

We expect the Scottish Budget to increase by 10 per cent in cash terms between 2022-23 and 2026-27. After adjusting for inflation, this increase is 1 per cent.

Resource funding is expected to increase and capital funding to fall, as a result of changes in funding from the UK Government.

### Expected Scottish Budgets flat after inflation

Scottish income tax revenues growing more slowly than the income tax Block Grant Adjustment means a negative net position and funding shortfall of £190 million in 2022-23.

This funding shortfall is expected to continue, reaching £417 million by 2026-27.

### Income tax funding shortfalls forecast

Since January, the outlook for the economy has improved, with GDP set to return to pre-pandemic levels by 2022 Q2.

This is because restrictions were lifted faster than anticipated and the economy adapted faster to restrictions than expected.

### Return to pre-pandemic GDP revised since last Budget

Our December 2021 forecast for nominal average earnings is higher than in January 2021.

As well as higher inflation, this reflects wage pressures because of labour shortages in particular industries and increases in the minimum wage.

### Higher earnings forecast partly driven by inflation

### Income tax forecast for 2022-23 increased since January

Our income tax forecast for 2022-23 has increased by £764 million compared to January 2021 driven by more resilient economic performance.

Freezing the higher rate threshold raises an additional £106 million in revenues in 2022-23.

### House price forecast revised up in line with income

We expect higher house prices in Scotland than in our previous forecast resulting from increased housing market activity since January 2021, as well as rising inflation feeding through to earnings.

As a result we have revised up our residential LBTT and ADS forecasts.

### Social Security

#### Social Security Spending

Over time Social Security Scotland will administer more payments directly following the introduction of Adult Disability Payment and Child Disability Payment.

Spending on Scottish Government payments also increases as payment rates rise and the Scottish Child Payment extends to children under 16.

#### Number of children receiving Scottish Child Payment

The number of children receiving Scottish Child Payment will peak in 2023 after the payment extends to children under 16.

We expect changes to Universal Credit will increase the number of eligible children and doubling the payment will encourage more people to apply.

## Summary

### Introduction

---

- 1 Our latest forecasts accompany the Scottish Government's fiscal event presenting both the 2022-23 Scottish Budget and the Medium-Term Financial Strategy to the Scottish Parliament. This Budget is being presented in a context where the resource budget is forecast to face pressure from increasingly negative funding positions for devolved taxes and social security. At the same time the capital budget is falling over the next five years. We focus first on the Scottish Government's plans for 2022-23 before considering the outlook for the economy and Scottish public finances over the next five years.
- 2 The COVID-19 pandemic continues to affect society, the economy, and the Scottish Budget, but to a lesser extent than we expected when we produced our forecasts for the previous Scottish Budget in January 2021. The success of the vaccination programme has weakened the links between case numbers, hospitalisations and deaths, and the public health response has shifted. In addition many businesses have found ways of adapting to new ways of working. The economic recovery has been faster and smoother than we expected. We anticipate that from April 2022 and into the longer term COVID-19 will become endemic and begin to be managed through guidance and voluntary measures. Our forecasts were finalised before the emergence of the Omicron variant. Current information on the severity and likely implications for restrictions of Omicron is limited, but broadly we think it remains reasonable to assume the effects of Omicron fit within our central assumptions.
- 3 In our recent reports we have focused on the immediate funding challenges facing the Scottish Government in managing the COVID-19 pandemic. These challenges have not disappeared, but are less pronounced than last winter when the Government was balancing variable spending pressures arising from public health restrictions against an uncertain funding position dependent on UK Government policy.
- 4 Our focus now is shifting to the fiscal outlook for the next five years. In this report we set out our latest independent forecasts of the Scottish economy, tax, and social security spending as well as the Scottish Budget position.

