element—whatever that might be; it could be any of the ones that we have argued for, or another—would upset the delicately planned corporate governance structure. Essentially, the model is aimed at providing a balance between health boards and local authorities, with an alternating chair and other such arrangements.

It is important that we get full user engagement. I have also argued that the staff who deliver the services have an important role in terms of influencing. My point is that we need to reach users, not the other delivery arms. Sometimes, there is confusion between those in the charitable sector who deliver services in a semicommercial way, and those who represent a user interest and have no commercial interest in delivery of services. We need to separate those two sides.

11:45

Gabrielle Stewart: If we want to change the culture, we need to change the people who are sitting around the table. If you simply bring together the people who have sat around the table in a council and the people who have sat around the table in a health board, you will not get effective change. We need to bring in allied health professionals, other professionals and users in order that different decisions can be made.

Dr McAlpine: I agree with that. As I said earlier, you have to think about what the people are there for. Historically, a lot of things have been done by lobbying groups, and you have ended up with dementia versus learning disability versus arthritis and so on. Some of that relates to finances and financial perceptions. There have to be on the boards people whose key remit is to work towards goals of integrating services, and who are not there with a particular representative-group hat on, and so are able to consult other parties and relevant people and bring those views back to the board. For example, you clearly could not have someone from every allied health profession, but you need someone who can bring back the views of people from the acute side, from primary care and so on. You want people who are there with a remit to communicate and to make joint decisions, with a clear idea of why the decisions are being made.

Rachel Cackett: In answering the question, I would come back to the first point that I made, which concerns the question of what it is that people are around the table to do. To pick up on Dr Taylor’s point around governance—or clinical governance, as we would have called it in the NHS—there is an important issue about how we can ensure that governance of our services is right from a care point of view.

We have an issue—I think that there are in the bill lots of such issues that we have not yet ironed out—around the fact that we are trying to bring together two quite different organisations. From a health point of view, we would, as a matter of course, have on every board a director of nursing who would have responsibility for the quality of care that is being delivered by that board; in that board, that is the ultimate assurance mechanism on quality of care. That is a standard element of the governance arrangements in the NHS, but that is not replicated in councils, which work on a very
different level and whose directors of social work do not have quite the same role as the directors of nursing in the NHS, because of the structures of local democracy.

The bill proposes, in the loosest sense, to bring together two mechanisms that have slightly different expectations of how we may facilitate governance. The director of social work and the chief social worker are clearly there to give advice to local councils, but they do not do so in quite the same way as the director of nursing would as an executive member of an NHS board. We have to grapple with what that means in the body corporate model, particularly when we are creating a new body, and we have to remember that, as the bill is written at the moment, the strategic plan of the body does not have to get sign-off from the parent bodies; it is signed off at that level, with a lot of responsibility given to that board to ensure that the services that it is designing and planning for the future are the right services and are fit for the local population.

The question that we should keep coming back to is this: why are people around the table? What is their function in the governance, in the body corporate model?

**Ruth Stark:** I want to return to the last point about governance and the point that Dave Watson introduced in relation to where the chief officer sits in the integrated model, and I want to remind people that the chief social work officer has specific statutory responsibilities that relate to people’s liberty, in terms of the powers around child protection, the detention of people under mental health legislation and the advice that is given to courts, in terms of criminal justice. There are some key issues there that are not the same as the health service responsibilities.

When I looked at the provisions in the bill about the person who will be the chief of the integrated body, I was left with a question—I do not know the answer—about who is chief of what and who is the chief when it comes to some of the other statutory responsibilities that fall to the social work profession, and how do they fit into the integrated plan? I envisage that there could, on some issues, be conflict between the chief of the integrated body and the chief social work officer’s responsibilities, and there could be conflict about the health elements, given the statutory responsibilities that certain people have in the NHS.

There is not clarity in the proposed governance structure and I cannot see that it takes us beyond principles that were outlined in the Social Work (Scotland) Act 1968, the children’s legislation, the Mental Health (Care and Treatment) (Scotland) Act 2003, the Adults with Incapacity (Scotland) Act 2000, and adult care and support legislation.

Those are all critical areas that involve social care and social work decisions. How are such decisions to be made under the proposed new legislation? How is the governance worked out? I see no clarity about that.

**Dr Gillies:** The background is important, and I have not heard the issue being raised. When we look at the evolution of the partnerships and the locality planning groups, we see that most people who work for our local authorities and health boards are employees. It is important to note that most general practitioners and some other community providers, including pharmacists, are contractors—we work for the national health service according to a contract, but we are not employees.

When one considers how GPs, pharmacists and other primary care contractors will contribute to the new arrangements, it is important to remember that they will need additional support. If a GP has to leave her practice for an afternoon to attend a group, she will have to be replaced by a locum. Such support arrangements need to be considered when we think about how we contribute to the future. Many of those issues are covered in the “All Hands On Deck” report, which was produced for the joint improvement team. If the system is to function, GPs will have to be supported to attend the meetings. It is important to include provision for that.

**The Convener:** Everybody around the table and all the evidence that we have received agrees that integration is a good idea. Politicians have tried to bring about integration in the past and have not been successful. Maybe we do not all agree about how, but we are all here and maybe there is frustration that we are here considering legislation to produce the general cultural change that has not happened so far.

I have a list of questions. Is legislation necessary? Why have we not made progress without it? How do we create the required cultural change? Is it, as we heard during the previous evidence session, about introducing more positive enforceable human rights for the clients who use the service in order to create a different sort of environment at corporate board level? Is it about incentivisation? Is it about a change in the GP contract? What practical things do we need to do to improve the experience, the quality and the outcome for people who are in receipt of care?

When we spoke to people yesterday in Inverness, they were very enthused about what they can do. They feel liberated by the Highland experience. However, we know from our visit that it is a long-term experience. The real hard choice may be about redesign—or it is, further down the line. What do we do? If we accept that things need
to change, and if legislation is not appropriate, how will we do it?

**Dr Gillies:** I will take up the challenge. First, in RCGP we believe that legislation is absolutely necessary, welcome and overdue. We have increased and appropriate expectations of health and social care because of the demographic shift to a more elderly population, the rise in complex conditions, multimorbidity among patients with long-term conditions and the deprivation in Scotland. We do not, however, have a health system or a social care system that is designed to address those problems. The bill should go some way towards addressing that.

As service users or patients, people do not distinguish between a health need and a social care need; that has been the case for many years. When I started in general practice, the difference between a health bath and a social care bath was carefully explained to me. I had thought it was just that an old body needed a bath.

All the things that the convener mentioned are absolutely necessary. For general practice, we need the continued development of a Scotland-focused contract to ensure that the skills and innovation of GPs can be used outside their practices and at the interfaces with secondary care and social care.

I keep talking about locality planning because I think that the culture change has to happen at local level. We cannot impose culture change from the top. That was attempted in England with the hospital service and it failed. The way forward is a combination of helpful changes at partnership level and strong localities to help to shape the service.

**Rachel Cackett:** The RCN is very clear that services should be seamless wherever you are. I agree that people who are in receipt of services do not perceive a difference between health and social care. Our difficulty at the moment is that our health and social care services are configured so differently, within such different paradigms, that to bring them together is a real challenge.

Do we need the bill? There are things in the bill, and particularly in the policy memorandum, that we support absolutely. There are things that need to change and supports need to be put in place. As I have said, the translation from the policy memorandum to the bill is not always as clear as it could be. Assuming that the bill progresses to stage 2, I am concerned that we may end up with an awful lot of amendments. I hope that that leaves us with a bill that has integrity.

There are many examples where things are already working very well. We have examples in nursing and social work teams of people working together very well on the ground. Our difficulty at the moment in taking that forward and expanding it is that quite often it needs time, and time is an expensive commodity in the public, third and private sectors.

Some years ago, at the start of the single outcome agreements, we held an event for lead nurses to talk about the impact of planning and single outcome agreements, and some of the things that nurses should be thinking about. I talked to two nurses; one was working in an area where integrated working was not going well, but the other said that it was working well where she was. Those two nurses were very close to each other geographically. Their different experiences came down to the amount of time that had been freed up in their teams to allow really simple things to happen—for example for a social worker and a district nurse to sit down and explain to each other the limits of practice within their regulatory bodies, and what they were allowed to do and not allowed to do to enable proper joint work.

I agree with John Gillies that some of the big cultural shifts will have to happen locally. However, that will mean ensuring, first of all, that there is enough resource—wherever someone works and whether or not they are an independent contractor—to allow the organisational development support and space for that to happen. We are, and we should be, asking our front-line staff to work very differently, so we should be committed to ensuring that they have the resources to do that.

In addition, we need to ensure that, all the way up the chain—to the very top—that push towards integrated working across what are, at the moment, two very different systems is seen and is valued at every level. That comes down to how, at national level, what goes through in the Public Bodies (Joint Working) (Scotland) Bill, what is being done on our community planning processes and what may be going through in the Children and Young People (Scotland) Bill in relation to planning for children, matches up and is as seamless at that level as we expect it to be when it comes to what our front-line practitioners do. Unless all that works together, nobody will make this work.

**Dave Watson:** At the risk of dismaying the convener even further, I have a slide that I use at conferences that lists all the initiatives and legislation on the issue over recent years. Believe me when I say that I had to use very small print to fit them all in. Over recent years, I reckon that, on average, there has been an initiative every 18 months. To be honest, if you talk to representatives of staff at the sharp end about the bill, as I have done, they will tell you that the view...
of front-line staff is, “Here we go again.” They think that it represents another moving around of the managerial deckchairs, and they question whether it will make a huge amount of difference. That is the honest appraisal of staff at the sharp end.

In some areas, the current structure works well, but in others it has broken down. I went to one local authority—which will remain nameless—where the relationship with the health board had broken down. The staff at the sharp end said that they just got on with it anyway; they muddled through. Although they felt that it would have been nice if the high heid yins could have sorted things out, they just got on with delivering the services. Sadly, that is the reality.

To be more helpful, if we look at international studies on the subject, of which there is a long list—I will not go through them; they are mentioned in our submission and in others—they are about getting the relationships right, respecting professional identity, aligning management and getting staff engagement right. Two themes come out of all that work. I have been involved in this area for more years than I care to remember and I was an expert adviser to the Christie commission, which looked at the issue extremely closely. The first thing that hit me was that, as John Gillies said, we need a bottom-up design. There is no top-down, one-size-fits-all solution.

Secondly, it is about people. If we read the bill, we find about one section on staff. The policy memorandum has half a paragraph on staff. The consultation paper, which ran to 64 pages, had half a page on staff. Therefore, my general message would be that, if we are to make integration work, we have to get the people bits right. Frankly, I think that there is too much focus on structures and budgets, and not enough on people.

Dr McAlpine: Similarly, I think that although geriatricians are keen to ensure that older people access acute care when they need it, we are aware that some people do not need to be in hospital, and we certainly feel that some people could leave hospital more promptly. We need to be aware that a big part of the work is to look at how we deal with the increasingly elderly population and the fact that we simply cannot afford to have all those people in hospital in the future. That is a big imperative.

There is sometimes a concern that it all comes down to the view that, given all the different organisations that are involved, if we can just get someone else to deal with the issue, we will shift it out of someone’s responsibility. We have to look at and learn from places such as Highland, which we talked about earlier, and Lothian, which has the comprehensive assessment service for frail older people. Funded through the change fund, it is very much about looking at all the different organisations in primary care, secondary care and social work, seeing how joint responsibility could be taken for improving services, and working together with everyone involved, with the common goal of improving the efficiency and effectiveness of services. There are places where that has worked, but we are probably not always good at spreading information around. It comes back to staff thinking, “That’s this week’s initiative. There’ll probably be another one along next week,” “More pilots than the RAF,” and so on. Unfortunately, those are the sort of comments that we hear from staff.

Malcolm Chisholm: I am prompted by Dave Watson’s comments in the last contribution but one, so I suppose that this question is for him, although it is a more general point. If the approach has to be bottom up and structural change is not the answer, is the bill necessary? More generally, what positive things can we get out of the bill? We have had some comments on that, but I am interested in the comments on quality in the RCN submission. Do the witnesses agree that we ought to build more into the bill explicitly on quality? Another point in the RCN submission that perhaps does not feature strongly in other submissions but which relates to other work that we are doing in the Parliament is about the extent to which it is right or wrong to separate this work from the work on children’s legislation. I am interested in that, too.

As I said, I was prompted by Dave Watson’s comments, so perhaps he can say whether the bill will contribute anything or whether it is just something that he and his members will have to put up with.

Dave Watson: I suspect that I veer towards the latter but, at the end of the day, it can be useful as long as it is enabling legislation that sets a framework. I am simply saying that there is not much in the bill that tackles what needs to be done to get health integration right. If the committee thinks that the legislation and all the words that you put in it will cut the ice, I am sorry to say that they probably will not. It is all the other things that we are talking about that will cut the ice.

I entirely agree with the point about quality. However, although we talk about healthcare integration, the way in which care is delivered in this country, particularly in the community, is a national disgrace. It is delivered by staff who are generally on the minimum wage—sometimes not even that—and certainly not the living wage. They are trekking around. The other day, at a meeting with a group of members, I asked them about the 15-minute care visit, and one of the staff said, “Fifteen minutes? That’s a luxury. You should see what I have to do on a day-to-day basis.”
That is because money is already tight in the area. We can write lovely phrases about quality in legislation—I am all for them and they are great—but we need to address the fact that, by 2030, we will have to find another £2.5 billion to meet the additional costs that are coming down the road when we do not meet the current costs. That has consequences for quality of care, which is the real disgrace. So my answer is this: by all means pass legislation and put warm words in it, but if you want to do something about the issue, you have to sort out issues such as the way in which care is delivered on the ground.

The Convener: We had an attempt at that in a previous committee report.

Dave Watson: Indeed you did.

Ruth Stark: I agree with Dave Watson, as that is what our members say, too, but I want to talk about something that has not yet been mentioned. There is an assumption that we are talking about people who are already engaged in health and social care services. One of our members’ tasks is to reach out to people who are not engaged with services, but those people do not seem to be factored in. We have articulate carers and service users, but an awful lot of people out there who are affecting the statistics on things such as poor health, particularly in places such as Glasgow, are not engaged. Our members reach out to those people, but somehow we seem to have factored them out of the discussion and out of the bill. I do not know how we engage with them, but if we are talking about stakeholders who need to be listened to, they are stakeholders who need to be listened to.

Gabrielle Stewart: I have a comment on the point about including allied health professionals—sorry, but I have lost my train of thought because I was busy listening to Ruth Stark. We want to keep people at home and save the Government money. We have quite a lot of evidence to back up the fact that including allied health professionals in services certainly creates a cost saving.

We have heard about the change funds and good examples. I have my thought back again—it was about being much more evidence based in deciding what we do. That involves looking at things that have worked well, working out what staff ratios made them work well and then sharing that good practice. That is fundamentally important. Although we welcome the bill, it does not talk about quality. The principles are good, but they are not expanded enough. For example, what does “wellbeing” mean? There are risks involved in the bill in that it is purely mechanistic and is not going to create the change that we want to happen.

The other issue was around staff saying, “Here we go again.” A lot of our staff report that they are already working in an integrated way but the systems stop them from working together. For example, they do not have computers that communicate with each other. We had the single shared assessment, but people could not share that assessment other than in written form. In this day and age, we need to talk about integration of the technologies that we use and look at the barriers that prevent communication on the ground.

The Convener: Rachel Cackett was name-checked a couple of times by Malcolm Chisholm.

Rachel Cackett: I was. It will not surprise him to hear that the RCN agrees with the RCN submission that quality should definitely be mentioned in the bill.

On the issues of what is not in the bill and information technology integration, we have talked to our members and there is a report on our website from a member conference that we ran at which IT came high up the list of priorities. We have a system in which front-line practitioners are being asked to share care but they cannot share a medical record. That does not make much sense. There are things that must happen outside the bill that we cannot expect legislation to deal with.

On what Dave Watson said about social care visits, we are interested in seeing quality mentioned in the bill. I hope that it would be more than warm words. It should certainly be about more than looking at the quality of healthcare. One of the reasons for including consideration of quality in the bill is that a consequence of the bill, if we take it to its logical conclusion, is that we will go down a line of commissioning that will almost certainly involve increased procurement. We have some questions about which bits of the budget will go down a line of procurement and which might not—I know that some of that has been dealt with through conversations on self-directed support. In the context of an increased culture of procurement, we should ensure that the quality of care is central to the contracts that will be held and delivered through the new commissioning routes. We should not contract on the basis of cost alone.

I know that we have to be pragmatic and realistic in the landscape that we are in, which is that the public sector does not have the money that it used to have even within what are seen to be protected NHS budgets. Not even the NHS has the money that it used to have because costs are spiralling. In that context, we must ensure that there is something to counterbalance what we see now, which is a tendency to contract on the basis of price. That is not good enough. We need to write something into the bill to deal with that.
The second issue is staffing. At the end of your first evidence session today, a question was asked about the capability of staff, which is central to what we are talking about. It is why we need to think differently about services and perhaps why we have not yet got there in the way that we would have liked. If we are talking about taking services from the health side out of the acute sector and locating them in the community, we need a community clinical staff group that is equipped with the right skills in the right place to deliver the required level of care. In some areas, initiatives such as virtual wards and hospital-at-home services are being developed and delivered across partnerships. Those are important early leaders in how we might go about delivering those services. However, the question is whether we are investing enough to ensure that we have the skills to deliver good-quality care in the community for those who need it, which will become ever more complex given the demography that we are dealing with. I suggest that we are not quite there yet.

The Convener: The financial memorandum to the bill cites a budget of £2 million per annum for health and social care IT.

Rachel Cackett: My understanding is that that is existing money. I know that work is going ahead to look at coming up with an integrated IT strategy by 2014. That is just one year before the process is due to go live. I wait with bated breath to see whether that is enough, given the problems that our members tell us that they see on the ground.

12:15

The Convener: I asked the question in the knowledge that the money is never enough.

Dr Taylor: I go back to the original question, on whether legislation is required. In respect of our members, surprisingly few, if any, psychiatrists said that legislation was not required, partly because I think that it was in answer to the question whether integration was a good idea, and they generally felt that it was.

In many ways, the history of mental health since the 1960s has been about closing large psychiatric hospitals, moving services into the community, and developing community mental health teams, with social workers as core members of those teams as often as not. The best examples of mental health work in Scotland have already gone a long way down that route to achieve what people are trying to achieve in mental health. Obviously, there are variations in different areas.

I suppose that the main concern has been around whether there will be disintegration, and one issue is the number of local authorities and health boards. Is 32 the right number? Is it too large or too small? The number probably matters less than the fact that there are different numbers of health boards and local authorities. We want coherence. Will there be different local authority and health and social care partnerships within the health board area developing different services, or will there be cohesion?

The Christie report often talked about different local authorities working in partnership over areas. An opportunity has been missed to encourage partnership working. It is about having an agreed strategy and agreed coherence of systems. Local authorities already commission services—certainly out-of-hours services—across several health board areas. We have heard other examples, and that is generally considered to be a good idea. A lot of what happens in mental health happens out of hours, so services need to be commissioned over larger areas, and certainly commissioning in individual local authority areas would often not be sufficient. Local authorities will often commission even their own mental health officer services across several local authorities.

Dr Gillies: We made the same point about the need for IT systems that share information across boundaries. As the convener said, there is never enough money for IT. The NHS is famous for throwing money away on IT—certainly in NHS England—but we hope that the bill will be a driver to push that process forward.

Dave Watson and Rachel Cackett brought up the issue of capacity. Last night, I spoke to a GP in Leith who had been on call during the day on Friday. She had had more than 60 patient contacts on the phone, in home visits and in surgery, and she felt that that was possibly beyond the limit of what could be safely dealt with during the day. That was in a fully staffed surgery in Leith.

If we are talking about doing more in the community and adding responsibilities to those of clinicians, doctors and nurses in the community, that will have to be carefully thought through if it is to work. There would be no point in saying that we need to look after more people in the community without having the clinical capacity—I think that I would include AHPs in that—to deal with the resulting workload. Innovative ways of working, including virtual wards, could be used to develop capacity, but we in general practice certainly feel that there is a need to increase the number of GPs to deal with demographic change, and integration will play a part in that.

The Convener: I want to pick up on points that Rachel Cackett made about quality and the impact of commissioning and procurement on that. I am thinking back to our report on elderly care and the national care standards, which are now more than 10 or 12 years old. I think that the Scottish Government accepted that a review was
necessary, on the committee’s recommendation. Is anybody aware of what is happening with that review?

Rachel Cackett: My understanding is that we are now waiting until early next year for the review to begin. I think that work has started and there have been a few public participation and clinician participation events around Scotland.

I agree with where I think your question comes from. If we are going to have a lot of local variation, and we are all talking about the importance of the changes being very much locally led, it should still mean that wherever someone is in Scotland, they should be assured of a national standard of care, even if the way in which those standards are delivered locally is very different. Like you, convener, we are still waiting for the care standards to be updated and made relevant to the situation in which we are all working and receiving services. We should also remember that those care standards, which are setting specific at the moment, do not necessarily cover all the areas of the journey that someone might take from being at home with a low level of services to being in hospital with high levels of acute service.

I would be very keen to see, as I understood we would, the two things happen in parallel. We know that the bill says that the integration plans and the strategic plans must have regard to the outcomes and the principles, but perhaps there is also an argument for them to have regard to care standards as set by the Scottish Government.

The Convener: Does anyone else have a view on that? Is there support for that view?

Dave Watson: Absolutely, but we did have a review of the social care procurement guidance and the rest of it and, frankly, it had no impact at all. You can ask our members in the voluntary sector and even those in the private sector and they will all say exactly the same. Essentially, there is a race to the bottom in that area. Standards are not the issue; it is about how the service can be delivered at the cheapest price.

Gabrielle Stewart: The AHPFS is developing quality service values for all our staff; they should be introduced in the next couple of weeks or so.

Ruth Stark: It is all very well to talk about the standards that are set, but there is the issue of the inspection regimes that are in place to measure the quality of care. They fall very short of doing the task that they are empowered to do. That is partly because authorities and workplaces do not want their dirty linen washed in public. Getting to the root of what some of the issues are in care inspections is a very complex task and it is not sufficiently resourced, or some of the methods are not getting to the issues, and that can lead to unsafe practice.

There are also some issues that my association has tried to take up with the Care Inspectorate and others about employers’ responsibilities in the area of providing high or competent standards of care. We have not yet got that culture right in terms of how we measure standards. We can rewrite the care standards but, if we do not somehow empower the standards that are put into practice, we will have another task to do. That still has to be addressed.

The Convener: The issues about the inspection regime have most recently been in acute settings and residential homes. The committee has had discussions about what will happen when we move to more care being delivered across the community. If we face a big challenge now in hospitals and residential settings, the challenge in the community will be really significant.

Ruth Stark: But the real judges of the quality of care are the people who use the services. How are we listening to them? There is a big issue about how easy it is for people who use services to make complaints or observations to the people who are charged with carrying out the inspections. That level of communication takes us back to the Christie report and to what happens on the ground and how people feel empowered to communicate with one another about the quality of care.

If that does not happen at ground level, we will continue to have incidents in which people are not well looked after. There is a real issue about how to empower people to communicate at that level. You can set standards and goals, but if you do not listen to what happens on the ground, you will not achieve anything.

Bob Doris: I have listened carefully to various things, including the point about the need to get the IT right. I still have the scars from two committees in relation to the IT for waiting lists and the TrakCare system in greater Glasgow in particular.

Although this is not a commissioning bill, commissioning could play a greater role in it, and I have listened carefully to some of the concerns about commissioning.

The key point about the bill is that it aims to compel local authorities and health boards where integration has not happened. That is probably why, for some people round this table, it is a bit sparse because it is almost a bill to compel integration in areas where it has not happened, rather than a bill to dictate what that will look like. I note, however, that COSLA thinks that there is too much in the bill already and that it would like us to strip some of it away. It is important to mention that.
Mr Watson said something that I thought was quite positive. [Laughter.] I will not say that it surprised me.

**Dave Watson:** I like to surprise you.

**Bob Doris:** That is for sure.

You said that there are examples in local areas of people just getting on with it and that there is good practice. This afternoon in the Parliament, we will debate “The keys to life”, the learning disability strategy, which is all about health and social care. This afternoon is the time to debate that. In that debate, we might also mention the situation that has arisen in Glasgow because staff or service users have not necessarily been included in service redesign. I will let that sit, but it is an example of another area in which people could just get on with closer health and social care integration. Much of the focus has been on adults, elderly services and children’s services, but are there other examples of where you would like local authorities and health boards—with the stakeholders of course—to just get on with it?

**Dave Watson:** Given our difficulties with the bill, I would be wary of leaping into new areas before we have sorted the current ones. I find that I agree with the COSLA submission more often than is probably good for my career. COSLA is right about many of those issues.

The example to which I alluded earlier was, interestingly, in learning disability. When a local authority and health board in an area not a million miles away from yours, Mr Doris, fell out and that was all over the newspapers, I spoke to one of the learning disability teams. I asked whether there was a problem, but they said no and that they just get on with it and muddle through. My point is that staff should not have to get on with it and muddle through. It is possible to put frameworks in place. It is a question of getting the balance right.

Where we can do something useful, I agree that it should be bottom up. I have said several times that I agree with COSLA. The problem with compelling is what you compel. The way to deal with the issue is certainly not for a person in Edinburgh to tell everybody what to do. That is where I agree with COSLA in relation to the powers, and we made a similar point in our written evidence. You can help from the centre with the frameworks. We have talked about that in relation to care frameworks and standards and, as we said in our submission, staffing frameworks.

All too often, people in this room, in particular those of us who have a trade union function, spend their time reinventing the wheel with this type of public service reform, over staff transfers, pensions and procedures. That might seem to be boring and mundane, but it is the stuff that causes disputes and difficulties at local level. I hope that you will take from our evidence on this point that we have set out what could be a useful national staffing framework that then educates local staffing frameworks and which stops us reinventing the wheel on some issues. It is not about deciding from the centre, but it is about setting out some common grounds.

As a trade union lawyer, I can see dozens of potential legal difficulties with the bill as it stands in terms of staffing issues. For example, when a hospital closes as a result of a budget change, the question will be who made that decision. Was it the health board or was it the third party? Have we worked out how staff will be seconded? Have we sorted out the issues of staff on different terms and conditions? The answer is no. Such matters are mundane, but they are absolutely key to getting better integration at local level.

**12:30**

**The Convener:** When we were in Highland yesterday, I raised the industrial relations problem and the risk, which COSLA and others have referred to, of underwriting equal pay claims and everything else. We spoke to health people but, perhaps naively, they discounted that level of risk, as the practice in Highland has been free from that. Your experience might be different, but it is important to put those views in Highland on the record.

**Dave Watson:** Sure, but I urge caution for two reasons. First, Highland has not chosen the body corporate model, but most of the legal difficulties that I am highlighting come as a result of the unknown body corporate model. Secondly, in Highland, the difficulties of a straight staff transfer situation and having one clear employer have not all been resolved and there will continue to be difficulties. We had to reinvent the wheel through countless hours of work in Highland just to get things to work, so it was not an easy process. All I am asking is whether we want to reinvent that 32 times in the next few years.

**The Convener:** I appreciate that.

**Dave Watson:** In my view, there is no need to do that. We are a small enough country to be able to do that as part of a national framework.

**The Convener:** You will not want to agree with COSLA again, but it questioned whether the Scottish Government would underwrite any equal pay claims. Do you see that as a significant risk?

**Dave Watson:** Equal pay is certainly one of the risks in a range that includes the equality duty and equality impact assessment duties. Equal pay could certainly be an issue, as the law stands. We have not sorted out the outstanding equal pay issues—that of course is an issue for another.
committee—and health and local government still have outstanding cases. My desk is groaning with the number of legal cases that I have on the issue. Frankly, we would all like to avoid creating a new tranche.

Gabrielle Stewart: I have one more point about the bill’s remit. The integration of two bodies does not prevent integration with other services. However, as Rachel Cackett said, the issues are time and investing in staff, who perhaps have the potential to be more creative with their services. Integration should be seen more broadly as involving services for housing, mental health, children and education. There are many opportunities, and I see the bill as a step in the right direction.

The Convener: On that note, you have the last word, Gaby. I thank you all for the written evidence that you provided and for your appearance here today.

Meeting closed at 12:33.
Public Bodies (Joint Working) (Scotland) Bill

Audit Scotland on Behalf of the Auditor General for Scotland and the Accounts Commission

Introduction
1. Audit Scotland is the public sector audit agency undertaking the external audit of the majority of public sector bodies in Scotland. We do this on behalf of the Auditor General for Scotland (for the NHS and central government) and the Accounts Commission (for local government). We provide this written evidence to assist the Health and Sport Committee’s scrutiny of the Public Bodies (Joint Working) (Scotland) Bill.

Background
2. The Auditor General and the Accounts Commission welcome the opportunity to comment on the Public Bodies (Joint Working) (Scotland) Bill and to contribute to the future integration of adult health and social care in Scotland. This submission refers to the experience and audit evidence gathered through the work Audit Scotland has carried out on our behalf. This response draws on a wide range of audit work, but in particular Audit Scotland’s reports on Review of Community Health Partnerships (June 2011) and Commissioning social care (March 2012).

3. The Committee invites comments on a number of questions and we have focused our response around them.

Question 1: Do you agree with the general principles of the Bill and its provisions?
4. We support the principle that public services should be designed around the needs of the service user, and that public bodies should seek to overcome the organisational barriers that get in the way of delivering seamless integrated health and social care. Over a number of years, Audit Scotland has highlighted the need to improve how health and social care services work together to meet the needs of the people of Scotland. It is essential that services are able to work well together to respond to needs whilst making the best use of existing resources and delivering high quality services. We have highlighted in several reports the need for barriers to partnership working to be addressed and the importance of having a joint vision and clear priorities for the use of shared resources. It is encouraging that the Bill seeks to address these problems.

5. In our previous report on Community Health Partnerships (CHPs), we highlighted that a more systematic and joined-up approach to planning and resourcing health and care services is needed to ensure that health and social care resources are used efficiently. We saw few examples of good joint planning underpinned by a comprehensive understanding of the shared resources available. This message was echoed strongly in our work on Commissioning social care where we found slow progress with strategic commissioning and limited joint working. One of our concerns about CHPs related to their lack of strategic influence over how resources
were used in the local area. The principles in the Bill aim to improve these issues, however, the change needed is significant and this is a challenging agenda.

**Question 2: To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

6. The Bill requires NHS boards and councils to work together to meet the needs of the people in the local area. There are specific aspects of the Bill that should address some of the concerns we have raised in previous audit work and help to achieve the stated policy objectives. In particular, the obligation to prepare, publish, monitor and report against a local integration plan, and involve and consult with service users and carers in developing the plan, should provide a focus for driving forward the policy intention of the legislation. The extent to which this will be effective will be dependent at least in part on the quality and effectiveness of local leadership and the commitment of local partners to the plan and to the delegation and sharing of resources. Similarly, the role of the Integration Joint Monitoring Committee will be important in providing oversight and challenge.

7. However, the change needed is significant and there are some areas of the Bill where more detail is needed.
   - It is not clear from the Bill how local people will be engaged in the changes proposed, whether the new partnerships will be central or local government bodies and how audit arrangements will operate.
   - To date, GPs, clinical professionals and social care staff have not been fully involved in service planning and resource allocation for health and social care services. The lack of influence that CHPs have had over overall resources has been a barrier to professional staff engaging with CHPs. This needs to be addressed because these professional staff influence a large proportion of the health and care budget as a result of their decisions. The role of professionals is unclear in the Bill.
   - The Bill provides little detail about how locality arrangements might work in practice. There needs to be a real contribution from professional staff groups to informing how resources are used and services improved.

8. In our report on Community Health Partnerships, we highlighted that partnership working between one or more organisations is challenging due to the differences in accountability arrangements and differences in organisational cultures, planning and performance and financial management. The proposals set out in the consultation appear to address some of these challenges but greater clarity is needed in some areas, include how acute NHS resources will be affected and how funds will flow via the new arrangements. The real test will be how the partnerships work in practice.
9. There are lessons to be learned from other partnership arrangements. When commenting on Community Justice Authorities in *An Overview of Scotland’s Criminal Justice System*, we noted:

> “Although CJAs were established in 2007, there are no agreed measures to assess their performance or impact. As a result, CJAs use a range of different performance indicators developed locally with different systems for reporting and presenting data. CJAs have recently agreed to improve information sharing and to look at developing a common set of core measures and associated information requirements. The lack of agreed performance indicators across the range of services designed to reduce reoffending means the cost-effectiveness of different local projects cannot be compared.”

10. The proposals set out in the Bill seek to avoid some of the above limitations, for example, the expectation that the local strategic plan will have regard to national health and well-being outcomes should ensure a greater focus on performance expectations.

**Question 3: Please indicate which, if any, aspects of the Bill's policy objectives you would consider as key strengths**

11. Our reports on CHPs and Community Planning Partnerships (CPPs) highlight the importance of applying certain key principles to underpin successful partnership working. It is encouraging that the Bill recognises the importance of these key issues, including the need for leadership, vision, clear roles and responsibilities and for risks to be identified and managed. Accountability arrangements and processes also need to be clear. Partners should have a shared understanding about what success looks like and that there are arrangements in place to monitor and publically report on progress. Although these issues are identified in the Bill, this needs to be an area of focus when the Bill is implemented.

12. We have commented in a number of our reports about the lack of joined-up, transparent and comparable performance measures for health and social care services. This makes it very difficult to build a clear picture of relative performance and does not help the public or the Scottish Parliament to be assured about the quality and efficiency of the service. Therefore, we welcome the proposal for a set of nationally agreed outcome measures. When taking the Bill forward, it is important to be clear how these new measures will fit with existing frameworks such as Single Outcome Agreements (SOAs) and HEAT.

**Question 4: Please provide details of any areas in which you feel the Bill’s provisions could be strengthened**

13. There are a number of key issues not addressed within the Bill or associated documents, and further information is needed to understand how these changes will work in practice. If these issues are not addressed in the Bill, they need to feature in subsequent implementation guidance. These issues fall into six main areas:
• **Resources.** In previous audit work we have highlighted that, for successful partnership working, it is essential that budgets and resources are clearly set out and agreed by all partners. The partners should be clear about the rationale for how money is allocated and spent, and efficiencies should be sought through sharing of resources and improved ways of working. There needs to be transparency about how devolved budgets have been determined and what resources are included in the devolved budget. Our work has shown that these key principles have not been applied fully in partnerships in Scotland to date.

From the information in the Bill, there are clear potential risks and tensions around how organisations will determine which budgets will be included in the integrated budget and the implications of this for their own governance and accountability arrangements. It is essential that there is clarity at a local level about governance and accountability arrangements and how risks will be identified and managed, and that there are effective dispute resolution arrangements in place. There is no minimum requirement for resources or services to be included in the new arrangements. This creates a risk of significant differences of approach across the country.

Linked to this point, it is unclear from the Bill the role that other policy areas will play, specifically housing. It is important that the new arrangements maximise the valuable contribution that housing can play in improving care and support for older people. More details on how self-directed support and personalisation of care will be addressed through the new partnerships would also be useful.

• **Links between health and social care integration and Community Planning.** The relationship between the new partnerships and the existing Community Planning Partnerships (CPPs) is not clear from the Bill. There is a need for a clear articulation of how these new arrangements fit with CPPs given the significant leadership and co-ordinating role for local public services that the Scottish Government/COSLA see for CPPs in their Statement of Ambition for Community Planning and Single Outcome Agreements. That document identifies community planning arrangements as being at the core of public service reform and ‘providing the foundation for effective partnership working within which wider reform initiatives, such as the integration of health and adult social care… will happen.’ Specifically it is not clear how accountability and outcomes/performance management will link between CPPs and the new health and social care partnerships. It essential that sound governance and accountability arrangements are in place. Any new governance and accountability arrangements should be effectively aligned with existing arrangements to avoid further complicating approaches to governance and accountability - we noted in our report on Community Health Partnerships that:

   “Approaches to partnership working have been incremental and there is a cluttered partnership landscape. CHPs were set up in addition to existing health and social care partnership arrangements in many areas. This has contributed to duplication and a lack of clarity of the
role of the CHP and other partnerships in place in a local area. There is scope to achieve efficiencies by reducing the number of partnership working arrangements”

Given that the new integrated arrangements will be responsible for significant resources, and may opt to include other services, such as services for children, it is even more important that the links to CPPs are clear and fully understood.

- **Implications for audit and scrutiny arrangements.** The Bill does not set out whether the corporate body will be a local government or central government body. This has significant implications for financial arrangements and for the audit function. There are other potential issues for auditing and other scrutiny arrangements because of these changes. Specifically, if local partners opt to establish a body corporate there will be implications for internal and external audit arrangements. For example, the VAT status of the new body will need to be clarified. These issues have implications for audit and inspection arrangements as well as Parliamentary scrutiny. Furthermore, there are different budgeting cycles for NHS and Local Government bodies. It is also unclear from the Bill and associated documents, how the external audit function will be funded and arranged and how it will work in practice. In taking forward the new arrangements, consideration will need to be given to audit committee and scrutiny arrangements, alongside the external audit issues we have raised. There is a need for more detail on how these integrated services will be regulated and inspected through the work of Healthcare Improvement Scotland and the Care Inspectorate to ensure that there is appropriate independent public assurance about the performance of the new partnerships.

- **Governance arrangements.** The Bill sets out plans for a Chief Officer. This addresses one of our concerns that the existing CHP model was not given sufficient powers and authority to lead on key decisions about how resources are used in the local area. However, there are challenges and tensions with this proposed approach and the role and remit of the Board of the NHS board and the council elected members. There needs to be clear arrangements for any disagreements between the partners, including disagreements about finances, services, performance, and leadership to be resolved. The Chief Officer may be accountable for significant resources; therefore, the leadership dynamic within both the NHS board and the Local Authority will be shifted by this arrangement. It is essential that there is more clarity about how the Chief Officer will report into the NHS board and into the Local Authority, and that clear performance management and accountability arrangements are put in place.

- **The role of health and care professionals.** The Bill recognises the importance of health and social care professionals being at the heart of making the partnerships a success. However, there is a lack of detail on how this will work in practice. We recognise the need for a degree of local
flexibility to allow partnerships to respond to local needs, but we have noted in previous audits that historically these professional groups, such as GPs, have not played a key role in partnership working to date. Their involvement will be critical to the success of the new arrangements.

- **Ministerial powers.** The Bill gives Ministers wide-ranging powers to make certain decisions about how services are planned and delivered locally, including powers to issue directions to local authorities, health boards or integration joint boards, about the functions related to the Bill, or in the integration plan. These powers are potentially significant, in particular in relation to the role and responsibility of local government. For that reason, more information on the circumstances in which Ministers might seek to exercise these wide-ranging powers would be useful.

**Question 5: What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

14. The new arrangements will require NHS boards and councils to improve and share information on how resources are used locally for specific groups within the local community. Audit Scotland has highlighted a number of gaps in information which could be addressed through this approach. Specifically, we have highlighted previously a lack of information on community services to inform how best to use shared resources for the local area. The new arrangements may make it easier for health and social care providers to see their services as part of a single system of care, making it easier to reduce overlaps and to ensure that people receive the care they need, while best use is made of existing resources.

15. We recognise the major challenge in integrating health and social care services. We have previously commented that there has been no large-scale shift in the balance of care to community services and on the lack of joint resourcing in Scotland, and consider that many partnerships will find agreeing on the resources to devolve to the integrated budget difficult. Our recent report on Commissioning social care found that there was a way to go to develop how services are planned and commissioned within a single agency, not least between partners. This will be a major change for partners and require strong leadership, investment and support to make the change.

**Question 6: What effect do you anticipate integration plans will have on outcomes for those receiving services?**

16. The intention from the Bill is for a clear change to how services are planned and managed as a result of the proposals. The Scottish Government, and local agencies, will need to consider the potential cost implication of these changes and the impact on professional staff who deliver frontline services. The focus should be on improving outcomes for local people as well as on integrating systems and services. The introduction of a core set of national outcome measures and the requirement on partners to jointly plan and use their resources to best meet local needs are welcome. The Bill provides the opportunity for better
coordination of services and making better use of available resources at a local level.

17. Any outcome measures must be transparently reported and available to the public and this information should be used to drive improvement. National measures are useful but partners also need a mechanism for ensuring local needs and priorities are met and for measuring the difference that specific services are making to the individual.

18. The Scottish Government, together with NHS boards and councils, will need to ensure there is minimum disruption to existing services and service users during the move to better integration. NHS boards and councils need to continue to deliver services to those who need them during this period of change and must ensure that people are not adversely affected. Whilst these changes are under way, it will be important to maintain the progress made by CHPs at a local level.

Audit Scotland on Behalf of the Auditor General for Scotland and the Accounts Commission
2 August 2013

Further information
We hope that you find our comments helpful. Should you require any further information please contact Fraser McKinlay, Director of Performance Audit and Best Value, Audit Scotland, 18 George Street, Edinburgh, EH2 2QU, e-mail fmckinlay@audit-scotland.gov.uk.
Public Bodies (Joint Working) (Scotland) Bill

The Care Inspectorate

Introduction

1. The Care Inspectorate is the independent scrutiny and improvement body established under the Public Services Reform (Scotland) Act 2010, that brings together the scrutiny work previously undertaken by the Care Commission, HMIE child protection team and the Social Work Inspection Agency. Our role is to regulate and inspect care and support services (including criminal justice services) and carry out scrutiny of social work services. We provide independent assurance and protection for people who use services, their families and carers and the wider public. In addition, we play a significant role in supporting improvements in the quality of services for people in Scotland.

2. We are responding to this call for evidence on the basis of a range of inspection findings. In addition to our ongoing inspection and regulation of registered care services, our views are informed by six years of inspections of social work services and two three-year programmes of joint inspection of services to protect children. We have also developed and piloted a new model for scrutiny and improvement of services for children, young people and families provided in local authority areas. The new approach, undertaken in partnership with colleagues from other inspection agencies, is based on the premise that positive outcomes are achieved when agencies work effectively together with a clear focus on the interests of children and young people at the heart of their activity. We are also piloting joint inspections of adult services in partnership with Healthcare Improvement Scotland (HIS). These inspections are intended to align with the Scottish Government’s policies for the integration of health and care.

Do you agree with the general principles of the Bill and its provisions?

3. We fully support the principle of a person-centred approach to service planning. We also agree with the principles of continuous improvement, particularly with regard to the focus of improving personal outcomes for people who use services. From experience of inspecting, we are aware that whilst there is evidence of good practice there is still work to be done to ensure that all services are delivered in an integrated and seamless manner. We would like to see a consistency of good practice across Scotland resulting from the implementation of this legislation.

4. We support the planning principles set out in section 4 of the Bill. We have evidence, in particular from the inspection of child protection, that when these principles are realised it is more likely that better outcomes

---

1 Education Scotland, Healthcare Improvement Scotland (HIS) and Her Majesty's Inspectorate of Constabulary for Scotland (HMICS)
will be achieved. We are also fully supportive of the principles which focus on prevention as stated in the Bill. We would, however, highlight that there needs to be appropriate management of risk to service users while systems change to reflect the principles of the Bill.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

5. We welcome the approach to develop high level national strategic outcomes with regard to health and wellbeing and look forward to seeing the detail of the work on outcomes. We are also happy to provide advice and support based on our inspection findings. From a regulatory perspective, we would suggest that the work currently underway on the National Care Standards be linked to the strategic outcomes for health and wellbeing. We also believe that placing human rights and dignity at the heart of standards would help ensure a person centred focus. Involving, empowering and supporting people who use services and their carers in the identification of personal outcomes cannot be overemphasised. Any future development of inspection methodology could focus on the agreed outcomes and base accountability and improvement on these agreed measures.

6. From our experience of regulation and inspection, we believe that structural change alone will not achieve the desired change and improvement. We, therefore, welcome the approach that has been taken to create a framework to support integration at local level. The impact of the proposals will rely on effective and robust partnership working. We support the need for effective partnership working as a tool to achieve improved outcomes by committing partners to mutual objectives. We have observed that where there is effective strategic leadership and partnership working then the desired cultural change can be achieved and does lead to improvement for people who use services. Cultural change and a willingness to share resources, alongside better and quicker decision making can lead to better outcomes for individual service users.

7. Effective self-evaluation and improvement at all levels underpin success in inter-agency delivery. Overcoming technical difficulties is key to supporting effective joint working by those who are delivering the service. For example, from our pilot inspections of older people’s services we have found that it can be difficult to access records for service users across services. Ensuring more effective information sharing across partnerships will be a key enabler. We would suggest that mutual ownership of robust performance information is desirable.

**Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.**

8. **Joint Commissioning:** The proposal to strengthen joint commissioning arrangements is welcomed. In our experience, local
authorities, health services and Community Planning Partnerships are at different stages of readiness in this work. Through our joint inspections, the Care Inspectorate and HIS are well placed to focus on the effectiveness of joint commissioning, and the Care Inspectorate can examine the outcomes of those commissioning strategies on service users through inspections of regulated care services. Effective strategic commissioning is essential to the success of the partnership, however the complications involved in assuring quality in this area need to be recognised.

9. **Joint accountability**: We welcome the jointly accountable nature of new ‘partnership’ arrangements, including the leadership of one jointly accountable officer. This should strengthen joint ownership of processes, services, resources and, ultimately, outcomes for people. We would wish to note the importance of co-ordinated financial management and financial governance in ensuring that partnership working is effective and delivers desired results.

10. **Outcomes focus**: We strongly support the emphasis on outcomes-based practice and the reinforcement this gives for service commissioners, providers and stakeholders. We also strongly support outcomes being individually based and strategic outcomes being rights based.

11. **Major social policy change**: We recognise the degree of cultural change needed and that this will have far reaching consequences for providers, commissioners, stakeholders, practitioners, carers and service users, and we welcome this approach. Through our joint inspections, the Care Inspectorate and HIS will be able to report on the reach and impact of cultural and organisational change on realising improved outcomes for people.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.

12. **Governance routes**: Whist recognising the need for local variation, we believe it would be helpful to have more clarity about the existing and proposed governance routes and the definitions and decision-making capacity and accountability of each - community planning partnerships; boards; and joint partnerships. We also recognise that partnerships will follow either the lead agency or new corporate body model and as such will have different accountabilities and governance arrangements. Through our joint inspections, the Care Inspectorate and HIS we will be assessing the impact of each model.

13. **Aligning targets and standards**: We would welcome further detail and guidance on the alignment of current targets with the proposed national health and wellbeing outcomes, and the subsequent scrutiny of each, linked with joint accountability.
14. **Information sharing:** We welcome the inclusion in legislation of information sharing, and would suggest that this needs to be more robust. Existing data sharing partnerships and the Data Protection Act, which should both act as an enabler to information sharing across boundaries of confidentiality, are all currently available. However, in inspection we have found that information sharing can and does cause a degree of anxiety. Our evidence from inspections is that sharing information and access to shared information can be challenging and not always overcome. Our experience in joint inspections of services to protect children and joint inspections of services for children and young people is that a clarity about expectations of when, how and what to share is of great benefit for staff and highly supportive of robust and consistent practice.

15. **Models of scrutiny:** We believe that scrutiny at all levels can contribute to and support the implementation of joint working. We understand that as scrutiny bodies we will require to be responsive in designing inspection processes in order to ensure consistency of approach whilst reacting to local arrangements. We would propose to adapt our inspection approaches to be able to evidence quality and to support improvement.

16. **Joint performance:** From our inspections to date, it is rare to find models of joint performance management and where it has been implemented, it is in its very early stages. Exceptions may be found in some areas, for example, where child protection committees have strengthened the suite of management information being gathered and analysed routinely and then used it to monitor performance, but even here, finding accurate and useful sources of joint data is a challenge. Guidance regarding scrutiny processes would provide consistency in measurement and evaluation across the board. We would propose that inspection could focus on key themes, such as the effectiveness of preventative work and the impact of strategic commissioning.

17. **Co-production:** Working with local communities in the development of integration plans, including those who currently use services, should be emphasised and is as important as the involvement of service users in the design of their own care plans.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

18. **Integration plans:** We hope that integration plans will follow clear, consistent and accessible guidance regarding content, format and style. There will be benefits for scrutiny processes in terms of inspecting consistently and to a single shared format and understanding. In this way, service providers and service users, their families and carers will understand what is being measured, in what way and to what standard. In turn, this will allow a more global measurement and trends to be evaluated and best practice to be
disseminated nationally as well as locally. Clarity of plans and monitoring the effective implementation of local plans will allow scrutiny bodies to identify that services are delivering improved care for people who use services and their carers.

19. **Outcomes focus:** The focus on personal outcomes for people who use services will reinforce both the national agenda and provide the basis for scrutiny which is in line with the recommendation of the Christie Commission. For this to be relevant to individuals, it also must be linked to strategic commissioning plans which focus on the individual receiving a service.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

20. Inspection findings show that the most effective plans are those which are well understood and delivered as intended. We believe, therefore, that this is strengthened through effective quality assurance and scrutiny processes both internally through self assessment and externally via scrutiny bodies.

21. Some local authorities have integrated Housing Services with Social Work Services, yet there is no emphasis on Housing Services as being part of integration plans. Housing Services are integral to supporting people within their local communities and are often key to individuals remaining in a homely, community based environment. We believe it would be helpful to see the role of Housing Services in integration clarified. Whilst we have specifically mentioned housing we are aware that a number of local authority services (particularly education, through lifelong learning, and leisure), health services, the third sector and others within Community Planning Partnerships have a key role in delivering successful integration plans.

22. The involvement of NHS acute services in the partnership is crucial to the effective delivery of services to people as they move from home (including a care home) to hospital and back home.

23. We believe that the governance arrangements still need to be further clarified through partnership arrangements. From inspections, we are aware that, often, levels of administration or bureaucratic processes within services can create challenges for service delivery to people who use services, their families and carers. We would welcome further clarification within the Bill.

24. We are not yet clear about what will happen to partnerships who do not comply – for whatever reason – with the requirements to have integration plans in place. As a scrutiny body, we would seek to clarify whether we have a responsibility or role in this area.
25. The Care Inspectorate looks forward to playing a key role in the scrutiny of care services that are integrated, ensuring that everyone who uses these services receives a quality of care that reflects their needs and promotes their rights.

The Care Inspectorate
2 August 2013
Healthcare Improvement Scotland is working closely and effectively with the Care Inspectorate on the joint inspection of health and social care and related activities, as detailed below. While we are in agreement in our support for the policy objectives of the Bill and several other aspects of our responses, we have agreed that submitting separate responses will provide the best opportunity to reflect the respective strengths and expertise of our organisations.

Introduction
Healthcare Improvement Scotland is a health body formed on 1 April 2011 and was created by the Public Services Reform (Scotland) Act 2010. Our key responsibility is to help NHSScotland and independent healthcare providers deliver high quality, evidence-based, safe, effective and person-centred care; and to scrutinise services to provide public assurance about the quality and safety of that care.

The Public Services Reform (Scotland) Act placed a number of duties and powers on Healthcare Improvement Scotland which are relevant to the policy ambitions of the Bill, specifically powers to inspect services provided by NHSScotland or independent healthcare services and to conduct joint inspections with other scrutiny authorities, and to support, ensure and monitor the public involvement activities of NHS Boards (through the Scottish Health Council).

The integration of health and social care will have a direct impact on our role: the Public Bodies (Joint Working) Bill's Explanatory Notes and accompanying Policy Memorandum, which refer to Healthcare Improvement Scotland and the Care Inspectorate's joint scrutiny role in relation to integration authorities. At present there is no reference to scrutiny on the face of the Bill and we discuss in further detail below our recommendation that this be addressed.

We are already working with the Care Inspectorate to develop a joined-up approach to scrutiny and test a new methodology for integrated inspection of the care of adults, and will ensure that any new arrangements support the Bill's approach. A further role has been identified for the two scrutiny bodies in the joint inspection of integration authorities' strategic commissioning plans, a new area of work for this organisation.

The Scottish Health Council, which is part of Healthcare Improvement Scotland, is submitting an additional response focusing specifically on the public involvement aspects of the Bill.
Response to Health and Sport Committee questions

1. Do you agree with the general principles of the Bill and its provisions?
We are supportive of the framework provided by the Bill which supports the integration of health and social care in Scotland - encouraging local authorities and health boards to move forward together in achieving better outcomes for people using health and social care services.

We welcome the focus in the Policy Memorandum on the perspective of the patient, service user or carer, along with the references to consultation made in the Bill. As an organisation, we aim to ensure that the views and experiences of patients and the public are used to improve the quality of healthcare services. The Public Services Reform (Scotland) Act 2010 places upon us a Duty of User Focus and involving the public in our work is an integral part of everything we do, including scrutiny activity. The Scottish Health Council supports NHS Boards to carry out their legal duty to encourage public involvement, and reports on how Boards involve patients and communities when making major changes to local health healthcare services. Its response to the call for evidence discusses these aspects in further detail.

The Policy Memorandum makes reference to the fact that “better integration of health and social care services is required in order to ensure the on-going provision of high quality, appropriate, sustainable services” and “The fundamental purpose of the policy on integration, which underpins the legislation, is to improve people’s wellbeing”. As an organisation we are considering how we can assure that integration is delivering this (by contributing, for example, to reductions in lengthy hospital admissions for older people and support for care at home and the community); however there is scope to further emphasise this within the principles underpinning the Bill.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
We welcome the outcomes-based approach to the planning and delivery of health and social care services and note that the nationally agreed outcomes for health and social care will be consulted on by Scottish Government. We believe that integrated services must also be supported by a single set of standards across health and social care and would welcome progress with the review of the National Care Standards, to ensure aspects such a dignity are central to the patient experience, no matter where the care is delivered.

It is vital that we continue to assure the quality and safety of health services under integrated health and social care. The quality of health services is currently measured against standards and indicators that are developed from a robust evidence base, using a synthesis of research and other knowledge on how to achieve optimal outcomes. The challenge of measuring quality achieved under integrated health and social care is in defining a similar evidence base. Despite these challenges, HIS is already starting to consider how to widen the methodologies used to develop such standards and indicators to incorporate the extant evidence base for integrated services. In addition HIS can learn from the evolving processes being developed by the National Institute for Health and Social Care Excellence (NICE) in England.
3. **Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.**

We welcome the alignment of outcomes between health and social care, which is central to shaping future policy at a corporate level in these sectors. It should be noted that local authorities and health boards will continue to report separately on other targets and performance indicators and there will be a need to ensure a proportionate and consistent approach.

In relation to strategic commissioning activity, we welcome the strengthened role of clinicians and social care professionals, along with the full involvement of the third and independent sectors, service users and carers. We also welcome that strategic commissioning plans should assure that sound clinical and care governance is embedded.

4. **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.**

**Scrutiny**

One of the policy ambitions for integrating health and social care services is ‘to improve the quality and consistency of services for patients, carers, service users and their families’. Scrutiny of integrated working is central to ensuring the quality of services delivered and outcomes are achieved, therefore we believe that scrutiny should be explicitly reflected on the face of the Bill.

We have identified that there are three aspects of scrutiny and assurance activity in relation to the integration of health and social care:

- scrutiny of integrated services (through joint inspection)
- scrutiny of strategic commissioning (review / quality assurance of strategic plans)
- ensuring appropriate public involvement in the planning and commissioning of integrated services

However, it is also important to consider those elements of scrutiny that may pertain exclusively to healthcare provided by health and social care partnerships such as by local GP practices and primary care teams. Healthcare Improvement Scotland will further develop its approach to scrutinising the quality of care delivered in primary care and the interface between primary and secondary care. The powers to do so exist within the Public Service Reform Act and it will be important to ensure that there is clarity in respect of the powers to act between the current and proposed legislation.
The approach to scrutiny will further develop as specific client groups fall within the ambit of joint inspections such as adults with learning disabilities etc. It is important to anticipate the further broadening of the inspection programme and ensure that this extension does not undermine the principles set out in the Crerar Review.

Our experience of joint inspection through the pilots which have been undertaken with the Care Inspectorate has shown that there are a number of powers which are fundamental to effective scrutiny activity: to enter and inspect a service, to require information, to conduct interviews and to share information. The application of such powers to the inspection of integrated services will be essential. It is obviously essential that Healthcare Improvement Scotland has sufficient powers to scrutinise the new ‘bodies corporate’. Information sharing is a particularly challenging issue, demonstrated through our pilot inspection of older people's services. The ability to scrutinise information related to integrated services will be fundamental to effective joint inspection.

The Policy Memorandum highlights that strategic commissioning is an area for development across local authorities, health boards and other strategic partners. It is essential that capacity and capability building in this area is supported to ensure that it delivers the Government's intention that it is through the strategic commissioning process that the required shift in the balance of care will be achieved.

Healthcare Improvement Scotland has substantial experience of scrutinising healthcare systems, processes and planning through our clinical governance activity. The scrutiny of the resource and financial planning aspects of strategic plans will require specific financial expertise and it is our view that Audit Scotland / Accounts Commission should be involved in joint working in this area, especially as such plans will interface with Community Planning Partnerships and Single Outcome Agreements. Healthcare Improvement Scotland will consider the mix of skills to support such broader roles.

**Commissioning**

As stated above, we welcome the strengthening of joint commissioning arrangements with stakeholder involvement. It is also essential to strengthen arrangements in terms of outcomes for patients. The Winterbourne Review highlighted the issue of a disconnect between the commissioning of services and ensuring positive outcomes and experience for patients. The scrutiny of joint commissioning arrangements will need to ensure that they will yield benefits to users and carers and this may, sometimes, be difficult to evidence in strategic commissioning plans.

It will be important to be explicit about the relative roles of different parties in the assessment of the joint commissioning of services. This is work which Healthcare Improvement Scotland would like to explore further with Scottish Government, Joint Improvement Team and the Care Inspectorate.
5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

From a scrutiny point of view, the delivery of integration plans will allow Healthcare Improvement Scotland to share expertise, approaches and business intelligence, and streamline data collection with other scrutiny bodies. It is hoped that a more holistic approach, which follows the patient journey through primary and acute care, would further enhance our role in providing public assurance about the quality and safety of healthcare, no matter where treated. The sharing of business intelligence between scrutiny bodies may also provide a further safeguard and minimise risk in relation to public assurance of the quality and safety of care.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

It is unclear at present how the creation of partnership arrangements between health and social care, set out in integration plans, will ultimately result in improved outcomes for users of health and social care. Consideration needs to be given to how the achievement by integration authorities of national outcomes - and ultimately improved care for users - can be demonstrated and assured, both internally and externally, through strategic plans.

We note the role of Joint Monitoring Committees and Integration Joint Boards in assuring partners that the arrangements are achieving the aims and objectives set out in the integration plan as well as delivering the outcomes set out in the strategic plan. It will be important to establish how the joint scrutiny activity of Healthcare Improvement Scotland and the Care Inspectorate will align to this activity.

There should also be further consideration of enforcement activity which may be required where partners are not delivering requirements in relation to integration plans or strategic commissioning or where these are not felt to be sound. Clarification of the roles of the Scottish Government and scrutiny bodies will be important in this.

Concluding remarks

Healthcare Improvement Scotland welcomes the opportunity to contribute to the Health and Sport Committee’s scrutiny of the Public Bodies Bill. We would further welcome the opportunity to contribute to the planned oral evidence sessions, to discuss the implications of the Bill and integration more broadly for healthcare quality assurance and scrutiny. As stated above, we believe that scrutiny should be on the face of the Bill, being central to ensuring high quality services and outcomes. We will continue to work with colleagues in Scottish Government, and through representation on a number of strategic groups, to explore and develop the practicalities of health and social care integration and its impact.

Healthcare Improvement Scotland
2 August 2013
The Public Bodies (Joint Working) (Scotland) Bill

The Information Commissioner’s Office

Introduction

The Information Commissioner’s Office (ICO) welcomes the opportunity to respond to the Health & Sport Committee’s stage 1 consideration of the Public Bodies (Joint Working) (Scotland) Bill (the Bill).

Given the ICO’s role as regulator of the Data Protection Act 1998 (the Act), this response will be limited to those aspects of the proposals which relate to data controller responsibilities and the processing of personal data. More generally, some comments are provided on Privacy Impact Assessments and the value they can add to policy considerations.

Data Controller Responsibilities

The ICO recognises the many benefits that can accrue from integrated service provision. However, in complex organisational relationships involving the processing of personal data, it is often difficult to determine which party is a data controller and which is a data processor for the purposes of the Act. The Act defines a data controller as:

…a person who (either alone or jointly or in common with other persons) determines the purposes for which and the manner in which any personal data are, or are to be, processed.

A data processor is defined as:

…any person (other than an employee of the data controller) who processes the data on behalf of the data controller.

In response to the Scottish Government’s consultation on the proposals, the ICO highlighted its concerns over establishing different models of integrated service providers as creating ambiguous accountability structures which have the potential to be confusing to users. It was felt that individuals seeking to exercise their rights under the Act could be confused as to who would be the data controller and in which organisation(s) these obligations would reside.

For this reason, the ICO welcomes the clarification provided in Part 1 of the Bill. In particular, section 21 places responsibility and liability squarely on the person to whom functions are delegated and section 43 clearly identifies the responsible organisations in each of the proposed models set out in section 1(4). Where the model is an integration authority as set out in section 1(4)(c), it is assumed that the Health Board and Local Authority will be joint data controllers as they will be acting ‘jointly’.

The importance of identifying correctly the extent of liability for data protection in the proposed structures is paramount as such liability cannot be abrogated
or delegated and the processing of users’ personal data will be sensitive for the purposes of the Act. It is noted that further guidance is to be provided in respect of the functions under, or in relation to, the provisions of the Bill and the ICO would be happy to assist in any areas relevant to data protection.

Processing of Personal Data

In its submission to the Scottish Government consultation, the ICO also recognised that the sharing of personal and sensitive personal data will be fundamental to the effective operation of the integration authorities. It is imperative that any such data sharing is carried out in a safe and secure manner, fully underpinned by an agreed Information Sharing Protocol to outline the broad aims and extent of sharing, with a robust Data Sharing Agreement to define the detail.

Under section 52A of the Data Protection Act, the Information Commissioner is required to publish a Data Sharing Code of Practice. Although it is not mandatory for data controllers to follow the Code, their compliance with it will be taken into consideration in the event of a breach. Given its status, the ICO would recommend that in any reference to sharing personal data, cognisance should be given to the Code when formulating information sharing protocols and/or agreements.

As well as considering the requirements of the Code, any data sharing must be undertaken in a safe and secure environment. The seventh Data Protection Principle requires that:

...appropriate technical and organisational measures are in place to prevent the unauthorised or unlawful processing of personal data, or the accidental loss, destruction, or damage to personal data.

Often more weight is given to the technical fixes to the extent that paper files and physical security are on the periphery. However, this can be the area of greatest vulnerability as can be seen from some of the breach cases on the ICO’s website: Taking Action - Undertakings, Enforcement and Monetary Penalties - ICO. It is important, therefore, that mutual understanding of security issues is included within any agreements/protocols on the practicalities of data sharing.

Privacy Impact Assessment

The ICO advocates the use of Privacy Impact Assessments (PIA) at an early stage of policy development. A PIA is a process which helps assess privacy risks to individuals in the collection, use and disclosure of information and helps identify privacy risks, foresee problems and bring forward solutions. Whilst there is currently no statutory requirement to undertake a PIA, the Scottish Government has endorsed the process within its Identity Management & Privacy Principles which were published in 2010. For example, Principle 2.1(a) requires that a PIA or proportionate equivalent is conducted and published prior to the implementation of a project which
involves the collection of personal information whilst Principle 2.9 states that wherever proposed legislation has a privacy dimension, a summary of the impacts identified in the PIA should be submitted for consideration by the lead committee in the Scottish Parliament.

The ICO is not aware of any PIA having been undertaken in relation to these proposals despite the likely sensitive nature of the information to be shared under the proposals. The ICO recommends, therefore, that a PIA is carried out in conjunction with the establishment of the integration authorities and would welcome this requirement being included on the face of the Bill or in relevant Regulations.

