Dear Committee Members,

I would like to share the below email that has today been sent to the Cabinet Secretary for Rural Affairs, Land Reform and Islands, **supported by a coalition of more than 50 Scottish businesses, industry representatives, youth groups, conservation groups, community groups and charities.**

Yours sincerely,

Rachel Mulrenan
WildFish Scotland

Mairi Gougeon MSP

Cabinet Secretary for Rural Affairs, Land Reform and Islands

12 November 2024

By email to - scottish.ministers@gov.scot

Dear Cabinet Secretary,

We write to you as a coalition of Scottish businesses, industry representatives, youth groups, conservation groups, community groups and charities, ahead of your upcoming evidence session at the Rural Affairs and Islands (RAI) Committee's follow up inquiry into salmon farming.

We write to ask that you urgently re-evaluate your policy on the open-net salmon farming industry, in light of the growing body of evidence demonstrating that the industry causes

multiple environmental, welfare and sustainability problems¹; and one which is widely held to be having a negative impact on many other stakeholders within Scotland.

The open-net salmon farming industry is regularly hailed as one of Scotland's economic success stories. However, peer-reviewed research has found that the economic benefits of the industry have not been adequately weighed against its detrimental impacts on other sectors of Scotland's economy (not to mention detrimental impacts on the marine environment, without which there can be no blue economic growth).²

We fully appreciate the need for high-quality jobs in Scotland's coastal communities, both on the west coast and the northern isles. However, this must not come at the expense of damaging our shared natural assets; particularly as climate change and warming waters increasingly mark the open-net salmon farming industry as one whose time is finite.

The number of new full-time jobs in the Highlands & Islands region created by the industry since 1990 is just **253**. The recent Fish Farm Production Survey, published last month, showed that the number of jobs on salmon farms decreased in 2023.³ Nonetheless, the industry continues to benefit greatly from Scottish Government grants and research funding (that could be used instead to fund a just transition for those employed by the industry).

What is often forgotten is that this industry uses Scotland's precious natural assets for 'free' disposal of its wastes and inflicts widespread damage on the ecosystems that support other commercial activities. These are costs that are currently ignored in Scottish Government assessments of the 'value' of the industry to Scotland as a whole. There are also increasing impacts on ecosystems around the globe, via its feed sourcing and use of cleaner fish. Additionally, the industry is plagued with increasingly horrific fish welfare issues, with an estimated 17.4 million salmon deaths last year alone.

We are therefore calling on you, as Scotland's Ministerial representative for our Island communities and marine operations, to consider the interests of all stakeholders, and **urgently commission an independent Cost-Benefit Analysis of Scotland's salmon farming industry, to consider its wider economic impacts.** Until these impacts are assessed, we consider that there should be a **halt on further growth of the industry.**

Yours sincerely,

AFFtheClyde