### 2022-23 Scottish Budget

---

- 5 The Scottish Government has introduced three new tax policies in the 2022-23 Scottish Budget. The income tax higher rate threshold in Scotland is to be frozen at £43,662 in 2022-23 rather than rising in line with inflation, so more income will be taxed at the higher rate of 41 per cent, raising an expected £106 million of additional revenue in 2022-23. The increase is largely offset by two Non-Domestic Rates policies which set the poundage below inflation and extend the retail hospitality and leisure relief at 50 per cent for the first three months of 2022-23, together reducing revenues by £96 million.
- 6 We expect devolved Scottish taxes to raise £17.3 billion of revenue in 2022-23, a significant upwards revision of £777 million since our January 2021 forecasts. Stronger than expected economic activity combined with higher inflation has led us to revise up our forecasts of nominal household incomes, house prices and GDP, some of the main determinants of our tax forecasts.

The improved economic outlook was also in part due to public health restrictions being lifted more quickly than we anticipated in January.

- 7 Although our forecast of Scottish income tax revenues has increased since January, we expect revenues in 2022-23 to be £190 million less than the income tax Block Grant Adjustment (BGA) – the amount subtracted from the Scottish Budget to account for the devolution of income tax. We discuss the causes and consequences of this reduction in the budget further below.
- 8 The Scottish Government is forecast to spend £4.1 billion on social security in 2022-23 including new spending plans announced in the Budget. The Scottish Child Payment will double from £10 to £20 per child per week from April 2022.<sup>1</sup> Our forecast allows for the possibility that the higher payment rate encourages more applications. Low Income Winter Heating Assistance launches in winter 2022 replacing Cold Weather Payments and is forecast to cost £21 million in 2022-23. Our forecasts also include the launch of the largest social security payment, Adult Disability Payment, which will replace Personal Independence Payment.

£ million	2022-23	2023-24	2024-25	2025-26	2026-27
SCP increased to £20	103	184	183	185	186

Source: Scottish Fiscal Commission

- 9 Overall the Scottish Budget in 2022-23 is 2.6 per cent lower than in 2021-22, after accounting for inflation the reduction is 5.2 per cent. The 2021-22 Budget included specific funding for COVID-19. From 2022-23 onwards there are no specific COVID-19 funding lines and any funding previously in this category which has continued is now part of general funding. This reduction is primarily because of the removal of COVID-19 funding and lower capital funding.
- 10 In developing its Budget the Scottish Government has assumed that it will receive extra income of £620 million for the resource budget in 2022-23 from a number of sources, some of which are still a matter of negotiation between the Scottish and UK Governments. We have reservations about the likelihood and amount of income available from some of these sources, but, considering the possibility of resource underspends materialising in the current financial year, we consider that, on balance across all the sources together, the Scottish Government assumptions are reasonable.
- 11 We discuss our concerns about some of the assumptions and the associated risks in the [Fiscal Overview chapter](#). The Scottish Government has outlined the potential sources of income and the expected sum they might generate in Annex A of the Budget, and we expect it to explain further how these various sources develop over the coming financial year.<sup>2</sup>

## The five-year outlook

### Economy

- 12 We continue to expect a strong economic recovery in 2021-22, with Scottish GDP growing by 10.4 per cent which implies a return to pre-pandemic levels of economic activity by the second quarter of 2022.

<sup>1</sup> The April 2023 inflation increase in the payment rate is brought forward to the same time as the payment is extended to older children, which we expect to be in December 2022 with a payment rate of £20.80.

<b>GDP</b>							
January 2021	-12.4	7.5	5.1	1.5	1.7	1.7	
December 2021	-10.3	10.4	2.2	1.2	1.3	1.4	1.4