ICO summary of recommendations

**Recommendation one: Data Sharing Code of Practice**

Given the importance appropriate and proportionate sharing of personal and sensitive personal data will have to the successful operationalization of the integration authorities, the ICO recommends that the Bill and/or relevant Regulations requires cognisance be given to the ICO’s statutory Data Sharing Code of Practice.

**Recommendation two: Privacy Impact Assessment**

Given the nature of the data involved, the ICO recommends compliance with the Scottish Government’s Identity Management & Privacy Principles by the inclusion of a requirement to conduct a PIA in conjunction with the establishment of integration authorities.

The Information Commissioner’s Office
2 August 2013

About the ICO
The ICO’s mission is to uphold information rights in the public interest, promoting openness by public bodies and data privacy for individuals.

The ICO is the UK’s independent public authority set up to uphold information rights. We do this by promoting good practice, ruling on complaints, providing information to individuals and organisations and taking appropriate action where the law is broken.

The ICO enforces and oversees the Data Protection Act 1998 and the Privacy and Electronic Communication Regulations 2003, as well as the UK Freedom of Information Act 2000 and the UK Environmental Information Regulations 2004, both of which apply to reserved matters in Scotland.
Public Bodies (Joint Working) (Scotland) Bill

Scottish Public Services Ombudsman

I am writing in response to your call for written evidence on the Public Bodies (Joint Working) (Scotland) Bill.

I am not responding to the specific questions you have raised because I am not writing in response to anything in the bill but to what I consider is an omission from that bill. The bill looks at organisations and their obligations. It also talks about outcomes for people. However, it does not deal with situations where an individual is unhappy about the outcome they receive and does not address the complexity of complaints processes in place in this area, an issue that remains outstanding from the recommendations of the Sinclair report in 2008.

I recognise the potential benefits in delivering integrated, joined-up services and support the aims of the bill. However, as I and others have previously raised with the Committee, the areas of health and social care contain competing legislative complaints processes and, without legislative change, there are barriers to these processes working together. As an example, a resident of a care home may need to access three different procedures to question the way their needs have been assessed by the local authority, how their care is being delivered by the care home and their treatment by any NHS staff who visit them there. Should they choose to take their complaint to independent review they would, potentially, be faced with different routes to the Care Inspectorate and SPSO, with SPSO then having different powers over health and other areas of jurisdiction. This means that, while the bodies and delivery of the service may be integrated, there is no integration of the complaints process. As the Chief Executive of Highland NHS informed the Committee in March 2012, they are currently having to use the NHS process initially but then escalate social care through a separate route.

I do not intend to remake my arguments in detail. I have enclosed copies of our response to the Scottish Government consultation on social work complaints which sets out the context and describes the current landscape as well as how this is dealt with elsewhere in the UK as well as our response to their consultation on integration. The Committee will remember the comments we made direct to them about this matter in relation to your inquiry into the regulation of care for older people.

The Scottish Government and Parliament have made a number of positive commitments over a number of years to improved complaints handling. I would like to highlight the commissioning and endorsement of the Sinclair review, the commitment to complaints in the Patients Rights Act; a public statement of complaint handling principles which has the endorsement of the Parliament; and the extension to my powers which has resulted in the implementation of one standardised process across most areas of the public sector. Last year, the Scottish Government commissioned a working group, including the SPSO, to look at Social work complaints which are one part but
a key part of the complex landscape that bodies who work more closely together will have to deal with. I do not doubt the commitment to make improvements but it is a matter of regret that this is not yet reflected in specific measures to match the pace of change in the way complaints processes work together with the pace of change in the way bodies work together.

Ensuring complaints processes are accessible, simple and clear is important in ensuring the quality and consistency of public service delivery. The complaints landscape across health, social work and social care remains complex and the move to enable organisations to provide integrated services in this area should include the provision to the public of easily accessible, straightforward complaints processes. Failure to address this lack of integration in the Bill would mean that users would potentially have no clear route to complain about jointly-delivered services and public bodies would be restricted in their ability to investigate and respond to complaints in a joined up way. This presents a risk to vulnerable service users and I would ask that the Committee highlight a need to include provision for complaints in this legislation.
Annex A

SPSO response to the Scottish Government consultation on the Integration of Adult Health and Social Care in Scotland

Background and context
The Scottish Public Services Ombudsman (SPSO) is the independent body that investigates complaints from members of the public about devolved public services in Scotland. This includes, amongst others, local government, the National Health Service and a range of public bodies including the Care Inspectorate.

We recognise the Scottish Government’s objectives in moving towards the integration of health and social care to improve outcomes and, in particular, the aim set out in the consultation to ensure that “services are planned and delivered seamlessly from the perspective of the patient, service user or carer, and systems for managing those services that actively support such seamlessness”.

There is an important barrier to this seamlessness which is not dealt with in the consultation - the complexity of complaints processes. We appreciate that the consultation says that it cannot refer to all the details. However, although we have had discussions with the Government’s team working on this area over the last year, we remain concerned that despite this engagement, this barrier may not be being considered. We have also raised these issues in response to the Government’s consultation on Social Work procedures, and these are outlined more fully later in this submission.

Complexity of complaints processes
The barrier relates to the inconsistent and conflicting complaints processes that operate in the health, social care and social work areas. We do not think that this is a secondary issue. The laudable aim to put the person at the centre of care can only work if that person also has a clear route to raise concerns and questions about that care and the key decisions made which impact on them.

There are three key complaints processes operating within this area.

- Complaints about the local authority’s assessment of a person’s care needs or about social services provided. Such a complaint would be subject to the local authority’s social work complaints procedure and the statutory directions issued by the Scottish Government.

- Complaints about a registered care service. Such a complaint would normally be made to the provider in the first instance or directly to the Care Inspectorate. The latter has a duty to operate a procedure for receiving complaints about registered care services under Section 79 of the Public Services Reform (Scotland) Act 2010.

- Complaints about NHS services. These complaints would be directed
to the statutory NHS complaints process which is now set out in terms of regulations made under the Patients Right (Scotland) Act 2011\(^6\).

In our view, there is already a danger to vulnerable citizens in the overlap and confusion between complaints handling for health, social care and social work services. There is further scope for additional confusion as the move towards integration progresses. This is not a theoretical concern. In their evidence to the Health and Sport Committee, NHS Highland reported that they did not realise complaints would be an issue until late in the process\(^7\). They told the committee that they would be operating two separate complaints processes depending on the underlying legal accountability.

The confusion affects not only the point where the user wishes to make a complaint to the service and may not know which route to use, but also has considerable potential to add to the complexity in terms of our own role.

**The SPSO’s dual role: complaint handling and standardisation**

There are two key issues. The first relates to the different ways we can look at complaints that come to us through the three different routes. The second relates to our new role in some areas as the body charged with improving and standardising complaints processes in public services.

1. **Our role in complaint handling**

In terms of the NHS complaints process our role is straightforward. Once the NHS complaints process has been completed, the person has the right to complain to us. We can look not only at issues relating to maladministration and service failure but, uniquely in terms of our remit, can review clinical decisions. This allows us to consider fully all aspects of the complaint made to us.

When a complaint is made to us through the social work complaints process, our role is normally restricted to investigating complaints about the operation of the social work complaints procedure rather than the substance of social work complaints.

If a complaint is made to the Care Inspectorate, we are only able to consider the way the Care Inspectorate has handled the complaint. This is because we do not normally\(^8\) have jurisdiction over social care providers themselves - that role is a function of the Care Inspectorate.

2. **Our role in improving complaints handling**

The SPSO has recently taken on a new statutory function, empowered by the Public Services Reform (Scotland) Act 2010 (the Act), to improve complaints handling in bodies across the public sector through a programme of standardisation and simplification of complaints handling procedures. This is in line with the recommendations of the Sinclair Report and with the backing of the Scottish Parliament and the Scottish Government. To deliver this function we have created the Complaints Standards Authority (CSA), an internal unit within the SPSO.
Model complaints handling procedures

Following a full public consultation and with parliamentary approval for our Statement of Complaint Handling Principles, we have developed model complaints handling procedures for all local authorities and registered social landlords. All organisations in these sectors are now required to adopt this standardised procedure involving only two internal stages – a frontline resolution stage of 5 working days and an investigation stage 20 working days. This streamlined approach is based broadly on the NHS complaints process in Scotland and will shortly be rolled out to all other sectors of the public service within our jurisdiction.

Since 2010, therefore, the work of ourselves and many others has created what is becoming the national standard for complaints in the public sector and brings us significantly closer to the goals of the Crerar and Sinclair reviews. However, because of the statutory requirements that regulate these areas, the SPSO does not have the power to develop and enforce a model CHP for either social care or social work providers. This is problematic for those public service organisations such as local authorities and housing associations who are generally under our jurisdiction and will now be applying the model for complaints about all other service areas. The current position requires them to comply with different processes, and in some circumstances this may mean different process for a single complaint brought by one member of the public. Integration will only further complicate this issue as it may bring together bodies who are and are not applying the standard model but who will be providing a joint service.

Social work
We have worked in partnership in creating the model procedures and we are continuing to do so to seek to resolve these issues. We have already had discussions with the Association of Directors of Social Work (ADSW), Convention of Scottish Local Authorities (COSLA) and the Scottish Government on reform of the existing statutory directions on social work complaints and will shortly be joining a working group set up by the Scottish Government for this. We have also had discussions with the Care Inspectorate about improvements to complaints handling procedures for care providers. For both of these areas we have recommended an alignment with our guidance in line with our plans for the wider public sector. However, given our more limited role in relation to revising complaints handling procedures in these areas of service, we are only able to recommend and have no power to direct improvements. Scottish Government leadership and the leadership of other key organisations is required to ensure that clear and simple complaints processes do cover the whole public sector including those areas not formally covered by our guidance and models to ensure that whoever and whatever citizens are complaining about, the public service they are complaining to can provide a clear, simple process for doing so.

Other jurisdictions
There are examples from other parts of the UK and Ireland of different routes
that operate to allow for the integration of services. In Ireland, services are delivered by a single Health and Social Care Executive, making complaints more straightforward. A consultation on complaints handling in care and social services procedures has recently closed in Wales. It is anticipated that the Public Services Ombudsman for Wales will be given additional powers to look at social care and social service complaints as a result.

England has operated a single approach for dealing with complaints about NHS and adult social care services since April 2009. They have done so without significant structural change. Department of Health guidance requires or encourages joint working and investigation where a complaint cuts across health, social services and social care. This applies both at the level of the initial complaint and also at the Ombudsman level.

The Local Authority Social Services and National Health Service Complaints (England) Regulations 2009 which came into force on 1 April 2009 represented a significant simplification and shift in the complaints process. The Regulations cover the NHS and social services provision by the local authority and there is an explicit duty placed on the NHS and local authorities to cooperate if a complaint appears to relate to more than one body. The Department of Health has provided guidance on joint working and recommends that a protocol be put in place where care is provided jointly. The guidance stresses that "if a complaint is made about care delivered by more than one organisation, it is important to provide a single point of contact and a single response to the complainant."

The Regulations also deal with complaints that reach local authorities but deal in part with a breach of care standards or social care provision. As these can relate to private bodies, the local authority is required to ask the complainant’s permission to pass the information to the registered person or adult social care provider. Once this has happened, the local authority is required to cooperate as far as is reasonable and practicable to ensure a single, coordinated response for the complainant.

Complaints about health, once they have completed the local complaints process, go to the Parliamentary and Health Services Ombudsman (PHSO). Complaints about local authorities including social work and social care provision funded by the local authority, are dealt with by the Local Government Ombudsman (LGO). Again, the local complaints process must have been exhausted before a complaint can be reviewed by the LGO. In October 2010, the LGO’s remit was extended to include adult social care not funded by the local authority, so all adult social care complaints are now dealt with by the LGO. The Regulatory Reform (Collaboration etc. between Ombudsmen) Order 2007 allows the PHSO and LGO to work together jointly to investigate complaints.

**Conclusion**

The integration of health and social care has the potential to add to the complexity of the complaints handling arrangements. There is an increasingly urgent need to amend the statutory schemes guiding social care, social work
and NHS complaints to ensure that complaints that involve several or jointly delivered services can be dealt with effectively and to minimise potential confusion amongst members of the public. Agency clarity is essential and we support the idea of setting up a working group that would develop revised procedures not only for social work, as outlined in the Scottish Government’s consultation, but for wider social care. The integration proposal allows for a number of models of delivery and any complaints process would have to reflect this flexibility.

We have already suggested in our response to the Government’s consultation on reviewing social work complaints that the option we favour is that the local authority model CHP be extended to cover social work complaints. We have also asked to be given the same powers over social work complaints as we do on health to review professional judgement. This is not a new power as Complaints Review Committees which would be replaced under changes to the social work complaints procedures have long had this power, but it would allow health and social work procedures to align which would help resolve the problems identified by Highland NHS.

For social care, we will continue to work with the Care Inspectorate to align providers’ complaints processes. We would also like to suggest changes to allow us to undertake joint investigations with the Care Inspectorate where a complaint relates to matters which cover both our jurisdictions. In order for this to come about, changes may need to be made to our respective statutes to allow for this.

These two moves - changes to the social work complaints procedures and to our relationship with the Care Inspectorate - would resolve a problem of overlaps and gaps which has been raised ever since our creation; and greatly simplify the landscape for the service user. It would also allow for service providers to have clear and simple procedures.

As a point of principle, simplicity from the complainant’s perspective should be uppermost, as underscored in the Sinclair Report. Whatever the complexity of the service delivery, there should be a single point of contact for the complainant and a single, co-ordinated response to their complaint.

(a) Do you agree to your response being made available to the public (in Scottish Government library and/or on the Scottish Government web site)?

Please tick as appropriate ☐ Yes ☐ No

(b) Where confidentiality is not requested, we will make your responses available to the public on the following basis

Please tick ONE of the following boxes

☐ Yes, make my response, name and address all available
☐ or

☐ Yes, make my response available, but not my name and address
☐ or

☐ Yes, make my response and name available, but not my address

(c) The name and address of your organisation will be made available to the public (in the Scottish Government library and/or on the Scottish Government web site).

Are you content for your response to be made available?

Please tick as appropriate ☒ Yes ☐ No

(d) We will share your response internally with other Scottish Government policy teams who may be addressing the issues you discuss. They may wish to contact you again in the future, but we require your permission to do so. Are you content for Scottish Government to contact you again in relation to this consultation exercise?

Please tick as appropriate ☒ Yes
The final stage of current social work complaints procedures provides for complaints to be considered by a Complaints Review Committee (CRC) when all other avenues of redress have been explored. The guidance says that CRCs should aim to bring an objective and independent eye to bear on complaints to give the public additional safeguards that their wishes and needs are being fairly considered and their complaints properly investigated. The Directions specify that the CRC should have an independent chair and the expertise that members are required to have.

The Sinclair Report recommended that the SPSO should take on the CRC stage of social work complaints. Alternatives to this would be to retain CRCs but modify and improve them or align social work complaints with the standardised Model Complaints Handling Procedure currently being developed by the SPSO and local government for all local authority services.

Q.1a Please choose which of the following options you would prefer for dealing with complaints about social work services, providing reasons for your choice:

- **Option 1** – Social work complaints to be dealt with in line with all other local authority complaints through the process set out in the SPSO model CHP for local government.

    
    Yes
    
    Reason

We are of the strong view that revised arrangements for social work complaints should align with the SPSO’s model CHP for local government and, in particular, the 2-stage process and timescales contained within that procedure. The consultation document sets out well the background to the Sinclair report, including recommendations, and I will not set these out again here. However, in summary there was a clear conclusion from both Crerar and Sinclair that there was a need for consistency and standardisation in relation to complaints handling across the public sector, particularly in relation to local government and social care. The focus was very much on a streamlined approach which was more focused on the user and on obtaining consistent measuring of outcomes.

The SPSO’s Complaints Standards Authority (CSA) has taken forward the development of a standardised model process which will apply to all public sector bodies within our jurisdiction. This model is based broadly on the streamlined approach adopted across the NHS in 2005 and on the recommended model outlined in the Sinclair report. Our view is that the
2-stage model process is an appropriate and robust model for handling all complaints irrespective of sector. We believe the adoption of this model, with no additional stages of review, will help to focus service providers on moving towards a culture of ‘getting it right first time’ and will reduce the cost of handling complaints through the removal of multiple stages of review. This also applies within sectors and we have not, in the course of our discussions with stakeholders, seen robust evidence which would justify a deviation from the streamlined model in relation to social work services.

We outline below our view on the possibility of extended timescales. We remain open to this possibility but believe that this should only be considered on the basis of sound evidence that this is in the interests of the user and that there is a specific need which is different from the needs of users in relation to similarly sensitive complaints in other areas, for example around sensitive or serious health provision. This would also apply in relation to additional stages of review. In our guidance on model CHPs, published in 2011, we stated that:

‘We…recognise…that there may be a need for additional stages of review in some circumstances, particularly in relation to sensitive complaints or those involving vulnerable individuals where set criteria are met. The CSA will work in partnership with service providers to identify circumstances where there is a strong justification for an additional tier of review and to develop appropriate criteria. Any justification should be supported by robust evidence.’

In discussions with service providers we have not heard any strong justifications for this and remain of the view that the 2-stage process within the CHP timescales remains the correct approach. We remain open to further discussion but believe that the Government should provide a clear steer on the back of consultation responses to inform the proposed working group’s remit.

We do, of course, recognise the particular importance of social work services and the significant impact these services can have on individuals and families. However, the importance and pressing nature of many of the issues underlying social work complaints makes it all the more important that complainants have a clear, streamlined process to follow allowing to them to receive a prompt response to their complaints from the provider and the opportunity to seek independent external review within a similarly quick timeframe rather than have to negotiate a number of time-consuming and complex stages of review.

**Next steps**

In terms of taking forward the work to align social work complaints with the model CHP we agree with the Government’s suggestion of a working group involving representatives with expertise in all aspects of social work complaints. The CSA would contribute to that discussion. The group
must, however, have clear terms of reference within which to operate. We believe that the Government should provide a very clear steer in relation to the preferred option (1-4) rather than delegate this consideration to the working group. It is also important that consideration is given to the wider arrangements for social care complaints to ensure a holistic approach focused on the user. This is considered in more detail below in our response to question 4.

The local authority CHP will be published in March 2012 and will be implemented over the course of 2012/13. Provision has been made to revise the model CHP in due course until the social work provisions have been revised and this will be something to be discussed by the working group.

- **Option 2** - As with Option 1 but with additional scope for increasing the working day timescale at stage 1 or 2 for social work complaints when circumstances require this. (Details of the circumstances in which timescales can be extended could be developed by the working group if there is support for this option.)

  **No**

  **Reason**

As stated above in our discussions with service providers we have not seen any strong evidence justifying extended timescales which would differentiate social work complaints or users from those involving other areas such as health. We remain of the view that the 2-stage process within the CHP timescales remains the correct approach.

However, we remain open to this possibility but believe that this should only be considered on the basis of sound evidence that this is in the interests of the user. It should also be emphasised that the existing model CHP for local authorities allows discretion on the part of local authorities to extend the 20 working day timescales at investigation in cases where this is clearly justified.

If evidence was available to suggest that there was a clear need it would be necessary to ensure that this applied only to specific complaints relating to particular issues of vulnerability, for example. It would not seem appropriate for all social work complaints to have an extended timescale simply because they were provided by social work services. Many social work complaints will not involve issues of significant vulnerability or complexity, for example, and certainly no more than many complaints from other service areas.

If this were the preferred option, therefore, we would recommend that very
clear criteria are set for the types of complaint where an extension to the standard process was available.

- **Option 3 - Modified and improved CRCs operating within local authorities.** CRCs would be retained but improved (e.g. faster time limits within which a committee must be convened and reach a decision). Please specify the improvements you would recommend.

  No

  Reason

We do not believe that there is a justification for a continued role for CRCs. The CRCs (even if improved in terms of time limits) add an unnecessary stage to the complaints handling process which adds complexity for service users and may act as a barrier for many in progressing their complaint through to independent external review by SPSO. The current statutory social work complaints procedure has three stages with a total minimum timescale of 112 days from the complaint being made to a local authority to the CRC reporting at the final stage. The aims of the Crerar and Sinclair reports should be central to any decision on future arrangements. We believe the user is better served in having a simplified approach to complaints handling which is in line with that in relation to other public services.

As we have documented (for example in SPSO commentaries and annual report 2010/2011\(^1\)), the experience we have of reviewing CRCs has caused us concern. We agree with the issues raised in the consultation document relating to the independence, timeliness and membership of CRCs. We also question the consistency with which the CRCs are being applied across the 32 local authorities and the scope of what the CRCs are currently considering.

Fundamentally, it remains vital that complainants have access to a streamlined process to follow allowing to them to receive a prompt response to their complaints from the provider and the opportunity to seek independent external review of the decision and the administration of the service within a similarly quick timeframe rather than have to negotiate an additional and time-consuming stage of review.

  If Yes, recommended Improvements

  N/A

---

\(^1\) Available on www.spso.org.uk
• **Option 4** - The SPSO expanding its remit to take on a similar role to that of the CRCs. This would provide the SPSO with a remit over social work decisions in line with its role in relation to NHS complaints. Please specify the main benefits of the SPSO taking on this expanded role.

**Yes** – However, it is important to point out that this option, were it to be supported by stakeholders and the Scottish Government, would need to be considered more formally through the parliamentary process and would require input from the Scottish Parliamentary Corporate Body (SPCB) from an early stage. It would also be subject to the considerations below in relation to how exactly this new role for SPSO would be defined and in relation to resource implications for this organisation.

**Reason**

The importance of social work service decisions and the impact that they have on individuals and families mean that it is an area where there is a strong argument for a fully independent external review. One of the aims of the original CRC model was to “bring an objective and independent eye to bear on complaints to give the public additional safeguards that their wishes and needs are being fairly considered and their complaints properly investigated”. As the consultation paper sets out, the current CRC model provides for CRCs to express disagreement with, for example, policies or professional judgement.

**Investigative powers**

Under the SPSO Act 2002 (The Act) the SPSO currently has the power to investigate complaints about maladministration or service failure. We cannot overturn decisions where a body has made a decision within its discretion. We can look into whether a body has followed a proper process in reaching its decision but, if the body has followed a proper process, the SPSO cannot decide that the wrong decision was made. There is one exception to this within the SPSO Act and this relates to decisions made by the NHS on clinical judgement where the SPSO does have a power to investigate decisions.

Matters considered by CRCs include the provision or non provision of social work services, the quality, extent and operation of social work services, the way in which decisions were arrived at and the decisions themselves (including financial assessments). The SPSO currently investigates the handling of the complaint by the CRCs, including, for example, whether the CRC was conducted properly, whether the CRC received all relevant information or whether the council had properly considered a CRC decision or recommendation. However, we can’t look at the subject of the complaint such as decisions or professional judgements about a person’s needs or the services they get. Neither can we look at complaints about financial assessments, although we may be able to consider complaints from people financing their own care arrangements
through Direct Payments. We can’t be used to ‘appeal’ a CRC decision. In short, we can normally only consider an outstanding administrative or procedural matter relating to the CRC or the subsequent actions of the council.

It is clear, therefore, that, if a decision was reached to abolish CRCs and provide SPSO with a similar role, this would require a wider SPSO remit over the substance of social work decisions. This would require legislative change to the SPSO Act 2002 to provide the SPSO with a remit over social work complaints, similar to the role SPSO has on health.

Resourcing
As well as legislative change, it would require additional resource for the SPSO to recruit and develop skills and advisors in social work services to enable it to make judgements in relation to the substance of social work complaints. The SPSO currently has a bank of advisors available to provide advice to SPSO on clinical matters. A similar arrangement would be required in relation to social work. It is not possible to provide an estimate for this without further definition of the exact remit proposed for the SPSO and the exact definition of complaints to be subject to this remit. However, our experience of changes in complaints handling arrangements suggests that we may see an significant increase in the volume of complaints in this area at least in the short term (on taking on the role of the Scottish Prisons Complaints Commission in 2010 SPSO received an average rate of approximately 50% more cases than the SPCC considered in its final year). There would, though, also be savings for the 32 local authorities who would no longer have to administer the additional CRC stage.

Independence
We have said above that, in practice, the operation of CRCs has caused us concern. The fact that it is administered by the local authority and only has the power to make a recommendation to the appropriate local authority committee has led to a perception that CRCs are not independent enough to undertake the role of reviewing the merits of the decision. Providing SPSO with this role would ensure a greater degree of public transparency and should increase confidence that, as originally intended, there is an objective look at such decisions.

Social care/health/social work – aligning complaints
The strength of option 4 is that it would fulfil both the need to have a streamlined internal model for handling the complaints as set out above while ensuring that the individual could have an objective, external view of decisions which may, as decisions made by the NHS also do, have a profound impact on them.

It is also a model that would be adaptable enough to cope with the changes which are being brought about by the move towards integrating health and social care. It is currently the position that if matters previously the responsibility of a social work department are transferred to the NHS,
the NHS not only needs to run two complaints processes but our organisation will be in the position of having to consider whether the judgement is NHS clinical judgement and we can review or not.

As we expand on below in relation to question 4, there is an important consideration in relation to wider arrangements for social care, health and social work complaints. With the move to integrate social care and health we believe there would be a benefit in aligning the SPSO’s role in social work with its role in relation to health complaints.

**Question 1b Are there any of the above options that you do not feel should be considered? please give reasons why.**

For the reasons outlined above we do not support option 3 for the retention of CRCs. We also do not feel that option 2 relating to a model CHP with longer time should be considered without strong evidence that there is a need for this in relation to the complaint.

**Scottish Ministers’ Regulations and Directions**

Section 5 B of the Social Work (Scotland) Act 1968 provides that Scottish Ministers may by order require local authorities to establish a complaints procedure. Such an order is in place – *The Social Work (Representations Procedure) (Scotland) Order 1990* (SI 1990/2519). Sections 5 and 5B also provide guidance and direction making powers in respect of local authority complaints procedures. SWSG 5/96 contains such guidance and directions. Local authorities have a duty to comply with directions made under the 1968 Act.

The Regulations and Directions can be amended in line with the new social work complaints procedures, but we’d welcome your views on whether or not they are still needed.

**Q. 2 Are Regulations and Directions still required in order to ensure that appropriate social work complaints procedures are adopted by all local authorities or will clear guidance be sufficient? Please tick and give reasons if you wish.**

- Directions still needed

  - [ ]

  or

- Clear Guidance Sufficient

  - [X]

**Reasons**

The Public Services Reform (Scotland) Act 2010 provided the SPSO with a statutory role in relation to the publishing of model CHPs for authorities under
its jurisdiction. Once published, authorities to which these CHPs apply are under a duty to comply with this CHP. If they do not comply, the Ombudsman has a power to declare an authority non-compliant. We believe that the local government CHP will provide sufficient guidance for local authorities and the Ombudsman’s powers provide sufficient statutory authority to ensure that the arrangements are adopted. There will though be a need for statutory changes to our own powers if it is decided that we should fully take on the role of the CRCs.

**Appeals**

The SPSO guidance on model Complaint Handling Procedures explains the importance of being clear about what a complaint is. This is an issue that needs to be carefully considered for social work services and it would be helpful to have views on whether or not there would be benefits in drawing a distinction between:

- complaints about policies and how they have been applied that may be more appropriately dealt with through an appeals process e.g. disagreement with the result of a financial assessments, the way eligibility criteria have been applied, or charging policies; and

- complaints about practice e.g. the way an individual has been treated by a social worker, delays in processing enquiries etc

The current guidance states that:

*People with social care needs and their carers are entitled to have some-one take a second look at assessments, service decisions and the way in which matters have been handled. It is a clear aim of Government policy, reflecting the Citizen’s Charter, to expose procedures and professional decision-making to more scrutiny than hitherto and it would be inconsistent with that policy to restrict the types of case to which complaints procedures relate. Local authorities can have alternative appeals arrangements for responding to certain types of complaints. However, complainers must have the right to refer their complaint to the formal complaints procedure at any stage, and should be made fully aware of this right.*

**Q 3a Should appeals procedures be established by all local authorities.**  
(In the interests of good administrative justice – individuals would retain their right to complain at any stage.)

No

We have argued above that there is a need to retain what was originally planned to be the CRC role, that is to retain a place for an independent and objective look at decisions made. We have argued that the best way to achieve this is to give us the same powers over this area as we do over health
In theory, this could be achieved by having an appeals process separate from the complaints process and leaving our powers as they are. However, the benefit of looking at the decision within the complaints process is that it allows for one body to take a holistic look at the whole experience and journey of the person. It can be difficult, for example, to take out concerns about the outcome of an assessment (the decision) from the complaint that the person was not treated with appropriate dignity and respect during that process. There is a need to focus not on the decision but on the person and an approach which starts with decisions and appeals can run the risk of being decision-centred rather than person-centred.

In arguing for this position, we do accept that local authorities have significant democratic accountability and also that not all local authority decisions should come under either any broader remit of this organisation or a formal appeal route. The argument here is one which we are narrowly applying to this area where there may be particular vulnerability and also where separating service decision from service delivery may not be appropriate.

We would, though, like to mention that, in our experience, purely financial decisions, such as those relating to the possible sale of a family home for care funding, do not sit easily alongside issues about service delivery and it may be both possible and desirable to deal with these separately through an appropriate appeal route.

Possible changes in the delivery of health and social care may also be significant. As we move to shared services and joint delivery, individuals should be able to raise issues about the whole of their experience easily and without having to access different systems. It may be difficult to explain to someone, for example, that we can look at the decision made by an NHS member of staff in some cases but not if they are providing social work type care.

**If YES**

Q 3b Would it be helpful for the working group on social work complaints to develop good practice guidance on appeals procedures?
Q 4  Do you have any other comments you would like to add?

As is clear from our response above options 1, 2 and 4 are not mutually exclusive and it is possible to envisage a solution where more than one of these options apply.

As we have said above and also in our responses to the Health and Sport Committee’s Inquiry into the Regulation of Care for Older People, it is also important to widen the focus of the review to ensure future arrangements align with the wider arrangements for handling social care complaints and, in particular, arrangements arising out of the future integration of social care and health.

We continue to have concerns with the overall complexity of the current arrangements for handling social care complaints and feel that further detailed work is required to ensure future integration of social care and health does not add to the confusion. This will require a holistic look at the existing statutory schemes guiding social care, social work and NHS complaints.

The current arrangements for social care and social work complaints remain complex with different routes, different procedures and different powers for complaints, depending on the provider and depending on the route chosen by the complainant. It is possible for complainants, currently, to have their complaint looked at by three different agencies with differing routes of escalation (NHS, local authorities, Care Inspectorate).

The SPSO does not have jurisdiction over social care providers themselves. That role is taken by the Care Inspectorate, with the SPSO only able to consider the way the Care Inspectorate has handled such complaints. As we have outlined above, our role in relation to social work complaints is normally restricted to investigation of complaints about the operation of the social work complaints procedures rather than the substance of social work complaints.

Given this complexity we believe there is a need to review the statutory schemes guiding social care, social work and NHS complaints to ensure that complaints that involve several or jointly delivered services can be dealt with effectively and to minimise potential confusion amongst members of the public. It may be that such a review is required before consideration is given to the review of social work arrangements by the Government’s proposed working group. Agency clarity is essential and we would support a discussion looking at revised arrangements for wider social care as a whole.

As a point of principle, simplicity from the complainant’s perspective should be uppermost, as underscored in the Sinclair Report. Whatever the complexity of the service delivery, as a minimum, there should be a single point of contact for the complainant and a single, co-ordinated response to their complaint.
On resuming—

Public Bodies (Joint Working) (Scotland) Bill: Stage 1

The Convener: Agenda item 3 is our last evidence session on the Public Bodies (Joint Working) (Scotland) Bill at stage 1. We will have a round-table discussion with what I could loosely call regulatory, scrutiny and complaints bodies. As is usual with a round-table session, I will introduce myself and ask everyone to do likewise, although there are many well-kent faces around the table. Many of you have been here before, but it is useful to have that information for the record. I am the convener of the Health and Sport Committee and the MSP for Greenock and Inverclyde.

Bob Doris: I am an MSP for Glasgow and the deputy convener of the committee.

Claire Sweeney (Audit Scotland): I am from Audit Scotland.

Annette Bruton (Social Care and Social Work Improvement Scotland): I am from the Care Inspectorate.

Richard Lyle (Central Scotland) (SNP): I am an MSP for Central Scotland.

Paul Edie (Social Care and Social Work Improvement Scotland): I am from the Care Inspectorate.

Gil Paterson (Clydebank and Milngavie) (SNP): I am the MSP for Clydebank and Milngavie.

Dr Denise Coia (Healthcare Improvement Scotland): I am the chair of Healthcare Improvement Scotland.

Rhoda Grant: I am a Highlands and Islands MSP.

Jim Martin (Scottish Public Services Ombudsman): I am the Scottish Public Services Ombudsman.

Aileen McLeod (South Scotland) (SNP): I am an MSP for South Scotland.

Robbie Pearson (Healthcare Improvement Scotland): I am director of scrutiny and assurance at Healthcare Improvement Scotland.

Nanette Milne: I am an MSP for North East Scotland.

Maureen Falconer (Information Commissioner’s Office): I am from the Information Commissioner’s Office.

Mark McDonald (Aberdeen Donside) (SNP): I am the MSP for Aberdeen Donside.
Paul McFadden (Scottish Public Services Ombudsman): I am from the office of the Scottish Public Services Ombudsman.

Malcolm Chisholm (Edinburgh Northern and Leith) (Lab): I am the MSP for Edinburgh Northern and Leith.

The Convener: I thank all our guests for that. Richard Lyle will open up the discussion with the first question. As always, we will give our witnesses preference over the politicians around the table. We want to listen to what you have to say today—it makes a change from having to listen to politicians. We will see if we can keep to that.

10:00

Richard Lyle: I welcome all the panel members. I will begin with the subject of public involvement. The committee has heard extensive evidence about the involvement of key stakeholders such as the third sector and different professional groups. However, the committee has heard less about public involvement. Last week, our witnesses stressed the importance of including the public, patients and carers. How should the bill involve the public, and is it clear about the involvement of the public?

Maureen Falconer: One of the issues that we have with the bill relates to the models that are used. I am thinking specifically about how the public will exercise their rights under the Data Protection Act 1998 should they either wish to make a subject access request or have an issue with the information that is recorded about them. Of the two models of public involvement, we would go for the body corporate model as opposed to the delegation model because we see the latter as being quite confusing for members of the public who want to engage with the organisations concerned regarding the delivery of services.

Annette Bruton: From a regulatory point of view, we believe that hearing the public voice as part of the evidence for our inspections is really important, and there are a couple of areas in the bill that might help to increase public participation in the inspection process. One of those is the principle of person centredness. We involve laypeople in our inspections, and we take more than 3,000 complaints a year from members of the public specifically about services, which we investigate. That already gives the public a voice. The protection of people’s human rights is also fundamental to the bill, and the public could either come to us with complaints or raise such matters as part of the work that they do in inspections to ensure that those rights are being upheld. We think that there is some potential for us to increase public participation in our inspection regime.

Claire Sweeney: Audit Scotland has long advocated users and carers being at the heart of the way in which services are delivered, and what is coming through strongly is the important role that local professionals such as general practitioners and social work staff play in shaping how services develop over time. However, it is less clear how the public will be involved and, as the bill develops, we are keen to hear more about how their voice will be heard, as it is very important that it is at the heart of service delivery.

Dr Coia: I echo what has been said. The Scottish health council, which is part of our organisation, is responsible for delivering the Scottish Government’s national person-centred health and care programme, which will extend out through community services. We also have a statutory duty of user focus and feel that, in addition to what the bill provides, we already have the framework in place for that.

Robbie Pearson: The Scottish health council already has a participation standard that is mandatory for national health service boards. We assess NHS boards against that standard in terms of how they engage with the public and service users. In addition, local authorities have the national community engagement framework standard. We have an opportunity to align the Scottish health council’s participation standard and local authorities’ community engagement framework standard. That would give us an indication of how we could join up and arrive at a common language about engagement with communities and individuals.

Jim Martin: Structures can be very easy for administrators to find their way around. The issue that I have is that, whichever structure is in place, it must be easy for the ordinary person to access and get around. When we look at structures, the first thing that we should look at is not how they will be administered but how accessible they will be.

Secondly, when people are in that system—one that is easy for them to access—there must be a simple and standardised way for them to raise any issues that emerge. The question was about involvement, and there is a difference between involvement and access. If people are genuinely to be involved in the care and the healthcare that they receive, they must have a simple, standardised and effective means by which they can engage.

Richard Lyle: Those were interesting answers. I have a follow-up question: does the bill comply with the Christie vision of services that are designed with and for people and communities?

The Convener: Do the witnesses think that the bill will make things better? Is it designed around
the needs of service users? Is it accountable to those people?

Annette Bruton: As we said in our submission, we believe that that is what the bill’s principles seek to do, so it has the potential to do that.

The Convener: Does anybody want to be more enthusiastic? I do not intend that to sound too sarcastic, because I think that what has been said reflects a lot of the evidence that we have already heard. Many MSPs, including members of this committee, are ambitious to make the bill work because what is already in place could be better for service users and others. However, there is much more work to do, between the bill and delivery. Does Robbie Pearson want to come in?

Robbie Pearson: Yes, I just want to develop that. It is about how we engage not just with service users but at a locality level. There is a real opportunity through the bill and locality planning for communities to be more closely engaged than they have been hitherto.

Paul Edie: As Annette Bruton said, the bill’s principles are right. One of the biggest obstacles to getting better outcomes for service users is entrenched organisationalism. Anything that we can do to break down the barriers is to be welcomed. Across the Scottish body politic in general, there is consensus on that. Politicians will perhaps disagree about the emphasis in how that is done, but the general direction of travel is to be welcomed. What we are all about is trying to get better outcomes for frail and vulnerable people.

The Convener: How do we change the culture?

Claire Sweeney: That is the point that I was going to make. There have been lots of attempts to resolve some of the challenges around the lack of integration of health and social care services. We welcome the approach that puts the user at the heart of the changes, which is important. In theory, the bill is about trying to get round artificial divisions between services. There is a real appetite for that to be taken forward at a local level, and we are certainly starting to see signs of the development of partnership work in a much more serious way than we have ever seen in Scotland.

Dr Coia: Just to build on that, one of the great opportunities in the bill is the commissioning powers that it will give health and social care partnerships. The commissioning powers will be partly based on standards. Apart from having both health and social care standards, it is important that we have standards and outcomes that are about what people genuinely think about the services that are being delivered. To build on Robbie Pearson’s point, it is about asking people in a locality what they think about the services. I think that we will be able to answer the question in

the next couple of years, if commissioners adhere to the standards that have been set and have person-centred outcomes.

Mark McDonald: On the public interface, Mr Martin said that there needs to be standardisation, which leads us on to issues around the complaints system. NHS Dumfries and Galloway told us that it felt that there was no urgent need for a standardised complaints procedure. However, the ombudsman’s submission states that

“the areas of health and social care contain competing legislative complaints processes and, without legislative change, there are barriers to these processes working together.”

Perhaps Mr Martin could comment first, but I would also be interested to hear other views on the urgency of the standardisation of complaints. How do you envisage the complaints procedure working in a standardised way? To whom would complaints be directed? Would there be a hierarchy within which complaints could be escalated? That happens now, albeit that we have different hierarchies. My question is really this: what is the urgency and what would the ideal complaints procedure look like?

The Convener: I think that that question is directed to you, Mr Martin.

Mark McDonald: Initially.

Jim Martin: It sounds like it.

I ask you to look outside this room for a second. A parallel development is happening in which the Government is trying to bring the social work complaints procedure more into line with what is happening in other parts of the public service. The word “service” is an important one. The question for me is whether, with integration, we are creating a service or finding a means by which we are delivering services. In my view, the public look at this as a service, so the case for standardisation is clear in the public mind: if we do this, it has to be about that.

At the moment, there are many different routes on the complaints side. For example, I am restricted in what I can look at in social work, but if the Government reforms go through in the way in which they look as if they will, I may have more powers to look at social work issues. I have different powers in relation to what I can look at in social work and health. In health, I can look at clinical decision making, but in social work I cannot look at the professional judgments of social workers. We might have a holistic approach to delivering services to ordinary people, but we make it extremely difficult for people to find their way through the system when things go wrong.

I understand that the procedure in Highland, where services have been brought together, is that
the opening portal for complaints is through the health system, and thereafter people are signposted to either local authority complaints or health complaints. To make a mess of the English language, I note that that is non-joined-upness. If we want to get the system to join up, we have to ensure that it is as easy as possible for people, when things go wrong, to get holistic solutions to the holistic problems that they face. The need for standardisation is there.

I do not think that the social work provisions will change at the same pace; they might lag a year or maybe two behind the bill. If we are really being public and patient centred, we should look at the system from the perspective of the client and the customer on the way in. Do they see one service or a multiplicity of services? What do we want them to see? Can we arrange things so that, when something goes wrong, it is as simple as possible for them to get things fixed as quickly as possible?

The Convener: Does anyone else want to comment?

Annette Bruton: I absolutely agree with everything that Jim Martin has just said. However, I want to make sure that we protect the level of complaints handling that the public currently enjoy. When we carry out our complaints investigations, we do so on behalf of the complainants and we try to work out with them what they are complaining about and how we can help them to resolve the issue.

Last year, we looked at more than 3,000 complaints. Notwithstanding all the things that Jim Martin said—we come up against barriers too, because we cannot go any further than the social care environment—the advantage for people of the current complaints system in social care is that, when we carry out a complaint investigation for them, it prompts an inspection. If someone comes to us and complains about the care that their mother is receiving in a care home, we can not only investigate the complaint but, depending on its seriousness, immediately go ahead and inspect the home.

It is not simply a case of having a coherent, joined-up complaints system that is systemically different from what we have now. We need to be able to use complaints to get immediate solutions to people’s problems.

The Convener: You must concede that the number of people round the table is a physical representation of the complexity of the system. In many cases, it is difficult even for elected representatives, with the resources and help that we can get and our experience of casework, to get families through the system, so how much more difficult must it be for others? We have two inspection agencies—Healthcare Improvement Scotland and the Care Inspectorate—and we have all these people round the table. We want seamless services so that, irrespective of where someone is on their journey, they can expect the same quality of care. It seems obvious that we should have a system with one entry point to ensure that people are picked up and supported.

Mark McDonald has another question.

10:15

Mark McDonald: My question is on the scope for standardisation. The bill will not cover all social care and health services—it focuses on adult social care and health services, although obviously there is scope for expansion, depending on the use of ministerial powers. How do you envisage the standardisation approach? Do you see the bill as an opportunity to standardise complaints procedure across the board, even though we perhaps do not have integration across the board? We could end up with a complicated picture if one part of the complaints process is standardised, but individual complaints procedures remain for the rest of the system.

Jim Martin: I refer the committee to the work that was done by Lorne Crerar and then by Douglas Sinclair. As I think I have said to the committee before, one of the most frustrating things that I find about the Parliament is that the pace that we go at between taking a decision for change and implementing the change sometimes seems very slow. Lorne Crerar was asked to start his work on standardisation and scrutiny in 2007. We are now in 2013 and we have just begun to implement standardisation across local authorities, housing associations and other bodies. If we are serious about integration, all aspects of integration should be looked at, which should include complaints. It is a matter of some urgency. I would not want a system to be put in place and then have a lag on the complaints side that causes people to become frustrated with the system and begin to lose confidence in it. I urge people to think carefully about that.

Annette Bruton makes a good point about the way in which we handle complaints. The bodies that are represented around this table have greater scope for joint investigations on some aspects. Bodies such as HIS and others have greater scope to use the information that we have in our databases to inform their inspections.

The Convener: We are on the same channel, and we share that frustration. It is 18 months since the committee made what I think were decent recommendations on HIS and the Care Inspectorate working together, and we raised all the issues that have been raised today. We share that frustration with slow progress. Do we have
around the table the same scenario that exists on the ground, which is that everybody is for change and working together until it impacts on them? We need to take pretty difficult decisions within organisations to break down those barriers. Is the cultural resistance that we perceive on the ground at the point of delivery reflected right the way up? Are we not all guilty of that?

Dr Coia: I do not think that we are culturally resistant. We have a huge opportunity in the integration bill. The Care Inspectorate and Healthcare Improvement Scotland have begun pilots on integrated scrutiny, which have been successful. Also, I do not think that we have issues about feeding in complaints. As organisations, we have started meeting regularly with the Scottish Public Services Ombudsman to look at the pattern of complaints in different areas.

Annette Bruton made the point that the issue is not reluctance to join complaints systems together; it is how we ensure that we provide absolutely the best service when somebody complains. I think that she was saying that the Care Inspectorate’s process for dealing with complaints is to look at them properly and work out what is actually wrong. The same system exists in the Scottish Public Services Ombudsman in relation to clinical care. The public ombudsman’s office can do huge in-depth deep dives into what is really happening clinically. Our challenge is to join the two together. I totally agree with you on that, and we would love to join them together but, when we do that, give us a chance to have some pilots to ensure that we do not lose any of the specialist expertise. I would say that it is not a cultural issue.

The Convener: The frustration expressed by Jim Martin and by ourselves is shared by the cabinet secretary. That is why we have the legislation, as Claire Sweeney said. Malcolm Chisholm, who is here today, previously attempted to encourage that change over a long period of time. The legislation has been brought about by frustration at not having been able to change the landscape and focus on people who are using the services. That is why we are here. What is Claire Sweeney’s view on that?

Claire Sweeney: The scale of the challenge becomes clear to us through local audit work looking at how public resources are being spent across Scotland. It is a huge cultural change for people at all levels and there is a need for really strong, clear, local leadership and a shared vision, and for clarity about how resources will be used and to what end. Most important, the thing that has been missing in the past is focus on the impact, on the difference that it is actually making to people, and clarity about what the intended change is supposed to be. Those things will help to move us forward, but the scale of the challenge is significant.

We have talked about complaints, but there is a raft of other issues around workforce, skills, whether the resources are in the right places, and giving people time to think differently. For example, GPs are important, but do they really have time and do they really have space to contribute to a challenging agenda that involves working in a different way? There are lots of issues to unpick.

The Convener: Does anyone else want to respond to that? Does silence indicate agreement?

Robbie Pearson: I am certainly in agreement. A crucial element is ensuring that, when we talk about health and social care integration, we bring together elements such as GPs in local communities. The increasing engagement of GPs in this agenda will be a marker of success in the future, whereas it has not been so robust with the community health partnerships.

Rhoda Grant: We have spoken about complaints, and I note that Audit Scotland’s evidence also mentioned the fact that it was not clear that the different bodies making up the new corporate body would have different audit procedures in place. We also heard previously that there are different statutory procedures in place for such things as staff governance between health and local government. I wonder how a new body gets over that, because we have heard in detail about how messy complaints can be. Once you get into staff governance, audit and the like, how can you ensure that the new body is workable? That is one of the concerns that has been brought to us.

Claire Sweeney: Audit Scotland’s submission raised technical issues and broader issues that we would want to see addressed going forward. There are technical issues around how the body corporate would work in practice, with questions such as whether there would need to be a set of accounts, whether auditors would have to be assigned to the new bodies, and other technical details underpinning how the body corporate process might look.

Highland is up and running with the lead agency approach, so we are already tackling the challenges around the financial audit process for that model, and there has been a lot of useful learning from that approach. One of the bigger issues that we flagged up in our response is that the new organisations will be responsible for a significant amount of resource across the local area, and there are also issues of local power balance, the capacity to provide strong, local leadership, and the technical skills needed to
support that arrangement. We want to see those issues addressed.

Dr Coia: I want to raise the issue of clinical governance in the new bodies corporate. In Healthcare Improvement Scotland, we currently assure clinical governance throughout the NHS. As far as the body corporate is concerned, it is important to have arrangements around both clinical governance and care governance in order to deliver the quality and safety of services in clinical terms. We are now beginning to have discussions about clinical governance within the body corporate.

Malcolm Chisholm: Claire Sweeney’s contribution, and her paper, raise two of the central issues: governance arrangements and resources. I suppose that the question of how resources will be determined is a straightforward one. We might wish to discuss that in more detail in a moment.

The discussion around governance raises wider issues. In the first evidence session, quite a lot of people were wondering what the relationship was, within the body corporate model, between the chief officer and the health boards and local authorities. There is still a lack of clarity on that. Audit Scotland says:

“It is essential that there is more clarity about how the Chief Officer will report into the NHS board and into the Local Authority,”

and its report makes various other comments on the matter. I do not know whether people have a view on that, or whether the bill needs to be tightened up in that regard. To quite a lot of people, it is not entirely clear what that relationship is. There is a shifting of power towards the chief officer, but it is not clear how complete that is.

Another angle came from the Information Commissioner’s Office. Its submission states:

“section 21 places responsibility and liability squarely on the person to whom functions are delegated”.

That is presumably the chief officer in the body corporate model. However, the ICO submission goes on to say:

“It is assumed that the Health Board and Local Authority will be joint data controllers”.

Even on the issue of responsibility for information, it is not entirely clear to me whether it is the host bodies from which power is delegated or whether it is the chief officer and the board to whom power is delegated.

The last point on governance is about exactly who will be involved on the board. We had long discussions in the previous two evidence sessions about the involvement of the public on the board. Audit Scotland has said that the role of health and care professionals is unclear. There seems to be a lack of clarity about the governance issue; I do not know whether people think that it should just be left to local arrangements. It seems that there needs to be more clarity on that nationally, as some aspects have significant legal implications.

Claire Sweeney: I refer to our submission, which set out some of our concerns about that lack of clarity and the need to be clearer in future. We know from previous work that we have carried out around community health partnerships, for instance, that clear accountability and a clear sharing of resources are a very powerful combination. The potential is there, but the question is how it can be taken forward in a practical sense, and that will be interesting to see as the bill develops.

Maureen Falconer: From the perspective of the Information Commissioner’s Office, the issue is about who is a legal entity. When it comes to pointing the finger of accountability on behalf of data subjects, the body corporate is easier for us, in a way, as it is a legal entity, and that is what we would pursue for some kind of redress, or to determine whether there had been a breach of a nature that was serious enough to impose a civil monetary penalty. That penalty would come from the legal entity, which is the body corporate.

Things become much more difficult, as Audit Scotland rightly says, in respect of joint data controllers. Part of the lead agency model addresses the question where we would point the finger of accountability in the event of a breach. If the breach was significant enough for a civil monetary penalty to be imposed, from whose budget would that have to come? If we have a joint data controller relationship, we have to tease out all those details very carefully in any joint data controller agreement.

That is why I said at the outset that the body corporate model is the easier one from our perspective—and also from the public’s perspective, I think. When people are engaging with a service, they point to that service as being the person from whom they will seek redress. If the board then says, “We are giving you the service, but it is not really us. You will have to go somewhere else because we are joint data controllers and that bit of the service is actually provided by another data controller,” everything becomes very messy.

10:30

Rhoda Grant: That is interesting, but one of the concerns is that, if we are to make the system work, we will have to set up a body—an entity on its own—and then reproduce all the functions of the two parent bodies such as audit, staff governance, clinical judgment and so on. How
much would that cost and how much would it remove from the services that we are trying to provide? The bill is designed to provide better services to those on the ground, but what if we spend much of the existing budgets on setting up a new service? Will it need to be funded by central Government? Will it need to be a body in its own right? How does that work and what costs will be attached?

Maureen Falconer: I am afraid that I do not have an answer to that. My perspective comes from the Data Protection Act and thinking about individuals and their rights under that act. What I am advocating will not necessarily be the best thing for costs to the Scottish Government. I could not answer that question.

The Convener: I suppose that it takes us to another question arising from previous evidence about how the organisations here fit in with the health board, the local authority, or three local authorities, the body corporate, or the community health partnerships. How do you all fit in to that? Is it a structure or structures? How does it all fit together with budgets going here and there? Who is accountable? How are the additional ministerial powers to be used if we do not understand the body corporate structure and what we should expect from it? How will we know when it is appropriate that the minister should intervene?

Claire Sweeney: Audit Scotland will clearly take a close interest in any area of the public sector that is going through a time of significant change. Resources are involved and we will be interested in how public money is being used, not least because the risks at that time are greater and significant.

There are two issues for Audit Scotland. The first is the technical arrangements around the finances. We have already touched on those and referred to them in our response to the committee. To understand what they will look like in practice, we need to understand a bit more about how those local arrangements will work in practice. It is very hard to say at this stage whether financial auditors ought to be appointed. To go back to the model being used in Highland, arrangements are already in place there. As I mentioned, lots of lessons have been learned from going through that process and those lessons are transferable to a body corporate arrangement in some cases.

Secondly, we also have a broader interest in how the inspectorate approach is working for that integrated system and, more generally, how good value from all the public sector resource is being achieved through that change. We are keeping a close eye on that and will continue to do so as some of the technical issues become resolved. Work is under way to address some of those challenges.

Dr Coia: Healthcare Improvement Scotland’s perspective is that, if we start with an older person who ends up in accident and emergency, we are interested in what they are interested in and in quality assuring the pathway that gets them from primary care, through social care, into an accident and emergency department.

We get too bound up with structures. We can set outcomes and standards for each stage of that journey so that the person can look back and reflect on whether they had a good or bad experience. In our joint inspections, we are going out and looking at those pathways to see whether they are working. A pathway will take a patient from primary care into strict nursing, through the body corporate, which I hope will have a great opportunity to provide intermediate care in the community, which would be a step up from having to use an accident and emergency department.

If we set the right standards, measure the right outcomes and ask people how the pathway experience was for them, that is what we and the Care Inspectorate quality assure. We will not be quality assuring the structures that are in place.

Annette Bruton: To build on the point that Dr Coia has just made, the new inspections that we are developing will be able to be carried out irrespective of the structure and will follow outcomes for people.

We have been able to demonstrate over the past seven or eight years how we do that with child protection and children’s services where, irrespective of the structure inside a local authority or, indeed, the community planning partnership, we have been able to examine the outcomes and impact on children and young people. In our triennial report, we have recently been able to reflect on where that partnership working has got better.

To support Denise Coia’s point, if we work back from the outcomes, inspection can probably be flexible enough to deal with the structures that are deemed to be necessary locally.

Bob Doris: It is almost as if we had discussed how to provide a seamless link, because I have been sitting patiently waiting to ask about the inspection process.

Sometimes, the Care Inspectorate can move quickly. Before the committee’s inquiry into care for older people ended, Nicola Sturgeon, who was then the responsible cabinet secretary, moved to improve the inspection regime for the sector. Sometimes, things can move quickly and effectively. It is important to put that on the record.

I am interested in care pathways. I know that there has been joint working between the Care Inspectorate and Healthcare Improvement
Scotland. How close are we to having one inspection regime? We are talking about integration, so rather than the Care Inspectorate or Healthcare Improvement Scotland going out, can we not just have the relevant inspector—I am not fussed what the organisation is called, to be frank—going out alone with a joint assessment tool and doing the inspection?

I hope that that is where we are going, so some comments on that would be useful, but I should stick to the details of the bill. I notice—I will read from the notes—that

“The policy memorandum to the Bill outlines that the Care Inspectorate and HIS will be required to ‘scrutinise strategic plans for quality and standards, and to ensure the plan will effectively achieve the objectives of the integration plan and the nationally agreed outcomes.’”

That is a widening role and an important check and balance within the system for the strategic plans.

I would welcome comments from Healthcare Improvement Scotland and the Care Inspectorate about how ready their organisations are to do that. How close are we are to having a single accountable officer for those inspection bodies—rather than both organisations doing it—doing the job so that the service and the inspection side are integrated?

Annette Bruton: I am certain that Robbie Pearson will also want to come in on that question.

If we look solely at older people’s services, we would say that we are making really good progress. As far as those who are being inspected and, more important, those who receive the services are concerned, it does not matter whose logo is on the report; they will get a single report that will pull together expertise from Healthcare Improvement Scotland and the Care Inspectorate that will comment on, and provide assurance about, the care pathway.

The landscape is a little bit more complicated than that, however; in terms of children’s services, Healthcare Improvement Scotland will be involved to some extent, but so will Education Scotland. We face in different directions for different stakeholder groups, so we need to think about the landscape for protecting all vulnerable people, including through housing support and criminal justice. The work that we have done on children’s services has demonstrated that those who receive inspections and those who benefit from them see it as a single inspection methodology and do not distinguish between inspectors.

Robbie Pearson may want to comment on the progress that we are jointly making on older people’s services.

Robbie Pearson: There is a real appetite and opportunity to do something imaginative in the joining-up of scrutiny. It would be difficult for us, through scrutiny, to make demands about integration in service delivery but not to demonstrate integration ourselves.

We have already undertaken three pilots—in West Lothian, Inverclyde and Perth and Kinross—which have been excellent opportunities to demonstrate joined-up working between HIS and the Care Inspectorate.

However, we also need to respect the different skills and expertise that each body brings. Healthcare Improvement Scotland will bring certain specialist expertise, as will the Care Inspectorate in relation to social work input, for instance. Notwithstanding that, our inspections are now looking at the journey of patients. In one inspection, for example, we looked at the case records for about 90 older people, of which about 20 were identified as including areas for further follow-up.

Such inspections provide a real opportunity to show that we are looking at the pathways of care, the things that precipitate hospital admission and the things that prevent discharge from acute hospital settings. As we take that forward, the bigger opportunity for us will be to link that to a broader and more comprehensive assessment about the quality and safety of NHS care within individual systems, in the context of what we are doing with the Care Inspectorate.

The Convener: Did those pilots include residential acute settings as well as community settings? What did the pilots examine?

Robbie Pearson: The pilots looked very much at community-based services. Obviously, we have a separate inspection regime for acute hospital settings, but the issues that we identify within acute settings, including the things that bring people into hospital through accident and emergency departments or the things that prevent discharge, have resonance with our wider inspections with the Care Inspectorate.

The Convener: When will that information be available?

Robbie Pearson: Do you mean information on the joint inspections?

The Convener: Yes.

Robbie Pearson: We will share the key messages from that in due course. We will not publish reports on the three pilots, but we will learn from them how to apply the methodology.

Dr Coia: I add that we should remember what both our organisations need to do in addition to straightforward inspections. In looking at care
pathways, it is important for conditions such as asthma or diabetes that the right treatments and facilities are available. The evidence that Healthcare Improvement Scotland uses for that comes from the SIGN—Scottish intercollegiate guidelines network—guidelines and a wide range of standards that we produce. In the same way, the Care Inspectorate has specialist expertise in children’s inspections, with links across to education.

It is nonsense to talk only about the structures, but it is important that we do not, in terms of standards and outcomes, lose specialist expertise when we combine the inspections and complete the circle. I agree that it is nonsense for the public that institutions are inspected by different people from different organisations doing different things. When we go out to inspect, there should be one group of people doing one thing.

Claire Sweeney: It is also worth mentioning that there are processes whereby inspection agencies come together to share knowledge about their local area, to think about the risks and to consider what those mean for inspections. Post Crerar, a process was established to draw those issues together in a place-based focus, I guess. That is a slightly different cut of the same issue.

Bob Doris: I accept that the important thing is that the public have an identified individual who is responsible for the inspection and to whom they can go for information. We also need to keep the expertise behind the scenes, in whatever way that is done most efficiently. However, no one has made specific reference—I do not know whether this omission means that you are supportive of the proposal—to providing quality assurance of the strategic plan for integration. Can we get something on the record about that?

Also, given that the bill is not simply about health and social care integration but about public bodies’ joint working, there is scope to include a range of services that are provided by local authorities and health boards—older people’s care, children’s services and housing—in partnership working in the years ahead. Therefore, are there other agencies that should in the future provide quality assurance for the strategic plan? It is getting ahead of ourselves slightly, but as well as hearing about the importance of your input in signing off such strategic plans, I would be interested to hear whether you anticipate that any other bodies might have an overview of plans in the future?

Annette Bruton: That is a very important point and we missed it out. The Care Inspectorate has certainly been discussing with Healthcare Improvement Scotland what we could bring to strategic commissioning, which we think will be a key part of the plan. Obviously, Audit Scotland will be interested in strategic commissioning from a governance point of view, but we believe that jointly, we could bring quite a lot of assurance and, indeed, could undertake follow-up action if necessary.

We can look at whether the intelligence that is being used to commission services strategically is having an impact on the front-line services that we inspect. In other words, a strategic commissioning plan may seem like the right plan for an area, but we can test that by examining the services that people receive and working back from that.

We believe that we have, collectively, a lot to offer on that aspect of the bill, but I can see that Audit Scotland would also want to have a view. We work jointly with Audit Scotland on a number of strategic inspections when we might want to have a view about leadership and governance, as well as a view on the quality of people’s care outcomes. It is a very important point.

The Convener: Is there anything to stop you from carrying out that assurance now? I think that the HIS submission mentioned sufficient powers or additional powers.

Robbie Pearson: Certainly, there is nothing that cuts across our being able to do that at the moment; the work that we are already testing out with the Care Inspectorate demonstrates that. We would encourage the inclusion of a reference to scrutiny on the face of the bill, through an amendment. We should be working within our existing relationships, not letting structures get in the way, and we should push on with assurance, which is what everybody wants.

The Convener: To go back to cultural change and what makes it happen, we have just heard from Robbie Pearson that there is really nothing to stop us—we have sufficient powers to carry out that cultural change. I suppose the obvious question is, “Why aren’t we getting on with it?” What is going to drive that cultural change? Will it be the legislation itself? Will it be the ministerial powers? Will it be the shifting of budgets? Will the more focused human rights agenda that is at the heart of the matter help to change the culture?

Dr Coia: I will base my answer on my experience, because I am very old.

The Convener: Not at all.

Dr Coia: I have been through this before. I have worked in integrated teams; as you know, psychiatrists have long had integration with community mental health teams. For me, it boils down to leadership. It is about setting the right space. Once you have that and the principles, it is
about leadership at local level because it is people and leadership that drive change. The bill gives us a very good framework, within which we have sufficient powers in which to operate.

**The Convener:** Do service users have sufficient powers, in terms of their enforceable rights, to change the culture to one with a person-centred focus? That is a change that everyone believes should happen.

**Dr Coia:** It absolutely part of our job in the Care Inspectorate and HIS to be working for the public. We should be held to account for how we involve the public in our quality assurance of services, including how the new community health and care partnerships are involving the public. It is very much part of our role to answer that question.

**Annette Bruton:** Our involving people group met last week; it was keen that I say to the committee that one way to hold people to account is to listen equally to the voices of service users and of those who provide the services. The group believes that holding the people who run services to account for the outcomes is how to get integration.

**Malcolm Chisholm:** I agree with what has been said—cultural change rather than structural change is the thing. However, I still think that the resource issue will be key to this and there is not really that much in the bill about that. There is scope for great variation in terms of what money is put in and how it is put in.

I know that Audit Scotland had serious concerns about the arrangement, in terms of how budgets would be determined. Do the witnesses have any views on that? Most of the witnesses have been content to leave that to local discretion, but one or two have said that there should be more central determination of budgets because otherwise there will be enormous variation. The key issue that people have flagged up—how acute budgets will be involved—will be left to the discretion of health boards. I am interested to hear comments on the resource question.

**Claire Sweeney:** It is difficult to say how the audit process would follow the money because it is not clear yet how the body corporate—our model—will work in practice. In previous audit reports that we have presented to the Public Audit Committee we have been clear that sharing of resources is very powerful, but there is a need to be clear about what is devolved, who is responsible for what and where the focus will be. We would not comment on the extent to which that should be prescribed, but there is a need for real clarity about what is involved in that sharing of resources and how it will be accounted for. It will be interesting to follow that through the strategic commissioning arrangements and to consider the impact that that shift makes over time. It is a challenge. We are considering services for older people and we can see the scale of the challenge in terms of how resources across both systems are used. It is very difficult.

**Richard Lyle:** A question about VAT arose at a meeting that I attended yesterday. Does Audit Scotland have any views on how VAT will be tackled with merging budgets and so on?

**Claire Sweeney:** That is another issue that we have raised in our submission and which needs clarification. What type of body is the body corporate? That has to be decided. There are different VAT arrangements for the NHS and local government, so we need to understand what type of body it will be. Once that is established, the VAT arrangements should be clear.

That goes for several different technical issues. There are different arrangements, for example, for the finances and the accounts for health and social care services. That all needs to be much clearer so that we understand what arrangements and legislation apply and when.

**The Convener:** Has Audit Scotland been involved in that process? Other issues that have been raised include pension implications, and we have a note from the Finance Committee—it is really for the Cabinet Secretary for Finance, Employment and Sustainable Growth—about the equal pay, pension and VAT risks. Has Audit Scotland done any work on those matters?

**Claire Sweeney:** There are several strands of work that touch on that process and a lot of local financial audit work deals with those issues, so they have been addressed in the audited accounts and the annual reports for the local bodies. We produce overview reports for the NHS and the local authorities each year, and some of those pressures and risks recur. We have flagged them up over several years and we have been involved in discussions about how they could be resolved.

**The Convener:** To link that directly to this legislation, has any correlation been made—

**Claire Sweeney:** We are keeping a close eye on how those discussions evolve, but we have flagged up the risks around the need to be clear about which type of body corporate it might be. There are implications; there is a raft of issues that need to be resolved.

**The Convener:** Is all that on the record?

**Claire Sweeney:** Yes, it is—through submissions to the committees and discussions with the Scottish Government.

**Nanette Milne:** We have heard a lot this morning about the need for good local leadership. I was lucky enough to be in Inverness last week
and in West Lothian yesterday where, in their different models, there is good leadership and great enthusiasm, and everyone seems to work well together. What about areas where there is not good leadership at the moment? We know that different organisations are at different stages of this journey towards integration. Will the bill help in the areas where there is no leadership?

The Convener: Is there any response? There are no takers.

Rhoda Grant: My question is for Maureen Falconer; it is about information sharing. Last week, we heard—from the British Medical Association, I think—concerns about the single shared assessment being shared only in paper form. The view was expressed that if services are to be integrated, information technology needs to be integrated into how information is shared. That is a big challenge, given that we are talking about a body corporate, two different organisations and data protection, especially in a highly sensitive area such as health. Have you had any thoughts about how that could be done?

Maureen Falconer: With great difficulty. It is a challenge now; it will not be the case only when we have whatever body ends up being set up as a result of the bill.

Within the NHS, there is a problem in that the different systems cannot speak to one another. The situation is the same in the local authorities—many use the same systems, but not all do—and in education. The different systems cannot talk to one another. Until we have the panacea of central procurement that sends down from on high a system that can be implemented in the public sector across the board—I do not think that will ever happen—the ability of organisations to talk to one another will always be a problem.

We are contacted more and more about information sharing in the public sector. It is a question of getting it right and setting things out in a protocol. It is about understanding what we are sharing, why we are sharing it and with whom we are sharing it. It is about accountability and responsibility. Once the information is there, who is the data controller for it? There are many questions, but they are not new questions.

A round the public sector, there are good examples of good information-sharing protocols having been used successfully, which allows information to be shared and services to be delivered properly and on time. Equally, there are bad examples. The difficulty is that, for understandable reasons, the health service tends to be extremely protective of its information. That does not mean that information cannot be shared; at issue is how people go about that.

Paper is no better and no worse than electronic processing. If you look at our website, you will find that many of the breaches that occur relate to information on paper going astray or something untoward happening to it. That is less common with electronic versions, although there are issues with electronic processing, too.

It is a matter of understanding what you want to do and of having a system that allows you to do that. When new structures come on stream, people often think about getting new systems. There is a cost involved with that. An issue that we have is that people will say, “We have the very system for you,” which they sell on the basis that it is an all-singing, all-dancing system with buttons and bells on it, but when someone tries to use it, it turns out that it does not do what it was supposed to do. In that respect, as we mentioned in our submission, we think that a privacy impact assessment should be carried out, so that people can raise issues to do with privacy, and can look at where infringements of privacy could be possible and how they might be mitigated in some way.

For us, it was a disappointment that a privacy impact assessment was not done alongside the bill, because the policy development to which it relates would be perfect for a privacy impact assessment that highlighted all the privacy concerns, including those about information sharing, which is fundamental to what is proposed. Integration will not happen unless there is information sharing; our fervent hope is that, at some point, a privacy impact assessment will be done that will look at information sharing in particular, as well as issues to do with the data controller and where responsibilities lie.

The Convener: We have covered a number of issues, as we expected to do. We said that we were here to listen—I suppose that there was a bit of tokenism at the end.

We will welcome your on-going observations and input, as people who are interested in and affected by the process. Thank you very much for all the time that you have given us and for your written evidence.

11:00

Meeting suspended.
On resuming—

Public Bodies (Joint Working) (Scotland) Bill: Stage 1

The Convener: Our final agenda item is an evidence-taking session with the Cabinet Secretary for Health and Wellbeing on the Public Bodies (Joint Working) (Scotland) Bill at stage 1. The cabinet secretary has been joined by the following Scottish Government officials: Kathleen Bessos, deputy director, and Alison Taylor, team leader, both from the directorate for health and social care integration. John Paterson stays with us from the previous session.

I invite the cabinet secretary to make an opening statement.

Alex Neil: Thank you for the opportunity to discuss the Public Bodies (Joint Working) (Scotland) Bill. I will take a few minutes to say a word or two about the bill.

First, in terms of the overview, as the committee is aware, the bill provides the framework for the integration of health and social care and sits alongside the Social Care (Self-directed Support) (Scotland) Act 2013 and other key policies to deliver the Scottish Government’s personalisation agenda. The bill promotes person-centred planning and delivery to ensure joined-up, seamless health and social care services, with the aim of improving outcomes for service users, carers and their families. We will do that by legislating for national health and wellbeing outcomes that will underpin the requirement for health boards and local authorities to plan effectively together to deliver quality, sustainable care services for their constituent populations.

Importantly, the bill aims to bring together the substantial resources of health and social care to deliver joined-up, effective and efficient services that meet the increasing number of people with longer-term and often complex needs, many of whom are older. We are all aware of the Audit Scotland criticism on the failure of community health partnerships, which is why the bill focuses on bringing together the accountability of statutory partners, health boards and local authorities to jointly deliver better outcomes for patients, service users and carers. For too long, health boards and local authorities have ended up in a cycle of cost shunting. The bill requires health boards and local authorities to, first, establish integrated arrangements through partnership working; and secondly, to provide for two models: delegation to a body corporate, established as a joint board, or delegation to each other as a lead agency. The health boards and local authorities will be required to delegate functions and budgets to the
integrated partnership; as a minimum, those will be adult primary care and community care; adult social care; and aspects of acute hospital services.

Secondary legislation will set out functions that integrated partnerships will be able to include, such as housing or children’s services, where there is local agreement to do so. Indeed, there are areas across Scotland, such as West Lothian and Highland, where that is already working well. Each partnership will be required to establish locality planning arrangements, which will provide a forum for local professional leadership of service planning and will encompass an assets-based approach, building on local knowledge and best practice to meet the needs of the local population. The integrated partnership will be required to prepare and implement a strategic commissioning plan, which will use the totality of resources available across health and social care to plan for the health and social care needs of local populations. Importantly, professionals, service users, GPs and the third and independent sectors will be embedded in the process as key stakeholders in shaping the redesign of services.

Alongside the Social Care (Self-directed Support) (Scotland) Act 2013 and the Children and Young People (Scotland) Bill, the Public Bodies (Joint Working) (Scotland) Bill is part of the Government’s broader agenda to deliver public services that better meet the needs of people and communities. The bill provides the legislative framework for partnership working at both a strategic and a local level, involving professionals, service users and partners. The planning and delivery principles in the bill encapsulate the principles of Christie, putting the person at the centre of service planning and delivery, and requiring a focus on prevention and anticipatory care planning.

The Health and Sport Committee has not only taken evidence from a range of stakeholders this month, but has heard during its inquiry into integration that there is wide support for the bill’s principles. For some who are already progressing well with shadow integrated arrangements, the bill might seem unnecessary. However, I think that we are all in agreement that not enough progress has been made under the existing permissive legislation. We have not started from a blank sheet of paper, because many areas across Scotland are already working in partnership to deliver integrated services. Furthermore, we have considered the evidence from across the UK and we are mindful of applying that in a Scottish context. However, I am clear that in order to achieve consistency of progress, it is necessary to set out a legislative framework that will deliver the necessary changes to meet future demands on services.

I believe that the bill strikes the right balance in setting the framework integration, making the necessary requirements on health boards and local authorities to deliver effective integration of health and social care and providing the flexibility to develop arrangements that best suit local circumstances. I welcome the opportunity to clarify the bill further.

**The Convener:** Thank you, cabinet secretary. Gil Paterson will ask the first question.

**Gil Paterson:** It is safe to say that the oral and written evidence that the committee has received so far shows that there is unanimity across the sector that integration is a good thing that people would like to see happen. Officials may correct me, but I do not think that a single submission has said that integration would be a bad thing. However, there are some ifs, buts and maybes. It has been suggested that the reason for failures in the past has been a lack of good leadership—that seems to be one of the key factors—and that there is a need for cultural change. Given that we are hearing from everybody who is involved that integration would be welcome and should happen, why is there a need for legislation? Why not just let it happen?

**Alex Neil:** Many attempts have been made to make it happen. It has happened in one or two areas—West Lothian is the most notable example—but without statutory underpinning it has not happened. In one or two areas there is still, frankly, resistance to the proposals. We cannot deliver the quality of care that we require to deliver to our adult population—in particular, the disabled population and older people—without the full integration of adult health and social care services.

Our strong view, which is based on the evidence of the past 10 or 20 years, is that integration will not happen without statutory underpinning. We hope that statutory underpinning will not only make it happen on the ground throughout Scotland, but help to change the culture in health boards and local authorities so that people see the need to put the person—the end user, the patient—at the centre of everything that we do and to give overriding consideration to their needs rather than the needs of either a health board or a local authority.

**Gil Paterson:** I am grateful for your answer, but it leads to another question. If people are saying that the problems were due to a lack of leadership, where is the provision for good leadership? Or is that an excuse and are people protecting their empires?

**Alex Neil:** Leadership is part of the equation. It is part of the jigsaw of making it happen, and we are providing leadership at the national level through the bill. I have spoken to Iain Gray, a
former minister with responsibility for social justice, and he told me that he regrets the fact that he did not underpin the plans that he had at that time with legislation. Without the legislation it will not work, but the leadership tends to pull the other way because of the vested interests of local authorities and health boards. The bill will ensure that the leadership must pull with integration in both the health boards and the local authorities. In the body corporate model or the lead agency model, the leadership comes from the chief accounting officer or the lead agency. Therefore, the bill will ensure good leadership at the national level as well as at the local level.

**Kathleen Bessos (Scottish Government):** We have made it clear from the beginning that legislation in itself will not change the mindsets of the practitioners on the ground and create the leadership. Alongside the legislative work, we are undertaking a significant piece of work on strategic workforce development; I can say a little more about that, if you would like. For us, strategic workforce development plus the work to support locality development and strategic commissioning is where all this will land—or not land—appropriately. The strategic workforce development group will produce, probably by the end of October, a framework for action that will cover the issues that the member has raised around the support for organisational development; the support for the joint boards regarding culture, language and communications; and the support that chief officers will need to provide the strategic leadership that will be required in a complex situation.

We will say something about management development, education and training for professionals and about our on-going work to develop commissioning skills to create a proper commissioning framework. We are going to do a whole load of work. The financial memorandum identified resource that we will make available to partnerships to support their transition into a new working environment.

**Alex Neil:** I will just add a point about the areas where integration is already happening, such as Highland. A few months ago, I was up in the Royal northern infirmary in Inverness, where people who previously worked with the health board now work with the local authority in an integrated setting. Some of them admitted that they were a bit sceptical, but they now say that it really is the right way to go. I have found many examples of that where integration is already working on the ground.

**Gil Paterson:** To be honest, I am not entirely sure that leadership is the real question. There are some real good people, but they have not engaged.

**Alex Neil:** I think that it varies between different areas.

**Gil Paterson:** In business or in local or national Government, there are always vested interests. I do not think that we can ever take vested interests out of the equation—that is just the way that it is. People protect their budgets and their own wee areas, or big areas for that matter. Do you agree that, in effect, the bill will mean that the vested interests will get much wider and will encapsulate a much greater area? The sphere of influence and vested interest will encapsulate most of the population. Perhaps I should not say that, but that is what I see in the bill and it is my interpretation of what you are trying to achieve.

**Alex Neil:** We certainly want to ensure that everyone has a vested interest in delivering what will be the national outcomes. It is clear that, whether we are talking about strategic commissioning, budgetary procedures, how the constitution of the bodies is established or reporting mechanisms, we are trying to ensure that everybody’s vested interest is in providing the best possible service to the end user.

**The Convener:** We know that you are having discussions with the Convention of Scottish Local Authorities. You might want to bring us up to date on those discussions but, to summarise—I am not saying that this is how it is, but it is how I view it—COSLA says that you are taking wide powers without our knowing how you would use those powers and the circumstances in which you would use them. COSLA’s fear is that you are taking all these powers, but there are no rules of engagement.

In addition, there is a question about how you can be impartial in the process. The Cabinet Secretary for Health and Wellbeing is there to protect, sustain and promote the health service. COSLA perceives an imbalance that it is crucial to resolve as we go forward. Do you agree or disagree with those issues about where the power lies and your role in the process? In what circumstances would the powers be used? Do we need clear rules of engagement?

**Alex Neil:** The first thing to say is that, although I am called the Cabinet Secretary for Health and Wellbeing, I am also the cabinet secretary responsible for adult social care, so it is just not the case that there is a conflict of interest, because I already have responsibility for adult social care. I exercise those responsibilities today and my predecessors exercised the same responsibilities.

Secondly, COSLA has expressed concern that it believes that there is a need for tighter definition of what we mean by the term “social care” in the bill. The concern is that the way in which the bill is
drafted could be interpreted to mean that I have the power not just over social care, but over a whole gamut of local authority services. We have been working at political and official level and we have agreed that we will lodge amendments at stage 2. Those amendments, jointly agreed between COSLA and us, will I think absolutely allay any fears that I am trying to widen my powers. I am absolutely sure that my Cabinet colleagues would not want that to happen, anyway. The bill, with those amendments, will make it definitively clear what is meant by the powers in relation to social care and that they do not cover much wider areas of local authority responsibility.

11:45

Thirdly, on rules of engagement, a lot will be followed up in secondary legislation and guidance, but fundamentally the point of the bill is that it should provide a national framework and binding principles—for example, strategic commissioning and the national outcomes—and define the different models in principle that are available to deliver them. We have been very clear about that and have agreed right up front with COSLA and others on it from day 1. It has always been agreed that, beyond that, we want to leave as much discretion as makes sense to local areas to make their own detailed arrangements, and for the bill not to be overly prescriptive. That is a sensible way to go.

I sat through the last 20 minutes of the previous panel’s discussion. Some of the issues that were mentioned will be covered in secondary legislation for various reasons that we will no doubt discuss in more detail later. It does not make sense to put some of those things in the bill; it makes more sense to put them in either secondary legislation or guidance.

The Convener: I am sure that you understand that, in the evidence that we have taken, people have been all on board, as Gil Paterson said.

Alex Neil: Yes.

The Convener: Indeed, the committee is on board, but a specific example is the contention about the shifting budget. The evidence that we have heard is that we can put everything in place, legislate and enable. However, according to COSLA in particular, if we do not shift the budget from the acute sector into the community, the approach will not work. I think that your position on whether you could deliver substantial money would be tested at that point, given that what was wanted was a top cut of money from the health service into the community. That is a difficult call for the Cabinet Secretary for Health and Wellbeing.

Alex Neil: There cannot be a simplistic percentage cut in the acute budget that is then redirected. That is not the right way to plan ahead.

The strategic commissioning role of the partnership is absolutely crucial. We already agree with COSLA that, where there is an acute budget related to the partnership’s responsibilities, how much is spent on acute care in relation to the overall responsibilities of the partnership will be very transparent. The partnership will then have the ability to influence the acute care budget.

I will get Kathleen Bessos to talk about this in a bit more detail, but let me give an example. In my estimation, one area in which we can substantially reduce the number of unnecessary hospitalisations is the long-term condition of chronic obstructive pulmonary disease. We hospitalise many people who would not need to be hospitalised, or hospitalised as often, if the proper support were available in the community. Because of the rate of hospitalisation, the budgets for dealing with those people are covered in the acute budget. We want to move some of that into the community. The strategic commissioning plan—it would be a plan—would say that, over a period of years and in agreement with the acute providers, resources will be shifted into the community in a planned way so that within three or four years’ time, say, many more people who suffer from COPD will be treated in the community rather than in the acute setting, and the money will effectively follow the patient in those circumstances.

The Convener: So you agree with COSLA and others that one of the key aspects is to shift the flow of people and budgets from the acute sector into the community.

Alex Neil: That is one of the things that we want to achieve, because we know that people are being hospitalised far too often. If the resources were available in the community, those people would not need to be hospitalised. Let us look at the economics of that. On average, it costs £4,600 a week to keep somebody in an acute hospital in Scotland and around £300 a week to treat a person at home. For those with serious chronic conditions, the average is probably nearer £800 or £900. It makes economic sense to treat people at home, but the really important point is that, where that has been done, patients’ health outcomes have substantially improved. That is particularly true for older people. One of the worst things that we can do is to hospitalise them unnecessarily. We are all at one on that.

I am not sure whether Kathleen Bessos would like to spell out the budgetary aspects of that—she can perhaps do so later.

Nanette Milne: Some of us were in West Lothian yesterday. The question is one of
widening the integration agenda. It is clear that they are working on adult health and social care, but they were also talking about how important housing and children’s services are. How does that tie in with what COSLA is saying to you about restricting integration?

Alex Neil: We are talking about the core of the joint board. The voting membership of the joint board in each local authority area that has the body corporate model will be made up of equal representation between the health board and the local authority. If the board decides that it wants to co-opt non-voting members on to the board, it will have the right to do so. There will be a host of infrastructure around the board and that is where services such as housing will be heavily involved—housing has a particularly important role to play in locality planning. The secondary legislation and the guidance will spell that out in more detail.

Malcolm Chisholm: What Kathleen Bessos said about the wider agenda is very important. All the witnesses have said that structural change in itself cannot deliver what is required. Most witnesses, with the exception of the Chartered Institute of Public Finance and Accountancy, have gone along in general terms with what is in the bill.

What interests me is the detail and there are two areas where I seek clarity. We have already started talking about one of them—acute budgets. In your opening statement on the bill, cabinet secretary, you spoke about aspects of acute hospital services and you gave the example of COPD. First, there is the question of who will decide. I presume that, in terms of what you propose, it is up to—in fact, I do not know. Will the health board decide, or will it be the partnership? Who decides?

The more fundamental question is, how much of the acute budget is to be shifted? Is it money to pay for reprovisioning in the community, or is it a much larger block of the acute budget? You are probably aware of NHS Lothian’s concern that it sounds as though you might be taking a much larger block of the acute budget. You would then be getting a position in which the body corporate commissions from the acute sector. That is where the return of language such as “commissioner-provider” or even “purchaser-provider” has come in. It is important to know in detail how the proposals will work. How much money is being transferred and what is the relationship between the body corporate and the rest of the health service?

Alex Neil: I will get Kathleen Bessos to explain the exact mechanics of how things will work. It is important for people to understand the detail of those mechanics.

I will not be reallocating anything. It will be an entirely local decision and it will be driven by the joint board—by the body corporate or by the lead agency in the Highlands. It will not be me making the decisions; there will be 32 decision-making bodies across the country that will be making the decisions.

Malcolm Chisholm: I understand that—but some people have expressed concern about that.

Alex Neil: A key point of this whole exercise is substantially to increase acute care in the community. If we were not going to give the joint boards some responsibility for the acute budget, that would defeat that particular purpose of the integration agenda.

We should not think in terms of a precise percentage of the acute budget, and I will tell you why. If you pick an acute hospital—say, Perth royal infirmary—and compare it with the Glasgow Southern general, you will find that the Southern general has a much wider remit than just the local authority area that it is serving. Perth royal infirmary does serve people outside the Perth area, but Glasgow Southern general is a teaching hospital with a range of other responsibilities. If we just said that a percentage of the acute budget should be transferred in the same way across the country, the impact of that would be extremely different in different areas, because of the different roles played by some of the bigger hospitals in particular. That is why it has to be a local decision, dependent on the configuration of acute services in each area.

Kathleen Bessos will explain the budgetary process and how we deal with the acute plan, which starts with the unprecedented transparency of the acute budget.

Kathleen Bessos: That is right. The important thing is that we stick with the principle that the resources that are associated with the functions that are delegated to the joint board go with the functions. That is the important point, and that can be clearly articulated. The key question then becomes which aspects of acute resources lend themselves to being used in a different way. Clearly, there are services such as neurosurgery that do not lend themselves to being redesigned to support an improved pathway of care, particularly for older people.

As the cabinet secretary said, we have been working closely with the chief executives of the NHS boards to unpick the complexities—how do you land this thing so as to give enough influence to change how acute budgets are used, without introducing either incredible amounts of bureaucracy or complete chaos and confusion, with the potential for the acute service not to be
able to plan coherently across their patch because they cover more than one local authority area?

We think that we have got a position that has been agreed with COSLA and with NHS boards on what that model looks like, so we are saying that the strategic commissioning plan must describe the money that is in scope. Within that commissioning plan there will be decisions taken by the partnership board, in discussion with the health board, the council and others, about the timeframe around which changes to acute services will happen. Those resources will then be realigned and redeployed as the commissioning plan is operationalised.

For example, in community acute hospitals it is likely that all of that budget will go with the functions and be in the integrated pot, so that that resource can be used flexibly on a daily basis. However, redesigning and realigning some aspects of acute service needs to sit within the context of the agreed commissioning plan, the timescale over which the change will happen, and complete transparency about what resource is available to be redeployed.

Clearly, it is not the whole of the acute budget, but we think that we have a model. The deputy director for health finance in the Scottish Government has already asked partnerships to give an early indication of what percentage of resources would be in scope, and I am sure that once she has a comprehensive picture she would not be unhappy to share the generality of that, given that the partners are in the early days of working through the amount. However, there is a significant amount in scope.

Malcolm Chisholm: It would be helpful if some of that detail could be provided to the committee and made available more generally. It has become one of the main points of interest in the discussions and I know that there is concern about it in some health boards, so I could probably ask lots of follow-up questions. One basic question might be whether the decision about how much money is in scope is a decision of the body corporate or a decision of the health board. There is lots of scope for tension between those two and I suppose, is that general point, as everybody knows, is that even in shifting the balance of care, because of demography, it is not as if acute budgets can be decreased in absolute terms. There are so many questions around that.

Alex Neil: The key tool is the strategic commissioning plan. Let us take COPD as an example, and let us say that it is for Edinburgh, Malcolm Chisholm’s area, because the health board and the council have signed up to the scenario. Part of the strategic commissioning plan is to treat far more COPD patients—a percentage might be specified—in the community. To provide that service will require not just GPs, but acute consultants to work in the community. The pace at which it is done, the resource allocation and the way in which it is done should all be part of the strategic commissioning plan, which must be drawn up by the joint board—obviously, Edinburgh is a body corporate model—in wide consultation with not only the health board and the local authority but a range of other bodies. The requirement for a consultation group on the strategic commissioning plan is in the bill. It is not a case of a unilateral decision being made. Everything must be done in consultation with the key stakeholders and then, once the plan is agreed, everybody is signed up to it.

12:00

Alison Taylor (Scottish Government): To pick up on a technical detail, the bill sets out that the original agreement between the health board and the local authority, which the bill describes as the integration plan, sets out the functions and the method of calculation for payments to go with the functions in the integrated arrangement. Therefore, at the overarching level—the level of the framework about which the cabinet secretary has been talking—the health board and the local authority will have that initial discussion within the parameters of what must go in, which will be in regulations. Then, once we get into the mechanics of working out how to improve outcomes, it is exactly as the cabinet secretary said: the determination comes into the strategic planning process.

Malcolm Chisholm: That is fine for the management of a particular condition such as COPD, but when it comes to the more general question of shifting the balance of care and reducing emergency admissions, it becomes a bit more difficult. It would be helpful to have some more detail on that.

The second matter on which there has been much discussion is the precise governance arrangements, particularly the position of the chief officer of a body corporate. Again, I am drawing on what the people in my area are saying. The City of Edinburgh Council and NHS Lothian are both saying that there is a view that the balance has shifted more than was intended towards the chief officer, that, in fact, far more responsibility and decision-making power will be located there and that, in some ways, there will be a weaker relationship with local authorities and health boards than was intended in the consultation document.

I would welcome any views on that. Have you had discussions with various health boards and local authorities about it?
Alex Neil: I will be clear. The chief officer will be appointed by the joint board. He or she will report to it. That person will not be able to make unilateral decisions; they will be answerable to the joint board. They have to be employed by the local authority or the health board for a host of other reasons.

However, that is not to say that somebody who is not currently employed by the health board or the local authority could not be the chief officer. It could be that such a person applies for the job, but it would then need to be decided who their employer was. That is a technical issue.

The first thing to stress is that the chief officer will be responsible to and report to the board. They will not be unaccountable. The second thing to stress is that, on a strategic level, they will report simultaneously to the chief executives of the health board and the local authority.

Clear lines are laid out for the role, powers and job description of the chief officer. Some of the fears are perhaps based on misconceptions rather than being real, because it is clear to us that what the officer does will be very much under the board’s control.

Malcolm Chisholm: The view has been expressed that the policy intention has not been translated into the wording of the bill. We will have to consider that at stage 2.

Alex Neil: We will do that.

Kathleen Bessos: That is right. We have a human resources technical working group considering the matter. The comment has been made—and we have registered it—that the chief officer will be accountable to the joint board for developing and delivering the strategic plan. However, they will have an operational line to the two chief executives for the operational discharge of that responsibility. We will do further work to clarify that, because it is a legitimate point.

Alex Neil: We are considering whether we need to lodge an amendment at stage 2 so that there is no dubiety on the issue.

The Convener: That was an interesting exchange. I have a wee parochial comment on it. I am concerned about the answers about the flow of acute budgets coming from non-specialist hospitals and worry about the sustainability of local hospitals that provide acute services. It seems that that will be the focus of drawing some of the budget out. I might be wrong, but I note the concern.

Richard Lyle: I say again that I welcome the intentions and objectives of the bill. Yesterday, I was fortunate enough to be part of a delegation that visited West Lothian, and I was impressed with what is being done there, including in the local hospital. I take on board the comments that you made about that.

You mentioned that you want disabled people to be involved. Later yesterday afternoon, we had another visit and we were asked how involved disabled people will be. You talked about who will be on the boards and said that there will be voting rights for the councils and health boards, but which independent people will we have on the boards? Will the bill state who will be on them? In response to a question that I was asked yesterday, I said that it might be that 100 organisations want to be on the board, but we cannot have that number at the top table. How do you intend to specify or decide who should be at the top table?

Alex Neil: There is a specification that, for example, there should be a representative from the staff side and a representative of the public, but there is a wider question about the accountability of the bodies. We have a piece of work going on to look specifically at how we can enhance the accountability of not just the health service in general, but the integration joint boards in the future. We do not think that we need to do more on that in the bill, as we believe that we have all the powers that we need. If we need to do anything by way of secondary legislation, we will do it. However, as I said, we are looking at the wider issue of accountability to ensure that there is genuine public accountability.

I would have thought that the fact that half of each board will be made up of elected councillors will, in itself, enhance accountability. The other half will comprise representatives of the health boards, and we are looking specifically at how we can enhance their accountability. As you know, we have trialled direct elections to health boards and some other ways of improving accountability, and I hope to make a statement sometime soon—before Christmas—on general issues of improving accountability.

The absolute guarantee is that we need to make sure that all the key stakeholders—the public, the end users, the third sector and the independent sector—are involved. The bill states throughout that they have to be involved—not just consulted, but involved—at both partnership level and, more important, the local level, because that is where a lot of the key decisions that will concern end users will be made.

Richard Lyle: I welcome that comment as I believe that they should be involved.

When I was asked this question yesterday, I could not answer it. Why did we change the name of the bill to the Public Bodies (Joint Working) (Scotland) Bill? I think that COSLA got a bit upset and thought that you and other cabinet secretaries
were going to grab extra powers from everywhere else. Why did we change the name of the bill?

Alex Neil: I point out that it is not an enabling bill of the kind that has been introduced in previous periods of history by other regimes.

This is where the lawyers come in, including the Parliament’s lawyers. What initiated the change to the title is that, under the bill, what used to be called the Common Services Agency will now be able to provide services much more widely and not just to the health service in Scotland. The fact that it will be able to provide services across the entire public sector will be good for public sector efficiency and cost effectiveness and will improve the delivery of services. However, because we included that provision in the bill, its original title was no longer legally competent, so we had to amend it. I fully accept that it is not the sexiest bill title in the world, but the important thing is the bill’s substance, rather than its title.

Richard Lyle: My last question is on VAT, which you will have heard me ask earlier. Different arrangements for VAT apply to local government and NHS boards. Do you have any concerns about that? What work is being done to ensure that no extra VAT will be paid once the bill is passed?

Alex Neil: We are in a state of advanced negotiations with HM Revenue & Customs on that very issue. Although I cannot forecast exactly what the outcome will be, I am reasonably confident that we will hopefully end up in a position where there will be no VAT implications in terms of additional expenditure arising from these measures.

Of course, in 2016 we will have powers over HMRC so we can rectify any outstanding matters after that.

Richard Lyle: I certainly agree with that comment.

The Convener: I think that Bob Doris has a supplementary question on that.

Bob Doris: Mr Lyle used the expression “top table”, and I think that the cabinet secretary gave a hint about this in an earlier answer when he mentioned locality planning. Is there any information available on who would sit at the table—let us call it a wider strategic table rather than a top table—to sign off strategic plans? There has been almost an expectation that various other bodies might sit at that table—I will not list them, because any that I miss out will take it as a slight that they are not considered as strategically important as the others. Who might sit at that wider strategic table and who will have voting rights?

More important, can you say a bit more about the locality plans that joint boards will be under a statutory obligation to produce? The expression “top table” motivated my supplementary question because I see this bill as being a community planning initiative as much as a top-down initiative. Therefore, it would be helpful to hear a little more about the importance of locality planning. Perhaps that is an area where other stakeholders from the front line could be involved.

Alex Neil: As I said earlier, the key thing is the strategic commissioning plan, which will determine exactly what each board will do. That is one area in the bill where we have been quite prescriptive both about the consultation group that must be set up and about the people who need to be involved in the development of the strategic commissioning plan. Clearly, I would like the process to be as much bottom-up as it is top-down because the strategic commissioning plan should be largely determined by the adult health and social care needs of the community.

Perhaps, without going into inordinate detail, Alison Taylor can give you a flavour of how we believe that the locality planning mechanism would typically work and who would be involved in that.

Alison Taylor: As you can see from the bill, we have not set out a prescriptive process on locality planning. That is in direct response to what we were told by stakeholders and partners, particularly those who were already doing something like locality planning well. It would be difficult to find two examples that are particularly similar, as there is huge local variation in how locality planning works, who exactly is around the table—that can depend on the balance of local need—how often they meet and what sorts of decisions they look at. The onus was very much on us to encourage the development of local innovation and not to be prescriptive.

The bill provides various powers to set out the range of people who need to be involved in strategic planning and who need to be consulted. Again, I do not think that ministers are minded to be particularly prescriptive about the numbers of people who would be involved or that sort of thing, because those are matters that the evidence tells us work better when they are agreed locally. In locality planning, I think that there needs to be a very strong role for local clinical professionals. From memory, we can see some good examples of that in NHS Grampian and there is an interesting model at work in Nairn. A lot can be learned from those places, and that is where our attention should go.

Bob Doris: Will there be guidance on local engagement?
Alison Taylor: Yes, absolutely. I apologise, as I should have said that.

Bob Doris: Regarding the wider strategic plan, although other bodies are not mentioned on the face of the bill, I understand that the bill is not restrictive. There is nothing to stop joint boards co-opting other partners on to the board, perhaps without voting rights, for example.

Alex Neil: I think that a good comparison can be made with the process for going for planning permission to build a new building. There are statutory consultees, who absolutely must be consulted, but developers must also show that they have consulted the wider community. The process will be similar. There will be statutory consultees, but that is the de minimis position.

12:15

Bob Doris: Will there be best practice guidance on that?

Alex Neil: Yes, there absolutely will.

Kathleen Bessos: There is guidance about strategic commissioning, from which we are learning a lot of lessons. We will produce guidance on the bill that builds on what we have learned.

We have sent out the “All Hands on Deck” report, which describes the key principles of locality planning, and we have asked partnerships to look at the report and consider, with support from the joint improvement team, how it fits their local circumstances. Partnerships can use it as a template as they start to work things through. In January we will get some feedback about putting the report’s guidance into practice, which we will use as we develop proper guidance, on which we will consult.

Bob Doris: That is helpful, thank you.

Rhoda Grant: In evidence, we have heard concern about matters such as governance, finance, audit, staffing and sharing information—the list goes on and on. How can such issues be satisfactorily resolved?

Alex Neil: That was a long list. I think that some concerns are misplaced. For example, I am sure that we will reach agreement with COSLA on amendments at stage 2 that are needed to address its concerns about governance. It was never our intention to give me wide-ranging powers over local authorities beyond what is intended in the bill.

On funding, we have had a good discussion on the budget process this morning and we will provide an additional briefing on the mechanics of it and the flow of budget decisions. The key point is that there will be an integrated budget. We will no longer have the ridiculous position whereby for each hospital patient there is a dog fight between the health board and the local authority about who will pay when the person is discharged, which means that we end up with delayed discharge. There are a range of issues such as that one.

When the system is fully operational, I think that there will be much more efficient and efficacious use of public funding. A good example of that will be a reduction in unnecessary hospitalisations. If we can do that, there will be much better patient outcomes, and treating people at home instead of spending so much money on keeping them unnecessarily in the acute setting in hospital will free up resources that can be used to improve the quality of care more generally.

We have listened and are listening carefully to what people are saying. We have any number of groups. There is the bill advisory group, on which all the key bodies are represented. We have a ministerial steering group, which I chair. We have an implementation group and eight working parties on all of this—just for starters. The one thing that we have done on this bill is consult, and we continue to consult widely. When we get the committee’s stage 1 report, we will take any recommendations very seriously, as we always do.

Rhoda Grant: I will be more specific, because I think that you have already made those points. There are different criteria for audit in local government and in health—there are internal and external audit processes and the like. What will the body corporate’s audit function be, and how will it carry it out? What will it need to put in place?

Alex Neil: Audit Scotland is part of a group that is looking at the bill, so there is active involvement from Audit Scotland on the issues that might need to be consulted on. The audit trail will need to be clear, so that we know what happens after the money goes into the new organisations. We need to know how the money is being spent and whether it is being spent on the right things, what the approval mechanisms are and so on. The audit process is part of that. Alison Taylor will explain the mechanics of how that will happen.

Alison Taylor: We have an overarching integrated resources advisory group, which is looking at all aspects of the finance and accounting procedure that relates to what we are proposing under the reforms. Sub-groups are looking at specific topics, such as audit.

As has been raised by committee members, we have heard concerns since the bill was published that we need to be clearer on aspects such as audit, which we have taken on board very seriously. The expert groups, including Audit Scotland, have been looking at those questions. With our legal colleagues, we are considering
whether any amendment to the bill might be necessary. Obviously, that will come forth in due course if it is decided that that is the best way in which to achieve clarity. Quite aside from that, there will be very detailed guidance on all these matters, an early draft of which we will share with a very large group of professionals and stakeholders at the end of this week.

We recognise that the answers to the concerns need to be clear and clearly stated. We have the work in place to get that into the parliamentary process.

**Rhoda Grant:** Does the same apply to staffing? We have heard evidence that there are different legal requirements for interaction with staffing and training. How will that work in a body corporate that is made up of two legal entities?

**Alex Neil:** I will get Alison Taylor to answer some of the detail, but let me just begin with the principle, which is that the body corporate itself will not be employing people. Obviously, that may change through time, but what we envisage is that, to start with, the people who work directly for the body corporate, such as the chief accounting officer, will be seconded from the local authority or the health board. The reason for that is that, as you will know, employment law is very complicated and it could raise a lot of issues that would make the whole integration process unnecessarily complicated. Therefore, the wisest thing to do at this stage is what we are doing, which is to work on the basis that people will technically be employees of the local authority or the health board, not of the body corporate.

**Rhoda Grant:** But that will surely require more work. If someone is seconded to the body corporate but kept on the local authority payroll, who will do their local authority work when they are doing the new job? Do you understand what I am driving at? There is a cost involved that is not covered in the bill, and there is no additional funding for it.

**Alex Neil:** In terms of the joint accounting officer, his or her salary and associated costs will obviously be met out of the integrated budget.

**Kathleen Bessos:** It will be jointly paid for by the board and the council.

**Alex Neil:** Obviously, bodies can make their own arrangements, but if the local authority or health board seconds somebody to the body corporate, it will do what it does whenever it seconds anyone, which is to make the necessary arrangements for somebody else to do the job that the person was doing, if it still needs to be done. That is normal procedure.

**Rhoda Grant:** That would surely mean additional costs for covering for backroom staff, which would take away money from front-line services.

**Alex Neil:** No. The person being seconded will do a job that will have previously been done by the local authority. It will be the same job, but it will be done under the aegis of the joint board.

**Rhoda Grant:** Let me just pursue this. For example, an HR officer who works for the local authority may be seconded to the new body. They will have done work for more than one department when they were part of the local authority. That work will surely need to be covered by somebody else, which will mean an additional cost.

**Alex Neil:** To be honest, I think that, to start with, that kind of central service will still be provided by the local authority and the health board, because the people working under the aegis of the body corporate will still, as I said earlier, be employed by the health board or the local authority.

**Rhoda Grant:** Okay. To take the example that you gave earlier of acute clinicians going out to work in the community, could somebody work in the community beside a social worker or care worker and have a different chain of command, line of management, personnel officer and pay structure?

**Alex Neil:** The chain of command for the job that they do will be with the body corporate. Obviously, there is a wide range of pay structures and pay scales within health boards and local authorities, let alone between them, so that will just continue.

**Rhoda Grant:** So they will remain their employees. Who will the body then employ?

**Kathleen Bessos:** It will not have to employ anybody. It will not be an employing body at that point. The people delivering the services will still be employed by the council or the NHS board. They will not have changed their employers and there will be no requirement to do so.

**Rhoda Grant:** Who, then, will give directions for what happens? How will a body share resources, put a budget together and then get people to work across sectors if they are still in their silos? How does this work? I am getting more and more confused by the answers.

**Alex Neil:** This concerns the legalities.

**John Paterson (Scottish Government):** For somebody in the local authority who provides social work services, the line management is through the local authority and ultimately to the chief executive. The chief executive directs that they follow direction from the chief officer in the chief officer’s role as operational director. They are
then required to follow that direction from the chief officer as operational director.

**Rhoda Grant:** If they are still paid by the local authority, why does the body corporate need a budget? If all the costs are undertaken, why do we need audit? If the body corporate only directs how services happen on the ground, why does it need a budget at all?

**Alex Neil:** It is a question of control over the resource.

**Kathleen Bessos:** It needs to direct how that resource will be deployed by the people in the local authority and the NHS. The chief officer has the overall budget, and on the back of the strategic commissioning plan there will be changes required over a period of time. The chief officer, on behalf of the joint board, will direct those services to be delivered in a way that complies with the strategic plan.

John Paterson’s point is that this bill enables the chief officer to give directions to the health board and the local authority to ensure that the staff employed fulfil that requirement. It is all tied up legally.

**The Convener:** I suppose that this gets to the difference between the body corporate model and—

**Kathleen Bessos:** —and the lead agency.

**The Convener:** The lead agency model in your area, Rhoda, does not require that transfer of employment.

What is the downside in terms of co-location of people? Does it drive the cultural agenda forward? Will it be able to achieve the results that you have witnessed and testified to in the Highlands?

**Alex Neil:** Some folk were at West Lothian yesterday, where it is already done and works very effectively. It is done very effectively on the lead agency model in the Highlands. Even in areas that have not had formal partnership agreements in the past, such as parts of Fife, it is done. For example, there is co-location in Queen Margaret hospital in Dunfermline between social workers and health professionals who all work as one team. It is done in Grampian.

**The Convener:** You should curb your enthusiasm or any minute now you will be scrapping this legislation.

**Rhoda Grant:** I want to get to the bottom of this. If, for example, you shift the balance of care from acute to care in the community and the body corporate decides that it does not need a consultant in an acute hospital but that it needs five or 10 more care workers for the cost of a consultant, does it tell the NHS to terminate that contract or not fill the contract as it would normally have done? Does it then go to the council and tell it to employ maybe five more workers? Is that how it would work?

**Alison Taylor:** There will be guidance about the directions that need to go to the health board and the local authority from the body corporate. That will be developed in good time. We would not envisage that they would be at that level of granularity. We would expect to see an expression in the strategic plan of a shift in investment and activity from one bit of the system to another.

The other important point is that the joint board is composed of members of the health board and the local authority. The chief officer has a strategic role in relation to the joint board, and an operational role in relation to the health board and the local authority. The key to all of this is that people work and plan together across the totality of available resource. Yes, there will have to be a discussion about how to deploy resources to best effect locally, as there is now. There are places which, for example, have quite significantly shifted their consultant geriatric input from hospital to community.

**Rhoda Grant:** The body corporate will not have the powers to direct. It may make up a strategic plan, but it has no way to fulfil that plan.

**Alison Taylor:** It has powers to direct delivery on the back of the strategic plan.

**Rhoda Grant:** The accounting officer answers to the chief executive. Surely the chief executive can say, “No, we’re not going to do this.”

12:30

**Alison Taylor:** The chief officer will be accountable to the joint board for the functions that are delegated to that board to strategically plan the delivery of services. The chief officer will have a day-to-day role. That is built on models that are more or less in place—it is similar but not exactly the same. On the operational side—in the day-to-day role in the delivery of services—the chief officer will have a close relationship with the two chief executives.

**John Paterson:** I talked about directing, which is separate from exercising the power of direction. A power of direction ultimately allows a direction to be given to tell someone that they must do something. In the way in which organisations operate normally, a formal direction does not require to be given on everything that is done. Normally, people are asked to do things and they do those things. It is only when conflict happens and a requirement arises for a formal direction to be given that one is given.

**Rhoda Grant:** You seem to be trying to legislate for good will. If the good will existed, integration
would be happening, as in the Lothian and Highland areas. The bill will push people down a street. Unless somebody is empowered to take the lead when consensus does not exist, you are trying to legislate for good will.

**Alex Neil:** The body corporate and the chief officer are empowered. Everybody needs to work on the basis of good will and trying to take people with them, but the body corporate has the ultimate power to do what is necessary to deliver an integrated service. The powers of direction to deal with a recalcitrant health board or local authority are vested in the body corporate. That has been missing and is why we have failed on integration for many years.

**Nanette Milne:** Given the available time, perhaps some of my questions could get written responses rather than answers now. Someone has told us that the term “public services” would be more appropriate than “public bodies” in the bill’s title, given what we are trying to achieve. Do you have a comment on that?

**Alex Neil:** I do not see the advantage in changing the bill’s title at this stage. What matters is the bill’s substance, rather than its title. However, I agree that it is always desirable to have a sexier title if that is at all possible.

**Nanette Milne:** It was the independent sector that made the comment.

I totally agree about the involvement, particularly at the locality level, of clinical health professionals. I lived through the GP frustration and disillusionment with CHPs.

It is crucial to involve GPs and other professionals. You said that they must be embedded. How will you enthuse them about that?

**Alex Neil:** A lot of enthusiasm is out there, because people realise that we are serious this time. We are going to do this—there will be a law—and people will have no other option, so integration will have to be done.

Two mistakes were made with the CHPs. One was that they were made sub-committees of health boards. The other was that integration was not a statutory requirement; it is only now becoming a statutory requirement. That is why the disillusionment set in.

Every medical professional—such as doctors, nurses and particularly community nurses—whom I have met has been utterly signed up to integration. We will make absolutely sure in guidance that, at the locality level and the partnership level, all the key people—the stakeholders who need to be involved and not just consulted—are involved.

**Nanette Milne:** The CHPs were not local enough—they lost the locality. That is terribly important.

**Alex Neil:** That is right.

**Nanette Milne:** A lot of concern has been expressed that no complaints system is spelled out. Will you give detail—not necessarily now—on that? In particular, the disabled groups that we met yesterday said that, as have a number of other people. That is a concern given the different complaint routes—it is a bit like what Rhoda Grant has said about other issues.

**Alex Neil:** We have a stream of work on exactly the issue of establishing a complaints procedure that is fit for purpose. Obviously, local authorities and health boards have different complaints procedures. We are working on that, but we certainly do not anticipate needing a big change in primary legislation to do it. I mentioned that we have eight working parties. We have a stream of work specifically on complaints, which will, I hope, report by, roughly, the turn of the year.

**Kathleen Bessos:** Yes, it will have reported by the end of this year.

**Nanette Milne:** My other questions probably should be given a written response. One is about the options that are being considered in relation to pension funding, including the costs.

**Alex Neil:** Again, that is a wee bit of a red herring, in that the bodies corporate will not employ people and therefore will not be directly involved in pension issues. Obviously, however, over time, they might employ people, so there is an issue. If in future years somebody transfers their employment to a body corporate and their pension fund is in deficit, we have to ensure that we do not inherit a share of the deficit, which is historical. A technical amendment to the bill is probably required to deal with that. However, beyond that, we do not see a big issue with pensions, for the simple reason that the bodies corporate will not actually employ anybody.

**Nanette Milne:** The point was in connection with what is set out in the financial memorandum—at paragraph 116, to be exact.

**Alex Neil:** I think that the Finance Committee drew that issue to the committee’s attention, but it is well in hand.

**Nanette Milne:** Okay. Another issue from the same source is whether any additional funding is to be provided in the event of a successful equal pay claim.

**Alex Neil:** No, because it is nothing to do with us. If there is an equal pay claim in the local authority, whoever works for the local authority will be part of that settlement. If there are equal pay
claims outstanding in health boards, the same thing will happen. We are not employing anybody. It is the employer who has to settle with the employee on equal pay.

Nanette Milne: Almost finally, do we have costs for the provision of funding for delivering Healthcare Improvement Scotland inspections under the integrated model?

Alex Neil: At the moment, the Care Inspectorate and Healthcare Improvement Scotland can with my permission carry out joint inspections. We will lodge an amendment to allow them to carry out those joint inspections without always having to come to me for permission—in fact, I think that that is already in the bill. As you probably heard earlier, the Care Inspectorate and HIS are working together on the implications of integration for the delivery of inspection services. HIS will launch a consultation fairly soon in which one of the subject areas that will be covered will be the implications of integration. Obviously, eventually, we will need a more integrated inspection regime.

Another strategic challenge is that, as we drive more and more to have people have their health and social care delivered much more at home, we need to be satisfied that we have robust systems in place for picking up any problems of abuse that there might be, particularly in relation to dementia patients, for example, who perhaps are not capable of reporting incidents themselves. I have charged officials and the agencies to look at that as a strategic issue that we need to address. Clearly, we cannot put a closed-circuit television camera in everybody’s house—I hope that nobody is suggesting that we do that under the bill—but there is an issue about abuse at home. South of the border, there was a recent example in which a TV company installed a CCTV camera, and the way in which the older person, whom I think had dementia, was being so badly treated did not make for pleasant viewing. We need to develop more robust systems for ensuring that we pick up any abuse of people who are being treated at home.

Nanette Milne: Finally, we know that most partnerships, apart from Highland, appear to be going down the body corporate route, but do you have final figures on that yet?

Alex Neil: A couple of areas have explored the lead agency model but, to the best of our knowledge—we are in pretty close touch with all 32 areas—the only part of Scotland that is likely to use the lead agency model is the Highlands. That is our clear impression at the moment.

Mark McDonald: I will try to keep this brief, not least because I have a meeting to get to at 1 o’clock.

This morning, we heard from the Scottish Public Services Ombudsman and others that the complaints procedures should be standardised under the new model. We heard different evidence from NHS Dumfries and Galloway: its view was that there was no need to rush at standardisation. What is the Scottish Government’s view on complaints procedures? Do you think that there would be merit in some form of standardisation?

Alex Neil: Inevitably, there has to be a clear single complaints procedure to allow people to make complaints against the body corporate or the lead agency. There is no doubt at all in my mind that people need to have clarity on the complaints process. That is the stream of work that is being done that I mentioned earlier. The SPSO is involved in the group that is undertaking that work. It will report by the turn of the year. At the appropriate time, we will share the outcome of that with the committee before we proceed. We will consult on the working party’s recommendations, but my view is that the ombudsman is right about the need for a single complaints procedure for the services that will be covered. However, we will wait and see what the working party says.

Mark McDonald: The ombudsman expressed concern that work on complaints and scrutiny can sometimes drag on. He pointed to the Crerar review, which was commissioned in 2007. Some of its recommendations have still not been fully implemented. Do you intend to pursue the issue with some vigour, to ensure that there is not an unacceptable lag between implementation of the legislation and implementation of a standardised complaints procedure?

Alex Neil: I say unequivocally that there will be no dragging on my watch.

Mark McDonald: Thank you very much.

The Convener: I understand that you were not here for the whole of our earlier session, cabinet secretary. As I said to the ombudsman, we made similar recommendations about complaints, commissioning, the development of the new workforce and national care standards in January 2012. Many of those recommendations were accepted by the Government. That was 18 months ago, so there are significant questions to be answered.

Can I clarify that we do not need legislation to address the issue of national care standards or the integration of the Care Inspectorate and HIS? Is there a contradiction, in that one has statutory powers and the other does not?

Alex Neil: As far as the way forward that we have agreed is concerned, we do not see any need for additional primary legislation beyond what is in the bill. On the complaints procedure, there is already a substantive legal framework for
complaints in Scotland. We are talking about the process, rather than the statutory basis of the complaints procedure.

If there is a requirement to make any legislative changes—on complaints, for example—we believe that we have the powers to do that in secondary legislation. I think that the Public Services Reform (Scotland) Act 2010 allows us to do that. It probably gives us the powers that we need to do anything that we might want to do in secondary legislation.

The Convener: To support the ombudsman’s claim, there is much that could have been done on the national care standards and outcomes—on which the committee made unanimous recommendations that were accepted by the Government—over the past 18 months. What has held us back?

Alex Neil: I do not think that we have been held back. Certain things happen at certain times. The priority has been to get the principles of the bill agreed. On complaints, we have not been sitting back doing nothing. Work has been going on on complaints over the past 18 months. Obviously, we have to try to take people with us. In this case, that means COSLA, and it is heavily involved in the complaints work that will report at the turn of the year.

12:45

The Convener: I am sorry to press you, cabinet secretary. You said earlier that we do not need the bill to deal with complaints or the national care standards. If the national care standards have not been reviewed in nearly 12 years, why has that work not been completed in the past 18 months?

Alex Neil: First, in terms of complaints, what I am saying to you is—

The Convener: We were talking about the national care standards, not necessarily complaints.

Alex Neil: Sorry—I thought that you were talking about both. On the national care standards, we looked carefully at the committee’s recommendations and accepted in principle the need for review. One issue is that we need to consult the appropriate people before we announce a national review of the national care standards. Also, we wanted to be a bit further down the road with the bill and all the infrastructure around it so that, by the time that we reviewed the national care standards, people could look at that in the context of knowing the shape of the bill, which will impact on what people say about the future of the national care standards. In particular, there is an issue around the future interplay between clinical standards and the national care standards. This is the appropriate time to review the national care standards, now that people know exactly what is happening on integration.

Kathleen Bessos: In the parliamentary debate at the beginning of the process, the cabinet secretary gave a commitment to Parliament that we would ensure that the review of the care standards was carried out with our informal process for looking at outcomes. The national outcomes that we have put into the consultation must link together with the care standards. As we speak, we are going around the country asking members of the public, including older people’s groups and broader groups, “This is what we’re planning around care standards. What do you think about the future? Here is what we’re saying about the national outcomes.” We have brought the two processes together. My team and colleagues from the care standards and sponsorship branch of the Scottish Government are jointly going around the country, talking to people on the ground about the care standards and the national outcomes. We wanted to avoid totally confusing everybody about what the care standards and the national outcomes are, so we are having joint presentations, joint discussions and joint debates both with members of the public and with the professionals.

The Convener: I am pleased to hear that, but I must have missed it in my constituency. I do not know whether any other committee members have come across it. It would be interesting to hear about it.

Kathleen Bessos: We could give you a list of places where we have been. We started in Shetland and have been down to Dumfries and Galloway. We have also been to Paisley, Dundee and Aberdeen. We can give the committee information on that.

The Convener: It would be nice to hear about that work. I make a plea on behalf of the committee. We have done a lot of work in the area and have made a number of recommendations. There was an indication that the committee would be kept up to date with that work, and it would be useful if we were. I am glad to hear that we are making progress in and around the complaints work.

I know that the cabinet secretary is under pressure and that committee members have another meeting to go to, but there are some issues and questions that have not been covered today, including some of the financial issues. Would it be okay if we wrote to you to get responses on those on the record?

Alex Neil: Yes. That is no problem at all. If there is anything that the committee feels that it needs
additional information on, we will supply that—no problem.

The Convener: I thank you and your colleagues for your attendance this morning.

Meeting closed at 12:48.

Public Bodies (Joint Working) (Scotland) (Bill)

Rev Donald Prentice (Individual)

Unfortunately the cultural realities for an integration of NHS and Social services, highlighted by recent efforts at joint working, predict an intransigent inertia from the social services who see themselves already overworked and better educated than a bunch of Nurses.

So those liberal democrats who have a rosy glow feeling about everybody being nice to each other and also putting the patients / client needs first, are going to be shocked by the petty fogging power games that will be acted out at a personal level. Going by Foucault's analysis of the abuse of power and how people do violence to others, in subtle ways, the only solution, is for a robust NHS leadership which the social services will have to respond to (with a robust audit to ensure that happens). So I recommend the NHS Lead Agency Model with both agencies being held to account for shortcomings and failures.

One salient question... can integration to cover care gaps be achieved without more staff and incentive funding (e.g. for out of hours evenings and weekends crises)

Rev Donald Prentice
2 August 2013
Public Bodies (Joint Working) (Scotland)(Bill)

North Ayrshire Council

1. Do you agree with the general principles of the Bill and its provisions?

Yes, North Ayrshire Council welcomes the general principles of the Bill and is committed to making the integration of health and social care work as well as we possibly can.

We welcome the local flexibility which the Bill has captured and this has allowed us to agree to integrate our children and family services within our local partnership agreement.

2. To what extend will the Bill achieve stated policy objectives?

We believe that the Bill will achieve the delivery of more effective and efficient services over the next five years. The Bill provides the governance structures to bring together decision makers from the Council and the NHS, and for the first time provides an opportunity for local elected members to directly influence the priorities for the NHS.

The Bill also provides a vehicle to more effectively implement joint leadership and management of resources through the Chief Officer post.

Overall, we welcome the focus within the Bill on outcomes for the citizens of Scotland and the drive to judge partnership effectiveness through nationally agreed outcomes. We expect that in addition to national outcomes the partnership will also agree local priorities and outcomes.

One of the challenging aspects of the proposed legislation is the requirement for locality planning and prioritisation and the involvement of the full range of interested groups. Our Community Planning Partnership has been developing a neighbourhood planning approach and we see this as a good fit with the approach within the Bill.

One aspect that does concern us, is the need to balance the views and influence of all interested groups so that one group does not dominate others. This will be challenging given the range of interested groups. Having said this, we are very committed to viewing our service delivery through the lens of those who use our services or care for people who use our services.
3. *Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths?*

We consider one of the Bill’s key strengths to be the aspiration of providing seamless, joined up, quality health and social care services in order to care for people in their homes or homely setting making it safe to do so:

We are particularly pleased to see this detailed within the legislation as at paragraph 25 integration delivery principles (i) is integrated from the point of view of recipients and (ii) takes account of the particular needs of different recipients.

We are wholly committed to delivering the best possible services we can, designed around the needs and desired outcomes for individuals, their families and carers. This is an important principle to remember when tackling inter-professional or organisational disputes. Service delivery should be driven by this principle rather than organisational or professional boundaries.

4. *Please provide details of any areas where you feel the Bill’s provisions could be strengthened?*

It is difficult to identify areas to be strengthened as much of the detail of this legislation will be contained within regulations and guidance. The draft Bill does have a Financial Memorandum (FM) attached. This FM seems to be very much focussed on costs to the NHS and misses many of the very real costs to Local Authorities. Unfortunately this gives a very one sided view of financial requirements.

As in all aspects of partnership working, it is important to be seen to be even handed and fair to all partners.

5. *What are the efficiencies and benefits that you anticipate will arise your organisation from the delivery of integration plans?*

This is a difficult question to answer at this stage and is one of the difficulties within integration. Local authorities have made substantial savings over the past four years, while the NHS has been protected. This is likely to mean the level of savings available without affecting operational capacity will be less for local authorities. Obviously we would expect to make efficiencies by sharing management (through joint appointments) and accommodation. We are also considering how the range of ‘support services’ required by health and social services would be best delivered. At this stage it is not possible to say if this will lead to efficiencies or if in fact some may require additional investment ‘Support services’ include; Finance; Human Resources; Legal Services; IT and Property; Facilities Management.
6. *What effect do you anticipate integration plans will have on our outcomes for those receiving services?*

It is our expectation that integration plans will focus on the removal of barriers between agencies and redesigning services based on delivery improved outcomes for clients/patients/carers. This will put those who use the service at the heart of the redesign. Services should be easier to access and appear seamless at the point of delivery.

North Ayrshire Council  
2 August 2013
Introduction

NSPCC Scotland welcomes the opportunity to provide written evidence to the Health and Sport Committee, to inform its consideration of the Public Bodies (Joint Working) (Scotland) Bill.

While we support the aims of the Bill to improve service provision and achieve better outcomes for service users, we have general concerns regarding the apparent lack of detailed consideration about the how the Bill will affect children’s services or how it relates to the wider legislative agenda for children and families.

About NSPCC Scotland

The NSPCC aims to end cruelty to children. Our vision is of a society where all children are loved, valued and able to fulfil their potential. We are working with partners to introduce new child protection programmes to help some of the most vulnerable and at-risk children in Scotland. We are testing the very best intervention models from around the world, alongside our universal services such as ChildLine, the ChildLine Schools Service and our adult Helpline. Based on the learning from all of our services we seek to achieve cultural, social and political change – influencing legislation, policy, practice, attitudes and behaviours so that all children in Scotland have the best protection from cruelty.

NSPCC Scotland response

NSPCC Scotland does not have specific comments to make on particular provisions in the Public Bodies (Joint Working) (Scotland) Bill; rather our response seeks to highlight concerns about how the Bill links with the other legislative developments. We feel it imperative that the Committee considers the Bill in relation to the wider context.

We recognise that the primary aim of the legislation is the integration of adult services, with a particular focus on improving older people’s services. In so doing, the Bill affords relevant authorities discretion as to whether other functions – such as children’s services – are included in the new integrated arrangements. However, we are concerned that the potential impact of the Bill on children’s services has not been thoroughly thought through and merits further consideration.

The Bill and supporting documents make very few connections with other pieces of recent and proposed legislation that will impact on children, young people and...
their families. In particular, there is no mention at all of the Children and Young People (Scotland) Bill which is also currently before the Scottish Parliament.

The latter Bill makes provision for a duty on Scottish Ministers and public bodies to take steps “to secure better or further effect” of the United Nations on the Rights of the Child (UNCRC) (ss1-2 of the Bill). It also seeks to create a framework for joint planning of children’s services, involving local authorities, health boards and other ‘service providers’ (ss7-18).

In legislating for service planning and provision, there is certain crossover between both Bills; this raises questions about how they are intended to ‘fit’ together. There appears to be no consideration of children’s rights in the Public Bodies Bill and no apparent consultation with children and young people. We are unsure how the proposed children’s services planning processes in the Children and Young People Bill, and the proposed integration planning and functions set out in the Bill at hand, will interact in practice.

Similarly, the recent Social Care (Self Directed Support)(Scotland) Act 2012\(^1\) and the planned Community Empowerment and Renewal Bill\(^2\) will also have implications for the planning and delivery of children’s services, and the involvement of service users.

It is unclear to us whether all of these parallel developments have been considered in the round. There appears to have been little strategic thinking about the position of children’s services and we are concerned that this might lead to confusion and fragmentation. It is arguable whether the disparate nature of the various pieces of legislation which affect children’s services suggests a lack of coherent vision for how the whole range of services meet the needs of children and young people in Scotland.

The impact of this broader legislative landscape on children’s lived experiences must be a central consideration for the Committee when considering the Public Bodies (Joint Working) (Scotland) Bill.

Where children’s services are not integrated into the proposed new structures, we have concerns that the proposals could potentially have a negative impact on ‘whole family’ approaches. While the initial aim is to achieve better integration between adult services, this could, at the same time, widen divisions between adult and children’s services, and/or split functions. This could create or exacerbate communication and practice issues from a family perspective.

---

\(^1\) This Act aims to give services users greater choice and control over the support they receive. See [http://www.scotland.gov.uk/Topics/Health/Support-Social-Care/Support/Self-Directed-Support/Bill](http://www.scotland.gov.uk/Topics/Health/Support-Social-Care/Support/Self-Directed-Support/Bill)

\(^2\) This Bill will seek to strengthen community participation and development. See [http://www.scotland.gov.uk/Topics/People/engage/cer](http://www.scotland.gov.uk/Topics/People/engage/cer)
Similarly, thought would need to be given as to how social work services can deliver integrated support, particularly where outcomes are tied to complex family circumstances, such as substance or alcohol misuse. It is also unclear how education and community justice services will link in with the new arrangements, particularly given that the structures for the latter are likewise under review\(^3\).

The discretion the Bill permits in relation to integrating children’s services may lead to greater inconsistency and variation in policy and practice around the country.

In order to gain a fuller picture of developments and enable a more thorough consideration of proposals, we suggest that the Health and Sport Committee considers holding a joint evidence session with the Education and Culture Committee to consider the interaction of relevant provisions contained in both the Children and Young People and the Public Bodies Bills, and their implications for services for children and families. We have made a similar suggestion to the Education and Culture Committee which is considering the former Bill.

**Conclusion**

NSPCC Scotland welcomes the aims of the Public Bodies (Joint Working) (Scotland) Bill but we have concerns about what the impact will be on children’s services and how the Bill fits with the wider legislative landscape, particularly the Children and Young People (Scotland) Bill. We urge the Committee to give consideration to these issues during Stage One.

**NSPCC Scotland**

Public Bodies (Joint Working) (Scotland) Bill

British Heart Foundation (BHF) Scotland

About BHF Scotland

Coronary heart disease is Scotland’s single biggest killer. For over 50 years BHF Scotland has pioneered research that has transformed the lives of people living with heart and circulatory conditions. Our work has been central to the discoveries of vital treatments that are changing the fight against heart disease.

BHF Scotland welcomes the opportunity to respond to this consultation.

General remarks

BHF Scotland fully supports the intentions of this Bill.

It order to see the practical implications of the intentions, is particularly with regard to heart failure that we make this response. See the Appendix for further information on this condition.

Specific remarks

Do you agree with the general principles of the Bill and its provisions?

The Bill’s stated ambitions of ‘integrating health and social care services… to improve the quality and consistency of services for patients, carers, service users and their families…. to ensure resources are used effectively and efficiently to deliver services ‘….are extremely welcome.

Effective coordination between health and social care systems is a vital component of achieving high-quality, cost-effective and integrated care for heart failure patients amongst others, providing a coherent patient and carer experience.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

BHF Scotland’s focus is on the outcomes of any proposed approach.

The merging of health and social care systems could, if implemented effectively, help address many important issues, by improving the transition between health and social care services, management of physical and mental co-morbidities in community and residential care settings, and medicines management in care and home-based settings, and by ensuring that the needs of carers are addressed within the system.
Additionally, this approach should lead to better use of health and social care resources, which is important given the need to make best use of limited funds.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

With reference to people with heart failure in particular, we see the commitment to ‘joined up quality health and social care services in order to care for people in their homes or a homely setting where it safe to do so…and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older’ as its key strengths.