Source: Scottish Fiscal Commission

- 13 We assume that with the success of vaccines in weakening the link between case numbers, hospitalisations and deaths, domestic restrictions remain minimal with limited measures in place until April 2022. These assumptions were finalised before the emergence of the Omicron variant. Current information on the severity and likely implications for restrictions of Omicron is limited, but broadly we think it remains reasonable to assume the effects of Omicron fit within our central COVID-19 judgements. More severe effects from Omicron and the emergence of further variants of COVID-19 which are resistant to existing vaccines remain a downside risk to our forecast.
- 14 Throughout 2020-21 and 2021-22 the labour market has been more resilient than many economic forecasters and commentators, including the Commission, expected. We now expect the unemployment rate to peak at only 4.9 per cent, a significant downward revision from our January 2021 forecast which peaked at 7.6 per cent. Following strong growth in 2021-22, we expect nominal earnings growth to moderate in 2022-23 at 2.6 per cent. Inflationary pressures have intensified since the summer, driven in part by high energy prices. Our central view of inflation, in line with the OBR and similar to that of the Bank of England, sees annual CPI inflation peaking at 4.4 per cent in 2022 Q2 and gradually returning to target in the second half of 2024 as supply chain issues ease, global demand rebalances and energy prices fall back. There are however significant risks to the outlook for inflation. If inflation remains higher for longer, this will have significant implications for the Scottish economy and households.
- 15 Higher inflation, combined with recent tax rises including the new Health and Social Care Levy, will erode real disposable incomes and household consumption. With inflation outpacing nominal earnings growth in 2022-23, we expect real earnings to fall by 0.8 per cent next year. Low-income households could be disproportionately affected, for example because they spend more of their money on essentials including energy.
- 16 In spite of the pace of the recovery, there is some evidence that the Scottish economy has been lagging behind the UK. Compared to pre-pandemic levels, GDP, employment and earnings have recovered more slowly than in the UK. In part, this can be explained by a divergent sectoral and regional recovery, with areas like finance growing strongly in London. However, some issues pre-date COVID-19: declining North Sea oil and gas activity continues to act as a dampener, and Scotland's demographics are reducing labour market participation relative to the UK. We expect slower growth in earnings and employment in Scotland to continue over the next few years. This has important implications for tax revenues and the Scottish budget.

### Contribution of tax to the Scottish Budget

- 17 The net position for a tax is the difference between the BGA and revenues: a positive net position means revenues are greater than the BGA so making a positive contribution to the budget while a negative net position means revenues are less than the BGA therefore reducing the budget. Over the next five years we expect the net position for Land and Buildings Transaction Tax (LBTT) to be positive, Scottish Landfill Tax (SLFT) has a positive net position until 2025-26. But the income tax

position is forecast to be negative and this is the dominant factor. With the exception of 2024-25, the overall net position for tax is negative for the next five years, as shown in Figure 3.

**Figure 3: Tax net positions**

£ million	2019-20	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27
Income Tax	148	-51	6	-190	-257	-111	-246	-417
LBTT	64	121	101	86	108	122	128	122
SLfT	20	20	34	18	1	9	1	-60
Total taxes	233	89	140	-86	-148	20	-117	-355

Source: Scottish Fiscal Commission, Scottish Government.

Shaded cells denote outturn.

- 18 Scottish income tax revenues in 2022-23 are expected to be £190 million less than the income tax Block Grant Adjustment (BGA) – the amount subtracted from the Scottish Budget to account for the devolution of income tax. We expect this shortfall to increase over the next five years, in spite of taxpayers earning over £27,850 paying higher levels of income tax in Scotland than in the rest of the UK.<sup>3</sup>
- 19 The net position is affected by two main factors: income tax policy differences and relative economic performance, including distributional differences. Since the 2016-17 initial deduction year for the income tax BGA, Scottish employment and earnings have grown more slowly than in the rest of the UK, even after accounting for differences in population growth. All else remaining equal, this would lead to a large negative income tax net position. Successive changes in income tax rates and bands in Scotland to raise additional income tax revenue have so far largely offset these negative economic effects on the income tax net position. Figure 4 shows the income tax net position and an illustrative calculation of what the income tax net position would have been without changes in Scottish income tax policy raising additional revenues. We estimate that in 2022-23, without cumulative Scottish income tax policy changes introduced since 2017-18, the net position would have been -£742 million. This does not factor in changes in UK Government income tax policy, which would have also contributed to the net position via their effect on the BGA.

<sup>3</sup> £27,850 is an illustrative calculation base on 2022-23 income tax rates and bands in Scotland compared to England and Northern Ireland. Individual tax circumstances may vary.