Patients need care in the most appropriate setting - home, care home or hospital. At present, too many patients end up in hospital due to poorly co-ordinated service and lack of integration of health and social care

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

BHF Scotland believes that the following areas should be regarded as particular priorities:

- Improved service user experience
- Continuing care: this is a key area where coordination between health and social care is particularly vital
- Reduced social isolation: this should cover the broad range of emotional, psychological and practical support that an individual may need to avoid social isolation, and include consideration of the needs of carers
- Services should be regarded as seamless, both across service provision and across time – available round the clock, 7 days and 24 hours.

The letter of the Bill focuses on the new challenge of integration of two key services at a strategic level and on the statutory responsibilities of integration authorities. The Policy Memorandum recognises the existing challenge of the lack of integration within the health service, e.g. between primary and secondary care. Authorities must not lose sight of this challenge in the work ahead.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As a charity which has committed millions of pounds over many years to pioneering health services and driving up standards in the health service, BHF Scotland welcomes the commitment to treating third sector organisations as key partners in the planning and assessing of services.
As the champion of the needs and interests of people with heart disease, we also welcome the commitment to services being planned and delivered seamlessly from the perspective of the patient, service user or carer.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

People with heart failure would enjoy a better quality of life if services were effectively integrated.

Not only do they require health services but they need support with housing; transport; personal care; benefits and social isolation.

Overall, the symptoms associated with progressive heart failure make it difficult for the person to continue with normal daily activities. Many people have to give up work and may get into financial difficulties at a time when they feel too ill to cope with their problems. Housework, cooking and gardening become difficult and washing, dressing and going to the toilet can be problematic. With so many disabling and distressing symptoms it is hardly surprising patients get depressed.

Social care needed for many of these patients includes help with shopping, housework, preparing meals and personal hygiene. Many will live alone and be housebound and will be socially isolated and may also benefit from a purely social visit from someone calling round for a cup of tea and a chat.

Caring for the people affected can become problematic as many of these patients are elderly with significant other co-morbidities and in many cases, their spouses are elderly and frail and find it hard to cope alone without additional support. Many carers would benefit from some respite from their carer role, however there is very little available for carers to access at present.

**Concluding remarks**

BHF Scotland supports the intentions of this Bill as, when successfully implemented, the result should be joined-up care that delivers better outcomes for patients and carers. The 71,000 people in Scotland living with heart failure stand to benefit.

**British Heart Foundation (BHF) Scotland**

2 August 2013

**APPENDIX**

**About heart failure**

Heart failure is a disabling and life-limiting condition for which there is no cure. It is usually, but not always, the result of damage to the heart from a heart attack. As heart failure progresses, many patients appear breathless even at rest. Breathlessness resulting from pulmonary oedema (fluid in the lungs) is a distressing symptom, which has been described as ‘feeling as if I’m drowning.’
It restricts physical activity and may occur in acute paroxysms (spasms), especially during the night (paroxysmal nocturnal dyspnoea) disturbing sleep and patients need to sleep propped up with a number of pillows or in a chair (orthopnoea). It is often accompanied by a persistent, dry, irritating cough. Oedema (fluid retention) may be apparent, initially in the feet, legs and ankles but in severe cases may be found anywhere, including the abdomen, causing the patient significant discomfort. Oedema can also increase the risk of pressure sores.

Many patients complain of tiredness which may be due to lack of sleep, breathlessness, loss of appetite and also muscle weakness resulting from poor perfusion of organs and muscles and can be exacerbated by abnormalities of serum electrolytes (especially increasing urea and hyponatraemia (low sodium). As further deterioration occurs, patients often report loss of appetite, nausea, itchiness of the skin, abdominal discomfort or pain, and delays in their blood clotting time increasing the risk of bruising and bleeding.

Prevalence of heart failure

Across Europe there has been a general decline in mortality from heart conditions, with death rates in Scotland falling by around 40% since 2000 (General Registrar for Scotland 2011). The prevalence of heart failure however is the one cardiac condition which continues to rise. This is due to changing demographics (e.g. ageing population) and improved survival from cardiac conditions in earlier life (European Society of Cardiology 2011a). Additionally people are living longer with heart failure due to improved management of existing cardiac conditions and specialist heart failure care including Specialist Heart Failure Nurses. Information and Statistics Division (ISD) Scotland estimate that there are around 100,000 people in Scotland living with heart failure.

Patients are reviewed by specialist nurses in a variety of settings: hospital wards, outpatient clinics, satellite clinics and in their homes. Their social care needs are therefore also an important part of their wider care and treatment package.
Do you agree with the general principles of the Bill and its provisions?

The general principles of the bill to make an integration plan to make provision in relation to the carrying out of the functions when integration is in place is extremely useful. To forward think with a formulized focus for the functions of the local authority and health boards will make for ease of transition.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objective?

Agree in principle, but need to make sure that all administrative tasks that may be easily overlooked (i.e. IT, laptops, expenses, log in details) are all thought through in the integration plans and not just the wider organisational issues (i.e. payroll).

Please indicate which, if any aspects of the Bills policy objectives you would consider as key strengths

The integration planning principles of the bill are a key strength, along with acknowledging the need to take into account the particular needs of recipients. Geographical issues are important, particularly within an older population, therefore utilising the integration planning principles when addressing wider determinants of health and wellbeing in consideration of integration is useful.

Another key strength is that these plans are being set out and led locally which will utilise the knowledge of the population from general practitioners and community led professions, as well as information from secondary care. In line with this, making the best use of available facilities, people and other resources, again linking into the voluntary sector will be an important and key point to the principles and objectives. Increased engagement from voluntary sectors, who normally work within community settings, and on limited funding, allows for gathering of experiences and learning from the development and working of these sectors.

Another key strength will be the establishment of consultation group to focus and manoeuvre the integration plan, allowing for key communication and discussions between groups, and focussed planning in terms of the agenda.

Please provide details of any areas in which you feel the Bills provisions could be strengthened.

Wider understanding and considerations of locality boundaries, payments and broader professional and organisational agenda setting that may occur. Wider consideration of the frontline workforce in integration plan, they come with information and knowledge that can be utilized and acknowledged within the
plan. Again as stated above, a wider consideration of voluntary sector and primary care (i.e. GP’s).

Another aspect which could be strengthened or further informed would be the publishing of the integration plans. Where and how will this be published, also will this be well publicized to all the workforce and wider population along with voluntary sector. Many of health and social care staff are not aware of the integration; thus are unable to comment on it. Co-operation section again did not seem to take into consideration of other partners and sectors out with health board and local authority.

In line with the national health and wellbeing outcomes, staff and population level need to be made aware of these, to ensure the integration functions are being followed. Therefore these must be well publicized within all sectors.

**What are the efficiencies and benefits that you will anticipate will arise for your organisation from the delivery of the integration plans**

Better joint working. Community partnerships will grow and develop, primary secondary, community and voluntary sector will hopefully be made more aware of each other and the services and provisions that they can offer. Wider understanding and considerations of preventative and anticipatory care, utilizing information sharing in a more positive form to develop better services and provisions for the population and staff.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Information sharing between local authority and health board in determining the integration plan, will have positive effects on those receiving the service, as information sharing and sharing of best practice will benefit the whole system.

Heather Locke and Catherine Murray
2 August 2013
Voluntary Health Scotland

Introduction

Voluntary Health Scotland is the national voice of the voluntary health sector with around 400 members. We welcome the opportunity to submit a response to the Health and Sport Committee’s call for written views and evidence on the Public Bodies (Joint Working) (Scotland) Bill. Our comments below reflect consultation with the sector through attendance at events and through individual discussions with members. We have also shared this response and sought feedback from members.

Questions

1. Do you agree with the general principles of the Bill and its provisions?

The policy memorandum sets out the policy ambition and overarching principles of the Bill. Voluntary Health Scotland agrees with these principles, which describe a framework for joined up care that delivers better outcomes for patients, services users and carers, focusing on a person-centred approach to effectively address the needs of individuals. This person-centred approach should build upon current legislation and initiatives and embrace principles highlighted as part of the Christie Commission. We would further stress the importance of a focus on human rights as a guiding principle to the Bill to protect dignity and quality of life, ensure individual needs are taken into account and ensure service users are effectively involved in the planning process.

However, while the Bill details integration planning and delivery principles, it does not adequately reflect the overarching policy ambition and principles of person-centred approaches, collaboration and co-production. We appreciate the rationale behind this approach, and the legal difficulties in defining principles in legislation. However, we and our members, agree that people-focused principles should be set out at the start of the Bill to demonstrate that the aim of structural reorganisation is to provide more integrated, consistent and quality care. We highlight the approach taken in the Social Care (Self-directed Support) (Scotland) Act 2013 as good practice, and support a similar approach with the Public Bodies (Joint Working) (Scotland) Bill with the inclusion of general objective/principles into the main body of the Bill.

The provisions of the Bill centre on integration at a strategic level and statutory responsibilities of integration authorities. However, successful health and social care integration is contingent on a range of factors, of which structural reorganisation is only one. Northern Ireland has had a structurally integrated system of health and social care since 1972. However, evidence

---

from Northern Ireland\(^3\) has shown that there can be difficulties with integrated systems, notably through inequitable resource allocation, priorities, identification of need and performance targeting. The Northern Ireland integrated health and social care system has not realised its full potential and the opportunities provided by the structural organisation have not been fully capitalised upon. The Audit Scotland 2011 Review of Community Health Partnerships\(^4\) also highlights a number of challenges in the integration of health and social care and concludes that effective local leadership and a commitment to develop partnership working over a sustained period is also needed. We would welcome further consideration of incorporating a ‘route map’ to integration in the Bill, incorporating people-focused principles and partnership working, which would accompany and complement structural reorganisation.

The policy memorandum also highlights a disconnect between primary and secondary care, and, acute and community care within the NHS. However, the provisions of the Bill do not address this disconnect and this will impact upon the effectiveness of integration plans. We would welcome further consideration of this reflected in the Bill.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The approach proposed in the Bill places significant focus on the structural reorganisation of public bodies as the route to integrated services. However, there is a disconnect between this and the policy objectives to; improve the quality and consistency of services for patients, carers, service users and their families; provide seamless, joined up quality health and social care services; and effectively and efficiently deliver services that meet people’s needs.

Structural reorganisation will not automatically lead to these outcomes and further work is necessary to ensure the Bill results in effective services for individuals. The Bill does not effectively address unintended consequences of integration, such as the short-term division of resources and focus, and issues surrounding transitions between services and atypical scenarios that can ‘fall through the gaps’. Here lies an intrinsic tension between person-centred approaches, collaboration and co-production and the realisation of a joint bureaucracy and the budgetary, structural and cultural tensions that accompany this.

We would advocate a holistic approach to the integration of health and social care, which draws on learning from the rest of the UK, and seeks to integrate structural reorganisation with effective partnership working and person-centred principles. Evidence submitted to the Christie Commission demonstrated that effective collaboration and partnerships with people and communities makes a real difference. It recommended that the government

should use these models to ensure legislation benefits individuals and communities. We would welcome further consideration of incorporating a ‘route map’ to integration in the Bill, incorporating people-focused principles and partnership working, which would accompany and complement structural reorganisation.

The third sector contribution to achieving the stated policy objectives is significant, and while this contribution is recognised within the policy memorandum, it is missing from the proposed legislation. The third sector brings a range of resources and expertise to integration in terms of:

- providing valuable support and services, both in collaboration and independent of the statutory sector
- adding insight and intelligence in the strategic commissioning process
- maintaining close links to service users and communities, which enables their voices to be heard, and
- accessing hard to reach groups.

The third sector should be acknowledged as a strategic partner in the integration of health and social care, and engaged with throughout the development of integration authorities and strategic plans.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

Voluntary Health Scotland agrees with the Bill’s policy objectives, subject to considerations detailed in question 1 above. We welcome the emphasis on integration of health and social care and the legislative duty on local authorities and health boards to integrate their services.

The development of national health and wellbeing outcomes will be critical to this process and we, the third sector, welcome the opportunity to contribute to the development of these shared objectives as detailed in Part 1: Section 5 (4) to ensure the vision of better outcomes for patients, services users and carers is achieved. We anticipate that the integration of health and social care will have a positive impact on openness of strategic commissioning, timely decision making and funding agreements and accountability.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

We do not believe that the proposed legislation effectively acknowledges or utilises the knowledge, resources and skills of the third sector. Partnership working with the third sector is crucial to ensuring the suitability and sustainability of services within an area. We believe that the legislation, omitting engagement with the third sector in the development of both integration and strategic plans, is flawed. We would recommend strengthening these provisions to ensure third sector involvement, especially if integration planning and delivery principles are to be achieved.
As previously outlined, the third sector has significant experience in delivering services that suit the needs of individuals and communities and have access to people that local authorities and health boards do not. As such, we believe that the involvement of the third sector should be strengthened in primary legislation to ensure involvement in designing and delivering services. Evidence from the JIT Health and Social Care Integration Enquiry\(^5\) shows that many areas have processes in place for planning shadow arrangements; within these, there has been variable engagement of key stakeholders. We believe that omission on a duty for integration authorities to consult and engage with the third sector will directly impact on the consistency of services across Scotland.

We acknowledge the inclusion of third sector organisations in the Bill in relation to the development of the national health and wellbeing outcomes. However, would recommend the inclusion of third sector organisations in the following sections of the Bill:

- Part 1: Section 6 – Consultation
- Part 1: Section 12 - Integration joint boards: further provision
- Part 1: Section 26 - Establishment of consultation group

We note from the policy memorandum that the remit of the Bill is to provide a framework to integrate adult health and social care services as a minimum, and for statutory partners to decide locally whether to include other functions in their integrated arrangements. The JIT Enquiry highlights that again in planning shadow arrangements, there are inconsistencies across Scotland as to what is included in integration arrangements. For example:

- 4 partnerships intend including aspects of children’s services and 6 are also actively considering this.
- 4 partnerships intend including criminal justice and 5 partnerships are also actively considering this.
- No partnership had intentions to include their housing departments in formal integration arrangements. Housing support is already integrated within social work for a number of partnerships and 3 partnerships are also actively considering this.

This creates a confusing landscape across Scotland for members of the public, service users and carers and impinges on the consistency of care across Scotland. It also creates questions for national third sector organisations and their ability to seek to influence nationally in future and engage with third sector interfaces. Similarly, transitional services are not included in legislation and we as a sector are concerned that transitions between services and atypical scenarios can ‘fall through the gaps’. We would recommend further strengthening of provisions for including other

functions in integrated arrangements and clarification is required on how these elements connect with community planning partnerships.

The Policy memorandum notes the importance of ensuring the effectiveness, quality and safety of services. However, third sector providers have noted the absence of ‘ensuring quality’ in the Bill itself. Accountability, assurance and ensuring that vital services continue to be provided to a high standard remains high on the third sector agenda. National standards could be referenced in the Bill, along with clear guidelines for independent scrutiny of quality, performance and the achievement of national outcomes.

We are also concerned around how the Bill links to existing legislation, for example, the Self Directed Support Act, and the complexities the integration of health and social care will introduce for service users, carers and families. We are also concerned about the provisions in the Bill for public involvement in the scrutiny of integrated services and how patients, service users, carers and their families can influence, feedback and complain about services in accordance with the Charter of Patient Rights & Responsibilities⁶.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As the national voice of the voluntary health sector, we believe that if the third sector is involved in the design and delivery of integration plans, this will lead to improved engagement between third sector organisations and statutory bodies. However, in order to do that, the provisions within the Bill need to be strengthened as described in our response above, to identify the third sector as equal partners in planning and decision making processes, including full membership of joint integration boards. This would recognise the equal input of the third sector into the partnership.

There needs to be a strengthened focus on integrated care and focusing on a framework for joined up care that delivers better outcomes for patients, services users and carers. This does not just include statutory bodies and as we have demonstrated, the third sector is a key partner in the delivery of services and can bring a number of advantages to the framework, including:

- Providing valuable support and services that complement and collaborate with, or those that are missing from statutory services
- Accessing hard to reach/isolated individuals that can be reluctant to engage with statutory bodies
- Tackling health inequalities through holistic approaches that take the social determinants of health into consideration, and
- The ability to move quickly and flexibly, to respond to patient and service user need without bureaucratic constraints.

⁶ http://www.scotland.gov.uk/Publications/2012/04/6273
6. **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Both integrated health and social care, and integration plans have the potential to positively impact on patients, service users, carers and their families. In line with the policy objectives of the Bill, this if developed effectively can lead to significant outcomes for people. However, this depends on the suitability of the framework adopted in each integration and strategic plan and the development of national health and wellbeing outcomes. This is not only dependent on the structural reorganisation of statutory bodies, but also includes the following:

- principles of person-centred approaches, partnership working, collaboration and co-production are realised and key stakeholders are engaged in the process
- lessons are learned from the rest of the UK, and former initiatives e.g. the review of CHPs, and
- recommendations from enquiries such as the Christie Commission are taken into account.

2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

British Psychological Society

About the Society

The British Psychological Society, incorporated by Royal Charter, is the learned and professional body for psychologists in the United Kingdom. We are a registered charity with a total membership of just over 50,000.

Under its Royal Charter, the objective of the British Psychological Society is "to promote the advancement and diffusion of the knowledge of psychology pure and applied and especially to promote the efficiency and usefulness of members by setting up a high standard of professional education and knowledge". We are committed to providing and disseminating evidence-based expertise and advice, engaging with policy and decision makers, and promoting the highest standards in learning and teaching, professional practice and research.

The British Psychological Society is an examining body granting certificates and diplomas in specialist areas of professional applied psychology.

Do you agree with the general principles of the Bill and its provisions?

The Society strongly supports the principle of service integration, which recognises the links between health and social care needs and that well-being can best be achieved by providing a more holistic approach to people’s care. We also welcome the focus on prevention and on efforts to make better use of local resources. This focus fits with an assets based approach, which is consistent with psychological models of well-being and which we believe is the most efficient and effective way to addressing Scotland’s health inequalities and to meeting the future mental health needs of its population.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Society is concerned that the proposed arrangements may not lead to improved well-being amongst the population of Scotland. The joint working arrangements may simply lead to the continued emphasis on current methods of tackling people’s health and social care needs, albeit in an integrated fashion. It is our view that a more radical shift is required that moves away from traditional models of care, and more towards services react to problems with treatments and interventions, towards an assets-based approach, which focuses on prevention by helping people build resilience and develop the skills and resources to solve their own problems and by involving families and communities. We would like to see a stronger commitment to increased investment in assets-based approaches (Division of Clinical Psychology Scotland, 2013). We would also like to see greater efforts to make use of the expertise of practitioner psychologists to contribute a psychological perspective to inform this shift in approach. Currently, practitioner
psychologists are under-represented in the decision-making structures of health boards and social care services and it does not seem as if the proposals in this Bill will help to overcome this.

We are also concerned that the proposed arrangements do not allow sufficient involvement of users, carers and the third sector. It is the Society’s view that the involvement of these parties should be extended beyond the requirement for them to be consulted, to being included as equal partners in the strategic planning and governance arrangements.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The Society supports the emphasis on older people’s health and care and the efforts to reduce hospital admissions amongst this population.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

As detailed above, it is our view that the planning and governance arrangements must be expanded to include users, carers and the third sector. We would also like to see greater efforts to bring about a fundamental shift towards an assets-based approach. To achieve this end, we believe that there must be greater financial investment in this approach at the expense of traditional methods. Furthermore, strategic planning must involve a broader range of professionals than is generally the case, including in particular, practitioner psychologists.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Psychological services will benefit from closer working arrangements with social care services in allowing a more holistic approach to care. Stronger governance arrangements which recognise the important role of psychological services and applied psychology in improving health and care outcomes will also be of benefit. Further, national outcomes for health and well-being should lead to improvements in the consistency of care for people across Scotland.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

Integration plans should allow recipients to experience a more co-ordinated, coherent approach to their care. It should allow them and their carers to be more actively involved in their care planning and to have access to services in the community which are better suited to their particular needs. However, unless there is a shift in commissioning practice from the acute care sector to the community, the Society is not confident that the proposals will ensure that older people are provided with services that support them to live for as long as they can in the community. Integration may help to deliver improved outcomes for older people and lead to reduced costs, the evidence base for this is not
yet fully established (Weatherly, H., Mason, A., Goddard, M., and Wright, K, 2010) and the process could lead to increased costs in the short to medium term which might undermine service quality.

About this Response

This response was led for the British Psychological Society by:

Dr Ruth Stocks CPsychol, Division of Clinical Psychology Scotland and Division of Forensic Psychology Scotland

With contributions from:
Dr Belinda Hacking, CPsychol AFBPsS, Division of Clinical Psychology Scotland and Division of Health Psychology Scotland
Do you agree with the general principles of the Bill and its provisions?

In our response to the Consultation on the Bill, NHS Lanarkshire affirmed our commitment to putting in place a system of Health and Social Care that is robust, effective and efficient and which reliably and sustainably ensures the highest possible quality of support and care to the communities we serve. In working towards these goals we fully acknowledge the need for services to be designed around the service users and their carers in a way that is as seamless and integrated as possible.

Together with our community planning partners we also recognise the importance of being jointly accountable for the delivery of national outcomes and for improving service delivery. In summary we therefore agree with the general principles of the Bill and strongly support the stated policy objectives.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

Again, within our response to the Consultation on Adult Health and Social Care Integration, NHS Lanarkshire and its Local Authority partners highlighted our shared concerns that where partnerships were already assessed as performing to a high standard in meeting the conjoint objectives of A Joint Future, that plans for integration that included structural changes could detract from the existing focus on delivering effective and efficient services to people in local communities and shift focus on to the reform process itself. Whilst recognising that the approaches set out in the Bill will require a significant level of leadership and organisational development time and energy, the proposed approaches are never the less very likely to support the achievement of the policy objectives. Local Authority and NHS leaders will be required to ensure that implementation plans and change management processes do not detract from frontline service delivery during the transition period.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

Within the response to the Consultation NHS Lanarkshire and its partners requested that any plans took account of the necessary balance between national expectations and targets and the local priorities that emerge through local community planning systems. In this way services can be designed to meet varying local circumstances whilst still achieving prescribed national outcomes. It is considered that the approaches set out in the Bill around Joint Strategic Planning afford the opportunity to strike the right balance and flexibility to meet specific local priorities. For this reason this is considered to be a key strength.
• Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

Overall the Bill’s provisions are considered to provide a clear framework to enable NHS Boards and Local Authorities to develop robust integration plans and to strengthen professional inputs to the community planning process.

• What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Since the publication of the Royal Charter for Older People and the subsequent introduction of “A Joint Future” service users and carers have sought more streamlined assessments, service plans and delivery mechanisms. The Bill presents an opportunity to build on the existing strong foundations of partnership working in Lanarkshire which in turn will see less duplication of effort and more effective use of assets be they Buildings, Equipment or Staff. Over time there will be opportunities to bring Corporate Services such as Finance, Human Resources, Estates and Capital Planning and IM&T together as single services. There will also be opportunities to streamline operational management structures and governance systems.

There will also be opportunities to begin to develop the roles of staff to enable individuals to deliver a broader spectrum of health and social care inputs by blurring professional boundaries. This will improve decision making especially where people have complex needs.

• What effect do you anticipate integration plans will have on outcomes for those receiving services?

From a service user perspective receiving comprehensive health and social care services based on a single shared assessment should speed up service delivery and reduce information exchanges and ‘hand offs’ between services. The integration plans should therefore support achievement of the overall policy objectives which are designed around improved access to more consistent, efficient and effective range of services.

NHS North Lanarkshire
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Carers Scotland

Carers Scotland is a charity set up to support the thousands of people who care for an elderly partner, sick friend or disabled family member. Carers Scotland is the Scottish nation office of Carers UK. Caring is part of life. Three in five of us will provide unpaid care for someone at some point in our lives. However, without the right support the personal cost of caring can be high with many carers experiencing poor health, poverty and disadvantage. Carers Scotland helps carers and campaigns to make their lives better.

Facts about carers

- There are almost 660,000 carers in Scotland
- 110,000 people provide over 50 hours of care per week
- People from lower socio-economic backgrounds\(^1\) and in areas of multiple deprivation\(^2\) are more likely to need and to provide care.
- Unpaid carers and young carers are more likely to suffer poor physical and mental health, particularly those who are providing intensive levels of care. This affects their ability to care.\(^3\)
- The role of carers is significant in the delivery of care and support. Currently the cost to replace the care provided by carers would be more than £10 billion each year\(^4\). Carers are critical in enabling older and disabled people to live safely in their own homes and communities.
- With a growing ageing population, the need for unpaid care will also increase. It is estimated that by 2037, there will be 1 million carers in Scotland\(^5\).

Introduction

Carers Scotland welcomes the opportunity to comment on proposals for the Public Bodies (Joint Working) (Scotland) Bill. Our comments aim to provide suggestions to strengthen the Bill and any supporting guidance and to highlight areas of concern.

1. General Principles & Policy Objectives

Carers Scotland welcomes the commitment to integration of health and social care and its intention to improve outcomes for individuals and carers. It is

\(^1\) EHRC, How Fair is Britain (2010)
\(^3\) Carers Scotland & Carers UK: Carers in Crisis (2008)
\(^4\) Carers UK: Value of Caring (2011)
\(^5\) Carers UK: It Could Be You (2001)
clear that, done well, this has the potential to break down artificial barriers between health and social care and enable people to receive consistent support that addresses their needs more holistically. We believe this will begin to address current problems where often carers report that they and the person they care for fall through the gaps between health and social care, causing unnecessary readmission to hospital and subsequent strain on carers.

For example, in recent research by Carers Scotland, four in 10 carers caring for someone discharged from hospital in the last year felt that the person they cared for was not ready to come out or they did not have the right support to be at home. Almost two thirds had either not been consulted about their discharge or had only been consulted at the last minute.

“She was discharged too early, without proper medication which resulted in her being re-admitted to hospital within three days.”

“The impact of a rapid discharge back home with me, even when I said I couldn’t manage, has been one of the most highly stressful things that I’ve had to deal with.”

This applies equally in the delivery of social care services in isolation from carers’ needs. Of those who cared for someone who had been admitted to hospital as an emergency in the last three years, more than one in five (22%) felt that this emergency admission to hospital could have been prevented if they had received replacement care to look after their own health or been given more respite and support.

We welcome the commitment to underpin these reforms with those outlined in the Christie Commission in that “effective services must be designed with and for people and communities.”

However, this should be clear that individuals and carers should be involved as equal partners alongside statutory, third and independent sector providers in strategic commissioning and planning for the delivery of services and support at all levels.

This means ensuring that legislation and supporting guidance for the Bill ensures that partnerships build a consistent approach to involving carers and carers’ organisations in strategic planning for support across the authority and in planning and delivery in localities.
We believe that the Bill as it stands does not sufficiently translate the stated policy of designing services with people and communities. We agree\(^6\) that “services should be planned and led locally” and that a consultation group to involve stakeholders should be established as an integral part of the development of strategic plans. However, we believe Bill itself should specify more than “engagement” and “consultation” and instead should specify that such planning is grounded in “co-production” with carers, individuals and communities who are fully involved from the outset. A mechanism for formal agreement of the integration plans by these representatives at both strategic and local level should be in place alongside that of the local authorities and health boards with statutory responsibility.

To deliver real change, the principles of good co-production should apply at all levels of planning – strategic, locality and individual. For example:

“Good co-production can ensure that services are shaped according to need, that the benefits of re-configuration are clear to all, that real challenges including financial ones are transparent and understood and that real involvement and control are given to communities.”\(^7\)

2. Strengths

Carers Scotland welcomes that the Bill places a duty on local authorities and health boards to integrate their services rather than previous, often inconsistent, approaches to joint working that have often failed to deliver for carers and those they care for. However, as outlined above, it is vital to fully engage with people and communities to deliver the most effective outcomes.

We further welcome the Scottish Government commitment to prescribe national outcomes. National outcomes have the potential to achieve consistency across Scotland in the delivery of holistic health and social care services. Changing and improving systems to improve delivery of health and social care is important but what is most important, and warmly welcomed, is the outcomes focus of the Bill which is firmly based upon making people’s lives better. We believe this holistic approach can make a difference to carers’ whole lives, focusing not only on their caring role but instead on sustaining and improving their health, wellbeing, quality of life and achieving aspirations.

At present there is a significant disconnect between social care and both primary and acute care. This can affect carers negatively and has impacts far

\(^6\) S4 1 (iv) & 25 1b (iv)
\(^7\) A Controlled Earthquake - A think piece on where Joint Commissioning Strategies need to go: Joint Improvement Team (2011)
beyond their ability to sustain caring. Carers can experience poor health, isolation, poverty and loss of employment simply because they care for a loved one. In our recent research\(^8\) 84% of carers said that caring had a negative effect on their health yet two thirds said their GP was aware of their caring role but gave them no extra help. This illustrates just one example of the lack of joined up approaches to providing effective support to carers.

Despite long term policy to better recognise and value carers as equal partners in care and to provide support to sustain caring, less than half were involved or consulted in discussions about the care of the person they look after, only half knew about technology such as telecare and telehealth that could help them in caring and almost a third of those caring for 35 hours or more receive no practical support with caring.\(^9\)

With effective leadership, the Bill and national outcomes have the potential to address these problems more consistently and deliver the seamless services that carers should be able to expect. Moreover, we welcome the intention to consult with carers in the process to regulate for national health and wellbeing outcomes that affect them and those they care for. Carers and organisations representing cares must have meaningful opportunities to make clear what will improve the lives of carers and those they care for.

3. Issues that require further strengthening

**Section 2: Integration plans: two or more local authorities**

Carers Scotland has some concerns over the lack of information in relation to this section of the Bill. There is a need for greater information on plans for the delivery of strategic planning over multiple local authorities. Carers Scotland would welcome more in-depth analysis and guidance to explain what this will mean in practice, ways in which people will be fully involved in the co-production of such plans and how they intend to deliver effective outcomes for people and carers.

**Consultation**

Whilst Carers Scotland welcomes the Government’s recognition\(^10\) that additional resources will be needed to support capacity and the recognition of co-production as key, we have some concerns over the lack of detail within the Bill on consulting and involving carers, people who use services and representative organisations such as carers’ centres. As noted earlier, we believe the provisions of the Bill itself should specify more than “engagement” and “consultation” and instead should specify that all integration planning is

---

\(^8\) State of Caring 2013: Carers UK
\(^9\) State of Caring 2013: Carers UK
\(^10\) Explanatory notes: 62-64
grounded in “co-production” with carers, individuals and communities who are fully involved from the outset. As noted, a mechanism for formal agreement of the integration plans by these representatives at both strategic and local level should be in place alongside that of the local authorities and health boards with statutory responsibility.

Statutory guidance and the specified secondary legislation should aim to ensure that there is a consistent approach across all partnerships and localities. This should build current standards for the involvement of carers and patients.\textsuperscript{11}

**Approval**

It is unclear in what circumstances approval for an integration plan may be refused by Ministers. This requires more clarity. However, we would suggest that in order to achieve approval, integration plans must include a formal agreement by carers and people who use services (and representative third sector organisations) alongside that of the local authorities and health boards with statutory responsibility.

**Complaints Procedures**

We reflect concerns from other third sector partners over the lack of reference to formal complaints procedures within the Bill. Both local authorities and health boards currently have their own complaints procedures and processes and we believe that one complaint procedure should be introduced for integrated partnerships to avoid confusion for people who use services and carers.

**Principles**

Carers Scotland welcomes the inclusion of integration planning principles\textsuperscript{12}. However, we believe that the Bill would be enhanced through underpinning and aligning principles with other relevant legislation and for these to be on the face of the Bill. This would ensure that the focus of integration in improving people’s lives is “centre stage” (as intended through the national outcomes) rather than structural change.

For example the Social Care (Self-Directed Support) Scotland Act 2013 principles include collaboration, involvement and the provision of information and to take “reasonable steps to facilitate” and respect individual’s right to

\textsuperscript{12} S4
dignity and to participate in the life of the community in which the person lives. The Patients’ Rights (Scotland) Act 2011 focuses on encouraging participation in decisions, providing information and support and the right to give feedback or raise concerns.

**Achieving Savings and Reinvestment**

The intention of integration is clear, to move from disjointed systems that can cause expensive unplanned and unnecessary admissions and delayed discharges towards coordinated support built around communities that will improve outcomes.

What is not clear however is how these “savings” made to acute care will be identified and reinvested into the new integrated services. Whilst we recognise that it may take time for these changes to actually deliver savings, it is unclear what mechanisms will be put in place to identify these savings and ensure that they are, over time, reinvested into integrated services, rather than being simply reabsorbed into acute health care settings. This movement of resources is critical to success.

4. **Efficiencies and benefits for organisations**

As an organisation involving and representing carers, we hope that integration will improve opportunities for active, equal and full engagement with carers and with those organisations representing and supporting them at both strategic and locality level. However, at its heart, integration must recognise and value the knowledge and expertise of communities, third sector organisations, carers and people who use services in identifying and delivering the best solutions that bring about real change and improvement. Again, we welcome the Government’s recognition \(^{13}\) that additional resources will be need to support capacity and co-production.

5. **Anticipated effects on outcomes for those receiving services?**

Integration has the potential to deliver better support for carers and those they care for. It is vital however that, as intended, it delivers support holistically; understanding that in order to reduce the negative effects of caring, support is needed not only to make caring sustainable but also to improve carers’ health, wellbeing and quality of life. This includes ensuring that they have the same opportunities to remain in paid employment and take part in learning, leisure and social activities as all citizens. We also hope that integrated plans will also recognise the linkages between good support for carers and for those

---

\(^{13}\) Explanatory notes: 62-64
they provide care, recognising the importance of delivering good outcomes for both.

It is critical however that integration retains its clear intention on improving outcomes and that this does not become lost in the process of changing systems, structures and workforce.

Carers Scotland
2 August 2013
1. **Introduction**

1.1 YouthLink Scotland is the national agency for youth work. It is a membership organisation and is in the unique position of representing the interests and aspirations of the whole of the sector, both voluntary and statutory.

1.2 This evidence does not claim to be the position of any one individual member organisation, or of all member organisations. Individual organisations may hold views which differ from the opinions presented here. We have consulted with our membership on this evidence, in line with our consultation response protocol, and this submission incorporates the views of those members who responded to the request for feedback.

1.3 In this submission, we are mostly concerned with the implications of the Bill for children and young people’s services. As the Bill’s provisions are focused on adult services, and have little to say on children’s services other than making it possible for them to be integrated, we are unable to answer some of the Committee’s questions directly, but rather have provided comments and questions for consideration and further exploration.

2. **General principles**

2.1 We welcome the overall policy aim of the Bill, which is to improve outcomes for service users, carers and their families. The general principles which are on the face of the Bill are the integration planning and delivery principles. These aim to improve the wellbeing of service recipients by providing services which: are integrated from the point of view of recipients; take account of their needs; are locally planned and led; anticipate needs and prevent them arising; and make the best use of facilities, people etc.

2.2 We support the general principles, but believe that there should be a greater emphasis on the rights of service users, as well as their needs. The need to tackle health inequalities, and the importance of preventative approaches and early intervention, should also be emphasised.

2.3 With regards to the Bill’s provisions, this is a more complex question. We deal with some of the issues, from the perspective of the children’s and young people’s sectors, below.

3. **Children and young people in the Bill**

3.1 The Bill seems to have been originally conceived as a ‘services for older people’ Bill, as it refers to them throughout. As a consequence, children and young people are largely invisible in the legislation. The potential to integrate children’s services and other functions such as housing seems to be something of an
afterthought and the implications of integrating (or not integrating) these other services is not adequately explored.

4. **Areas in which the Bill’s provisions could be strengthened**

4.1 There is a lack of clarity over how this Bill links to the shared children’s services planning duties in the Children and Young People (Scotland) Bill, and to the assessment of needs and planning requirements in the Regulations for Community Learning and Development 2013. These regulations require education authorities to undertake an assessment of community learning and development needs in their area, and to publish three year plans accordingly. It is imperative that these assessments and plans take full account of children and young people’s needs, and that, in turn, children’s services planning takes full cognisance of the role and contribution of community learning and development. How is it envisaged that these planning processes will link to the integration of children’s services, as enabled by this Bill?

4.2 We are unclear as to how the provisions will impact on the transition from children’s to adult services, especially given that there may be a proliferation of different integration approaches across Scotland. This is a highly significant issue, as transitions are crucial in helping children and young people achieve positive outcomes. Transition is an important issue for all young people, but it is particularly significant for vulnerable and disadvantaged young people, and those who have disabilities and long-term conditions. The guidance accompanying the Social Care (Self-directed Support) (Scotland) Act 201 refers to transitions and the importance of early planning, which we would reiterate. We would like to see a greater connection between the Self-Directed Support provisions and this Bill.

4.3 We would like further clarity over where children’s social work and education (including community learning and development) will sit within, or in relation to, these new structures, and where management responsibility will lie.

4.4 As the provisions will result in a range of different approaches to integrating children’s services being taken across the country, this could result in increased complexity, especially when dealing with cases that cover more than one area, and could lead to confusion among the public.

4.5 In many cases, areas will choose to create new integration bodies. If these bodies are to operate as trusts, this could present some specific difficulties. In our evidence to the Education and Culture Committee on the role of children’s charities in June 2012, we reported the views of some of our member organisations, whose experience is that “the trend towards creating local authority trusts is problematic, as trusts spend a disproportionate amount of time on income generation as opposed to direct delivery of services for young people and their communities.”

4.6 There is a lack of detail on the requirement to involve service users in the governance arrangements. If children’s services are integrated then it will be

---

1 http://www.youthlinkscotland.org/webs/245/documents/EducationandCultureCommittee-Written evidencefromYLS.doc
necessary to include children and young people in these processes. As we stated in our response to the consultation on the Community Empowerment and Renewal (Scotland) Bill\(^2\), the involvement of young people must be meaningful and not tokenistic. Methods of engagement are more successful when they are creative and sustained, and where there is a positive attitude towards young people’s involvement. There needs to be awareness that structures can exclude young people – for example, the times that meetings are held at may be unsuitable as they clash with school or college timetables. These issues could be developed and clarified through statutory guidance and regulations.

4.7 The Bill also needs to demonstrate how integrated services will connect to community planning processes and the provisions in the Community Empowerment and Renewal Bill, which, as mentioned above, requires community engagement (including the participation of young people) in planning processes.

4.8 The integration of services will also presumably lead to the merging of three different complaints mechanisms (for health, social care and social work). Whatever mechanisms are decided upon, it is important that means of complaint and redress are accessible, local, and young-person friendly, so that problems can be resolved quickly and easily.

5. **The third sector**

5.1 The third sector must be fully involved in the planning and decision-making processes. However there are a number of questions regarding how this would work in practice. The third sector is diverse, with a range of sometimes competing views. Who will ‘the third sector’ representatives be, and how will this be decided on? There will be practical difficulties for national voluntary organisations in engaging in these diverse models of integration across Scotland. It may be the case that umbrella bodies, such as voluntary organisations’ councils, will represent the sector, but this requires further discussion.

5.2 The Policy Memorandum suggests that the third sector will not have voting rights on the governance bodies. If this is the case, it could lead the third sector being perceived as a ‘second tier’ member with less influence.

6. **Other issues**

6.1 The Bill requires integration between local authority functions, which are ultimately accountable to elected officials, and NHS functions, where the officials are appointed rather than elected. This raises some questions over accountability and representation, particularly in instances where the health board becomes the lead body, or where a new body is created.

6.2 Another issue which the Bill does not address is the discrepancy between social care services and NHS services in terms of cost. There is a charge for social care services, but NHS services are free at the point of delivery. This creates a

discrepancy which members of the public may find difficult to understand, especially if they are receiving services from one integrated body.

6.3 The Bill raises questions about the future direction of public services more generally, as the Scottish Government has now introduced a considerable amount of legislation in relation to joint planning and delivery. What is the overarching picture the Government has in mind?

Public Bodies (Joint Working) (Scotland) Bill

Dumfries and Galloway Council

Introduction

The Council’s response to the Health and Sport Committee is based on the joint submission in September 2012 by Dumfries and Galloway Strategic Partnership (our Community Planning Partnership) to the Scottish Government’s consultation on the Integration of Adult Health and Social Care and public service reform generally. It also reflects recent discussions and considerations by the Dumfries and Galloway Community Health and Social Care Partnership Board (CHSCPB) in its role as shadow Health and Social Care Partnership (HSCP).

Given that the Public Bodies (Joint Working) (Scotland) Bill was published relatively recently, our Elected Members will continue to consider the detail of it as it progresses through Parliament and as we develop, in equal partnership with our Health and Third and Independent Sector colleagues, our local current preferred model - body corporate - for consideration at future meetings of Dumfries and Galloway Council post political recess and Dumfries and Galloway NHS Board.

On 4 July 2013, the CHSCPB considered a detailed report on the contents of the Bill and an initial comparison of the integration models possible against our local principles for integration with the conclusion that our local principles can be accommodated and progressed through the Bill as it currently stands.

The integration model for Dumfries and Galloway - being informed and developed through our Health and Social Care Integration Programme Board - will meet legislative requirements and our local integration principles, focussing on bespoke services provided at local area level to meet the specific needs of individuals, communities and partner organisations.

Call for written evidence on the following 6 questions

1. Do you agree with the general principles of the Bill and its provisions?

The intent of the Bill is to provide “the framework which will support improvement of the quality and consistency of health and social care services through the integration of health and social care in Scotland”. As indicated in the Introduction above, the CHSCPB has considered the direction in the Bill and has concluded that there is alignment with the Dumfries and Galloway local principles for integration which focus on:

- improved health and wellbeing outcomes and addressing health inequalities
- prevention and early intervention
- quality of care
• a commitment to a person-centred approach
• services provided at community or locality level wherever possible
• full and meaningful engagement with communities and participation of all partners
• clear and robust decision-making structures; local accountability; integrated budgets; and professional leadership

The considerations of the CHSCPB confirm that our local principles are accommodated and will be progressed through the Bill as it currently stands.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The CHSCPB has noted that much of the detail of the Bill is to come through guidance and regulations; however, the Board expects to see an improvement in service design, quality and delivery through application of our local principles for integration which are broadly in line with the direction in the Bill and accompanying Policy Memorandum. An emphasis in the Bill and in our local principles on developing local decision-making and community involvement is a positive and necessary step to realise the policy objectives. Putting people at the centre of all decisions about their health and care and ensuring that services are planned and delivered to support this seamlessly for patients, carers, service users and their families is fundamental.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The policy ambition within the Bill for integrating health and social care services is to “improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older”. The work of the CHSCPB to date confirms that our local principles for integration are consistent with this ambition.

Our demographics highlight that the biggest single factor influencing social care and health needs in the future is expected to be the substantial rise in the number of older people, particularly the projected increase in those over the age of 75, and this is recognised in the Bill.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

More detailed information through early guidance and regulations is anticipated and there will be continuing discussions between COSLA, local government and other interests. Early notification of the timescale for submission of a final integration plan would be helpful although it is
acknowledged both that this is dictated by the pace of the legislative process, and that there may be changes to some of the detail in the final Bill.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

If integration plans fully reflect the integration planning principles currently outlined in the Bill and the proposed national health and wellbeing outcomes (which we have seen in draft), then the anticipated efficiencies and benefits for our Council should closely resonate with the outcomes we wish to see delivered through our local principles for integration i.e.

- clear and robust decision-making structures fully reflecting the unique and different roles of the Council and the NHS, retaining the respective accountability for resources, outcomes and performance and quality of services through a continuing commissioning approach
- clear and robust structures providing for full delegation and empowered decision-making
- professional leadership and oversight and practice development should remain with senior professional officers in each organisation
- an integrated budget to respond to all situations
- valuing staff and ensuring professional leadership and appropriate supervision, supporting them in their roles within integrated services
- existing change or improvement activity in adult health and social care refocused to support and underpin the delivery of integrated services

There are already programmes locally, including Putting You First, that are addressing aspects of the health and social care agenda for certain groups of adults. The efficiencies and benefits we anticipate through delivery of integration plans would be across health and social care for all adults in a consistent manner.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

If integration plans fully reflect the integration planning principles currently outlined in the Bill and the proposed national health and wellbeing outcomes (which we have seen in draft), then the anticipated outcomes for those receiving services should closely resonate with the outcomes we wish to see delivered through our local principles for integration i.e.

- improved health and wellbeing outcomes for local people, quality of care and the needs of the individual being central in all our considerations and decisions - “a person-centred approach to care”
- services delivered at a local level recognising that the shape of services may be different in each local area to meet specific and unique characteristics
- ensuring that people have the right support in the right place with timely and appropriate access to specialist services, minimising harmful delays in care and support
• involvement of people, communities and professionals from the outset and as equal partners in determining service design and delivery and support in their local area

• promotion of early intervention and prevention

• encouragement of self-care and self-management; and addressing health inequalities

Dumfries and Galloway Council
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Children in Scotland

1. Do you agree with the general principles of the Bill and its provisions?

Children in Scotland welcomes the opportunity to submit evidence to the Committee on this Bill which provides the framework to integrate health and social care services. The intention to provide a legal underpinning for integration and working together is welcomed, and has the potential to create more accessible services and clarity for service users.

The Bill itself does not refer to the principles which are detailed in the policy memorandum - it is very much a technical document setting out how arrangements for integration can be made. This is understandable but it should be possible to include more of the spirit and intentions at the start of the Bill, as has been achieved with the general principles at the start of the recent Social Care (Self-directed Support) (Scotland) Act.

Structural reorganisation is not the only element of ensuring successful health and social care integration – we would welcome further information on a ‘route map’ to integration incorporating partnership working to accompany the structural reorganisation provisions.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill is largely focused on structural reorganisation which will not automatically lead to the stated policy objectives - this needs to be combined with partnership working (including the third sector) and person centered principles. Successful integration will also require culture change for health and social care services, effective engagement with children, young people and families and also sound communication of information in accessible formats throughout the planning, implementation and evaluation stages.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The intent and legislative provisions for integrating health and social care services are welcomed, but as noted above and below could be strengthened. The development of the national health and wellbeing outcomes will be key in this process, and the third sector and service users should have a voice where possible in shaping these.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

The people who use health and social care services, where they wish to, should have a recognised voice in the process. There is a concern that the Bill currently states that third sector providers of health and social care services,
should be consulted and engaged with, but they may not have a role in eg signing off integration plans, or voting on proposals. This might include those who may not consider themselves ‘providers’ but who contribute considerably to meeting individual and community needs and towards achieving positive health and wellbeing outcomes.

This Bill makes no mention of the processes that will apply for those who access health and social care services – and this will hopefully be addressed in guidance/secondary legislation. There is, for example, no equivalent of the ‘named person’ (as contained in Getting it Right for Every Child and the Children and Young People Bill) – or a central point of contact for service users. The Bill mentions scrutiny of new bodies and arrangements but there is no mention of how service users will be able to raise concerns or provide feedback under new arrangements.

We would also welcome clarity on how this Bill will link to existing legislation such as the Social Care (Self-directed Support) (Scotland) Act and the possible complexities integrated social care services may introduce for service users, carers and families, particularly with regard to transitioning from children’s to adult services.

The policy memorandum to the Bill states that integration should include adult health and social care services at a minimum, and that local partners should decide whether other functions should also be integrated. It is our understanding that a number of areas will choose to integrate children’s health and social care services. An enquiry by the Joint Improvement Team (2013)¹ found that 4 partnerships intend including aspects of children’s services and 6 are actively considering this. A survey of Children in Scotland members showed mixed knowledge as to whether this was being planned in their area or whether some children’s services were already integrated. There was enthusiasm for more information on this topic.

This has the potential to create a mixed, and potentially confusing picture across the country where some services are integrated in one area but not in another. More emphasis on integration beyond adult health and social care is required in the Bill or accompanying documents.

We would also encourage the Health and Sport Committee to communicate with the Parliaments Education and Culture Committee who will be considering the Children and Young People Bill, which will likely work its way through Parliament at the same time as the Public Bodies Bill.

The Children and Young People Bill makes a number of provisions in relation to Getting it Right for Every Child and joint working which may have implications for any integrated health and social care services. These include:

- Requiring local authorities and health boards to develop joint children’s services plans
- Require a ‘child’s plan’ where targeted intervention is necessary
- Creating a statutory definition of wellbeing
- The requirement for each child to have a ‘named person’ (for under 5’s this will likely be a health visitor and for school aged children a teacher or head teacher).

The Bill will also require Scottish Ministers and public bodies (including local authorities and health boards) to issue reports showing how they have taken the UNCRC into account.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Children in Scotland has members from both statutory and non-statutory services and we believe both have a key role to play in the successful integration of health and social care services. The third sector is a key partner in service delivery and its involvement in the design and delivery of integration plans could lead to improved integration beyond just greater partnership working between health boards and local authorities.

It may be beneficial to the Committee to consider taking oral evidence from representatives from non-statutory or voluntary services (local and national) during stage 1 consideration of the Bill to discuss issues such as the involvement of the third sector in design and delivery, and the implications where services (eg children’s) are integrated in one area but not another. Children in Scotland is a member of Voluntary Health Scotland who have held a number of events to consider these issues.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

Children in Scotland welcomes the intent to extend integration of health and social care services beyond older people’s services as the original intention seemed to be. The responses received to the initial consultation suggested that an arbitrary point or age at which integration begins to apply (eg age 65) would not be helpful. We would be concerned that where only adult health and social services were integrated there would be issues in transitioning from children’s to adult services. Transitions are a key concern in many policy areas affecting children and young people including education, health and social care. There may also be implications if some parts of Scotland choose to integrate these children’s services and others do not. Transitions need to be more overtly addressed in the Bill and accompanying documents. The policy memorandum also states that other services such as housing could be integrated in future – it would be useful to have some sort of estimate of what the proposed timescale or intention for future integration is.

Stakeholders in the integration process will require effective information, communications and guidance to ensure good outcomes for service users –
particularly those with additional support needs using health and social care services.

Children in Scotland is the national umbrella agency for organisations and professionals working with and for children, young people and their families. It exists to identify and promote the interests of children and their families and to ensure that policies and services and other provisions are of the highest possible quality and are able to meet the needs of a diverse society. Children in Scotland represents more than 400 members, including most of Scottish local authorities, all major voluntary, statutory and private children’s agencies, professional organisations, as well as many other smaller community groups and children’s services. It is linked with similar agencies in other parts of the UK and Europe.

The work of Children in Scotland encompasses extensive information, policy, research and practice development programmes. The agency works closely with MSPs, the Scottish Government, local authorities and practitioners. It also services groups such as the Cross Party Parliamentary Group on Children and Young People (with YouthLink Scotland). In addition, Children in Scotland hosts Enquire - the national advice service for additional support for learning, and Resolve: ASL, Scotland’s largest independent education mediation service.
General Comments
There are many things that Scotland has done to support the improvement of the quality and consistency of health and social care services through integration; the coherent policy across government, maintaining a commitment to integration, giving it time to work and relative organisational stability. A robust legal framework would help progress integration but focus needs to be on leadership development of public sector agencies and their key partners to improve collaborative working.

Community pharmacy should be central to keeping people safe, improving outcomes for patients, reducing health inequalities and improving the wellbeing of local communities. The public would be better served if community pharmacy were fully involved in the development and implementation of health policy.

Translating the government’s policy and achieving the key ambition of integrated care based around the person on a sustainable basis will rely on the involvement of multiple agencies, systems, commissioners, providers and government at national and local levels. Community pharmacy is not only a major provider of health services within Scotland but also a vital part of the wellbeing of communities in terms of investment, employment, training and sustainability.

What people really want – personalised, high-quality, seamless care focused on their needs. The public sector agencies of health and social care as well as private, independent and third sector agencies do not collaborate well enough and as a result people, especially those living with long terms conditions, are poorly served.

We support Dr Harry Burns, Chief Medical Officer, when he proposed ‘that asset based approaches may provide the necessary step change in health creation which Scotland needs to accelerate gains in healthy life expectancy across the population’. We would like propose some forms of integration where pharmacy can make a significant contribution:

- Vertical integration (secondary and primary care). There are opportunities for community pharmacy to help people even more to get the right medicines by integrating community pharmacy services with hospital admissions and discharge planning, palliative care and end of life services.

  We are keen to see greater involvement of community pharmacy in Managed Clinical Networks (MCNs) which have been constant feature of the health care system in Scotland for the last 15 years. The universal coverage across all Health Boards in the following areas; coronary heart disease, stroke, diabetes, respiratory and cancer would deliver even
greater benefits to patients from the intervention of community pharmacy teams.

- **Horizontal integration (primary, community and social care).** Community pharmacy supports independent living as well as providing these services as part of the national contract; Minor Aliment Schemes (MAS), Chronic Medication Service (CMS), Public Health Services (PHS), Advice to Residential Homes, Dispensing of Methadone for Drug Users, Domiciliary Oxygen Service, Needle Exchange Services and Disposal of Patients’ Unwanted Medicines.

There are many people who are disempowered living isolated lives in their communities. Community Pharmacies are often a focal point, the place where people go and we can help to address this type of issue by signposting to social care services.

- **Virtual integration (systems and processes).** Community pharmacy provides Acute Medication Service, (AMS); electronic transmission of prescription information (ETP) between GP prescribers and community pharmacy. However we are keen to see the ambition for information sharing as set out by Professor Lewis Ritchie - Chairman of the CMS Advisory Group (2009), progress with a greater sense of urgency and integrated across health and social care.

‘**CMS will need to be underpinned by robust information flows in both directions linking community pharmacies and general practices, supported by explicit and informed patient consent.**’

The Scottish Government said in ‘Renewing Scotland’s Public Services, priorities for reform in response to the Christie Commission, 2011’

‘**Community is at the heart of our approach and Community Planning Partnerships will continue to play a significant role in identifying priority local outcomes and leading service integration in their areas through the further development of Single Outcome Agreements.**

**Our priorities for improving partnership during this Parliament include:**

- continuing closer joint working between GPs, pharmacists and other community services to improve the service on offer to patients’

We are keen to understand the planned work streams that are in place to achieve this priority and how we can contribute during this parliament.

**Response to specific questions**

**Do you agree with the general principles of the Bill and its provisions?**

Yes, the Bill provides a supportive framework. Integration of health and social care requires long-term sustained effort. Integration has been facilitated by relative organisational stability, political consensus, a willingness of health and social care professionals and all parties committed to collaborative working.
To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

A key policy objective of this Bill is to enable and require appropriate, local responses to changing patterns of need, within a national context of accountability for clearly articulate, joint outcomes.

- Aligned performance management. The National Performance Framework and the Single Outcome Agreements (SOAs) clearly demonstrate the coherent policy across government. SOAs are the means by which Community Planning Partnerships (CPPs) agree the strategic priorities for their local area and express them as outcomes to be delivered by the partners.

We are keen to understand how community pharmacy contributes and aligns with this performance management system. The Scottish Ministers required to involve a range of key stakeholders in the development of outcomes and performance indicators; as a key stakeholder we are keen to offer our support.

- The proposed reform programme. The focus on governance, accountability and management arrangements will establish integration joint boards and integration joint monitoring committees. These boards and committees will need to demonstrate effectiveness in this cluttered landscape of integration of health and social care.

If the Community Health Partnerships (34) are to be replaced by an optimum number of new integration joint boards, how will that be achieved without rationalising the current number of Health Boards (14) and Local Authorities (32)? Other public services such as Fire and Rescue Services and Police have reformed significantly in April 2013 and could be a model for health and social care in the future.

- Full integration of health and social care. This requires managing the tensions and differences in the NHS and LAs i.e. the NHS has not gone down the purchaser, provider model of care whereas LAs increasingly commission services from other providers such as the independent and third sectors. There is a sense of mistrust between Local Authority Councillors and Health Board members; councillors are elected whereas Health Board members are not. The implicit pooled budgets for health and social would be a key success factor for effective integration.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

We are delighted that after the consultation on the proposals for the integration of adult health and social care, May 2012, the government strengthened the wording as proposed from “engage” to “involve”. ‘The integration authority will be required to involve a range of partners in the development of the plan (strategic) and consult widely.’ Community pharmacy is a key partner and would make a significant contribution to the development of strategic plans.
We support the proposal in the consultation that integration authorities will need to ensure professionals have time to participate in the process. This is of particular relevance to community pharmacy because under the regulations, pharmacists would have to pay for locum cover in order to attend meetings during working hours. This additional cost burden could prevent community pharmacy from fully participating in the process and would be seen to be unfair.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

Pharmacies are in the heart of the community, making easy access for people who are well, those who are unwell, families and carers, and those who are disempowered living isolated lives in their communities. Community pharmacy is not only a valuable health asset but also an important social care asset. We believe that there should be more explicit recognition of the need for pharmacists to be represented on new bodies and fully involved in the planning of health and social care services.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

a) Focusing on Safety. Around 2 million people in Scotland have at least one long-term condition, and one in four adults over 16 report some form of long-term illness, health problem or disability. By the age of 75, nearly two-thirds of people will have developed a long-term condition. Recent research has also demonstrated that most people with a long-term condition have more than one and that the prevalence of multi-morbidity increases with age and is associated with deprivation (Barnett et al 2012).

Drug wastage represents a significant lost resource within the NHS. It is estimated that around 50% of medicines are not taken as prescribed by patients with long term medical conditions (Establishing Effective Therapeutic Partnerships, report 2009). There is general agreement of the benefits to integrating the management of people living with long term conditions. However there is no evidence of the integration of medicines across the patient pathway.

Community pharmacy is best placed with local team of experts in medicines to help people get the best out of their medicines (and reduce preventable harm). We expect to see CMS integrated across MCNs.

b) Effective community pharmacy engagement in developing and implementing strategic plans. Pharmacy leaders need to be in the same room with key partners discussing, sharing, listening and thinking differently as to how we can make real change and deliver measurable benefits. We expect to see representatives of community pharmacy working closely in partnership with integration authorities and making a significant contribution to the development of strategic plans.
What effect do you anticipate integration plans will have on outcomes for those receiving services?
We would anticipate a positive effect on outcomes for those receiving services.

Company Chemists Association Ltd
2 August 2013
Public Bodies (Joint Working) Bill

Community Pharmacy Scotland

Introduction
Community Pharmacy Scotland represents the owners of Scotland’s 1247 community pharmacies. Services are provided for patients throughout Scotland through the contract under the terms negotiated with Scottish Government for pharmaceutical care services.

Community Pharmacy Scotland is supportive of the Government’s 20:20 Vision for health.

Our response to the 6 questions posed follow.

Do you agree with the general principles of the Bill and its provisions?
Yes. We note that there is scope for different NHS Boards/Local Authorities to develop their own plan in their own way. However as pharmacy contractors may operate pharmacies in more than one NHS Board or local authority we see potential for confusion and complexity in terms of our ability to deliver.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
We would like to say we are confident that it will, but given the lack of detail at this stage on how what is proposed will be delivered on the ground, we are not in a position to predict how successful it will be.

Please indicate which if any aspects of the Bill’s policy objectives you would consider as key strengths?
We consider the introduction of nationally agreed outcomes could be a key strength. We’d like to know how these proposed outcomes are being developed to improve on current outcomes. We see that work on outcomes will be taken forward as regulations are prepared and we look forward to having the opportunity to engage with that work.

We are also pleased to see a focus being placed on involvement and engagement with all local professionals.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened?
Based on our previous experience with locally negotiated services we would prefer to see more direction being given nationally. Nationally agreed outcomes with local flexibility to deliver should encourage innovation and have previously in our experience, improved service experience for patients. The trick will be to ensure that innovation can successfully become mainstream rather than reliant on particular individuals.

It is not clear to us how success in meeting objectives will be determined and if objectives are not immediately met how long SG will give the new structures to bed in.
What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
We hope to see greater involvement of the pharmacy profession. Unfortunately to date we have not had the opportunity to participate in any work of the bill preparatory groups.

We’d like to see a holistic approach to care delivery with both health and social care in agreement on what would most benefit the patient. The prime example for us is the provision of compliance aids where social care services can often insist upon their use and healthcare can see that they bring problems as well as benefits. Our hope is integration can help drive focus on patient need rather than shifting responsibility to meet skill deficiencies at particular points.

What effect do you anticipate integration plans will have on outcomes for those receiving services?
We hope to see a focus on anticipatory care, in whatever form that might take, and that where a change in the care pathway is required it can be delivered in a speedy and efficient fashion.

We all, including patients and/or their carers, need to be prepared to be realistic about what can be delivered in the current financial circumstances.

We think the most important point here is that there has to successful delivery of integration plans. The plan in itself delivers nothing.

Community Pharmacy Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

The Scottish Independent Advocacy Alliance

Do you agree with the general principles of the Bill and its provisions?

1. We feel it is useful for the Bill to outline general principles; however we feel that these principles need to be consistent with other Scottish Government policies, for example regarding user involvement and co-production in the design, delivery, monitoring and review of services. The principles should be clearly stated and positioned at the beginning of the bill to ensure clarity, e.g. like the Mental Health Act.

2. The Bill should include a right of access to independent advocacy in the same way as identified in the Mental Health (Care & Treatment)(Scotland) Act 2003. Individuals and groups should have the appropriate levels of support to be able to engage effectively in the form of individual and collective independent advocacy. There also needs to be a strong statement about the importance of proper and effective engagement between the statutory sector and the third sector. Alongside other Scottish legislation, this Bill should be based on the principles of human rights. The language used in the Bill appears to be orientated towards the medical model of disability and does not have an emphasis on empowering or fully involving individuals. The use of the word ‘recipient’ does not reflect principles of empowerment or inclusion. Rather it feels like people using services will have things ‘done to them’ rather than being actively involved in making decisions. We feel that the Bill would better reflect the principles if the approach reflected Human Rights, user involvement and the social model of disability. This would also help with the change in culture that is required within both the NHS and LA in order for this legislation to succeed. The Bill should also identify principles and outcomes around engagement and participation.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

3. We are concerned that the stated policy objectives of the Bill and the actual Bill are not clearly aligned. We feel that the Bill appears to concentrate on structural and financial aspects of integrating the NHS and LA and does not give enough regard to the cultural shift that is required. It also does not appear to consider the implications of statutory duties that currently lie with specific professions and what the impact of this legislation would have on these duties, e.g. the importance of the independence of the Mental Health Officer (usually LA) from the clinical team (usually NHS) when making decisions about an individuals’ care and treatment.
4. We are concerned that the Bill currently does not give enough recognition to the role of the third sector. The third sector can play an important role in helping to ensure that the objectives outlined in the Bill are fulfilled and we believe that the third sector should have voting rights as should people who use services. The third sector, namely independent advocacy organisations can support individuals and groups to effectively participate in the design, delivery and review of services. They can also support individuals and groups voice their opinions, needs, aspirations and wishes effectively.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

5. We welcome the ideology of integrating health and social care but we think that there needs to be a greater emphasis on outcomes for individuals and groups. We think there needs to more attention given to quality assurance so that there is greater clarity and transparency about when principles are being adhered to and when they are not and when outcomes are achieved or not.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

6. The Bill should give users the right to access independent advocacy in the same way as the Mental Health Act. There needs to be clarity and transparency about what is effective involvement of service users in all aspects of health and social care, whether that is as individuals or collectively.

7. There also needs to be a clear understanding of the role of the third sector and recognition that the third sector is not a homogenous group but has varying agendas and priorities. We feel that the involvement of people who use services needs to be given proper consideration separately from the third sector.

8. There needs to be further thought given to the role of Public Partnership Forums. The locality groups identified in the Bill need to have a clearly defined role and remit. The Bill needs to address how the locality groups are going to operate without undue party political influence.

9. We also believe that the responsibility for ‘signing off’ strategic plans should lie with the Scottish Parliament Health & Sport Committee rather than the Minister.

10. There needs to be clarity around how people can raise concerns about the service they receive. There are different systems currently between health
and social care. For example how will the Patient Rights Act apply across service provision?

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

11. If the right to access independent advocacy is added to the Bill then we would anticipate the demand for independent advocacy both individual and collective to increase. We would also hope that engagement between advocacy organisations and statutory bodies would be enhanced and strengthened.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

12. We hope that service provision will improve and that it will help to improve the lives of people and facilitate independent living.

The Scottish Independent Advocacy Alliance

Public Bodies (Joint Working) (Scotland) Bill

Falkirk Council

Background

Falkirk Council fully supports the aspirations of improving outcomes for people who use Health and Social Care Services in Scotland. People who depend on our services should have seamless care no matter who delivers, manages or pays for that care.

We welcomed the opportunity to comment on the Government’s earlier consultation on Health and Social Care Integration and view the current Bill as the most significant piece of legislation to affect Social Work Services and the people who depend on them for decades. As such it is important that the provisions in this Bill are shaped to give confidence that improved outcomes will follow. There is a balance to be struck between detailed prescription and the creation of a general legal framework which facilitates local responses to local circumstances. The Bill undoubtedly strives to achieve that balance, however, we would not always agree with the areas where detailed prescription is applied.

In relation to the specific questions posed by the Committee:

1. Do you agree with the general principles of the Bill and its provisions?

Falkirk Council agrees with the general principles of the Bill and its provisions. However we have some concerns about the powers which Ministers would be granted to intervene in the management of services if they perceive that services are not delivering well enough. This function was not part of the consultation and it is not clear the circumstances in which it would be used. It is also not clear how such powers fit with the role of inspection and regulatory bodies.

It is also of concern that the Bill provides Ministers with the power to extend the scope of integration authorities by regulation (Section 1(6)). This is a very far reaching power which could see the delegation of a much wider range of Local Authority without recourse to further legislation. This provision is not in keeping with the policy intention of the Bill and we would advocate it’s removal from the Bill.
2. **To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

Much of the detail of the Bill is being left to regulation and guidance. We will await those parts of the legislation before reaching conclusions on how the provisions can be implemented and before offering a view on the likely impact.

There are parts of the Bill that we still require further clarification, for example what proportion of the acute budget from the NHS will be put into the partnership arrangements. There is also some uncertainty around the details of the governance arrangements as outlined in the Bill.

3. **Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths**

The Bill’s policy objective of improving the wellbeing of people who require adult health and social care services is one which we would consider to be a key strength.

4. **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened**

- The Bill leaves lots of detail to regulation which we are unable to comment on at this stage.

- The Bill makes no reference to the role of the Chief Social Work Officer in new partnership arrangements and no consideration is given to how, irrespective of structural considerations, the integrity of this role should be ensured. This is particularly important in view of the potential downside of the integration of adult services which could be the fragmentation of Children’s services and Criminal Justice Services.

- The Bill does not address how the voice of service users can consistently be heard across health and social care services and how the move towards citizens directing their own support can be promoted not just in respect of social care services but also in respect of health provision.

5. **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

It is difficult at this point in time to identify what efficiencies will be achievable and the financial memorandum associated with the Bill provides very limited evidence of how these could be achieved. The Council has responded separately to the Finance Committee’s call for evidence in this regard.
6. **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Integration plans should have, at their heart, a shared commitment to improved outcomes. However, their success will be dependent on there being a commitment to a well-planned and well-managed change process. For this reason we would urge the committee to take into account the time that will be required to bring about this change while at the same time maintaining strong operational management of services to some of society's most vulnerable adults.

Falkirk Council
2 August 2013
WHO WE ARE

HIV Scotland is the national HIV policy charity for Scotland. We want a society which is well-informed about HIV and devoid of HIV-related stigma and discrimination. Our mission is to ensure that all HIV relevant policy and practice in Scotland is grounded in evidence and in the experience of people living with and affected by HIV. We maintain meaningful engagement with people living with HIV and demonstrate how their involvement makes a difference.

SUMMARY

This Bill is of particular relevance to people living with HIV, given its implications for health and social care and initial emphasis on the needs of the aging population. Since the introduction of antiretroviral therapy, people living with HIV are enjoying healthier longer lives; 1 in 5 people with HIV in the UK is now over 50\(^1\) and a 2011 study\(^2\) found that the prevalence of certain conditions typical of aging (e.g. cardiovascular disease, liver disease, hypertension) in people living with HIV was more typical of HIV negative people aged 10-15 years older. The same study also points to the need for earlier detection of non-infectious comorbidities, which this Bill could play a vital role in addressing. Furthermore, people living with HIV may be more likely to access multiple services across a range of settings e.g. health, social care, social work, welfare, housing and criminal justice.

The Bill also has the potential to ensure that individuals, communities and the third sector are meaningfully involved in the planning, design and delivery of public services. However, HIV Scotland believes that the provisions in the Bill require to be strengthened if this potential is to be realised and to ensure a genuine focus on the needs and rights of individual patients and service users.

QUESTIONS

- Do you agree with the general principles of the Bill and its provisions?

HIV Scotland fully supports the policy ambitions and principles outlined within the Policy Memorandum, such as the delivery of joined up and person-centred care. However, within the Bill itself the overarching ‘general principles’ are unclear; instead there are a set of ‘integration planning principles’ and

‘integration delivery principles’ set out within different sections. It is also unclear which principles are to be seen as driving this legislation, whether it be the “the underlying principle… that Health Boards and local authorities must take joint and equal responsibility for the delivery of nationally agreed outcomes…” or “the desire to embed a person-centred approach to public service delivery of health and social care.”

HIV Scotland firmly believes that any reform to public services must be driven by the need to place the person at the heart of the services they receive, however the principles contained within the Bill at present do not go far enough to ensure that the focus will truly be on the individual patient or service user. A far better approach would be to explicitly set out guiding principles at the start of the Bill, placing a duty on the relevant public bodies to adhere to principles such as involvement, collaboration and the fulfilment of individual’s rights (e.g. independent living and access to quality and effective services) when acting on their functions under the Bill. We would refer to the Social Care (Self-directed Support) (Scotland) Act 2013 as an example of good practice in this regard. This Act established a legal framework for people to have greater choice and control over the support they receive, with principles such as independent living being set out on the face of the legislation.

- To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill appears largely focused on the technical aspects of integration, placing a strong emphasis on the desired structural change. However, the integration of health and social care is a means to an end and not an end in itself. The integration of services alone will not be enough to better deliver outcomes for individuals and produce better quality services equipped to meet their needs. In order to achieve these ends, it will be absolutely essential that the people accessing services are meaningfully involved in their design and delivery but the provisions in the Bill relating to the involvement of service users and communities are currently weak.

The significant contribution of the voluntary sector towards meeting the policy objectives must also be recognised, with the voluntary sector being included as a full and equal partner. The voluntary sector has a key role to play, both in supporting commissioners to procure services that are responsive to peoples’ needs and provide value for money, and in the delivery of effective and innovative health and social care provision. The voluntary sector is also well placed to engage people and communities and give them a voice in decisions which affect them. Unless the Bill is strengthened in this regard, the potential for it to achieve the stated policy objectives will be greatly lessened.

One of the stated policy objectives is to “improve the quality and consistency of services”. The fact that the Bill allows for integration authorities to progress integration using several different models may result in significant inconsistencies between localities. This could have implications for the consistency of support for people living with HIV who may travel beyond their
local service(s) to access care. Furthermore, depending on the delegation model adopted and the effectiveness of its implementation, there could remain serious disconnects. For example, disconnects could be widened between child and adult services where a ‘delegation between partners’ model is employed in relation to these services.

- Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

HIV Scotland welcomes attempts to deliver joined up care which delivers better outcomes for patients, service users and carers. The fact that the Bill introduces a requirement for health and social care partners to integrate their services and budgets, prepare and publish strategic plans and engage in strategic commissioning certainly goes further than previous attempts to foster integration.

We also greatly welcome the introduction of nationally agreed outcomes for health and social care, which if properly developed and implemented could go far to ensure that all partners are working together towards the delivery of better outcomes for individuals and communities.

- Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

As stated above, the development of national health and wellbeing outcomes and published integration plans could help to bring about improvements in the delivery of public services. However, this will only be the case if the people accessing these services and the third sector are meaningfully involved in their development. The term ‘consultation’ used throughout the Bill is not strong enough to ensure that this will happen; a much greater emphasis must be placed on involvement and collaboration, with the voluntary sector being positioned as an equal partner in strategic planning and the design/delivery of services. Unless the provisions of the Bill are strengthened in this regard, there is a real danger that the national health and wellbeing outcomes will not reflect the needs people accessing services and that voluntary sector involvement will become tokenistic within the new arrangements. This is especially so given that the third sector will be a non-voting member of the HSCP Committees.

In relation to integration plans, the Bill could be greatly strengthened by placing a duty on Health Boards and local authorities to evidence/report how they have involved communities and the third sector in their development. Furthermore, there is little detail in the Bill about how or whether integration authorities will be held accountable for progress against the agreed national outcomes and strategic plans, or how poor performance will be identified and addressed in a timeous manner.

The plans to integrate adult health and social care services are not limited to older people’s services but are intended to extend to all adult health and social care services. HIV Scotland believes that the proposals would greatly

3
benefit from clarity as to when and where the proposals for integration are intended to be progressed.

HIV Scotland would also like to see human rights and a rights-based approach being given more prominence within the Bill. This could be achieved by setting out clear overarching rights-based principles as described earlier in this response.

- **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

  This Bill presents an opportunity to ensure that services across all sectors can be better aligned to joint outcomes, focused on the needs of individuals and communities. HIV Scotland is aware of a number of examples of good practice in this regard, where effective joint working has delivered significant efficiencies for all partners and, critically, better outcomes for individuals.

  Waverley Care is a national charity that works with people living with HIV and hepatitis C. One of their projects is the running of Milestone House, a short term residential support unit. This service is currently being comprehensively redesigned and reshaped in collaboration with the local authority and the NHS to focus more on ‘step-up’ and ‘step-down’ care. Multi agency referral pathways are being designed, with funding being allocated to the new service by both the local authority and health board. Waverley Care also runs an African Health Project that provides a variety of holistic support services ranging from housing and immigration to health. An important aspect of this is work with Africans, both living with HIV and not, is support to access health services and navigate a sometimes complex NHS system. This is particularly vital for recent migrants who are completely unfamiliar with the system and often have low levels of treatment-literacy. This is an ‘at risk’ population that is often only able to access services because of the support of the third sector. This delivers clear benefits, not only in ensuring the best use of NHS resources, but also in terms of the preventative approach put forward by the Christie Commission; taking demand out of the system over the longer term.

  Positive Help is a charity which offers volunteer led practical help to those affected by HIV and hepatitis C in Edinburgh and the Lothians. Positive Help’s befriending service offers a life line to children and young people who are either living with HIV or hepatitis, or whose parent/s have HIV or hepatitis C. By establishing trust and relationships with young people and their families, Positive Help not only provides a vital support which better enables people to live in their local communities and enjoy an improved quality of life, but any problems can be identified at an early stage and the families linked to the appropriate support. This again demonstrates the way in which the voluntary sector can engage people and communities who may not normally come to the attention of statutory services, ensuring that their needs are identified and addressed at the earliest possible opportunity.

  Another example of good practice is Gay Men’s Health (GMH), the only Scottish organisation that delivers community based services run by and for gay and bisexual men. To steer the work it does, GMH consults widely and
frequently with its volunteer base and the whole community, enabling new trends and health needs to be quickly identified and addressed. GMH also works with NHS Boards to increase the choice and variety of sexual health services that gay and bisexual men can access, offering HIV testing within community settings to increase awareness, and early identification, of HIV in a risk group.

However, building on this type of success will require that joint strategic commissioning is taken forward in such a way that it prioritises preventive support and recognises the third sector as a key partner. If this is not the case, there is a very real risk that existing areas of good practice could be undermined by the integration proposals.

- **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

The answer to this question depends heavily on the extent to which the outcomes of people receiving health and social care services come to be reflected in the national health and wellbeing outcomes. At present, HIV appears to be largely missing from national and local outcomes and performance monitoring mechanisms. HIV Scotland is hopeful that the integration plans will provide an opportunity to address this oversight and ensure the inclusion of people living with or at risk of HIV in the design and delivery of services.

The development of shared outcomes and better integrated services may present new opportunities to better promote and evaluate public health and prevention efforts to reduce HIV transmission. For example, it could help to align efforts to increase the proportion of people with HIV being identified at an early stage of infection. The overall proportion of late diagnoses remains high in the UK, in 2011 this comprised 47% of people newly diagnosed with HIV.³ People diagnosed late have a tenfold increased risk of dying within a year of diagnosis. The findings of a recent Scottish study support more routine HIV testing outside of a specialist setting, particularly for patients in high-risk populations.⁴

The integration plans could also serve to ensure that people working across sectors and settings have a greater awareness and understanding of HIV and related issues. This could be achieved, for example, through developing joint training packages and co-locating staff and services.

**HIV Scotland**

---

⁴ L Goodall and C Leen, *Scott Med J* (2011) ‘Late diagnosis of HIV: could this be avoided?’
Public Bodies (Joint Working) (Scotland) Bill

Alex Stobart (the Alliance)

“to improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older.”

Comments to Health Committee – Alex Stobart

Do you agree with the general principles of the Bill and its provisions?

In general, the direction of travel to take Christie and build is very sound. However, I think the Bill is mis-named and not accurate. The focus should be on outcomes and citizens, not Public Bodies alone as they do not work or act together unless there is a sustainable common purpose.

It requires individuals, their behaviours and cultural attitudes to change in order for Organisations e.g. State Bodies; Delivery Organisations to change. By only emphasising the role of Public Bodies, the Bill does not convey all the messages or chances for truly person-centred approaches.

The Bill does not address the principles enshrined in the observation by the Christie Commission that —effective services must be designed with and for people and communities

While I agree with the general principles, I do not feel that they offer the individual citizen a comprehensive and effective role in their Health & Care. The Bill appears to attempt to correct Organisational defects.

Organisations in 2013 that accept that data belongs to the individual, and that the future of an “Information Society” can be built by Scottish citizens, will benefit from the co-production opportunities and the greater trust that flows.

In practice, citizens can interact with porous boundaries and nuanced identities, while Organisations are still grappling to manage the new digital economy. Person centred services that enable information to flow from the individual to multiple organisations will empower citizens.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

I do not believe that changing functions and titles among the participating Organisations will be enough. The Bill should include much more information about, and statutory rights for, the individual to be involved in the system. Users of services could provide invaluable sources for service improvement – often innovation and new thinking comes from outside the system.

Nor does the Bill contain any reference to the uses of technology, aligned with the needs of the citizen. The Bill should aim to empower citizens in Scotland
to live longer and healthier lives through the use of personalised digital channels for their health and care needs, and also aim to work with citizens and clinicians to reduce pressure on more expensive services.

This can involve digital participation with citizens, the Third Sector, user communities, public sector and other businesses.

- Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The willingness to attempt something new and the emphasis on a person centred approach at Para 13 of Policy Memorandum (PM).
The procurement corrections appear sensible to allow Lead partners.

- Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

Para 6 of PM – “integrated health and social care “ is wrongly defined as it is Organisation-centric and does not understand Christie.

In the Bill, it should read that –
“the individual is the point of integration of health and social care. The individual should have a central role, able to exercise choice and control over their health and care arrangements.”

Organisational re-arranging on its own will not achieve any lasting change, or improvement in quality or outcomes. Much more of the Bill must focus on the citizen, and how they participate in the service.

As is recognised, cultures and behaviours have to change inside the NHS and Local Authority systems; the citizen can assist with this by having a much greater role, and being treated as the same person all the time, and whenever they touch the system. At the moment, people have to re-start their story time after time with different parts of the system.

- What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

As currently drafted and envisaged, I would suggest there will be no benefits or efficiencies for Organisations outside the State sector. It will not be possible to advocate and support the individual if the system is not moved to change.

Community Planning Partnerships were created by the Parliament, but they have not directly or knowingly improved the lives of citizens. They remain relatively distant and opaque bodies, and ordinary people do not know what they are.

Without involving citizens, and communities, this Bill will risk the same end – apparently very little in terms of better outcomes.
Because there is no place for ordinary citizens in the Governance arrangements, it is likely that people in Scotland will not relate to, or understand these new organisations. This will be a shame.

- What effect do you anticipate integration plans will have on outcomes for those receiving services?

The effect will be sub-optimal as it does not involve the individual, or give them a statutory duty to be consulted, included and involved.

The governance is not completely democratic, and it is closed. Citizens cannot influence this process of governance in the Bill, so outcomes will not be measured by the people receiving them. Where this situation arises elsewhere in the Health system, the evidence is that outcomes are not identified when issues arise.

Integration Joint Boards are at risk of being lost in existing, alternative, prevailing governance arrangements. There are too many competing arrangements it would appear, and few include the citizen.

Para of the PM - *The integration joint monitoring committee will be a joint committee of the local authority and the Health Board and will be accountable to both. Membership of the joint committee will be determined by the full council and the Health Board (some members appointed by the Health Board and others by the council), and the joint committee will report to the full council and the Health Board.*

Alex Stobart (the Alliance)
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

College of Occupational Therapists

What is occupational therapy?
Occupational therapy promotes health, wellbeing and independence through participation in activities or occupation. These are the things that make us who we are and give our life meaning, from daily tasks such as washing and dressing, to working, socialising or taking part in a hobby. Occupational therapy gives people the tools and skills to do the things they need or want to do, removing obstacles to disability, injury, illness or other conditions. “Occupational therapy enables people to achieve health, wellbeing and life satisfaction through participation in occupation.” (COT Definition 2004)

- Do you agree with the general principles of the Bill and its provisions?

The College of Occupational Therapists (COT) welcomes the general principles of the Bill and its provisions but has comment to make in both regards.

The principles fail to indicate an asset based approach taking a “needs” led and one could argue a medical model approach instead. This implies services that are done to rather than shared with the people and communities and do not reflect the Christie Commission Report that “…effective services must be designed with and for people and communities-not delivered ‘top-down’ for administrative convenience.”

The word ‘need’ itself is difficult here as it implies neediness rather than holistic wellbeing. It is also difficult in relation to prevention and anticipatory services as this is about retaining health and wellbeing rather than specific needs. The word “recipient” also implies a passive rather than an active role.

There is no inclusion within the principles of the knowledge base. The term ‘takes account’ is used without reference to any kind of standard, quality assurance or intelligence framework.

The addition of a principle that stated that services must have regard to any relevant guidance, knowledge or intelligence would be welcomed and would ensure some kind of quality within the principles.

COT has concern in relation to the different terms and conditions of employment of OTs at the point of integration where staff are moved from one employer to another. OTs within local authority and NHS are on different pay scales and terms and conditions. When integrating teams, there can be tensions especially when more experienced staff are being paid less than their less experienced counterparts. Careful consideration is required in this regard especially if they are to perform
the same function within the team and can be a real barrier to full integration.

- **To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

Occupational therapists (OTs) are one of the professions working within health, social care and the third sector. They already work across these boundaries and the disconnect is often one of culture, communication systems and systems within services.

A good example would be someone who has experienced a stroke and have become wheelchair dependent. They see an OT with a specialism in neurology whilst in hospital for intensive rehabilitation. This OT will liaise with an OT within the community with a specialism in complex adaptation to ensure that the person is able to return home to live as independently as possible.

As they have different computer systems information is often shared as a paper copy and requires inputting into the other services system—often in a different format. The referral process within the local authority may mean that there are waiting lists and also a need to assess eligibility for services as well as means testing and assessment around self directed support or packages of care.

The joined up working is already happening between the occupational therapists and there is no duplication within their roles, one is providing intensive inpatient neurological rehab the other is assessing the person in relation to the home environment, arranging ramping and level access living. COT is not confident that the approach being proposed in the Bill will achieve the objective in regard to -integrated from the point of view of the recipient, unless there is a clear commitment to ensure that integration is not just about funding and commissioning but also about ensuring that the systems they are working with are not barriers within themselves.

COT is concerned that without statutory inclusion of Allied Health Professionals (AHPs) on the integration joint boards, they will not have the intricate knowledge required to commission services. The right people need to be at the table. This harps back to the previous point that without a knowledge base there is a risk that services will be commissioned without a clear understanding of the intricacies and potential roles of practitioners. This applies to all AHP services. If lead AHPs are not positioned within the integrated boards there is a real risk that their potential will not be realised. AHPs and indeed OTs are key to supporting people with long term conditions and people requiring rehabilitation to remain at home in the community living as independently as possible, as well as supporting the prevention agenda.
An example of the effectiveness of OTs working within preventative services below indicates a cost saving that the Board without AHP representation may not be aware of.

A randomized controlled trial in independent-living older adults (the Well-Elderly Study) found significant health, functional and quality of life benefits attributable to a 9-month preventative occupational therapy programme. The study aimed to evaluate the cost-effectiveness of this preventative programme. It was found that post-intervention healthcare costs for the occupational therapy intervention groups were reduced by 50% compared to the control group. The research concluded that preventative occupational therapy for this client group demonstrated cost effectiveness and a trend towards decreased medical expenditures. (Hay J et al, 2002)

- **Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths**
  COT is very supportive of the objective to embed a person-centred approach to public service delivery of health and social care.

- **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.**
  COT understands the intention to enable local decision making in regard to other services that may be included outside of the minimum adult health and social care services within the integrated arrangements.

  This does raise some concerns though in regard to true integration.
  - Children’s services at the point of transition.
  - Mental health services—People cannot be siloed into mental and physical. People experiencing a long term condition may also be depressed.
  - Learning Disabilities—the same applies as to mental health and this group often require support in relation to physical health.
  - Criminal Justice, We know that this population experiences some of the greatest health inequalities.
  - Housing—adaptations, housing support, healthy communities and community support—essential for well being and independence.

  COT would welcome a stronger message within the Bill for truly integrated services. Once again a reference to the Christie Commission report is appropriate “…effective services must be designed with and for people and communities—not delivered ‘top-down’ for administrative convenience.”

- **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**
  Greater collaboration between specialist OTs providing a seamless service without administrative barriers (this is an aspiration).
A focus on prevention and wellbeing

OTs will be able to focus more holistically on individuals rather than a narrow service led interventions.

- **What effect do you anticipate integration plans will have on outcomes for those receiving services?**
  Decisions made with a focus on the individual rather than between organisations with a focus on funding and systems.

  Hopefully in time with clear national outcomes and a focus on prevention, individual assets and co-production; there will be a true shift in the balance of care with the individual at the centre of decision making and service design.

The College of Occupational Therapists is the professional body for occupational therapists and represents over 29,000 occupational therapists, support workers and students from across the United Kingdom. There are approximately 3,500 Occupational Therapists working in Scotland. Occupational therapists work in local authority social services, the NHS, housing, schools, prisons, voluntary and independent sectors, and vocational and employment rehabilitation services.

Occupational therapists are regulated by the Health and Care Professions Council, and work with people of all ages with a wide range of occupational problems resulting from physical, mental, social or developmental difficulties.

Chartered Society of Physiotherapy Scotland

Introduction and comment
The Chartered Society of Physiotherapy (CSP) welcomes the introduction of the Public Bodies Joint Working (Scotland) Bill. CSP Scotland strongly supports the initiative to better integrate health and social care provision and particularly welcomes the emphasis on preventative and anticipatory care as being in the best interests of patients and service users and the most effective use of resources.

Physiotherapists, along with other Allied Health Professionals (AHPs), work across all healthcare settings and in both health and social care services. They are ideally placed to understand the interface between health and social care provision and routinely support service users and their carers to access appropriate services. Physiotherapists, and other allied health professionals, are the ‘glue’ that holds complex health and social care pathways together, especially for older people and those with long-term conditions. Better integration between the community and acute setting is needed to put an end to fragmented transitions which can potentially slow or limit an individual’s recovery.

It is in this context that CSP Scotland seeks to ensure that future decision making over the planning and provision of health and social care is focussed on the needs of patients and service users.

Q1. Do you agree with the general principles of the Bill and its provisions?
CSP Scotland fully supports moves to better integrate care between settings (both community, primary and secondary) and also in improving integration between NHS funded healthcare services and local government funded social services. The bill as introduced is welcomed as a recognition of the need to provide the necessary framework to enable more integrated provision.

The current Bill has been titled ‘joint working’ but the principle of integration remains in the clauses. It is recognised that it is an enabling measure which does not create a single health and social care body, but will encourage integration without creating or requiring structural upheaval. CSP Scotland supports this approach, as large scale reorganisation can be costly and distract from the business of providing quality services.

CSP Scotland notes the provision in the Bill to empower new corporate structures to employ staff. Whilst this may be necessary for its administrative function, CSP Scotland would strongly assert that this must not allow for the direct employment of health and social care staff or staff groups that are employed by the NHS under nationally agreed terms and conditions.

In addition the primary legislation does not include the detail that will be essential for joint working to succeed. In particular, the success of the policy
will depend on good decision making in the planning and delivery of integrated services, and a patient centred approach to health and social care provision. Much of this will be determined by the secondary legislation. CSP Scotland would urge the Scottish Government to publish the regulations as soon as possible in order that they can be considered alongside the Bill.

Q2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The integration of health care and social care provision requires collaboration at the interface of planning and delivery at all levels, including strategic management, professional relationships, and joint working across multiple settings and services areas. The success of the approach will be dependent on the practice of integration, not merely the legal and financial framework. CSP Scotland has consistently recognised the importance of supporting a cultural shift, in order to better integrate health and social care, from all involved. Facilitating this will require local opportunities to exploit joint working networks, events and professional development initiatives to support the creation of a culture of mutual accountability for delivering agreed national outcomes.

The policy objectives must therefore be driven by closer working relationships and pathways of care, which will be determined by the practical changes and involvement of all stakeholders. This should include partnership working with staff side representatives in transforming services. The principles of sharing best practice to drive up standards of care will also be essential to the success of the policy.

Q3. Please indicate what, if any, aspects of the Bill's policy objectives you would consider as key strengths.
CSP Scotland welcomes the focus on joint accountability for national outcomes, as a driver for change within the new framework. This will ensure accountability at senior levels to support and encourage integrated working arrangements.

Following initial consultation, it is also a key strength that the integration agenda is not imposing structural changes involving the transfer of staff or workforce upheaval that would detract from the aims of the legislation. The Society particularly welcomes the avoidance of compulsory transfer of staff to new employers and the focus on better working relationships between the various organisations involved.

The Society also welcomes the intention to consult on and introduce national outcomes for health and social care, and the emphasis on the involvement of professional groups and service users.

Q4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.
CSP Scotland would wish to see a statutory requirement to involve the relevant health and social care professionals (as currently specified in community health partnerships) and particularly the inclusion of allied health
professionals. Essentially, in the same way as currently exists for the Community Health Partnerships (CHPs) a ‘statutory governance framework’ must be put in place to ensure that joint arrangements and new corporate bodies operate consistently and effectively across Scotland.

There must be a degree of flexibility to allow for local circumstances to be reflected in the delivery of integrated care. However, it must be clear from the outset what extensions or modifications to CHP functions are proposed, and these must be set out as additional functions within the terms and remit of the new arrangements.

For effective strategic planning across health and social care, the professions at the interface of the sectors, such as physiotherapists and other allied health professionals, must be included in the decision-making structures that are developed.

The role of allied health professions in rehabilitation and preventative care make them an essential component whose role is not always recognised or understood by policy makers or other professionals. The inclusion of an AHP member at a strategic level in the Community Health Partnership Committees has been invaluable in transforming rehabilitation provision in primary care in Scotland. We would strongly urge the Scottish Government to ensure the same contribution from AHPs is a requirement of any reformed structures in primary/social care.

**Q5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

As the professional education and trade union body for the physiotherapy workforce in Scotland, the CSP is interested in those benefits that assist physiotherapists to ensure that people have the right access to appropriate services, and derives no ‘organisational benefit’ as such from the proposals. Nevertheless there are opportunities for physiotherapy practice that in turn will benefit patient care. This includes the more efficient use of resources that emerge with more integrated working and the capability of services to respond more flexibly to patient need. Great involvement of physiotherapists in the wider delivery of related services would deliver benefits, for example in the more joined up use of resources to promote greater independence for older people’s services.

Reablement services present an opportunity for health and social care to work in an integrated way; successful services assist older people to maximise their capability on discharge from a hospital admission or following an acute event. CSP Scotland promotes the value of services to support people to stay in their own home, and this is critical to the sustainability of residential care provision. The reablement agenda is a vital element to supporting older people to remain in their own home for as long as possible and reduce avoidable hospital admissions. Physiotherapists, and other allied health professionals, have a unique role, working across care pathways, and often providing a ‘bridge’ between hospital, primary, community and social care, helping patients navigate their way through their treatment. This gives them unique expertise.
in patient wellbeing that complements and enhances professional healthcare in community settings. They are ideally placed to support closer integration around the needs of patients.

Community-based healthcare professionals must have access to the same standard of IT infrastructure that colleagues in secondary care settings use, but many staff still have to use a variety of different systems when communicating with different agencies. The recent experience is that this has not been prioritised and physiotherapy data is still not collected electronically in many cases, creating difficulties in sharing information about a patient’s journey across different care settings. CSP Scotland would identify the Scottish Government aims to improve integrated IT system support as an essential benefit.

Q6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

CSP Scotland is primarily concerned with improving pathways and outcomes for service users. Integrated planning of services is needed to deliver quality care which is more cost effective in the long term.

One of the essential aspects of the agenda to better integrate health and social care provision is the potential to better target joint resources toward preventative care, in particular, reducing unscheduled hospital admissions and GP referrals. There are numerous examples of good practice in supporting older people to remain in their own home, in supporting effective self-management of long term conditions and health promotion for various patient groups, all of which are of considerable benefit to patients and service users while also reducing the burden on health services and avoiding the need for more intensive social care.

CSP Scotland would highlight improved outcomes for the following conditions and patient groups (further information is available on request):

- **Falls prevention**: by reducing hospital admissions and keeping people independent. The physiotherapy led Glasgow falls Prevention Programme sees 175 patients per month to reduce risk factors, reducing admissions due to falls between 27% and 40%.
- **Chronic Obstructive Pulmonary Disorder (COPD)**: supporting self-management and reducing avoidable hospital admissions. The Edinburgh Community Respiratory team, led by physiotherapists, where around a fifth of the 570 referrals each year are made with the explicit aim of preventing hospital admission.
- **Chronic Pain**: improving quality of life, greater independence and employability, programmes such as the Fife Integrated pain Management Service, provides pain management in community settings, with increased referrals from 1260 referrals in 2009/10 to 1451 in 2011/12.
- **People with learning disabilities**: Physiotherapists can act as a conduit between service users and health and social care providers, such as at Perth and Kinross multidisciplinary learning disability service.
for NHS Tayside, supporting access to services, increasing quality of life, and reducing reliance on health and social care support.

- **Older people’s services, stroke care, and dementia:** early access to physiotherapy can prevent the need for greater social care support, through targeted community provision.

Chartered Society of Physiotherapy Scotland
2 August 2013
Macmillan Cancer Support welcome the opportunity to respond to your consultation. In previous responses on health & social care integration we have expressed strong support for this proposal – and indeed have suggested that without integration of health & social care services, preventive spending on improving the co-ordination of care would not achieve the proposed outcomes.

Do you agree with the general principles of the Bill and its provisions?
The central aim of an integrated health and social care system should be to improve the patient experience by providing person-centred care that is based on assessment of individual needs, including emotional, financial and practical needs. People should, where possible be supported to self manage their condition in their own homes and should be provided with rehabilitation support and help to stay in or return to work. An effective health and social care system would also support end of life care at home rather than in hospital, an important issue for many older people. The General Principles of the Bill do seem to want to achieve these aims.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The Scottish Government has stated its aim of a person-centred health service that shifts the balance of care away from acute and secondary care, to the community, supported self-management and supportive care.

We believe better use of Cancer Clinical Nurse Specialists to deliver and co-ordinate care more effectively, including assessment and care planning for all cancer patients – linking to information provision and benefits advice – is the key.

Improving the coordination of cancer care through more integrated Health & Social Care service is vital not only to improve the patient experience but also to increase quality and cost effectiveness. People whose care is unplanned and uncoordinated are more likely to be high users of health and social care services, including emergency care. Research led by Macmillan and Monitor Group shows that improving supportive care such as co-ordination, communication and information can deliver improved productivity and is cost effective, having the potential to release about 10 per cent of cancer expenditure. This is achieved by addressing some of the problems that result in high costs for cancer services including:

- Reducing avoidable emergency admissions to hospital
- Reducing length of stay in hospital
- Improving follow-up
- Supporting patients to return to or stay in work
Supporting patients to die at home rather than in hospital

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
Macmillan were involved in the shaping of the responses from Health and Social Care Alliance Scotland and Voluntary Health Scotland – their submissions raise several issues including around third sector involvement that we are concerned about.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
Macmillan together with the Scottish Government launched the ‘Transforming Your Care After Treatment (TCAT)’ programme earlier this year – and we hope this model of follow-up care will prove to be a successful model for integrating health and social care services. Successful delivery of integration should mean projects like TCAT are deliverable across the sector.

What effect do you anticipate integration plans will have on outcomes for those receiving services?
Macmillan’s experience suggests that the improved coordination of care that would be a result of integration of health and social care can significantly improve the quality of care received by cancer patients, including:

- Reduced stress
- Reduced confusion
- Increased involvement of carers and patients in their treatment
- Improved health outcomes for survivors
- Better palliative care support

Macmillan Cancer
2 August 2013
The Society of Chiropodists and Podiatrists (SCP), the professional body and trade union which represents over 10,000 Chiropodists and Podiatrists throughout the UK, wishes to respond to the invitation to submit written evidence to the Health Committee regarding the Public Bodies (Joint Working) (Scotland) Bill. In responding to the various questions to which the Committee seeks an answer, where necessary, distinction will be drawn between the two functions of the Society.

1. **Do you agree with the general principles of the Bill and its provisions?**

The SCP supports the objectives of the Bill and many, but not all, provisions.

2. **To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

The SCP believes with the right people around the right tables at national, local and locality levels the Bill (and subsequent early regulation) *could* make a step change to health and well being outcomes in Scotland.

The SCP, along with other AHP professional bodies, would wish the Bill – or subsequent early regulation – to secure statutory AHP representation on integration joint boards, local authority committees, health boards or joint integration monitoring committees. Integration authorities, of whichever form, need ongoing and direct access to well informed intelligence on the full professional capacity potentially available to them (particularly in relation to those services which enable people with long term conditions to live independently) in order that they can make evidence based decisions about efficient and effective use of that potential capacity in pursuit of optimum outcomes for local populations.

If AHPs are not directly and powerfully positioned to influence decisions about effective and efficient use of resources; the implementation of the Bill is in danger of continuing the current pattern of variable quality of services and poor outcomes for many adults with long term conditions in Scotland.

The SCP is well placed to comment on long term care as it is, or should be an integral part of the care pathway relating to the treatment of a number of long term conditions. These range from Diabetes to Peripheral Arterial Disease and Rheumatoid Arthritis. In addition our members, whether employed by the NHS or in private practice, work in a range of settings including home visits, community based clinics, care homes and acute hospitals.

As health professions who work to a large extent in the community, Podiatrists and other AHPs could bring a positive new perspective to the “old” argument of medical versus social in health & wellbeing delivery for the population. AHP leaders can also draw on their long experience and knowledge of best practice to demonstrate and provide leadership on providing services in
people’s home or homely settings in integrated, multi-disciplinary, multi-agency and multi-sector ways.

AHPs are already fully focussed on delivering the health and well being outcomes described in the consultation paper preceding the Bill.

AHP representation as described above could also help facilitate the Bill’s overarching objective to significantly change how and to what ends services are delivered. The above benefits may be deliverable at little extra cost as many boards already have AHP Directors or Associate Directors in post and efficiently one AHP representative could cover up to 12 professional groups, assuming the appropriate uni-disciplinary leadership is in place to support this representative.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
The Bill’s stated policy ambition “to improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs, many of whom are older.” is perhaps its greatest strength. The Christie Commission report of 2011 established that demographic and economic realities meant that the status quo was not an option. The policy ambition articulated above is surely one which health professionals and the public at large can overwhelmingly support. However as with all legislation, “the devil is in the detail”.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.
The Allied Health Professions are currently represented on CHPs. The removal of CHPs reduces greatly the ability of AHPs to influence resource use and service planning locally. Securing AHP representation on CHPs was an advance which helped to address the usual imbalance towards other health professionals (Doctors, Nurses) at this strategic level.

The SCP, as a trade union, had three areas of concern regarding the original consultation on the integration of health and social care.

- an AHP role at the strategic heart of any reorganisation,
- workforce issues, including partnership working and staff governance,
- and, closely related to workforce issues, the allocation of resources between integrated budgets and non-integrated parts of the system.

Of these three concerns the question of a strategic leadership role for AHPs has been adequately covered. This leaves workforce and budgetary issues to be addressed.

The SCP sees no evidence in any part of this Bill that the various proposals simplify rather than complicate existing bodies and structures. We have
some concerns around potentially fracturing service delivery. NHS podiatrists typically have a mixed caseload of elderly/adult and children. It would be very unfortunate if the reality of integration actually led to a fragmenting of budgets and services leading to unnecessary confusion.

This leads to a major concern regarding workforce, namely the lack of clarity over the transfer of staff. We will resist detrimental changes to our members Terms and Conditions of service. There needs to be clear unequivocal direction from the Scottish Government on maintaining the NHS Staff Governance Standard and Partnership working. On this subject, the SCP would stress the need for clarity around the term partnership. Partnership working, as defined within NHS Scotland, by NHS MEL (1999), is a very specific term with a very specific application. Members have expressed grave concern that the fact that there is no mention of partnership working or of trade union representation on integrated joint boards (for example) will mean an end to arrangements as they currently exist within NHS Scotland.

The partnership model of industrial relations in NHS Scotland is regarded as a leading edge example of the extent to which innovative industrial relations arrangements may contribute towards improving public service delivery. There should, therefore, be a firm commitment to ensure that these exemplary partnership working structures and practices will be part of the integrated system. Ideally, this should be guaranteed by legislative underpinning i.e. a statutory requirement for Health and Social Care Partnerships to have a Staff Governance framework in place.

We would wish to see integration plans include details of the planned method of ensuring quality services relevant to the delegated functions. This method might include how boards are going to take account of Health and Care Professions Council regulations, AHP clinical standards of practice and other clinical governance duties.

The SCP would also wish planned methods of ensuring quality (or changes to these) to be subject to Ministerial approval along with methods of calculating payments.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

The SCP has a significant proportion of members in private practice. We hope that in the delivery of integration plans the potential for “integrating” this significant element of the workforce into health & social care provision is fully recognised. Early work on this has already been undertaken by the recognition in the Scottish Government’s Personal Footcare working group, that referral to a private practitioner for personal footcare is one of a number of possible models. However private practitioners, along with colleagues in the NHS, are fully qualified HCPC registered professionals and as such it would be good to see government recognition that the “independent sector” is not just about care and care home providers.
Other benefits that will arise specifically for the organisation (i.e. The Society) are less easy to identify at this early stage in delivery, however a properly and fully integrated pathway for the delivery of podiatry which saw the service fully recognised and funded for the important role it has to play in keeping people mobile, active and living in their own homes or the community, would benefit both the foot health of the nation and members of the Society in carrying out their profession.

5. **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

It is easy to lose sight of the priority of an improved patient experience of health and social care services when addressing specific concerns. It is important therefore to state that with suitable protection for members, and with AHPs, including Podiatrists, placed firmly at the centre of reform, the SCP believes that the stated policy objectives of the Bill can be achieved. Mention has already been made of Diabetes and of Rheumatoid Arthritis.

Podiatry has a crucial role to play in both of these conditions and both conditions are best managed within a multi-disciplinary team. A diabetes annual review will involve the following professionals- doctor (diabetes consultant or GP), specialist nurse, Podiatrist, Dietician, and Orthoptist - for retinopathy (diabetic eye screening). So typically three AHPS, doctors, nurses and the patient (self – management in the community) are all involved in the team. It is not alarmist to describe the increase in diabetes in the population as a “time bomb”. For up to date statistics and related information on diabetes, Diabetes UK Scotland’s “State of the Nation” report is comprehensive.

Similarly Rheumatoid Arthritis is best managed in a multi disciplinary team, with sign guideline 123 explicitly stating in Key message 2.1 “The multidisciplinary team has been shown to be effective in optimising management of patients with RA. All patients should have access to such a range of professionals including general practitioner, rheumatologist, nurse specialist, physiotherapist, occupational therapist, dietician, podiatrist, pharmacist and social worker.” The guideline also states explicitly that all patients should be offered podiatry referral.

If integration plans are successful in achieving the desired outcomes patients receiving treatment for these and other conditions should experience a fully integrated “seamless” patient pathway.

Public Bodies (Joint Working) (Scotland) Bill

MS Society

Do you agree with the general principles of the Bill and its provisions?

The MS Society welcomes the Scottish Government’s commitment in this Bill to integrating health and social care to improve outcomes. We believe that greater coordination between health and social care services could significantly improve the lives of people affected by Multiple Sclerosis (MS).

MS is a progressive and incurable long-term condition, most commonly diagnosed between the ages of 20 and 40. Over 10,500 people are living with MS in Scotland – one of the highest rates anywhere in the world. Along with medical implications, MS has a social impact. A person experiencing a relapse, for example, may require medical treatment from a MS nurse but their relapse may have caused mobility problems meaning they also require support to get dressed or need adaptations to their home. It is a condition that does not adhere to department boundaries.

MS can also be a fluctuating and unpredictable condition. People living with MS may need to access health and social care services throughout the course of their condition sporadically but perhaps quite suddenly. Coordinated action and a shared knowledge of an individual’s condition are crucial if people with MS are to receive timely and responsive services. The right support at the right time can help people with MS remain in work for longer or live independently for as long as possible.

While we welcome the general principles of the Bill, we would question whether its provisions go far enough to enable the transformation required to deliver improved outcomes on the ground.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

We welcome the legislative duty placed on local authorities and health boards to integrate their services, rather than the non-statutory approach to date which has not led to the common vision and joint working required to improve services.

However, we are concerned that the Bill is in danger of focusing too heavily on structural change and how to achieve this - at the expense of the primary focus on improving outcomes for people. Delivering coordinated and effective care requires more than structural change and integrated budgets. Strong leadership and a radical change in culture will be key to improving services, and we hope to see the Scottish Government’s plans on delivering these critical changes, without which legislation can not achieve its policy objectives.

Our experience shows that where health and social care work best together there is a tangible desire to coordinate action and an understanding that coordinated services provide the best outcome for individuals (see case study below). Greater professional respect is also needed across departments, along with an understanding of the different professional and legal boundaries of each professional. In addition, practical barriers like different IT systems, different terms and conditions for staff and training will all need to be considered for services to improve on the ground.
Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

As noted above we welcome the legislative duty placed on local authorities and health boards to integrate their services, rather than the non-statutory approach to date which has not led to the common vision and joint working required to improve services.

We also consider that the inclusion of a framework for National Outcomes for Health and Social Care within the legislation offers an important basis for monitoring outcomes and improving the quality and consistency of health and social care services across Scotland.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

(a) Consistency and charging

We believe that the Bill needs to be strengthened with regard to measures to improve the consistency of services provided to people by Health and Social Care Partnerships.

People with MS have often told us of their frustration at a ‘postcode lottery’ of care. Many feel that this inconsistency stems from the different charging policies and eligibility criteria across local authorities. This local variation is a real concern for people with MS. At present, for instance, transferring a care package across local authority areas can be very difficult, which can affect where a person decides to live and work.

As free of charge health and contribution-based social care services integrate there is a risk of creating additional confusion and inconsistent practices around charging policies and eligibility for different services. This Bill offers an opportunity to improve consistency, however this critical issue of charging needs to be addressed head on.

The MS Society would also welcome greater clarity about how integration fits with the roll out of Self Directed Support. As services become more integrated it is unclear whether service users will be able to use their SDS options for housing or health needs, for example.

(b) Scope of integrated budgets

The impact of MS of is far-reaching. It can affect an individual’s physical and mental health, housing requirements, educational needs, employment prospects and financial security, family responsibilities, mobility and social inclusion.

It is important then that other budgets are considered when thinking about an individual’s health and social care needs; and the MS Society supports the intention of the Bill to enable Health Boards and local authorities to include other budgets within the scope of the HSCP.

However, we are concerned that without guidance in the policy memorandum to support this provision in the Bill, the current challenges caused by inconsistency in approach will be exacerbated.
(c) Third sector and service user involvement

The MS Society believes that a stronger voice for people who use health and social care support and services is required. Service user participation is essential to improving services. It is important that the third sector – as an advocate and conduit for the voices of service users – is able to participate meaningfully at a strategic level within HSCPs. We welcome that consultation with the third sector is enshrined in the Bill, however we believe that the third sector should also have a role in signing off the local strategic plans.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

We hope that the delivery of integration plans will have the following outcomes for people living with MS:

- Care that is more person-centred and holistic
- Better information-sharing between professionals involved with an individual and their family
- Faster access to the health and social care services that an individual needs at the time they need them
- Improved information and clarity on entitlements to services
- Equality of access to high quality health and social care services across Scotland
- People with MS feel more supported to live independent and active lives

Mixed outcomes to date

People living with MS in areas that have started to integrate report mixed experiences of how it has made a difference to them. Some examples are provided below:

1. “Since integration of health and social care, one individual, whose husband is her carer but also not in the best of health, has been very glad to have now had help allocated to them through their social worker, whereas before they were simply unable to access any help and had to make private arrangements for which they paid.”

2. “The service is seriously overloaded for the number of staff employed. Staff are frequently off sick with stress and there is no continuity, and a tendency to “pass the buck”. The provision is simply not there. Whereas a few years ago before integration, members knew their social worker/care manager/key worker (the name keeps changing), now most of them do not have a person dedicated to them individually.”

3. “I feel that Social work - NHS integration is not working as it should be for adults. There is no clear guidance on what they can provide or who to ask. Most people including ourselves have been told by friends about who to ask. The last time I was on the Council web site, the Social Work part was not easy to understand by myself. There is no clear guidance on where to ask for advice. I know that in our area they have moved some services to different offices but not told anybody. One example-the contact for the Help Call has been moved but we, the users were not informed.”
Integration project case study

A good example of a very simple but effective integration project can be seen within Lanarkshire. A number of ‘managed care networks’ have been set up, which bring together personnel from health, social work and third sector support organisations in a single community venue, providing a ‘clinic’ for people affected by MS.

The benefits of these clinics are diverse; fundamentally, they offer a one-stop-shop service for people affected by MS, allowing issues and needs to be explored and addressed in a co-ordinated manner across services. A visitor to the clinic can meet with professionals from health services, social work services, and third sector services all in one short visit. Clinics are held in community settings, typically in health or local authority buildings, thus tackling the challenge of equity of access to services / postcode lottery problems.

There are additional benefits for professionals, and these include:
- a reduction in referral time and paperwork;
- improved networking and development of contacts across services and sectors;
- a collaborative approach to case management and problem-solving;
- the development of a greater understanding of cross-sector standards and objectives and a joint commitment to shared outcomes.

The managed care networks have been developed without the need for extensive or lengthy planning, and with minimal or no cost impact on operational budgets.

In conclusion

It is clear that integration has the potential to make a positive difference for all health and social care users, especially those with complex needs or long-term conditions. The Bill is a welcome step forward, however for the reasons outline above it is important not to lose focus on the non-structural aspects that are essential to the delivery of what it sets out to achieve.

MS Society
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Citizens Advice Scotland

While Citizens Advice Scotland (CAS) are not submitting a detailed response to the questions raised in the call for written evidence about the Public Bodies (Joint Working) (Scotland) Bill, we have a general concern about the lack of reference to public feedback mechanisms, including complaints, within the proposals.

The Scottish Government Patient Safety and Improvement agenda has a clear aim of being responsive to the needs of the public. The Healthcare Quality Strategy for NHS Scotland states that “…people in Scotland will have the opportunity to comment systematically on their experience of healthcare and its impact on their quality of life”\(^1\). It goes on to say that it “…is about putting people at the heart of our NHS. It will mean that our NHS will listen to peoples’ views, gather information about their perceptions and personal experience of care and use that information to further improve care.” The 2020 Vision for Health and Social Care also discusses giving the public “…a voice on their experiences to drive up the quality of care” and to ensure that “…they become more involved and engaged in their healthcare.”\(^2\)

These aims cannot be achieved without clear and effective mechanisms for feedback, comments, concerns or complaints. This is clearly acknowledged in the Patient Rights (Scotland) Act 2011, but the Public Bodies (Joint Working) Scotland Bill currently fails to recognise this.

CAS feels that it is vital that this forms a core principle of the Bill.

A clear framework for handling feedback will be necessary to enable responsiveness to public feedback and to facilitate joint working, particularly as health is integrated with social care. It will be particularly important to have a statutory mechanism for addressing and acting on complaints regarding social care and social work, including where complaints may fall between geographical or services boundaries, that is where these are not coterminous.

This is an issue which cuts across a number of Scottish Government agendas and policies. While NHS Education for Scotland, regional Health Boards and the Patient Advice and Support Service have been helping to raise staff’s awareness of patients’ rights, this will now need to be extended across the whole social care field. This will involve changes within a wide range of organisations both internally and externally as well as a change in culture which will have to be introduced consistently at all levels of each organisation.

\(^1\) The Healthcare Quality Strategy for NHS Scotland
\(^2\) A Route Map to the 2020 Vision for Health and Social Care
Failure to make provision for complaint handling could have serious implications for user safety. There are potentially serious risks to individuals if complaints are not raised to and with the correct area/member of staff and action cannot be taken to change practices identified as being detrimental. With experience of delivering the Patient Advice and Support Service and therefore a thorough knowledge of the structured NHS complaints system, CAS are particularly concerned about clients moving from NHS to Council-provided services and how they would be affected by a lack of clarity about who would deal with the issues they have raised.

CAS are concerned that there is a potential for vulnerable clients to fall between the lines during a time of transition. There is a need for consistency of approach in the handling and providing of feedback, comments, concerns or complaints in both health and social care. It is vital that information, training and awareness-raising is carried out for staff working in both the NHS and social care to enable this to happen smoothly and to ensure that no patients or service users are adversely affected by this. CAS believe that failure to include provision for handling of feedback, comments, concerns and complaints in the Public Bodies (Joint Working) (Scotland) Bill would be a missed opportunity to protect vulnerable people.

CAS are involved in the Social Work Complaints short life working group. However this group hasn’t yet resolved the issues around social work complaints. CAS feel it is vital that this is dealt with on a statutory basis within the Public Bodies (Joint Working) (Scotland) Bill.

Citizens Advice Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

The Scottish Health Council

The Scottish Health Council is part of Healthcare Improvement Scotland. Our written evidence focuses on the aspects of the Bill which relate specifically to involving service users and communities, and should be read alongside the Healthcare Improvement Scotland response, which addresses other relevant aspects of the Bill.

Do you agree with the general principles of the Bill and its provisions?
The Scottish Health Council supports the policy ambition underpinning the Bill and welcomes the focus on improving the quality and consistency of services for patients, carers, service users and their families, subject to our comments below.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
Whilst the general approach and ambition for the Bill are sound, there is a significant danger that these will be undermined if the statutory agencies focus disproportionately on the ‘mechanics’ of integration, including in particular the structural and financial aspects. Much of the Bill appears to be skewed towards these aspects. It is essential that this balance is redressed as work progresses to develop how integration will work in practice, particularly in relation to ensuring that people and communities using integrated services are empowered to shape their design and delivery, working in partnership with the statutory agencies and the third sector.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
The Scottish Health Council recognises the “two key disconnects” described in the Policy Memorandum i.e. between primary and acute care in the NHS, and between health and social care. We agree this makes it difficult to address people’s needs holistically. It also results in missed opportunities and inconsistency in terms of how people are involved and engaged in these services. Integration offers the chance to do things differently in future – to review experience of involving people to date across these sectors, to learn from what has worked well and to develop a refreshed approach to engagement, which is shaped and designed with the people and communities whom the services exist to support. The recognition of the importance of this involvement in the Policy Memorandum is welcomed but the Bill itself needs to go further to ensure this aspiration is enshrined effectively in the primary legislation.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
In 2012-13, the Scottish Health Council commissioned research to explore future possibilities for public involvement in health and social care in
Scotland. The research gathered views from members of the public, and health and social care practitioners through discussion groups, telephone interviews, an online survey and a workshop. This was followed up in June and July 2013, with three events in Edinburgh, Glasgow and Perth to discuss the ideas raised by the research and a related ‘think piece’. A report on these events will be published shortly. We have drawn on the themes and issues explored through this research and stakeholder discussions in reaching many of our views outlined below.

Both the ‘integration planning principles’ in section 4 and ‘integration delivery principles’ in section 25 of the Bill are welcome. However, it is disappointing that they do not appear to go as far as suggested in the Scottish Government’s response to the 2012 consultation exercise, which says: “It is therefore our intention,... to legislate for a duty on Health and Social Care Partnerships to ‘engage with and involve’, rather than merely to ‘consult’... representatives of patients, people who use services, and carers regarding how best to put in place local arrangements for planning service provision.” The Scottish Health Council would like to see the Bill strengthened accordingly.

In other legislation, such as the Adults with Incapacity (Scotland) Act 2000 and the Mental Health (Care and Treatment) (Scotland) Act 2003, there is a statement of guiding principles at the beginning of the legislation. This helps to set the tone of legislation and guide overall interpretation. The Scottish Health Council would advocate adopting the same approach to outlining the overarching principles in section 1 of the Public Bodies (Joint Working) (Scotland) Bill.

The principles should also explicitly acknowledge the vital role played by carers.

Section 5 of the Bill says that Scottish Ministers may set out in regulations, national outcomes in relation to health and wellbeing. Our research and work with stakeholders (see above) explored the issue of national outcomes and in particular, the suggestion that there could be a national outcome related to service user and community participation. One option would be an overarching principle or outcome on participation which underpins the other national outcomes as a way of working, and this could be developed and supported by co-producing a vision and plan for public involvement in health and social care nationally.

Consultation requirements in relation to the preparation of integration plans are set out in section 6. It is essential that service users and communities are able to shape and influence the development of these plans and that the statutory agencies are able to demonstrate how they have listened to input gathered from local people. This is equally important in relation to the

---

development of strategic plans (sections 23-27) particularly as the strategic plans will clearly lead to changes in service delivery. Currently NHS Boards are required to follow Scottish Government guidance on *Informing, Engaging and Consulting People in Developing Health and Community Care Services, CEL 4 (2010)* when planning changes to services. The Scottish Health Council believes that the principles and approach outlined in this guidance in terms of involving service users and communities should be adapted in relation to integrated services, and any lessening of expectations in this regard would be a retrograde step.

The ‘consultation group’ (section 26) will have an important role to play in the preparation of a strategic plan and its membership must include representation of service users and communities, and also the third and independent sectors which play a vital role in health and social care.

Section 30 of the Bill relates to a situation where an integration authority proposes to take a decision that might significantly affect the provision of a service, and which is intended to take effect other than in its next strategic plan. The authority must take “such action as it thinks fit” to involve and consult users of the service which is or may be provided in relation to the decision. The Scottish Health Council is concerned that the term “such action as it thinks fit” is not appropriate in this context. It is vague and likely to lead to inconsistent interpretation in practice. We would suggest that the Bill includes reference to guidance which should be developed to set out clear expectations about how this provision should operate, drawing on the principles and approach set out in existing guidance *CEL 4 (2010)* referred to above.

Section 34 outlines that any variation to the integration plan must be made jointly by the local authority and the Health Board and is to be achieved by the preparation of a revised integration plan. A revised integration plan must be jointly submitted by the local authority and the Health Board to the Scottish Ministers for approval, who will set the date on which the revised integration plan will take effect. It is of concern that there is no requirement that revisions to the plan should be subject to any consultation or engagement, and the Scottish Health Council believes that the Bill should be amended to address this omission.

Section 51 of the Bill repeals certain sections of the National Health Service Reform (Scotland) Act 2004, thereby removing Community Health Partnerships from statute. The Bill does not explicitly address the issue of what will happen to Public Partnership Forums, which currently have a key role in enabling Community Health Partnerships to engage with local communities. However, as Community Health Partnerships are repealed, it could be argued that Public Partnership Forums should no longer exist by default, despite the recognition in the Policy Memorandum that “they were quoted as an example of a successful means of engaging with the public”. The Scottish Health Council’s local offices have supported the development of Public Partnership Forums and have considerable knowledge and experience of what has or has not worked well in relation to their establishment and
operation, and would welcome the opportunity to use this learning to support any further development in involvement structures.

The issue of structures for involving communities, and what this might mean for Public Partnership Forums, was explored during our research and events mentioned above. Most stakeholders felt that there should be guidance on options for involvement structures and a recommended model (or models), with local areas asked to adopt this or explain why they are using a different approach. The Francis Inquiry\(^2\) highlighted the significant difficulties that can arise when communities don’t have an effective channel for local involvement. It is also worth noting that there are some people whose voices may not be heard through traditional routes and structures and it is essential that statutory agencies are proactive in adopting a flexible and proactive approach to ensure that there are a wide range of opportunities for people to participate which take account of diversity and individual preferences within communities.

Our research also highlighted support for creating a single standard for public involvement in health and social care services. Currently, local authorities and the NHS use two main standards – the National Standards for Community Engagement and the Participation Standard. There are links between the two, but they are assessed in different ways. While the National Standards for Community Engagement are voluntary, the Participation Standard is mandatory for NHS Boards. Overall, there was broad agreement that there was potential to further align the two standards and a belief that a common standard could help with building a joint ethos, culture and language around public involvement across health and social care. The Scottish Health Council has 8 years experience of reviewing the application of national guidance and standards for engagement, including the Participation Standard, and is keen to draw on this experience to help shape how the quality and consistency of participation is assured in the context of integration.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

The Scottish Health Council believes that there are significant potential efficiencies and benefits in a more joined up and holistic approach to involving service users and communities in service design, development and delivery, and we believe we can play a key role in supporting implementation and sharing learning from experience to date across the new integrated services.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

There is significant potential for integrated services to make a positive difference to outcomes for those receiving services, but there is a long road to travel before that ambition is realised in practice. It is essential that everyone involved stays focussed on the goal of improving services for individuals and communities who use them, and the best way of ensuring that this happens is to involve individuals and communities on every step of the journey.

---

\(^2\) Report of the Mid Staffordshire NHS Foundation Trust Public Inquiry, Chaired by Robert Francis QC, February 2013
Further comments
Access to clear information and appropriate support services will be vital in order to support effective participation of service users and communities in integrated services. Individual and collective independent advocacy services would support the aims and the principles embedded in the Bill. Services such as the Patient Advice and Support Service (PASS) also have a key role to play. It is essential that these services are appropriately funded in order to meet any increased demand which they may face to ensure that all those affected by the Public Bodies (Joint Working) (Scotland) Bill can access the support they may require to participate fully and ensure their voices are heard.

There currently exists a raft of legislation which applies either to health services or social care services. Further work is needed to consider what changes might be required to ensure that there is a holistic and consistent approach in relation to service delivery from the perspective of service users. One example is the Patient Rights (Scotland) Act and the associated Charter of Patient Rights and Responsibilities. Might these provisions be revised where appropriate to encompass social care? How will recently introduced expectations on NHS Boards to produce annual reports on feedback, comments, concerns and complaints, analysing data and showing how this has been used to improve services, apply to integration authorities? What implications might there be for those benefiting from self-directed support? These and many other questions will require to be addressed.

The Scottish Health Council would be happy to provide any additional information that would be helpful to supplement our response and would also welcome the opportunity to discuss the issues that we have highlighted further by taking part in the oral evidence sessions on the Bill.

The Scottish Health Council
2 August 2013

About the Scottish Health Council
The Scottish Health Council was established in April 2005 to promote improvements in the quality and extent of patient and public participation in the NHS in Scotland, and has a local office in each NHS Board area. It supports and monitors work carried out by NHS Boards to involve patients and the public in the planning and development of healthcare services, and in decisions about those services.
The Scottish Health Council is part of Healthcare Improvement Scotland.

Further Information
Further information about the Scottish Health Council can be found on our website www.scottishhealthcouncil.org
Inverclyde Community Health and Care Partnership

Background
As an integrated Community Health & Care Partnership since 2010, Inverclyde CHCP is pleased to submit written evidence on the Public Bodies (Joint Working) (Scotland) Bill to the Health & Sport Committee and we are available to provide evidence orally if required.

Inverclyde CHCP embraces the integration of social care and health services to improve outcomes for the people who use our services. Our view is based on local experience of integration, and we believe that local people now have better services as a result of our joint arrangements, and that this situation continues to improve. Our integration arrangements include all social work and community health services, from antenatal; through children and families; and adult services, addressing health inequalities through health improvement programmes is a key priority of current integrated working arrangements.

Specific questions

1. *Do you agree with the general principles of the Bill and its provisions?*
Inverclyde CHCP agrees with the principles of the Bill and its provisions. We are pleased that the Bill provides flexibility for us to continue to develop our current approach, albeit that there will be a need to review some of our arrangements with regard to governance and financial structures in order to ensure that we become fully compliant with the requirements of the legislation. We are confident though that the Bill supports our aspirations for improved service-user outcomes through integrated services that support better pathways and easier access.

2. *To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?*
Some aspects of the Bill reflect our own current arrangements; however there are parts of the Bill that we still require clarification on. We would expect to pursue the body corporate model, with the integration joint board being similar to our current CHCP Sub-Committee and being led by the Chief Officer which we envisage as being similar to our current arrangement of having a jointly appointed CHCP Director.

Our jointly appointed CHCP Director is responsible for the management of the aligned budgets and the delivery of services. An important area requiring clarification is whether the CHCP Sub-Committee, in evolving to the integration joint board, would become a full joint Committee in its own right. Currently Council requirements are met by the CHCP Sub-Committee having a reporting and governance line to the Health & Social Care Committee which meets annually and delegates its powers to the Sub-Committee. The Bill would require the integration joint board membership to have Elected Members and Health Board non-Executives. This requirement needs to be
reconciled with current requirements that Council Committees are populated exclusively by Elected Members. We would wish to be supported to build on our success to date, rather than our energies being diverted to the construction of complex technical devices to meet the detail of the legislation rather than the spirit of the Bill.

3. **Please indicate which, if any, aspects of the Bill's policy objectives you would consider as key strengths**

Our experience of integration to date has been very positive and we believe that integration of health and social care services is the right way ahead for the whole of Scotland. Integration has brought some unanticipated benefits such as a stronger presence in Community Planning and closer links with colleagues in other parts of the Council such as Education and Community Safety. The Bill provides the impetus for integration where it has not already begun.

4. **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened**

The Bill leaves much of the detail to regulation, so it is difficult to comment specifically at this stage. However there are some areas where we would seek clarity.

The Bill proposes that budgets will be fully integrated and that money will “lose its identity”, yet accountability to and control by both parent organisations will remain. It is not clear to us how this will work in practice. For example:

- If the joint integration board spends over or under budget, it is not clear how the judgement should be made as to which parent body will be responsible for the shortfall, or have claim on the underspend. However there is clear potential for this to be written into the integration plan.
- If either or both of the parent bodies are required to make efficiency savings, how will the integration joint board’s contribution be calculated?
- Health services are free at the point of delivery but social care services are chargeable, and each authority has discretion to set its own charges. If service users cannot discern the interface between health and social care provision, it could be difficult to explain and justify charging.
- There could be questions around how parent health boards spanning multiple local authorities will manage differential charging.
- It is not clear at this stage how financial governance will operate with accountability to the parent bodies remaining, whilst money will lose its identity.

5. **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

We have already realised a number of efficiencies and benefits from having established our integrated CHCP. For example, we have streamlined the management function (and numbers) through merging two distinct organisational structures. Joint planning and commissioning have
been well supported through our arrangements too. We are on a continuing journey of integration of services, recognising that within the former CHP and Social Work departments, different service areas were at different stages of readiness for integration. On that basis we are still evolving, but we have come a long way so far. One of the most important aspect of our integration journey has been to proactively support the development of a new CHCP culture based on the values that underpinned the former organisations, and taking the best examples of practise from both and implementing them across the then newly formed CHCP. This helped to reinforce that we were aiming to build on established good practice so that staff felt values and involved. We would urge that new integration joint boards are encouraged to support staff with the transition in similar ways.