**Figure 4: Income tax net position and illustrative position excluding Scottish policy change**

Source: Scottish Fiscal Commission

- 20 From 2022-23, total earnings and employment are expected to continue to grow more slowly in Scotland than in the rest of the UK, and these economic factors are increasingly outweighing the additional income tax revenues from policy changes.
- 21 The relatively slower earnings and employment growth in Scotland compared to the UK arises from several underlying factors contributing to the emerging negative income tax net position. These include:
- Scotland's changing demographics and a faster growing share of the population among older age groups
  - Falling labour market participation of younger age groups
  - Slow growth in Scottish average earnings, particularly in North East Scotland relating to oil and gas activity
  - More rapid growth in earnings in the UK, driven in part by strong growth in financial services in the UK
- 22 To move the net position back towards zero or positive values, there would need to be a period of relatively faster growth in income tax revenues per capita in Scotland to catch up with the BGA. Growth could be driven by further policies to raise additional income tax revenues from Scottish taxpayers, or by relatively faster economic growth in Scotland.
- 23 In addition to the effect on the resource budget of this downward pressure from tax revenues, it is important to note the consequences of increased spending on social security for the Scottish Budget.

### Rising social security spending

- 24 The Scottish Government has introduced significant reforms of devolved social security. Existing payments administered by DWP on behalf of the Scottish Government are being replaced by new Scottish payments administered by Social Security Scotland. As well as reforming the administration

of these payments with an ambition to improve take-up of payments, the Scottish Government has, for many payments, expanded the number of people eligible and increased payment amounts. The largest payment, Adult Disability Payment, launches in 2022. The Scottish Government has also introduced new uniquely Scottish payments, most notably the Scottish Child Payment (SCP) which has been increased in this Budget.

- 25 We forecast devolved social security spending to increase from £4.1 billion in 2022-23 to £5.5 billion in 2026-27. Overall, our forecast of spending in 2025-26 has increased by £1.0 billion since January 2021. This increase primarily occurs because the Scottish Government plans to launch new payments which are more generous or received by more people. In addition, most payments are uprated by inflation and the higher inflation forecast therefore increases spending. By 2025-26, our forecast is £190 million higher than in January 2021 because of higher inflation.
- 26 Together these plans see more devolved social security transferring to be based on Scottish Government policy. In 2022-23, most social security spending, over £3 billion, will continue to be administered by the Department for Work and Pensions (DWP) on behalf of the Scottish Government.
- 27 By 2026-27, Social Security Scotland will administer more payments directly. Spending is also increasing as payment rates increase and the SCP is rolled out to all children aged under 16. As shown in Figure 5, our current forecasts estimate that 73 per cent of spending in 2026-27 will be administered by Social Security Scotland and be based on Scottish Government policy. We expect this percentage to increase in our future forecasts as we have not yet incorporated any changes in spending arising from the Scottish Government’s replacement payments for Carer’s Allowance, Attendance Allowance, Industrial Injuries Scheme, and Winter Fuel Payments which the Scottish Government aims to launch by the end of 2025. Any changes to these payments which further increase spending will also need to be met from the wider Scottish Budget.

**Figure 5: Social security spending in 2022-23 and 2026-27**

Source: Scottish Fiscal Commission

Scottish Government policy includes Best Start Foods, the three payments of Best Start Grant, Carer's Allowance Supplement, Child Winter Heating Assistance, Low Income Winter Heating Assistance, Funeral Support Payment, Discretionary Housing Payments, Fair Start Scotland, Self-Isolation Support Grant and Scottish Welfare Fund.

This figure does not include Winter Fuel Payment as it has not yet been devolved.

[1] "Other" includes Industrial Injuries Disablement Scheme and Severe Disablement Allowance

- 28 Adult Disability Payment will become the largest component of social security, replacing Personal Independence Payment. People qualify for ADP on the basis of a disability or health condition, and their eligibility is not affected by their income or employment status. This means spending on ADP is not related to economic performance, and instead is primarily related to demographics. Older people are more likely to receive ADP and therefore a combination of an aging population and increases in the state pension age mean we expect the number of people receiving ADP to increase over the next five years. Changes the Scottish Government is making to devolved social security have long-term spending implications, as once people are deemed to be eligible, they can continue to receive a payment for many years.
- 29 For the largest payments, the Scottish Government receives Block Grant Adjustment (BGA) funding from the UK Government based on spending on the original DWP payments. Spending above the BGAs for social security must be met from the wider Scottish Budget. The Scottish Government has introduced new payments that do not receive any funding from the UK Government and the costs must be met entirely from the Scottish Budget. Combining completely new payments and payments with BGA funding, we expect that by 2026-27 spending on the Scottish Government's social security benefits will be £760 million more than the corresponding funding received, reducing the funding available for other parts of the Scottish Budget.