6. **What effect do you anticipate integration plans will have on outcomes for those receiving services?**

We believe that integration is an important means by which to improve outcomes. The draft national outcomes, although requiring further development, seem sensible and relevant. We would urge though that due consideration is taken in developing performance measures against the final outcomes, and that this be done in the context of reviewing the full range of performance returns currently required of the NHS and Social Work Departments. In the changing public sector landscape, many of the indicators could potentially be combined, streamlined or even discontinued if they are no longer relevant to policy direction.

Inverclyde Community Health and Care Partnership
2 August 2013
The Royal Pharmaceutical Society

The Royal Pharmaceutical Society (RPS) is the professional leadership body for pharmacists in Scotland, England and Wales. The RPS leads and supports the development of the pharmacy profession for public and patient benefit. This response comes from the Scottish Pharmacy Board (SPB) which is the elected body of pharmacists representing all sectors of pharmacy practice in Scotland.

The Bill is in general very enabling and the scope for tailored local arrangements is welcomed, however it will be the specific details in the forthcoming regulations and orders which will determine how well the Bill will work in practice. We would like to draw the committee’s attention to one aspect of working together which we believe needs further consideration.

The need for sharing of information is highlighted in the policy memorandum which accompanies the Bill. The SPB believes that access and input to the appropriate parts of one single patient electronic health record will be essential to facilitate this information sharing and ensure patient safety.

RPS has recently launched a report on the use of Medicines Compliance Aids highlighting the need for patient assessment and shared responsibility between social care, pharmacists and GPs when supplying patients with these aids. Sharing of information through a single patient record will be necessary for safe and efficient working practice. In addition, there are numerous examples of patients transferring from one care setting to another, particularly at weekends and out of hours when lack of information has led to inadequate patient care and contributed to hospital re-admission. We would be happy to discuss this further with the committee.

Non-medical and pharmacist prescribing is now well established and it is possible for several health professionals to be prescribing for one individual at any one time. As health and social care integration becomes established, it will be even more important that relevant information is shared both between different prescribers and with social care colleagues. The SPB would like to see more specific requirements for the sharing of information in the regulations and orders which will follow the Bill.

It is established that medicines play an important role in the treatment of long term conditions and are a major expenditure in the care of older people. We know that unplanned admissions to hospital account for almost one third of the total spend on older people’s services.\(^1\) We also know that adverse drug reactions account for at least 6.5% of unplanned hospital admissions and over 70% of these are avoidable. Minimising these incidents and reducing unplanned admissions to hospital is a major driver for successful integration of health and social care.
The SPB would like the national outcomes which will follow the Bill to recognise the importance of medicines and pharmaceutical care in contributing to improving patient health and wellbeing and for there to be a statutory requirement for pharmacist expertise wherever medicines are included in patient care. This will require pharmacy input and engagement at all levels of new and emerging health and social care structures from the strategic and governance levels at the top through to operational delivery. We would be very happy to discuss with the committee in more detail the means through which this can be achieved and any aspect of our comments on the Bill.

Public Bodies (Joint Working) (Scotland) Bill

Royal College of Speech and Language Therapists

RCSLT response to Committee Questions

This response focuses on Part 1 of the Bill only and has been generated in consultation with leaders of speech and language therapy services and with reference to the relevant policy and research base.

1. There is broad RCSLT agreement with general principles, but not all provisions

RCSLT support the objectives of the Bill and support many, but not all, provisions.

2. Extent RCSLT believe that the approach being proposed in the Bill will achieve its stated policy objectives

RCSLT members believe that with the right people around the right tables at national, local and locality levels the Bill (and subsequent early regulation) could significantly improve health and well being outcomes in Scotland.

RCSLT, along with other AHP professional bodies, would wish the Bill – or subsequent early regulation – to secure statutory representation of allied health professionals on integration joint boards, local authority committees, health boards or joint integration monitoring committees.

Integration authorities, of whichever form, need access to good intelligence on the full professional capacity potentially available to them. This is particularly true in relation to those services which rehabilitate and enable people with long term conditions to live independently. Access to good intelligence would allow integration authorities to make evidence based decisions about the best use of that potential capacity when seeking the best outcomes for local populations.

If allied health professionals are not directly and powerfully positioned to influence decisions about effective and efficient utilisation of resources, the implementation of the Bill is in danger of perpetuating the current pattern of inconsistent, poorly informed decision making. This would lead to a continuation of variable quality of services and poor outcomes for many adults with long term conditions in Scotland.

The Health and Sports Committee’s own current survey on speech and language therapy funding and provision across Scotland is testament to the consequences of variably informed health and local authority decision making on best utilisation of professional and financial resources.

Additional material on the link between speech and language therapy (SLT) and the Bill, including the Impact of speech and language therapy on health and well being outcomes can be found at the end of this submission.
Allied Health Profession (AHP) representation as described above could also help facilitate the Bill’s overarching objective to significantly change how and to what ends services are delivered.

As health professions who largely work in a social model, AHPs could challenge the medical versus social model dichotomy by bringing a new perspective to integration planning and implementation.

AHP leaders can also draw on their long experience and knowledge of best practice to demonstrate and provide leadership on providing services in people’s home or homely settings in integrated, multi-disciplinary, multi-agency and multi-sector ways.

In fact, AHPs are already fully focussed on delivering the health and well being outcomes described in the consultation paper preceding the Bill.

The above benefits are deliverable at little extra cost as many boards already have AHP Directors or Associate Directors in post and one AHP representative could cover up to 12 professional groups.

3. **Aspects of the Bill’s policy objectives RCSLT consider as key strengths**

RCSLT fully support the Bill’s objectives to improve the quality and consistency of services; to provide seamless, joined up services in people’s homes or a homely setting and to ensure resources are used effectively and efficiently.

In particular, RCSLT is pleased the Bill:

- Removes the voluntary aspect of integrated working between both statutory agencies and third sector providers and thus promotes partnership working.
- Centrally drives joint working while allowing local flexibility on agency relationships.
- Will lead to a common national health and well being outcomes for adult services thus providing a clear vision, strategic direction and focus for all concerned.
- Establishes principles of integrated planning and delivery, which, with some improvement are welcome.
- Empowers Ministers to make orders in respect of staff and members of integration joint boards and integration authority strategic planning consultation groups.
- Empowers Ministers to prescribe aspects of implementation and approve plans, thus improving potential for local government and health boards to act consistently.
4. Areas in which RCSLT feel the Bill’s provisions could be strengthened

(1) Keep what was good about Community Health Partnerships

AHPs are currently statutory members of Community Healthcare Partnerships (CHPs) committees. The removal of CHPs represents a diminution of the AHPs potential to directly influence resource use and service planning locally.

RCSLT, along with other AHP professional bodies, would wish the Bill (or subsequent early regulation) to secure statutory representation of allied health professionals on integration joint boards, local authority committees, health boards or joint integration monitoring committees.

(2) Payment formulas to reflect policy and the services people actually use, need and want (Subsections 1:3(d), 13:(2),16,17, 18)

RCSLT are concerned that local agencies will use different methods of calculating payments to be made in respect of delegated functions without good service data on the inputs required. These inputs might relate, for example, to professional groups, the quantity or the nature of provision.

For many years SLT leaders have negotiated service level agreements (SLAs) for services to children with (and sometimes without) co-ordinated support plans. SLAs involve money transferring from Local Authorities (LAs) to the NHS. The government itself has responded to the wide variability and effectiveness of partnership working by publishing “Working in Partnership” guidance. At the local level, variable approach to transfer of funds (and associated conditions) between agencies has led to inconsistencies in service levels and quality across Scotland. LAs have made cuts of up to 50% in SLT budgets over the last few years. In at least one area, contrary to Government policy, cuts have terminated preventative SLT provision to disadvantaged nursery age children.

The Health and Sports Committee is conducting its own survey into SLT funding at the local level. **RCSLT would ask that the Committee takes the findings of that survey into account when considering this aspect of the Bill.**

RCSLT would also wish to see the method of calculating payments to integration joint boards or lead agencies regulated.

(3) Ensuring quality of services is as important as calculating payments

Subsection 21: (2) means the person to whom functions are (newly) delegated has the same duties, rights and powers as those that used to be responsible for the function. Subsection 22: (2) enables integration joint boards to make directions about the manner in which a particular function is to be carried out.
RCSLT are of the strong belief that delegated functions will only deliver the desired outcomes if they are supported by well informed and experienced clinical and social care leadership.

RCSLT would wish to see – in addition to money transfer – integration plans to include details of the planned method of ensuring quality (safe, effective, person centred) services relevant to the delegated functions. This might include how boards are going to take account of Health and Care Professions Council regulations, AHP uni and multi-disciplinary clinical standards of practice and other clinical governance duties.

RCSLT also would wish planned methods of ensuring quality (or changes to these) to be subject to Ministerial approval – just like methods of calculating payments.

(4) Co-production better than “engagement”: Integration planning principles

Use of the term “engaged” (Subsection 4:1(b)(iv)) is vague and open to wide interpretation and is therefore weak in respect of ensuring communities and local professionals consistently get the opportunity to shape integration plans - even within one area over time.

RCSLT would wish the Bill to instead talk of “co-production” involving service users and carers and health, social care, adult education and justice staff (from all sectors).

(5) Who “represents” and how well do they represent? (Subsection 5: (3) (d))

The Bill empowers the Minister to determine who “appears” to be representative of health professionals, users of healthcare and carers for the purpose of consultation on national outcomes.

It would be helpful to ensure that the Minister, when determining which body or group is representative, takes cognisance of the Office of the Scottish Charity Regulator and / or Health and Care Professions Council (HCPC) registered charities and professional bodies.

The Bill has the potential to radically change the current situation, in which it is only the voices of those who can read, write and express themselves eloquently which are heard. The Bill can do this by ensuring (through guidance, direction or regulation) that representative organisations are required to demonstrably meet the communication access needs of those they represent.
(6) *Consistency only comes with consistent information, intelligence and buy in*  
(Subsection 11: (4), 12: (2), 16: (1))

RCSLT are concerned that integration joint boards could be very different in different areas of Scotland. Diversity of core board membership prompts the question of how consistency of service will be ensured if the parties engaged in decisions about the best way to allocate resource to deliver outcomes is widely varied.

RCSLT would wish the Minister to regulate for consistent core membership (at least) of integration joint boards (and in the case of lead agency models – the integration joint monitoring committees, health boards and local authority health and social care committees), across Scotland.

(7) *Equally accessible strategic planning and published plans*  
(Subsection 26 (3))

RCSLT request that integration authorities are required (by Act, regulation, direction or guidance) to ensure equal representation on strategic plan consultation groups for people with communication support needs. Strategic plans should also be required to be published in communication accessible forms.

(8) *Who is involved in deciding what’s a “significant” change or decision and how?*  
(Subsections 30, 32)

Identifying a change or decision as “significant” will depend on an integration authority’s (or locality function’s) awareness of how a change to service inputs could impact on outcomes.

For example, the reduction of one speech and language therapist in an area might seem acceptable to the board or care team. At ground level however, it could remove a key service preventing chest infections (a primary cause of aspiration pneumonia and unplanned admissions) among a hundred or more frail elderly or people with dementia who are also highly likely to have communication support needs and are therefore less able to respond to consultation on changes.

For this reason RCSLT would wish the bill to ensure the definition of “significant” was informed by the right people, around the right tables, in integrated authorities and local function teams. Further RCSLT would wish the bill to ensure public involvement and consultation was accessible to those service users (and carers) with communication support needs.
5. **Effect RCSLT anticipate integration plans will have on outcomes for those receiving services**

RCSLT members anticipate, with the changes suggested above, that the Bill and subsequent related regulation could have a considerable positive impact on health and well being outcomes for the people of Scotland.

**Royal College of Speech and Language Therapists**  
**2 August 2013**

**Link between speech and language therapy (SLT) and the Joint Working Bill – additional material**

Speech and language therapists work solely for people with communication support needs and/or eating, drinking and swallowing difficulties.

The estimated 250,000 Scots with communication support needs and those with eating, drinking and swallowing difficulties include many, if not all of the people the Bill aims to improve outcomes for. That is those with long-term conditions such as stroke, head and neck cancers, dementia, autistic spectrum disorder, motor neurone disease, MS, Parkinson's disease, learning disability and mental illness.

It is known that 349 (40%) of speech and language therapists working in Scotland work for adult care groups and, along with other AHPs, social care and third sector partners, they are key to the success of the Bill because they are part of the service the public – and the Government - need and want to deliver health and well being outcomes. For example, the Allied Health Professions National Delivery Plan notes that “[AHPs] are uniquely placed to exploit their expertise in “enabling” approaches through providing rehabilitation/reablement approaches and leadership across health and social care as well as driving integrated approaches at the point of care.”

Speech and language therapists enable people to enjoy optimum health and well being by providing a mix of individual assessment and rehabilitation. This is provided through support, training, guidance and practical communication and eating and drinking equipment to carers and colleagues throughout statutory, private and third sector health, social care, adult education and justice settings including hospitals, care homes and people’s own homes.

The impact of speech and language therapy:

- **Improving safety and effectiveness in hospitals and the community** by reducing risk of poor nutrition of older people and chest infections and thus preventing hospital admissions or delayed discharge.
• **Improving the protection of vulnerable adults** by enabling communication access to *Adult Support and Protection* and *Adult with Incapacity* provisions.

• **Improving independent living** by improving and supporting people's communication so they and their carers can better self manage long-term conditions.

• **Enabling healthier living and reducing health inequalities** by improving 24/7 communication access to all services that enhance wellbeing.

• **Enabling services to be person centred and ensure positive experiences** by improving their capacity to meet service users and carer's communication and/or eating and drinking needs.

• **Supporting carers** by equipping them with the confidence, skills and resources they need to communicate with loved ones and ensure safe and effective eating and drinking.

• **Reducing costs** - independent economic evaluation showed SLT services can deliver an annual net benefit at least £2.4 million/annum in adult stroke services alone.
NHS Education for Scotland

NHS Education for Scotland (NES) is a Special Health Board, responsible for supporting NHS services for the people of Scotland through the development and delivery of education and training for all NHSScotland staff. Everything NES does is based on eight fundamental principles:

- Be open, listen and learn
- Work together with others to benefit patients
- Look ahead and be creative
- Always aim for quality and excellence
- Promote equality and value diversity
- Understand and respond quickly and confidently
- Work to a clear common cause and
- Give people power and lead by example

NES supports the pre and post-registration education, training and continuing professional development of doctors, psychologists, nurses, allied health professionals, dentists, pharmacists, and support staff. NES works closely with other NHS boards and also maintains strong links with the Royal Colleges, UK regulatory bodies and other organisations such as the Health Foundation. The Scottish Funding Council and the Scottish Social Services Council are key partners, and we work closely with Scotland’s Colleges and Universities, Skills for Health, COSLA, and Skills Development Scotland.

Our vision is ‘Quality Education for a Healthier Scotland’. Our mission is to provide educational solutions that support excellence in healthcare for the people of Scotland.

In supporting the integration of Health and Social Care agenda NES have been working in partnership with Scottish Social Services Council (SSSC) over a number of years. This partnership is underpinned by a Memorandum of Understanding. Current partnership workstreams include supporting a number of key government policy drivers namely the Dementia Strategy, Carers Strategy, Early Years and Reshaping Care for Older People by providing educational resources for the health and social care workforce.

NES welcomes the opportunity to contribute to this important call for written evidence from the ‘Health and Sport Committee into the Public Bodies (Joint Working) (Scotland) Bill.

In response to the questions, specific responses have been noted in respect to education and workforce development.

Q1 Do you agree with the general principles of the Bill and its provisions?

NES is supportive of the general principles of the Bill and its provisions that better integration of health and social care services is required in order to meet people’s needs and expectations.
Q2 To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The aspiration of the Bill to address the structural, professional, governance and financial issues in order to deliver more ‘joined up’, ‘person centred care’ and ultimately better outcomes for patients, carers and users of service is supported. The degree to which the stated policy objective is achieved maybe variable but in order to support the desirable a cultural shift is required. Organisational leadership is a critical success factor and should be underpinned by multi professional, interagency education across the whole system including health, social care, housing, education, independent and third sector.

Q3 Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths?
It is difficult to disaggregate any one of the policy objectives has being a key strength when they are all intrinsically linked. The core of having national outcomes for health and well being which involves a range of key stakeholders in developing these outcomes and performance indicators is clearly a strength. As is the governance required in that is will be mandatory to include representation from health and social care professionals, the third sector, service users, carers and the public.

Q4 Please provide details of any areas in which you feel the Bill’s provision could be strengthened?
Whilst a strength; the legislation allows different models of integration authority across Scotland could be a challenge which may result in multiple variations and in turn present problems. The relationship between national and locality planning may require to be strengthened in order to ensure efficiencies across the sector on a national basis can be achieved.

Q6 What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integrated plans?
NHS Education for Scotland (NES) and the Scottish Social Service Council (SSSC) have for a number of years worked in partnership to support education and development of the health and social services staff. This partnership work is cited in several Scottish Government documents including ‘Renewing Scotland’s Public Service – Priorities for Reform in Response to the Christie Commission (September 2011) and in the Health and Social Care Adult Integration Consultation Bill (May 2012). The partnership continues to strengthen whilst maintaining recognition of each other’s unique contribution of professional reach, skills and values.

The efficiencies and benefits in our partnership work are to ensure the health and social care workforce are both prepared and supported for working much more collaboratively within an integrated model of delivery. Integrated care delivery is unlikely to happen at the necessary pace and scale unless those implementing it are provided with support. Building leadership, trust, collaboration and a common vision amongst stakeholders are key. It is essential that frontline workers, first line managers, as well as strategic managers, have the necessary skills and knowledge to deliver better
outcomes for individuals, families and communities. Written and verbal evidence was provided by NES to the Scottish Parliament Finance Committee Inquiry in to Demographic Change and Ageing Population

The NES and SSSC work programme presently centres around current policy and strategy initiatives including:-

- Scotland’s National Dementia Strategy 2010 - 2015
- Caring Together & Getting it Right for Young Carers 2010 – 2015
- Reshaping Care for Older People – A Programme of Change 2011 - 2021
- Early Years Collaborative Common Core of Skills, Knowledge & Understanding and Values for the Children’s Workforce in Scotland
- Knowledge Management for Social Services /SSKS
- Integration of Health and Social Care Bill
- National Colloquium on Public Service Workforce Development, a process during 2012 that was designed to further the recommendations of the Christie Commission on the Future Delivery of Public Services in Scotland
- NES and SSSC through the Collaborative Leadership Development Board are promoting and implementing specific collaborative leadership development initiatives across Scottish public service, recognising national, local, geographic and sectoral capabilities and delivery models.

A body of evidence has been developed from the joint NES and SSSC partnership work that supports many benefits of joint education and training as well as efficiencies of scale. Such a practical example of efficiency relates to the partnership work between NES, SSSC and Alzheimers Scotland which has seen a number of joint educational developments for the health and social services workforce.

Around 11,000 hard copies of the DVD ‘Informed about Dementia – Improving Practice ’ which was developed to support health and social services staff knowledge and skills have been distributed and is also available via the Promoting Excellence website which also provides the detail of the education framework and other education resources to support workforce development [www.knowledge.scot.nhs.uk/home/portals-and-topics/dementia-promoting-excellence](http://www.knowledge.scot.nhs.uk/home/portals-and-topics/dementia-promoting-excellence)

The NES/SSSC learning resource “Dementia Skilled – Improving Practice” has seen 2,700 hard copies being widely distributed with another 3500 people accessing the resource on line. Accompanying guidance on the use of the Skilled Resource, targeted at the social services sector has also been produced. A range of educational resources on psychological approaches for staff have been developed.

Around 1,430 health and social services staff have undertaken various national training programmes, many using training for trainers and capacity building models including cognitive stimulation therapy, stress and distress in dementia, and palliative care. A ‘Post Diagnostic Support’ training programme
based on Alzheimers Scotland’s 5 Pillar model has been developed, piloted and evaluated.

**Q7 What effect do you anticipate integration plans will have on outcomes for those receiving services?**

Hopefully integration plans will meet the Bill’s outcomes for integrated health and social care services and the problems that it is attempting to address; namely; unnecessary delays in hospital discharges, avoidable hospital admissions and insufficient preventative services. An inconsistency of quality of care for people and support for carers across Scotland will require to have a close monitoring system in place.

NHS Education for Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Scottish Association for Mental Health

Do you agree with the general principles of the Bill and its provisions?

SAMH welcomes moves to improve patient and service user care through better joint working between health and social care services. Improvements in quality and consistency for patients, service users and their families and carers are desirable.

We are pleased that there has been a shift in focus away from older peoples’ services to adult health and social care, although we note the wording of the policy memorandum remains more focused on this than other areas.

Legislation can only go so far to drive integration and the importance of the behavioural aspects of organisational change cannot be overstated; it will take time for mutual trust to develop. The experience of health and social care integration in recent years suggests that closer attention should be paid to this aspect in future policy.¹

The focus on effective and efficient use of resources goes without saying, given the current financial climate; to ensure best value, regulation and scrutiny is required, which is where some questions remain about how this will be achieved, and where the Bill could be strengthened.

- To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

This is a technical bill setting up the structures for better joint working, as well as some of the details of the requirements of statutory and non-statutory partners. As many of the details are not yet confirmed, and given the change in culture which will be required, it is impossible to predict the success of the Bill’s proposals.

There will be significant challenges to overcome in order to improve the joint working and consistent approach required by the Bill. Previous attempts to improve joint working have had limited success, but SAMH notes the Bill strengthens the requirements for joint working between statutory agencies, rather than just enabling cooperation.

While SAMH is supportive of the Bill’s commitment to local decision-making in allowing for the creation of different integration models, we are also concerned this is potentially problematic, both in terms of delivery and benchmarking success. SAMH previously raised concerns about whether the lead agency model would be able to truly deliver an integrated approach; while we understand that some local authorities and health boards might want to work in this way, we are concerned that one agency devolving responsibility to another may not lead to better joint working. As a social care service provider,

¹ Integrating health and social care: Where next? The Kings Fund, March 2011
we would be concerned that a health board acting as a lead agency could result in a more medical approach to care.

The meaningful involvement of patients, service users, carers, and the third sector is necessary – even fundamental – to achieve the policy objectives of the Bill. Without seeing the detail of how they will be involved, as these will be set out in future regulations, but recognising that these non-statutory agencies, patients, service users and their supporters will not have equal voting rights on committees or boards, SAMH is concerned that the modus operandi of former ‘partnerships’ could continue. Clarification about how non-statutory partners will be ‘engaged and involved’ is required.

As important will be the ‘buy-in’ by the institutions, both statutory and non-statutory. As so many social care services are delivered by the third sector, efforts must be made to ensure that they are truly involved in planning outcomes and delivery. Community planning partnerships and erstwhile CHPs did not adequately involve third sector organisations, and the lack of voting rights for non-statutory members will make it hard for this to be meaningful. Statutory partners must be required to demonstrate how patients, carers, service users, third sector and others have been involved.

- Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The rhetoric and principles within the Bill and policy memorandum are sound, and hard to argue against. We know there is political will across the Scottish Parliament for better joint working between health and social care, and for the patient or service user to be at the heart of their care provision. This Bill is an attempt to realise these goals, and that should be welcomed.

SAMH hopes that the national health and wellbeing outcomes will provide real focus and meaningful partnership working, continuing on the Christie Commission’s intentions to take a preventative approach to health and social care provision. It will be important that shared health and wellbeing outcomes are neither ‘health’ or ‘social care’ focused, but should be truly joined up and shared. SAMH believes that their focus should be on health promotion, recovery, self-management and wellbeing.

Establishing these outcomes in legislation, albeit secondary legislation, will strengthen the obligation on the health boards and local authorities. Reflecting these outcomes in single outcome agreements should join up delivery plans. However, the limitations of single outcome agreements must be acknowledged and addressed, especially if these are to be seen as a vehicle for transformational change. SAMH hopes that this Bill provides an opportunity to improve the scrutiny of how well CPPs are meeting their single outcome agreements. Historically, there has not been enough independent assessment of progress towards SOAs, and there appears to be little or no sanction for failure in this regard. Audit Scotland\(^2\) have also identified that, as local partners agree their own performance indicators in relation to SOAs,

---

\(^2\) Review of Community Health Partnerships, Audit Scotland, 2011
benchmarking local performance is not always possible. They recommended that the Scottish Government should work with NHS boards and councils to streamline and improve performance information for SOA, HEAT and other performance targets to support benchmarking.

Strategic commissioning with the full involvement of the ‘key partners’, the third and independent sectors would be a step forward. Despite the Joint Statement of 2009, and as noted by Audit Scotland\(^3\), social care commissioning has not been done well. From a scrutiny point of view, SAMH believes that this could be strengthened within the Bill to require the Care Inspectorate, Health Improvement Scotland and Audit Scotland to take on this role of ensuring partnership arrangements are working well and commissioning better outcomes. SAMH supports CCPS’s call to set this down in primary legislation rather than in regulations.

The Scottish Government has powers to reject integration plans. We hope that this retained power will ensure that the plans take into account national health and social care strategies (such as the mental health strategy, the forthcoming suicide prevention strategy etc) and that these policies are carried out systematically at a local level.

- **Please provide details of any areas in which you feel the Bill’s provisions could be strengthened**

SAMH would like to see human rights embedded within the Bill. The Convention on Economic, Social and Cultural Rights promotes the highest attainable standard of physical and mental health as a right. This should be enshrined within the legislation to promote a rights-based culture as part of the new joint working, which would require a more person-centred approach. This Bill is very technical, so the focus on the patient or service user should not be lost.

The needs of people experiencing mental ill-health extend beyond the reach of social care services. Many people who use health or social services also rely on other public services in areas such as housing, employment, transport, education and welfare. The problems that people experience are often interrelated, so SAMH would welcome an integrated approach that is holistic, so that we can better acknowledge and engage with the realities of peoples’ lives.

How will non-statutory involvement be meaningful? There is necessarily a two-tier system because of the voting rights held by statutory bodies. SAMH would like to see much more information about how the third sector and other representatives will be included and involved. In terms of the proposed arrangements for the new joint Committees, there should be a specified proportion of places should be reserved for service users and a clear statement of their duties, an acceptable selection process and the support they will receive. It will be absolutely vital that partners across all sectors are fully and appropriately involved in planning and decision making within the

\(^3\) Commissioning Social Care, Audit Scotland, 2012
new partnership arrangements. Whilst the Bill’s documents state that the NHS Chair and Local Authority Leader will ensure that appropriate stakeholders are engaged in the planning and delivery of services, it is unclear how this will actually be achieved in practice.

The issue of ‘free’ health and ‘paid for’ social care has not been addressed. As more healthcare moves into the community and services become more integrated, people who were previously treated in hospital could start receiving their care in a social care setting. If this incurred a charge, people with disabilities, who are more likely to be on a lower income or benefits, could be worse off than before, which could be subject to an equality challenge.

There needs to be much more recognition of the impact of self-directed support (SDS) in terms of delivering outcomes and strategic commissioning; and an urgent need to address potential conflicts between joint working and self-directed support. This bill is progressing through Parliament at the same time as self-directed support is being prepared for social care. Despite this, the policy memorandum barely mentions SDS and how it will operate in terms of budgeting decisions, commissioning and care delivery in the wake of health and social care integration. SAMH is concerned that there could be potential for conflicts between SDS and health and social care integration. Will care managers and service users be accountable to the integration authority/committee in terms of budget and commissioning? How will individual care plans as envisioned by SDS interact with integration locality planning?

Scrutiny (through the Care Inspectorate, Health Improvement Scotland and Audit Scotland) needs to be written into the Bill rather than merely in the policy memorandum. SAMH would be keen for the actual ‘joint working’ of public bodies and their partners to be scrutinised, as well as whether or not health and wellbeing outcomes and single outcome agreements are achieved; and whether strategic commissioning is being delivered. This will help to demonstrate whether a culture has been changed, if all partners are included and respected, and ensure service delivery is improved in an effective, resource-efficient way.

SAMH is concerned about the extent to which the financial pressures facing the NHS and local government may help or hinder integration. The impact of welfare reform on plans to improve joint working is particularly concerning. Many people with disabilities or long term ill health are being adversely affected by the changes to the benefits system. Local authorities may see even greater demands on their budgets to meet increases in homelessness, rent arrears as well as meeting the needs of people with disabilities who are assessed as being no longer eligible for certain benefits. It is likely that demand for NHS services could increase as well. The impact of increased poverty and debt is detrimental to mental and physical health, and this should to be taken into account when planning and commissioning services.

Housing is a crucial component in social care service provision – to reduce delayed discharges from hospitals or care homes to the community, there
must be adequate housing stock, both in terms of quality and quantity. Consideration should be given about how housing associations and others can be involved in strategic commissioning.

The flexible approach of different models of integration could make it harder to benchmark good practice and achievement of targets across Scotland, and in the lead agency case, could result in the medicalisation of social care provision. Effective scrutiny, governance and accountability will all be crucial to ensure that locality planning arrangements are robust.

- What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans? What effect do you anticipate integration plans will have on outcomes for those receiving services?

SAMH is responding to these questions together, because our anticipations for service delivery and the outcomes for those receiving services are based on our hopes for the policy; we still need clarification on how the Bill will be augmented by regulations, and implemented.

Poor mental health and wellbeing lies at the heart of some of the most expensive problems that Scotland faces: not only in health but also in areas such as crime, unemployment and deprivation. A more joined up approach could improve consistency and delivery of national strategies such as the mental health strategy and the various commitments on crisis services, access to psychological therapies and employability services within that policy.

If partners beyond health and social care, including patients, service users and the third sector, are fully involved in transforming health and social care provision to be truly person-centred; and there is a cultural and budgetary move towards a preventative, early-interventionist approach, we hope this could truly transform peoples’ lives.

SAMH hopes that the national health and wellbeing outcomes will take an assets-based and preventative approach to health and social care service provision. Redistribution of budgets towards health promotion services, keeping people well and active within the community, and requiring less medical intervention would be welcome. Better joint working could improve the choice of treatments available at different points of the care pathway, for mental health and other conditions, including social prescribing opportunities.

SAMH hopes that making health and social care delivery more efficient and streamlined will be reflected in the patient or service user pathway. We would like to see patient or service user referrals to social care services to be much more streamlined; there is no reason why a GP, consultant or even the person themselves cannot refer directly to services in this new approach, if health and social care bodies are to truly work better together. This could reduce pressure on the NHS, and the easier routes to support could mean that interventions take place earlier, leading to fewer people in crisis or requiring acute care.
Expanding the access points for treatment could also allow for more responsive treatment for fluctuating conditions, allowing people the confidence to ‘leave’ services, knowing they can re-join the system without long delays and bureaucracy.

If there is good strategic planning and commissioning to ensure adequate housing stock and workforce planning, delayed discharges from hospitals to care homes or community housing support should be reduced. In all aspects of health and social care, if patients, service users, carers and third sector service providers are included in a meaningful way, this should improve the commissioning of services and the care pathway. We look forward to being partners in transforming the mental health of our service users and wider Scottish society.

Scottish Association for Mental Health
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

BMA Scotland

Introduction
BMA Scotland welcomes the opportunity to provide the Health Committee with written evidence on the Public Bodies (Joint Working) (Scotland) Bill which requires NHS boards and local authorities to integrate adult health and social care services.

The British Medical Association is a registered trade union and professional association representing doctors from all branches of medicine. The BMA has a total membership of around 140,000 representing 70% of all practising doctors in the UK. In Scotland, the BMA represents around 16,000 members.

Do you agree with the general principles of the Bill and its provisions?
BMA Scotland supports the key principle of integration outlined within the Bill that the main purpose is to improve the wellbeing of recipients (S4 (1) (a)). The single biggest challenge to health and social care services both now and long-term is the increasing number of elderly people with multiple physical problems, cognitive impairment and increasingly complex care needs. BMA Scotland has consistently called for greater joint working between health and social care to address these issues, and in a recent BMA survey, when asked what needs to happen to ensure the NHS survives the next 65 years, doctors agreed with the current Government policy of greater integration between health and social care as a priority issue. The financial challenge will be considerable - healthcare spending is concentrated in the last year of life, and as people live longer, they are more likely to have more complex needs for both health and social care over extended periods. An ageing population combined with a difficult public spending environment poses a very significant challenge, and we share the concern expressed in the Scottish Government’s report on “Reshaping Care for Older People” that current arrangements are simply not sustainable.

Inevitably the proposed legislative framework for the integration of health and social care puts in place overarching parameters which do not contain specific detailed information about local implementation. The primary legislation has been drafted to require NHS boards and local authorities to integrate planning and service provision arrangements for all areas of adult health and social care. There is reference throughout the Bill that the Scottish Ministers will establish via secondary legislation the detail which must underpin the Bill, for example the functions that must, may and may not be delegated. Without sight of more specific detail at this stage it is very difficult to give specific and more helpful comment, and we suggest that the Health Committee may consider asking to have sight of the regulations and secondary legislation before Stage 2 to expedite discussion about the Bill and its implications across health and social care.
To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
The Bill is very clear in its stated policy objectives, and the broad overarching primary legislative framework requires the integration of adult health and social care services through a variety of integration models and the development of integration plans and subsequent strategic plans. This is the first crucial step towards integrating health and social care services. However in order to address this in more detail and whether the approach will achieve its policy objectives will require careful scrutiny and debate around the secondary legislation and supporting guidance.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
Integrating health and social care successfully is a huge problem that has troubled past and present administrations in Scotland, but so far none has come up with a solution to the systemic problems that exist within the health and social care sectors. BMA Scotland hopes that this legislation will establish a robust vehicle for successful integration, and its broad objectives are in line with this. There is shared desire among everyone involved in the patient journey to provide high quality, seamless care wherever that care is provided; be it in hospitals, GP surgeries or in a patient’s home. The Bill is clear in its intent to drive this initiative forward, and it is appropriate that the fundamental principle throughout is to improve the wellbeing of recipients.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
This is an ambitious and challenging approach by the Scottish Government, and there are still many barriers in place between the current systems of health and social care in terms of structures, professional territories, governance arrangements and financial management that may work against general aspirations of efficiency and clinical/care quality. To avoid the significant risk of another failed attempt at successful joint working in the face of such barriers, it is vital there is also detail in place about how this change will be achieved and sustained. In particular, careful consideration will be required of the measures that will be put in place to overcome the difficulties that have undermined previous unsuccessful attempts to achieve seamless delivery of care services within an integrated NHS and local authority structure.

In order to ensure that there is robust and transparent governance and accountability in place there must be robust external scrutiny in place. Audit Scotland’s review of CHPs in 2011 revealed significant failings in the governance of these organisations as well as a failure to achieve many of the organisational objectives. The Bill outlines how the integration authority requires either a Joint Integration Board or an Integration Monitoring Committee to be put in place depending on which model is chosen, and these will ensure the governance and oversight of health and social care services. The new integration authorities must be clinically driven and supported by management to avoid the failures of their predecessors. BMA Scotland would
welcome further involvement in the development of governance arrangements for the integration authorities and the opportunity to comment on more specific guidance on who will sit on the Joint Integration Boards/integration monitoring committees, who will choose them and the mechanism for electing these committees. At the moment, the Bill states that membership will be determined by the council and the Health Board, and we understand that membership will be defined in secondary legislation. In order to strengthen the role of clinicians in the strategic commissioning of services for adults we consider that GPs and senior secondary care doctors must be represented appropriately on all partnership arrangements, and must have the confidence of local clinicians.

The financial memorandum supporting the Bill describes, in Paragraph 62, the intention to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery activity. We would agree that there is a need to ensure closer working relationships between health boards, local authorities and the third and independent sector, but there should be clarity on the exact nature of this involvement, how representation would be achieved and perhaps more importantly how this nonstatutory sector would have influence over the resources in the statutory health and local authority structures.

There is also no clear information about how the public will formally be involved in the work of the integration boards or at locality level, and feedback on how well services both in the community and hospital are working would help develop suggestions for future improvement. Public involvement had been explicitly written into the primary legislation for Community Health Partnerships. We would want to see the current arrangements maintained and improved upon. A BMA survey showed that doctors believe collaborative cultures with shared values, good professional relationships and effective leadership are essential if integration is to get off the ground. These elements are also vital to securing what should be the key measures of success of efforts to integrate, confirmed by doctors in our survey – improved clinical outcomes and better patient experiences. This collaborative approach would also need to be sufficiently robust in order to ensure that shared services deliver what is most needed by the local population.

Due to the overarching nature of the Bill, the focus is on high level principles of integration at a macro level. We would welcome greater clarity on how the role of clinicians in the strategic commissioning of services for adults will be strengthened, particularly in the locality. Without this level of detail on how clinicians will influence service delivery there is a significant risk that previous mistakes will be replicated. In a national survey of GP opinion conducted by the BMA in 2007, the lack of influence of CHPs was highlighted as a key factor in doctors’ disengagement from this structure. Two-thirds of respondents considered the lack of effective communication between CHPs and general practice to be a barrier to effective GP engagement and more than half considered the lack of shared vision between GP practices and CHPs to be a barrier to effective GP engagement. 48.7 per cent (495 of 1016) of respondents considered the lack of financial support to allow effective
GP/practice staff engagement with CHPs to be a barrier to effective GP engagement. A subsequent report from Audit Scotland (referred to previously) highlighted the lack of engagement of GPs as a key factor in the failure of many of these organisations and unless this is explicitly addressed during the legislative process, then there is a risk that the failures will be repeated.

The Financial memorandum supporting the bill highlights the intention to delegate resources between partners to create an integrated budget (paragraph 65). However the BMA believes that it would be essential for localities to have budgetary authority if they are to genuinely influence the provision of services locally. We would therefore welcome more information on the government’s intentions as to how authority would be delegated between the Joint Integration Boards and the locality structures.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
The successful delivery of integration plans must be for the benefits of those requiring the services of health and social care. Adequate funding must be made available in line with the level of health and social care that the Scottish Government wishes to provide, as it is increasingly clear that providing care to older people will require more funding in line with demographic changes, and to keep them in their community and out of hospital requires adequate resources close to the home. Due to already excessive levels of workload there is no capacity for general practice to take on any further planned (or unplanned) work without the addition of new resources, including significant investment in infrastructure. A comprehensive assessment is needed of the likely resources required to meet the needs in both primary and secondary care of a population with a higher proportion of elderly and very elderly patients and a rising prevalence of long term conditions. Without planning and investment for both sectors Scottish Government aspirations to shift the balance of care and integrate adult health and social care may ultimately be unachievable and general practice could buckle under the strain of an impossible and unsustainable workload.

We believe that putting doctors at the heart of clinical service development is crucial, we are keen to avoid generating bureaucracy and additional costs through unnecessary organisational change. The integration of adult health and social care will require sustained workforce planning across the NHS and local authorities to ensure high quality patient care can be delivered effectively. There may be conflicting priorities if there are disagreements between local and central governments. We would welcome further information/discussion about how competing priorities would be dealt with both now and in the future.

Under Section 11 of the Bill the body corporate would have the potential power to make appointments of staff other than a chief office, and we would welcome clarification whether this is intended for the appointment of officers as it could be seen as a wide-ranging power which may be open to wider use and may confer the power to set TCS which is not in line with current arrangements for negotiated TCS. The explanatory notes accompanying the
Bill make it clear that under the harmonisation of TCS transfers will be made via TUPE rather than using a public sector exemption, however this section does allow the possibility of creating jobs which are not consistent with current arrangements.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

From the point of view of users of health and social care and their carers, the success of health and social care integration will largely be determined by the quality of care they receive from teams of health and social care professionals. Integration is not itself a goal, but must result in better outcomes for people receiving these services, with improved clinical outcomes and better patient experiences. There are significant potential benefits in the integration of health and social care, conversely there is also potential for healthcare to be adversely impacted by these changes, as there is a gap between the demand for social care for older people and the funding available. Unmet need in social care might result in increased pressure on primary and secondary health services which may come in the form of higher hospital admissions, delays in discharge from hospital and increased pressure on A&E and GP services. Audit Scotland’s recent report noted that Councils’ social care spending increased by 46% in real terms between 2002/3 to 2010/11. The number of older people in Scotland is projected to rise by 22 per cent over ten years (from 879,000 in 2010 to 1,075,000 in 2020), and by 63 per cent over 25 years (to 1,431,000 in 2035). The number of people aged 85 and over is projected to increase by 39 per cent over ten years and by 147 per cent over 25 years. These population trends will significantly increase demand for health and social care services in future.

There is a danger that restructuring introduced by the adult health and social care agenda may damage established joint working by health and social care. Considerable care must be taken to ensure that current examples of integrated health and integrated health and social care team working are maintained and extended. For example, GP practice based teams (practice and attached staff including community and district nurses) must be supported and expanded to include social care professionals to strengthen integration at the most local of levels.

**Delegation of functions**

Section 21 of the Bill sets out the delegation of functions within an integration plan, and we recognise that this will be key to the integration of health and social care. However the scope contained within S21 (2) (a) (b) and (c) is sweeping, as the person to whom the function is delegated has the same duties, rights and powers and ‘is in all respects as if the person who delegated the function’ (S21 (2) (c). While this is clearly aimed at maximising and facilitating integration across health and social care, such scope might potentially lead to difficulties from a professional perspective and we would welcome the opportunity for more detailed scrutiny through secondary legislation with any appropriate restrictions in place as necessary in order to ensure that changes are not inadvertently applied which may damage doctors ability to provide services to patients.
**Information Sharing**

Section 37 of the Bill enables health boards and local authorities to disclose information to the other for the purpose of preparing an integration plan and while we fully recognise and support this provision in terms of developing a plan, we are concerned that subsection (6) may be overly broad in its provision: “Subsections (1) to (3) apply despite any duty of confidentiality owed to any person in respect of the information by the person disclosing the information”. Confidentiality is a core ethical principle in healthcare that is too important to be overridden by general powers and BMA Scotland maintains its fundamental objection to the concept of patients' records being accessed without knowledge or express consent. The ease with which patient information can now be shared is a positive step towards improving the patient journey, however it also challenges us to come up with new ways of protecting information they have shared with us. With the growing use of electronic patient records, it is essential that we know who has looked at which records and when, so we can ensure only appropriate access.

A proper identity and access management system must be in place for staff to give proper electronic identities and access. Staff involved in the care of a patient should only have access to records of patients they are actually looking after and they should be able to see only information they require to carry out their duties for patients in their care. We would welcome more careful language used in this section or appropriate restrictions put in place via secondary legislation.

**Consultation process and Locality Planning**

The Scottish Government had previously confirmed that “a central role for professionals in the planning and commissioning process is critical to the success of putting in place integrated pathways of care that focus in particular on preventative and anticipatory intervention”. We consider that GPs and senior clinicians must be involved in how best to put in place local arrangements for planning service provision in order to effectively strengthen the role of clinicians. The Bill outlines the consultation process regarding the development of the integration plan and the strategic plan and we welcome the provision that it is specified that the local authority and Health Board must take account of any views expressed via the consultation process in the development of both the integration plan and the strategic plan (S6 (3) and S27 (6)).

We would however welcome clarification on who must be consulted for the development of these plans. In terms of the integration plan and the strategic plan, the local authority and Health Board must consult those persons appearing to the Scottish Ministers to have an interest as may be prescribed (S (2) (a)) and “such other persons as the local authority and the Health Board think fit” (S6 (2) (b)), and similar for the strategic plan (Section 27). There must be a robust system in place to guarantee the opportunity for meaningful engagement with professionals in the planning of services.

The Bill has been designed to enable and support locally-implemented integration, and there is considerable flexibility for local variation while still
retaining central direction. However, inevitably there is a considerable lack of clarity about the structure and function of locality groups as this will be locally driven. Involvement in the development and consultation on strategic planning will therefore be vital for local arrangements, and we recognise that secondary legislation will develop and specify involvement in the planning and decision-making process in the partnership arrangements. Local arrangements are crucial to the success of the integration agenda. We believe there are two primary elements that are fundamental to creating effective locality groups: locality group leadership must be representative of the doctors in the area and must be able to effect change of service provision (see attached Appendix 1, Letter to Cabinet Secretary for Health and Wellbeing, 10 April 2013). We would welcome ongoing involvement in the development of locality planning arrangements.

Terminology
Throughout the process to date reference has been made repeatedly to Health and Social Care Partnerships, however for the purposes of the Bill partnership arrangements are described as “integration authorities” which can be established using one of the four models of integration outlined in S1(4)(a)-(d). Given the step change that is intended to take place through the integration of adult health and social care, consistency of language and terminology in future is vital to ensure familiarity and a shared understanding across all sectors.

Conclusion
There must be a long-term commitment to an evidence-based approach. Both the NHS in Scotland and local government has entered a prolonged period of financial restraint and it will be a significant challenge to maintain the focus on quality and achieve concrete benefits for elderly people in such a difficult environment. Establishing new services or reshaping existing ones requires the right resources being made available at the right time.

In our view there are two fundamental areas that must be assured on a long-term basis to promote effective integration of adult health and social care:
• GPs and senior secondary care doctors must be meaningfully involved in the decision making processes of adult health and care integration
• Doctor-led teams must be central to the provision of services to users of health and social care.

At this stage the Bill has focused on organisational philosophy and broad themes. While this is key groundwork, it is important that further detail is made available to analyse what this will potentially mean for services and patients to ensure that integration will provide high quality care that is safe, effective, based on patient experience and based on clinical evidence. More explicit examples of how integration will work in practice will be needed. At present there is a lack of information about exactly how this integrated model will work in practice at a local level, and we would welcome the opportunity to continue to be involved in contributing to this work.

BMA SCOTLAND
2 August 2013

APPENDIX ONE

Letter to Cabinet Secretary for Health and Wellbeing (10 April 2013)

Dear Mr Neil

Medical Involvement in the Integration of Adult Health and Social Care
We are writing to you regarding medical involvement in adult health and social care integration.

The Scottish Government consultation was clear that professional leadership will be essential to the success of adult health and social care integration:

Health and social care services [will be] characterised by strong clinical and care professional leadership.

The BMA Scotland consultation response strongly supported this objective, which is consistent with longstanding BMA policy on clinical leadership in NHS Scotland. The purpose of this letter is to follow up and focus on key aspects of the BMA Scotland consultation response and describe in practical terms how we believe adequate clinician leadership can be ensured in the integration of adult health and social care.

In our view there are two fundamental areas that must be assured to promote effective integration of adult health and social care:

- GPs and senior secondary care doctors must be meaningfully involved in the decision making processes of adult health and care integration
- Doctor-led teams must be central to the provision of services to users of health and social care.

Clinician involvement in decision making
To promote the Government’s aim that health and social services are characterised by strong clinical leadership it is essential that doctors are involved in decision making at national and local (Health and Social Care Partnership and locality group) levels.

At a national level we strongly recommend that BMA Scotland and the wider health profession continue to be consulted and involved in the:

- Creation of nationally agreed outcomes for adult health and social care. These must be based on established evidence and should only be adopted where they are expected to effect genuine change to improve the wellbeing of older people.
- Development of governance arrangements for Health and Social Care Partnerships and HSCP Committee constitution.
- Development of reimbursement/contractual arrangements for clinician involvement in HSCP Committees and locality group management.

Generally, we believe that there must be an explicit duty to involve doctors from primary and secondary care who have current experience and expertise in health delivery and who provide services to patients that may be affected by any decision by Health and Social Care Partnerships. Unless doctors are able
to engage in the local decision making process and genuinely effect change, there is a serious risk that adult health and social care integration, and the associated operational structures, will fail to achieve meaningful change for NHS Scotland and its patients.

To ensure adequate doctor engagement there should be clear legislative requirements for HSCPs (and locality groups where applicable) to:

• Meaningfully engage and involve medical professionals in decision making.
• Produce a clear strategy for involving GPs and senior secondary care doctors in the decision making process, especially as it relates to service delivery.
• Demonstrate how constituent GP practices and relevant senior secondary care doctors are involved in setting local healthcare priorities.
• Engage doctors who actively deliver medical services, rather than relying largely on input from clinicians who predominantly work in managerial roles.
• Ensure that doctors are at the heart of the leadership within clinical fora, with support from health and social care planners.
• While HSCPs must operate within budgetary constraints, clinical priorities must be set by clinical consensus over what is best for patients within those constraints.
• Local clinical leaders must be required to engage with and achieve the general support of their colleagues.
• Establish clear and nationally consistent commitment to value senior doctor time for involvement with HSCPs. Doctors cannot be expected to carry out adult health and social care integration related work in their spare time, or in the case of GPs, at potential personal cost. The ongoing involvement of clinicians must be valued and resourced.

We have the following specific recommendations for HSCP Committees:

• GPs and senior secondary care doctors must be represented appropriately. To ensure that doctor representatives have the confidence of local clinicians Local Medical Committees/GP Subcommittee (contractor GPs) and NHS board Area Medical Committees (employed doctors) must be involved in the appointment process.
• Doctors involved in the provision of services to older persons should be represented on Committees as professional advisers. Given the medical specialties involved this may include a general practitioner, geriatrician and psychiatrist.
• There should be a minimum requirement for primary and secondary care doctor representation on Committees, as is proposed for patient and third sector representation.

There remains a considerable lack of clarity about the structure and function of locality groups as proposed by the consultation process. We believe there are two primary elements that are fundamental to creating effective locality groups: locality group leadership must be representative of the doctors in the area and must be able to effect change of service provision.

We have the following specific recommendations relating to locality groups:

• Localities should be clustered around geographically and service provision
sensible areas of GP practices. To ensure there is sufficient flexibility for local demographics and circumstances, we do not believe that the number of practices (or the numbers of patients served by practices) should be prescribed. Locality areas should be determined in consultation with GP practices and with agreement of the GP subcommittee of the Area Medical Committee.

• Locality groups must focus on and have the ability to: effect local service provision change (in primary, secondary and social care), address problems relating to service delivery, and, where necessary to accomplish change, have devolved power to direct local budgetary spend.
• The level of devolved locality group financial and operational responsibility must be sufficient to allow service provision changes to the patients covered by the locality.
• The locality group must be led by representative local doctors and care professionals involved in the provision of services to patients and supported by management.
• All GP practices in the locality must have the ability to nominate from within their practice or from practices within the locality a GP representative(s) to the locality group.
• Local senior secondary care doctors that care for patients in the locality area must be able to nominate clinician representative(s) to the locality group.
• Medical staff employed in a management role should be engaged to effect the changes and actions from the locality groups. This would empower clinician led changes and enhance the impact of clinicians in the health and social care system.

As above, for HSCP Committees, doctor involvement in locality group activity must be resourced appropriately. Locality groups should establish a number of funded sessions per week for doctor involvement and there should be consistency across all NHS board areas/locality groups.

**Clinician led teams**
From the point of view of users of health and social care and their carers the success of health and social care integration will largely be determined by the quality of care they receive from teams of health and social care professionals. There is a danger that restructuring introduced by the adult health and social care agenda fractures established joint working by health and social care. Considerable care must be taken to ensure that current examples of integrated health and integrated health and social care team working are maintained and extended. For example, GP practice based teams (practice and attached staff including community and district nurses) must be supported and expanded to include social care professionals to strengthen integration at the most local of levels.

Senior doctors provide leadership and vision of how services can be improved by bringing together teams for the benefit of patient care. The creation of co-located integrated teams of professionals must be considered in all areas where adult health and social care integration is expected to impact patient care. Doctors must be at the heart of these teams and be empowered and
supported by locality groups and HSCPs to organise team working for the benefit of patients.

We appreciate that this is an area that will be under discussion at the Bill Advisory Group; however, we would welcome the opportunity to discuss this matter with you directly if that would be helpful.
1) Do you agree with the general principles of the Bill and its provisions?
MND Scotland agrees and supports the policy ambition for integrating health and social care services to improve the quality and consistency of services for patients, carers, service users and their families; to provide seamless, joined up quality health and social care services in order to care for people in their homes or a homely setting where it is safe to do so; and to ensure resources are used effectively and efficiently to deliver services that meet the increasing number of people with longer term and often complex needs.

2) To what extent do you believe the approach being proposed in the Bill will achieve its stated policy objectives?
It appears to us that the first problem with the proposed approach achieving its objectives is the claim that it will improve consistency. The Bill provides a great deal of flexibility to health boards and local authorities in determining, for example, which of the four integration models they will use, how they will develop their integration plans, which functions will be delegated and to whom. It is hard to see how this could achieve greater consistency. It seems more likely that there will be even less consistency than there is now, with service provision varying widely across geographical areas and the inevitable postcode lottery of service provision becoming a greater problem.

Secondly, again because of this great flexibility, the degree to which integration will actually take place could potentially be very variable from area to area. If no real or meaningful integration takes place in some areas, it is possible that the Bill won’t achieve its objectives and there may be little impact on outcomes for people who use services.

From the explanatory notes, it is difficult to understand why the Scottish Government has adopted such a flexible approach, especially when it envisages that most ‘partners’ will choose the ‘integration joint board/body corporate’ model and it appears, from the evidence provided, to be the most cost effective. The potential cost of integration set out in the explanatory notes varies enormously because it depends, amongst other things, which integration model each area chooses. This leads us to question just how economically beneficial integration will end up being.

3) Please indicate which, if any, aspects of the Bill’s policy of objectives you would consider as key strengths?
We are pleased that integration plans need approval from Scottish Ministers however there needs to be clear criteria given as to what needs to be included in each plan in order for approval to be given. We would hope that this might ensure some level of consistency.

We welcome the establishment of ‘National health and wellbeing outcomes’ and the requirement for integration authorities to produce an annual performance report. We would hope that reporting will concentrate on the outcomes achieved for service users, patients and carers.
4) Please provide details of any areas in which you feel the Bill’s provisions could be strengthened?
As highlighted in response to question 2, we feel that health boards and local authorities have been allowed too much flexibility to determine how they will integrate health and social care and it is not easy to see how this flexibility will benefit our clients. More direction from the Scottish Government on integration we feel would ensure greater consistency and more consistency in service provision would make it easier to examine and compare the quality of care being provided across Scotland.

We feel that there are a number of areas within the Bill which could be strengthened through the specific inclusion and involvement of the third sector. These would include involvement in the development and signing off of development plans and membership of joint monitoring committees. In the explanatory notes, there is acknowledgement that third sector organisations provide health and social care services and a statement that through secondary legislation, integration authorities will be required to fully involve the third sector as key partners in strategic commissioning, locality planning and service delivery. If this is the case, we question why fully involving third sector partners was not included in this Bill and hope that this secondary legislation is not delayed.

The Bill could be strengthened if it incorporated greater person centred principles and reflected more on the outcomes of service users.

5) What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
With so many possibilities on how to proceed with integration open to health boards and local authorities, it is difficult to effectively anticipate how this will affect our organisation, services and clients.

Because Motor Neurone Disease, along with a number of other neurological conditions, require a high level of input from both health and social care services, often intense in nature and requiring rapid input, it would be our hope that through the integration joint boards coordination and delivery of services will be enhanced for those affect by MND. It would also be our hope that referral to our own services will be improved. We would also anticipate that staff education in MND would be facilitated through the integration boards.

As the number of those affected by MND throughout Scotland is relatively low, ~400 people, MND Scotland believe that a consistent and equitable service is needed across the country. This could be facilitated by the establishment of joint integration boards but only if they are providing the same services in each area and are structured in a way that allows patients, carers and service providers easy access.

We have a number of core services which include an MND Specialist Care Team employed by the NHS but whose costs are funded predominantly by our organisation. It is possible that none, one or more of our specialist care
team staff could have their ‘function’ delegated to a local authority or joint board. We have a concern that this could potentially create a lack of consistency to those receiving the service across Scotland.

Our Equipment Loan Service provides equipment to people with MND across Scotland such as hoists, medical beds and riser/recliner chairs while they wait on this equipment being made available from statutory services. Potentially, following integration, this service could have to liaise with an increased number of providers depending on if/who this function is delegated to.

In addition, the lack of consistency across Scotland creates problems for our campaigning work on behalf of people with MND. For example, we have recently contacted the Charging Team of each local authority asking them to outline their charging policy for personal care. If this function of the local authority was to be delegated for some areas and not others, collating this helpful information would become very difficult.

6) What effect do you anticipate integration plans will have on outcomes for those receiving services?
It is difficult to assess the impact of integration plans on those receiving services when it remains unclear exactly how, and to what degree, integration will be implemented. However, we feel it is fair to expect that there will be a considerable amount of confusion for some time for those receiving services about who is providing what service. It seems possible also that people could fall through gaps in service provision as the process of integration and the delegation of particular functions take place in each area.

In addition we concur with other charities’ concerns that there is a risk that, as we suspect has happened with NHS Continuing Care in Scotland, entitlement to free healthcare could be compromised. This would seem to be a greater risk where health boards delegate functions to local authorities. Free healthcare could be at risk of being (wrongly) charged for, or eligibility criteria put in place, as it is for social care.

MND Scotland
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Voices Of eXperience Scotland (VOX)

Do you agree with the general principles of the Bill and its provisions?
Vox believes that service users will be best served by a seamless service and that the principles of the bill and its provisions should make that easier to accomplish.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
While the general approach seems to be reasonable there is a lot of emphasis on staffing realignment and administrative arrangements and not so much emphasis on ensuring improved outcomes for the individual. In our view the approach does not sufficiently address the need for the voice of the individual service user to be heard or make provision for the advocacy support that will be vital in order to ensure that while these changes take place the individual has a strong voice in their care arrangements.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
VOX recognises that information sharing has been difficult between differing parts of the system notably health and social care but also primary and secondary care and welcomes the provisions that make that information more readily available to all appropriate individuals. However because of the stigma involved in mental health we would want involvement of individuals and/or appropriate advocacy groups to consider the method and extent of information sharing. It is good that involvement is referred to in the Policy Memorandum but as with all legislation dealing with mental health, where there is power to restrict people’s liberties, it is important that user involvement, and the advocacy to support it, is properly recognised in primary legislation.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
VOX believe that the bill should ensure advocacy provision for all in order to ensure that mental health service users get an appropriate provision of health and social care services to meet their identified needs whether receiving these services under compulsory powers or otherwise. The Self Directed Support and personalisation agenda will only work well for mental health service users and carers where high quality independent individual and collective advocacy services are able to provide support.

There is no mention either of the role that collective advocacy groups have been playing locally in all aspects of service design delivery and evaluation, or of the work done nationally by groups such as our own. It is important that collective advocacy groups continue to play their important role within the national, regional and local planning structures and this role is fully recognised in legislation and guidance.
The ‘consultation group’ proposed in section 26 must have mental health service user representation as they as a group are well experienced in terms of working across health and social care, and have been since the first “delivering for mental health” in 2005 and indeed the Framework for Mental Health Services for Scotland (1997).

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
Our membership in particular our local group members will benefit in terms of a reduction in hours spent at planning meetings, and our ability to contribute to strategic and organisational issues around design and delivery of services will be enhanced.

What effect do you anticipate integration plans will have on outcomes for those receiving services?
Our members are particularly concerned with these plans as there is the risk that some services currently provided as NHS services, free at the point of delivery, may be reclassified and realigned as social care services, and become chargeable.

This would be an extremely adverse development, against a background of great financial hardship due to welfare reform where our members are already among the hardest hit of all communities, due to the lack of understanding of their conditions in the agencies involved.

For these reasons it is absolutely imperative that the primary legislation reflects the need for individual and collective voices to be heard and support to be available to have that voice heard.

Further thoughts
The principles in the mental health act include reciprocity. We have a duty to certain vulnerable individuals in Scottish society and our duties in this legislation are to ensure that their voice is heard as health and social care come together. Members of VOX would be happy to give further evidence to the Committee in its oral evidence sessions, on any of the points covered in this submission.

Voices Of eXperience Scotland (VOX)
2 August 2013

VOX is a National Mental Health Service User Led charity funded by the Scottish Government and Comic Relief. We work in partnership with mental health and related services to ensure that service users get every opportunity to contribute positively to changes in the services that serve them and the wider society.

VOX supports individuals and service user led groups to ensure that their views are listened to. We have 345 Individual members, 12 Group Members
and 8 Associate Group members (we have a fairly strict criteria for this grouping, must be service user led and must be following equal opportunities policies etc.) This means that we act for approximately 3500 people. We are the only national mental health user organisation in Scotland.
Carers Trust in Scotland

Public Bodies (Joint Working) (Scotland) Bill

- Do you agree with the general principles of the Bill and its provisions?
  Yes. Carers Trust in Scotland welcomes the Scottish Government’s commitment to integrating health and social care services and is pleased to see legislation introduced that will make this a reality. Services on the ground need to work more effectively to achieve more positive outcomes for service users and carers, and the role of unpaid carers in ensuring better outcomes for the people they look after (and themselves) will be helped and supported by integrated resources and services. Integration should mean it will be easier for people to be involved in decisions relating to their own care, or that of those they care for, and there will be a smoother transition between health care and social care in situations such as hospital discharge, as well as better multi-agency support and management of long term conditions in community settings.

- To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
  It is recognised in *Caring Together: The Carers Strategy for Scotland 2010-2015* that ‘Carers play a crucial role in the delivery of health and social care provision in Scotland’; in order for carers to carry out this role they must have adequate support, and plans for integration must include a strong focus on effective, preventative carer support, with unpaid carers being recognised as equal partners in care provision. To achieve this, service users, carers and the wider third sector must be involved in the planning, development and delivery of services. Whilst the Bill contains a number of proposals that will go towards achieving this involvement of carers and service users, we believe that this could be strengthened.

  Particularly, the title of the Bill (and references in the accompanying documents) indicates the recognition that integrated working must include a wider range of services than simply health and social care, with an emphasis on joint working between all services that contribute to people’s wellbeing. However, the provisions in the Bill are very heavily focused on the public sector and there appears to be a limited role for local third and independent sector organisations, including those who provide health and care services and those who provide support to carers and service users. As well as the role as a provider of support and services, third sector organisations are also a key mechanism through which service users and carers can be involved and have their voices heard. The direct involvement of people who use support and services is vital to ensure that services are truly beneficial to the people who use them.

  Without a strong and effective voice for the third sector and for people who use support and services, there is a risk that the Bill could focus too narrowly on changes to processes and structure within the statutory services, rather
than improving people’s experiences of health and social care by increasing the quality and consistency of services.

- Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
  We welcome the reference to the Christie Commission report in the policy overview, recognising that services which include their service users and communities in planning and delivery are most effective, and that effective joint working requires strategic coordination that is achieved by consistency of objectives (and outcomes) between the organisations that are working together. Aligning health and social care integration within wider public service reform will hopefully ensure that the plans are successful.

  Carers Trust in Scotland also supports the emphasis on a national outcomes approach; this will provide an additional focus for the local partnerships and allow local service provision to anticipate and respond to local needs whilst also ensuring strategic consistency across Scotland. An outcomes focus also complements the objective to enable and require appropriate local responses to changing patterns of need: at an individual level, focusing on outcomes for service users will make sure they have the correct support in place at the right time, which is not constrained by issues with resources or delivery.

- Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
  A key area of concern for us is the limited role for the third sector. We are pleased to see specific mention of carers and non-commercial providers of health and social care included as groups that must be consulted at various stages of integration planning and development, including development of the national outcomes. However, as carers’ centres do not always provide formal care or contracted services, they may not always consider themselves as fitting into this category and may be excluded. More explicit inclusion of carers’ services and other support organisations who do not consider themselves to be ‘health and social care providers’ would ensure that this group is included. We agree with the Health and Social Care Alliance’s position that a further, more inclusive category is added to the list of those required to be consulted on national outcome development: ‘(k) third sector organisations contributing to health and wellbeing.’ Specific organisations for inclusion, such as carers’ centres, must be specified at guidance and regulatory stage to ensure they are not overlooked.

  Another area of concern for us at the consultation stage was the lack of voting rights for the third sector, or for service users and carers, on integration partnerships. These concerns have not been addressed in the Bill, despite some alterations to the structure of integration joint boards, and we remain concerned that the third sector may not have a role in signing off the local strategic plans. The third sector’s involvement in local Change Plans has been a significant enabler of the cultural change evidenced in the Reshaping Care for Older People (RCOP) Change Fund process, and given the repeated references to the positives of the RCOP process in the Bill and consultation so far, we would have expected the good practice to be developed further in
this legislation. We are aware of the risks that the Scottish Government have identified regarding third sector voting rights, but there is a concern that overlooking third sector involvement will result in a backwards step if Health and Social Care Partnerships are only accountable to local authorities and health boards.

Whilst the integration planning principles are welcomed, we believe there is some room for improvement as they are currently open to interpretation. Particularly, it is not clear if carers and people who don’t yet use services fit into the principles, as they may not be considered under (i) as a ‘recipient’ of services.

We would also welcome further clarity about how service users and carers will be informed of the changing structures. We agree with the points made by the Health and Social Care Alliance regarding the need to clarify what will happen to Public Participation Forums (PPFs) in an integrated landscape, as these forums have been useful to engage more widely with local communities and support public involvement in planning and development of services.

- What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
  The carers’ centres that form part of Carers Trust’s Network provide vital support, advice, information and services to carers at all stages of the caring journey. This legislation should strengthen their position as a community-based health and care resource, providing support to carers that enables them to continue their caring role in partnership with statutory and third sector health and care services. Some carers’ centres provide services on behalf of the local authority, such as carers’ assessments; this is one of the reasons why we believe a greater role for carers’ centres in integration planning structures (as part of the wider involvement of the third sector) is necessary. Situations such as hospital discharge should be improved in an integrated working environment, as carers report that lack of communication between health and social care services, or lack of involving the carer as an equal partner in care when trying to plan discharge or admission to hospital is the main cause of difficulties.

- What effect do you anticipate integration plans will have on outcomes for those receiving services?
  Carers Trust in Scotland hopes that plans for integrated services will lead to an improvement in developing outcomes for individual service users and their carers, as greater communication between services is one of the key things which will lead to better and more joined-up care and services, allowing people to live more healthily and independently and receive care and support in a way that suits them. However, to achieve this properly, the integration process is wider than just statutory health and social care. At the very minimum education, housing and wider third sector involvement will be necessary to make sure that all partners that deliver services and that are involved in developing outcomes for individuals are fully integrated.
Carers Trust
2 August

Carers Trust in Scotland (formerly the Princess Royal Trust for Carers) works to improve support, services and recognition for anyone living with the challenges of caring, unpaid, for a family member or friend who is ill, frail, disabled or has mental health or addiction problems. With our Network Partners, we aim to ensure that information, advice and practical support are available to all carers across the UK.
Barnardo's Scotland supports the general principles of the proposed Bill. We support the integration agenda and putting people at the centre of health and social care planning. In those areas that have effectively implemented GIRFEC, putting children at the centre of service design and delivery, this has proven to be very successful and is something we would like to see replicated across Scotland in health and social care settings.

Barnardo's Scotland delivers a number of children’s services in 28 local authority areas across Scotland, many of which are fully or partially funded by local authorities. These services will be directly affected by those integration bodies that choose to take on children’s services.

We currently deliver services in Highland and have direct experience of the integration work that has been carried out there by NHS Highland and the local authority. Highland has followed a delegation between partners approach with the local authority taking on responsibility for children’s services.

Since the changes in Highland we have felt that Barnardo’s Scotland has become more involved in key decisions regarding service delivery in the area. We have had a seat at the table when discussing commissioning and budgets and have been able to negotiate around the needs of the service users rather than what money is available. Barnardo’s Scotland is well represented at key local decision-making bodies, including at community planning level. The overall impression of our staff working with the council, since these changes, is that they feel they are listened to and that the opinion of the organisation and the wider third sector is taken on board for key decisions.

Barnardo’s Scotland would call on other areas to look at the work in NHS Highland as an example of good practice. We would also like to see more assessment of the lessons learnt from the Northern Ireland model of regional health and social boards.

**General Comments**

We believe that there should be a children rights based approach to the Bill and the general principles of the Bill should be amended to reflect this. The Children and Young People Bill and its commitment to wellbeing, the SHANARRI indicators, children’s rights and the United Nations Convention on the Rights of the Child (UNCRC) should be recognised in the Public Bodies Bill.

A major concern of Barnardo’s Scotland is that the intent behind the proposals is still far too adult focused. It is important for policy-makers to recognise and understand that these proposals will also affect children’s services. We are
concerned that children’s services will not be recognised as an equal priority and suffer as a result.

It is also far from clear to us where the responsibility for children’s services will lie in those areas where integration authorities do not choose to take on responsibility for them. This will create significant uncertainty.

The legislation and accompanying documents have not made it clear what the relationship will be between the proposed integration authorities and Community Planning Partnerships (CPPs). We are concerned that if this is not laid out clearly either on the face of the Bill or in subsequent guidelines then there will be blurred lines of responsibility and accountability. We are concerned that this may lead to confusion and ultimately affect service delivery.

We are pleased to see that the Scottish Government has indicated that their ambitions for integration are about improving health and social care, however, we are concerned that some areas may see integration purely as an opportunity to save money, particularly in this time of financial pressure. We believe that such an approach would undermine new integration models of working and result in poorer services.

We have concerns that there will still be consistency issues with regards to the delivery of services and care and that the integration agenda may not solve this. In our experience there were at times consistency issues with Community Health Partnerships, the forerunners to these proposals. It is clear that areas will integrate in different ways and different paces. There will also be a need for a substantial cultural shift in some areas where silo working has long been entrenched. The third sector already helps bridge the gap between health and social care across Scotland and there are lots of examples of good practice. It will be crucial to ensure that the third sector plays a critical role in the integration process and this should be recognised on the face of the Bill.

The legislation focuses almost entirely on the two main statutory partners in this process, the NHS Board and the local authority. We believe that more should be done to recognise and embed the role of the third sector in the integration process, particularly with regards to service, design and delivery.

There is little in the Bill or the policy memorandum that relates it to the proposals in the Children and Young People Bill, which is currently going through Parliament. With the Public Bodies Bill having an impact on children’s services it will be crucial to explain how the two proposed Bills will work together. The Scottish Government needs to explain further how these two pieces of legislation will interact.

Barnardo's Scotland recently supported the Social Care (Self Directed Support) (Scotland) Act and believe that the new self-directed support regime it will create will give many families and children much more control over their care packages. We are not clear about how the Public Bodies Bill will interact with self directed support. Will those eligible for self-directed support be
entitled to direct any health and social care services they need through the integration authority? There may also be issues relating to shared budgets between local authorities and NHS Boards, if a significant element of the social care budget has to be earmarked for those managing their own budgets or choosing to place their budget with another provider, this might mean healthcare has to provide a bigger share of the integrated budgets.

The proposals set out in the Public Bodies Bill must not be seen purely as a way for local authorities and NHS Boards to save money. In the context of increased budgetary pressure, evidence of return on investment is crucial if the integration of health and social care is to be a success. Measurement and evaluation of integrated health and social care should be based around outcomes for patients/service users and not process or inputs such as hospital admissions.

The Scottish Government needs to ensure there is adequate transition money to allow for integration of health and social care.

The move towards integration, which was set out in the Christie Commission, must also see a continued commitment to preventative spending and preventative services, which is also at the heart of the Christie Commission.

Specific proposals within the Bill

Barnardo's Scotland has a number of concerns about specific elements of the Bill, which we would like to see addressed by the Scottish Parliament as it progresses.

It is still far from clear to us how children’s services will work in the vast majority of integration set-ups and how this will impact on commissioning and procurement practices in these areas. From our understanding we believe that many local authorities and NHS Board’s plan to include children’s services in the work of their integration bodies. This makes these proposals very pertinent to Barnardo's Scotland and other organisations and it will be crucial that the legislation and subsequent guidelines ensure that children’s services are at the very heart of these proposals and not an add-on at the expense of adult services.

The legislation states that each area must prepare a strategic plan that explains how the delegated functions will be delivered and how they will meet national health and wellbeing outcomes. It is not clear from the face of the Bill/Policy Memorandum how and if the third sector will be involved in preparing these plans. It would appear under section 6 of the Bill that there is scope for third sector consultation and a requirement to consider this, but we are worried that this is not sufficient. We believe that the third sector should be consulted at the earliest possible point on what model of integration is considered by each NHS Board and local authority.

Barnardo's Scotland has a number of concerns regarding how the proposed national health and social care outcomes, set out in Section 5 of the Bill, will
relate to the outcomes for Community Planning Partnerships (CPPs) and Single Outcome Agreements (SOAs). This relationship will be particularly important to understand for those integration areas that choose to take responsibility for children’s services.

We are very supportive of strategic commissioning and the requirement of each integration authority under section 23 to prepare a strategic plan. We believe that decisions about commissioning services must be informed by a full analysis of the ability of different providers (public, private and voluntary) to meet the individual needs of the child/person and to achieve good outcomes most cost effectively. In our experience, commissioners rarely approach service users, including Barnardo’s Scotland, before a tender opportunity is published. We have found that a collaborative approach to service design, when it happens, can be a very effective means of improving service quality. We believe that strategic commissioning needs to be at the heart of the integration agenda and we support the proposals set out in the Bill.

Children have a right to participate in decisions made about their care. This must go beyond a simple tick box approach. Co-production must be at the heart of this Bill and its implementation. Integration authorities that take on the responsibility for children’s services must follow the GIRFEC principles and embed a co-production approach to the planning and delivery of individual services for children. Such a co-production approach should also explore how the skills and knowledge of relevant third sector organisations can also make the most effective contribution, not just as delivery agents but also as full participants in planning and development processes.

Barnardo's Scotland
2 August 2013
Leonard Cheshire Disability (LCD) is the UK’s leading pan-disability charity. Founded in 1948 in reaction to the lack of care and support available for disabled people, today we provide a wide range of services, including social care and employment support as well as working to improve the rights of disabled people around the world. Campaigning is at the heart of what we do and our policy and campaigns team works with disabled people across the UK to lobby for positive change.

Introduction

Leonard Cheshire Disability welcomes this opportunity to provide input at Stage 1 of the Scottish Government’s Public Bodies (Joint Working) (Scotland) Bill, which addresses plans to integrate aspects of health and social care. We are particularly interested in the impact that these reforms could have on disabled people living in Scotland.

We support around 450 people with disabilities across Scotland – 60% with a physical/sensory disability, 40% with learning disabilities. They are supported by around 800 staff and volunteers across Scotland and our total contract value across Scotland is just over £13m.

Our Scottish services are broadly made up of:

- Support at home 30%
- Supported living services 25%
- Day services 24%
- Residential 21%

Do you agree with the general principles of the Bill and its provisions?

We agree that there is potential, through the integration of services, to improve the design and delivery of care and support for individuals, and see that their health and care needs can be met as seamlessly as possible. We also welcome the principles contained within Section 25 of the Bill stating that services should be provided in a way that is integrated from the point of view of recipients and that takes account of the particular needs of different people. However, we share the concern of some partner organisations, such as the Coalition of Care and Support Providers, over the omission or quality of care and support in the principles of the Bill.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

While the Bill offers an opportunity to improve the way that health and social care providers work together, we believe that an emphasis on the quality of care and support is missing from the Bill and that an apparent lack of involvement from individuals in the design and delivery of their care could present a missed opportunity. We believe that there is also a lack of clarity
about how the Bill will work in relation to Self-Directed Support, and that clarity is required on this matter.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

- The intention to develop National Outcomes is a strength of the Bill as it stands. We hope that these will be used to ensure that there is a consistency across Scotland in the development of integration and the delivery of health and social care services. We hope that the Scottish Government and the Scottish Parliament will hold the joint boards to the National Standards and that a report and review mechanism will be developed to ensure that Standards are being met.

- We welcome the principle that services “should be planned and delivered seamlessly from the perspective of the patient, service user or carer, and that systems for managing services should actively support such seamlessness,” as outlined in the Policy Memorandum accompanying the publication of the Bill.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

- While we welcome the principles of the Bill as outlined in Section 25 of the Bill and are glad that the Bill envisages services that are integrated from the point of view of recipients, we believe that person-centred planning is vital if integration is to meet the needs of people in a way that allows them to live life their way. Additionally, we urge committee members to consider the need for advocacy in the design and delivery of care and support. Primary research carried out by Leonard Cheshire Disability last year found that people with learning disabilities often felt misunderstood or not listened to when accessing services while, in some cases, people’s social care needs were only met when they were visited by chance in hospital by members of our support staff. We believe that a person-centred principle within the Bill, as well as a requirement for advocacy where this is needed or preferred could deliver better quality care and support that meets the individual’s needs.

- Section 5 of the Bill outlines groups that Scottish Ministers must consult in making regulations that prescribe outcomes in relation to health and wellbeing, and that these include users of healthcare and users of social care as well as their families and carers. However, there appears to be no firm requirement that in jointly consulting on the integration plan, the local authority and the Health Board must also consult these groups. While Section 5 of the Bill addresses this to an extent and requires that integration, “is planned and led locally in a way that is engaged with the community and local professionals”, we believe that there should be a firm requirement in the regulations to require consultation with disabled people, their families and carers and ensure that they play a meaningful role in the consultation process. We also feel that the Bill should contain a stronger role for the third sector in the planning and delivery of care.
Concerns have previously been raised about a lack of a values-based approach to the integration of health and social care. The emphasis of the bill is technical and primarily concerned with governance and accountability and budgets and resourcing. While these are important aspects of integration, we believe that there is scope for the Bill to explicitly place the values of human rights, dignity and equality at the heart of integration. We hope that the guidance and regulations following on from the Bill will address this issue.

What effect do you anticipate integration plans will have on outcomes for those receiving services?
We believe that the attempt to join up health and social care services is a positive step. However, the focus on older people in the policy memorandum is concerning. Services for one group may not necessarily be appropriate for other groups and we hope that this will be addressed during the scrutiny of the Bill.

Leonard Cheshire Disability
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Quarriers

Quarriers is a major Scottish charity providing practical care and support every day to thousands of people. Through more than 120 services for Adult Disability, Children and Families, Epilepsy and Young Adults in Scotland and a growing number of service in parts of England, we challenge inequality of opportunity and choice, to bring about positive change in people’s lives.

Quarriers fully support the evidence submitted by the Health and Social Care ALLIANCE Scotland on this Bill.

Consultation Questions

Do you agree with the general principals of the Bill and its provisions?
Quarriers supports the Scottish Government’s aim to integrate health and social care to improve outcomes. Quarriers believes that integrated and high quality support provided in partnership with health and social care will lead to an improved life and healthier outcomes.

Quarriers also supports the comments from the ALLIANCE that the provisions in the bill may not go far enough to achieve the transformational change advocated in the Christie Commissions report on the future of public services.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
Quarriers believe that the Bill has the potential to improve outcomes for people using health and social care services across Scotland, but is concerned that the effectiveness of this may differ across Scotland with some health boards and local authorities working together more effectively.

Quarriers would also support calls made by the ALLIANCE that the involvement of service users, unpaid carers and the third sector are key to making integration a success.

Quarriers believe that the third sector has a key role to play to ensure the aims of the Bill are a success and would like to ensure that the third sector is a key partner working with health and social care to reshape services. Quarriers is a major provider of support and services for both Health Boards and Local Authorities across Scotland.

Quarriers would also like to see this Bill being used as an effective tool for people who use the support services to be more involved in the developing of services and support and would highlight that this is already being done effectively in some local authorities across Scotland.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
Quarriers would support calls for a stronger voice for people using health and social care support and services and would like to ensure that the third sector is involved in developing integration plans to ensure that the voices of the people using support services is added.
The role of the third sector must be clearly defined in the process as an equal partner in the process. The role of the third sector within current CHPs and CHCPs is inconsistent at best and this situation has shown little change in the start of the integration process. Quarriers are concerned that the level of third sector and individual's involvement with differs drastically between authorities. Quarriers supports the position of the ALLIANCE that

The third sector and people who use support/services should be included within membership of Integration Boards at section 12 and strategic plan consultation groups at section 26 of the Bill. Quarriers would also advocate a set of human rights based principles in the Bill, or amendments to the existing principles so that the Bill is focussed on achieving outcomes, rather than a needs-based approach and co-production/asset-based approaches rather than a professional/provider-led agenda. In their content and language the principles reflect the traditional ‘deficit/needs’ based paradigm with professionals framed as holding the balance of expertise and power. This seems at odds with the Christie agenda and wider drives for personalisation, person-centred care and the desire to ‘shift the balance of power’. "We must ensure that when budgets are brought together that it is always the needs of people supported that is key and not a budget reduction exercise that some areas may see it as.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans? Quarriers believe that the Bill could significantly strengthen the working relationship between third sector organisations and statutory services and this will lead to improved services and planning across Scotland.

What effect do you anticipate integration plans will have on outcomes for those receiving services? Quarriers believe the Bill can be an effective way of improving services and support for people across Scotland, this will only be achieved if the people receiving support and services across Scotland are active partners in the developing of health and social care across Scotland.

Quarriers

Public Bodies (Joint Working) (Scotland) Bill

ENABLE Scotland

Introduction and Summary: ENABLE Scotland welcomes the opportunity to submit this written evidence paper to inform the Health and Sport Committee’s stage 1 scrutiny of the Public Bodies (Joint Working) Scotland Bill (the ‘Bill’). Our key comments/recommendations are summarised below:

a. This Bill is ultimately intended to improve outcomes for people who use services or support. By focusing on Public Bodies and not engagement of individuals, this message is lost in the narrative of the Bill. It could be more aspirational in this regard.

b. Links to other current and proposed policy and legislative frameworks are not clear, and risk developing a muddled system for individuals and organisations alike.

c. Further clarity in strong Guidance supported by a wider change management programme will be required to deliver the transformational change as recommended by the Christie Commission. This Bill is just the starting point.

d. Role of the third sector, whether as commissioned service providers, providers of services and peer support delivered via charitable income, or as bodies representing the views and needs of groups of citizens, needs further consideration and clarity in terms of service planning, delivery, strategic commissioning and monitoring.

e. The focus on older people in the Policy Memorandum may present a risk that specialist services for other groups, such as people with learning disabilities and their carers, are deprioritised, at least in the first round of locality planning.

f. The focus solely on ‘consultation’ in the narrative of the Bill is wrong (s.6); we believe that co-production and engagement are separate, but complementary, principles which should be embedded in both the planning and delivery principles on the face of the Bill, and the National Outcomes to be defined by Scottish Ministers.

g. The language used to describe people who use services and support as ‘recipients’ throughout the Bill perpetuates a passive culture; we would encourage the Committee to debate this issue and take advice on alternative wording. This reflects the wider impact of the Bill in bringing the medical and social models of disability, and therefore models of support, under the same legislative framework.

h. The planning and delivery principles proposed in s.4 of the Bill should be extended to include ‘Deliver the best quality support and services for individuals’
i. More clarity is required on the impact of bringing the NHS system of services free at the point of use and delivered directly by public bodies and a social care system that charges individuals for services which are delivered by a range of providers according to market principles; there is insufficient information about the impact of this on either individuals or providers of services in the Bill or the Policy Memorandum to inform constructive comment at Stage 1.

j. As a result, current reading of the Bill leaves ambiguity for third and private sector service provider organisations operating in the social care market about the potential for a local integrated budget to purchase health services from these sectors also.

k. The change is the name of the Bill raises questions – is the intention that the scope can be widened to services outwith health and social care?

Consultation Questions

1. Do you agree with the general principles of the Bill and its provisions?
   1.1 Our vision is a society where people who have learning disabilities and their carers have the same life chances as other people. We believe in a society that is free from discrimination and values all of our citizens equally. We believe this vision is shared by public sector bodies and that this ethos could be better embedded into the general principles of the Bill to support greater transparency about achievement of quality outcomes and greater partnership between individuals, families and provider organisations across all sectors.

   1.2 As introduced at Stage 1, we believe that the Bill’s principles (Part 1, s.4) focus too heavily on needs, as opposed to actively recognising the assets that people and communities bring; focuses too much on retrospective consultation with people on plans as opposed to promoting the co-production of locality plans in a process which actively engages with people and their representatives; and does not reflect the importance of designing support and services which deliver high quality outcomes for people in terms of helping them to live independently, achieve their aspirations and live well, regardless of their age.

   1.3 ENABLE Scotland is in favour of the greater integration of health and social care with the clear purpose of achieving better outcomes for individuals, families and communities. Of equal importance, we believe that the active involvement of individuals, families and communities is critical in designing the support and services which will deliver this. The Bill in its current format is too implicit with this aim; and we would encourage the Committee to consider how better to promote the active engagement of individuals in shaping support and services, not just be consulted, and to ensure that this results in the delivery of high quality support and services.

   1.4 It is vital that people with learning disabilities and their families are at the heart of decision making about the services and support in their lives. This was central to the ethos of “The Same As You?” (2000), the Scottish
Government’s seminal policy initiative on learning disability, and is the cornerstone of the Social Care (Self Directed Support) Act 2013, due to be enacted in April 2014.

1.5 The recent updated learning disability policy, “The Keys to Life” (2013) has highlighted that people with learning disabilities are more likely to experience poor health due to poverty, inadequate housing, lack of employment, social isolation and discrimination. It stressed the importance of taking a human-rights-based approach and includes recommendations for reorienting strategic commissioning towards outcomes and that joint commissioning plans need to take account of the needs of people with learning disabilities of all ages.

1.6 Consequently, while we welcome the principles in the Bill, we believe that these do not go far enough in reflecting human rights principles nor do they align with the values and principles of care and support recently outlined in the Draft Statutory Guidance on Care and Support that accompanies the Self-directed Support (Scotland) Act.

1.7 We also feel that people with learning disabilities are a group whom the policy memorandum could usefully have specified.

1.8 The language used to describe people who use services and support as ‘recipients’ throughout the Bill perpetuates a passive culture which runs counter to the principles of co-production; we would encourage the Committee to debate this issue and take advice on alternative wording.

1.9 Finally, we make a specific suggestion that Section 4 should include a principle of ensuring that the service provided also ‘deliver quality outcomes for persons to whom the services are provided’.

1.10 A logical extension of this suggestion is that the National Outcomes to be prescribed by Scottish Ministers under Section 5 should include a focus on participation or co-production, and quality.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

2.1 The Bill focuses on structural and technical issues. Though it is important to get this right, especially in the early stages of integration, we are concerned that there is a lack of focus on the aspirational aims of integration. Cultural change is required to deliver on the stated policy objectives of improved quality, seamless community-based services, and effective use of resources – but there is little indication in the Bill of how this will be achieved.

2.2 ENABLE Scotland is less concerned about functions, structures and processes than we are about public services meeting the needs of people who have learning disabilities and their carers. It is important that the Bill does not simply focus on the technical arrangements required during the initial transitional phase but embeds upfront the key principles of user involvement in the shaping and delivery of services and partnership working across all
sectors including individuals, carers and providers.

2.3 Voluntary organisations play a significant role both in commissioned service delivery, community support, and in supporting individuals and families, through collective advocacy, to make their views known. However, this wider role of the voluntary sector is not acknowledged in the Bill. The third sector should be a much stronger partner in the integration process.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

3.1 We consider the general principles of the stated policy objective of the Bill itself as its key strength, but would like to see this embedded at the start of the Bill to promote the principles at the heart of the legislation.

3.2 We are pleased at the new requirement for health bodies and local authorities to work together and engage in joint commissioning and delivery of support. Our members have long expressed frustration at the lack of joined-up work between health and social care staff, and this new duty has the potential to drive real and positive change.

3.3 We welcome the focus on national outcomes as the driver for public bodies integration plans – although we feel that outcomes on participation and on quality will be required to achieve the policy objectives.

3.4 Joint Strategic Planning and commissioning also has the potential to really lead to effective local services and support which delivery high-quality integrated person-centred services. However, we believe that requirements for authorities to involve non-statutory partners needs to be strengthened further to support the effectiveness of the planning, delivery, and monitoring process.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

4.1 Objectives: We have some concerns about the wording of the stated objective and the description of people as “patients, carers, service users and their families”. There’s a sense that ‘patients and carers’ belong to health services and ‘service users and their families’ belong to local authorities. We would prefer a more integrated description that simply reflects that the objective is to “improve the quality and consistency of services for individuals, families and carers.”

4.2 Principles: Section 5 and 25: The principles need strengthening particularly in relation to engagement and participation. These also need supported by robust quality assurance and monitoring to ensure these become embedded in practice. We also believe there should be a clearer distinction between principles of planning and principles of delivery.

4.3 Outcomes: It is very important that the delivery of integrated health and social care services is driven by jointly agreed outcomes for which
partnerships will be jointly accountable. People who have learning disabilities and their parents and carers want to receive the best service possible from health and social care services – they are less interested in the structure by which it is provided. Reporting and scrutiny should be robustly applied, and there should be clear consequences for health and social care partnerships where health and social care outcomes are not being achieved.

4.4 Strategic planning and consultation: (ss 23-30): There needs to be a much stronger consultation and partnership process with the 3rd sector and a clearer process for user engagement. It may be helpful to require integration boards to publish a separate Consultation Strategy and to monitor how it is used.

The Bill's proposals need to more strongly reflect the move towards co-production, and for people to become equal partners alongside service providers. People who use services and unpaid carers can play an important role, alongside professionals, in planning and commissioning. People who use services and carers representatives must have the opportunity to influence decision making – including the opportunity to vote on those decisions.

4.5 Role of the third sector: The third sector also has an important role to play in driving such a transformational change and should be an equal, strategic partner. We believe that they should have a role in the approval of the strategic plan (s. 28) including voting rights. To ensure meaningful participation and an equal role for the sector, it may be helpful if the Bill created a new public duty to facilitate the capacity-building of third sector organisations to participate meaningfully in the planning process.

4.6 Revision and review (ss. 34-26): We are concerned that there is no requirement to consult before producing a revised integration plan. There could be merit in a role for the Consultation Group in approving any changes and in deciding if wider consultation is needed.

4.7 Links with other government policy: There needs to be better links with other key areas of government policy. For example, a clearer fit with the self-directed support agenda is required to ensure that integration and self-directed support are progressed together. The recent consultation on a draft Community Empowerment and Renewal Bill envisaged a strong partnership approach and communities taking responsibility for the delivery of some local services or challenging poor service delivery by public bodies.

4.8 Complaints routes: There is no mention of complaints processes and the need to integrate these or provide a clear route for complaints that ensures people can raise any concerns with the relevant bodies.

4.9 Eligibility criteria and charging: Further clarity is needed on how eligibility criteria and charging policies will be tackled in integrated provision. Healthcare is universal and free at point of contact. Social care is subject to eligibility and contributory charges. These issues are not addressed in the Bill but will pose considerable challenges and are already a concern for people
with learning disabilities and families.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

5.1 It is very difficult to say at the moment. ENABLE Scotland delivers services and/or has membership groups in 29 local authority areas and it will be helpful in future if health board areas and local authority areas are coterminous. However, our experience is that different areas approach commissioning, service delivery and user participation differently and this is unlikely to change.

5.2 We anticipate that there will be more opportunities to engage with partners across the statutory, and indeed voluntary sectors, at local level to engage in the locality planning processes. We believe that there is a need for the Scottish Government to a) consider developing guidance for the Voluntary Sector on engaging with the planning and delivery mechanisms proposed in the Bill; and b) for the voluntary sector to consider further how best to organise itself to effectively engage in this process.

5.3 ENABLE Scotland is very keen for the scrutiny of this Bill to generate debate around its impact on bringing the NHS system of services free at the point of use and delivered directly by public bodies and a social care system that charges individuals for services which are delivered by a range of providers according to market principles; there is insufficient information about the impact of this on either individuals or providers of services in the Bill or the Policy Memorandum to inform constructive comment at Stage 1.

5.4 As a result, current reading of the Bill leaves ambiguity for third and private sector service provider organisations operating in the social care market about the potential for a local integrated budget to purchase health services from these sectors also.

5.5 We would encourage the Committee to consider this important issue in its Stage 1 scrutiny.

6. What effect do you anticipate integration plans will have on outcomes for those receiving services?

6.1 We believe that it is more likely that outcomes for people with learning disabilities and their families will be positive if:

- people have choice and control over the design and delivery of their services – determining the outcomes they want to achieve and being supported to do so;
- there is greater recognition of the role of early intervention and preventative services – recognising that these reduce pressure on more specialist and more expensive services, reducing the demand for more costly services;
- individuals, their families, and providers organisations are seen as equal partners in the planning and delivery of care and support alongside local authorities and health services.
The Bill has the potential to deliver this but needs more focus on principles of participation and quality supported by national outcomes which focus on the same.

ENABLE Scotland
2 August 2013
The National Pharmacy Association (NPA) is the largest UK trade body of independent community pharmacy owners. The vast majority of Scottish independent pharmacies are voluntary members of the NPA. The Association provides its members with professional and commercial support as well as representing the interests of community pharmacy in dialogue with the public, NHS, Government and other pharmacy stakeholders.

Community pharmacy owners, like general practitioners, are independent contractors of NHSScotland

The National Pharmacy Association welcomes the opportunity to respond to the following questions:

**Do you agree with the general principles of the Bill and its provisions?**

The National Pharmacy Association (NPA) agrees with the principles of integrating Social Care and Adult Health. To be effective this process will require new ways of working across organisations and disciplines. For it to be cost effective contracts will need to be aligned across contractor groups to avoid duplication of payment and promote integrated service provision in the interests of improved patient care. There needs to be clear accountability of the Public Bodies involved, including NHS and Social Care agencies and independent contractors. Our understanding is that this Bill sets the initial statutory climate and detailed further guidance, consultation and asset based planning will be required to implement the integration of social care and adult health to ensure resources are used effectively and efficiently to improve quality and consistency of patient centred care.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

The NPA believes achieving the stated policy objectives is reliant on:

- The quality and measurability of the National Outcomes for Social Care and Adult Health. The outcomes must encompass measurable social and health outcomes from a collective patient perspective and include regular audit and review.
- The facilitation of effective inter-agency joint working between Health and Social Care professionals including independent contractors. This requires shared organisational understanding, common language and communication channels.
- Integration of Joint Board and Locality Planning Groups having the expertise and experience of patient care in the entirety of social and health settings including understanding of all professional disciplines and the contractual terms of all health and social care professionals.

**Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths**

The key strengths of the policy objectives we believe to be:
• The focus on anticipation and prevention of need and effective use of resources.
• The development of a strategic plan for all agencies and that widespread consultation amongst professionals will be taken integral to their implementation.
• Locality planning will be focussed on the needs of the local population.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

• The Bill discusses wide professional consultation, specifically mentioning General Practitioners, it should be a requirement that the overall planning committees include the expertise of all health and social care professions, and the inclusion of all relevant professions in local planning, rather than just by consultation.
• There is lack of clarity on how developed service provision would be signed off and how consultation would be evaluated.
• There is lack of clarity on how budgets will be governed and what will be unsuitable for integration.
• There is a lack of mention of responsibilities of the service provider, user and Third sector involvement in service development in the Bill.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
The NPA believes community pharmacy is ideally placed at the interface of social care and health services to be vital in the achievement of the objectives of this Bill.

Medicines are the most frequently used health care intervention and pharmacists are the health care professionals who are experts in medicines.

Throughout Scotland a network of over 1200 pharmacies provide essential and much valued services in the heart of communities, including in rural communities, urban deprived areas and the larger metropolitan centres. Community pharmacies are instantly recognisable to patients, very accessible, open longer hours than other NHS sites and have confidential, suitably equipped consultation rooms. Community pharmacy owners have invested in their premises and staff to provide facilities suitable for the safe and effective supply of medicines and advice. Community pharmacists are usually available without an appointment, are frequently the first point of call for those seeking advice and with their staff see a wide spread of the population including those who are collecting prescriptions, and those buying over the counter remedies and seeking support for self care. They see people when they are well in addition to when they are in poor health. Pharmacists being the most accessible healthcare professionals with expert clinical skills and public health service experience are well placed to make opportunistic healthcare and potentially social care interventions, such as offering brief advice on topics such as alcohol use. Pharmacists provide patients and their carer’s access to health information to assist in the management of
conditions. This provision of information could be extended to provide suitable social care information.

Community pharmacists and pharmacy premises are regulated by the General Pharmaceutical Council, and community pharmacy owners are bound by the NHS terms and conditions of being an independent NHS contractor. Community pharmacy staff are part of the NHSScotland team of Primary Care health professionals and have excellent relationships with patients, carers, other local professionals and the local communities in general.

Pharmacies are the healthcare site that has the nearest match to the distribution of deprivation with more than double the numbers of pharmacies in the most deprived areas.

Community pharmacy support often means that patients are able to stay in their own homes for longer or avoid hospital readmission. The current Pharmacy Minor Ailment, Public Health and Unscheduled care services ease the burden on other Primary care services. The Chronic Medication Service provides pharmaceutical care to those with long term conditions including those patients most at risk of hospital admission. This service supports people to get the most benefit from their medicines.

Pharmacies sit where health and social care meet, supporting the frail, disabled or housebound, and carers with the administration of medicines. This frequent contact means pharmacy staff can be the first to notice when things are amiss; this informal monitoring can be transformed into a formal role when linked to other health and social care providers. For example, shared care systems for substance misusers link the pharmacy, key worker, patient and prescriber to the benefit of patient care.

Pharmacy services could be extended to include joint working with social care, or be developed to add further anticipatory care services in order to build capacity for other primary care colleagues to take on integrated services. An example of joint working could be the pharmacy led training of social carers in medicine adherence. Extension of the Pharmacy Public Health Services to include oral contraceptive supply or NHSScotland flu vaccination could build capacity in Primary Care.

Community pharmacy services impact on both patient health and social care as with the supply of compliance aids for use by carers supporting patients paid for out of the Health budget when the benefit is felt by social care. Community Pharmacy contractors drive efficiencies for NHSScotland through Margin Sharing schemes providing cost effective medicine supply.

The NPA believes that community pharmacists take a holistic interest in their patient’s wellbeing and would welcome joint working with other organisations, social and healthcare, to improve quality and consistency of care.
What effect do you anticipate integration plans will have on outcomes for those receiving services?
The NPA believes that locality planning could provide health and social care services that achieve target National Outcomes however we have concerns that some service budgets must have a National Strategy. The NPA believe taking medicine supply budgets to locality planning could trigger “postcode prescribing” and patients “border hopping” to access services not available in their locality. Equity of current services including National Pharmacy Services must be maintained to ensure equitable access to medicines. There will be service provision that has local priorities, which should have additional local funding to be developed over and above current services.

Planning groups should be wary of introducing administrative burden for providers and service users due to local service procedural variance.

Service users and providers will require integrated care pathways for people to move easily through health and social care integrated systems.

It is important that all health and social care professionals who provide support to managing a person’s needs should have access to all appropriate information about that patient. A secure electronic, standard format, person centred care record should be available for all patients and professionals making care decisions in relevant parts with read/write access.

Do you agree with the general principles of the Bill and its provisions?
The NPA agrees with the initial principles in the Bill and await more details as to how the breadth of the joint working will be facilitated, monitored and governed to achieve improved more efficient care.

National Pharmacy Association
2 August 2013
Inquiry Questions

**Do you agree with the general principles of the Bill and its provisions?**
The Red Cross agrees with the general principles of the Bill to integrate health and social care to improve outcomes for people.

However, we are uncertain that the provisions within the Bill will be able to deliver truly integrated health and social care. We would argue that without greater consultation, involvement and participation by other statutory services, the third and independent sectors and people who use services and their carers, integrating delegated functions of health boards and local authorities will not achieve the transformation of services that is required.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**
The Red Cross is supportive of integrating health and social care and believes that integration has the potential to deliver the stated policy objectives of the Bill.

Nevertheless, we feel that without a more formalised role for the third sector there is a risk that the Bill will not fully achieve the policy objectives. The Red Cross would support a stronger requirement in the legislation to establish the third sector as a partner with a crucial role in the planning, development and delivery of care.

Without formalising the role of the third sector in the integration process we remain concerned that integration will be hindered by structural and budgetary issues around the two statutory bodies, rather than focussed on improving outcomes for people.

**Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.**
The Red Cross welcomes the legislative duty on health boards and local authorities to integrate their services through one of the proposed models. We hope that this will help health boards and local authorities approach the planning, development and delivering of health and social care as one body with a common vision.

Furthermore, we welcome the intention to introduce outcomes for which both health and local authorities will be accountable. This will help to ensure that integration is more than a structural change and is ultimately about achieving better outcomes for people.

**Please provide details of any areas in which you feel the Bill’s provisions could be strengthened.**
The Red Cross feels that the provisions on the involvement of the third sector and users of health and social care services should be made stronger.
There are provisions to consult and take account of the views of representative groups in the integration plan, Part 1 Section 6, however we do not believe this requirement is sufficiently robust. We would suggest that either:

- a third sector representative is required to agree the integration plan or
- health boards and local authorities must demonstrate how they have effectively involved and taken account of the views expressed by persons outlined in Part 1 Section 5 (4).

In case of the latter, if this is not seen to be completed effectively this should be grounds on which the plan can be refused by Scottish Ministers.

This would ensure that the third sector has effective representation in shaping the development of the integration plans.

The Red Cross would also support a formalised partnership role for the third sector in the development of the strategic plans. This would allow for a truly integrated health and social care strategic plan to be developed which encompasses the knowledge and expertise on the ground which the third sector holds.

Finally, the Red Cross believes that it is essential that the national health and wellbeing outcomes are incorporated within Single Outcomes Agreements. We strongly believe that the full potential of this policy objective can only be achieved in partnership with a number of statutory bodies including transport, housing and leisure. It will be critical that all partners are held accountable for achieving the national health and wellbeing outcomes.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

The Red Cross hopes that integration plans will deliver more seamless care pathways, within which it is clear how and where the financial resources are used. This will support the third sector to demonstrate the role it plays in enabling those care pathways.

It is also hoped that this will make the transfer of resources to the community more transparent and help deliver the shift of resources that is required to achieve the policy objectives of Reshaping Care for Older People.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

There is potential for integration plans to have a positive impact on outcomes for people receiving services and it is for this reason that the Red Cross supports the integration agenda.

That said, it is critical that integration plans are not dominated by the interests of local authorities and health boards. This must be an inclusive process which takes in all stakeholders and partners to ensure that truly integrated health and social care services across all sectors is achieved.
The integration plans provide a way of driving forward change as long as the knowledge and expertise of users of services and carers, independent providers and the third sector are adequately utilised. This will enable integration plans to develop which are built around an outcomes based approach and able to demonstrate how best to meet the needs of people in Scotland.

British Red Cross
2 August 2013

The British Red Cross helps millions of people in the UK and around the world to prepare for, respond to and recover from emergencies, disasters and conflicts. Our volunteers and staff help people in crisis to live independently by providing support at home, mobility aids and transport. We also teach first aid skills. We are part of the global Red Cross and Red Crescent humanitarian network. We refuse to ignore people in crisis.

The British Red Cross provides the following health and social care services:

- **Support at home** - short-term practical and emotional support at home to help people regain their independence.
- **Mobility aids** – lends wheelchairs and other independent living aids
- **Transport support** – support to people affected by crisis by providing transport for medical appointments and essential daily needs
- **Hand, arm and shoulder massage** - to promote wellbeing for people who need support at home and to relieve stress in emergencies.
Capability Scotland

Capability Scotland campaigns with, and provides education, employment and care services, to disabled people across Scotland.

Summary

- Capability Scotland believes that this legislation provides a real opportunity to reinforce the social model of disability by enabling people to live independently and maintain wellbeing, rather than being forced to rely on medical intervention. This shift in the balance of care should also enable disabled people to access the services they require by removing unnecessary administrative and budgetary barriers.

- As the Scottish Government has acknowledged, the third sector is particularly skilled at early intervention and taking a preventative approach to care and support. We would therefore urge the Scottish Government to ensure that service-providing organisations, and the third sector more widely, are given a seat at the table in the development of integrated services. The duty to consult with third sector representatives should be strengthened.

- The integration of health and social care services will make it increasingly difficult to maintain the tenuous distinction between health care which is free at the point of delivery and social care which can be charged for. This distinction will become more difficult to justify as health and social care work together to achieve shared objectives from a shared budget.

- The Social Work (Self Directed Support) (Scotland) Act 2013 will give most older and disabled people the right to receive direct payments to pay for their care and support. Greater clarity is required regards the ability to integrate healthcare within a Self Directed Support package.

Do you agree with the general principles of the Bill and its provisions?

1. Capability Scotland supports the general principles of the Bill as stated in sections 4 and 25. We would, however, like the legislation to make reference to public bodies' duties to take a rights-based approach to service planning and delivery. In particular, we would like consideration to be given to how services can be arranged in such a way that leads to the realisation of individual's rights through high quality, equitable services. Incorporation of a principle on the realisation of individual rights would not create new duties but would consolidate existing duties contained in the Human Rights Act 1998, Patients’ Rights (Scotland) Act and Social Work (Self Directed Support) (Scotland) Act 2013.

2. Capability Scotland also believes that there is a need for a particular emphasis to be placed on equitable access to services. This reflects our
concern that integration will result in some individuals having to pay more to access care and support services than others. The Bill currently makes no mention of how local authority policies on charging for social care services will be affected by their integration with NHS services. Once an integrated system is in place, with a shared budget and shared outcomes, identifying services which can be charged for will become increasingly difficult. Further, while we welcome a shift away from hospitalisation and towards independent living, we are concerned about the impact this will have on the amount disabled people are asked to contribute to the cost of their care. While living at home with care and support is clearly preferable to living in a hospital, it can also be more expensive for the individual who may have to pay care charges.

3. Thus, while it may be too complex to address the finer details of this issue in the current legislation, an underlying principle of equality of access would ensure that no group is left at a disadvantage when accessing health and social care services.

4. Capability Scotland also support the Coalition of Care and Support Providers in Scotland (CCPS)’s concern that the principles should make reference to involving people in the design of their care and support, and enabling them to exercise appropriate control over how it is delivered. We believe that such a focus will be key to driving change and achieving better outcomes for individuals.

**To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?**

5. Capability Scotland believes that the approach proposed in the Bill could lead to the stated policy objectives being achieved. However, in order for this to happen, the legislation must be accompanied by a cultural shift and wider work force and public education. It will be essential that both staff and members of the public understand the values behind integration and the objectives they are working towards. In particular, we believe staff should receive training on the principles of independent living and disability equality.

6. We also believe that the policy objectives are more likely to be successfully achieved in areas where a great deal of consideration has already been given to the implications of integration. Community health and social care services for older people, for instance, have been at the centre of this Bill’s development and surrounding debate. Less consideration has been given to the implications of this Bill for those age groups (such as children) and services (such as housing) which were not central to its conception. As a result, there has been insufficient consideration of how the requirements set out in the Children and Young People (Scotland) Bill will apply to joint bodies. There is a risk that these various pieces of legislation will lead to an uncoordinated approach to planning.

7. We are also concerned that applying the principles of integration to some services before others will lead to new ‘transition points’ emerging. Currently, young disabled adults, for instance, have difficulties moving between services...
designed for children and those designed for adults. The subsequent changes to entitlement and provision leave many struggling to access the services they need. We would therefore prefer to see a degree of integration across all services to avoid the creation of new transition points between integrated and non-integrated services.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
8. The rationale of integrated service planning and delivery and shared national outcomes is extremely positive and should help to dismantle some of the barriers that disabled people face to accessing the care and support they require. Problems with existing structures were illustrated by a recent call to Capability Scotland’s Advice Service. The caller explained that his son had struggled to access the care and support he required to live independently. The young man had had a tracheotomy because of breathing difficulties and sometimes stops breathing overnight. His father approached the local authority about the possibility of social work services to allow more flexible care so as to obtain help and support for his son to get out and about. He was told that as his son had “medical needs, not social needs”, this was not an option for him. Hopefully, integration will help to tackle difficulties such as this.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
9. The Bill places duties on integration authorities to consult the third sector. We support CCPS’s view that this duty is not strong enough. The third sector, and specifically its service providers, should be treated as full partners in the planning and delivery of care and support.

10. We are also disappointed that the legislation provides a range of models for integration, rather than requiring joint integration bodies to be established in each area. There is a concern that where Health Boards are responsible for administering the joint budget, spending will be disproportionately focused on medical services. This is a particular worry for disabled people who are likely to benefit disproportionately from spending on more social care services.

11. As the Committee is aware, the Social Work (Self Directed Support) (Scotland) Act will give most older and disabled people the right to receive direct payments to pay for their care and support. Several people have contacted Capability Scotland’s Advice Service to ask whether integration will make it possible for them to use their direct payments to purchase services delivered by the NHS. We would like more clarity to be provided on this issue which will obviously become increasingly pressing as community health and social care services become indistinguishable.

12. We are also concerned that the Bill makes no reference to any requirement for independent scrutiny of integration authorities in respect of quality, performance or the achievement of national outcomes. It is disappointing that whilst the policy memorandum is specific on the need for independent scrutiny of strategic commissioning, the Bill itself makes no reference to it.
13. Furthermore, Capability Scotland is concerned that there is currently no adequate and independent mechanism available to people who want to challenge joint decisions relating to entitlement for care, assessment of need or care charges. We would urge the Scottish Government to ensure there is an independent, effective and human rights-compliant process available to hear appeals against social care decisions. These could include the assessment of care needs, the provision of care, and the charges applied. It is essential that such a process can review and, if necessary, overturn such decisions.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

14. The Bill places a duty on integration authorities ‘to work with local professionals, across extended multi-disciplinary teams and the third and independent sectors, to determine how best to put in place local arrangements for planning service provision’. As a third sector service provider, we hope this provision will give us a larger role in planning local services which meet the requirements of our customers.

15. The Bill also provides an excellent opportunity to reinforce the social model of disability by enabling people to live independently and maintain wellbeing, rather than becoming overly reliant on medical intervention. It should also begin to break down the needless barriers between budgets which have made it administratively difficult for disabled people to access the services they require.

16. The extent to which the Bill’s proposals benefit those who use Capability Scotland’s services will, however, depend on how actively they are employed by public bodies. There are several areas where we believe integrated budgets would be extremely beneficial to our customers. The Scottish Wheelchair Service, for instance, has traditionally been part of the NHS. However, given the huge impact the service has on people’s ability to live independently – and the fact that wheelchairs often meet a social as well as a medical need – we think there is scope for social work to play a bigger part in the service. Passage of this legislation will give the Scottish Government and NHS Boards an opportunity to consider how the wheelchair service can benefit from this agenda.

**Capability Scotland**  
2 August 2013

**About Us**
Capability Scotland campaigns with, and provides education, employment and care services for, disabled people across Scotland. The organisation aims to be a major ally in supporting disabled people to achieve full equality and to have choice and control of their lives by 2020. More information is available at www.capability-scotland.org.uk.
Public Bodies (Joint Working)(Scotland) Bill

British Dietetic Association

The British Dietetic Association Scottish Board welcomes the opportunity to respond to Stage 1 consideration of the Public Bodies (Joint Working)(Scotland) Bill.

This response reiterates many of the points from our earlier submission at the consultation phase.

Do you agree with the general principles of the Bill and its provisions?

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The general principles of the Bill are supported and the introduction of this legislation, to enable the integration of health and social care, provides a real opportunity to improve the delivery of health and social care services for the benefit of the people of Scotland and provide a seamless system for services users/patients.

As is recognised however, legislation alone will not bring about these changes and the integration of two quite different organisations is going to take time and effort.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The legislation not only enables Health Boards and local authorities to integrate planning and service provisions for adult health and social care services, the framework permits that this can be broadened further.

The development of a common set of outcomes nationally is welcomed as is the fact that this will introduce a mechanism for ensuring that Health Boards and local authorities are jointly and equally accountable for planning and delivery of effective integrated services.

The stated involvement and consultation with partners is also welcomed. It is important that there is full recognition of the range of health and social care professionals to include AHPs. AHPs are already working across health and social care and have a wealth of expertise and knowledge which it is important to capture and use at all levels, both nationally and locally.

The Allied Health Professions Federation Scotland (AHPFS), which provides collective leadership and representation for its member professional bodies, provides a key route for accessing AHP expertise and access to the AHP professions in Scotland, to include the dietetic profession.

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

AHPs currently have a statutory seat on Community Healthcare Partnership committees. With the removal of these, it is important that AHPs are still in a
position to taken an active role in and provide leadership on decisions around local planning and service provision. As above, AHPs are already working across health and social care and have a wealth of expertise and knowledge which it is important to capture and use at all levels, both nationally and locally.

Whilst there is recognition that in order to address local needs there will be a requirement for some flexibility in terms of structures, functions and delivery etc, it is important that this is balanced with some standardisation of processes and potential regulation as necessary to ensure some consistency of delivery and quality across Scotland.

**What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

For those working in health and social care, including Dietitians, the delivery of integration plans provides opportunities for improved communication and decision making, greater joint working and reduced duplication. It also creates the opportunity for greater flexibility to create different options for packages of care and skill mix.

For these benefits to be fully realised however, there are many challenges that will need to be addressed and systems put in place to facilitate this. IT systems which have the ability to talk to each other and information sharing systems are examples of a number of challenges which will need to be overcome to allow for effective integration between health and social care.

There will be benefits to both the profession and to service users if the profession are fully involved and recognised for their role in the delivery of effective integrated health and social care services.

**What effect do you anticipate integration plans will have on outcomes for those receiving services?**

By facilitating the integration of health and social care services, The Bill provides the framework to provide real opportunities to improve the delivery of health and social care services for the benefit of the people of Scotland.

---

**British Dietetic Association**

2 August 2013

The British Dietetic Association, founded in 1936, is the professional association for registered dietitians in Great Britain and Northern Ireland. It is the nation’s largest organization of food and nutrition professionals with over 7,000 members. About two-thirds of members are employed in the National Health Service. The remaining members work in education, industry, research, sport settings or freelance.

Registered Dietitians (RDs) are the only qualified health professionals that assess, diagnose and treat diet and nutrition problems at an individual and wider public health level. Uniquely, dietitians use the most up to date public health and scientific research on food, health and disease, which they
translate into practical guidance to enable people to make appropriate lifestyle and food choices.

Dietitians are the only nutrition professionals to be statutorily regulated, and governed by an ethical code, to ensure that they always work to the highest standard. Dietitians work in the NHS, private practice, industry, education, research, sport, media, public relations, publishing, NGOs and government. Their advice influences food and health policy across the spectrum from government, local communities and individuals.

The title dietitian can only be used by those appropriately trained professionals who have registered with the Health Care Professions Council.
Public Bodies (Joint Working) (Scotland) Bill

Parkinson’s UK

Do you agree with the general principles of the Bill and its provisions?
Parkinson’s UK supports the principle of integrated services, but we have some concerns that this Bill focusses on structures to such an extent that outcomes for people receiving services are largely lost. We would like to be able to see this as truly enabling legislation - not just in the legal sense, but in terms of enabling individuals and families to have a better experience of care and live as well as they can.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?
Parkinson’s UK believes that the proposed Bill as proposed will succeed in integrating statutory structures, but we are not convinced that this will necessarily result in improving the quality and consistency of health and social care services.

The Bill’s focusing on statutory agencies, may have the unintended consequence of impeding the development of the broader, cross-sectoral partnerships that are needed to develop more effective person-centred services.

We are also concerned that the Bill itself is silent on matters of quality, as opposed to “improving wellbeing”. We believe that it is essential that integrated services are planned and commissioned on the basis of quality, and not just cost. There is confusion about the extent to which the existing mechanisms in health and social care to promote quality will apply across integrated services.

We believe that contrary to increasing consistency of service provision, the Bill may drive increasing variation. Although the Bill clarifies governance arrangements, it proposes four potential models, and allows for very different approaches to the incorporation of wider issues, such as housing and transport, which have a significant impact on people’s lives. There is also likely to be significant variation in the involvement of non-statutory partners, and the little detail about how locality planning will work in practice. Parkinson’s UK believes that there is high potential for variation between HSCPs.

Please indicate which, if any, aspects of the Bill's policy objectives you would consider as key strengths
The Bill will improve the transparency and consistency of governance arrangements, addressing a major concern raised by Audit Scotland in its recent report on CHPs.¹
Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

Lack of clarity about which existing laws, policies and procedures will apply to service users, providers and professionals

There are a number of areas where the status of people that will use integrated services is very unclear. For example:

- will everyone who uses integrated services be covered by both the Patients’ Rights Act and the Self Directed Support Act?
- which complaints procedures will apply to people using integrated services?
- to what extent will the NHS Quality Strategy apply to integrated services?
- will responsibility for scrutiny of integrated services lie with the NHS Healthcare Improvement Scotland or the Care Inspectorate?

At worst, this could lead to real gaps in independent scrutiny for essential services supporting extremely vulnerable people. Even if HIS and the Care Inspectorate remain clear on their scrutiny duties, there may be confusion amongst service providers, and it is extremely likely that people and their families will find it more difficult to identify their rights and make sure that they receive the quality of care to which they are entitled.

Risk of “Cost creep”
Parkinson’s UK has very particular concerns about issues arising from integrating free, universal NHS Services with means tested social care that is subject to eligibility criteria. We have previously written to the committee outlining our concerns about “cost creep” in the light of the crisis in NHS Continuing Care, where it appears that many people are having to pay for social care to meet health needs that which ought to be funded by the NHS.

We believe that the integration bill could have the unintended consequence of expanding the problem to much larger numbers of people, who could find themselves having to pay for services that they are entitled to have funded by the NHS. From the experience of NHS Continuing Care, we are particularly concerned that this is particularly likely to affect people in two groups – those with progressive neurological conditions and those with conditions, including Parkinson’s, which most commonly affect older people.

Human rights, Person-centredness and assets
Parkinson’s UK notes that recent legislation covering the NHS and social care were explicit in adopting a human rights framework, and we are disappointed that there is no reference to rights within this legislation.

Parkinson’s UK believes that the Integration planning principles cover very important areas (seamlessness, equity, diversity, local leadership and engagement from a range of sectors, prevention focus, efficiency). However, although the Policy Memorandum refers positively to principles of co-production, the Bill does not reflect them, allowing statutory bodies to avoid
engaging with service users and local communities as equal partners in designing services.

We are extremely concerned that the Bill refers to service users passively, typically as “recipients” with “needs” to be “met”. In contrast, the Self Directed Support Bill typically refers to “a person” and the “support” and “care” that is “provided”.

The Bill’s language and approach is a backward step from the Christie Commission’s focus on harnessing individual and community assets. We believe that the integration planning principles should reflect this approach, including a person-centred commitment to providing services that enable people to live the best lives that they can with their condition.

National health and wellbeing outcomes
Parkinson’s UK warmly welcomes the power for Ministers to prescribe national health and wellbeing outcomes, but we are concerned that the intention is to link these to Single Outcome Agreements rather than HEAT targets. We are concerned that there is considerable variation in the approach that local authorities take to Single Outcome Agreements, that they go largely unscrutinised, and that it is unclear what action will be taken if SOAs are not met. We believe that health and wellbeing outcome targets would have a greater potential impact if they were expressed as HEAT targets.

Marginalisation of voluntary sector and service user voices
Parkinson’s UK shares the concerns of other third sector organisations that the Bill marginalises third sector and service user involvement in integration plans. The title refers only joint working between statutory bodies, yet effective planning and service provision involves joint working between NHS, local authority, voluntary sector, commercial interests and individual service users and families.

There is a duty for statutory bodies to consult on integration plans in Section 6, and to form a consultation group for strategic planning in section 26, but being a consultee is a long way away from being an equal partner. We fear that the locality planning arrangements could very easily become a “rubberstamping” exercise, rather than a genuine process of engagement and partnership working. There is no clear proposal to replace the Public Partnership Forums that exist within CHPs. In many areas of Scotland, these have provided helpful channels for service users, carers and the public to become involved.

The proposal that only NHS Board and Local authority elected members should have voting rights marginalises the voluntary sector, and any public or service user representatives. We recognise that there may be concerns around accountability, but believe that the principle should be that all members of the HSCP have equal voting rights to avoid tokenism. The Reshaping Care for Older People Change Fund enabled voluntary sector representatives to vote, and the evidence shows that they discharged their voting rights responsibly.
There should be safeguards around conflict of interest in the case of service providers influencing outcomes in favour of their services. These should apply to all members, including those from statutory agencies who may have a conflict of interest in respect of service provision.

Parkinson’s UK believes that the Bill needs to do more to recognise the diverse contributions that the voluntary sector can make. While a third of Scotland’s social care is provided by the voluntary sector, many voluntary sector organisations, including Parkinson’s UK, do not provide care services. We have a valuable contribution to make through our work with people affected by Parkinson’s. We support people affected by Parkinson’s as service user representatives and also use our contact with thousands of families in Scotland to give voice to the experiences of people living with the condition.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
As Parkinson’s UK is not a provider of care services, we will not experience direct efficiencies from the delivery of integration plans. If integration is successful, we would expect it to be easier for our team of local Information Support Workers to provide support and signposting for people with Parkinson’s, unpaid carers and families to access the support that they need.

What effect do you anticipate integration plans will have on outcomes for those receiving services?
We hope that integration plans will improve outcomes for individuals and families, allowing for a more person-centred journey.

However, as the NHS Healthcare Improvement Scotland Clinical Standards for Neurological Health Services\(^5\) state, people with Parkinson’s require ongoing access to specialist multi-disciplinary support throughout the course of their condition.

Without appropriate care, people with Parkinson’s are at high risk of:
- expensive emergency hospital admission
- extended hospital stays
- premature care home admission

About one in four people with Parkinson’s is admitted to hospital at least once each year, and more than half of these admissions are unplanned.\(^6\) One in ten of all people with Parkinson’s are classified by ISD as a very high risk of hospital re-admission within the next year.\(^7\)

It will be essential to ensure that the new framework allows for ongoing specialist “health” input, including from Parkinson’s nurse specialists, alongside social care services, and that reallocation from acute budgets does not have the consequence of reducing specialist input to those who need it most.
Parkinson’s UK also recognises that some hospital and care home admissions are entirely appropriate, and believes it is imperative that integration does not have the impact of preventing hospital admissions when they are needed.

**Parkinson's UK**  
2 August 2013

**About Parkinson's**  
About 10,000 people in Scotland people have Parkinson’s.

Parkinson’s is a progressive, fluctuating neurological disorder, which affects all aspects of daily living including talking, walking, swallowing and writing. People with Parkinson’s often find it hard to move freely. There are also other issues such as tiredness, pain, depression, dementia, compulsive behaviours and continence problems which can have a huge impact. The severity of symptoms can fluctuate, both from day to day and with rapid changes in functionality during the course of the day, including sudden ‘freezing’. There is no cure.

The average age of onset of Parkinson’s is between 50-60 years of age, and incidence increases with age. One in twenty people with Parkinson’s is diagnosed before the age of 40.

For further information, please contact Tanith Muller, Parliamentary and Campaigns Officer for Parkinson’s UK in Scotland, tmuller@parkinsons.org.uk, telephone 0844 225 3726.

6 Parkinson’s UK analysis of ISD figures (unpublished).  
Public Bodies (Joint Working) (Scotland) Bill

Midlothian Council

1. Do you agree with the general principles of the Bill and its provisions?

Yes, but it is important that there is no uncertainty about the nature of continuing accountability to both NHS Boards and Local Authorities. Recent discussions with Senior Policy Officers from Scottish Government confirmed that such accountability remains the Government’s intention, alongside a determination that the new Boards will have real power to make the service changes required. A more explicit statement to this effect within the Bill is necessary to ensure there is no remaining ambiguity which could unhelpfully deflect attention from improving and transforming health and care services.

2. To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

It is critical that the structural changes arising from the Bill are not considered an end in themselves but rather a means to strengthening joint working and thereby improving outcomes for users and carers. There remains a danger of preoccupation with structure particularly with the complete dissolution of Community Health Partnerships and the need to develop alternative structure and governance arrangements for all health services, not just those focussing on adults and older people.

The requirement for Integration Plans and Strategic Plans is helpful in encouraging the focus to be on improved joint working and on effective joint strategic commissioning with the objective of improving outcomes for users and carers.

3. Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The emphasis on strategic commissioning is helpful in avoiding the potential preoccupation with governance and internal processes relating to resources, information sharing etc which arguably weakened the previous Joint Future policy implementation.

4. Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

Whilst the expectations regarding more efficient working are understandable, many of the anticipated improvements from the new arrangements will impact primarily on improved experiences for patients/service user. Clearly, supporting and treating more people at home, based on models of care underpinned by a commitment to prevention and recovery, should reduce public service expenditure. However the increasing demands arising from demographic changes, growing public expectations, and changing models of care including technological change, will inevitably give rise to continued
additional pressure on public service budgets. The expectation, referred to in the Financial Memorandum, that real savings can be achieved through the implementation of the Bill, is not only unrealistic but potentially unhelpful if it were to become the primary indicator of success.

Moving resources from the Acute Sector will be very challenging given the continual pressures on hospitals in terms of growing standards and public expectations. The Reshaping Care for Older People Change Fund has been helpful in enabling a period of bridging to new models of care but this fund is due to end in March 2015. This will potentially increase the pressure on the Acute Sector given the difficulties local partnerships will face in identifying alternative funding for a range of innovative community-based services.

5. What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

The integration agenda will enable improved service delivery at home supporting the whole health and social care system, thereby helping to absorb increased demand within the current financial envelope. Our local experience in recent years confirms this is achievable but such transformation is not a science and to specify the level of actual real savings within the context of the Bill assumes a greater degree of understanding and control over the rate and scale of the transformation process than is likely to be the case in reality.

The benefits of more joined-up service provision, more user-friendly pathways for patients and a whole system approach to the delivery of health and social care services have driven the local transformation process in Midlothian. We firmly believe the enactment of the Bill will greatly accelerate this approach.

Midlothian Council
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Dr Jenny Ure (Individual)

Context:
I am replying in my capacity as a carer, as a member of the Alliance, and as a researcher involved particularly with the experience of patients, nurses and GPs in the implementation of new telehealth services for long term conditions in the Lothians.

Do you agree with the principles of the Bill & what it is trying to achieve?
Agree with the aims wholeheartedly, as:
- current services are the worst of many different options, economically, clinically, socially because they are not integrated around users

They are fragmented, involve multiple sets of conflicting and often inaccurate records, alienate users and carers, try to make one size fit all, prevent patients and carers informing more targeted care that is more likely to achieve its objectives. In this parents, carers and carer groups are a wasted resource. (This is particularly evident in complex conditions such as mental health, where there are disagreements on diagnosis, and additional legal complexities, over and above fragmentation and duplications of information and services across agencies)

- users of services are an under-utilised resource for adding value, and cutting the cost and risk of failed implementation such as Choose and Book!

In my research capacity, have been most struck by the value of patient/carer input for design and implementation, and the lack of organisational and statutory representation that might harness this free resource in building more cost-effective systems. (eBusiness services on it so why reinvent the wheel!) There's a lot of research on this that is never publicised, showing the economic value of patient/carer input.

Will the proposed approach achieve these aims?
- Unsure is the bill is specific enough about the mechanisms (organisational and legal) to achieve these very laudable and necessary aims, since there will be tensions between stakeholders, and there will be alternative delivery scenarios. The lack of formal mechanisms for including users in practice, and more importantly, the lack of representation of users and carers at the decision-making level means that

The design and implementation of new, often digitally assisted services at scale in eBusiness and in eHealth has also been characterised by lack of differentiation between the structures needed for different kinds of services

(a) those services that can be most cost-effectively organised centrally (e.g. vaccination programmes), using the existing infrastructure
(b) those services that need a lot of tailored local input and agency – as in the care of many older people with complex conditions - where the input of patients, carers and others in the community is essential for this to be effectively targeted, and more cost-effective to boot.

ICT-based services particularly, such as NHS Connect, and other telehealth services have failed precisely as a result of lack of mechanism for engagement with users from the design through to implementation stages. (Can provide research data on this from several studies in eHealth and eBusiness).

Involving users as arbiters of services is already established as more cost effective in eBusiness, as well as obviously the preferred option by users themselves. This is particularly so in areas such as mental health, where there is NO clear pathway in the experience of carers, optimizing the economic, social and clinical damage for service users and their families, and society in general.