**Figure 6: Social security net position and new payments**

£ million	2022-23	2023-24	2024-25	2025-26	2026-27
Social security net position [1]	-38	-176	-253	-255	-252
Social security new payments [2]	-322	-493	-496	-503	-512
Total	-361	-669	-749	-758	-764

Source: Scottish Fiscal Commission

[1] This includes Adult Disability Payment (covered by the Personal Independence Payment BGA), Child Disability Payment (covered by the Disability Living Allowance BGA along with DLA Adult spending), Attendance Allowance, Carer's Allowance, Industrial Injuries Disablement Scheme, Low Income Winter Heating Assistance (covered by the Cold Weather Payment BGA), and Severe Disablement Allowance.

[2] New payments includes: Carer's Allowance Supplement, Scottish Child Payment, Child Winter Heating Assistance, Best Start Grant Early Learning Payment and Best Start Grant School Age Payment. We also include spending on bedroom tax mitigation through Discretionary Housing Payments.

## Fiscal Overview

- 30 Overall we expect the Scottish Budget in cash terms to increase by 10 per cent between 2022-23 and 2026-27, largely because of increases in UK Government funding. Behind this headline increase are several different elements. Increased resource funding is partially offset by a shrinking capital budget and anticipated shortfalls between tax revenues and Block Grant Adjustments (BGA). The Scottish Government also plans social security spending above the corresponding BGA funding. This creates pressures over the next five years and the Scottish Government will need to balance its spending plans against the available budget.
- 31 After taking account of inflation the overall increase in the Scottish Budget over the next five years is expected to be 1 per cent, with the first three years of funding being flat before increasing in the subsequent two years. The UK Government's recent Spending Review set out the funding the

Scottish Government should expect for the next three financial years, and the Scottish Government has made assumptions about expected growth in the Block Grant beyond that period. We consider these assumptions reasonable.

**Resource outlook**

- 32 Resource funding makes up most of the Scottish Budget and is for spending on current costs such as public sector wages, spending on goods and services, grants and subsidies, and social security spending. For the period covered by the UK Government’s Spending Review, 2022-23 to 2024-25, resource funding increases in nominal terms but remains flat after adjusting for inflation. Thereafter it is assumed UK Government funding increases again.
- 33 Scottish tax revenues are forecast to increase by 20 per cent between 2022-23 and 2026-27, but the net effect on the budget is forecast to be negative in every year with the exception of 2024-25. Negative Block Grant Adjustments (BGA) reflect tax revenues in the rest of the UK, and these are forecast to outweigh the positive contribution from Scottish tax revenues. This difference is primarily driven by income tax because of lower earnings growth and lower labour market participation rates in Scotland.
- 34 The overall effect is that the resource budget increases by 12 per cent in nominal terms between 2022-23 and 2026-27, and by 3 per cent after adjusting for inflation.

**Figure 7: Medium term outlook for resource funding, indexed to 2022-23**

Source: Scottish Fiscal Commission, Scottish Government

Figures in 2022-23 prices calculated using year-on-year growth GDP deflators from Table 1.7 of the OBR’s supplementary economy tables. Figures rebased so 2022-23 = 100. Office for Budget Responsibility (2021) Economic and fiscal outlook – October 2021 – supplementary economy tables ([link](#))

- 35 The Scottish Government will need to balance its spending plans against the resource budget available. The resource management tools available to the Scottish Government give it a limited ability to transfer funding between financial years but cannot be used to manage longer term divergences in funding and spending plans.

## Resource management tools

- 36 The Scottish Government is required to maintain a broadly balanced budget, matching its spending to available funding each year. As the Scottish Government cannot overspend its budget, outturn spending must come in below the allocated budget and this results in underspends, as a normal outcome of budget management. The Scottish Government can use the Scotland Reserve to transfer unspent funds from one financial year to the next. Following the devolution of tax and social security powers, the Scottish Government also has resource borrowing powers which can be used to manage forecast errors.
- 37 The Scottish Budget is set in advance of each financial year, based on forecasts of revenue and spending. For LBTT, SLfT and social security any differences between our forecasts and outturn data are managed in-year. For income tax both our forecast of Scottish income tax revenue and the BGA based on OBR forecasts are fixed from when the Scottish Budget is set until outturn data become available. The outturns for revenue and the BGA only become known two years later and differences between forecasts and outturns give rise to a reconciliation in the subsequent budget.
- 38 In January 2021 the forecast 2021-22 BGA was £475 million lower than our forecast of Scottish income tax revenues. We cautioned that this difference could not be explained by economic or tax policy differences and seemed to reflect the considerable uncertainty surrounding COVID-19 and the fast-paced change of the COVID-19 outlook at the time. Since January 2021, both our and the OBR's forecasts have been revised up following stronger than expected earnings growth in 2021. However, the OBR forecasts have been revised up by significantly more than our forecasts, leading to a reduction in the net position. Our latest forecasts are for Scottish tax revenues to be just £6 million greater than the BGA in 2021-22, and we therefore expect a negative £469 million reconciliation to be applied in 2024-25. The actual reconciliation in 2024-25 will depend on the outturns which will be reported in 2023.
- 39 The Scottish Government has limited tools to manage this reconciliation, and has stated it plans to use resource borrowing to manage income tax reconciliations. The Scottish Government will be able to borrow £300 million to manage the reconciliation, effectively passing the repayment forward to future years. The remaining £169 million of the expected £469 million reconciliation will reduce funding in 2024-25. The Scotland Reserve is the other tool available to the Scottish Government, which in principle could prepare for a negative reconciliation by deliberate underspends to build up the Reserve. However, the Reserve has an overall size limit and an annual drawdown limit and, given the existing need for the Scottish Government to use the Reserve to manage underspends, the scope for it to help prepare for negative reconciliations is very limited.
- 40 Currently the Scottish Government has enhanced borrowing powers and greater flexibility to use the Scotland Reserve because our January 2021 forecasts triggered a "Scotland-specific economic shock". These flexibilities expire after 2023-24 and are therefore not available to the Scottish Government to manage the large income tax reconciliation expected in 2024-25. As a result, the Scottish Government would need to consider adjustments to spending to manage the reconciliations. With the Scottish budget steadily increasing in size (both through inflation and real increases) this situation is likely to become increasingly common while the limits remain fixed.

## Capital funding

- 41 Capital funding accounts for 13 per cent of the Scottish Budget. It is used for long-term investment such as hospitals, roads, and research and development. Financial transactions are a subsection of capital funding and can be used to make loans to, or equity investments in, private sector entities.

- 42 Over the next five years we expect capital funding to fall in both cash and inflation adjusted terms, primarily because of reduced UK Government funding. The Scottish Government is moving closer to reaching its capital borrowing limit of £3 billion, with a self-imposed rule to ensure a contingency of £300 million remains available in 2026-27. To stay within these limits, borrowing is planned to reduce over the next five years, further reducing capital funding.

**Figure 8: Medium term outlook for capital funding, indexed to 2022-23**

Source: Scottish Fiscal Commission, Scottish Government

Figures in 2022-23 prices calculated using year-on-year growth GDP deflators from Table 1.7 of the OBR's supplementary economy tables. Figures rebased so 2022-23 = 100. Office for Budget Responsibility (2021) Economic and fiscal outlook – October 2021 – supplementary economy tables ([link](#))

- 43 The Scottish Government plans to borrow the annual maximum of £450 million in 2022-23. However, in the past, where underspends have arisen during the year, it has typically reduced planned borrowing in-year to ensure there is not a large underspend which reaches the Scotland Reserve limit. We therefore consider the Scottish Government's planned borrowing reasonable, but note both the likelihood that borrowing will turn out to be less than planned in each year, and that over the next five years it is likely the Scottish Government will be close to the overall borrowing limit.