The potential weakness of the Bill is if the mechanisms are too vague, at the level of engagement, and more crucially, at the level of feeding back the view of users into policy and practice in a consistent and coherent way. In other words there has to be a new Bill of Rights in essence for the reconfiguration of roles and rights with arises from user centric services, and particularly from digitally-assisted user services at scale.

**Will the proposed approach achieve these aims?**

Given shrinking resources for services, and given competing agendas and models, this will be hard to achieve by any means, although I do believe strongly (as a researcher and a carer) that it is the most cost-effective and the most human approach.

In particular, there is a strong tension between the model adopted in forma/traditional primary care by GPs, which is based on rationing time and specialist resource for those who are clearly already ill, as opposed to the preventative health and well being model which is much discussed, but clearly sidelined in primary care.

There is a need for new legal ‘Bill of Rights’ in this sense, but also because the digital nature of new services has already outstripped the existing legal framework for dealing with new opportunities, and new risks.

**Recommendations**

- New vehicles for service redesign

Look at ‘experience based design’ as a mechanism for getting stakeholding users to identify and enter into negotiation about new roles, risks and resource allocations, the NIHR (Nat. Inst. Of Health Research) have used very effective mechanisms to involve stakeholding users, in what they call experience based research, and which businesses call business process re-engineering, but
which researchers might call collaborative action research, or just straight participation.

- New legal rights for carers and carer communities

  As legal entities in research, development and pathway design for this kind of serviceso that (a) the very abstract aims of user centred services can be translated into the real landscape of needs and use in practice (b) they are not only included in ‘consultations’ but have a statutory and executive role in decision-making. Carers and patients, particularly in groups like PASDA, have the knowledge of the context and the barriers to best inform implementations that often failed when centrally executed. They are a real and under-used resource that is free! (Wikipedia, web 2.0, Facebook are all successfully driven by concerned groups

- Clarity about how service users and their families will manage their information – will it be something like MyDex for personal information management? Until there are pilots and people can have a go, this will be too intangible to challenge the status quo.

Dr Jenny Ure (Individual)
2 August 2013
The GMC is the independent regulator for doctors in the UK. Our statutory purpose is to protect, promote and maintain the health and safety of the public by ensuring proper standards in the practice of medicine.

We do that by controlling entry to the medical register and setting the standards for medical schools and postgraduate education and training. We also determine the principles and values that underpin good medical practice and we take firm but fair action where those standards have not been met.

Where any doctor fails to meet those standards, we act to protect patients from harm if necessary, by removing the doctor from the register and removing their right to practise medicine. Action may also be taken to uphold public confidence in the medical profession.

The GMC welcomes proposals to improve joint working to support the integration of health and social care in Scotland. In reviewing any structural changes to integrate health and social care you may wish to consider potential impacts on the mechanisms in place to assure patient safety and which ensure referrals to the GMC are made when appropriate.

One key mechanism now in place is medical revalidation, introduced in December 2012. Revalidation is a continuous process through which the GMC ascertains that individual doctors are up-to-date and fit to practise medicine. Any integrated joint boards employing doctors would likely be ‘designated bodies’ under UK regulations pertaining to the GMC’s revalidation process. Joint boards which employ doctors would therefore need to be aware of their responsibilities regarding doctors they employ. These responsibilities are set out in the Responsible Officer Regulations. These regulations were made by the Department of Health (England) and apply to Scotland and Wales also (separate regulations apply in Northern Ireland). The Department has provided guidance to accompany the regulations. The regulations and guidance are below.

[Responsible officer regulations and guidance.](#)

The GMC has well established processes to support new designated bodies. Any new designated body, or any doctor whose employer changes, should contact the GMC.

Public Bodies (Joint Working) (Scotland) Bill

South Lanarkshire Council

Do you agree with the general principles of the Bill and its provisions?

The general principles of the Bill is to improve health and social care services for patients and service users through more effective joint working. We absolutely agree with these principles, although we feel that integration may not be the only way of ensuring that this is achieved. The Bill, as it stands, provides a framework for integration which should allow for some local flexibility in pursuit of the stated national outcomes.

To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

The Bill allows for structural and organisational changes and this will have some impact on service delivery and outcomes for patients and service users. It should help to reduce boundaries between professional groups that are exacerbated by organisational arrangements and result in clearer care pathways. However, the biggest impact on service delivery is linked to practice and the Bill will not necessarily impact on practice, particularly where practice is linked to professional codes of conduct and standards. Integration may start discussions across professional bodies about role, professional competence and boundaries but it will not in itself resolve these issues. Integration of health and social care will also not deal with the greatest area of disconnect which is within the health service: that is, the interface between primary and secondary care. Although the Bill makes some provision for the transfer of Acute budget streams to integrated health and social care partnerships, it is stated that this will relate to unplanned care only, and is likely to focus on professional groups such as AHPs and continuing care nursing and not tackle the more fundamental issues that exist across acute and primary care.

Integration will also have the potential to create new disconnects between services currently provided by Social Work services particularly those which work across justice and adult services or children’s and adult services.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths.

We welcome the national outcomes framework which will both replace and strengthen the former Community Care Outcomes Framework. This provides a clear set of objectives for each health and social care partnership. We would expect, over time, that this set will replace the benchmarking indicators currently proposed by SOLACE to simplify reporting and benchmarking across health and social care.

We also welcome the fact that there is scope for local flexibility in establishing integrated health and social care partnerships. South Lanarkshire has a history of strong partnership working across the key statutory partners, and
this has been strengthened with the implementation of Reshaping Care for Older People. We will be building on these strong foundations when agreeing the best possible model for us at local level.

Please provide details of any areas in which you feel the Bill's provisions could be strengthened.

A great deal of the detail has yet to be determined and this has brought some challenges in considering the potential impact of the Bill. For example, the Bill does not specify the minimum set of services that will be included in the integrated body – in particular the funding streams and services associated with the Acute sector is very undefined - and this makes it difficult to plan in a holistic way.

More specifically there are issues relating to finance and governance that could be strengthened.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?

Organisational efficiencies and benefits are unlikely to be achieved in the immediate or short term, but we expect there to be longer term benefits as workforce planning and development is embedded across the new, integrated body.

In a separate response prepared for CIPFA this Council has also raised concerns that the level of funding made available to support integration is inadequate and in places is based on flawed assumptions. Little consideration is given to the financial implications of IT harmonisation, and there has been insufficient provision made for support services, clinical and other stakeholder involvement in locality planning, VAT and ongoing staff costs.

What effect do you anticipate integration plans will have on outcomes for those receiving services?

Our experience of running integrated services is that service users receive a more streamlined service, with greater, more natural contact across different professional groups. This has been the case with the Community Older People’s Team in Cambuslang and Rutherglen, and early indications from the Integrated Community Support Service in East Kilbride and Strathaven support this view. These services have been developed within organisational structures that remain separate but which have worked to create teams that work in an integrated manner. Formal integration should enable this approach to occur as the default position and provide easier access to service users to the services they require.

South Lanarkshire Council
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

British Healthcare Trades Association

The British Healthcare Trades Association (BHTA) is one of the UK’s oldest and largest healthcare associations (founded in 1917). Its membership - of some 460 UK companies employing over 17,000 people - comprises both large and small businesses across the many non-pharmaceutical and assistive technology sectors of the healthcare industry. Our members manufacture goods and supply goods and services.

However, we represent predominantly SMEs supplying the NHS and local authorities. The products our members make and supply are as varied as hearing aids, wheelchairs and scooters, seating and positioning products, electronic communication devices, rehabilitation products, first aid equipment, aids and services for children and for visually impaired people, and even prosthetics and orthotics. We also provide training for health and social care professionals and many of our members are “hands on” in assisting people to live independent lives in their own homes.

BHTA welcome the publication of the Public Bodies (Joint Working) (Scotland) Bill and the contribution greater integration of health and local authority care services can make to improved patient care and a more focussed, strategic approach to key issues. We agree that the main purpose of integrated services should be to improve the wellbeing of recipients and to make the most effective use of public resources.

Our members fulfil an important role as providers of goods and services to both bodies. In this regard we know of occasions where members’ ability to provide the best possible service has been compromised by lack of effective communication between Health Boards and local authority partners and where goods supplied by the acute sector have not been suitable for community use by a patient.

We also welcome recent complementary Scottish Government efforts to harmonise local authority and Health Board boundaries which we believe will be effective in supporting better service provision.

While we agree with the establishment of integration joint boards and joint monitoring committees and the removal of Community Health Partnerships we note that better integration is not guaranteed by a change in structure or the setting up of new bodies.

Effective joint working relies on the individuals working within Scotland’s local authorities and area Health Boards. It requires a change in culture as much as a change of structures. We would not wish to minimise the progress made in terms of joint working. Our members cite good and effective practice in terms of the use of joint stores. It is essential that the issue of joint budgeting is effectively addressed.
We are content that the final decision about how the integration authority will be set up (body corporate or delegation between partners) should be left to the local partners to decide. We note also that some parts of the country already have joint arrangements in place which, our members suggest, are working well and this would allow those arrangements to continue.

We agree with plans to allow Health Boards to contract on behalf of other Health Boards and to allow Scottish Ministers to form a wider range of joint ventures.

We appreciate that there might well be some financial consequential impacts affecting some businesses. However, we believe that these are likely to be transitional costs, such as training, that would not deliver significant, long term detriment to our members.

We note that section 110 of the Financial Memorandum states that “There are no additional regulations or requirements being placed on private sector stakeholders. In respect of collaborative procurement, the powers sought will be used in the context of existing contractual arrangements and documentation. The proposals will not impact on access to public sector markets.” And section 111 says “For Health Boards, there will be increased flexibility in the procurement of facilities and a consequent reduction in both development and on-going costs. Private Sector Development Partners have already been selected via open procurement in accordance with EU procurement law.”

BHTA is engaging with the Scottish Government on the forthcoming procurement legislation as well as on an ongoing basis on behalf of our members. Despite the assurances contained in the Financial Memorandum, we would be concerned if in any way the suggested changes were to restrict choice and innovation in respect of medical devices and other products supplied by our members. Scotland is highly dependent on external supply so it’s important that the Scottish Government encourages suppliers to continue to participate so that choice is not marginalised as a result of integration. We are also aware that patient groups are concerned that any restriction of choice could be to the detriment of patient care. Reducing choice can also be a false economy if it results in further expensive care to rectify resulting problems, often in hospital.

British Healthcare Trades Association
2 August 2013
Public Bodies (Joint Working) (Scotland) Bill

South Ayrshire Council

- Do you agree with the general principles of the Bill and its provisions?

South Ayrshire Council (SAC) supports the principles behind the Government’s proposals to better integrate Health & Social Care Services for Adults and to remove perceived barriers to improving systems of care. In addition, the Council supports the development of new national outcomes which should permit the progress and success of the new arrangements to be effectively measured, thus driving continuous improvement.

The Council has concerns about the potential created for significant central direction in the provisions of the Bill, which is not in keeping with the Government’s Response to the Consultation Exercise. Ministers are seeking significant powers to direct Integration Joint Boards and Statutory Partners, which as currently drafted, has the potential to significantly undermine local democratic decision making and the stated objective of locally planned services for local people and local communities.

- To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

Beyond a general welcome of the development of national outcomes, the principles of integration and the general management approach detailed in the Bill and accompanying documents, it is difficult, at this time, to fully endorse or otherwise, the Government’s approach as much of the detail will not be known until regulations and guidance are published, potentially, much later in the process.

The Council remains concerned, based on the Bill and the information currently available, that the proposals may not address the key systemic disconnect that exists between the acute and community sectors as stated in the Council’s response to the original Consultation Exercise. The most effective use of the total and very limited financial resources available cannot be fully addressed without Partnerships having a say in how financial resources are used within the acute sector. Without this there will not be an end to “cost shunting.” There is currently no information available on the extent of the acute budget that will be redirected to Partnerships.

As was stated in the Council’s response to the Consultation Exercise, the current arrangement in relation to GP contracts creates no imperative for them to reduce emergency admissions. The proposals outlined do not remedy this, nor do they create the necessary driver to shift the balance of care away from acute hospital services to community care. SAC urges, therefore, that this is considered as part of the Parliamentary process.
• Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths

The Bill creates a framework for change which the Council hopes will provide a catalyst for developing new ways of working and provide access to the most appropriate services delivered in a seamless way for service users, their families and carers.

The creation of national outcomes and principles for service delivery are key strengths, as are the proposals to make Councils and NHS Boards equal partners in the provision of services through Joint Integration Boards. The role envisaged for third sector organisations, service users, carers, G.P’s and other professionals in the planning and delivery of services should improve the quality of decision making.

The emphasis on locality planning and the recognition that service planning, resource allocation and service delivery can be more effectively and efficiently provided at a local level, in a way that seeks to address the individual needs of local communities, is in the Council’s view, an important aspect of the Bill. This more than any other part of the legislation will be fundamental to securing change and driving on-going changes to the provision of care and the balance of care in the future.

Similarly, the recognition of the need for an integrated budget planned and overseen by one Chief Officer is a significant step forward and is likely to facilitate a change in the way services are delivered and in the culture of those involved in delivery.

• Please provide details of any areas in which you feel the Bill’s provisions could be strengthened

It is difficult to be definitive on this point at this time given that so much of the detail of the Government’s approach will remain unknown until regulations and guidance are published, both of which are likely to be informed by the recommendations of the National Working Groups which are still to report. For this reason we think it is very important that the secondary legislation is subject to affirmative procedures.

One of the Council’s primary concerns about the draft legislation, as it is currently presented, relates to the potential to undermine locality planning and local democratic control, which the Government has stated are cornerstones of its approach and fundamental to its success, as a result of the significant powers which Ministers intend be given to them through the legislation to direct operational matters within individual partnerships.

SAC is concerned that the Bill contains no meaningful proposals to address the disconnect between the acute and community care sectors. As this is where the most significant financial resources are spent and where such disconnects impact most significantly on the outcomes for individual services users, this is a weakness in the Government’s proposals as detailed in the
Bill. Given this concern, the need to achieve a shift in the balance of care should be included as one of the new nationally agreed outcomes.

Government and Parliament should also consider ways of requiring the appropriate involvement of all GP’s in Health & Social Care Partnership’s and in actively seeking changes to the balance of care within agreed parameters. Such involvement of GP’s in the planning and delivery of service provision across the full range of all of the alternative services available is likely to be a significant factor in unlocking the redirection of funding from the acute sector to the community sector.

South Ayrshire Council has, through various reforms, taken steps to integrate the delivery of its social work services to provide seamless support for families and service users and has done this in a way that also integrates these with its education and housing services, with all of these services being part of the one Directorate and subject to scrutiny review by the same Panel of Elected Members. Whilst the Council appreciates and supports a move to achieve better integration between adult health and social care services, it regrets the potential that the Government’s proposals have to create new barriers between Partnership delivered services and Council services and the re-creation of barriers so successfully dismantled in South Ayrshire in recent years.

The proposals could be strengthened by more clarity being provided in respect of the employment of staff and in relation to which body or bodies will have responsibility for the delivery of services. The draft legislation appears somewhat contradictory on these points, indicating on the one hand that it is not envisaged that Integration Joint Boards will directly employ staff or deliver services, while on the other stating that the legislation will enable this while indicating that there could be financial reasons for not permitting it. This uncertainty adds to difficulties both in the planning of future service delivery and in the development of management structures to support integration.

Parts of the draft legislation are overly prescriptive and again are at odds with the principles of local democratic control and effective and efficient service planning and delivery through localities. A particularly significant example of this is the minute detail in the Bill about how Statutory Partners will conduct the Strategic Planning process.

It may also be helpful if there was further clarity between performance reporting and outcomes and consideration given to the role of scrutiny within the performance process.

- **What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?**

The Council expects that there will be efficiencies from the introduction of integrated budgets, joint planning, joint commissioning and through the streamlining of front-line service delivery. However, given the lack of detail within the Bill, it is too early to be able to quantify this in any meaningful way.
and there is a risk, where there is more than one local authority per health board area, that this will present special challenges, one of which could be in terms of efficient working arrangements.

The Council expects, over time, as new cultures and approaches bed in and as strategic plan objectives deliver progress against the new nationally agreed outcomes, that the greatest benefit will be to service users and carers. Although, this will be dependent on the resource base keeping pace with the increasing demand for services.

- What effect do you anticipate integration plans will have on outcomes for those receiving services?

South Ayrshire Council expects, over time, that the integration plans will lead to improved outcomes for those receiving services through more integrated working at local level based on effective joint planning and resourcing of services, improved information sharing and simpler and less risk adverse processes and systems. The delivery of this, however, will be dependant both on effective engagement, particularly with all of the professionals involved and be equally dependant on a significant retraining and organisational development programme designed to change organisational, professional and individual cultures and approaches.

South Ayrshire Council
2 August, 2013
Public Bodies (Joint Working) (Scotland) Bill
Equality and Human Rights Commission

The Equality and Human Rights Commission is the regulatory Body for equality and anti-discrimination law in Scotland, England and Wales, with a statutory remit to protect, enforce and promote equality across the nine "protected" grounds - age, disability, gender, race, religion and belief, pregnancy and maternity, marriage and civil partnership, sexual orientation and gender reassignment. The Commission is also one of Scotland’s two National Human Rights Institutions (NHRIs), with a duty to monitor and report on human rights.

The Commission welcomes the opportunity to give evidence on the Public Bodies (Joint Working) (Scotland) Bill at Stage 1. We previously submitted evidence to the pre-legislative consultation in September 2012. Our comments will be placed in the wider context of the public sector reform agenda in Scotland, particularly the recommendations of the Commission into the Future Delivery of Scotland’s Public Services (the Christie Commission), published in the summer of 2011.

Equality Regulation and Devolved Public Authorities in Scotland
The purpose of the public sector equality duty is to ensure that public authorities and those carrying out a public function consider how they can positively contribute to a more equal society through advancing equality and good relations in their day-to-day business, to:

- take effective action on equality
- make the right decisions, first time around
- develop better policies and practices, based on evidence
- be more transparent, accessible and accountable
- deliver improved outcomes for all.

The public sector equality duty requires equality to be considered in all the functions of public authorities, including decision-making, in the design of internal and external policies and in the delivery of services, and for these issues to be kept under review.

On 27 May 2012 specific regulations, the ‘Scottish Specific Duties’ drafted by Scottish Ministers and passed by the Scottish Parliament, came into force. These set out the steps that key public bodies, including councils and health boards, need to take to meet the requirements of the duty. These steps include requirements to:

- report on mainstreaming the equality duty

---

• publish equality outcomes by April 2013 and report progress
• assess and review policies and practices
• consider award criteria and conditions in relation to public procurement

The EHRC has produced a set of non-statutory guidance on the duties\(^2\). We have published our preliminary analysis of the information published in April 2013\(^3\), and will publish further qualitative analysis in late summer 2013.

With their emphasis on gathering evidence and setting outcomes, the Scottish Specific Duties have clear parallels with the wider outcomes-focused policy environment in Scotland, and the Commission is encouraged that the Scottish Government is planning future work to better align the Public Sector Equality Duty with the National Performance Framework\(^4\). This will have value not just at the national level, but locally, where evidence gathered and outcomes set under the specific duties can and should help public authorities deliver against national outcomes and indicators.

**Equality, Rights and the Public Service Reform Agenda in Scotland**

The Christie Commission report sets out clearly (pp.53-60) the links between inequality and “failure demand”, that is, resource-intensive responses to symptoms rather than causes; and the need to shift to a preventative approach which prioritises early intervention, builds public services which are responsive to users’ needs and is grounded in the principles of dignity and fairness. The report explicitly recommends that public services should be encouraged to tackle inequality and promote equality.

The policy memorandum accompanying the Bill\(^5\) also highlights the Christie Commission recommendations and so situates the Bill’s policy intentions within the wider public service reform agenda in Scotland. With this in mind, it is useful to consider evidence gathered by the EHRC earlier in 2013 on how equality and human rights principles were being applied by policy makers working in public service reform, and particularly health and social care integration. This research was intended primarily to inform the Commission internally, and interviewees were approached on that basis, so the points raised here will be general.

The broad thrust of the evidence gathered by the Commission suggest a strong willingness to embed equality and human rights principles in policy

---

\(^4\) [www.scotland.gov.uk/About/Performance/scotPerforms/Messages](http://www.scotland.gov.uk/About/Performance/scotPerforms/Messages)

\(^5\) [www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20Joint%20Working%20Scott%20Bill/b32s4-introd-pm.pdf](http://www.scottish.parliament.uk/S4_Bills/Public%20Bodies%20Joint%20Working%20Scott%20Bill/b32s4-introd-pm.pdf)
development and a recognition on the part of officials and others of the value that this brings. However, it also suggests

- widespread confusion between process and outcomes (e.g. setting up a reference group vs. delivering tangible changes to people's lives on the ground),
- at times, a legalistic and compliance-led understanding of equality and human rights (e.g. what needs to be done to avoid censure or to remove the threat of legal action), and
- challenges around identifying the impact equality and human rights principles have actually had on policy development.

This evidence suggests that there is a lot of value in the distinctive, outcomes-based approach to policy-development and implementation in Scotland, but it also suggests that there remains a gap between the Christie principles of promoting equality in public service reform in Scotland and the reality.

**Comments on the Bill**

The Commission supports the general principles of the Bill, and recognises the significant shifts since the 2012 consultation, and the impact that our and others' arguments have had on policy makers. For example, we welcome the shift away from age-specified older people as the initial focus for health and social care outcomes, and the move to a more general focus on all users' wellbeing. We also welcome the shift to a less prescriptive approach, with more emphasis on providing a minimal framework and on allowing agencies to determine locally what specific arrangements will work best for them and those they serve. In line with the context provided above however, we would make several further points:

1. **Policy Aims:** The consideration of equality and human rights in the accompanying policy memorandum is still very process-oriented, with the emphasis on the steps taken in drafting an EQIA and setting up a reference group. In line with the comments above, we feel that this is a missed opportunity to demonstrate how the policy intentions of the Bill are aligned with the Christie Commission's emphasis on the links between equality, talking "failure demand" (see above) and building more responsive services. Building a solid analytical framework based on the very different experiences and expectations of all health and social care service users requires robust equalities evidence at the very start of the policy process. This opportunity is removed if equalities groups are only invited to give views to already partially developed proposals.

   The policy aim of delivering more person-centred and responsive services is likewise strengthened where outcomes are formulated with reference to clear human rights principles such as dignity, liberty, and agency. Human rights and equality principles should help policy makers articulate where it is they want to get to.

2. **Structures and User Involvement:** A common criticism of the pre-legislative proposals was that they were very professional and clinician-
led, and that the voice and priorities of the end user was in danger of being lost. To that end, more still needs to be done to ensure that users are equal partners not just on the process of integration, but to the wider purpose of integration (e.g. resource allocation, seamless delivery of health and social care services, eligibility criteria and assessment). This is, again, in line with the Christie recommendations, and would go some way towards the kind of embodiment of equality and rights principles which we have touched on elsewhere.

3. Explicit Reference to Equality and Human Rights Principles: health and social care leaders, working together with service users should articulate explicitly how integration joint boards will, through their integration plan deliver services which are based on human rights principles and equality outcomes. The key public authorities sitting on these boards are all subject to the Scottish Specific Equality Duties, so should be able to refer back to their individual corporate equality outcomes and ensure that these are properly aligned with integration boards’ shared plans. We would support recommendations made by disabled people’s organisations and the independent living movement that the related principles of independent living and co-production are also embedded in the development and revision of integration strategies.

Conclusion
The Commission welcomes and supports the policy intentions of the Bill, and recognises its role in the wider policy challenges of public service reform in Scotland. Similarly, we support ministers’ and policy makers’ recognition, in line with the Christie recommendations, of the value of embedding equality and human rights principles in this process. However, there remain challenges, many of which are wider and more complex that any one piece of legislation, in developing a clearer sense of how and why equality and human rights are integral to the development of more responsive, person-centred and, ultimately, sustainable public services in Scotland.

Equality & Human Rights Commission
16 August 2013
The Chartered Institute of Public Finance and Accountancy

CIPFA, the Chartered Institute of Public Finance and Accountancy, is the professional body for people in public finance. CIPFA shows the way in public finance globally, standing up for sound public financial management and good governance around the world as the leading commentator on managing and accounting for public money.

EXECUTIVE SUMMARY
There are a series of tests which should be applied and passed before any new legislation is brought forward:

1. the impact of existing legislation is clear and has been tested;
2. the case for new legislation has been made;
3. the cost and consequences of the new legislation are transparent, and that
4. there is a clear timescale for post-legislative impact assessment to determine whether the legislation is having the impact claimed in the original case for legislation

In submitting comments to the current proposals for integration of adult health and social care in Scotland, we have assessed and considered the extent to which new and revised primary legislation is in fact required. It is our view that the case for new legislation has not been made within the current consultation document.

The absence of any significant post-legislation scrutiny has meant that Parliament and government have not reviewed the impact of existing legislation in the area of health and social care integration.

All evidence points to leadership as the key ingredient to improving outcomes and the consultation document fails to address leadership capability and capacity and instead focuses on matters which would be cornerstones for structural reform.

1 THE CASE FOR NEW LEGISLATION

1.1 The current proposals for the integration of health and social care are being presented against the background of an existing and established legislative framework. That framework which has been in existence since 1999 was formalised by primary legislation with the introduction of the Community Care and Health (Scotland) Act 2002. This was later followed by further primary legislation, the NHS Reform (Scotland) Act 2004.

1.2 This existing legislation was designed as the statutory basis as part of the then emerging joint future agenda which built on earlier local health care cooperatives (LHCC’s) to encourage a more formal framework for joint planning and joint resourcing. The 2004 legislation established Community Health Partnerships (CHP’s). The existing legislation which enables
integration of health and social care is less than ten years old. We have therefore sought evidence that the Scottish Parliament could demonstrate that it had received clear evidence of the impact of the existing legislation and that the legislation had in fact been tested.

1.3 We found that no such tests had in fact been carried out other than the recent Health and Sport Committee inquiry into integration of health and social care. This enquiry was held in 2012 following the Scottish Government announcement of (then) forthcoming proposals for integration. The scope of that inquiry was limited to two questions only. These questions focused upon the challenges of integration and the barriers to be addressed. The intention of the inquiry was to use the findings to scrutinise “...any future legislation”. The inquiry did not review the effectiveness (or otherwise) of existing legislation.

1.4 In examination of the final inquiry report and of the quoted witness statements we observed that no adverse comments were made or conclusions reached on the existing legislation.

1.5 Consequently, we undertook further investigation to identify what evidence there was available to support the introduction of further legislation. The Scottish Government undertook a study and published a paper which assessed progress, evidence and options on integration. The study reflected on integration based on the Clyde Valley study undertaken by Sir John Arbutnott. The Scottish Government document in considering the potential for further integration in Scotland noted that:

“The benefits of integration can be realised in Scotland using the flexibilities already permitted by existing legislation...”

1.6 Although this is only one extract from a lengthy document, the meaning is not in doubt. Unsurprisingly, given this phrase, the Scottish Government paper, in referring to the existing enabling legislative framework did not indicate any deficiency in legislation.

1.7 We then reviewed Audit Scotland’s report on their review of community health partnerships. Audit Scotland’s key messages did not conclude on any deficiency of existing legislation but, included references to the need to streamline partnerships, a more systematic joined up approach to planning and resourcing and the need for strong leadership. We will return to leadership later in this paper

1.8 We have seen no evidence which would indicate that the existing legislative framework is in any way deficient. Any perceived failure to integrate is not as a result of a failure of legislation.

1.9 We conclude therefore that, the case for new legislation has not been made and we recommend that before there is any further legislative development, that robust post-legislative scrutiny is undertaken of the existing legislation.
2. THE CASE FOR INTEGRATED HEALTH AND SOCIAL CARE DELIVERY

**Leadership**

2.1 In our review of the evidence base for integrated service delivery, there was one recognisable and recurring theme. That theme was consistently identifiable as a key ingredient for success and which was summed up in one single word. Leadership. There is a body of evidence which indicates that the need for strong leadership is greater than the need for a further legislative solution and is greater than any focus on any particular model of delivery\(^\text{11}\).

2.2 The Scottish Government 2010 paper sets out key lessons from all available evidence on integration. It specifically refers to Leutz’s sixth law that all integration is local and success will hinge on strong local leadership which identifies solutions to specific local problems\(^\text{12}\).

2.3 Audit Scotland’s review of CHP’s in 2011 identified that partnership working for health and social care is a challenge and that it required “..strong, shared leadership by both NHS boards and councils”\(^\text{13}\).

2.4 The 2012 Health and Sport Committee inquiry identified leadership and culture as a key theme concluding that there must be a development of “strong and collaborative leadership…at a local level”\(^\text{14}\).

2.5 Finally, the Institute for Research and Innovation in Social Services identified the need for leadership as one of the factors which enhanced integrated working.

2.6 We have found the evidence for the case for leadership to be convincing and we consider that efforts to empower local leadership will be a stronger instrument of change than the development of further legislation will be.

**Structural Integration**

2.7 The consultation paper does not propose either structural reform or integration of a structural nature. The Scottish Government funded research in 2010 entitled ‘Financial Integration Across Health and Social Care: Evidence Review’ stated that\(^\text{15}\)

*There is little evidence that structural integration is either necessary or sufficient for achieving integration of care and partnership working*.

2.8 Surprisingly, given this statement, the consultation paper does address a range of issues which relate to external and internal governance frameworks. For example, the paper considers the issue of joint accountability, a feature of a bodies external governance framework and the detail of committee structure, generally regarded to be a feature of a bodies internal governance framework\(^\text{16}\). External and internal governance framework issues would generally be regarded as key issues when considering structural reform of an organisation.

2.9 The consultation document therefore feels contradictory. It does not set out to achieve structural reform of NHS and Local authority social services and yet many of the issues under consideration (and therefore being
considered for legislation) are the cornerstones of structural reform.

**Financial Integration**

2.10 A full chapter of the consultation paper is dedicated to integrated budgets and resourcing. The paper describes that a key priority is to “put an end to cost shunting between the NHS and local authorities”\(^{17}\). The proposed solution, as well as stated cornerstone of the consultation paper, is that there should be an integrated budget.

2.11 The proposal is for the integrated budget to include health, social care and some acute hospital services. The paper goes on to make the case that a fully integrated budget will result in a shift in the balance of care and ultimately ensure “..the best ..outcome for the individual”\(^{18}\).

2.12 A Scottish Government Social Research paper in 2010 explicitly stated however that\(^{19}\): 

“there was no evidence that the use of joint financing was associated with improved health outcomes”.

2.13 The institute for Research and Innovation in Social Services reflected on “tentative evidence that financial integration can be beneficial” while concluding that evidence for improved outcomes or cost savings was lacking\(^{20}\).

2.14 The Audit Commission noted difficulty in being able to quantify the extent to which joint financing arrangements have directly achieved better value for money or has demonstrated improved outcomes for users\(^{21}\).

2.15 Despite this evidence the Scottish Parliament’s, Health and Sport Committee in its inquiry concluded that being unable to establish genuinely integrated budgets has acted as a barrier to efforts to integrate health and social care.

2.16 Audit Scotland’s 2011 review found that there was limited progress in joint funding in Scotland and considered it unlikely that local authorities and NHS boards would move quickly towards more integrated budgets.

2.17 Overall, the evidence base does not support the significant focus which is applied to budget integration within the consultation document. Evidence would suggest that financial integration does not result in better outcomes. Limited progress to date in Scotland with financial integration is not because of an absence of legislative power to integrate financially. Effective post-legislative scrutiny of the impact of the existing powers for financial integration would identify some of the issues underlying a perceived failure to integrate. Consequently, we remain unconvinced that financial integration is the key driver to achieving improved outcomes.

**Achieving Outcomes with Integration**

2.18 The base premise for the consultation and for the existing legislative framework is that essentially that integration will result in an improved service
and in better outcomes. This is the essence of the proposed new legislation – that the revised arrangements will in fact make a difference to the service user.

2.19 The Institute for Research and Innovation in Social Services reviewed the evidence base for partnership and integrated working. It concluded that there was\textsuperscript{22}:

“a dearth of research evidence to support the notion that joint working between health and social services is effective”

2.20 It further concluded that most of the research had focused upon the process of partnership working rather than the consequences of that joint working. The Scottish Government in its summary of available evidence on effective integration stated that any integration should be for the right reasons and that\textsuperscript{23}:

“attempts to impose integrated care in a top down manner have been less successful”

2.21 Of most significance however is the finding again from the IRISS which stated that\textsuperscript{24}:

2.22 Although the consultation paper states that the focus is on “what matters most to people who use services”\textsuperscript{25} no evidence is provided that service users wish to see changes to governance, accountability and to integrated budgets or indeed that these are cornerstone issues for securing better outcomes. We do support the vision of the Scottish government and its commitment to improved outcomes. We do however doubt, based on available evidence, that further legislation is the solution to achieving better outcomes.

"The journey towards integration needs to start from a focus on service users and from different agencies agreeing a shared vision for the future rather than from a structures and organisational standpoint"
Public Bodies (Joint Working) (Scotland) Bill

East Renfrewshire Community Health and Care Partnership

Background to Comments
East Renfrewshire Council and NHS Greater Glasgow and Clyde took the decision to create a fully integrated Community Health and Care Partnership in 2005. The CHCP has a single Director accountable to both the Chief Executive of the Council and to the Chief Executive of NHS Greater Glasgow and Clyde. The Director is on the Council’s Corporate Management Team and the Senior Management Team of the NHS Board.

Evidence on principles and approach
We agree with the principle of a focus on wellbeing. East Renfrewshire CHCP was established with an ambitious agenda. The purpose of the CHCP included both the management of ALL local NHS and social care services, i.e. fully integrated provision; and to improve the health of its population and close the inequalities gap.

As we move towards more of a focus on early intervention and prevention, the importance of the new integrated health and care partnership being fully embedded within both partner organisations cannot be under estimated. As a fully integrated CHCP, our Health Improvement Team has provided support and encouragement to the wider in their public health role and is seen as an integral Council as well as health service. Similarly the Early Years Collaborative is being led by the CHCP with the full support of the Council CMT and elected members.

When East Renfrewshire CHCP was established, the CHCP Committee became a formal part of the community planning structures. The CHCP Director represents the NHS at community planning meetings and leads the NHS contribution to the Single Outcome Agreement making this a very simple and efficient process. We consider it vital that this ‘golden thread’ is retained and strengthened through the new.

Evidence on outcomes and benefits
East Renfrewshire CHCP was formed to create a single integrated mechanism for service delivery when previously services had been split across health board areas resulting in very different models and access to health care within the same local authority area. The scale of the CHCP and the principle of being co-terminus was important to the partners’ vision of modern and integrated community health and social care services focused on natural localities. We have found this successful in terms of outcomes for local people and local accountability and ownership.

The whole of the local authority social work service is managed within the CHCP as well as the majority of community health services. The CHCP is also responsible for the prescribing budgets for local GPs and for the contracts with local GPs, dentists and pharmacists.

There are advantages in this arrangement which significantly outweigh the challenges:
• Care pathways are developed from a customer/patient perspective not along organisational boundaries. For example, there is one senior manager responsible for older people services – from home care to district nursing to older people’s mental health services.
• Close relationships with local voluntary organisations and community groups – essential for developing community capacity and networks of support.
• Close relationships with other Council Departments – essential for truly collaborative working to promote health and wellbeing in its widest sense.
• No dislocation between children and families services and adult community care – particularly important when working with vulnerable families.
• Developing strong relationships with primary care enabling us to cluster services around this ‘universal’ provision – the family doctor.
• Significant savings in management / accommodation and back - office costs.

Evidence on barriers and issues where the Bill could be strengthened

Integration plans

We assume that section 3 and 4 and others apply equally to Integration plans: same local authority and Health Board area and Integration plans: two or more local authorities in Health Board area but this is not clear due to the current layout of the proposed legislation.

Assessment

Locally we have developed plans for a Single Point of Access to screen all referrals for both health and social care “help”. Instead of having parallel routes the plan is to have all referrals coming to one place and decisions being made on the most appropriate response by a multi disciplinary team involving health and social work professionals.

However our understanding based on discussions with the Council’s Chief solicitor is that due to the local authority’s responsibilities under the SW Scotland Act 1968 to promote social welfare and by extension offer an assessment where people with potential needs come to their attention and issues around indemnity where functions normally undertaken by local authority employees are “delegated” to health employees is that the referrals will all need to be assessed (not a full written assessment, but a professional judgment made) by a local authority member of staff (usually social work but could be an Occupational Therapist). The decisions then need to be “signed-off” by a social work team manager since unlike most health professionals (nurses etc) social workers are not “independent practitioners”. All decisions they make are subject to oversight and scrutiny by a more senior professional. Potentially, the net result is a potentially clumsy and time-consuming system which requires a social work manager to oversee many more referrals than...
they would previously have done and fails to make best use of valuable people and other resources

Another potential issue is that where an assessment is undertaken by an NHS staff member for and this leads to a ‘local authority’ services being accessed the council has essentially delegated an assessment function to the NHS. The advice is that this brings potential difficulties for the council’s liability. This may even be problematic where assessment is reviewed by a local authority employed professional (usually social work, but could be occupational therapist).

We would like to understand how the Bill will overcome these barriers and enable a more streamlined service for adults and older people without putting either the Local Authority or NHS at risk of additional liabilities. It should also be noted that any emerging arrangements for operational leadership and management need to take into account the differences between professional groups and their registration arrangements.

Information sharing
We are currently experiencing barriers in enabling NHS staff to access Council IT systems and Council staff to access NHS IT systems. This is vital in developing shared records and facilitating shared management. In particular we are very concerned about the implications of recent advice from the Cabinet Office that PSN cannot be ring fenced and that unmanaged end user devices (i.e. non council or non corporate devices) cannot be allowed to connect to the council network. Our current agile working programme rests on the assumption that NHS staff using NHS devices can access council systems when out visiting patients in order to read and record appropriate information about their care and support needs, thus ensuring a service that is integrated from the point of view of recipients. We would like the Bill and its guidance to overcome some of the information security barriers that currently prevent the integration of information systems and networks.

Conclusion
We would like to reiterate our support for and commitment to integrated health and social care. We have worked hard to achieve integration under current legislation and our observations have been made in the light of this practical experience of promoting wellbeing from within both the NHS and Council and trying to deliver an integrated service that is focused on supporting people to achieve their personal outcomes.

East Renfrewshire Community Health and Care Partnership
8 August 2013
Public Bodies (Joint Working) (Scotland) Bill

Marie Curie Cancer Care

1. Marie Curie Cancer Care is pleased for the opportunity to respond to the Health and Sports Committee’s call for written views on Public Bodies (Joint Working) (Scotland) Bill which was introduced in Parliament on 28 May 2013.

2. Marie Curie gives people with all terminal illnesses the choice to die at home. Our nurses provide them and their families with free hands-on care and emotional support, in their own homes, right until the end. In Scotland we run hospices in Edinburgh and Glasgow, which provide free specialist medical care for those with serious illnesses, and emotional support for their families, giving them the best possible quality of life.

3. Wherever possible, we work with statutory partners to support service redesign and innovation that will benefit people at the end of life and their families. In Scotland we work in partnership with NHS Scotland – funding 50% of every Marie Curie Nurse commissioned. We spend approximately £12million directly on the care of patients at the end of life. Highly skilled and experienced staff within our two hospices in Edinburgh and Glasgow along with our 400-strong nursing service provide palliative and end of life care to patients and support to their carer’s and families. We care for more than 1,500 patients a year in our hospices in Scotland and over 3,500 at home through our nursing service.

4. End of life care often relies on both health and social care working together to deliver a person-centred package of support that meets their needs. For example, those wishing to receive their care at home may need to have adaptations and adjustments made to their home, before they can be discharged from hospital. Without an integrated and seamless approach patients can face unnecessary delays to discharge.

5. Our response is based on our experience as a charity which specialises in end of life care and is a major care provider. We believe that a strong emphasis on end of life care must be at the heart of the integration agenda. Our ageing population, together with the increasing number of people who have multiple morbidities, means that over the coming decades there will be increasing pressure on services and a clear need to focus on the way that we provide services for people at the end of life.

6. We welcome the Scottish Government’s integration agenda and its commitment to delivering improved outcomes through integration as set out in the Bill. We believe that everyone should have the right to receive integrated, person-centred and seamless support based on their needs and wishes at the end of life. This Bill has the potential to play a significant part in achieving this.

7. Marie Curie has a number of successful services and projects which are currently using an integrated approach to delivering health and social care, which we believe can act as examples of good practice for NHS Boards and
local authorities across Scotland.

8. In 2013 we launched the ‘Confident Caring’ programme, which works to empower the carers of patients with terminal illness to care with confidence. The programme was designed in partnership with a multi-disciplinary group of representatives from NHS Boards, the third sector, NHS specialists in the acute setting and those based in a community care setting.

9. In June 2011, we started our Palliative Care ‘Fast-Track’ Discharge Service in Glasgow and Lothian. Our specialist, Fast-track Palliative Care Discharge Liaison Nurses arrange the support patients need immediately after their discharge home. This is done in discussion with other healthcare and social care professionals involved in the patients’ care in the hospital and community.

10. We would be happy to provide further information on each of these projects, as well as facilitate any visit the committee might like to make to see these projects as part of its deliberations on the Bill.

11. Marie Curie has a number of concerns, questions and suggestions that we would like the Committee to consider as the Bill proceeds through Stage One, which we have set out below.

Integration Planning and Delivery Principles

12. We welcome the integration planning and delivery principles of the Bill, however we feel that they are too vague and the language is somewhat divorced from the principles of co-production and person-centred care. The Bill defines individuals as ‘recipients’ according to ‘need’ as opposed to partners who have the right to receive quality care. Until legislation defines people as equal partners in the delivery of their care there will remain a disconnect between providers and those requiring care. We would like to see the principles of the Bill amended to put individuals at the heart of the Bill to encourage a more person centre approach to care, that would see them as partners and not ‘recipients’.

13. The Bill very clearly sees integration as primarily between health and social care, which we believe undervalues the crucial role that the third and voluntary sector plays in delivering health and social care. We would also like to see the principles set out in the Bill strengthened so that they adequately address/outline the need for integration between statutory providers and the third sector.

Strategic Commissioning and Culture Change

14. We welcome the commitment in the legislation to strategic commissioning. Effective strategic commissioning and co-production must follow the integration process in order for the new regime to be successful. It is vital that those responsible for joint commissioning at a strategic level are proactively engaging with service users, their carers and the third sector as a significant
provider of services. We welcome that the third sector has been recognised in the Bill, but believe that too often the sector is limited to a consultative role. Voluntary and community organisations have expert knowledge of local populations, strong delivery records and their unique nature and situation should be recognised by commissioners and their advice and support seen as integral to informing decisions at a strategic level.

15. Currently, far too often we see local authorities and others resort to competitive tendering for the recruitment of services, which often leads to a ‘race to the bottom’ rather than a quality service that will truly meet the needs of the service users.

16. What is not clear is if/how the Bill will define strategic commissioning as different from public sector procurement. Commissioning in post-integration Scotland must not cherry pick the public procurement reform programme’s focus of ‘maximising efficiency’ and ‘delivering cash savings’ without remembering the need for collaboration and a focus on outcomes. Third sector service providers such as Marie Curie have the experience, the expertise and the ethos that enables us to advise commissioners on what is required dependent upon the best interests of the patient and the value that a provider can bring.

17. We believe that the Bill does not suitably address what will be sea changes in culture for the majority of statutory health and social care providers. The effects of the Bill will see not only a systems change across the board but a change for the people that work within these deeply embedded systems. All those involved in the integration agenda will need to work hard in order to overcome those cultural challenges. The third sector can provide a real insight into the provision of flexible, constantly changing services whilst working alongside a variety of partners and as such can play an important role in bringing health and social care bodies together.

Voting Rights and Representation

18. Within the Bill, we welcome the Scottish Government’s overarching premise that the third sector should be more involved in the delivery of health and social care. However, such a premise is undermined by the fact that the proposed integration authorities will be accountable only to NHS Boards and local authorities. Marie Curie believes that the third sector should be included as voting partners on the proposed integration authority boards.

19. It should be noted that if the third sector was granted voting rights it would not outnumber the statutory partners. The benefits of engaging fully with the third sector are numerous – the sector would add an invaluable and informed voice to proceedings. This was demonstrated during the ‘Reshaping Care for Older People’ initiative. The opportunity for true collaboration across sectors should not be lost.
National Outcomes

20. Marie Curie supports an outcome-based approach to the delivery of health and social care. National health and wellbeing outcomes show a clear commitment to the rights of the individual as opposed to top-down, budgetary based priorities of delivery. At present we believe that the proposed outcomes, along with the integration planning principles, are too vague and we are looking forward to further details in the subsequent guidelines. In addition it is not clear how the proposed national health and wellbeing outcomes will fit with the national outcomes set out as part of The National Performance Framework, or how they will sit with Single Outcomes Agreements. We believe that the relationship of these outcomes needs to be explained so that it is crystal clear what outcomes organisations and services are working towards. It will be crucial for the third sector to be involved in the shaping of these outcomes from the very beginning of the process.

21. The commitment to health and wellbeing outcomes must not be lost within the process of integration. Improving outcomes for people has long been a staple of the third sector and in the midst of changing cultures, budget-sharing, IT streamlining, workforce planning and other issues, this must remain the goal of integration.

Integrated Budgets and Self Directed Support

22. We believe there is a need for further clarity on how integrated NHS Board and local authority budgets are to be calculated, agreed and managed. The recently passed Social Care (Self Directed Support) Act will result in a significant amount of the local authority’s social care budget being earmarked for those seeking to directly manage their own budget and those that want a third party to manage their budget. This raises a number of questions and concerns that need to be addressed. Will calculations for establishing an integrated health and social care budget be taken before or after budget planning for self directed support has taken place. How will this process affect the final integrated budget for the integration authority? Under the integration model will those individuals that have opted for option one under the Social Care Act, and who also require healthcare, be able to manage their own health budget or will healthcare budgets remain the preserve of the NHS Board? Will local authorities become more involved in assessing who requires end of life care? Will the jointly accountable officer have oversight of the patients care pathway in order to inform their decisions?

23. We would ask for clarity on how the Bill will link in to legislation such as the Social Care (Scotland) Act as well as other upcoming legislation such as the Community Empowerment Bill and would strongly suggest that this is laid out within the Government response to the consultation.

24. Though it is stated that the minuitiae of each integrated budget will be outlined within the strategic plan, we would suggest that there is a need to explain how this will work before the Bill proceeds to allow the third sector to fully appreciate the implications.
25. We welcome the Government’s recognition that the Bill should not be seen as a cost cutting exercise however we would urge caution that it may be used as such at a local level.

Approval and Accountability

26. The fact that strategic plans are to be approved by Scottish ministers throws up issues that are not addressed within the Bill. Upon what grounds will ministers approve or reject plans? Will they be required to consult the third sector and service users about the final approval of plans? Local authorities and health boards have the power to revise rejected integration plans without further consultation, which we believe should not be the case. We believe that if a plan is rejected that there should be additional consultation.

27. During the Reshaping Care for Older People process, sign off by the third sector provided a tangible bridge to cultural change within Change Fund initiatives and the power of such engagement should be harnessed to inform future integration initiatives such as those contained within the Bill.

28. The integration of health and social care cannot provide a solution to every problem. This comes sharply into focus when looking at the resourcing of healthcare services. With or without the integration process we have a number of resource issues such as an ageing workforce and the shortage of nurses who are vital to ensuring transition from the acute to the community setting without the loss of service provision.

29. As a significant member of the third sector we are concerned that the Bill’s focus is upon merging two very different cultures and the structures involved with that. We would urge caution that the integration process does not become the complete focus of the Bill and its aftermath. This will lead to agencies losing sight of improving outcomes for service users, which will ultimately affect service delivery.

30. We would be happy to provide further written or oral evidence during the committee’s deliberations during Stage One of the Bill.

Marie Curie Cancer Care
9 August 2013
Council of Deans of Health

About the Council of Deans of Health
The Council of Deans of Health (CoDH) is the representative voice of all 85 UK higher education institutions (HEIs) with faculties providing education and research for nursing, midwifery and the allied health professions. The Council seeks to play an influential leadership role in improving health outcomes through developing an expert health workforce and through utilising its collective expertise to inform innovative educational practice and translational research. In Scotland, our membership comprises the universities of Edinburgh Napier, Glasgow Caledonian, Aberdeen, Strathclyde, Dundee, Abertay, Stirling, Edinburgh, Glasgow, Robert Gordon, West of Scotland, Highlands & Islands and the Open University. All Scottish HEI members of CoDH are also members of SHANAHP (Scottish Heads of Academic Nursing and Allied Health Professions) and the two organisations work closely together.

Overview
The Council of Dean welcomes the opportunity to submit written evidence on this Bill. We have answered those questions which are relevant to our membership and areas of expertise. There are 4 main areas that we have concerns with and have been expanded on in answer to the questions below:
- Quality assurances for service provision
- Safeguards for existing healthcare budgets
- Adapting the workforce for the new structures - in particular, as to organisational culture differences

Written Evidence Questions & Answers

Do you agree with the general principles of the Bill and its provisions?
To what extent do you believe that the approach being proposed in the Bill will achieve its stated policy objectives?

CoDH cautiously welcomes the principles of what the Bill is trying to achieve. That is, seamless care for service users.

However we also recognise that in bringing the health and social care services together, there are a number of challenges which will arise. For example, the bringing together of two different professional sectors with their own cultures and practices will need to be addressed. This will range from the approach of patient care to differences in terminology. Furthermore research and practice has shown that relationships, communication and culture are core to successful joint-up working. This does not appear to be articulated in the Bill, but rather focuses more on the structures, governance and performance elements. We do recognize that fostering a culture change is not easy and cannot simply be defined in statute, but something could be included in the Bill which acknowledges this issues that requires providers to take measures (such as conduct appropriate training) where appropriate to ensure a smooth transition and ensure that the workforce is suitably prepared for the changes.
A further area of concern for Scottish HEIs, is the possible impact that is had on the availability of placements, particularly in light of the possibilities that budgets may move between NHS boards and local authorities and vice versa. A great deal of effort amongst the HEIs and placement providers is involved in arranging and coordinating students and we would like to see reassurances that the importance of this is giving consideration when deciding how services are to be delivered.

Some CoDH members also raised areas of concerns about the non-ring-fencing of funding. Where healthcare funding has been safeguarded in past, if financial resources are moved over to local authorities, then there is a possibility that funding could be reduced, as has been seen in areas of local authority services. The Bill does not appear offer any reassurances as to this.

Please indicate which, if any, aspects of the Bill’s policy objectives you would consider as key strengths
No comments

Please provide details of any areas in which you feel the Bill’s provisions could be strengthened
There is reference to “national health and wellbeing outcomes” in the Bill. Given the diversity of Scotland’s population we believe there should be more focus on outcomes which reflect the demographic in one particular area of Scotland, rather than a one-size-fits-all approach. Whilst we acknowledge the need for the Scottish Government to set targets, this should be done in the context of the localised needs of the patients.

CoDH is also concerned at the lack of reference to quality assurance. Whilst there is a need to deliver more for less, there should be elements included in the statute which safeguards high standards of care. Whilst it should be expected that standards don’t fall, it should not be taken for granted that it won’t become an issue, and inclusion of such a provision would compel service providers to take this in to account.

What are the efficiencies and benefits that you anticipate will arise for your organisation from the delivery of integration plans?
No comment

What effect do you anticipate integration plans will have on outcomes for those receiving services?
As noted above, the aspiration of joint seamless services across health and social delivery is to be welcomed. However we would reiterate the points made above as it is ultimately the service receiver i.e. the patient – who stands to benefit or suffer as a result of the changes and this will be the most important measure of the Bill’s success.

Council of Deans of Health
12 August 2013
Public Bodies (Joint Working) (Scotland) Bill:

Scottish Social Services Council

The Scottish Social Services Council (SSSC) is the statutory Non-Departmental Public Body responsible for registering people who work in social services in Scotland, regulating their education, learning and development and generating workforce information for the sector, including the publication of Official Statistics. The SSSC is also one of the partners of Skills for Care and Development, the Sector Skills Council for the social service workforce in the UK.

There are approximately 195,000 workers in the social service workforce in Scotland. The SSSC’s role is to raise standards of practice in social services, to strengthen and support the workforce and to increase the protection of people who use the services. Our vision is a competent, confident workforce, capable of delivering high quality services that has the confidence of the public, those who use services, and their carers.

The SSSC welcomes the opportunity to provide evidence on the Public Bodies (Joint Working) (Scotland) Bill. The SSSC’s general position on the integration of adult social care and health services remains unchanged since the Scottish Government consultation in 2012. The response to that consultation is attached as an Appendix from page 4 onwards. Our comments below focus on the Bill. A number of the points may be more relevant to the regulations and guidance to follow the publication of the Act.

General Principles of the Bill

5 The SSSC agrees with the general principles of the Bill and its provisions. We reiterate a number of points made in our previous consultation response, particularly:

- The need to integrate services a way which recognises the unique contribution made by partners across all settings

- The need to recognise a number of examples of partners working together effectively to share knowledge and expertise across social care and health services.

Achievement of stated policy objectives

The Public Bodies (Joint Working) Scotland Bill primarily focuses on the structural changes that will be necessary to deliver effective and efficient services which are integrated at the point of delivery. The Bill’s aspirations will be achieved through changes to culture, learning and practice.

A key part of any culture change is the effective engagement of the workforce from backroom services and frontline practitioners through to senior strategic managers and leaders. This will be a substantial change, particularly bearing in mind the size of the workforce potentially involved in the delivery of integrated services. Significant attention has to be given to the experience, knowledge and skills needs of the current and future workforce. Allied to this
agenda is the key role played by Self-Directed Support (SDS). The SDS approach is primarily about negotiating a different type of relationship between those providing and those accessing health and social care services. These changes in relationship, role and responsibility are significant and the investment required to achieve this shift should not be underestimated. We would recommend that the subsequent Regulations and Guidance specifically address issues of culture change, workforce development and learning and workforce planning. These agendas should be a prominent feature within strategic integration plans.

**Key Strengths of the Bill**

There are a number of key strengths within the Bill. These include:

- the proposed National Outcomes for health and social care
- the integration planning principles and their focus on the recipients of services.

Further information on these topics can be found within our response to the original consultation.

**Areas where the Bill could be strengthened**

There is mention in the Bill of the need to engage with local communities in developing the integration locality and strategic plans. The Social Care (Self-Directed Support) (Scotland) Act 2013 places a strong emphasis on the direct involvement of people engaged in using health and social care services in directing their care, and being active participants in the development of services. The Public Bodies (Joint Working) Scotland Bill does not have the same strength of emphasis. We would recommend the inclusion of a stronger voice of those who are using public services in the design, delivery and monitoring of the effectiveness of the integration strategic and locality plans.

**Efficiencies and Benefits from the delivery of integration plans**

One additional issue that will have to be addressed is the workforce development needs of commissioned and private sector services. For example, the private sector (40 per cent) and voluntary sector (25 per cent) employ a substantial proportion of the social services workforce. Workforce development activity must encompass the whole workforce to ensure that there are shared values, learning and skills. The guidance and regulations can play a key role in delivering this agenda.

The SSSC is working closely with NHS Education for Scotland (NES) on a number of resources to support the development of the social services and health workforce. Key drivers for this work include the Dementia and Carers Strategies.

**What effect will integration plans have on outcomes for those receiving social services?**

We believe that it is essential that, whatever arrangements partnerships put in place to delegate authority, sufficient attention must be paid to the provision of professional leadership, practice governance and supervision for social workers and social care workers, and it would be helpful to reference the relationship between the jointly accountable officer and the Chief Social Work
Officer in the Bill, with detail in associated guidance. Professional supervision is a core component of good practice, and one on which practitioners place great significance. The statutory Codes of Practice for Social Services Workers and Employers places a responsibility upon employers to “support effective practice and good conduct”.

In addition, it should be noted that a Health & Social Care Partnership that employs workers engaged in the delivery of a care service (as defined by the Regulation of Care (Scotland) Act 2001), will be subject to the Scottish Social Services Council Code of Practice for Employers, and the workers within those care services would remain subject to the Code of Practice for Social Service Workers and regulation with the Scottish Social Services Council, where there is a requirement to be registered.

Scottish Social Services Council
12 August 2013

Appendix

Health and Social Care Integration Consultation, SSSC Response (September 2012)

The Scottish Social Services Council (SSSC) was established in 2001 by the Regulation of Care (Scotland) Act. We are responsible for registering people who work in social services, regulating their education and training and the collation and publication of data on the size and nature of the sector’s workforce.

Our work will increase the protection of people who use services by ensuring that the workforce is properly trained, appropriately qualified and effectively regulated. Our aims are to protect people who use services, to raise standards of practice, to strengthen and support the professionalism of the workforce and to improve the outcomes and experience of people who use social services.

Our vision is that our work means the people of Scotland can count on social services being provided by a trusted, skilled and confident workforce. Our purpose is to raise standards and protect the public through regulation, innovation and continuous improvement in workforce planning and development for the social services workforce.

The SSSC welcomes the opportunity to respond to the Integration of Adult Social Care and Health consultation. The SSSC supports this policy and welcomes the policy’s drive towards improving the quality of outcomes both now and in future.

We use terminology such as “social care” throughout this response although we also typically refer to the wider language of “social services” in our work.
The social services sector employs approximately 200,000 individuals in Scotland, including workers in:

- care at home services
- housing support services
- care homes for adults
- residential child care
- day care services for children
- criminal justice social work services
- adoption and fostering services
- school care accommodation
- offender accommodation.

Approximately 40% of the overall social services workforce is now employed by the private sector, 34% by the public sector and 26% by the voluntary sector. The SSSC is incrementally registering social services workers in accordance with Scottish Ministers’ timetable. Approximately 50,000 workers were registered with the SSSC as of July 2012. We will be registering a substantial number of additional workers over the next few years. For example, all practitioners in care home services for adults had to be registered with the SSSC by 29 March 2013, while support workers must do so by 30 September 2015.

In recent years the sector has also experienced an increase in the number of personal assistants employed by individuals in receipt of Self Directed Support (SDS).

We note that differing terms are used in the consultation paper to describe the same or similar services, for example, care at home and home care. Our experience of supporting multi-agency workforce development, and much of the research into multi-agency working, emphasises the importance of having a shared and agreed definition of technical and non-technical terms. We highlight the importance of using a single definition that is agreed by the agencies represented in the partnerships and recommend that the use of specific language is given priority in the development of the Bill and associated guidance. We suggest that this may be achieved through the use of a glossary compiled in consultation with the health and social services sectors and that the same definitions are employed across all government departments.

Our response now focuses on the specific questions contained within the consultation document.

**Question 1:** Is the proposal to focus initially, after legislation is enacted, on improving outcomes for older people, and then to extend our focus to improving integration of all areas of adult health and social care, practical and helpful?

Yes ☒ No ☐

The outcomes contained within Annex A of the consultation document reinforce the rationale for integrated adult social care and health services. We believe a key challenge is to do this in a way which recognises the unique contributions made by partners across all settings. There are already
many examples of partners working together to share knowledge and expertise across social care and health services. It will be important to ensure that the Health and Social Care Partnerships are encouraged to build on the skills, knowledge and effective partnership working practices that already exist so that there is a recognition of what they have already achieved, as well as a challenge to make further improvements.

Outline of proposed reforms

**Question 2**: Is our proposed framework for integration comprehensive? Is there anything missing that you would want to see added to it, or anything you would suggest should be removed?

**Yes □  No □**

**YES (comprehensive framework) and NO (nothing to add or remove)**

We believe that the variation in identified need, current service provision, partnership development and demographic differences mean that there needs to be a balance between there being a national framework and flexibility to adopt a framework which meets local need. We suggest that in order to do this, the Health and Social Care Partnerships should be asked to demonstrate their ability to adapt and develop services to meet local need through new ways of working to achieve the outcomes that the partnerships are asked to evidence.

**Question 3**: This proposal will establish in law a requirement for statutory partners – Health Boards and Local Authorities – to deliver, and to be held jointly and equally accountable for, nationally agreed outcomes for adult health and social care. This is a significant departure from the current, separate performance management mechanisms that apply to Health Boards and Local Authorities. Does this approach provide a sufficiently strong mechanism to achieve the extent of change that is required?

**Yes □  No □**

There is evidence of good practice in children’s services in relation to the integrated Children’s Services Planning process; in adult services within the Community Justice Authorities (CJAs) and Alcohol and Drug Partnerships. In these instances the identification of shared outcomes has supported the development of effective partnership working to achieve objectives. Anecdotal evidence from the sector would show that when the HEAT targets and the local authority outcome measures differ, each agency tends to allocate resource and prioritise their own outcome. A joint and equal accountability to achieved shared outcomes will actively encourage shared priorities for the partnerships.
Question 4: Do you agree that nationally agreed outcomes for adult health and social care should be included within all local Single Outcome Agreements?

Yes ☒ No ☐

Single Outcome Agreements would seem to us to be an appropriate way of monitoring performance towards these objectives while maintaining the required levels of local flexibility. We believe Health and Social Care Partnership outcomes should be monitored and evaluated through the community planning processes (the Single Outcome Agreements) so that there is one reporting mechanism for the impact of the delivery of public services in each local authority area.

We welcome the proposed Health and Care Integration Outcomes. The only one we comment on is number six, engaged workforce:

“People who work in health and social care services are positive about their role and supported to improve the care and treatment they provide.”

The term “supported” implies the importance of workforce development. We recommend that the link between workforce development and an engaged workforce is reinforced here. We suggest the inclusion of “development” or similar language within the outcome to reinforce the value of education and training. As an example:

“People who work in health and social care services are positive about their role. Workers receive support and development to improve the care and treatment they provide”.

Question 5: Will joint accountability to Ministers and Local Authority Leaders provide the right balance of local democratic accountability and accountability to central government, for health and social care services?

Yes ☐ No ☒

We have no comment to make on this question.

Question 6: Should there be scope to establish a Health and Social Care Partnership that covers more than one Local Authority?

Yes ☒ No ☐

The importance of being able to flexibly deliver and manage services according to local need has been highlighted earlier in the response. Where Health and Social Care Partnerships are able to demonstrate that they are better able to meet need, deploy staff more effectively and provide improved consistency of service delivery, there should be scope for Partnerships to cover more than one LA area. This could be evidenced by the Partnership in their agreement. However there are issues in relation to the membership of the partnership that would need to be considered. There may also be particular issues relating to the governance of the Partnership.

There are examples of strategic and operational partnerships which are delivered across more than one local authority area, such as Child
Protection Committees, Alcohol and Drug Partnerships and Community Justice Authorities.

**Question 7:** Are the proposed Committee arrangements appropriate to ensure governance of the Health and Social Care Partnership?

Yes [ ] No [ ]

We welcome the involvement of a non-voting representative on “the service user and carer experience of care” in the Health and Social Care Partnership Committee. We would suggest that representation from the private and voluntary sectors is also considered here.

**Question 8:** Are the performance management arrangements described above sufficiently robust to provide public confidence that effective action will be taken if local services are failing to deliver appropriately?

Yes [ ] No [ ]

We have no comment to make on this question.

**Question 9:** Should Health Boards and Local Authorities be free to choose whether to include the budgets for other CHP functions – apart from adult health and social care – within the scope of the Health and Social Care Partnership?

Yes [ ] No [ ]

We have no comment to make on this question.

**Question 10:** Do you think the models described above can successfully deliver our objective to use money to best effect for the patient or service user, whether they need “health” or “social care” support?

Yes [ ] No [ ]

**PERHAPS**

The provision of a structure or model provides a framework for delivery. However, the integral and essential element of effective partnership working is the development of a positive culture of collaborative practice which is solution focused and prioritises a values-based approach to service development, service delivery and relationships between service users, professionals and carers. The proposed models and structures will provide that framework for the partnerships but their impact and effectiveness will be fundamentally influenced by their leadership and culture. We recommend that significant priority be given to supporting Partnerships to develop positive cultures and a values—based approach in the work undertaken in relation to workforce development.
**Question 11**: Do you have experience of the ease or difficulty of making flexible use of resources across the health and social care system that you would like to share?

Yes ☒ No ☐