## Key tables from main report

### Total Social Security spending

- 1 Social security spending increases over time because we expect more people to receive support, and most payment amounts are uprated each year with inflation. Most payment rates will increase by 3.1 per cent in April 2022 and we forecast a 3.9 per cent increase in April 2023.

**Figure 5.4: Social security spending forecasts**

Shaded cells refer to provisional outturn available at time of publication. Figures may not sum because of rounding.

[1] Adult Disability Payment includes spending on the UK Government Personal Independence Payment until all existing clients are receiving ADP. We assume that this transfer will be completed by the end of 2024-25.

[2] Best Start Foods for 2020-21 includes spending on UK Government Healthy Start Vouchers.

[3] Child Disability Payment includes spending on the UK Government Disability Living Allowance (Child) until all clients are receiving the new payment. We assume that this transfer will be completed by the end of 2022-23.

[4] Social security spending forecasts is split in two Scottish Government portfolios. Social Justice, Housing and Local Government portfolio includes all social security payments that were previously captured within the Social Security and Older People portfolio, plus Discretionary Housing Payments and Best Start Foods. Finance and Economy portfolio includes Fair Start Scotland and Self-Isolation Support Grant.

## Caseload

- 2 We expect the number of people receiving disability payments to increase over the forecast horizon. There are several other payments where we expect the caseload to remain broadly flat or fall gradually overtime. The caseload for payments to families with children, such as the Best Start Grant (BSG), are affected by the size of the child population. We forecast the number of births and child population will fall over the next five years, so the number of Best Start Grant payments falls.
- 3 We also expect an increase in the SCP caseload in the short-term due to UK Government changes to the Universal Credit taper rate and work allowances, and higher take-up in response to the much larger weekly payment for SCP. Over the medium term we still expect the caseload to fall from a peak in 2022-23 due to economic recovery and a falling population.
- 4 Adult Disability Payment (ADP) will replace Personal Impendence Payment (PIP) launching nationally in Scotland from summer 2022. Whilst similar in legislation, there are some differences in the processes and support that will be available for ADP compared to PIP, as well as some changes in policy such as the introduction of Short Term Assistance and changes to the terminal illness definition. We expect these to result in an increase in the number of clients receiving payment.

**Table S5.1: Forecast number of people receiving payments**

Thousand	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26	2026-27
Adult Disability Payment [1]	298	312	339	382	417	446	475

Scottish Child Payment, of which: [3]	96	107	334	333	324	319	314

Children under six	96	107	111	108	103	102	100
Children over six [3]			224	225	221	217	213
Self-Isolation Support Grant [4]	9	64	30				
Severe Disablement Allowance	2	1	1	1	1	1	1

Source: Scottish Fiscal Commission

[1] Adult Disability Payment figures include people receiving Personal Independence Payment

[2] Child Disability Payment figures include children receiving Disability Living Allowance (Child)

[3] Scottish Child Payment figures in 2022-23 show the number of children aged 6-15 receiving payments from the payment is

extended to cover them, which is assumed to be December 2022.

[4] For Self-Isolation Support Grant, caseload is the number of payments

### Change in forecast spending since January 2021

- 5 Figure 5.10 shows the main reasons our headline forecasts have changed since January 2021 split by data updates, modelling changes, assumption changes and policy changes. The most significant change is our costing of Adult Disability Payment (ADP), the replacement for Personal Independence Payment (PIP). This change in ADP spending, together with the doubling of Scottish Child Payment (SCP) and other policies, are presented in Figure 5.10 under 'Policy changes – Scottish Government'.
- 6 Our January 2021 inflation forecast implied that payment rates would increase by 1.4 per cent in April 2022 and 1.6 per cent in April 2023. We have now revised up our inflation forecasts, meaning most payment rates will increase by 3.1 per cent in April 2022 and we forecast a 3.9 per cent increase in April 2023. A higher inflation forecast increases the payment rates and spending forecast from 2022-23 onwards, increasing spending by £60 million in 2022-23 and £190 million by 2025-26.

**Figure 5.10: Change in social security spending forecasts since January 2021**

£ million	2020-21	2021-22	2022-23	2023-24	2024-25	2025-26

Other [5]	0	1	1	1	1	0
<b>Total policy change</b>	<b>1</b>	<b>28</b>	<b>179</b>	<b>440</b>	<b>563</b>	<b>775</b>

[1] includes direct extra cost of the new policy on ADP, and additional cost to CA and CAS because of the introduction of ADP.

[2] Carer's Allowance Supplement (Scotland) Bill was initially costed in June 2021. Scottish Fiscal Commission (2021) Supplementary Costing – Carer's Allowance Supplement (Scotland) Bill – June 2021([link](#)).

[3] Contains the extension of CWHA eligibility to PIP and the change in Scottish Government uprating policy for CWHA.

[4] This includes both the upward effect of expanding eligibility early in 2021 and the more recent downward effect of removing eligibility from double-vaccinated contacts who do not have a positive PCR test.

[5] "Other" covers changes to the funding arrangement for DHP and the increase in the Best Start Foods payment rate

### Adult Disability Payment

- 7 The largest devolved social security payment, Personal Independence Payment (PIP), is being replaced by Adult Disability Payment (ADP) from 2022. Our August forecasts provided a first estimate of spending on ADP. Our ADP forecast is based on our PIP forecast with adjustments for the effects of the new ADP processes and procedures on caseload and spending.
- 8 Figure 5.8 shows the latest version of our estimate of additional ADP spending above forecast PIP spending. Our overall approach to costing ADP is unchanged since August, where we explain our forecast methodology in more detail. However, in August, we assumed that the Scottish Government would run a pilot from spring 2022, which we did not include in our costing as the scale of the pilot was unclear and we assumed that it would not have a material effect on our forecast. Based on new information shared by the Scottish Government, we have now included the pilot in our costing of ADP. We assume the pilot will start in spring 2022, covering a gradually increasing number of Local Authorities. We forecast that the ADP pilot will increase spending by £4 million in 2022-23.
- 9 There is an additional cost to Carer's Allowance (CA) and Carer's Allowance Supplement (CAS) because of the introduction of ADP. We expect more people to be in receipt of disability payments under ADP compared to PIP, and in turn more people to be eligible and apply. Based on our forecast of ADP caseload, we estimate that CA and CAS spending will increase by £40 million by 2026-27.

Figure 5.8: ADP Policy decomposition

Source: Scottish Fiscal Commission.[1] We assume that the case transfer will be completed by the end of 2024-25.

## Increase weekly Scottish Child Payment to £20 for each child

- 10 The current weekly value of Scottish Child Payment (SCP) is £10 for each child. The 2022-23 Budget included the announcement that the Scottish Child Payment will increase to £20 from April 2022. The Scottish Government has also brought forward the increase that would normally occur in April 2023 to the same time as the payment is extended to older children, which we currently assume will be in December 2022. From April 2024 onwards the payment will continue to be uprated as normal.
- 11 Figure A.7 shows the forecast weekly value of the Scottish Child Payment under the existing (baseline) policy, in which it is uprated every April in line with CPI inflation, and under the new policy.

**Figure A.7: Forecast inflation and weekly Scottish Child Payment amounts**

	2022-23	2023-24	2024-25	2025-26	2026-27
Per cent					
CPI inflation [1]	3.1	3.9	2.4	2.0	2.0
£ per week					
Weekly amount – baseline policy	10.30	10.70	10.95	11.15	11.35
Weekly amount – new policy [2]	20.00	20.80	21.30	21.75	22.20

Source: Scottish Fiscal Commission

[1] Inflation figures are shown in the year that they would be used for uprating, for example the 2022-23 column shows the CPI inflation figure for September 2021, used to uprate the payment from April 2022.

[2] The highlighted rate for 2023-24 is expected to apply from December 2022, so also covers the final four months of 2022-23.

- 12 Figure A.9 shows the static costing and the final costing including the behavioural adjustment to allow for the potential for higher take-up and eligibility rates in response to the larger payment.

**Figure A.9: Costing of the overall policy change to Scottish Child Payment**

£ million	2022-23	2023-24	2024-25	2025-26	2026-27
Static costing	94	168	167	168	169
Behavioural response	9	17	17	17	17
Final costing	103	184	183	185	186
